ABSTRACT

Gammu is an easy and well-known application, it is also a module that can be combined with any programming language. For example, one can use PHP and access it through a database administration tool such as phpMyAdmin. The use of gammu is quite easy, if through the procedure properly. So it will be easier and effective if the SMS is sent using a computer.

As an application test, I built a simple students data application that will check if there is information about an email address from students. The student database has one table that has three fields such as nim, nama, and email address.

In this application, I made a program that will reply to SMS automatically. This application server can receive and send SMS from any number for which the users do not need to register. But users must type a keyword “nama” to receive an email address.

**Keyword**: gammu, PHP
FOREWORD

I want to say thanks to God that always bless me with inspiration and solution if I had trouble. I dedicated all of my achievement for the last four year to my whole family that had been support me.

I would like to say thank you to:

1. God for His guide and blessing, so I can finish my final project.
2. My family members that always supports me and fulfill my need.
3. Mr. Yanto as supervisor that give me ideas and advices to finish my project perfectly.
4. All Lecturers Faculty of Computer Science Mr.Yanto, Mr.Marlon, Mr.Aji, Mrs.Rosita, Mrs.Shinta, etc.
5. At last big thanks to all of my best friends at IKOM and at other places in Semarang who always support me all this time.

Thank you to anybody else who know me and always pray and support for me when i'm down during this project. I want to say to apologize if I had mistake and do something wrong all this time.
