# Submarine Warfare in the 20<sup>th</sup> & 21<sup>st</sup> Centuries: A Bibliography

### **Compiled by Michaele Lee Huygen**

3<sup>D</sup> EDITION

Dudley Knox Library Naval Postgraduate School June 2009 This page is deliberately blank.

#### INTRODUCTION

The game of war outgrows the combat rules When blindman's buff is played beneath the lid Of ocean's bleak arena on the grid Of hemispheres where steel fish stage their duels.

The armored monsters of the shipping lane Have shown no mercy to the tarrier In convoy; and got none from the warrior. The ocean pays no homage to the slain.

-- Aloysius Michael Sullivan. **The Bottom of The Sea**. New York: Dun & Bradstreet, 1966. p. 205.

This bibliography is a revised edition of the bibliography **Submarine Warfare in the 20th & 21st Centuries**, 2003, which is in turn a revised and expanded version of **Submarine Warfare in the 20th Century**, 2002. It is a bibliography listing books, periodical articles, and web sites related to submarine and antisubmarine warfare in the 20th Century, a rapidly growing body of literature as more WWII military history becomes available for research. It has become increasingly apparent that there has been a translation race, so foreign catalogs have been searched in depth, if they utilize the roman alphabet. Formal series statements are presented as (series statement) between publication date and pagination to set them apart within a single bibliographic citation.

Some entries have brief annotations taken directly from library catalogers' notes. Some have comments from the item in hand. The Bibliographies/References Cited for all titles as received in our collection have been compared to the contents of this bibliography.

The letters "NPS/DKL," followed by location and call number information, identify the books held by the Naval Postgraduate School's Dudley Knox Library. Many of the journal articles are also accessible in the Dudley Knox Library. Please note that DKL does not loan to individuals. Consult with your local library's Reference or Interlibrary Loan Department for advice on obtaining materials of interest.

This Bibliography will also be available online at <a href="http://www.nps.edu/Library/Research/Bibliographies/index.html">http://www.nps.edu/Library/Research/Bibliographies/index.html</a>

Contents: Nelson's Legacy. -- Samurai in Nelson's Shadow. -- The Man Who Could Lose the Empire in an Afternoon. -- The Fighter and the Strategist. -- The New Legacies.

Review: "Although *Iron Admirals* has some useful analysis of the evolution of naval warfare from the late-Nineteenth through the mid-Twentieth centuries, it is a sadly limited work. Focused on the lives and wars of Togo, Jellicoe, Halsey, and Spruance, the book overlooks a host of other naval commanders, who, while perhaps not war winners, were certainly vital to the development of war at sea in the period, such as Fisher, Doenitz, Yamamoto, Cunningham, and so forth." -- NYMAS [New York Military Affairs Symposium] Review Spring 2004 <a href="http://www.libraryautomation.com/nymas/Nwsltr30.pdf">http://www.libraryautomation.com/nymas/Nwsltr30.pdf</a>

Abstract: Historical evidence of genuine concern about the impact of war on the human environment can be found since the earliest civilisations. Yet, the history of war is replete with examples of serious devastation of the enemy's land and property. The relationship between peacetime human activities and the environment is in the stage of advanced public debate and scholarly attention, and much progress has been made in recent years regarding the development of appropriate instruments and institutions pertaining to the protection of the environment in peacetime. The cornerstone of modern International Environmental Law is the prohibition of transfrontier pollution, according to which, States have the responsibility to ensure that activities within their jurisdiction or control do not cause damage to the environment of other States or to areas beyond national jurisdiction. In addition, there is now a Substantial body of international treaties laying down detailed regimes for various environmental sectors. Recent international conflicts, such as the 1980-1988 Iran-Iraq and the 1990-1991 Gulf wars, have raised fundamental questions about the relationship between modern International Environmental Law and armed conflict. The notion that rules of general International Environmental Law continue to apply during armed conflict is now well accepted. In its 1996 Advisory Opinion on the Legality of the Threat or Use of Nuclear Weapons, the International Court of Justice stressed that "the obligations of States to respect and protect the natural environment," applied equally "to the actual use of nuclear weapons in armed conflict."1 However, the international legal principles for the protection of the environment in armed conflict which are usually cited, remain at a very high level of abstraction. In the above advisory opinion, the Court offered the following broad statement.

Boyne, Walter J. **The Influence of Air Power Upon History**. Gretna, LA: Pelican, 2003. 447p.

Contents: Fledgling wings. -- Air power in World War I. -- Fighters and Bombers. -- Growth of air power theory. -- Air power Between the wars. -- The search for air power 1939-41. -- The growth of air power 1941-43. -- True air Superiority, then air Supremacy. -- The Cold War. -- The Cold War 1963-73. -- Post World War II Middle Eastern wars.

Abstract: For hundreds of years before the first flight at Kittyhawk on December 17, 1903, man had sought to gain the ultimate view from the sky. There were as many ideas about how the ability to fly could be of use as there were failed machines that attempted to accomplish it. This quest for air power, defined as the ability to conduct military, commercial, or humanitarian operations from the air, has had farreaching implications not only for combat technology, but also in politics, diplomacy, technology, and mass culture. Where Alfred Thayer Mahan's classic work, The Influence of Sea Power upon History,

catalogues the elements that made naval prowess a determinant of a nation's strength, this book studies the development of air-power philosophy by examining its theory and practice as demonstrated not only in War, but in the myriad demands it makes upon the nations that employ it. In air power, as in sea power, the evolution from concept to practical execution goes through many individuals, each improving on previous work. The personalities of the inventors emerge as important factors in the creation and application of the new technology. This book focuses extensively on the impact of these personalities on air power and, thus, their effect on history. Many factors influenced the development of air power, including entirely new technologies that, in recent years, have included the jet engine and precisionguided munitions. The influence of air power was aided immeasurably by the simultaneous growth of aviation, motion pictures, radio, and, later, television. In turn, the media's influence grew tremendously because of its profound ability to observe and transmit events around the globe, thereby imposing an urgency on both military and civilian life. The Influence of Air Power upon History is a thorough examination of how air power was applied from the very earliest Days of the balloon down to the latest use of space technology. Including both air and aerospace military power in his considerations, Boyne (a retired U.S. Air Force colonel) surveys, in a celebratory fashion, the use of air power in international conflict. His analysis is perfectly in line with the technological fetishism of most U.S. war planners, almost invariably arguing that the imposition of superior air power is the most decisive factor in winning wars, and even suggesting that the American war in Vietnam would have been won with just a little more bombing. Chapters cover the development and deployment of air power doctrines by the United States, its allies, and its enemies in wars in which it was politically concerned.

Abstract: With the dissolution of the Soviet Union and Warsaw Pact, the threat of global war has all but been eliminated. At the same time, the Third World is experiencing a rising tide of instability, brought about by economic and social inequities, religious fundamentalism, and resurgent ethnic and political rivalries--and fuelled by increasing military capabilities caused by the proliferation of advanced-Technology weapons. As a result of these changes, U.S. security strategy is turning from its Cold War focus on global containment to the protection of U.S. interests against regional instabilities. The most dramatic confirmation of this change in direction was the announcement by the President on 2 August 1990 of a new National Security Strategy which would focus on maintaining stability and responding to regional crises, rather than on preparing for a global conflict against the Soviet Union.

Plotz, Jason. Sailing the Blood-Dimmed Tide: The Navy and the Post-Modern State. Halifax, N.S.: Dalhousie University, 1999. (MAI, 38(6): 1496 1999). 2 microfiche.

Thesis (M.A.) -- Dalhousie University, 1999.

Abstract: The end of the Cold War represents a time of fundamental and perhaps Revolutionary change, akin to the other great Historical turning points in European History 1648, 1789, 1815, 1918, and 1945. The advanced industrial liberal democratic states have undergone changes, emerging as 'post-modern' states. The post-modern state is far more vulnerable to societal pressures than was the case during the Cold War. In such states, the concept of the national interest is under siege, as public opinion, the media, and various nonnational and transnational interests -- whether economic, social or cultural -- exert a greater degree of influence in the shaping of foreign policy. This will lead to an increasing demand for action by these states, as each particular group looks to advance its own causes. However, at the same time, these states are experiencing a decline in military budgets, as politicians search for the 'peace dividend'. Commitments will increase as capabilities erode and are not replaced. Given the fear these states have of casualties, however, they will be reluctant to send in ground troops. Instead, it will be the navy that has to carry the burden of the commitment, which is necessarily limited, of these states to the wider world. An increasingly heavy burden, with opportunity costs and implications that are not all beneficial to the navy, may be the result.

Rose, Lisle Abbott. **Power at Sea**. Columbia: University of Missouri Press, 2006. 3v. Contents: V. 1. The age of Navalism, 1890-1918: The Master: Alfred Thayer mahan. -- The architects: Theodore Roosevelt, alfred von Tirpitz, and John "Jacky" Fisher. -- Scorpions in a bottle. -- Rengo Kantai. -- The boast of the red, white and Blue. -- Rush to Conflict. -- Standoff, 1914-1915. -- Jutland. -- Terror at sea, 1915-1918: The Submarine and its consequences.; V. 2. The Breaking storm, 1919-1945. -- The containment of sea power: Washington, 1921-1922. -- The Race resumes. -- A lion in Winter. -- Preparing for Armageddon: Germany. -- Preparing for Armageddon: Japan. -- American Revolution. -- Contours of Conflict. -- The Axis: Lost Victories. -- Defending the Atlantic lifeline. -- The Allies: Foundations of conquest. -- Gem of the ocean.; V. 3. A violent peace, 1946-2006: Grand Strategy. -- Going MAD: The nuclearization of sea power. -- "Grey Diplomats:" the sixth and seventh Fleets in the 1950s. -- The Aframe fractor and other frustrations: Korea and Vietnam. -- Crisis and consequence: Cuba, 1962. -- Red Fleet rising. -- Reversals of fortune. -- Rocks and shoals. -- Navy Imperial.

Review: A nonacademic narrative about the major navies of the world during the past century, these three volumes divide into periods symbolized by dominant ships: The Battleship, Aircraft carrier, and nuclear Submarine. Rose, an author of specialty naval histories who served in the U.S. Navy in the 1950s, instills clarity about a tension that animates any modern navy, that Between its national strategy and the ships necessary to effect that strategy. Since ships inherently fix a strategy for years into the future, contentious theorizing erupts over the optimal vessels to construct. Rose reprises this intranaval conflict in each tome, incorporating a nation's domestic interests, which are inevitably involved because of the Great expense of navies. -- Gilbert Taylor, Booklist 103(7):8 December 1, 2006.

Thesis (Ph.D.) -- Ohio University, 1991.

Abstract: This dissertation examines Anglo-American policy toward the People's Republic of China Between 1949 and 1958 and the Chinese Communist Party's reaction to that policy. The dissertation utilized recently declassified British and American documents as well as new Chinese sources to explore the interactions between a Revolutionary state and two established Western powers between 1949 and 1958. It stressed mutual influences and mutual constraints in the formation of Anglo-American policies, examining how considerations of each other's reactions affect decisions.

Dissertation note: Thesis (M.S. in Systems Technology) -- Naval Postgraduate School, June 2005.

Abstract: The Chief of Naval Operations defines FORCEnet as the "operational construction and architectural framework for Naval Warfare in the Information Age which integrates Warriors, sensors, networks, Command and control, platforms and weapons into a networked, distributed combat force, scalable across the spectrum of conflict from seabed to space and sea to land." The Trident Warrior experiments are the Navy's premier FORCEnet Sea Trial experiments. The purpose of the Trident Warrior experiments is to provide "speed to capability" and to develop supporting tactics, Techniques, and procedures The purpose of this thesis will be to provide a basic overview of the Trident Warrior Experimentation Process. Through a step-by-step analysis, this thesis will explain and justify the many steps required to complete a successful experiment/experimentation campaign.

This report was prepared by Systems Engineering and Analysis Cohort Six (SEA-6). "Prepared for: Deputy Chief of Naval Operations for Warfare Requirements and Programs (OPNAV N7), 2000 Navy Pentagon, Rm. 4E392, Washington, DC 20350-2000."

Thesis technical report; December 2005.

Abstract: Recent conflicts such as Operation Desert Shield/Storm and Operation Iraqi Freedom highlight the logistics difficulties the United States faces by relying on foreign access and infrastructure and large supply stockpiles ashore to support expeditionary operations. The Navy's transformational vision for the future, Sea Power 21, involves Seabasing as a way to address these difficulties by projecting and sustaining joint forces globally from the sea. This study analyzes logistics flow to, within and from a Sea Base to an objective, and the architectures and systems needed to rapidly deploy and sustain a brigade-size force. Utilizing the Joint Capabilities Integration and Development System (JCIDS), this study incorporates a systems Engineering framework to examine current systems, programs of record and proposed systems out to the year 2025. Several capability gaps that hamper a brigade-size force from seizing the initiative anywhere in the world within a 10-day period point to a need for dedicated lift assets, such as high-speed surface ships or lighter-than-air ships, to facilitate the rapid formation of the Sea Base. Additionally, the study identifies the need for large-payload/high-speed or load-once/direct-to-objective connector capabilities to minimize the number of at-sea transfers required to employ such a force from the Sea Base in 10 hrs. With these gaps addressed, the Joint Expeditionary Brigade is supportable from the Sea Base.

Branco, Robert John. The Effects of Environmental Factors on Naval Strategy.

Monterey, CA: Naval Postgraduate School, 1974. (ADA781868). 104p.

Thesis (M.S. in Management) -- Naval Postgraduate School, 1974.

Abstract: (U) The thesis treats the need to understand the effects of environmental factors on naval strategy. Studies are made of the navies of the United States and Soviet Union with several examples of how these factors have influenced naval policy in the past. A detailed examination of these factors such as political issues, economics, and Third World nationalism, illustrates how significant these subjective elements of naval strategy are in determining policy judgments. (NPS-GSBPP-06-011; ADA456223). 99p. "Technical report; 4/1/06-9/30/06; "Prepared for: Naval Sea Systems Command"--Cover.

Abstract: "Sea Enterprise is the resource-enabling component of the Navy's Sea Power 21 initiative. In recognition of a future resource-constrained environment, Sea Enterprise seeks to reform the culture and business practices of the Navy so as to generate resources internally that can be applied to reinvestment and recapitalization. Sea Enterprise contracted the Center for Defense Management Reform to research transformation and benchmarking best practices in the private sector. The aim of this research is to help Sea Enterprise understand, design and implement its agenda for organizational change. This report presents a brief recent history of management reform within the Department of Defense and a summary review of current business management transformation initiatives in the DoD and in the services. Then, a survey of the scholarly and practitioner literature on organizational change explores the guestions of firstorder and second-order change, and looks at models of incremental, episodic and continuous change. Next, this report examines various types of benchmarking and identifies benchmarking candidates from both private- and public-sector organizations categorized by distinctive best practices that may be applicable to Sea Enterprise. The report concludes that further in-depth benchmarking by matching Sea Enterprise with specific organizations could contribute to the success of Sea Enterprise. Modeling and benchmarking can help the leaders and managers of Sea Enterprise understand, promote, and advance the success of this important change initiative."--p. iv.

Calvano, Charles, Robert Harney, Fotis Papoulias, Robert Ashton, and Dwight Warnock. **Sea Force: A Sea Basing Platform**. Monterey, CA: Naval Postgraduate School, 2003. (NPS-ME-03-001). 341p.

"This report was prepared for as an integral part of the Total Ship Systems Engineering (TSSE) educational process, which, in turn, was partially supported by funding from the Naval Sea Systems Command (NAVSEA). The work described was performed between July and December 2002."

Abstract: The need for effective operation from the sea while conducting amphibious operations ashore has never been more evident than in today's modern conflicts. As important as this task is it has not significantly changed since World War I. Sea Force is an attempt to show that sea basing, as discussed by the Chief of Naval Operations (CNO) in Sea Power 21, can be accomplished by the year 2020 with reasonable advances in technology. The concept of sea basing implies a number of capabilities that are not inherent in current expeditionary forces, among these are Ship to Objective Maneuver (STOM), indefinite sustainment, selective offload, reconstitution of forces ashore, long range Naval Surface Fire Support (NSFS), and an increased capability in command and control. The Marine Corps has also established the requirement of a 3.0 Marine Expeditionary Brigade (MEB) lift capability that is not currently met by the existing force structure. The Total Ship Systems Engineering Program undertook the task of designing a system of ships that could be brought together to enable the sea basing of one MEB for an indefinite period of time. The Sea Force design completely supports all of the operational requirements of STOM in addition to providing a path for re-supply and a method for reconstitution of forces ashore. Sea Force also is designed to be reconfigurable from a Warship to a supply ship during a shipyard availability period with minimal effort through the use of modularity. The first design analysis was based on combining the capabilities of the MPF, LMSR, and LHA ships into a single hull one-ship-doesall concept. The second design analysis was based on an MPF/LMSR variant with a separate LHA design. The third design analysis, the LHA/MPF with LMSR design, combines two ships on similar hull forms but with different structural requirements, layouts, and Missions. (53 tables, 85 figures, 11 appendixes.)

Collins, Harold H. **The United States and Brazil: A Naval Partnership for the Twenty-First Century?** Monterey, CA: Naval Postgraduate School, 2005. (ADA242430). 93p.

Thesis (M.A.)--Naval Postgraduate School, 1991.

Abstract: This thesis explores the prospects for a U.S./Brazilian naval partnership for the Twenty-First Century. It examines the viability of existing multilateral agreements between the United States and Latin American countries for maritime defense of the South Atlantic. It argues that the existing agreements are outdated and ineffective, primarily due to a reduction in Cold War threat. With a naval capability ranked among the highest in the third world, and historical naval ties to the United States from both World Wars, the Brazilian navy offers the possibility to assume a greater role in western defense. As a possible means to cultivate this beneficial relationship, a shift in emphasis from the current posture of U.S./Latin American multilateral hemispheric defense, to a focused bilateral U.S./Brazilian naval partnership is suggested. The thesis also suggests that national Security threats to the hemisphere have changed to terrorism, narco-

trafficking, the spread of high technology weapons, and the rise of ethnic tensions. These threats affect both the United States and Brazil, and could lead to closer cooperation in U.S./Brazilian naval relations. NPS/DKL Location: THESIS C573

## Cote, Owen R. The Politics of Innovative Military Doctrine the U.S. Navy and Fleet Ballistic Missiles. 2v.

Thesis (Ph.D.)--Massachusetts Institute of Technology, 1996.

Abstract: The Polaris and Trident II SLBM weapon systems were developed by the U.S. Navy during periods of major strategic nuclear modernization, when national leaders were concerned about the vulnerability of U.S. Air Force land based nuclear forces to Soviet attack. Both Navy systems provided a superior alternative to bomber and ICBM weapon systems of the time, but only Polaris provoked innovative changes in U.S. nuclear doctrine. These cases of innovative and stagnant doctrine are compared and used to test the explanatory power of three competing theories of the sources of innovative military doctrine. The three theories hypothesize independent, explanatory roles for civilmilitary conflict, intraservice bargaining, and interservice competition. The first case shows a strong causal link between intense interservice competition, a Navy decision to develop Polaris as an alternative to Air Force land based forces, and an ensuing improvement in the survivability of those land based forces. The second case shows a somewhat weaker correlation between institutionalized interservice cooperation, a Navy decision to develop Trident II as a complement rather than an alternative to land based forces, and the absence of any ensuing improvement in the survivability of those forces. Thus, Polaris caused an innovative change in nuclear doctrine while Trident II did not, and the cases show that differing patterns of interservice relations had more to do with these outcomes than civil-military or intraservice relations. The thesis concludes with a discussion of the sources of different patterns of interservice relations, and argues that civilian defense leaders can manipulate interservice competition to cause doctrinal innovation.

Cutter, David C. **Building Line Officers Into Financial Managers: An Analysis of the Process and Recommendations for Improvement**. Monterey, CA: Naval Postgraduate School, 2004. 75p.

Thesis (M.B.A.) -- Naval Postgraduate School, June 2004.

Abstract: With a FY 2004 budget of \$114 billion, there is no question that the Department of the Navy is involved in big business. If compared to the sales revenues of the Fortune 500, the Navy would rank sixth. After having weathered a prolonged drawdown through the 1990's, Naval leadership must recapitalize its aging legacy systems. The plan to accomplish this task is the Sea Enterprise component of the Navy's Sea Power 21 strategy. In order to reach these goals, the Chief of Naval Operations needs a cadre of business-savvy line officers who can properly allocate scarce resources. The core of this group is comprised of line officers who hold the Financial Management (FM) Subspecialty designator. This thesis applies a managerial control system approach to the process of filling Financial Management billets with properly qualified FM line officers. Complex and multifaceted, the process contains three distinct components: Promotion, assignment and education. After examining levers of control that can be accessed by the FM community manager, this thesis identifies system weaknesses. Recommendations to solve the weaknesses include improved control and tailored incentives. The combination of control and incentives could improve the qualification rate of the Navy's FM officer positions and, ultimately, allow the Navy to meet its Sea Enterprise goals.

Felker, Craig C. Simulation and Sea Power: The U.S. Navy Fleet Problems, 1923-1940. 314 l. Durham, NC: Duke University, 2004.

Thesis (Ph.D.) -- Duke University, Department of History, 2004.

Abstract: From 1923 to 1940 the U.S. Navy held Twenty-one major exercises, known as "Fleet Problems." While only part of annual fleet training, these exercises differed from routine maneuvers and gunnery exercises. All available fleet units were integrated into a single major action.... Concepts such as dive-bombing, independent submarine operations, antisubmarine warfare, and amphibious operations were explored in a medium that stressed the thinking of naval officers as how best to fight a naval War with modern weapons.

Gray, Anthony W. (Anthony Whitford). **The Evolution of U.S. Naval Policy in Latin America**. Ann Arbor, MI: University Microfilms, 1982. (UMI 82 23835). 269p. Thesis (Ph.D.) -- American University, 1982.

Abstract: The purpose of this dissertation is to provide an understanding of the historical naval or maritime role in hemispheric defense by tracing the evolution of U.S. naval policy in Latin America through seven distinct although overlapping phases. These seven historical phases include the development of U.S.-Latin Amerian Navy-to-Navy relations as well as the development of the U.S. Navy from one of deployed squadrons through the development of the fleet system into a globally recognized force. In conjunction with this, the concept of hemispheric defense and the recognition of the value of credible Latin American navies evolved through the implementation of U.S. Naval Missions, culminating in the cooperation of World War II. Through this process Navy-to-Navy relations evolved from confrontation to cooperation.

Kaplan, Robert D. Hog Pilots, Blue Water Grunts: The American Military in the Air, at Sea, and on the Ground. 1st ed. New York: Random House, 2007. 448p.

Abstract: Foreign affairs journalist Kaplan lets readers experience up close the American military worldwide in the air, at sea, and on the ground: Flying in a B-2 bomber, living on a nuclear submarine, and traveling with a Stryker brigade on missions around the world. Provided unprecedented access, Kaplan moves from destroyers off the coast of Indonesia to submarines in the central Pacific, from simulated Iraqi training grounds in Alaska to technology bases in Las Vegas. He goes deep into their

highly technical and exotic worlds, and tells this story through the words and perspectives of the enlisted personnel and junior officers themselves--men and women who, as he writes, have "had their national identities as Americans engraved in sharp bas-relief." He not only conveys the vast scope of America's military commitments, but also shows us astonishing and vital operations as they unfold--from the point of view of the troops themselves.--from publisher description.

Labs, Eric J. **Options for the Navy's Future Fleet**. Washington, DC: Congressional Budget Office (U S Congress), 2006. (ADA456708). 111p.

Abstract: Today's Navy numbers about 285 Battle force ships (a category that includes Aircraft carriers, submarines, surface combat ships, amphibious warfare ships, and various support vessels). Recently, the Navy indicated that it needs a fleet of 313 ships to perform all of its missions. Building and sustaining such a force, however, would require greater budgetary resources over the next three decades than the Navy has received in recent years. The Congressional Budget Office (CBO) estimates that the Navy would have to spend an average of about \$21 billion per year (in 2007 dollars) on ship procurement to carry out its 313-ship plan -- more than 70 percent greater than its average spending between 2000 and 2005. At the same time, the Navy has plans to modernize its aircraft that, if fully implemented, would require more resources than the service currently spends on new planes and helicopters. Given the many pressures that the federal budget will face in coming decades, the Navy might not receive a sizable increase in funding. In that case, what alternative force structures could be accommodated within existing spending levels? This CBO study -- prepared at the request of the Subcommittee on Seapower of the Senate Committee on Armed Services -- examines that question. It looks at the Navy's modernization plans for ships and aircraft and their budgetary implications. It also analyzes five alternative approaches to modernization that would cost roughly the same average annual amount as the Navy has spent since 2000. In keeping with CBO's mandate to provide impartial analysis, this study makes no recommendations.

Lyon, Wesley W. **Rethinking the Maritime Strategy for the 1990s in Terms of European Security**. Monterey, CA: Naval Postgraduate School, 1990. (ADA227231.). 75p.

