FOREWORD

Thanks a lot of God because it has been able to be completed my final project, with title: Implementation Bayesian Algorithm in Expert System Method to Know The Level of Air Pollution In Semarang. And in this opportunity, I would like to thanks:

- My Lord, Jesus Christ that give me power to finish this project.
- My parents, my brother, and my big family for their support, love, and pray.
- Gregorius Hendita Artha Kusuma, S.Si, M.Cs as my supervisor for helping, guiding and giving me ideas and advice in finishing this project.
- My Community “Miracle Ministry” that give me support and pray.
- All of my love friends which help and support me to finish this project, and also for people who have helped me in prayers and support.

Finally, I would like to apologize if the project is still many shortcomings. I look forward to suggestions and criticism.

Semarang, July 14th, 2010

Nyoto Kurniawan

ABSTRACT

This application is used to give the conclusion from the answered questions by user and to compare of each user who has answered. This application can edit the questions that existing. This application used Bayesian as an algorithm and tree as a data structure.

Table of Table ............................................................................................. ix

Chapter I Introduction
1.1. Background .......................................................................................... 1
1.2. Scope ..................................................................................................... 1
1.3. Objectives ............................................................................................. 1

Chapter II Literature Study
2.1. Algorithm ............................................................................................. 3
   2.1.1. Bayesian Algorithm Description ..................................................... 3
   2.1.2. Sample Case from My Literature ..................................................... 4
   2.1.3. Case in DPR .................................................................................. 6
   2.1.4. Implement to My Case ................................................................. 13
2.2. Data Structured .................................................................................... 18
   2.2.1. Implement With Tree ................................................................... 18
   2.2.2. Example Tree Based on Example Case Above .............................. 18
   2.2.3. Tree Step Description .................................................................. 20

Chapter III Planning
3.1. Research Methodology .......................................................................... 22
3.2. Project Management ............................................................................ 22

Chapter IV Analysis and Design
4.1. Analysis ............................................................................................... 23
