Acta Crystallographica Section E: Structure Reports Online is the IUCr's highly popular open-access structural journal. It provides a simple and easily accessible publication mechanism for the growing number of inorganic, metal-organic and organic crystal structure determinations. The electronic submission, validation, refereeing and publication facilities of the journal ensure very rapid and high-quality publication, whilst key indicators and validation reports provide measures of structural reliability. The average publication time is less than one month. Articles are published in a short-format style with enhanced supplementary materials. Each publication consists of a complete package – the published article, HTML and PDF supplements, CIF, structure factors, graphics, and any other submitted supplementary files.

Crystallography Journals Online is available from journals.iucr.org

(4-Methylpiperazin-1-yl)(2,3,4-trimethoxybenzylidene)amine

Received 17 March 2014; accepted 20 March 2014

Key indicators: single-crystal X-ray study; $T = 173\text{ K}$; mean $\sigma(\text{C}-\text{C}) = 0.002\text{ \AA}$; R factor = 0.040; wR factor = 0.113; data-to-parameter ratio = 15.3.

In the title compound, $\text{C}_{15}\text{H}_{23}\text{N}_3\text{O}_3$, the piperazine ring is in a slightly distorted chair conformation and is twisted from the mean plane of the benzene ring making a dihedral angle of $14.94(6)^\circ$. The 4-methoxy substituent is almost co-planar with the benzene ring [$\text{C}-\text{C}-\text{O}-\text{C}$ torsion angle = $5.4(1)^\circ$], while the methoxy groups at positions 2 and 3 [$\text{C}-\text{C}-\text{O}-\text{C}$ torsion angles of $122.6(4)$ and $-66.1(4)^\circ$, respectively] are twisted away from the mean plane of the benzene ring in anticlinical and synclinal conformations, respectively. No classical hydrogen bonds or any weak intermolecular interactions are observed in the crystal structure.

(4-Methylpiperazin-1-yl)(2,3,4-trimethoxybenzylidene)amine

Channappa N. Kavitha, Jerry P. Jasinski, Manpreet Kaur and H.S. Yathirajan

1. Comment

The Schiff base ligands derived from 1-amino-4-methylpiperazine have attracted the interest due to diverse biological applications found with piperazine moiety. Schiff base piperazine derivatives were found to be designed for the study of their antimicrobial activity (Savaliya *et al.*, 2010) and antibacterial activity (Xu *et al.*, 2012). A valuable insight into recent advances on antimicrobial activity of piperazine derivatives is reported (Kharb *et al.*, 2012). A review on the current pharmacological and toxicological information for piperazine derivatives is described (Elliott, 2011). The crystal structures of some related compounds, viz., 2-[(4-methylpiperazin-1-yl)iminomethyl]phenol (Guo, 2007), 1,4-bis-{3-[4-(dimethylamino)benzylideneamino] propyl}piperazine (Xu *et al.*, 2009), 2-methoxy-4-[(4-methylpiperazin-1-yl)iminomethyl]phenol (Zhou *et al.*, 2011) and 2,4-dibromo-6-[(4-methylpiperazin-1-yl) iminomethyl]phenol (Guo & Qiu, 2007) have been reported. The crystal structures of similar Schiff bases, viz, (1H-indol-3-yl-methylene)- (4-methyl-piperazin-1-yl)-amine (Kavitha *et al.*, 2013a) and (4-methyl-piperazin-1-yl)-(2-nitro-benzylidene)-amine (Kavitha *et al.*, 2013b) have been reported. The title compound is a Schiff base prepared by the reaction of 1-amino-4-methylpiperazine and 2,3,4-trimethoxy benzaldehyde. In view of the above importance of N-piperazinyl Schiff bases, the title compound, (I), $C_{15}H_{23}N_3O_3$, has been synthesized and the crystal structure is reported.

The title compound, (I), crystallizes with one independent molecule in the asymmetric unit. In the molecule, the piperazine ring is in a slightly disordered chair conformation (puckering parameters Q , θ , and $\varphi = 0.5691$ (15) \AA , 176.10 (14) $^\circ$ and 160 (2) $^\circ$, respectively; (Cremer & Pople, 1975) and is twisted from the mean plane of the phenyl ring with a N2/N3/C5/C6 torsion angle of 177.3 (7) $^\circ$ (Fig. 1). The 4-methoxy substituent with a C10/C9/O3/C15 torsion angle of 5.4 (1) $^\circ$ is almost planar with respect to the mean plane of the phenyl ring while the methoxy groups at positions 2 and 3, with torsion angles of 122.6 (4) $^\circ$ (C6/C7/O1/C13) and -66.1 (4) $^\circ$ (C9/C8/O2/C14), are twisted away from the mean plane of the phenyl ring in anti-clinical and -syn-clinical conformations, respectively. Bond lengths are in normal ranges (Allen *et al.*, 1987). No classical hydrogen bonds or any weak intermolecular interactions are observed.

2. Experimental

To a solution of 2,3,4-trimethoxy benzaldehyde (0.98 g, 0.005 mol) in 5 ml of methanol an equimolar amount of (1-amino-4-methyl)piperazine (0.57 g, 0.005 mol) is added dropwise with constant stirring. The mixture was refluxed for eight hours. The solution was evaporated at room temperature to obtain the solid. The solid was then recrystallized using ethylacetate and the crystals were used as such for x-ray diffraction studies (m.p.: 365-369 K).

3. Refinement

All of the H atoms were placed in their calculated positions and then refined using the riding model with Atom—H lengths of 0.93 \AA (CH), 0.97 \AA (CH₂) OR 0.96 \AA (CH₃). Isotropic displacement parameters for these atoms were set to 1.2 (CH, CH₂) or 1.5 (CH₃) times U_{eq} of the parent atom. Idealised Me refined as rotating groups.

2008), $Fc^* = kFc[1 + 0.001xFc^2\lambda^3/\sin(2\theta)]^{1/4}$
Extinction coefficient: 0.00092 (14)

Special details

Geometry. All esds (except the esd in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell esds are taken into account individually in the estimation of esds in distances, angles and torsion angles; correlations between esds in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell esds is used for estimating esds involving l.s. planes.