Thesis (M.S. in National Security Affairs) -- Naval Postgraduate School, March 1990. Abstract: This thesis reexamines the Warfighting component of the Maritime Strategy in light of recent political changes in the communist world as well as recent arms control advances. The following conclusions are reached: First, a Conventional Forces Europe (CFE) agreement and the political changes in Eastern Europe will make mobilization and reinforcement key factors in any future European conflict. Secondly, under the conditions of a START agreement, it will no longer be necessary for the Soviet Union to form protected bastions to guard its SSBNs; seeking out and attacking Soviet SSBNs could be more

risky and destabilizing. Thirdly, the START and CFE agreements, combined with improving Soviet submarine technology, will make the likelihood of a Soviet SLOC interdiction campaign much greater in the event of future conflict; the U.S. should adopt a layered defense strategy in response to these developments. Fourth and finally, because of the political difficulties associated with ground-based intermediate-range nuclear forces, the U.S. Navy must be assuming a larger role in providing theater nuclear deterrence in Europe.

MacGregor, David. Innovation in Naval Warfare in Britain and the United States Between the First and Second World Wars. Rochester, NY: The University of Rochester, 1990. 248p.

Thesis (Ph.D.) -- The University of Rochester, 1990.

Abstract: The dissertation compares the progress of the Royal Navy and the U.S. Navy between the World Wars in developing and implementing new methods of air, amphibious, surface, antisubmarine and submarine warfare. Using British Cabinet and Admiralty and U.S. Navy and Marine Corps records, it describes the major developments in each navy in each area of Warfare and evaluates the factors which made each navy stronger in some areas than in others. Broadly, the U.S. Navy made more progress in air and amphibious warfare, and the Royal Navy more in surface and antisubmarine warfare. Institutional and strategic factors favored naval aviation and amphibious warfare in the United States but discouraged them in Britain. Those same factors, and a cultural bias favoring cautious innovation in traditional forms of Warfare, caused the Royal Navy to make more progress in surface and antisubmarine warfare.

# McBride, William M. The Rise and Fall of a Strategic Technology: The American Battleship from Santiago Bay to Pearl Harbor, 1898-1941. 414p.

Ph.D. Johns Hopkins University; 1990.

Abstract: The naval profession, perhaps more so than any other, has always identified with, and drawn its power from, its artifacts. The history of the battleship within the United States Navy indicates that a strategic imperative, interpreted by the preeminent faction within the naval officer corps, has governed the selection of naval technologies. The social status quo has been maintained, at the cost of strategic inflexibility, through control of the strategic and tactical roles assigned to alternate technologies. Beginning with the anti-technology policy immediately after the Civil War, this work explores the American adoption of the battleship and the Subsequent efforts by sea-going officers to wrest control of the technological basis of their profession from engineering specialists between 1880 and 1910. In 1898, the

battleship strategic ethos acquired new geo-political components that affected battleship designs and naval-industrial technology development. With the refinement of submarine warfare and the development of aviation during World War I, technological factions emerged within the officer corps that challenged the supremacy of the battleship and the social status quo. The battleship hierarchy was anxious to adopt aviation, but only to augment the battleship. The 1922 Washington Naval Treaty, and the anti-naval policies of the New Era, severely limited the battleship, but the special hearings held by the navy in 1924 reaffirmed the existing technological hierarchy and the primacy of the battleship ethos. The social preeminence of the battleship faction was institutionalized through strategic and tactical doctrine refined during the 1920-30s. Naval aviation had progressed, but could not counter the momentum of the battleship strategy. The navy was rebuilt under New Deal public works funding, but the policies of Franklin Roosevelt ensured that the battleship remained supreme. The battleship ethos ended only after the majority of its artifacts were destroyed at Pearl Harbor in 1941. During World War II, the aircraft carrier replaced the battleship as the navy's capital ship and the new aviation faction shaped strategic and tactical doctrine in order to control technology selection and sustain their preeminent status within the post-War naval officer corps.

Shaarda, Daniel A. **Admiral Arleigh Burke: A Study in Strategic Leadership**. Fort Leavenworth, KS: Army Command and General Staff College, 2004. (ADA428986). 91p.

Thesis (M.S. in Military History) --. Army Command and General Staff College, June 2004.

Abstract: In a surprise move during the summer of 1955 the Secretary of the Navy selected Rear Admiral Arleigh Burke over 92 more senior admirals to become the Navy's next Chief of Naval Operations. The junior admiral went on to serve an unprecedented three terms as the Navy's principal leader, a record yet to be broken. With no formal leadership instruction aside from his Naval Academy days and abbreviated experience at the senior operational level, Burke nonetheless became a prolific strategic level leader. At the height of the Cold War Burke led the Navy through a transition in technology, moving from an era of bullets and propellers to one of guided missiles and jets. Under his watch nuclear propulsion became the standard for all US submarines while the Navy greatly enhanced its contribution to the nation's strategic nuclear capability with nuclear missile submarines. In driving these transitions Burke left his mark on Navy culture and morale, shaking the service out of the doldrums and reinvigorating it. Today's military leaders are required to deal with a large degree of ambiguity. Understanding how previous leaders dealt with complex issues may help current and future leaders understand how to deal with difficult issues effectively. It may also help leaders understand circumstances as they exist today by examining the visions and decisions of strategic leaders in the past.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, June 1991.

Abstract: This thesis examines the evolution, and theoretical basis of the United States' maritime strategy in the North Atlantic and what is referred to as NATO's Northern Flank. The strategy associated with past Secretary of the Navy, John Lehman, is no longer considered applicable in the context of today's East-West relationship and is in need of reassessment. The paper assesses the current, post Cold War situation and looks at future Security interest the United States may have in the region. Additionally, the security and defense capabilities of our allies in the region are examined. Given the United States will remain closely linked with European security issues, by examining the successes and failures of past strategies and the strengths and weaknesses of our allies, one will be better able to develop a new strategy.

Abstract: The Office of the Chief of Naval Operations, Plans, Policy and Operations asked the Center for Naval Analyses to evaluate Argentine naval strategy, its political and economic sustainability, its impact on other key nations in South America, and the implications for U.S. naval relations with countries of the Southern Cone. Thus, we examined in-depth the political-military Environment in Argentina, Brazil, and Chile--the three naval powers of the Southern Cone. The study considers the impact of civilian leadership on the Southern Cone armed forces, and navies in particular. It documents the themes of defense policies evolving within the region, examines broad political support for the armed forces in general, and gives special attention to navy roles and missions. The study also recommends approaches for the U.S. Navy in developing a long-term strategy toward the Southern Cone and Latin America.

Abstract: The Commander, Seventh Fleet, asked CNA to assess the security environment of the Asia-Pacific Region (APR) between now and 2010. This research memorandum focuses on the most probable trends relating to Southeast Asia and Australia during this period. The project's final report, The dynamics of security in the Asia-Pacific Region (CNA Research Memorandum 95-172, January 1996), discusses the implications of these trends (and of the probable trends in other countries of the region) for U.S. forces, particularly the Navy.

Breckon, M. Lyall and Thomas J. Hirshfield. **The Dynamics of Security in the Asia-Pacific Region**. Alexandria, VA: Center for Naval Analyses, 1996. (Research Memorandum CRM-95-172; ADA306359). 61p.

Abstract: Rapid change in the Asia-Pacific Region (APR)-including explosive economic growth and the shifts in regional political and security perceptions this growth will generate-will present new Problems and opportunities for U.S. defense planning in the next 15 years. Yet elements of continuity will remain, notably the critical importance of the U.S.-Japan defense relationship and continued basing of U.S. forces in that country for stability throughout the region. This will be true even as economic power becomes relatively more important than military power in Asian affairs, and as the United States becomes more interdependent with, and vulnerable to, developments in Asian economies. The Navy will become a proportionately larger element of U.S. force presence in the Pacific, carrying more of the burden of preserving regional balance and maintaining the informal security system that has evolved since 1950. Apart from Korea, no formal region-wide or subregional security structures or force-related confidencebuilding arrangements on the European model are in prospect. Peacetime fleet missions in the APR will focus on reassurance and on deterrence of a diffuse range of threats to regional stability. Region-wide arms modernization will reflect economic growth more than reactive arms races, unless the U.S. balancing role in regional security loses credibility. Sea and air forces will expand, but there will be no significant military challenge to U.S. forces in the Pacific. Yet distance and, especially, the perceptions of regional states require that fleet units be regionally based: Surge capability, transitory presence, or assignment or earmarking of externally based forces will not be Substitutes.

Butler, Bryce D. **Factors of East Asian Maritime Security**. Monterey, CA: Naval Postgraduate School, 2003. (ADA414654). 93p.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, March 2003.

Abstract: Since the end of the Cold War, the principle naval powers of East Asia--China, Japan, and the Republic of Korea--have increased the importance they attach to their maritime strategies relative to the changing situation in East Asia and adjoining waters. With the growing reliance on each of these countries on seaborne trade and supply of resources, including oil, the countries' maritime defense policies, including the sea lanes of communications (SLOCs), are more important than ever. The purpose of this thesis is to explore the maritime visions of these three countries, the changing maritime security environment they address the maritime territorial disputes, in which they are engaged and the potential for a naval arms race in East Asia. It assesses the impact of Korean reunification and Chinese reunification on their maritime strategies and prospects for a regional multilateral maritime security regime. This thesis emphasizes the importance of the U.S. Navy's Forward presence in stabilizing potential problems at sea in East Asia.

Goldrick, James. Navies in Asia: A Survey of the Development of Ten Navies in South and South East Asia, 1945-1992. Newport, RI: Naval War College, 1992. (ADA260572). 261p.

Abstract: The study analyses the development of the navies of South and South East Asia from the end of the Second World War until 1992. Included within the history are the services of Pakistan, India, Sri Lanka, Bangladesh, Thailand, the Philippines, Malaysia, Singapore, Brunei and Indonesia. The factors involved within the development of each navy over the last forty seven years are treated, with particular emphasis on strategic, economic and cultural considerations. The great majority of these navies have undergone considerable expansion in size and improvement in capability within the last two decades. This is partly the result of increases in budgets arising from rapid economic development within the region, but it also reflects increasing awareness amongst the countries concerned of the significance of the maritime sphere and of the complex strategic environment arising from the end of the Cold War and the rise of powers such as China, Japan and India. 145 All but the least developed now possess surface to surface missiles, modem ocean going combatants with organic helicopters and a variety of other weapons and sensors. India, Pakistan and Indonesia possess modem diesel-electric submarines, while India has experimented with a nuclear submarine. Still other countries are examining proposals to acquire submarine forces. Every nation is improving its maritime surveillance capabilities. The theme within the region is one of improved capabilities to meet ever more demanding requirements. The study analyses these changes and suggests the likely directions which each service will take, as well as the associated implications for the local security situation.

Abstract: The Commander, Seventh Fleet, asked CNA to assess the security environment of the Asia-Pacific Region (APR) between now and 2010. This research memorandum focuses on the most probable trends relating to Southeast Asia and Australia during this period. The project's final report, The dynamics of security in the Asia-Pacific Region (CNA Research Memorandum 95-172, January 1996), discusses the implications of these trends (and of the probable trends in other countries of the region) for U.S. forces, particularly the Navy.

#### **BRAZILIAN**

Bonturi, Orlando. **Brazil and the Vital South Atlantic**. Washington, DC: National Defense University: Supt. Of Docs., U.S. GPO [distributor], 1988. (ADA259350). 96p. Abstract: Throughout history, control of the seas has been critical in War and indispensable to economic prosperity. In today's global economy, the security of the world's oceans remains critical. Captain Bonturi contends that Brazil is well suited to take a leading role in the defense of the South Atlantic; Brazil's own defense is closely tied to the South Atlantic, he notes. By virtue of its geographical position and numerous good ports, Brazil is increasingly looking toward the sea for its growth as a major trading nation. In his analysis, Captain Bonturi examines the sea lines of communication so critical to Brazil's and the West's economic well-being. He identifies major choke points that could become vulnerable during a crisis, including the straight formed by the western-most coast of Africa and the eastern-most coast of South America--a line often overlooked in strategic analyses. The author also suggests a possible defense line --the 'South Atlantic Early Warning Belt'--be established between the two Continents. Captain Bonturi recommends a NATO-like organization--a South Atlantic Treaty Organization--made up of South American and African nations for the Defense of the South Atlantic. Collins, Harold H. **The United States and Brazil: A Naval Partnership for the Twenty-First Century?** Monterey, CA: Naval Postgraduate School, 2005. (ADA242430). 93p.

Thesis (M.A.)--Naval Postgraduate School, 1991.

Abstract: This thesis explores the prospects for a U.S./Brazilian naval partnership for the Twenty-First Century. It examines the viability of existing multilateral agreements between the United States and Latin American countries for maritime defense of the South Atlantic. It argues that the existing agreements are outdated and ineffective, primarily due to a reduction in Cold War threat. With a naval capability ranked among the highest in the third world, and historical naval ties to the United States from both World Wars, the Brazilian navy offers the possibility to assume a greater role in western defense. As a possible means to cultivate this beneficial relationship, a shift in emphasis from the current posture of U.S./Latin American multilateral hemispheric defense, to a focused bilateral U.S./Brazilian naval partnership is suggested. The thesis also suggests that national security threats to the hemisphere have changed to terrorism, narcotrafficking, the spread of high technology weapons, and the rise of ethnic tensions. These threats affect both the United States and Brazil, and could lead to closer cooperation in U.S./Brazilian naval relations. NPS/DKL Location: THESIS C573

Connors, Michael E. **Tudo Pela Patria: The Brazilian Navy's Drive to Blue Water**. Monterey, CA: Naval Postgraduate School, 2005. (ADA435681). 65p.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, June 2005. Abstract: The Brazilian Navy is unique among most world navies today. Since the end of the Cold War, most nations have reduced their naval power, yet Brazil has maintained a determination to possess a Blue-water fleet. Brazil is also attempting to assert itself as the regional power in South America, in this case through the development of a modern yet modest naval force capable of projecting power beyond its shores. This thesis seeks to explore Brazil's recent naval expansion through three points of view. First, Brazil is seeking possession of a blue water naval force as a likely means for it to achieve greater power and prestige amongst other powerful states in the world. Second, Brazil aspires for a permanent seat on the United Nations Security Council, and is expanding its fleet to increase its chances of being chosen. Finally, domestic politics also have a great effect on Brazil's current drive to blue water. Creation of the civilian-led defense ministry, the expensive SIVAM surveillance system, and general public sentiment all

work to favor naval expansion. The thesis concludes by summarizing the three arguments and stating

that each of the three arguments have collectively contributed to Brazil's naval expansion.

Ferreira, Domingos P.C. Branco. **The Navy of Brazil: An Emerging Power at Sea**. Washington, DC: National Defense University: [For sale by the Supt. of Docs., U.S. GPO], 1983. (ADA125544; National Security Affairs Issue paper series; 83-1). 57p. Abstract: Captain Ferreira provides a perspective not available from one of our United States Fellows. Many observers foresee an increasingly influential place for Brazil in international affairs. Is the Brazilian Navy prepared to take on an expanded international role? Captain Ferreira examines the history of his country's navy, analyzes current problems, and suggests directions for future development. He identifies the basic issues facing the Brazilian Navy: Overdependence on foreign equipment, lack of funds, and excessive concentration of forces in Rio de Janeiro. As possible solutions, he proposes building more ships and naval equipment in Brazil, modernizing and expanding the fleet, and redeploying forces. Captain Ferreira's perceptions of his country's navy are of special interest to US naval strategists and to the national security planning community concerned with issues in Latin America and the South Atlantic.

Summary: The importance of marine salvage during armed conflict has been vastly underestimated since becoming a vital Naval arm during the First World War. Between 1915 and 1918 the Admiralty Salvage Section saved nearly 400 merchant vessels, desperately needed to bring food and War materials into Britain. During the Second World War, some two million tons of shipping was successfully recovered. From D-Day onwards Admiralty salvage men cleared many stricken craft from the Normandy beaches alone, often under heavy shellfire. Then, as the Germans retreated back across Europe, salvage teams undertook vital port clearance duties, greatly aiding the Allied advance on Germany.During the Suez Crisis, Falklands Conflict and even the last Gulf War the same story can be told. Drawing on a wealth of official documents, Admiralty Salvage is the first book to explore in depth the courage, personal sacrifice and invaluable contribution these forgotten heroes have made during both peace and War. -- -- http://www.pen-and-sword.co.uk/

MacGregor, David. Innovation in Naval Warfare in Britain and the United States

**Between the First and Second World Wars**. Rochester, NY: The University of Rochester, 1990. 248p.

Thesis (Ph.D.) -- The University of Rochester, 1990.

Abstract: The dissertation compares the progress of the Royal Navy and the U.S. Navy between the World Wars in developing and implementing new methods of air, amphibious, surface, antisubmarine and submarine warfare. Using British Cabinet and Admiralty and U.S. Navy and Marine Corps records, it describes the major developments in each navy in each area of Warfare and evaluates the factors which made each navy stronger in some areas than in others. Broadly, the U.S. Navy made more progress in air and amphibious warfare, and the Royal Navy more in surface and antisubmarine warfare. Institutional and strategic factors favored naval aviation and amphibious warfare in the United States but discouraged them in Britain. Those same factors, and a cultural bias favoring cautious innovation in traditional forms of Warfare, caused the Royal Navy to make more progress in surface and antisubmarine warfare.

Canada: University of Victoria, 2003. 94p. Thesis (M.A.)--University of Victoria, 2003.

Abstract: As part of a major defence review meant to streamline and re-prioritize the Canadian Armed Forces (CAF), in 1969, the Trudeau government decommissioned Canada's last aircraft carrier, HMCS Bonaventure. The carrier represented a major part of Maritime Command's NATO oriented antisubmarine warfare (ASW) effort. There were three main reasons for the government's decision. First, the carrier's yearly cost of \$20 million was too much for the government to afford. Second, several defence experts challenged the ability of the Bonaventure to fulfill its ASW role. Third, members of the government and sections of the public believed that an aircraft carrier was a luxury that Canada did not require for its defence. There was a perception that the carrier was the wrong ship used for the wrong role. In sum, the decision to decommission the Bonaventure was politically attractive because of economic reasons, but was made based on strategic rationale.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, March 2003. Abstract: Since the end of the Cold War, the principle naval powers of East Asia--China, Japan, and the Republic of Korea--have increased the importance they attach to their maritime strategies relative to the changing situation in East Asia and adjoining waters. With the growing reliance on each of these countries on seaborne trade and supply of resources, including oil, the countries' maritime defense policies, including the sea lanes of communications (SLOCs), are more important than ever. The purpose of this thesis is to explore the maritime visions of these three countries, the changing maritime security environment they address the maritime territorial disputes, in which they are engaged and the potential for a naval arms race in East Asia. It assesses the impact of Korean reunification and Chinese reunification on their maritime strategies and prospects for a regional multilateral maritime security regime. This thesis emphasizes the importance of the U.S. Navy's forward presence in stabilizing potential problems at sea in East Asia.

Abstract: Relations between Washington and Beijing improved swiftly in the wake of the 9/11 terrorist attacks, especially in comparison to the nadir that had been reached during the April 2001 EP-3 incident. This new tide of cooperation has included counterterrorism initiatives, regional partnership in such complex situations as Afghanistan and North Korea, and even some modest agreement on the importance of maintaining the status quo with respect to Taiwan's status. A strong foundation for this strategic cooperation is, of course, a burgeoning trade relationship, which received a further boost from China's entry into the World Trade Organization in November 2001. In 2003, trade between the United States and China amounted to \$191.7 billion, up 23.2 percent from 2002. Remarkably, the total for 2003 was more than double the figure for 1998. The United States is China's second most important trading partner nation (Japan is first). Many reasonable strategists, observing this data, consider armed conflict between Washington and Beijing impossible, given the economic losses that both would incur almost immediately. Unfortunately, history has not been kind to the school of theorizing, known as commercial liberalism, which holds that economic interdependence prevents conflict. Indeed, the belligerent powers prior to both World Wars had achieved impressive levels of economic interdependence.

Asian Maritime Stability.

Summary: Few theorists can rival Mahan's influence upon statesmen and strategists. He was feted not only in the United States but in Victorian Britain, the Kaiser's Germany, and Imperial Japan. Chinese analysts now routinely invoke Mahan's writings, exhorting their nation to build a powerful navy.

Thesis (Ph.D.) -- George Washington University, 1994.

Abstract: Since 1978, China has experienced a strategic transformation in its national development. China abandoned its self-reliant approach and began a new maritime-oriented development. This study primarily examines China's maritime-oriented national development, its roles in elevating China's comprehensive national strength, and its implications for China's national security. This study discusses the rationales for China's seaward development. In terms of the geostrategic environment, China encountered less threat from its land border, but more economic and security interests from the sea.

# Olivier, David H. Staatskaperei [Nationalization of Privateering]: The German Navy and Commerce Warfare, 1856-1888, 2001. 342p.

Thesis (Ph.D.)--University of Saskatchewan, 2001.

Abstract: This dissertation is the first attempt to examine the effects German commerce-raiding philosophies had on naval operations planning and construction policies from 1856 to 1888. Commerce-raiding doctrines reflected the awareness of the importance of overseas trade, provided a simple strategy for a second-class navy, and gave officers and crews a means of contributing to the War-effort. Thesis (Ph.D.) -- University of Tennessee, Knoxville, 1982.

Abstract: The subject of this study is the construction of the German High Seas Fleet at the turn of the Century from 1897 to 1912. Specifically, it focuses on the efforts of the Imperial Naval Office (RMA) under the direction of Admiral Tirpitz as State Secretary to coordinate and control fleet construction and the many firms caught up in that program. From the Admiral's appointment to the RMA in 1897 until the Reichstag's budget priorities shifted back to the army in 1912, the fleet was one of the outstanding sources of debate in Germany and among the western powers. Previous historical research has concentrated on political and social ramifications, but has ignored the naval-industrial relationship that was fundamental to the development of the fleet.

Abstract: Introduction to use of term doctrine" as used in Italy. In Italian navy, term is applied to naval thought and strategy and is similar to what is referred to in the U.S. as operational art. Doctrine may also re used at the tactical level of War. Report reviews history of Italian navy doctrine from earliest known times, medieval and pre-unitary navies are covered, with specific emphasis on the navies of Naples, the Kingdom of Sardinia-Piedmount. Venice, and with less emphasis on the Pontiff navy and the navy of Tuscany. Italian navy covered since unification. Analysis of doctrinal role during early years of Italian navy, World War I, the interwar years, World War II. And since the end of World War ii. Conclusions

include: Doctrine existed in both written and non written form; there are parallels in the building of a national Italian navy doctrine from its many parts and current efforts to create multinational navy doctrine; the influence of foreign navies was strong in the development of Italian navy doctrine; Italy has a strong tradition of doctrinal development: Italy may be an excellent case study for the development of navy doctrine by a medium-power navy: Italy shares with most other navies the problems associated with translating naval doctrine into concepts understandable by political and military leaders. Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, March 2003. Abstract: Since the end of the Cold War, the principle naval powers of East Asia--China, Japan, and the Republic of Korea--have increased the importance they attach to their maritime strategies relative to the changing situation in East Asia and adjoining waters. With the growing reliance on each of these countries on seaborne trade and supply of resources, including oil, the countries' maritime defense policies, including the sea lanes of communications (SLOCs), are more important than ever. The purpose of this thesis is to explore the maritime visions of these three countries, the changing maritime security environment they address the maritime territorial disputes, in which they are engaged and the potential for a naval arms race in East Asia. It assesses the impact of Korean reunification and Chinese reunification on their maritime strategies and prospects for a regional multilateral maritime security

regime. This thesis emphasizes the importance of the U.S. Navy's forward presence in stabilizing potential problems at sea in East Asia.

#### **KOREAN**

Butler, Bryce D. **Factors of East Asian Maritime Security**. Monterey, CA: Naval Postgraduate School, 2003. (ADA414654). 93p.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, March 2003. Abstract: Since the end of the Cold War, the principle naval powers of East Asia--China, Japan, and the Republic of Korea--have increased the importance they attach to their maritime strategies relative to the changing situation in East Asia and adjoining waters. With the growing reliance on each of these countries on seaborne trade and supply of resources, including oil, the countries' maritime defense policies, including the sea lanes of communications (SLOCs), are more important than ever. The purpose of this thesis is to explore the maritime visions of these three countries, the changing maritime Security environment they address the maritime territorial disputes, in which they are engaged and the potential for a naval arms race in East Asia. It assesses the impact of Korean reunification and Chinese reunification on their maritime strategies and prospects for a regional multilateral maritime security regime. This thesis emphasizes the importance of the U.S. Navy's forward presence in stabilizing potential problems at sea in East Asia.

McCallum, Christopher M. Cooperative Security in Northeast Asia: Ramifications of Change in the U.S. and ROK Maritime Strategies. Monterey, CA: Naval Postgraduate School, 2002. (ADA406973). 77p.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, September 2002.

Abstract: Since the end of World War II, stability in Northeast Asia has been a key goal of the United States. Maintaining a balance of power in this maritime theater has proven important for regional stability and global economic growth. The modernization of the South Korean Navy and its changing maritime strategy will have ramifications for the U.S.-Republic of Korea (ROK) relationship in the future. In the current world situation, changing regional threats will require new approaches to maintaining future stability. The United States and South Korea must work together toward achieving stronger bilateral and multilateral relationships with other principal actors in the region to achieve this goal. The purpose of this thesis is to review the changing strategies of the United States and South Korean Navies in Northeast Asia and to examine the ramifications should a more cooperative maritime alliance structure be utilized in the future. It is relevant because the United States has played a vital role in the security of the Korean peninsula since the end of World War II, and because decisions made by South Korea regarding security matters affect the United States and its interests in the region.

Monterey, CA: Naval Postgraduate School, 1974. (ADA781868). 104p.

Thesis (M.S. in Management) -- Naval Postgraduate School, 1974.

Abstract: (U) The thesis treats the need to understand the effects of environmental factors on naval strategy. Studies are made of the navies of the United States and Soviet Union with several examples of how these factors have influenced naval policy in the past. A detailed examination of these factors such as political issues, economics, and Third World nationalism, illustrates how significant these subjective elements of naval strategy are in determining policy judgments. Daniel, Richard W. A History of Russian and Soviet Naval Developments. Monterey, CA: Naval Postgraduate School, 1988. (ADA194343). 59p.

Thesis (M.S. in Systems Technology) -- Naval Postgraduate School, March 1988.

Abstract: This thesis seeks to provide an historical understanding of Russian and Soviet naval developments. This historical basis is provided to complement technological analysis of Soviet naval concepts and systems. The origins of Soviet naval traditions are examined, beginning with the establishment of the ancient Russian state of Kiev, the birth of the Tsarist Navy (under Peter I), the origins of the Communist State and Navy, and concluding with the Soviet naval developments during the Second World War. In examining these developments significant naval victories (Sweden, 1721; and Tchesme, 1770) and defeats (Crimean, 1853; and Tsushima, 1905) are noted, along with non-combat administrative reforms. The employment of the Russian Navy in World War One and the Soviet Navy in World War Two are also examined. The conclusion is drawn that the primary mission of the Soviet Navy is to support the Soviet Army in a continental theater. This conclusion is based on the historical failure of the Russian and Soviet Navies in conducting blue-water operations (inferring a notion of perceived futility in attempting these operations), the historical success in conducting coastal operations in support of the army (inferring the utility of these types of operations), and the historical land combat bias of the Russian and Soviet Militaries.

Research report, 31 Oct 1975; Final report, 31 Oct 1985 is classified.

Abstract: (U) This study attempts to identify technology required for the Navy to engage in forms of limited Warfare not previously widely studied, but whose plausibility may increase significantly over the next quarter century. The assymetric character of the U.S. and Soviet fleets is studied to reveal their vulnerabilities as well as opportunities for U.S. technological initiatives. (Author).

Kime, Steve F. **A Soviet Navy for the Nuclear Age**. Washington, DC: National Defense University, Research Directorate, 1980. (ADA084855; National Security Affairs Issue paper; 80-1). 25p.

Abstract: In this paper, a continuing topic of concern to US security policymakers is addressed--the growing qualitative and quantitative improvements in the Soviet military establishment. Perhaps one of the more interesting aspects of this trend has been the marked improvement in the strengths and capabilities of the Soviet Navy, which, as the author notes, has undergone a Revolution. Commander Steve Kime has published several earlier pieces about Soviet maritime affairs. In this issue paper he provides a useful perspective on current Soviet naval initiatives by tracing the historical development of the Russian Navy to its current status as a formidable nuclear force with global reach. In fact, as the study suggests, it is a force which challenges the national will of the United States to remain the world's leading seapower.

Walt, Stephen M. Analysts in War and Peace: MccGwire, McConnell, and Admiral Gorshkov. Alexandria, VA: Center for Naval Analyses, 1987. (Professional paper; 458);(ADA187842). 63p.

Abstract: This paper is an attempt to evaluate the debate between two Western analysts of the Soviet Navy. The material in question is Soviet military literature, and the focus is on Admiral Sergei G. Gorshkov. Our two scholarly protagonists are James M. McConnell and Michael K. MccGwire. There are two major questions. First, was Gorshkov speaking authoritatively in his celebrated series Navies in War and Peace? Second, what was he saying? Was he elaborating a novel strategy of withholding SSBN? Alternatively, was the Gorshkov series a polemic for an expansion of the Soviet Navy along more traditional lines, with defense against Western naval strike forces as a principal mission? In this essay, I focus primarily on the second of these questions.

Abstract: Translated from the official German naval history of the First World War, this account is based upon the War diaries of the commanding officers involved and makes extensive use of the texts of naval staff memoranda and instructions, operation and War orders, and German wireless messages. Concentrating on the North Sea area, the volume begins with an examination of the background of the conflict and the preliminary German preparations for the Warvis-a-vis those of the British Navy, and then proceeds to the early operations of the two fleets during August 1914. The detailed treatment reflects the importance of this initial stage of the contest, in which are exhibited the maritime planning and determinations that set the course of the entire naval conduct of the War: The Blockade by Britain and the German employment of the submarine and mine warfare. Relevant appendices, tables, and charts accompany each part.

English translation of "Der krieg in der Nordsee."

North Sea Aeronaval War II: The Greatest Battle Never Fought. -- 18. 'Taranto' 1918 and Jan Smuts' Revenge. -- 19. Conclusions. -- Appendix 1. Growth of Naval Air Arms 1914-1918. --Appendix 2. Ships Sunk, Permanently Disabled, Captured, Interned or otherwise Incapacitated by Direct or Indirect Aerial Action. -- Appendix 3. A Note on the Development of Aerial Direction of Naval Gunfire. Review: Most important are Mr. Layman's case studies of the successes and missed opportunities of naval aviation in its most significant role of the War, strategic reconnaissance. These included the defense of the Suez Canal, anti- U-Boat operations, the Dardanelles/Gallipoli Campaign, and, of course, the Battle of Jutland. Two further commendations are due to the author and his editors for covering all theaters of operations equally well (they do not disproportionately focus on the North Sea and Atlantic) and for the tremendous selection of photographs supporting the text. -- Michael E. Hanlon, Research Editor, Relevance: The Quarterly Journal of The Great War Society, 1997.

Bennett, Geoffrey Martin. **Naval Battles of the First World War**. Princeton, NJ; Recording for the Blind & Dyslexic, 2002. (Classic Military History). 1 sound disc. Abstract: Most people think of World War I only in terms of trench Warfare and biplanes, but with [this book, the author] reveals an important but often overlooked aspect: The sea. This classic history of the Great War at sea combines graphic and stirring accounts of all the principle naval engagements-battles overseas, in British waters and, for the first time, under the sea-with analysis of the strategy and tactics of both sides. Vividly recounting these battles, [he] confirms the Allied navies' vital contribution to victory. Illustrated with maps, plans, [the book] brings long-overdue attention to the naval history of World War I. - http://www.amazon.com.

Events After The Occupation Of Baghdad.

Publisher's description: March 2007 sees the anniversary of the fall of Baghdad - not in 2003, but 1917. Few people realize that the latest American-led invasion was prefigured by a poorly-resourced but ultimately successful British campaign during the First World War. Where the Americans had overwhelming air superiority, the British enjoyed a similar advantage - naval power. In fact, the army's advance up the Tigris marshlands against heavy odds was only possible thanks to the close artillery support of the Navy's gunboats and the transport capacities of river steamers.

Beginning as an ad hoc operation by the Indian Army to secure Western oil supplies (only the first of many echoes of the present), startling initial successes were followed by overweening ambition, the disastrous surrender at Kut, a reassessment of strategy and the final triumphant capture of Baghdad, which was quickly secured with little destruction and no looting. In each phase, the Navy played a major role, eventually building special shallow-draft vessels for the task, which were shipped out in kit form and assembled at Basra. Familiar problems, like inter-tribal rivalry, were faced from the outset, but with experienced colonial administrators brought in from India, the British were well-equipped to preserve civil order after military victory.

Written with insight and authority by the man who commanded the naval forces, it provides a fascinating insider's view of an operation that did not always run smoothly but whose results look all the more impressive when compared with the recent history of Iraq. This is emphasised in a new Foreword by Sir Jeremy Greenstock, until his resignation in 2004 the deputy to Paul Bremer in the Coalition Provisional Authority. -- <a href="http://www.chathampublishing.com/booksheets/tigris\_gunboats.html">http://www.chathampublishing.com/booksheets/tigris\_gunboats.html</a>

Review: The Gallipoli campaign of 1914–15 is one of the events of the First World War that continues to seize imaginations today. The first modern seaborne landing of British, French, Australian, New Zealand, and Indian forces on a hostile—and what proved to be a well-defended—peninsula, the attack has been

remembered for its many acts of individual heroism as well as its unprepared leaders. Of particular fascination, and until now largely overlooked in historical accounts, are the naval dimensions of the campaign. The Navy's presence at Gallipoli crucially proved how influential submarine power could be. This absorbing book provides the only account of the complete Allied submarine and related German U-Boat activity, integrated with a thorough analysis of the strategies and actions of all land, sea, and air forces. Incorporating patrol and technical reports and personal testimonies, Victor Rudenno's gripping narrative does full justice to the dramatic and inspirational battles in the Dardanelles. -- http://yalepress.yale.edu/yupbooks/book.asp?isbn=9780300124408

Smith, Peter Charles. **Naval Warfare in the English Channel, 1939-1945**. Barnsley, South Yorkshire: Pen & Sword Maritime, 2007. 255p.

Publisher's synopsis: From the year 1066 the English Channel has provided Great Britain with a natural defensive barrier, but never more than in the early days of World War Two. This book relates how the Royal Navy defended that vital seaway throughout the War. From the early days of the Dover Patrols, through the traumas of the Dunkirk evacuation, the Battles of the Channel convoys; the War against the E-Boats and U-Boats; the tragic raids at Dieppe and St Nazaire; the Escape of the German Battle-fleet; coastal convoys; the Normandy landings and the Final liberation of the Channel Islands. Many Wartime photographs, charts and tables add to this superb account of this bitterly contested narrow sea. -- <a href="http://www.pen-and-sword.co.uk/?product\_id=1517">http://www.pen-and-sword.co.uk/?product\_id=1517</a>

Abstract: At the end of World War I, and upon the signing of the Treaty of Versailles, the German Armed Forces had been drastically reduced by the Allies. The German Navy was stripped of its battleships, submarines, and aircraft. The effort to rebuild began immediately following the War. The decision about what direction and shape the Navy would take was influenced by several factors. The German Navy's anticipated enemy, the restrictions of the Treaty of Versailles, and the political situation all played a part in the development of the post- World War I German Navy. At least as important as any of these factors was the influence of two prominent naval theorists, A.T. Mahan, and Sir Julian Corbett. This thesis examined the extent that the theories of Mahan and Corbett influenced the development of German Naval Strategy between 1930 and 1936. The period includes the remnants of the Weimar Republic, the ascension of Adolf Hitler, and the signing of the Anglo-German Naval agreement in 1935, and finally the First of naval developments after the treaty.

Horn, Alton Stephenson. **The Story of Operation K and the Second Attack on Pearl Harbor**. Ashville, NC: University of North Carolina, 2000. 194p.

Thesis (Master of Liberal Arts) -- University of North Carolina, 2000.

Abstract: "Operation K" was a plan to use flying boats operating from bases in the Marshall Islands for armed reconnaissance raids on the Hawaiian bases. These aircraft would be refueled by submarines at an atoll west of Oahu to extend their range for the attacks. Only one such attack took place on the night of March 3-4, 1942. Because of cloud cover, the targets were not visible and the Japanese bombers did no real damage. Brilliant Intelligence work by U.S. intelligence officers and cryptanalysists thwarted the planned follow-on raids. Denied the knowledge of the location of American aircraft carriers, the Japanese suffered a disaster in the Battle of Midway, the crucial "turning point" in the Pacific War.

Parillo, Mark P. **The Japanese Merchant Marine in World War II**. Annapolis, MD: Naval Institute Press, c1993. 308p.

Thesis (Ph. D.) -- Ohio State University, 1987.

Abstract: Although Japan's shipyards performed beyond expectations During the War, the nation's seaborne transport capacity shrunk Substantially throughout the years of conflict. The Japanese contributed significantly to this sad result with their indifference to shipping protection. The military services commandeered shipping irresponsibly, provided escorts of inadequate quantity and quality, neglected development of anti-submarine doctrine and tactics, ignored mine warfare, and wasted much transport capacity through inefficient administration. The collapse of the merchant marine doomed both the country's economy and its military prospects.

Abstract: The acoustic environment in the ocean contains numerous narrowband and broadband sources which conflict to introduce uncertainty in bearing estimates used to detect submerged targets. The detection and localization of a target of interest in the presence of noise is the key element of antisubmarine warfare. The DIFAR sonobuoy is the most effective tool for this purpose. A DIFAR sonobuoy is comprised of 3 receiving elements which can be used to extract directional information from an incoming acoustic signal. High-resolution beamforming techniques, including the Maximum Likelihood Adaptive Beamformer (MLAB), have been previously applied to real DIFAR data [Desrochers, 1999] to provide successful direction estimates of two sources in the same frequency bin. MLAB uses the Fast Fourier Transform (FFT) to compute a cross-spectral matrix that is used to estimate the bearing of acoustic targets. It has been shown that Fast Orthogonal Search (FOS) technique can yield a higher frequency resolution with a lower variance on the estimate than the FFT algorithm. This thesis applies the FOS algorithm in place of the FFT in both the arctangent bearing estimator and ML Beamformer. Using FOS to create a spectral estimate for DIFAR sonobuoy data has shown an improvement in the detection of narrowband sources. A better spectral estimate in the presence of noise leads to an improved bearing estimate calculated using both a simple arctangent bearing estimator and the Maximum Likelihood Adaptive Beamformer.

Felker, Craig C. Simulation and Sea Power: The U.S. Navy Fleet Problems, 1923-1940. 314 I. Durham, NC: Duke University, 2004.

Thesis (Ph.D.) -- Duke University, Department of History, 2004.

Abstract: From 1923 to 1940 the U.S. Navy held Twenty-one major exercises, known as "Fleet Problems." While only part of annual fleet training, these exercises differed from routine maneuvers and gunnery exercises. All available fleet units were integrated into a single major action.... Concepts such as dive-bombing, independent submarine operations, antisubmarine warfare, and amphibious operations were explored in a medium that stressed the thinking of naval officers as how best to fight a naval War with modern weapons.

Hoeg, J. G. Technical Evaluation Report on the Flight Mechanics Panel Symposium on Aircraft Ship Operations = Le Couple Aeronef-Navire dans les Operations. Neuilly Sur Seine, France: AGARD, 1992. (AGARD advisory Report; 312; AGARDAR312). 5p.

"This Advisory Report was prepared at the request of the Flight Mechanics Panel of AGARD."

Abstract: Worldwide interest in the use of shipborne aircraft as a major weapons system is very broad. Many NATO countries operate fixed wing aircraft from ships. Additionally, the use of ships as helicopter platforms is extensive in the NATO community and brings another important dimension to the aircraft/ship interface issue. Thus, it seemed that both fixed and rotary wing aviation deserved equal billing in the Aircraft/Ship Interface Symposium which is the subject of this Technical Evaluation Report. The Symposium contained Twenty-five presentations grouped under the following topics: Keynote Addresses; Ship Environment; Guidance, Controls, and Displays; Flight Test and Simulation Techniques; Launch, Recovery, and Handling Systems Development; and Operational Views and Future Developments.

Abstract: Environmental information is important for successful planning and execution of naval operations. To ensure that naval forces have the most up-to-date capacities, ONR has extensive environmental research program. To increase research community understanding of the operational demands placed on naval operations and to facilitate discover between these two groups, the NRC's Ocean Studies Board, working with ONR, convened five previous symposiums on tactical oceanography. The sixth and latest symposium in this series was held February 1999 in Corpus Christi, Texas.

Abbatiello, John J. **British Naval Aviation and the Anti-Submarine Campaign, 1917-18**. London: King's College Department of War Studies, 2004. (ADA425512). 289p. Doctoral Dissertation (PhD (Arts)) -- King's College, 2004.

Abstract: This thesis investigates the employment of British aircraft Against German submarines during the final years of the First World War, an issue that appears only marginally in other studies because it does not clearly fall into naval or air power history. A focused study is needed to assess the effectiveness of the effort and the veracity of the secondary literature. The Royal Naval Air Service invested heavily in aircraft of all types in order to counter the U-Boat. Under the Royal Air Force, the air campaign against U-Boats continued uninterrupted. Aircraft bombed German U-Boat bases in Flanders, conducted area and hunting patrols around the coasts of Britain, and escorted merchant convoys to safety. Despite the fact that aircraft acting alone destroyed only one U-Boat during the War, their overall contribution to foiling U-Boat attacks was significant. Only five merchant vessels succumbed to submarine attack when convoyed by a combined air and surface escort during World War I. This thesis is organised thematically. Early chapters examine the aircraft and weapons technology, aircrew training, and aircraft production issues that shaped this campaign. Then, a close examination of anti-submarine operations that is, bombing, patrols, and escort yields a significantly different judgment from existing interpretations of these operations. A chapter on the British official assessments, which provided a basis for much of the secondary literature, demonstrates that this campaign was often misrepresented because it was either used to promote specific agendas or it was inappropriately employed as evidence in unrelated historical arguments. The next chapter examines the German view of aircraft effectiveness, through German

actions, prisoner interrogations, official histories, and memoirs, to provide a comparative judgment. The conclusion closes with a brief narrative of post-War air anti-submarine developments and a summary of findings.

Grant, Robert McQueen. **U-Boat Intelligence 1914-1918: Admiralty Intelligence Division and the Defeat of the U-Boats 1914-18.** New ed. Penzance, Cornwall: Periscope Publishing, 2002. 195p.

Synopsis: This landmark book shows how the Intelligence Division of the Admiralty played a key role in the defeat of the U-Boats in World War One. With the assistance of the Naval Historical Branch of the Ministry of Defence and the Director of Naval History in Washington, Professor Grant has been able to piece together the crucial role played by naval intelligence in the victory at sea 1914-1918. Intelligence came from many sources including prisoner interrogations, signals interception and the investigation and salvage of wrecks. By analysing this information, naval intelligence was able thwart attempts to land spies in North Africa, deal the U-Boat minelaying campaign in British coastal waters a fatal blow and ensure that the U-Boats would not have the opportunity to attack the Grand Fleet in 1918

Grant, Robert McQueen. **U-Boats Destroyed: The Effect of Anti-Submarine Warfare 1914-1918**. Penzance, Cornwall: Periscope Publishing, Ltd., 2002. 172p.

Synopsis: World War One saw the submarine develop into a potent weapon of War. The German

submarine campaign almost defeated Britain during the Spring of 1917. By striking at the shipping that supplied her, it has been estimated that Britain came within six weeks of starvation. Salvation came in two ways. Firstly, the allies adopted the convoy system, forcing the U-Boats into encounters with escorting Warships, whilst protecting precious cargoes. Secondly, technological innovations, such as the hydrophone, depth charge and mine barrage were added to the arsenal of anti-submarine weaponry. Slowly the tide turned and the U-Boat menace was contained.

The raids on Zeebrugge and Ostend remain the most exciting small Actions, not just of the First World War but in British history. The purpose was to counter the U-Boat menace. Submarine attacks on Allied shipping caused great difficult and hardship. Surprise and daring were essential. Despite over 600 casualties, the attacks were a great boost to civilian morale in Britain. Eleven Victoria Crosses were awarded, eight of them for the Zeebrugge raid alone. --

Burtch, Andrew Paul. Canadian Theatre: The Battle of the St. Lawrence and Its Aftermath, May-October 1942. Waterloo, Ontario: Wilfrid Laurier University, 2003. 114 l.

Thesis (M.A.)--Wilfrid Laurier University, 2003.

Abstract: The Battle of the St. Lawrence is one of the least discussed engagements in Canadian naval history. The vast majority of those who have dealt with it write off the battle as simply a defeat for the Canadian War effort. On closer examination, however, it becomes clear that the Battle of the St. Lawrence and its aftermath, the closure of the St. Lawrence to shipping, are much more complex. The RCN and the RCAF accomplished much in coastal defence with very little resources, and though no U-Boats were killed in the engagement, Canadian naval and air units working in combination gave the appearance of coordinated ASW to German submarine commanders. U-Boats did not return to Canadian coastal waters in the following shipping season. Furthermore, Canadian defence planners took valuable lessons from the setbacks in the Gulf in 1942 and devised more aggressive doctrines for escort work and air patrols. The most important contribution of this work is the analysis of the decision to close the St. Lawrence. Whereas most historians contend that the Canadian government closed down a vital maritime artery in a panicked response to losses in the St. Lawrence, it is shown that the decision was the culmination of a carefully drafted policy which had been considered for several years. The policy incorporated the preferences of both Canadian defence planners and the British Ministry of War Transport. The decision to close the St. Lawrence did not have its intended effect, since shipping resumed in the Gulf of St. Lawrence with some restrictions in early 1943. The impact of the Battle of the St. Lawrence on the War effort, conversely to what other historians have argued, was in fact negligible.

Henry, Chris. **Depth Charge: Royal Naval Mines, Depth Charges and Underwater Weapons 1914-1945**. Barnsley, South Yorkshire: Pen & Sword, 2005. 224p.

Summary: The history of weapons and Warfare is usually written from the point of view of the battles fought and the tactics used. In naval Warfare, in particular, the story of how these weapons were invented, designed and supplied is seldom told. Chris Henry, in this pioneering study, sets the record straight. He describes how, to counter the extraordinary threat posed by the U-Boats in the World Wars, the Royal Navy responded with weapons that kept open the vital supply routes of the Atlantic Ocean. He also celebrates the achievements of the engineers and inventors whose inspired work was essential to Britain's Survival - men like Herbert Taylor and Alban Gwynne. --BOOK JACKET.

Partial contents: 39. First VC Attack On U-Boat Lloyd Trigg

Trigg was an experienced pilot attached to 200 Squadron RAF, operating with Coastal Command. On 11 August 1943 he engaged the German submarine U-468, under the command of Klemens Schamong. His aircraft received several catastrophic hits from the anti-aircraft guns during his approach to drop depth charges and was on fire as Trigg made his final attack. It then crashed, killing Trigg and his crew, so the only witnesses to his high courage were the U-Boat crew members. The U-Boat sank but the seven survivors were rescued by a Royal Navy vessel and the captain reported the incident, recommending Trigg be decorated for his bravery. The Victoria Cross was awarded posthumously. -- http://en.wikipedia.org/wiki/Lloyd Allan Trigg

52. Coastal Command Epic David Hornell

On 24 June 1944 on sea patrol near the Faroes in the North Atlantic, Flight Lieutenant Hornell's twinengined amphibian aircraft was attacked and badly damaged by an enemy German U-Boat; nevertheless he succeeded in sinking it and then with superhuman effort managed to bring his aircraft down on the heavy swell, blazing furiously. There was only one serviceable dinghy which could not hold all the crew so they took it in turns in the water. By the time the survivors were rescued after 21 hours, Flight Lieutenant Hornell was blinded and weak from exposure and cold. He died shortly after being picked up. -- http://en.wikipedia.org/wiki/David Ernest Hornell

Warnock, A. Timothy. The U.S. Army Air Forces in World War II: The Battle Against the U-Boat in the American Theater: December 7, 1941- September 2, 1945. Washington, DC: Bolling AFB, 1994. (ADA433272). 32p.

Abstract: In 1942, the Allied powers faced the most serious challenge to their control of the seas encountered in the Second World War: The menace of the U- boat. Fast, well-armed, and long-ranged, Hitler's submarines attacked shipping zones throughout the North Atlantic, often within sight of America's coastal towns and cities. Eventually, the combination of intelligence, land, and sea- based air power, and surface vessel operations from both North American and British bases ended this threat, making possible the Allied Build-up for the invasion of Europe in 1944. This booklet, by A. Timothy Warnock of the Air Force Historical Research Agency, is one of a series tracing selected Army Air Forces activities in the Second World War. It describes the Army Air Forces' contribution to the Battle of the Atlantic from the American Theater. A Subsequent booklet will examine the campaign in the eastern Atlantic and the Mediterranean. Flying radar-equipped, long-range patrol planes, Army Air Force airmen demonstrated the value of land-based air power against naval threats. This success has been reaffirmed consistently since the Second World War, from Vietnam and crises such as the Mayaguez incident to operations in Desert Shield and Desert Storm. The Harpoon-armed B-52s of our present-day global Air Force are the heirs of a sea-control tradition dating to the Army Air Force's A-29s and B-24s of the Second World War. #### **NPS THESES & REPORTS**

Adams, Brian S. Analysis of the Effects of Energy Spreading Loss and Transmission Loss on Low Frequency Active Sonar Operations in Shallow Water. Monterey, CA: Naval Postgraduate School, 1997. (ADA341298). 74p. Thesis (M.S. in Physical Oceanography) -- Naval Postgraduate School, September 1997.

Abstract: Energy Spreading Loss (ESL) is qualitatively defined as the reduction in peak power level due to energy spreading of a transmitted acoustic pulse in tune. An analysis of the impact of bathymetric geometry and sediment type on ESL and TL associated with the Low Frequency Active/Compact Low Frequency Active (LFA /CLFA) sonar operations was conducted utilizing the FEPE, FEPE SYN and EXT TD programs to model the time spreading of the acoustic pulse due to multipath propagation in shallow water. Both a Blackman windowed pulse and a Continuous Wave (CW) pulse were used in this analysis. The Blackman pulse had a center frequency of 244 Hz with a bandwidth of 24 Hz. The CW pulse had a center frequency of 244 Hz with a bandwidth of 0.0625 Hz. Model inputs were a geoacoustic description of the Tanner Bank region off the coast of San Diego and a typical late summer sound speed profile taken from the MOODS database. ESL and TL's impact on low frequency active sonar operations was determined as a function of bathymetry, sediment type, sound speed profile, and pulse length. The results showed that ESL is inversely related to pulse duration and at low frequencies is relatively uninfluenced by sediment type. When pulse lengths were reduced to less than 1 second, ESL became appreciable ( > 6 dB one way) and was an important segment of the active sonar equation. TL was found to be the dominating factor in LFA/CLFA operations for pulse lengths greater than 1 second and was greatly influenced by sediment type and sound speed profile.

Adler, Vance Erick. **Digital Processing of Acoustic Signals with Application to an ASW Signal Processor.** Monterey, CA: Naval Postgraduate School, 1973. (AD07750383). 102p.

Thesis (M.S. in Acoustical Engineering) -- Naval Postgraduate School, 1973.

Abstract: There is a growing need within the Navy for methods for detecting discrete narrowband signals in a non-stationary background. This paper concerns itself with the application of digital processing and spectral analysis techniques toward that goal. The use of the fast Fourier Transform in estimating the power spectrum of a signal is described. The method involves sectioning the time record, making 'raw' estimates of the spectrum from these sections, and averaging these 'raw' estimates. It is shown that more stable estimates are available if the segments are overlapped and an optimum amount of overlap for the case of the Hanning window is found. It is shown that the stability of these spectral

estimates can be interpreted as processing gain in the case of a discrete narrowband signal in additive noise, and finally, a brief description of signal detection theory applied to a human observer is presented to emphasize the flexibility that a human operator can bring to a signal detection system.

"Prepared for: Chairman of the Systems Engineering Department in partial fulfillment of the requirements for the degree of Master of Science in Systems Engineering"--Cover. Abstract: The Hybrid Airship Multi-Role (HAMR) Anti-Submarine Warfare (ASW) Mission Module project applies established systems engineering principles and processes to the design of an ASW payload module that examines the capability of the HAMR to perform persistent ASW mission support. Critical system functions and objectives are identified and are assigned appropriate quantitative metrics. Additionally, three alternative architectures are generated and evaluated using the appropriate metrics based on results from modeling using Naval Systems Simulation (NSS). Manning is considered as a key stakeholder parameter and is included as an evaluation concern. The alternatives are also compared through the examination of life cycle costs. The recommendation to the stakeholders based on the research and results is an unmanned ASW sensor platform that uses other ASW assets for prosecution.

Akbori, Fahrettin. **Autonomous-Agent Based Simulation of Anti- Submarine Warfare Operations with the Goal of Protecting a High Value Unit**. Monterey, CA: Naval Postgraduate School, 2004. (ADA422144). 124p.

Thesis (M.S. in Modeling, Virtual Environments and Simulation (MOVES)) -- Naval Postgraduate School, March 2004.

Abstract: The Anti-Submarine Warfare screen design simulation is a program that provides a model for operations in Anti-Submarine Warfare (ASW). The purpose of the program is to aid ASW commanders, allowing them to configure an ASW screen, including the sonar policy, convoy speed, and the number of ships, to gain insight into how these and other factors beyond their control, such as water conditions, impact ASW effectiveness. It is also designed to be used as a training tool for ASW officers. The program is implemented in Java programming language, using the Multi Agent System (MAS) technique. The simulation interface is a Horizontal Display Center (HDC) which is very similar to a MEKQ2OO class Frigate Combat Information Center's (CIC) HDC. The program uses Extensible Markup Language (XML) files for reading data for program scenarios; parameters are initialized before each run time begins. The simulation also provides all the output data at the end of run time for analysis purposes. The program user's goal, and the purpose of the program, is to decrease the number of successful attacks against surface vessels by changing the configuration parameters of the ASW screen, to reflect sonar policy, convoy speed or number of ships in the simulation. Ongoing use of the program can provide data needed to anticipate required operational needs in future ASW situations.

Aktan, Zafer Mutlu. **Probabilistic Approach to ASW Deployment in Shallow Waters**. Monterey, CA: Naval Postgraduate School, 1992. (ADA257589). 87p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, September. 1992. Abstract: The Advanced Air Deployable Array (AdDA), which is a modern air-dropped fiber optic ASW device, provides an opportunity for the rapid enclosure of a hostile submarine in shallow waters. This thesis explores the effect of the deployment depth, and effect of using longer or shorter AdDA array segments, on the performance of eighth proposed AdDA deployment tactics which employ single or dual aircraft. It is shown that when the AdDA sinking rate is considered, several of the proposed tactics become infeasible for certain depth and submarine speed combinations. Still, today fiber optics offer unique capabilities for solving some of the U.S. Navy's and the Turkish Navy's problems in the future.

Armo, Knut Rief. **The Relationship Between a Submarine's Maximum Speed and Its Evasive Capability**. Monterey, CA: Naval Postgraduate School, 2000. (ADA382255). 55p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 2000.

Abstract: The experiences of submarine warfare from WWI and WWII have generally dictated maximum speed when designing conventional submarines. Technological development of submarine and antisubmarine weapons, however, requires examination of submarine warfare and tactics. This thesis focuses on a coastal conventional submarine's ability to survive, as a function of its maximum speed, when attacked by a light antisubmarine warfare (ASW) torpedo. It also evaluates the maximum speed with which the submarine should be equipped to ensure a specified probability of survival. The measure of effectiveness (MOB) is the probability that the submarine, operating up to maximum speed and launching only one set of countermeasures, is not caught by the torpedo. The investigation builds on a discrete event simulation model. The systems simulated are a submarine, a light ASW torpedo, and a countermeasure system consisting of one decoy and four jammers. The results show that maximum speed of a submarine does affect the submarine's evasive performance between 12 and 18 knots. The simulated model reached a maximum probability of survival at 18 knots. That result should be regarded as a minimum since a real life system might require a higher maximum speed to reach its greatest probability of survival.

Arnold, Ronald R. II. Comparison of P-3C Acoustic Processing Capability with Acoustic Operator Capability. Monterey, CA: Naval Postgraduate School, 1987. (ADA181635). 57p.

Thesis (M.S. in Information Systems) -- Naval Postgraduate School, March 1987. Abstract: This thesis sought to determine if the requirements for operation of the acoustic processing equipment now installed aboard P-3C aircraft is too complex for the acoustic operators, given their current amount of training. This was accomplished by using a test scenario designed to test for all of the skills and knowledge required by acoustic operator in the performance of his duties during the passive portion of the prosecution of a target. The results seem to suggest that the students that successfully complete the P-3C 'Antisubmarine Warfare Operator' rating training pipeline are acquiring an acceptable level of operator capability. In addition, this study seems to suggest that fleet operators who are recognized in fleet squadrons as master journeyman, are operating their ASW acoustic processing equipment to its fullest capability and without apparent operator deficiencies.

Aydin, Erhan. **Screen Dispositions of Naval Task Forces Against Anti-Ship Missiles**. Monterey, CA: Naval Postgraduate School, 2000. (ADA377605) 96p. Thesis (M.S. in Operations Research) -- Naval Postgraduate School, March 2000.

Abstract: Ship defense in convoy operations against Anti-Surface Missiles (ASM) has been an important aspect of Naval Warfare for the last two decades. Countries in a state of conflict often conduct threatening operations in their own territories in order to slow or stop the enemy merchant ship traffic through the straits or littoral waters. Such littoral scenarios, the quantity and capability of ASM's in non-NATO countries pose a significant threat to the safe operation of the NATO forces in the waters off of potentially hostile shores. In these operations the goals of the tactical commander are to design an optimal reaction platform (formation) and to determine an optimal strategy that will help him in multi-threat encounters. The scope and design in most anti-air Warfare studies have been limited to evaluating the effectiveness of detecting sensors and weapon systems in a regular screen formation. The proposed model's (Disposition Mission Model - DMM) characterization, however, is based on how to perform an effective, defensive disposition from a task force. In DMM we focus on usage of a graphical user interface and provide a user-friendly environment for analyzing new tactics in screen formations. The model, with its user interface, allows the user to build and run a convoy simulation, and see the results comparatively on the same interface. The analysis using this model has yielded significant insights towards the defense of a convoy by way of regression methods. It has been seen that positioning the escort ships within the threat sector reduces the damage on the HVU and also balances the defensive load of each defense ship for the incoming missiles. The model, with its graphical interface and simulation components, provides an initial approach for future analysts, not only in anti-air Warfare defense of screen formations, but also in the areas of anti-surface and anti-submarine warfare.

Bacon, Daniel Keith. **Integration of a Submarine into NPSNET**. Monterey, CA: Naval Postgraduate School, 1995. (ADA304337). 99p.

Thesis (M.S. in Computer Science) -- Naval Postgraduate School, September1995.

Abstract: In the current version of NPSNET there are two problems that prevent users or this virtual environment from achieving a realistic training experience. First, the motion of the vehicles is not built around realistic, physically based models. In particular, the motion of computer-generated sea-going vehicles is not based on the hydrodynamic models that reflect the motion of actual ships moving through water. Second, vehicles in NPSNET are currently controlled by a single individual; they lack the capability to be controlled by a team. This misrepresents the many actual military vehicles-submarines, tanks, helicopters, and others- that must be controlled by several people working together. The approach taken was to update the submersible vehicle class in NPSNET in two ways. A physically-based hydrodynamic model was used to control the vehicle's motion through the virtual world. In addition, a network communications protocol was implemented to enable several remote individuals to control the same

vehicle simultaneously. The result of this work is the creation of a computer-generated submersible vehicle whose motion is determined by a real-time hydrodynamic model so it moves through the virtual world according to physically based models. This submersible is also capable of being controlled by several remote individuals-effectively the same team members who would perform the job in the actual vehicle. This ultimately results in a more realistic user experience as well as a more effective training tool

for NPSNET.

Baggett, John P. Logistical Analysis of the Littoral Combat Ship (LCS) Operating Independently in the Pacific. Monterey, CA: Naval Postgraduate School, 2008. (ADA479828). 98p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, March 2008. Abstract: The LCS will be a small combatant designed to address many of the challenges facing the Navy in the 2002 Defense Planning Guidance (DPG). It will rely on newly developing mission modular technology that will allow the core component of LCS, the seaframe, to change out Warfare mission packages to adapt it for different warfighting scenarios. Unlike the current combatants of the Navy, LCS will be a single-mission focused ship that will rely on still developing technology to conduct operations in one of three main areas: Anti-Submarine Warfare (ASW), Mine Warfare (MIW) and Surface Warfare (SUW). Through models developed in Microsoft Excel this thesis evaluates how speed and different fuel reserve levels impact Littoral Combat Ship fuel consumption and endurance of the two approved versions of LCS, analyzes the implication of these findings and other possible mission limiting factors on Littoral Combat Ship logistics and analyzes how the current CLF force structure in the Pacific will affect overall mission capability of LCS.

Bjorklund, Bruce R. **Probabilistic Observations on Antisubmarine Warfare Tactical Decision Aid (ASWTDA).** Monterey, CA: Naval Postgraduate School, 1990. (ADA227540). 54p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, March 1990. Abstract: The goal of this thesis is to examine the methodology used in the Antisubmarine Warfare Tactical Decision Aid (ASWTDA) in development by Sonalysts, Incorporated of Waterford, Connecticut under Navy contract. ASWTDA is a Computer Assisted Search (CAS) program which is designed as a tool to assist platform, unit or force commanders afloat and ashore in making tactical ASW decisions. First, a Classical Computer Assisted Search program is described as a basis of comparison for the methodology employed in ASWTDA. Then, the operations as performed in ASWTDA are described, followed by a probabilistic analysis. In the analysis sections, probabilistic support for the applied methodology is provided where applicable, and conceptual problems and possible solutions are cited where appropriate. Keywords: Target motion, Probabilistic analysis. (kr)

Bliss, John Robert. **Modification of the TASDA Computer Program for Inflight Use**. Monterey, CA: Naval Postgraduate School, 1973. (AD0769831). 195p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1973.

Abstract: TASDA, acronym for Tactical Airborne Sonar Decision Aid, is a computer simulation designed to select optimum sonobuoy pattern spacings given environmental parameters and submarine mode of operation. The program was designed to operate in a Tactical Support Center for briefing of flight crew personnel. Analytical methods and statistical models are used to investigate the TASDA program with a view towards modifying it for future aircraft inflight utilization. Some improvements are made to the TASDA model which reduce program run time and core storage requirements. A modified version of the TASDA program is developed as an initial step toward an inflight model.

Bobbitt, Richard B. **Escape Strategies for Turboprop Aircraft in a Microburst Windshear**. Monterey, CA: Naval Postgraduate School, 1991. (ADA243090). 247p. Thesis (M.S. in Aeronautical Engineering) -- Naval Postgraduate School, March 1991.

Abstract: A quantitative analysis was carried out on the performance of turboprop aircraft within a microburst windshear. The objective of the analysis was to provide specific flight procedures for optimal navigation through the windshear. The microburst windshear model uses in the analysis embodied the severe characteristics of the microburst encountered by Delta Flight 191 during an approach to landing at Dallas/Ft. Worth, 2 August 1985. Different escape strategies were tested using the flight performance characteristics of the U.S. Navy's P-3 'Orion' and T-44 'Pegasus' aircraft. The three flight phases investigated were approach to landing, takeoff, and the low altitude ASW mission. Results from the analysis were coupled with the pilot's view point from which conclusions were drawn. The results of the analysis support a constant-pitch-angle escape procedure. The same procedural steps can be used for both aircraft in any configuration or situation with the difference being the degree of pitch to employ. The conclusions are in a format for integrating specific microburst escape procedures within the NATOPS programs for the P-3 and T-44.

Boice, Frank B. **Probability Model for a Convoy Threatened by a Submarine Launched Missile**. Monterey, CA: Naval Postgraduate School, 1965. (AD0475379). 115p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1965.

Abstract: The advent of the missile firing submarine has added yet another dimension to the problem of defending convoys and task groups during ocean transit. The specific situation wherein the submarine must surface to fire a relatively short range missile against a convoy of ships is considered. The model developed considers several different problem parameters. It enables the calculation of probability of detection of the submarine, probability of killing the submarine before a particular missile is fired, and the expected number of missiles that the submarine will fire. Selected results from randomly selected parameter values are also presented.

Bond, Charles Pruitt, King; Burnett, Howard Burnett; Grehawick, Gregory Daniel. **An Analysis of the Utilization of the In-Flight Technician in the P3C Community**. Monterey, CA: Naval Postgraduate School, 1975. (ADA014553). 76p. Thesis (M.S. in Management) -- Naval Postgraduate School, 1975.

Abstract: This thesis investigated the number of In-Flight-Technicians assigned to a Navy P3C squadron, their contributions to the squadron's ASW capability in their dual roles as in-flight and ground repairmen, and the adequacy of the In-Flight-Maintenance-Kit. Tradeoffs between the number of In-Flight Technicians and ground avionics workers were evaluated as were various methods of the In-Flight

Technician's ground and airborne utilization. Potential benefits associated with In-Flight Technician assignment to Intermediate and Depot Level maintenance activities were also examined. The In-Flight Technician's contributions to the squadron's ASW capability were measured in Equivalent Aircraft Units which were a function of how many repairs were corrected and the impact on ASW capability of the systems repaired.

Breemer, Jan S. **Anti-Submarine Warfare: A Strategy Primer**. Monterey, CA: Naval Postgraduate School, 1988. (NPS-56-88-014; ADA199554). 20p.

Abstract: This report reviews the naval planner's basic menu of operational Anti Submarine Warfare (ASW) strategical choices. Basic ASW strategies, discussed from a historical perspective, are: (1) destruction of the submarine (2) containment of the submarine, and (3) limiting the submarine's efficiency. The report has been prepared for inclusion in the International Military and Defense Encyclopedia (IMADE), scheduled for publication by Pergamon-Brassey's in 1991-92.

Brennan, Peter J. **Analysis of the Manpower Costs Associated with the Helicopter Air Wing Commander Concept**. Monterey, CA: Naval Postgraduate School, 1998. (ADA343363). 120p.

Thesis (M.S. in Management) -- Naval Postgraduate School, March 1998.

Abstract: This thesis presents an analysis and comparison of manpower costs of three options for the United States Navy Helicopter force structure through the year 2020. The First option, the basic plan, leaves the force structure as it is today. The second option assumes the mission to support the Military Sealift Command (MSC) is outsourced and combines the Helicopter Combat Support (HC) and Helicopter Antisubmarine Warfare (HS) communities into a community referred to as HSC. The third option realigns the force along missions performed by the SH-60Bs and CH-60 under a Helicopter Air Wing Commander (HAWC). All three options support the requirements set forth in the Helo Master Plan (HMP) and are based on the acquisition of the CH-60 helicopter along with the upgrade of all SH-60Bs and SH-60Fs to SH-60Rs. The analysis involved developing manning levels, by pay grade, for the three options and deterniining the differences in those manning levels. Manpower costs were allocated to the total personnel requirements, and differences in costs among the options were calculated.

Brownsberger, Nicholas Mason. **Estimation of Sonobuoy Position Relative to an Aircraft Using Extended Kalman Filters**. Monterey, CA: Naval Postgraduate School, 1979. (ADA078280). 151p.

Thesis (M.S. in Acoustical Engineering and Degree of Acoustical Engineer) -- Naval Postgraduate School, 1979.

Abstract: In airborne antisubmarine warfare there is a need to more accurately determine the positions of sonobuoys on the surface of the water. This report develops two algorithms which employ extended Kalman filters to determine estimated position. The bearing from the aircraft to the sonobuoy is the primary measurement. Range information is not available. The first algorithm is a six-state filter which was reduced from the 13-state system developed by the Orincon Corporation. Its states include relative position, relative velocity, and inertial misalignments. The second algorithm includes two cascaded Kalman filters. The primary two-state filters etimates sonobuoy position. A secondary filter estimates drift from information obtained from the primary filter. Both algorithms successfully estimated sonobuoy position for simulated aircraft data. The effect of aircraft-to-sonobuoy range, the frequency of measurement, and changes in altitude are also analyzed.

Brownsweiger, Jeffrey Scott. **S-3 Viking Weapon System Improvement Program: Financial Management Implications**. Monterey, CA: Naval Postgraduate School, 1990. (ADA247150) 55p.

Thesis (M.S. in Management) -- Naval Postgraduate School, December 1990.

Abstract: In response to recent significant improvements in soviet Submarine Technologies the Navy developed the Weapon System Improvement Program for the S-3A Viking. This program is an example of the dynamic nature of the environment within which the program manager operates. It provides the program manager with little control over certain events and the effects they have on their programs. An effective program manager will realize these limitations exist and attempt to strategically and flexibly manage the resources available to him as effectively and efficiently as his/her political environment will allow. However, this sometime happens at the expense of contractor inefficiencies and at a higher cost to the Government. In the DOD/DON world of scarce resources a thorough analysis of the competitive environment may provide useful insight into the S-3 Program Office and their efforts to complete the S-3 WSIP.

Bush, John Richard. **Aviation Squadron Organization Development of the Navy's Light Airborne Multi-Purpose System (LAMPS) Mk III**. Monterey, CA: Naval Postgraduate School, 1981. (NPS-54-81-017, ADA113863). 183p. Thesis (M.S. in Management) -- Naval Postgraduate School, 1981. Also issued as Naval Postgraduate School Technical Report (NPS-54-81-017).

Abstract: This paper examines the evolution of the U.S. Navy's SH-60B, LAMPS Mk III aircraft and squadron methodology. It analyzes current HSL organization design and introduces alternative organization structures to support this new helicopter community when it is introduced in the fleet in 1983-84. It begins with a statement of the issue which includes a concise historical overview of the LAMPS program and discusses its tactical and support missions. It next examines the conventional naval air squadron organization methodology from which LAMPS squadrons are designed and manned. A statistical analysis of operational fleet HSL squadrons is presented which concludes that conventional squadron design methodology does not support the unique LAMPS community. Four general alternative organization models are proposed followed by a discussion of the possible utilization of the Naval Flight Officer in the LAMPS System. The paper concludes with a summary of the proposals from which organization redesign may result and offers recommendations to that process.

Buterbaugh, Thomas A. Multivariate Analysis of the Effects of Academic Performance and Graduate Education on the Promotion of Senior U.S. Navy Officers. Monterey, CA: Naval Postgraduate School, 1995. (ADA300188). 97p. Thesis (M.S. in Management) -- Naval Postgraduate School, June 1995

Abstract: This thesis develops multivariate models to estimate the effects of undergraduate academic performance and fully-funded graduate education on promotion to the ranks of Commander (0-5) and Captain (0-6) in the U. S. Navy. Using data extracted from the Officer Promotion History Files, two sample populations were selected for analysis: Officers who appeared before the Commander promotion boards between fiscal years 1981 and 1994, and those who appeared before the Captain promotion boards during this same period. These data sets were further categorized into five Warfare communities and two separate time periods; the period between 1981-1989 (the pre-drawdown), and the period between 1990-1994 (the drawdown). Ordinary least squares (OLS) and maximum likelihood log it regression models were employed to estimate the probability of being promoted to these two ranks. The findings reveal that graduate education and academic performance have positive effects on promotion probability for some, but not all, of the communities over the various time periods. Recommendations for further study are included.

Cagle, Clifford Monroe. An Application of Multidimensional Scaling to the Prioritization of Decision Aids in the S-3A. Monterey, CA: Naval Postgraduate School, 1980. (ADA092405). 134p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1980.

Abstract: This thesis presents an application of Multidimensional Scaling (MDS) used in the prioritization of ASW decision functions in the S-3A. The ASW decision space was divided into 14 discrete decision functions for the purposes of this analysis. The problem of developing a prioritization methodology was approached from two independent directions. First, an unconstrained sorting task was preformed to provide input to Multidimensional Scaling algorithm. The result of this analysis provided a three dimensional representation of the decision space with dimensional interpretation. Second, a series of ranking tasks were preformed to provide input to an Unfolding Analysis algorithm. The Generalized Distance Model was selected as the model most representative of the ranking data. The decision function coordinates for the MDS algorithm and the decision function coefficients for the Unfolding Analysis algorithm were combined in a regression-like equation to provide a prioritization methodology for the 14 decision functions of the S-3A ASW decision space.

Cahill, David Blake. **Tactical Display of CZ Propagation Area**. Monterey, CA: Naval Postgraduate School, 1977. (ADA042173). 36p.

Thesis (M.S. in Systems Technology) -- Naval Postgraduate School, 1977.

Abstract: The need for an enhanced display of the geographic distribution convergence-zone propagation in a region of shallow and variable bottom topography is demonstrated. A preliminary display is generated utilizing point-by-point computer processing of the convergence-zone minimum depth requirements with a large bathymetric data base for a region north of the Azores. The trade-offs between the accuracy of the preliminary output and cost (computer time and space) are discussed.

Caldwell, James F. Jr. Investigation and Implementation of an Algorithm for Computing Optimal Search Paths. Monterey, CA: Naval Postgraduate School, 1987. (ADA185927). 88p.

Thesis (M.S. in Operatons Research) -- Naval Postgraduate School, September 1987. Abstract: A moving target is detected at long range with an initial position given by a probability distribution on a grid of N cells. Also located on the grid is a searcher, constrained by speed, who must find an optimal search path in order to minimize the probability of target survival by time T. A branch-and-bound algorithm designed by Professors Eagle and Yee of the Naval Postgraduate School in Monterey, California, is successfully implemented in order to solve this problem. Within the algorithm, the problem is set up as a nonlinear optimization of a convex objective function subject to the flow constraints of an acyclic N x T network. Lower bounds are obtained via the Frank-Wolfe method of solution specialized for acyclic networks. This technique relies on linearization of the objective function to yield a shortest path problem that is solvable by dynamic programming. For each iteration, the lower bound can be found by use of a Taylor first order approximation. Implementation of this algorithm is accomplished by the use of a Fortran program which is run for several test cases. The characteristics of the solution procedure as well as program results are discussed in detail. Finally, some real world applications along with several questions requiring further research are proposed. Keywords: Thesis; Integer programming;

Antisubmarine Warfare.

Calvano, Charles N., Robert C. Harney, David Wickersham, Ioannis Farsaris, Philip

Malone, David Ruley and Nathan York. **Surface Warfare Test Ship Design**. Monterey, CA: Naval Postgraduate School, 2000. (NPS-ME-00-001; ADA374332). 260p.

Abstract: A systems engineering approach to the design of a ship conversion to satisfy the requirements for a Surface Warfare Test Ship (SWTS) to be employed by the Port Hueneme Division of the Naval Surface Warfare Center is presented. The ship described would meet test needs for future weapons and sensor systems and provide limited test capability for future hull, mechanical and electrical systems. The current Self Defense Test Ship is over 45 years old, approaching the end of its useful life. A conversion of a decommissioned SPRUANCE (DD 963) class ship is the basis for the replacement Surface Warfare Test Ship. The study proceeds from mission needs and operational requirements through a functional analysis and study of threat weapons to be employed against the SWTS. After summarizing the characteristics of a SPRUANCE Class ship, the study reports an analysis of four alternative conversion schemes. The alternatives are described, with the rationale for choosing that considered best. The chosen alternative is then described and analyzed in several important areas of concern including combat systems functionality, signature characteristics, engineering plant and habitability for test personnel. The fitness of the proposed design for several special evolutions is also described, and alternatives for further enhancing performance are presented.

Cary, Steven H. **Use of the Radio Shack TRS-80 Model 100 Computer for Combat Modeling**. Monterey, CA: Naval Postgraduate School, 1986. (ADA175327). 117p. Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1986.

Abstract: The primary purpose of this thesis is to demonstrate some principles of combat modeling using programs for the Radio Shack TRS-80 Model 100 computer. In addition to the combat modeling, the thesis includes several utility programs for the M100 of interest to students of operations analysis. The combat modeling programs include an Antisubmarine Warfare (ASW) detection simulation, a Kalman filter, and a Lanchester differential equation simulation. The utility programs include a matrix algebra program, a numerical double integration program for zero degree of difficulty problems. The integration program is also written as a subroutine that can be included in other programs. The matrix algebra includes a simultaneous linear equation solving subroutine which can be used in other programs. All programs are written in M100 BASIC. Documentation includes an explanation of the input required, the output produced, and the components of each program, and sample problems. The chapter on geometric programming includes a tutorial on the mathematical basis for that technique.

Çelikel, A. Kaan. **Parametrics of Near Surface Response of Submersible Vehicles**. Monterey, Ca: Naval Postgraduate School, 1996. (ADA319573). 76 p

Thesis (M.S. in Mechanical Engineering) -- Naval Postgraduate School, Sept. 1996.

Abstract: Vertical plane response of submersible vehicles in the proximity of a free surface in deep water is evaluated using a potential flow, strip theory solver. Two criteria, that are periscope submergence, and sail broaching are used to quantify the response. These criteria combined with the vehicle's response amplitude operators in regular sinusoidal waves along with a statistical description of the seaway lead to an assessment of an overall operability index for the vehicle. This thesis presents a systematic parametric study of the effects of body geometry on near surface response. Two cases, namely limited diameter and limited length are considered. The total volume of the vehicle is kept constant, and certain shape factors are changed, while either the overall diameter or the overall length remains the same. The operability index is calculated for each case within a given range for sea states and sea directions and for various shape factors, vehicle speeds and operating depths. The results indicate that certain changes of shape factors can improve vehicle operations in various depth and speed combinations.

Chang, Peng-tso. **Evaluation and Improvement of the ASW System Evaluation Tool**. Monterey, CA: Naval Postgraduate School, 1992. (ADA248081). 144p. Thesis (M.S. in Computer Science) -- Naval Postgraduate School, March 1992.

Abstract: The Antisubmarine Warfare System Evaluation Tool (ASSET) is a generic high-level Antisubmarine Warfare (ASW) modeling tool, designed to aid ASW personnel in the development and refinement of ASW top-level Warfare requirements and the ASW Master Plan. The primary objective of this thesis is to analyze and implement the improvements suggested in previous evaluations of various sub-areas of ASSET. The glimpse rate model for submarine detection used in ASSET has been Substituted with compound Lambda-Sigma jump model. There is a different target radiated frequency in each environmental region. Each target will have its own detection rate to reflect the differences in its operating characteristics. Multiple engagements between platforms are used to eliminate the limitations of interaction between opponent platforms. The glimpse rate model is used to determine detection opportunities of maritime patrol aircraft (MPA) and to approximate a continuous-looking sensor pattern. A different criterion of selecting search probability area (SPA) and MPA pairs using the ratio of MPA's time on-station over the SPA size was implemented. The feasibility of converting current ASSET code to CLOS was investigated. In addition, part of the code was converted to CLOS.

Chuan, Edmund Cheong Kong. **A Helicopter Submarine Search Game**. Monterey, CA: Naval Postgraduate School, 1988. (ADA201212). 56p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, September 1988.

Abstract: This thesis examines a two-person zero sum game where a submarine, after revealing his position by causing a flaming datum, is hunted by a helicopter which arrives on the scene after a time delay. Various helicopter and submarine strategies are explored and simulation runs are used to determine the detection probability (payoffs) for each combination of helicopter and submarine strategy. The value of the game (detection probability) with the related optimal strategies is then obtained using linear programming. A modified random search equation is also derived using probabilities of detection obtained from different combinations of parameters used in the game. Similar and related games are also discussed with emphasis on the differences in assumptions made and approaches taken in order to solve the problem. (sdw)

Ciboci, John William. Verification of Mazeika's Method of Thermocline Depth Prediction for the Northeast Pacific Ocean. Monterey, CA: Naval Postgraduate School, 1966. (AD0803657). 65p.

Thesis (M.S. in Oceanography) -- Naval Postgraduate School, 1966.

Abstract: Mazeika's method for forecasting mixed-layer (thermocline) depth of the upper ocean layers is discussed along with a newer version of this method developed by James. Using Mazeika's method primarily, a verification for the Northeast Pacific Ocean was completed with data from Ocean Weather Stations PAPA (50N, 145W) and NOVEMBER (30N, 140W) and a point named MIDPOINT (40N, 140W). The results indicate Mazeika's method is successful at Station PAPA more than seventy five percent of the time during the heating season followed by a rapid decline as the cooling season begins. The method should be useful in the entire Central Subarctic Domain as described by John P.Tully. The method fails at NOVEMBER and MIDPOINT producing less than thirty percent success in prediction. James' version did not improve the results obtained at Station NOVEMBER. This failure appears to be due to the controlling parameters for processes in the Subtropic or Transitional oceanographic regions (which include NOVEMBER and MIDPOINT); these differ from parameters controlling oceanic processes in the Pacific Subarctic region (Station PAPA), which resemble those involved in the Atlantic region for which Mazeika's method was developed. Climatology data which can be used to obtain surface and 400-foot level temperature are also tested. The results indicate these data are very useful and accurate in determining the stability index required of Mazeika's method.

Conner, George W.; Mark A. Ehlersa and Kneale T. Marshall. **Countering Short Range Ballistic Missiles**. Monterey, CA: Naval Postgraduate School, 1993. (NPS-OR-93-009, ADA261056). 36p.

Abstract: Concepts commonly found in ASW search are used to model the flow and detect mobile launchers for short range ballistic missiles. Emphasis is on detection and destruction of the launcher before launch. The benefit of prehostility intelligence and pre-missile-launch prosecution, the backbone of successful ASW, is revealed through the analysis of a circulation model which reflects the standard operations of a third world mobile missile launcher during hostilities. A decision model is constructed and analyzed to give insight into the development of pre-hostility intelligence policies.

Conner, Hilton L. Application of Color-Coding in Airborne Tactical Displays.

Monterey, CA: Naval Postgraduate School, 1979. (ADA067558). 96p. Thesis (M.S. in Systems Technology) -- Naval Postgraduate School, 1979.

Abstract: This thesis analyzes the operational environment and task variables of the Tactical Coordinator in the S-3A for possible application of color coding in the display symbology in the multi-Purpose display. Beginning with the ASW threat to the carrier force under the CV concept, the missions of the S-3A are presented. The roles, tasks and functions of the Tactical Coordinator are identified and form the basis for an analysis of the need of color in airborne displays. Current display design requirements and discrepancies in the S-3A are discussed as a basis for areas of color application. Color research recently conducted is reviewed with the results directed toward the symbology currently used in airborne displays.

Coppens, Alan B. and James V.Sanders. **An Introduction to the Sonar Equations with Applications**. Monterey, CA: Naval Postgraduate School, 1976. (NPS-61SD76071, ADA030034). 124p.

Abstract: This report provides an introduction to the SONAR equations for those interested in underwater sound as applied to ASW but lacking either the mathematical background or the time for a more rigorous presentation. Earlier versions of these notes were developed for Continuing Education courses presented at Moffett Field, California, and Naval Torpedo Station, Washington. Additionally, these notes have been in demand for certain courses at the Naval Postgraduate School. While this is the text for these courses and should be supplemented by lectures, we have attempted to design the material so that it is reasonably self-explanatory, communicating many of the essential concepts without requiring extensive verbal amplification. The unusual format has been deliberately chosen to facilitate these goals, and our experiences in presenting these materials have seemed to justify this choice. It is assumed that the reader has some familiarity with trigonometric functions and either has or will develop with the aid of the appendix the facility of handling scientific notation and logarithmic operations.

Cox, Stephen A. **Satellite Applications to Acoustic Prediction Systems**. Monterey, CA: Naval Postgraduate School, 1982. (NPS68-82-005, ADA125027). 151p. Thesis (M.S. in Systems Technology) -- Naval Postgraduate School, 1982. Also issued as Naval Postgraduate School Technical Report NPS68-82-005.

Abstract: Predicting the thermal structure of the oceans is of importance to the Naval tactician, logistician, or search and rescue coordinator. Understanding the structure of the oceans provides valuable insights to those who must utilize the oceanic environment effectively in their day to day operations. Today, recent information about an area is limited to point observations of single bathythermographs. Few models produce an accurate picture of the ocean environment that can be used for updating tactics to conform to a changing situation. Producing a reliable prediction of conditions for a large area, while using limited resources, is the basic objective of this paper. Satellite infrared imaging of the ocean surface has been used effectively to map sea surface temperature patterns. Such sea surface temperature patterns can be used, along with climatology, to identify Subsurface thermal structure in an ocean area according to results of this study. More accurate inputs can be made to range dependent acoustic prediction models, thus improving the antisubmarine warfare environmental predictions available to fleet users.

Craigie, Kyle M. **Assessment of Atmospheric Influence on Surveillance Radar Performance in Littoral Zones.** Monterey, CA: Naval Postgraduate School, 1993. (ADA273045). 87p.

Thesis (M.S. in Systems Engineering (Electronic Warfare)) -- Naval Postgraduate School, September 1993.

Abstract: Acoustic sensors, traditionally thought of as the mainstay of modem ASW's means of detection and localization, are rapidly becoming secondary in the littoral zones to active sensors such as radar. The coastal region has a dynamic meteorological environment dominated by surface and near-surface ducts which influence sea clutter. Accurate, timely description of the effects this changing environment has on sensor performance is mandatory for the ASW tactitician to utilize his sensors. The Radio Physics Optics (RPO) program and the Engineer's Refractive Effects Prediction System (EPEPS) are used to evaluate influence of a measured environment. Both prediction systems are then applied to a Gulf of Oman winter environmental profile with five generic radars operating parameters. EREPS is used to evaluate factors affecting Wallops Flight Facility Space and Ranging Radar (SPANDAR) detected sea clutter in the littoral zone off the United States East Coast.

Crawford, Frederick Roberts. **Submarine Radiated Noise Far-Field Beam Patterns for Discrete Frequencies from Near-Field Measurements**. Monterey, CA: Naval Postgraduate School, 1975. (ADA020106). 47p.

Thesis (M.S. in Engineering Acoustics) -- Naval Postgraduate School, 1975.

Abstract: A theoretical model was developed which can predict discrete frequency far-field radiation patterns of submerged submarines from near-field measurements. The model developed uses the Helmholtz integral equation and the assumptions of the DRL method of near-field measurements. The DRL working formula is further modified by using a plane surface of integration and restricting the far-field points of interest to a horizontal plane containing the source. These assumptions and restrictions lead to

a mathematical solution of the Helmholtz equation which is in the form of a Fourier transform. Near-field measurements on a horn speaker in an anechoic chamber were taken and the far-field beam pattern predicted by the model developed, using a simple computer program containing a Fourier transform routine. Computed beam patterns were in satisfactory agreement with measured far-field beam patterns, errors being concentrated in the outer side lobes from the acoustic axis. Problems which would be encountered in applying this model to at sea acoustic measurements are discussed.

Criswell, Philip W. Evaluation of the ASSET Campaign Model in a Regional Antisubmarine Warfare Context. Monterey, CA: Naval Postgraduate School, 1992. (ADA257625). 86p.

Thesis (M.S. in Applied Science) -- Naval Postgraduate School, September 1992. Abstract: This thesis looks at the Antisubmarine Warfare Systems Evaluation Tool (ASSET), written by Metron, Incorporated for OP-71, and how it relates to a current threat environment. ASSET is a campaign level ASW Monte-Carlo simulation intended for developing ASW Master Plans, top-level War fighting requirements (TLWRs), appraisals, and assessments. ASSET, delivered in 1990, was written from a U.S.-Soviet conflict perspective, and needs some restructuring to be able to provide conflict Measures of Effectiveness using platforms that are expected in a regional War. Included as suggested improvements are: A conventional submarine addition with major emphasis on power plant abilities and limitations, improvements to the surface group-submarine interaction; and improvements and additions to the methods of detection available to the objects in simulation.

Dassler, Dale M. Jr. **Naval Ship Utility: The Soviet Perspective**. Monterey, CA: Naval Postgraduate School, 1986. (ADA177464). 99p.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, Decmeber 1986.

Abstract: This thesis critically reviews Twenty-two articles from the Soviet Naval Digest, Morskoy Sbornik, dealing with a wide spectrum of measures of effectiveness such as individual time efficiency, ASW search effectiveness, command decision efficiency, effectiveness of A SW training, measures of

force control, and others. These Soviet measures of effectiveness are categorized by level of combat action. Although there is some question about the specific Soviet meaning of the translations, this thesis uses the translator's rendering of the basic units of Soviet Naval organization; individual, subunit (podrazdeleniye), unit (chast'), and force (soyedineniye). The levels of combat action above force (generally agreed to be named front (front), and TVD (Teatr Voyennykh Deystviy), are not included in this study. The articles illustrate the Soviet tendency to organize their operations research along the same lines as the units of naval organization and indicate that the most basic measure of naval ship utility is combat effectiveness.

NPS/DKL Location: THESIS D16177

Davis, William Oris and Paul Howard Donaldson. **Signal Processing for Antisubmarine Warfare**. Monterey, CA: Naval Postgraduate School, 1975. (ADA007866). 153p.

Thesis (M.S. in Systems Technology) -- Naval Postgraduate School, 1975.

Abstract: Signal Processing for Antisubmarine Warfare is a short course in electrical signal processing fundamentals and their applications in the field of Antisubmarine Warfare. It contains an introduction to Fourier transforms and their properties, sampling and quantization, filters and bandwidth requirements, random signals and noise, and an introduction to four types of processing equipment; the DELTIC, energy detectors, correlation detectors, and beamformers. Course objectives are given in terms of specific questions which a person completing the course should be able to answer. The course text and illustrative material is contained in the appendix to the thesis. The course is designed to be presented in the Fleet to the personnel involved with the operation and employment of detection equipment to provide them a better understanding of the operations accomplished by their equipment and to develop in them a better appreciation of the problems and limitations associated with signal detection in the antisubmarine warfare environment.

Deffenbaugh, Robert M. Investigation of the Statistical Decision Process for Anti-Submarine Warfare Tactical Decisions. Monterey, CA: Naval Postgraduate School, 1964. (AD0481269). 54p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1964.

Abstract: An application of the statistical decision process to the problem of ASW tactical decision is investigated. The Bayesian decision process is utilized. The basic ASW decision problem with emphasis on the uncertainty aspect of a possible submarine contact is analyzed. A mechanism is developed to formally connect the general problem areas.

NPS/DKL Location: THESIS D235

DeLateur, Robert Emmett. **Job Enrichment in Antisubmarine Warfare**. Monterey, CA: Naval Postgraduate School, 1979. (ADA071079). 173p.

Thesis (M.S. in Management) -- Naval Postgraduate School, 1979.

Abstract: Since the all volunteer force came into being, retention of military personnel beyond their first enlistment has become an increasingly important problem, especially for the U.S. Navy. Yearly retention conferences have been held for the purpose of developing plans to reduce turnover. The results of the latest conference brought the focus of attention to better leadership and management training of U.S. Navy personnel. Among the techniques that deals with the problems of absenteeism and turnover is job enrichment. The main thrust of job enrichment is to increase retention by increasing work satisfaction. Job enrichment as a management technique focuses on the basics of employee motivation and work behaviors. It aids the managers in identifying the components which comprise a job, and enables them to determine satisfying components that can be enhanced and dissatisfying components that can be diminished or eliminated.

Devereux, Francis A. **SEATAG Extension**. Monterey, CA: Naval Postgraduate School, 1982. (ADA117560). 73p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1982.

Abstract: The SEATAG EXTENSION will revise and suggest optional and alternative rules for the game SEATAG: A Sea Control Tactical Analysis Game. Alternative rules are proposed for damage assessment, detection, classification, targeting, weapon's effectiveness, and ASMD close in weapon systems. Air-to-air combat tables have been revised to include the latest additions to both the United States and Soviet naval aircraft inventories. Optional rules will incorporate electronic Warfare, battle damage repairs, miniature ship model combat, and use of the Tomahawk cruise missile.

Diamandopoulos, Fanourios P. **Optimal Deployment Angles for the Air-Dropped Undersea Warfare Cable in Shallow Water**. Monterey, CA: Naval Postgraduate School, 1994. (ADA280484). 56p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, March 1994.

Abstract: The Advanced Air Deployable Array (AdDA) is an air-dropped undersea Warfare device for detection of an enemy submarine in the shallow waters region. Previous studies have introduced six tactical deployment methods by C-130 aircraft. This thesis addresses one of the methods, called Bound the Expanding Farthest-On Circle. Changes in deployment rules are suggested, and feasibility conditions identified. A model is developed showing how the isolation area where the submarine is to be contained, and the number of needed array segments, can be reduced. Also, as the main work of this study, the effective deployment angles for successive AdDA cable are determined for C-130 pilots. Today these cables, because of their advantages and great utility, can give unique solutions in shallow water tactical operations.

Dougherty, William A. Computer Simulation for the Comparison of ASW Vehicles.

Monterey, CA: Naval Postgraduate School, 1965. (AD04752903). 57p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1965.

Abstract: A method is developed to analyze and compare the effectiveness of ASW vehicles. The measure of effectiveness is the probability that the vehicle, after detecting a submarine with passive sensors, can transit to the contact area and re-establish contact with the submarine. A computer simulation is developed and an example using three hypothetical ASW vehicles is illustrated.

NPS/DKL Location: THESIS D69

Dunston, Mary Cottrell. **Study of the Effect of Design Parameter Variation on Predicted Tilt-Rotor Aircraft Performance**. Monterey, CA: Naval Postgraduate School, 1988. (ADA204856). 103p.

Thesis (M.S. in Aeronautical Engineering) -- Naval Postgraduate School, December 1988.

Abstract: There is currently little data available for trend analyses of tilt-rotor aircraft performance. This study analyzed the sensitivity of predicted tilt-rotor performance to variations in six design parameters: Disk loading, tip speed, solidity, download, wing loading, and wing thickness ratio. Two mission profiles were analyzed: A combat search-and-rescue mission and an antisubmarine warfare mission. A tilt-rotor preliminary design code was used to perform computer simulations; and data available from independent tests completed by NASA and the military were encoded in the input data decks. Results were presented as graphs of performance aspects plotted against the parameters varied. Because the study was a trend analysis, no specific conclusions were drawn but a summary was made of the more significant results. It

is hoped that the results of this project can serve as a guide to preliminary selection of design parameters for tilt-rotor configurations that would be suitable for a broad range of military and civil applications.

Ellis, John Richard. **Design and Evaluation of a Sonobuoy Ranging System.** 

Monterey, CA: Naval Postgraduate School, 1970. (AD0710357). 141p.

Thesis (M.S. in Electrical Engineering) -- Naval Postgraduate School, 1970.

Abstract: Airborne Anti-Submarine Warfare operations require a means of precise tactical navigation relative to an air-dropped sonobuoy pattern. Advantages and disadvantages of navigational techniques which could be used to solve this problem are discussed. An analysis is made of a previously proposed method to solve this problem by sonobuoy ranging concepts. The design of a prototype sonobuoy ranging system is described, and a preliminary evaluation is made of the accuracy of the prototype system.

Farris, Christy Lee and Neil John Gaffney. **Consideration of the Carrier-Based Tactical Support Center Design**. Monterey, CA: Naval Postgraduate School, 1976. (ADA025434). 134p.

Thesis (M.S. in Systems Technology) -- Naval Postgraduate School, 1976.

Abstract: This joint thesis analyzes the carrier-based Tactical Support Center (CV-TSC) design from a human factors engineering view-point. Beginning with the ASW threat to the carrier force under the CV concept, a definition of the mission of the CV/TSC is presented. System functions are identified and developed into man-machine relationships of the CV/TSC. A comprehensive, albeit general, description of TSC components is included as part of the system analysis. Man's role, functions and tasks in the CV/TSC are identified and form the basis for alternatives to the current TSC display/control console. NPS/DKL Location: THESIS F234

Feustel, Richard D. A Joint Campaign Analysis Approach to Antisubmarine Warfare Using a Circulation Model Template. Monterey, CA: Naval Postgraduate School, 1996. (ADA322913). 133p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, September 1996. Abstract: To enhance insight into a War at sea, a general, aggregated and highly flexible model of the ASW campaign is offered. This thesis provides a simple and usable circulation model template. The generality and simplicity of the model allows for 'jointization' of an ASW campaign by allowing the user to utilize other resources to define the force mix. The model is designed, first and foremost, to examine the change in the marginal effectiveness of friendly ASW forces due to changes in force level, mix, effectiveness, and employment strategies. The model is keyed to the interaction of a threat submarine with friendly ASW forces and merchant or military shipping. Specific features of the model provide for four unique attack regimes. The in port and operational regimes control friendly attacks on a daily basis while the outbound and inbound regimes control barriers by events. The campaign model is a deliverable product programmed using Borland(registered) Delphi for use in Microsoft Windows.

Fisher, Rory H. Variability and Sensitivity of Coupled Mixed Layer-Acoustic Model Systems. Monterey, CA: Naval Postgraduate School, 1981. (NPS68-81-002, ADA114302). 124p.

Thesis (M.S. in Systems Technology) -- Naval Postgraduate School, 1981. Also issued as Naval Postgraduate School Technical Report NPS-68-81-002 in conjunction with Calvin R. Dunlap and Roland W. Garwood.

Abstract: This study is the first reported analysis of coupled mixed layer-acoustic model systems. This analysis emphasizes the performance of the combined systems rather than the acoustic or ocean models separately. Acoustic variability of the coupled model systems was studied in terms of the median detection range (MDR). Synoptic time variations of MDR as a function of figure of merit, frequency and receiver depth were analyzed during the month of May 1980 at OWS 'Papa' in order to provide a better insight into the operational capabilities of model systems to accurately represent the actual oceanic variability. The results of this limited analysis revealed that the model systems displayed more day-to-day acoustic (MDR) variability than did direct environmental input(BT). The capability to accurately model the thermal structure was reviewed with the following results. No significant correlation was observed between the EOTS model and the actual BT mixed layer depths while there appeared to be a strong positive correlation between the ODT model (driven by atmospheric forcing) and the BT mixed layer depths. Moreover, a possible lag of two days was observed in the EOTS model mixed layer depth relative to the observed mixed layer depth time series.

Forrest, R. N. **Two Motion Strategies**. Monterey, CA:: Naval Postgraduate School; , 1982. (NPS71-82-001-REV; ADA136221). 27p.

Revision of report dated Dec 82, ADA129194.

Abstract: The report discusses two motion strategies that reduce the localization information provided by a surveillance system. In the revision, an expression in Appendix 6 has been changed and a new reference has been cited. Also, several typographical errors have been corrected.

NPS/DKL Location: GENERAL V165 .F67

Forrest, R. N. and James N. Eagle. **Empirical Analysis of a Submarine Motion Model**. Monterey, CA: Naval Postgraduate School Antisubmarine Warfare Academic Group, 1991. (NPS-AW-91-002, ADA242342). 93p.

Abstract: This report describes an empirical analysis of a motion model that has been used to generate random submarine tracks for an antisubmarine warfare tactical decision aid. The model describes a submarine's motion as a series of transitions between the square cells of a grid that covers a defined operating region. A 3 x 3 transition matrix is associated with each cell of the grid which determines the submarine's transitions from a cell. The set of transition matrices define a Markov process. Despite its discrete nature, this Markov track generating process has been called a diffusion process in antisubmarine warfare tactical decision aid literature. The transition matrices are determined by tracks generated by an auxiliary stochastic process that is presumed to be of higher fidelity but more costly to implement than the Markov process.

Fountoulakis, Radamanthis P. **Oceanographic and Acoustical Survey of the East Ionian Sea**. Monterey, CA: Naval Postgraduate School, 1990. (ADA241360). 97p.

Thesis (M.S. in Engineering Acoustics) -- Naval Postgraduate School, September 1990. Abstract: A study was conducted in an area off the Hellenic west coast to examine the spatial and time variability of various oceanic parameters, with special emphasis on those effecting ASW operations. Propagation loss runs were conducted using PE and RAYMODE models. The reactions of both models to different bottom morphology and sound speed profiles (seasons) were examined. Between the two models, the PE model was found to be closer to reality than RAYMODE. Results suggest that the application of these models can improve the understanding of sound propagation in the Hellenic seas. The bottom modeling program, BLUG, appears to need improvement.

Franken, Jeroen. **Tactical Application of Coastal Acoustic Tomography**. Monterey, CA: Naval Postgraduate School, 1994. (ADA290219). 66p.

Thesis (M.S. in Engineering Acoustics) -- Naval Postgraduate School, December 1994. Abstract: The objective of this study is to investigate the utility of acoustic tomography for performance assessment of a generic low frequency active sonar system. The performance of the sonar is simulated using tomography-derived sound speed data versus a range independent ocean model. The ocean environment used in the simulation is 159 tomographic snapshots of the Barents Sea Polar Front, taken every 5 minutes in August 1992. The modeled sonar system consists of a 1000 Hz source with a source level of 205.5 dB and a towed horizontal array of hydrophones. The system is derived from unclassified parameters of ATAS (Active Towed Array Sonar), built by Thomson Sintra ASM and British Aerospace SEMA, and the experimental ALF sonar, designed by FEL-TNO (the Netherlands) and built by Thomson Sintra ASM. The tomographic images over a range of 26 km provide a realistic ocean in which system performance is assessed. This study used a broadband, coupled normal mode, propagation model and assumed a noise-limited condition. The probability of detection calculated as a function of time for 13 hours is compared with that estimated using a range- and time-independent assumption. The utility of coastal acoustic tomography for tactical applications is discussed. (AN).

French, Thomas Penn. **Sonobuoy Location**. Monterey, CA: Naval Postgraduate School, 1970. (AD0713077). 77p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1970

Abstract: In airborne anti-submarine warfare operations there is a critical requirement for maintaining an accurate relative plot of the sonobuoys with respect to the aircraft. This study proposed a method for locating sonobuoys in a pattern using aircraft-to-buoy slant range information. The method did not use triangulation procedures and attempted to minimize the restrictions placed on the aircraft. The study showed the feasibility of the proposed methodology and the approximate errors to be encountered. NPS/DKL Location: THESIS F86

Frost, Mark Douglas. **An ASW Campaign Model**. Monterey, CA: Naval Postgraduate School, 1980. (ADA094570). 122p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1980

Abstract: To enhance insight into a War at sea, a large-scale, aggregated, and highly flexible model of the ASW campaign is offered. The model was designed, first and foremost, to examine the change in the marginal effectiveness of friendly ASW forces due to changes of force level, force mix, and force employment strategies. The model is keyed to the interaction of the threat submarine force with friendly ASW forces and merchant or military shipping. Specific features of the model provide for threat deployment options, allocation of friendly forces, attrition to threat and friendly forces, aggregation of friendly ASW force performance, sensitivity to force levels, deployment of submarines within 'wolfpacks' and coordinated barrier stations, and parametric treatment of other Warfare area effectiveness. The campaign model has been programmed in the APL/360 language for use on an IBM 360-67 computer.

Gangsaas, Aasgeir. **Barrier Search Model Using Active Bistatic Sonar to Protect a Channel**. Naval Postgraduate School, Monterey, CA. March 1993. (ADA264910). 55p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, March 1993.

Abstract: Advances in nuclear and diesel-electric submarine technology have reduced the effectiveness of passive means of detection. The United States is faced with a multipolar threat in part due to the proliferation to Third World nations of advanced diesel-electric submarines. The use of active sonar must be explored to gain back the detection advantage the United States submarine force has enjoyed in the past. The use of bistatic sonar reduces the counter-detection threat resulting from active sonar.

Garcia, Arturo M. Model for Evaluating HS/HSL Community Consolidation.

Monterey, CA: Naval Postgraduate School, 1995. (ADA296694). 64p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, March 1995.

Abstract: A methodology is developed to assist in the evaluation of competing proposals for HS/HSL consolidation. Six criteria are developed to allow a quantitative measure of critical personnel, cost, and operational issues. The criteria are incorporated into a spreadsheet model that can evaluate five options simultaneously. Decision maker participation is required to derive a set of weights that represent the relative importance attributed to each criteria. Five options currently under consideration as candidates for consolidation are examined. Analysis is conducted to determine the effect different weight values have on the optimal solution. A sample run of the model is conducted to demonstrate its use. (KAR)p. 2.

Garrett, Roger A. and Albert P.Herrlinger **Automatic Antisubmarine Track Reconstruction**. Monterey, CA: Naval Postgraduate School, 1966. (AD0803652). 73p.

Distribution Limitation now Removed.

Thesis (M.S. in Operation Research) -- Naval Postgraduate School, 1966.

Abstract: The relative distance between various Antisubmarine Warfare vehicles is an important parameter for the evaluation of sensor equipment. This thesis presents a computer model, utilizing a time dependent error navigation system, Omega, for the determination of this relative distance parameter. A methodology for predetermining a relative distance error distribution for a specific area by simulating various Antisubmarine Warfare vehicle tracks from known navigational errors has been established. Attempts to smooth estimated tracks of Antisubmarine Warfare vehicles which receive the same time dependent navigational information simultaneously was found not to be advisable as this disturbs the correlation of navigation error between the vehicles.

Gonzalez, Debra L. Relationship Between the Armed Services Vocational Aptitude Battery (ASVAB) and Performance in Fleet Readiness Squadron (FRS) Acoustic Operator Training. Monterey, CA: Naval Postgraduate School, 1986. (ADA168516). 72p.

Thesis (M.S. in Management) -- Naval Postgraduate School, 1986.

Abstract: The purpose of this thesis is to determine whether the Armed Services Vocational Aptitude Battery (ASVAB) scores, specifically the composite of ASVAB subtests (AR + 2MK + GS) used to predict eligibility for formal training in the Aviation Antisubmarine Warfare Operator (AW) rating, can actually

predict the success or failure of enlisted personnel attempting the P-3 fleet readiness squadron (FRS) Acoustic Operator syllabus. This was accomplished by computing a Pearson Product - Moment Correlation Coefficient, corrected for restriction in range, to determine the correlation between ASVAB subtest and composite scores and success or failure in the FRS syllabus. The results indicate that ASVAB scores are only slightly predictive of performance.

Goodwin, Francis R. **NAVTAG (Naval Tactical Game) System and Its Modification to Include the SH-60B Helicopter**. Monterey, CA: Naval Postgraduate School, 1984. (ADA152004). 77p.

Thesis (M.S. in Information System) -- Naval Postgraduate School, 1984.

Abstract: The Naval Tactical Game (NAVTAG) Training Systems are to become the standard War gaming computers in fleet use to train Surface Warfare Officers in tactical operations. As modern weapons platforms are developed, they need to be modeled into NAVTAG in order that they might be included in applicable atsea engagements. In support of this objective, the SH-60B (SEAHAWK) Anti-Submarine Warfare Helicopter, which is currently not supported by NAVTAG, is incorporated into the NAVTAG system. The SH-60B is incorporated into the NAVTAG System with the full range of functions that are enjoyed by other aircraft modeled in NAVTAG. Using NAVTAG the SH-60B is tested in an Antisubmarine Warfare (ASW) scenario developed to test its capabilities against a Soviet submarine. For comparison and testing purposes the SH-60B is also compared to the SH-2F helicopter previously modeled in NAVTAG. Both helicopters have comparable mission objectives and tactics. This is a research project to determine if NAVTAG can be modified in a research environment and with what degree of difficulty this may be accomplished. This in no way is meant to modify the Standard NAVTAG Systems that have been distributed to fleet units without the consent of the Program Manager. Originator supplied keywords include: Wargaming, NAVTAG, SH-60B helicopter.

NPS/DKL Location: THESIS G5725

Gostlow, GA, **TAO** (**Tactical Action Officer**) **ASW** (**Anti-Submarine Warfare**) **Expert System Prototype.** Monterey, CA: Naval Postgraduate School, 1986. (ADA175258). 66p.

Thesis (M.S. in Systems Technology) -- Naval Postgraduate School, 1986.

Abstract: The expertise required by Tactical Action Officers in a modern Anti-Submarine Warfare environment of complex weaponry, minimal reaction time and ardous conditions at sea necessitate training and experience that is both exhaustive and progressive. For these officers to be effective in making accurate and timely decisions so as to effect the most appropriate responses, they must have ready access to current tactical doctrine and system performance statistics. In time of War there is no time to allow a junior Tactical Action Officer to progress to a level of competency: He must be a reliable, capable, fully functional Warfare team member at the outset of his tour. This thesis presents a prototype Artificial Intelligence model of the TAO ASW decision making process using an expert system development tool run on a microcomputer, to train fledgling TAO's with an outlook to the potential

development and capability of an operational expert system.

Gowans, George Keith. **Variation in Thermal Structure and Geostrophic Current Between Alaska and Hawaii Determined from Synoptic Space Sections**. Monterey, CA: Naval Postgraduate School, 1969. (AD0706077). 73p.

Thesis (M.S. in Oceanography) -- Naval Postgraduate School, 1969.

Abstract: Five synoptic space sections along 158W longitude between Hawaii and the Aleutian Islands were developed from data collected by airborne expendable bathythermographs during experiment PARKA, a research project sponsored by the U. S. Navy in 1968. The sections are examined for spacial and temporal variation in thermal structure and geostrophic surface velocity. Two recently developed analysis techniques are employed. Denner's T-S gradient method, wherein thermal and haline contributions to total geostrophic velocity are distinguishable, expedites calculations and results in velocity fields comparable to those developed by the dynamic method. Thermocline parameters are developed using Boston's objective definition of the thermocline, a statistical curve-fitting technique which develops the notion of a Gaussain thermocline. Gross features of thermal structure remain fairly consistent during the heating season; however, thermal fronts are observed to vary in time and space. The distribution of isothermal lines with latitude suggests the possibility of a Taylor-column effect slightly north of Hawaii.

Grant, Gary Maxwell. **Preliminary Investigation of a Proposed Sonobuoy Ranging System**. Monterey, CA: Naval Postgraduate School, 1969. (AD0705497). 68p. Thesis (M.S. in Electrical Engineering) -- Naval Postgraduate School, 1969.

Abstract: The ability to locate and determine the position of an ASW sonobuoy is an essential part of airborne anti-submarine operations. Present methods restrict the parent aircraft's operational capability and yield only marginal data. State-of-the-art frequency control makes it possible to range sonobuoys accurately with radio signals. Sonobuoy position can then be determined by combining this range data with other available information. A system is proposed to both free the parent aircraft from present restrictions and to increase the accuracy of the position information.

Griggs, William Clifton and John Arthur Thompson. **Methodology for the Conversion of Tactical Board Games to Computer Assisted War Games**. Monterey, CA: Naval Postgraduate School, 1980. (ADA094617). 247p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1981.

Abstract: As part of the development of the capabilities of the Command, Control and Communications (C3) Laboratory at the Naval Postgraduate School, there was a need for an in-house computer assisted tactical war game. The objective of this thesis was to satisfy that need. An Anti-submarine warfare board game, 'Up Scope', which was designed, developed and produced by Simulations Productions, Inc. of New

York, was used as the model. This thesis provides an interactive computer assisted anti-submarine warfare War game called 'Up Scope' which is written in FORTRAN. This thesis also develops a framework for any future computer adaptation of a tactical board game, details a players manual and gives full documentation of the computer programming. Program listings, a sample game and several tactical scenarios are also included.

NPS/DKL Location: THESIS G83225

Guillory, Theodore. Canada: **The Decision to Procure Nuclear Attack Submarines and Its Significance for NATO**. Naval Postgraduate School, 1988. (ADA201669). 88p.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, September 1988.

Abstract: In June 1987 the Canadian government announced plans to procure 10 to 12 nuclear attack submarines (SSNs). The evidence suggests that, for some Canadians, a primary purpose for this submarine program may not be to enhance the security of NATO, but instead to assert Canada's sovereignty, principally against the United States, in the Arctic region. The thesis discuss this decision and its possible implications for the security of North America and NATO. It is argued that the United States must continue to have unimpeded access to the Arctic region to counter the ever increasing threat posed by Soviet nuclear ballistic missile submarines (SSBNs). Finally the thesis suggests a possible solution to the current sovereignty debate and a potential strategy for employing these SNN to enhance the security of North America and NATO as a whole.

Gunn, Lee Fredric and Peter Tocha. **An Algorithm for the Solution of Concave-Convex Games**. Monterey, CA: Naval Postgraduate School, 1971. (AD0735309). 78p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1971.

Abstract: The thesis discusses the solution of concave-convex games. An algorithm is developed, a computer program written and applied to an anti-submarine warfare force allocation problem as an illustration. Techniques for handling concave-convex problems in high dimensions are included.

NPS/DKL Location: THESIS G8647

Hall, Charles R. A Game Theoretical Approach to the Contact Area Helicopter ASW Problem. Monterey, CA: Naval Postgraduate School, 1964. (AD0480740). 70p. Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1964.

Abstract: The helicopter contact area search problem is studied. The analysis used to derive current search plans is presented, and an error in this analysis is demonstrated. As a result of this examination a new model is constructed for investigating the problem. Game theory techniques are applied to the model andthe methodology required to derive optimal strategies is illustrated. Although no complete optimal strategies are derived, it is possible to derive such strategies by applying computer techniques to the results of this study. Such strategies could then be applied in the fleet.

Hammon, Colin P. The Design and Construction of a Computer Simulation.

Monterey, CA: Naval Postgraduate School, 1964. (AD0615652). 2p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1964.

Abstract: A procedural approach to the design and implementation of a computer simulation model is presented, with a simulation model description and computer code. The discussion and example are intended as reference material for the computer science and computer War gaming courses offered at the United States Naval Postgraduate School. The sample computer simulation was designed for the

statistical analysis of the comparative effectiveness of different ASW helicopter search tactics in a variety of tactical and physical environments. This simulation has available a wide range of input parameters and is applicable to all ASW helicopters and any search plan employing ten helicopters or less. The accompanying FORTRAN computer code was written for the CDC 1604 computer, and is adaptable to the IBM 7090-94 by the inclusion of the appropriate control cards and random number generator. NPS/DKL Location: THESIS H175

Harvey, Lawrence Michael. **Application of the Sonar Equations to Bistatic Echo-Ranging**. Monterey, CA: Naval Postgraduate School, 1982. (ADA115731). 87p. Thesis (M.S. in Systems Technology) -- Naval Postgraduate School, 1982.

Abstract: The thesis explores the phenomena unique to echo-ranging with a source widely separated from the receiver. In an asset-austere era of antisubmarine warfare, this technique serves as a tactical advantage, particularly in the passive tracking of a submarine. Particular emphasis is placed on the terms of the sonar equation most affected by the bistatic geometry: Reverberation level and target strength. The research is particularly applicable to ongoing NATO and Naval Laboratory work involving the bistatic concept in array design and for use with surface escorts in conjunction with friendly submarines.

Harvey, Phillip Ivan. **An Analysis of Environmental Data for Use in Updating Low Frequency Propagation Loss Forecasts**. Monterey, CA: Naval Postgraduate School, 1972. (AD0757682). 181p.

Thesis (M.S. in Oceanography) -- Naval Postgraduate School, 1972.

Abstract: An acoustic model for low frequency (100-2400 HZ) propagation loss within a surface duct is examined. An analysis of the sensitivity of this model as a function of the governing environmental parameters is performed. The results of this analysis show that the frequency and mixed layer depth are influential over a wide range of environmental conditions and that the below layer thermal gradient becomes important at low frequencies when the layer depth is relatively shallow. Under certain conditions, a change in below layer thermal gradient of 2F/100 FT has the same resultant effect as a 25 FT change in the mixed layer depth. (Author Modified Abstract)

Harvey, Robert Frank. A Computer War Game for Determining the Cost-Effectiveness of Active Sonobuoys. Monterey, CA: Naval Postgraduate School, 1967. (AD0824131). 79p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1967.

Abstract: In order to evaluate the relative effectiveness of different active non-directional sonobuoys, a computer war game is developed. One submarine, employing one evasion tactic, is opposed by one helicopter, using five prosecution tactics. The tactic of the helicopter prior to the initial detection of the submarine is seen to be critical, and this simulation aids in determining an optimum tactic. A cost-effectiveness model to use data from this simulation is developed. An example, using hypothetical but realistic data, is presented to illustrate methods of determining the cost-effectiveness of each sonobuoy type when used with its optimum tactic.

Haworth, AG. A War-Game Analysis of an Undeveloped Submarine Detection System. Monterey, CA: Naval Postgraduate School, 1965. (AD0475240). 30p. Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1965.

Abstract: The evaluation of a proposed submarine detection system by computer war gaming techniques is illustrated by a hypothetical example. A scenerio is chosen, tactics and policies established, and the tactical simulation conducted. From the results of the simulation, minimum specifications for the system to attain a given level of effectiveness are drawn. Finally, a scale is made for comparison of this system with similar systems in terms of cost per day per mile of barrier.

Hayes, James A. **SSBN Survivability: A Time for Confidence-Building Measures**. Monterey, CA: Naval Postgraduate School, 1982. (ADA126701). 134p.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, 1982.

Abstract: This thesis will focus on the sea-based legs of the American and Soviet triads, examining a series of confidence-building measures (CBMs) that may be considered during the Strategic Arms Reduction Talks (START) that are underway in Geneva. Some proponents have argued that these CBMs, if implemented, would strengthen each side's belief in the invulnerability of nuclear-powered, ballistic missile launching submarines (SSBNs), thereby increasing strategic stability. These proposals seek to increase confidence in SSBN survivability by managing both the employment of anti-submarine warfare (ASW) forces and the development of technology that could be specifically directed against SSBNs. This thesis will consider the possible effects that five different CBMs could have on U.S. perceptions of SSBN survivability. These changes in perception will be measured against the costs that might be exacted in other areas (e.g., tactical anti-submarine warfare) by agreeing to the CBMs.

Hilzer, Ralph Conrad. **NANCEE: An Approach to Barrier Sonobuoy Pattern Optimization**. Monterey, CA: Naval Postgraduate School, 1974. (AD0783809). 97p. Thesis (M.S. in Computer Science) -- Naval Postgraduate School, 1974.

Abstract: NANCEE is a computer simulation program which uses convolution (or meeting) probabilities to determine which barrier type of sonobuoy pattern has the highest probability of detection for a transiting nuclear submarine. The program assumes that the optimum barrier is a straight-line one, two, or three row sonobuoy pattern containing not more than 48 sonobuoys. The barrier is centered on the submarine's expected line of transit, oriented perpendicular to the submarine's course, and placed far enough ahead of the submarine's position that all pattern sonobuoys are in the water and being monitored before the submarine enters the detection range of the sonobuoy pattern. If more than one barrier is found to have the highest probability of detection, the one with the least number of sonobuoys is selected as optimum. (Modified author abstract)

Huff, Michael Thomas. **Comparison of ASTRAL and RAYMODE Propagation Loss Models and Their Use in Air ASW Platforms**. Monterey, CA: Naval Postgraduate School, 1993. (ADA275015). 64p.

Thesis (M.S. in Applied Science) -- Naval Postgraduate School, September 1993.

Abstract: The development of new decision support systems for Antisubmarine Warfare will entail the installation of propagation loss models on ASW aircraft. The decision to put either a range dependent or range independent model in the system will affect the predicted ranges, the overall probability of detection, and the computation time. Comparisons of the range dependent ASTRAL and range

independent RAYMODE propagation loss models were made in the Eastern Mediterranean, the Gulf of Oman and the South China Sea for eight source/receiver/frequency combinations. Computation time differences between the two models were not significant at either of the source frequencies (50 Hz or 400 Hz). RAYMODE showed much better correlation with the split step PE model which was used as a standard. The ASTRAL model often predicted lower transmission losses than either RAYMODE or PE. For the short detection ranges normally encountered in air ASW the more complex range dependent models are not necessary. The RAYMODE model or a comparable range independent model will provide adequate propagation loss predictions. ASTRAL, RAYMODE, Propagation loss models.

Ingold, Barry W. **Key Feature Identification from Image Profile Segments Using a High Frequency Sonar**. Monterey, CA: Naval Postgraduate School, 1992. (ADA261926). 67p.

Thesis (M.S. in Mechanical Engineering) -- Naval Postgraduate School, December 1992.

Abstract: Many avenues have been explored to allow recognition of underwater objects by a sensing system on an Autonomous Underwater Vehicle (AUV). In particular, this research analyzes the precision with which a Tritech ST1000 high resolution imaging sonar system allows the extraction of linear features from its perceived environment. The linear extraction algorithm, as well as acceptance criteria for individual sonar returns are developed. Test results showing the actual sonar data and the sonar's perceived environment are presented. Additionally, position of the sonar relative to the perceived image is determined based on the identification of key points in the scene.

Jenkins, Alan K. Modeling Convergence Zone Gain on MS-DOS Based Personal

**Computers**. Monterey, CA: Naval Postgraduate School, 1991. (ADA243252). 84p. Thesis (M.S. in Applied Science) -- Naval Postgraduate School, December 1991.

Abstract: The models for determining convergence zone Gain (G) were developed using a linearized Sound Speed Profile (SSP) and applying ray tracing theory. The SSP was divided into three cases; bilinear, bilinear with isospeed layer, and bilinear with mixed layer. Two analytical solutions were developed using Taylor series and binomial series expansions to determine G, one for the bilinear and bilinear with isospeed layer, and the other for the bilinear with a mixed layer. The solutions for G are exclusively a function of the SSP gradients. Each solution was compared to the solutions from ray tracing and the solutions from the Integrated Carrier Antisubmarine Warfare Prediction System (ICAPS) (which runs on mainframe computers and requires more data in addition to the SSP). When the SSP's were not too unusual, the solutions for G were fairly close when compared to ray tracing and ICAPS. NPS/DKL Location: THESIS J452

Joyce, Michael D. Quadruplet Expansion of the Acoustic Pressure Field in a Wedge Shaped Ocean. Monterey, CA: Naval Postgraduate School, 1993. (ADA275121). 40p.

Thesis (M.S. in Applied Physics) -- Naval Postgraduate School, September 1993.

Abstract: In a wedge shaped ocean, the method of images is used to develop an analytical approximation of the acoustic pressure field. Contemporary work develops acoustic doublets from a combination of the source and surface reflection image using simple dipole theory. The method of images is then used to sum the dipole images. This thesis matches dipole pairs to achieve a quadruplet expansion. A computer program using the derived quadruplet equation is then created to verify the results by comparing them with the URTEXT program. Method of images, Quadruplet expansion.

Kelley, Robert D. **Verification of Mcdonnell'S Mixed-Layer Depth Forecasting Model**. Monterey, CA: Naval Postgraduate School, 1966. (AD0805629). 73p. Thesis (M.S. in Physical Oceanography) -- Naval Postgraduate School, 1966. Abstract: A model based on Kitaigorodsky's application of similarity theory and modified by McDonnell to forecast the mixed-layer depth was studied. The model applies during the Warming season and is

to forecast the mixed-layer depth was studied. The model applies during the Warming season and is based on the theory of similarity. The parameters involved in the model were determined from bathythermograph data recorded at Ocean Weather Stations November (latitude 30N, longitude 140W) and Bravo (latitude 56 30N, longitude 51W). Parameters were evaluated daily and grouped by months. Both seasonal and transitional MLD situations were treated. From these parameters, the form of the dimensionless function P(N), claimed by Kitaigorodsky to be universal, was determined by least squares fit to be best approximated by a second order polynomial. Forecasting equations involving P(N) were developed for each month and tested with data from the following years for both OWS ships. There is general agreement between the observed MLD and that found from the prediction equation based on the last year's P(N) for the same month and location. Month-to-month and spatial differences in P(N) cast considerable doubt on its universality, at least as determined by the parameters as currently defined. NPS/DKL Location: THESIS K272

Kern, Deborah R. **Design and Implementation of the Acoustic Database and Acoustic Trainer for ARGOS**. Monterey, CA: Naval Postgraduate School, 1990. (ADA232052). 105p.

Thesis (M.S. in Computer Science) -- Naval Postgraduate School, June 1990. Abstract: ARGOS is a multimedia database prototype system currently being developed by the Computer Science department of the Naval Postgraduate School in Monterey. Its primary purpose is to provide a prototype system that could be used as a Battle Group Commander's assessment tool and a shipboard data management tool, in addition to providing increased efficiency and productivity to the

Navy ships. This implementation demonstrates the contribution such a system would make to the efforts of the Anti-Submarine Warfare (ASW) community.

Keys, Richard Toney. Large Grain Data Flow Graph Construction and Restructuring Utilizing the ECOS Workstation System. Monterey, CA: Naval Postgraduate School, 1994. (ADA289632). 90p.

Thesis (Master of Computer Science) -- Naval Postgraduate School, September 1994 Abstract: The U.S. Navy's new multiprocessor, the AN/UYS-2 Enhanced Modular Signal Processor (EMSP) utilizes a First-Come-First-Serve (FCFS) algorithm to transfer data. This algorithm is simple to implement but provides no mechanism to control execution of a specific application on the AN/UYS-2 which prevents performance predictions. A Large Grain Data Flow (LGDF) representation of a specific application is utilized to predict performance, with the introduction of trigger queues (dependency arcs) into the graphs to control execution. I utilized the EMSP Common Operational Software (ECOS) Workstation to execute graph representations of specific applications used by the U.S. Navy in the Anti-Submarine Warfare (ASW) arena. A complete description of the ECOS workstation, and the process of transforming specific applications into graph representations to be executed on the ECOS Workstation is demonstrated. Specifically, the Correlator Graph which represents a real-time ASW process is examined. To control and improve performance, the technique of implementing trigger queues using the ECOS Workstation is demonstrated. A basic graph is executed and referenced as a benchmark, with two reconstructed graphs executed demonstrating how trigger queues effect graph execution. The node execution times statistics indicate trigger queues control execution and will provide a mechanism to predict node performance.

Kiland, IN and Jerry Allen Kotchka. **A Game Theoretic Analysis of the Convoy-ASW Problem**. Monterey, CA: Naval Postgraduate School, 1967. (AD0831654). 49p. Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1967.

Abstract: The problem of allocation of ASW forces assigned to an oceanic convoy in a submarine warfare environment is postulated as a two-person game with the payoff function being based on the 'formula of random search.' The opponents in the game are a convoy system and a submarine system. A submarine is given the option of attacking the convoy system either from afar with surface-launched missiles or near with torpedoes. The convoy system is defended by units capable of destroying submarines exercising either of their options. The optimal allocation of forces for both sides is shown to be a set of pure strategies which are dependent on the parameters of the model.

King, Portia B. **Use of the Wavenumber Technique with the Lloyds Mirror for an Acoustic Doublet.** Monterey, CA: Naval Postgraduate School, 1985. (ADA156463). 113p.

Thesis (M.S. in Systems Technology) -- Naval Postgraduate School, 1985.

Abstract: This thesis examines a method to determine the depth of a point source in and isospeed ocean environment. Using the Fourier Transform on the acoustic pressure field in the range domain results in the attainment of the acoustic pressure spectrum in the wave-number domain and a characteristic nodal spacing unique to the source-receiver depths. Quantitative examination of a magnitude plot of the spectrum and use of simple mathematical formulae yield the source depth. The debilitative effects of narrowband noise and surface roughness on the pressure spectrum is recognizable in noise after the pressure field in the range domain has been lost in the noise field. The effect of surface gravity waves on the pressure spectrum is similar to that on the pressure field in the range domain: The characteristic nodal spacing is suppressed as the height of the surface waves increases. Keywords include: Lloyds mirror; Underwater acoustics; Fast fourier transform; Wavenumber Technique; Pressure spectrum; Source depth determination; Acoustic propagation; Isospeed environment; Antisubmarine Warfare.

Koepke, John Allen. **Conceptual Design of a Stand-Off Weapon for Maritime Patrol Aircraft**. Monterey, CA: Naval Postgraduate School, 1988. (ADA221572). 183p. Thesis (M.S. in Aeronautical Engineering) -- Naval Postgraduate School, 1988.

Abstract: A conceptual design of a stand-off weapon to be launched from maritime patrol aircraft for use against hostile surface combatants was performed at the request of the Naval Air Test Center. The purpose of this thesis was to study the feasibility of developing a low-cost, anti-ship missile for air ASW platforms. A mission threat analysis was conducted to determine the lethality of probable targets and to determine required missile performance characteristics. Current design methods and techniques were used to calculate the necessary missile geometry to meet the derived performance characteristics. An evaluation of navigation laws was conducted to determine the most appropriate flight profile for the missile. The control system was tailored to meet the specifications of the selected navigation law. An investigation of passive and active homing devices was conducted. A low cost seeker to adequately locate and track targets of interest was examined. A target engagement model was used to verify the missile's maneuverability. This model demonstrated that the missile could intercept highly maneuvering craft when launched from a desirable stand-off distance.

Landa Borges, José Manuel. Radar Search and Detection with the CASA 212 S43 Aircraft. Monterey, CA: Naval Postgraduate School, 2004. (ADA429893). 75p. Thesis (M.S. in Operations Research) - -Naval Postgraduate School, December 2004. Abstract: This research develops a detection rate model to analyze the effectiveness of the RDR 1500B search radar installed in the CASA 212 S43 aircraft belonging to Venezuelan Naval Aviation. The model is based on a search and detection mission to find a diesel submarine executing an incursion inside the Venezuelan Caribbean Sea area, assumed to be intermittently operating with periscopes or masts exposed above the sea surface. The analysis obtains cumulative probability of detection vs. time based on the radar manufacturer's performance data, user inputs for aircraft search area size, search speed, and search altitude, and submarine periscope or mast exposure profile. The model can use given periscope radar cross section data, or roughly calculate radar cross section given assumptions about exposed periscope height above the sea-surface and sea-state conditions. Submarine evasion due to radar counterdetection is also modeled.

Lanman, George Maurice. An Adaptation of a Markov Chain Model for Antisubmarine Warfare Carrier Aircraft. Monterey, CA: Naval Postgraduate School, 1988. (AD0489085). 63p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1966.

Abstract: It is the purpose of this paper to develop a useful mathematical model of ASW aircraft availability. The increasing emphasis of systems studies dictates the use of accurate and representative models of the ASW systems. At present, many studies are using essentially the same models developed during World War II. This paper is an attempt to make use of advanced theory in a more powerful and flexible model and to make the use of the model practical and verifiable. The writer adapted the time homogeneous bivariate model as developed by F. C. Collins. This is a discrete time Markov process with a stochastic matrix of transition probabilities wherein the maintenance process is modeled as a pulsed input multiple server queue. The model was programmed in FORTRAN 63 on the CDC 1604 and then modified to allow for variability in the input parameters. Other modifications include an increase in the size of the model to accommodate a 16-aircraft squadron, the largest ASW squadron at present, and an explicit form solution to the maintenance queueing equations.

Lentz, Frederick Charles. **Integration of ASW Helicopter Operations and Environment into NPSNET**. Monterey, CA: Naval Postgraduate School, 1995. (ADA304302). 124p.

Abstract: Despite the increasing emphasis by the military on joint force operations, existing modelling and simulation programs, including NPSNET, fail to address joint operations and crew coordination. The problem is that previous work on NPSNET, the virtual environment and visual simulation platform developed by the Computer Science Department at the Naval PostGraduate School in Monterey, California, has focused primarily on individual ground force elements with little emphasis on naval forces or crew concepts. This restricts the practical use of the system to ground force training while ignoring joint force training with sea and air components and between crew members. One solution to is expand the capability of NPSNET by incorporating a variety of vehicles from different components of the military with the added capability of multiple workstation control of a single vehicle. The approach taken is to expand NPSNET to simulate helicopter Anti-Submarine Warfare. This work focuses on realistic helicopter flight control, multiple workstation control of a single vehicle, and interface design between workstations controlling one vehicle. NPSNET has become a more useful training tool for today's military forces by implementing more realistic helicopter flight controls and adding joint mission capabilities. The significance of this work is that a broad range of forces can receive valuable joint training and crew coordination training conducted in a virtual environment.

Llanos, Humberto M. An Investigation of the Problem of Optimizing a Search Tactic for a Searchlight Type Sonar. Monterey, CA: Naval Postgraduate School, 1972. (AD0754352). 42p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1972.

Abstract: A searchlight type sonar is one of the systems that small navies use to counteract the danger which submarines present to their lines of supply and transport. In the paper, a standard search pattern for this type of sonar is compared with search patterns which are based on a consideration of the tactical

value of detecting a submarine as a function of the relative location of the submarine. The results of the comparison suggest that is possible to increase the effectiveness of a searchlight type sonar by using a search pattern in which the sweep time allocated to a search sector is based on the sectors tactical importance.

Lowery, John L. **High Speed Marine Craft Threat: Buoyancy and Stability Requirements for a Sub-Launched Weapon System**. Monterey, CA: Naval Postgraduate School, 1999. (ADA374340). 59p.

Abstract: Military intelligence has considered various coastal scenarios in which the submarine is the only platform -available to engage waterborne infiltration forces. Torpedoes are meant for large ships, and cruise missiles are strategic weapons not to be wasted on small craft. Therefore, the submarine does not have a weapons capability to engage and destroy high-speed marine craft (HSMC) that would be used for coastal infiltration. The most practical scenario would utilize a torpedo stow for a weapon system that would be tube launched, thus ensuring the maximum cruise missile capability of the submarine with a minimal sacrifice to anti-surface and anti-submarine warfare capabilities. The maintaining of the submarine's stealth will be paramount, therefore, an off-hull launcher is desired. The weapon needs to be highly discriminative due to high shipping traffic in coastal waters. In all, the major factors associated with the design and employment of a sub-launched weapon system for engaging HSMC are the threat, the missile, the launcher and the deployment method. In a hostile coastal environment, there are numerous targets ranging from surface threats to air threats. Missile design is dependent on the threat and can be varied for different scenarios. However, the launcher and deployment of a tube launched weapon system are only restricted by the dimensions of the torpedo tube and the buoyancy and stability of the designed system. These parameters can be quantified and modeled. This thesis focused on designing a weapon system, SEABAT, to meet the basic buoyancy and stability requirements. The results of the SEABAT design prove its feasibility as a torpedo tube launched weapon system.

Mancini, Steven. **Sensitivity of Satellite Altimetry Data Assimilation on a Naval Anti-Submarine Warfare Weapon System**. Monterey, CA: Naval Postgraduate School, 2004. (ADA 427237). 77p.

Thesis (M.S. in Meteorology and Physical Oceanography) -- Naval Postgraduate School, September 2004.

Abstract: The purpose of this thesis is to assess the benefit of assimilating satellite altimeter data into the Modular Ocean Data Assimilation System (MODAS). To accomplish this, two different MODAS fields were used by the Weapon Acoustic Preset Program (WAPP) to determine suggested presets for a Mk 48 variant torpedo. The MODAS fields differ in that one uses altimeter data assimilated from three satellites while the other uses no altimeter data. The metric used to compare the two sets of outputs is the relative difference in acoustic coverage area generated by WAPP. Output presets are created for five different scenarios, two Anti- Surface Warfare scenarios and three Anti-Submarine Warfare scenarios, in each of three regions: The East China Sea, the Sea of Japan, and an area south of Japan that includes the Kuroshio current. Analysis of the output reveals that, in some situations, WAPP output is very sensitive to the inclusion of the altimeter data because of the resulting differences in the Subsurface predictions. The change in weapon presets could be so much that the effectiveness of the weapon might be affected.

Mann, Joelle J. **ASW Fusion on a PC**. Monterey, CA: Naval Postgraduate School, 2004. (ADA424696). 69p.

Thesis (M.S. in Applied Science (Operations Research)) -- Naval Postgraduate School,

June 2004.

Abstract: LosCon, the software program developed for the author's thesis and tested at sea, is designed to help the ASW commander regain tactical control in a loss of submarine contact situation. Persistent detection and cueing in the battlespace depend on utilizing contact reports from a network of combatant platform and offboard sensors. LosCon, an extended Kalman filter-based program modeled after MTST (Maneuvering Target Statistical Tracker), can integrate the sensor network very efficiently. Kalman filtering is a method of recursively updating the position of an evading target and accuracy of that position using imperfect measurements. Lines of bearing to the contact with associated standard deviation bearing errors and positions with their standard deviation range errors are the measurements LosCon uses to generate an ellipse of the submarine's likely position or AOU (Area Of Uncertainty). LosCon will also generate an expanded AOU for any future time, allowing commanders to correctly estimate the size of the search area. The effectiveness of the sea shield concept depends on the ability of organic forces to deny the enemy tactical control of the battlespace area. Incorporating the information generated by LosCon would assist ASW commanders in maintaining undersea superiority.

Martin, Claude F. Call for New ASW Screen Geometries for Carrier Battlegroup Open Ocean Transits Under the 1990's Threat. Monterey, CA: Naval Postgraduate School, 1992. (ADA257699). 143p.

Thesis (M.S. in Applied Science) -- Naval Postgraduate School, June 1992.

Abstract: A simulation model was specified. It examines United States Navy Antisubmarine Warfare Screen alternative dispositions for Carrier Battlegroups. The scenario posed is open ocean transit under the threat of an attack from foreign submarine hulls built in the 1990's. The investigation raises the issue of the appropriateness of current Navy practices and suggests that new tactics be developed. The author's thoughts are that in the 1990's there will be ever newer, more lethal, unpredictable threats to United State's maritime independence than current doctrine addresses. The full implementation of the simulation program has not been accomplished. A segment of verification output is shown for expository purposes only. A discussion is given on the adequacy of the model's abstractions along with their possible impact on potential results of experiments.

McClure, Donald James. **Experimental Design Considerations in the Operational Test and Evaluation of Airborne Acoustic Processing Systems**. Monterey, CA: Naval Postgraduate School, 1979. (ADA078270). 53p.

Thesis (M.S. in Operations Research ) -- Naval Postgraduate School, September 1979. Abstract: The Antisubmarine Warfare (ASW) capability of the air arms of western navies depends upon their ability to employ air-dropable sonobuoys for the detection and localization of enemy submarines. The systems which process the acoustic information from these sonobuoys are sophisticated spectrum analyzers. A constant effort to improve performance has led to frequent updates to existing systems and the periodic development of completely new processors. Assessing the significance of these improvements in the operational environment is the function of an operational evaluation. The operational evaluation of an acoustic processing system is complicated by the impact of the constantly changing acoustic propagation conditions encountered in ocean operating areas. This, along with the inherent variability in the other factors affecting passive sonar performance, makes it difficult to compare the ranges achieved from one trial to the next. However, it is imperative that the evaluation agencies report findings that are applicable over the wide variety of operating conditions which are likely to be encountered in the operational employment of the airborne acoustic processor.

McDonnell, John R. Application of Similarity Theory to Forecasting the Mixed-Layer Depth of the Ocean. Monterey, CA: Naval Postgraduate School, 1944. (AD0601580). 2p.

Thesis (M.S. in Oceanography) -- Naval Postgraduate School, 1964.

Abstract: The thermal structure of the ocean, especially the uppermost mixed layer, greatly affects sonar ranges. In this paper, similarity theory is applied to the problem of forecasting the depth of the mixed layer during the warm season, assuming the controlling processes are secular, non-advective, and non divergent. The resulting forecast method consists mainly of two equations. Parameters used are wind, coriolis effect, the coefficient of thermal expansion and a measure of the excess heat within the mixed layer. The constants in the equations were determined using data from OWS Papa (50N, 145W). The forecast method treats both seasonal and transitional thermoclines. The method was tested with data from OWS Papa and OWS November (30N, 140W). The tests apparently indicate wide applicability of this forecast method and thus tend to corroborate the proposal by Kitaigorodsky that the mixed-layer depth is a function of a universal coefficient.

McGinlay, Thomas Charles John. Personnel and Equipment Design Concept for a Maritime Patrol Airship (Non-Rigid) to Conduct Search, Anti-Submarine Warfare, and Airborne Mine Countermeasures Missions. Monterey, CA: Naval Postgraduate School, 1979. (ADA085144). 227p.

Thesis (M.S. in Management) -- Naval Postgraduate School, 1979.

Abstract: A personnel and equipment design concept for a non-rigid, 100 hour endurance, Maritime Patrol Airship meeting Search and Rescue (SAR), Anti-Submarine Warfare (ASW), and Airborne Mine Countermeasures (AMCM) requirements was developed. The Maritime Patrol Airship could readily be equipped with off-the-shelf equipment. Minimal new design equipment requirements were identified. A baseline flight scenario and on station scenarios for: SAR, transoceanic ASW utilizing a passive towed array sonar, and AMCM were developed. Human factors task analyses and a time line analysis were constructed from the scenarios. Manning reductions resulted for each scenario (3 crewmembers for SAR, 10 crewmembers for transoceanic ASW, 7 crewmembers for AMCM). Further research areas are identified.

McMichael, D.L. An On-Line Simulation of ASW in a Multi-Burst Nuclear Environment. Monterey, CA: Naval Postgraduate School, 1966. (AD0488327). 123p. Thesis (M.S. in Electrical Engineering) -- Naval Postgraduate School, 1966.

Abstract: A general approach is documented as a guide to aid in the formulation and implementation of on-line, real time computer simulations. A computer program, MULNUC1, is developed as an on-line, real time computer simulation of antisubmarine warfare in a multiple burst nuclear environment. The principals of the game are a submarine armed with torpedoes, and two destroyers equipped with stand-off antisubmarine weapons. The simulation is intended as a demonstration of the on-line capabilities of the United States Naval Postgraduate School computer system and as a tool for further study of the factors involved in a representative ASW operational environment.

Nash, Wyatt J. Calculation of Barrier Search Probability of Detection for Arbitrary Search Tracks. Monterey, CA: Naval Postgraduate School, 2000. (ADA378067). 103p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, March 2000. Abstract: The Surface Warfare Development Group is responsible for conducting the Ship Anti-Submarine Warfare Readiness/Effectiveness Measuring program. They currently employ a standard set of measures for evaluating the performance of shipboard anti-submarine warfare sensors. This research

investigates several new performance-based measures to determine if they are more suitable than the standard measures for evaluating the conduct of anti-submarine warfare barrier searches. The investigation simulates barrier searches to determine probability of detection, calculates the proposed measures, and compares the two. The results indicate that the proposed measures can be improved. A barrier search algorithm exploiting target-relative space ideas is developed which generalizes the classical search theory results for predicting probability of detection during barrier search.

Nicholson, Charles Louis. Localization of Acoustic Transients in Shallow Water Environments. Monterey, CA: Naval Postgraduate School, 1992. (ADA260615). 38p. Thesis (M.S. in Electrical Engineering) -- Naval Postgraduate School, December 1992 Abstract: Determination an of an underwater target's position using passive acoustic sensors is of considerable use for the Navy, both for Anti-Submarine Warfare (ASW) and underwater surveillance. This thesis proposes and develops localization algorithms capable of passively determining the location of a transient source given some broad constraints. In particular, this thesis investigates the effect of the source signal uncertainty on localizer performance. The localization process consists of two parts. First, a time domain propagation modeling code determines the impulse response of the environment from all possible source locations to a single hydrophone. This program predicts the signal as it would appear at the receiver from a grid of possible source locations. Second, source localization results from finding the maximum correlation between the positionally dependent, numerically modeled signals and the actual received signal. The position of the maximum cross correlation reveals an estimate of source position. Using model to model correlation, this technique successfully localized acoustic sources in both Monterey Bay and Barents Sea scenarios.

Nissen, Richard J. Feasibility for the Integration of ASW Information Databases. Monterey, CA: Naval Postgraduate School, 1992. (ADA257581). 150p. Thesis (M.S. in Applied Science) -- Naval Postgraduate School, September 1992. Abstract: There are currently three databases supported by three different commands that collect and output basically the same type of information: PACER, SHAREM, and AIREM. These systems contain initial detection data, tracking data, environmental data, system performance data, and weapon performance data. This thesis investigates the commonalities and differences in structure and content of the three databases, and examines the feasibility of integrating PACER, SHAREM, and AIREM into a single database. The benefits of this database integration are a more comprehensive utilization of data, reduced data collection for fleet users, and a standardization of how the data is analyzed.

Null, James Mark. **Perturbative Inversion of Geoacoustic Parameters in a Shallow Water Environment**. Monterey, CA: Naval Postgraduate School, 1995. (ADA294674). 99p.

Thesis (M.S. in Meteorology and Physical Oceanography) -- Naval Postgraduate School, March 1995.

Abstract: In many strategic shallow water areas the geoacoustic properties of the sub-bottom are largely unknown. In this thesis it is demonstrated that inverse theory and measured data from a single hydrophone can be used to accurately deduce the geoacoustic properties of the sub-bottom, even when the initial background geoacoustic model is a highly inaccurate guess. Since propagation in shallow water is very sensitive to the geoacoustic properties of the sub-bottom, the inverse technique developed in this thesis presents the Navy with a vitally important, practical, and inexpensive means to improve sonar performance prediction in a potentially hostile environment. To provide ground truth for the inverse technique, measured data collected during Project GEMINI were compared to the inverse solutions. Detailed, site-specific geoacoustic models were developed for two array locations and the Finite Element Parabolic Equation (FEPE) model was used to estimate transmission loss (TL). The model estimates from FEPE compared well with the measured data and the detailed geoacoustic models were considered as ground truth. To test the efficacy of the technique, initial background geoacoustic models were constructed assuming no a priori information of the bottom. The resultant inverse solution was used to predict the geoacoustic properties at each of the sites. The final results were in excellent agreement with the measured data and the resulting inverse technique TL estimates were as good or better than the Th estimates obtained from the detailed, site-specific geoacoustic models.

## Ong, Seow Meng. A Mission Planning Expert System with Three-Dimensional Path Optimization for the NPS Model 2 Autonomous Underwater Vehicle.

Monterey, CA: Naval Postgraduate School, 1990. (ADA226395). 192p.

Thesis (M.S. in Computer Science) -- Naval Postgraduate School, June 1990.

Abstract: Unmanned vehicle technology has matured significantly over the last two decades. This is evidenced by its widespread use in industrial and military applications ranging from deep-ocean exploration to anti-submarine Warfare. Indeed, the feasibility of short range, special-purpose vehicles (whether autonomous or remotely operated) is no longer in question. The research efforts have now begun to shift their focus on development of reliable, longer range, high-endurance and fully autonomous systems. One of the major underlying technologies required to realize this goal is Artificial Intelligence (AI). The latter offers great potential to endow vehicles with the intelligence needed for fully automated and extended range capability; this involves the increased application of AI techniques to support mission planning and execution, navigation and contingency planning. This thesis addresses two issues associated with the above goal for Autonomous Underwater Vehicles (AUV's). Firstly, a new approach is proposed for path planning in underwater environments that is capable of dealing with uncharted obstacles and which requires significantly less planning time and computer memory. Secondly, it explores the use of expert system technology in the planning of AUV missions. (KR)

Panoff, Timothy J. **Reference Path Generation and Tracking of Marine Vehicles**. Monterey, CA: Naval Postgraduate School, 1992. (ADA257742). 64p. Thesis (M.S. in Mechanical Engineering) -- Naval Postgraduate School, September 1992.

Abstract: This thesis analyzes the problem of accurate path keeping for marine vehicles. The reference path is generated automatically through the use of a critically damped second order model. An appropriate shift in the time axis allows a smooth path with zero overshoot regardless of the initial conditions. Control design for the physical system is achieved through the use of optimum control and linear quadratic regulator techniques. Results are presented for general maneuvering scenarios in the horizontal plane and demonstrate the validity of the models used in the research.

Peck, Robert Louis. A Systematic Approach Toward Developing ASW Tactics Based on Plausible Soviet Resource Allocation. Monterey, CA: Naval Postgraduate School, 1974. (AD0777216). 37p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1974.

Abstract: The thesis relates the fact that, in the past, our ASW community has placed great (and justifiable) emphasis in detection and classification of submarines, while a serious lag in tactical procedures has developed. In order to alleviate this problem, it was felt that a systematic approach be taken which uses the principles of Operations Research. By examining submarine warfare from the viewpoint of the Soviet Union, a resource allocation problem was devised which compares the various submarine classes and the possible mission areas in which they may be assigned. Characteristics and available numbers of submarines were estimated, and the resulting allocation of forces was determined. (Modified author abstract)

NPS/DKL Location: THESIS P319

Perry, Michael D. Value Aided Satellite Altimetry Data for Weapon Presets.

Monterey, CA: Naval Postgraduate School, 2003. (ADA417625). 86p.

Thesis (M.S. in Applied Sciences)--Naval Postgraduate School, June 2003.

Abstract: The purpose of this thesis is to determine the effect that the inclusion of satellite altimeter data has on weapon preset accuracy. GDEM data and MODAS data utilizing four satellite altimeters were used by the Weapon Acoustic Preset Program to determine the suggested presets for a Mk 48 torpedo. The acoustic coverage area generated by the program will be used as the metric to compare the two sets of outputs. The assumption is that the MODAS initialized presets will be more accurate, and, therefore, the difference between the two sets of presets can be attributed to inaccuracy on the part of the GDEM presets. Output presets were created for two different scenarios, an Anti-Surface Warfare (ASUW) scenario and an Anti-Submarine Warfare (ASW) scenario, and three different depth bands, shallow, mid, and deep. After analyzing the output, it became clear that the GDEM data predicted a weapon effectiveness that was far higher than the effectiveness predicted by the MODAS data. Also, while GDEM predicted a wide range of coverage percentages MODAS predicted a narrow range of coverage percentages.

Philipp, Brian F. Categorical Analysis of Weapon System Accuracy Trial (WSAT) Data. Monterey, CA: Naval Postgraduate School, 1992. (ADA257573). 47p. Thesis (M.S. in Applied Science) -- Naval Postgraduate School, September 1992. Abstract: This thesis contains an analysis of the last five years of Antisubmarine Warfare (ASW) Weapon System Accuracy Trial (WSAT) data from both the Atlantic and Pacific Fleet. The analysis is conducted in an effort to provide recommendations to be applied toward future evolution of the ASW Test Program for surface ships. A statistical chi-square test is conducted on Fleet and Navy wide data to determine which ASW combat system material categories are most prone to degradation. Additionally, a critical examination of the existing WSAT data base is provided with an aim toward promoting future

statistical analysis. Results of this thesis indicate that degradation to weapons delivery systems like torpedo tubes and ASROC launchers are statistically significant with respect to other material categories. The analysis also shows how the existing WSAT data base can easily be modified and adapted for further use to document inspections on existing ships as well as new construction ships with future material systems.

Pollak, Kenneth D. Real-Time Enhancement of a Climatology or Forecast of Ocean Thermal Structure Using Observed Ocean Temperatures. Monterey, CA: Naval Postgraduate School, 1984. (ADA151118). 66p.

Thesis (M.S. in Oceanography) -- Naval Postgraduate School, 1984.

Abstract: Vertical temperature profiles observed in the eastern North Pacific were used to examine the feasibility of extrapolating an observation from one location to another. The technique, referred to as simple enhancement, is a special case of the Gandin (1963) optimum interpolation methodology. Application to Navy ASW (Antisubmarine Warfare) operations is considered. The technique requires the use of a trial value and a local observation. Trial values are obtained from a climatology and a synoptic analysis /forecast system provided by the Fleet Numerical Oceanography Center. An enhanced temperature profile is calculated by adding an observed anomaly (i.e., observation minus trial value) to the trial value at the desired location. Calculations of mean and RMS errors indicate that simple enhancement can provide a closer estimate to actual conditions than unenhanced climatology. The mixed layer depth cannot be extrapolated accurately to new locations presumably due to mesoscale eddies, fronts, internal waves and small scale fluctuations at the base of the mixed layer. Experiments at different locations and seasons would be required for a complete assessment of the application to ASW operations.

Recalde, Cesar J. **Reactive ASW Sonar Search Tactical Decision Aid**. Monterey, CA: Naval Postgraduate School, 1996. (ADA322381). 164p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, September 1996. Abstract: This thesis develops, implements and tests a Tactical Decision Aid for a Reactive Target ASW Active Search. The mode uses a Bayesian Filtering Process to fuse information from a real world search conducted by several assets with information from a Monte Carlo Simulation that encompasses five hundred equally likely different possible initial positions and behaviors of the real target. A Reactive Target Model resembles the behavior of a target that is always aware and reacts because of the presence and activity of the searchers. An initial 'prior', or best estimate of the location of the target is updated using the movement of the simulated targets, the negative information conveyed in an unsuccessful search over a period of time and the positive information implied in a contact report. The search effort is measured using a Fixed Scan Stochastic Model that solves the Sonar Equation limited by noise and reverberation. As a result of updating the prior, a 'posterior' distribution is obtained. The Law of Total Probabilities is used to render a probability map of the location of the Target by mapping color intensities to probabilities. A recursive expression for evaluating a contact report is also developed.

Ridings, William V. **Analysis of Effects of Variable Factors on Weapon Performance**. Monterey, CA: Naval Postgraduate School, 1993. (ADA267166). 61p. Thesis (M.S. in Operations Research) -- Naval Postgraduate School, March 1993. Abstract: Statistical analysis provides a powerful tool for modern decision makers. Unfortunately, this

tool can be a two-edged sword. Improper or erroneous analysis can result in incorrect and costly decisions. Many analysis errors can be traced to the misapplication of statistical methods. When examining experimental data, it is first necessary to determine the true nature of that data, specifically, the structure from which the data is drawn. This determination will then be a primary factor in the choice of statistical tests. This thesis examines an analysis performed by Surface Warfare Development Group (SWDG). The SWDG analysis is shown to be incorrect due to the misapplication of testing methods. A corrected analysis is presented and recommendations suggested for changes to the testing procedures used by SWDG. Additionally, a computer program to perform basic Analysis of Variance (ANOVA) tests is provided to be appended to the current SWDG statistical software.

Rinaldi, Ronald Daniel. **The Probable Distribution of Whales as False Sonar Targets in the North Pacific Ocean by Analysis of Whaling Data**. Monterey, CA: Naval Postgraduate School, 1972. (AD0743085). 181p.

Thesis (M.S. in Oceanography) -- Naval Postgraduate School, 1972.

Abstract: False Sonar targets present a serious unpredicted problem to U. S. Navy ASW units. It is believed that planning and operations could be enhanced by a forecasting capability for whale distribution. As a possible solution to this problem, a modified form of the 'Transect Method of population estimation' is applied to whaling data to calculate probable numbers of false targets per 1000 nautical miles of steaming with a 1000 yard sonar range. Japanese and Russian whale fishery data are analyzed by the 'q' and Expected Catch methods of population dynamics to obtain two independent estimates of the populations of fin, sei and sperm whales. The mean of the two estimates is applied to the equation along with a term for assumed ideal sonar conditions.

Robbins, Douglas L. **Decision-Making Process of an Antisubmarine Warfare Commander**. Monterey, CA: Naval Postgraduate School, 1986. (ADA176049). 49p. Thesis (M.S. in Systems Technology) -- Naval Postgraduate School, September 1986. Abstract: This thesis represents a study of the decision-making process of an Anti-Submarine Warfare Commander (ASWC). Several real world operational issues are analyzed and discussed as to how they can influence his thought process when making decisions. One approach to model this individual's thought process was accomplished by ALPHATECH, INC. By utilizing an ASW scenario, it evaluates how an ASWC makes his tactical decisions to track submarines based upon pieces of received acoustical information. In order to improve this model's representation of a realistic operational environment, a conceptual ASWC decision-making model is provided here.

Roll, Raymond B. Analysis of the Advantages and Disadvantages Associated with the Consolidation of the HS and HSL Missions and Communities. Monterey, CA: Naval Postgraduate School, 1994. (ADA280069). 78p.

Thesis (M.S. in Management) -- Naval Postgraduate School, March 1994.

Abstract: This study examines the advantages and disadvantages associated with the consolidation of the Helicopter Antisubmarine (HS) and Helicopter Anti-submarine (Light) (HSL) communities. The primary source material is generated from personal interviews of the Commanding Officers of these communities. The helicopter and mission developments of each community are researched to determine the goals, environments and technology that shape the squadron operational structures. The operational design of the current squadrons are then examined to see how they are structured to respond to these organizational constraints. This paper analyzes both sides of the consolidation issue and proposes four combined community organizations. Additionally, the advantages and disadvantages of each new structure are reviewed to make recommendations on consolidating the HS and HSL communities. This study also recommends a Project Action Team be formed to continue analyzing the consolidation of these

communities and outline the steps required to implement a consolidation plan. Anti-Submarine Warfare(ASW), Fleet Replacement Squadron(FRS), Helicopter Anti-submarine(HS) Helicopter Anti-Submarines(Light)(HSL).

Rudko, David D. **Logistical Analysis of the Littoral Combat Ship**. Monterey, CA: Naval Postgraduate School, 2003. (ADA415144). 96p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, March 2003.

Abstract: The purpose of the Littoral Combat Ship (LCS) is to provide the Navy with an affordable, small, multi-mission ship capable of independent, interdependent, and integrated operations inside the littorals. The LCS will be designed to replace high-value Naval assets when conducting high-end missions such as littoral Anti-Submarine Warfare (ASW), Mine Warfare (MIW), and Anti-Surface Warfare (ASuW) as well as low-end missions such as Humanitarian Assistance (HA), Non-combatant Evacuation Operations (NEO), and Maritime Intercept Operations (MIO). To accomplish these missions and successfully counter the enemy's littoral denial strategy, the Navy has stated that the LCS must incorporate endurance, speed, payload capacity, sea-keeping, shallow-draft, and mission reconfigurability into a small ship design. Constraints in current ship design technology make this desired combination of design characteristics in small ships difficult to realize at any cost. This thesis analyzes the relationship between speed, endurance, and payload to determine the expected displacement of the LCS; determines the impact of speed, displacement, and significant wave height on LCS fuel consumption and endurance; and analyzes the implications of findings on LCS logistics. The Joint Venture high-speed, wave-piercing catamaran is utilized in this thesis as the LCS seaframe to demonstrate the logistical implications of the speed, endurance, and payload tradeoffs with respect to the modular design of the ship. The weight and space requirement of each onboard and modular system is determined and added to that of the Joint Venture seaframe. Factors considered for full displacement calculations include the base seaframe, installed weapons systems, command and control systems and sensors, personnel and supply load levels, fuel storage capacity, ordnance load levels, and modular systems (embarked manned and unmanned air and sea vehicles). Sanchez, Jaime Cortes. Small Computer Analysis of Regional Ocean Data.

Monterey, CA: Naval Postgraduate School, 1971. (AD0734974). 84p.

Thesis (M.S. in Oceanography) -- Naval Postgraduate School, 1971.

Abstract: The study presents the results of an experiment in objective analysis of oceanographic data for a limited area. The objective analysis is designed to provide a reliable operational system for tactical use in coastal waters. It is shown that this approach makes it possible to obtain a very detailed analysis with good vertical consistency and that only a relatively small amount of highly accurate data is required. The procedure requires only a small computer and little computer time. This method will provide a basis for short-time forecasts of oceanographic parameters using only small computer centers or even time sharing systems.

Sandel, Clyde D and Mary F. Gleason. **Enlistment Standards as Related to Performance in Aviation Antisubmarine Warfare Operator and Aviation Antisubmarine Warfare Technician Ratings**. Monterey, CA: Naval Postgraduate School, 1983. (ADA137558). 75p.

Thesis (M.S. in Management) -- Naval Postgraduate School, 1983.

Abstract: The purpose of this study is to discover if the Navy's system of assigning personnel to the

Aviation Antisubmarine Warfare Technician (AX) and the Aviation Antisubmarine Warfare Operator (AW) ratings can be improved. A multivariable model is developed using success and failure as criterion variables. Biographical and aptitude data available at the time of enlistment are used as predictor variables. Two independent models were created using data available on personnel entering the Navy in 1976, 1977 and 1978. The models were then validated on a new sample. These models predict the future fleet performance of AX and AW personnel as measured by length of service, paygrade achieved, and recommendation for reenlistment. Other results and recommendations regarding implementation and future research are discussed.

Saunders, Norman Thomas and Harald Ziehms. **An Investigation of the Concepts of Purposeful Searches**. Monterey, CA: Naval Postgraduate School, 1972. (AD0751645). 34p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1972.

Abstract: A discrete-time discrete-space search model is considered in which an observer employing an idealized detection device is searching for a uniformly distributed stationary target. The model is formulated as a discrete-time counting process, called the search process, which under weak additional conditions is uniquely determined by a sequence of probabilities. Formulas for the time-to-detection and the detection rate of a search are derived in terms of the parameters of the search process, and are applied to two special types of searches, the systematic search and the random search. Using these search types as boundary cases a purposeful search is defined, and sufficient conditions on the sequence of probabilities are established for the purposeful search. Possible extensions of the search process to less restricted models are indicated.

Sawrey, William Michael. Comparison of Propagation Loss Output from the Tactical Environmental Support System (TESS v. 2.2A) and ASW Tactical Decision Aid (v. 2.1.2.1). Monterey, CA: Naval Postgraduate School, 1993. (ADA264005). 98p.

Thesis (M.S. in Applied Science) -- Naval Postgraduate School, March 1993.

Abstract: The United States Navy uses a number of different systems to predict underwater acoustic transmission loss for operational forces. Historically, these systems have used different acoustic models and supporting databases, resulting in significantly different predictions. Major efforts to bring all acoustic models and databases under configuration control in the Oceanographic and Atmospheric Master Library (OAML) have reduced, but not eliminated, differences in acoustic predictions. Comparisons of 1600 transmission loss runs from the Antisubmarine Warfare Tactical Decision Aid (ASWTDA) and the Tactical Environmental Support System (TESS) were made in the Mediterranean and Sea of Japan for the months of January and July. All inputs to the acoustic models were provided by the respective system databases. Significant differences between ASWTDA and TESS in the areas investigated are evident in regions of complex bathymetry, and these differences become more acute with higher frequency.... TESS, ASWTDA, RAYMODE, ASTRAL, PE, Transmisssion Loss.

Schmidt, Dennis Arvin. **NPSNET: A Graphical Based Expert System to Model P-3 Aircraft Interaction with Submarines and Ships**. Monterey, CA: Naval Postgraduate School, 1993. (ADA271543). 89p.

Thesis (Master of Computer Science) -- Naval Postgraduate School, June 1993.

Abstract: The Computer Science Department at Naval Postgraduate School in Monterey, California has developed a low-cost battlespace simulation system, known as NPSNET, to work on commercially available Silicon Graphics IRIS workstations. Initial work on NPSNET has concentrated primarily on

ground-based forces with only limited work focusing on naval or maritime air forces. With the present movement of the military towards totally integrated joint force operations, there exists a need to expand existing modeling and simulation programs to include all aspects of military operations. This thesis takes a step in that direction by incorporating naval maritime air units into NPSNET, expanding its capability to include naval and Antisubmarine Warfare (ASW) units. This work focuses on several areas of research, including modeling of the P-3 aircraft, aircraft motion control, aircraft ordnance ballistics modeling, interstation networking using the Distributed Interactive Simulation (DIS) protocol and development of an expert system to autonomously control aircraft behavior. Graphics, P-3, Expert Systems, Torpedo ballistics, Sonobuoy ballistics, CLIPS.

Schriner, Karl Leonard. **A Study of Enlisted Training and Education in Applied Oceanography**. Monterey, CA: Naval Postgraduate School, 1972. (AD0751596). 225p.

Thesis (M.S. in Oceanography) -- Naval Postgraduate School, 1972.

Abstract: The study concludes that the primary reason for present programs of enlisted training and education in oceanography is to support ASW. There is a significant lack of courses, schools, and self-study material available to enlisted personnel on the subject of oceanography. Through more than the surface ASW community in the ability to utilize ASW. ASW sonar technicians are inadequately trained in environmental effects on underwater sound propagation. To increase the oceanography knowledge of all enlisted personnel including STs and to provide enlisted ratings to better utilize training in environmental effects, several programs are proposed. These programs include an ASW sensor rating and an oceanographer rating.

Schroeder, Roger Glenn. **Search and Evasion Games**. Monterey, CA: Naval Postgraduate School, 1966. (TR/RP-68; AD0639921). 2p.

Abstract: The author develops some two-person zero-sum formulations of search and evasion problems. By employing a game theoretic approach, he allows the hider, as well as the searcher, to choose a strategy. This is in contrast to most search models which assume a stationary or passive hider. Both non-sequential and sequential search games are investigated. Some interesting aspects of the non-sequential game and an example of an antisubmarine search problem are given. The sequential games consist of a sequence of moves. When the players move, they not only determine a payoff but also the probability that the game terminates before the next move. When at most a finite number of moves is allowed, he proves that a solution may be found by solving a recursive sequence of matrix games. When the number of moves is not bounded, the game is characterized by a special type of non-linear program. The solution to this program can be approximated by successive perturbations of a related linear program. He obtains the result that a pair of strategies minimaxes the expected duration of the game if and only if these strategies also maximin the probability of termination in one step.

Schulte, Walter B., III. **The Frequency Response, Impulse Response, and Transfer Function of an Ocean Waveguide**. Monterey, CA: Naval Postgraduate School, 2004. (ADA424621). 49p.

Thesis (M.S. in Applied Science (Signal Processing)) -- Naval Postgraduate School, June 2004.

Abstract: In this thesis, the ocean was modeled as a waveguide with an ideal pressure - release surface, and an ideal rigid bottom. The ocean waveguide was then treated as a linear, time - invariant, space - variant (TISV) filter or communication channel. The filter is time - invariant because no motion was modeled and because the properties of the ocean were assumed to be constant. The filter is space - variant because of the presence of the two boundaries, that is, the ocean surface and ocean bottom. This thesis investigates the ocean as a linear TISV filter by evaluating 1) the complex frequency response, 2)

the impulse response, and 3) the transfer function of the ocean with respect to depth. It is shown that the TISV impulse response of the ocean contains information that can be used to help localize a target in range and whether the target is above or below the receiver. Computer simulation results were obtained by evaluating the three filter functions for several different test cases.

Shaffer, Richard M. Evaluation of the MPA Detection and Allocation Models Utilized by the ASW Systems Evaluation Tool (ASSET). Monterey, CA: Naval Postgraduate School, 1991. (ADA246595). 52p.

Thesis (M.S. in Applied Science) -- Naval Postgraduate School, September 1991.

Abstract: The primary objective of this thesis is to analyze and recommend improvements to the Maritime Patrol Aircraft (MPA) detection and allocation models utilized by the ASW Systems Evaluation Tool (ASSET), version 1.0. ASSET is a generic high-level ASW modeling tool, designed to aid CNO (OP-71) in the development and refinement of ASW top-level Warfare requirements and the ASW Master Plan. ASSET's strengths lie in its C3I modeling of submarine, MPA, and overhead surveillance in large scale ASW campaigns. To reduce the processing time required by ASSET, the current version of the MPA detection model contains simplifications which can limit its ability to effectively simulate some MPA tactical ASW scenarios. This thesis proposes two new MPA detection models which utilize the coverage area of a user-defined sonobuoy pattern and address the limitations of the current ASSET model. Also proposed is an MPA allocation scheme which should provide a higher cumulative detection probability.

Shaheen, Frederick F. Soviet Union and Its Caribbean Allies: Strategic, Maritime, and Regional Threat to the United States. Monterey, CA: Naval Postgraduate School, 1985. (ADA155886). 96p.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, 1985.

Abstract: The Soviet Union's activity in the Carribean Basin, executed via its client-states of Cuba and Nicaragua, has created a serious threat to U.S. security in the region. This threat to U.S. security takes two forms. The first is the reality of a heavily militarized Cuba posing a significant anti-SLOC potential against Caribbean sea lanes in the event of general War. Such a scenario would tie down NATO Antisubmarine Warfare (ASW) assets in the Caribbean, detracting from NATO's ability to wage the ASW campaign in more critical areas such as the Central and North Atlantic. The second threat is Nicaraguan and Cuban active support of leftist insurgencies in the Basin. These efforts, at the direction of the Soviet Union, pose, not a potential, but a present-day and ongoing security concern for the United States. This thesis briefly examines the historical context of Soviet involvement in the region, and then proceeds to catalog the above mentioned threats to U.S. security, and discusses their implications.

Smith, Billy Joe and Larry Wayne Vice. **Probability and Its Applications to Antisubmarine Warfare**. Monterey, CA: Naval Postgraduate School, 1975. (ADA009913). 99p.

Thesis (M.S. in Systems Technology) -- Naval Postgraduate School, 1975.

Abstract: A basic course with applications of probability to ASW, the course consists of six lesson plans and a 'Study Guide.' The lesson plans are designed to give the/an instructor guidance in what to teach, the depth required and objectives the student should be able to accomplish. The 'Study Guide' provided is for the use of both the instructor and the student, and it should serve as a basic text for the course. Current ASW tactical publications were examined by the authors while developing the course, and as many of the probability applications and as much associated probability terminology from these sources as practicable (and when this could be accomplished at the 'unclassified' level) are incorporated in the course.

Smith, Thomas Joseph. **Two Evaluative Models for a Family of Submarine Versus Submarine Expanding Square Search Plans**. Monterey, CA: Naval Postgraduate School, 1973. (AD07698244). 94p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1973.

Abstract: The thesis investigates the effectiveness of a search plan developed by B. O. Koopman in a submarine versus submarine search situation. Two computer simulation models allow probability of target detection as a function of sonar range to be used as a measure of effectiveness. The Koopman search plan is analyzed and a family of alternate search plans are developed. The choice of a particular alternate search plan is dependent on the parameters of the problem. These parameters are target speed, searcher speed, time late to the search area and total time available to conduct the search. By use of the computer programs a search plan can be chosen so as to maximize the probability of target detection at a particular sonar range for each combination of input parameters.

Soldow, David S. **An Assessment of Submarine Approach Officer Decision-Making and Its Implications for Command Workstation Design**. Monterey, CA: Naval Postgraduate School, 1998. (ADA358437). 123p.

Thesis (M.S. in Operations Research)-- Naval Postgraduate School, Dec. 1998.

Abstract: U.S. Navy Submarine Approach Officers (AO) use tactical skills acquired from years at sea and a seemingly natural panache to accurately determine an enemy submarine's bearing range, course, and speed. This thesis investigates the effects of AO demographic differences and combat system employment methodologies on the ability to develop a timely and accurate firing solution. Employing a low-resolution submarine combat simulator, approximately 10 percent of the total pool of AO's were taken through two of four pre-scripted initial contact scenarios. The AO's were instructed to execute each scenario until they perceive that an accurate solution is obtained on the enemy submarine. The

demographic differences of geographic location, ship type, and duty type are the top three traits that distinguish between success and failure. Further data analysis reveals differences in the information utilization of the simulator between successful and unsuccessful operators. Additionally, utilizing a survey administered to the subjects and basic display design principles, a notional command workstation for the next generation of submarine is developed. The conclusions of this research provide insight into the cognitive modeling, training, and selection of AO's, as well as adding to the growing body of work in the design of military decision support systems.

Stout, Margaret C. The U.S. Navy Submarine Hydrodynamics/Hydroacoustic Community: A Case Study in Strategic Planning for a Decentralized, Multi-Organizational, Military Community. Monterey, CA: Naval Postgraduate School, 2004. (ADA429872). 136p.

Thesis (M.S. in Product Development) -- Naval Postgraduate School, December 2004. Abstract: The United States Navy Submarine Hydrodynamic/Hydroacoustic community is a decentralized, multiorganizational, geographically distributed enterprise. Strategic planning and management, whether formal or ad hoc, is necessary for effective functioning of any organization. However, formal strategic planning is particularly difficult in multi-organizational, geographically diverse enterprises. Enterprise-wide performance measurement and a shared understanding of enterprise performance is necessary to devise compelling and effective strategies. During the Cold War, the U.S. Navy submarine force had a clear mission and compelling goals, with resulting clarity on performance metrics. The Submarine Hydrodynamic/Hydroacoustic workforce was focused on helping the submarine force achieve these goals. In the post-Cold War era, the submarine force mission in the integrated battle space is less defined. The percentage of the military budget that can be spent on discretionary spending is decreasing. The Submarine Hydrodynamics/Hydroacoustic community has been directly impacted by the recent lack of focus and budget reductions. The purpose of this thesis is to research the past processes used to perform strategic planning for the Submarine Hydrodynamic/Hydroacoustic community, identify current strategic issues for the community, and document strategic lessons learned

that can be identified through the evaluation of product successes and failures.

Stuart, Jay C. Optimal Evasive Trajectories of an Isotropic Acoustic Radiator.

Monterey, CA: Naval Postgraduate School, 1975. (ADA019378). 68p. Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1975.

Abstract: The effects of detection equipment integration time on the optimal evasive trajectory of an isotropic acoustic radiator are studied. The boundary cases of infinite and zero integration time are examined. The infinite integration time case is formulated as a control problem and a maximum principle solution is obtained. The results consist of advice as to the choice of control vectors. The zero integration time problem is formulated in ordinary differential equations and the results consist of control vector advice. The relative movement plots and control vectors of the two bounding cases are compared.

Sullivan, Daniel J. A Correlation Study of Some Factors Effecting Submarine Detection by Destroyer Mounted Sonars. Monterey, CA: Naval Postgraduate School, 1970. (AD0722573). 47p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1970.

Abstract: A FORTRAN IV computer program was employed to conduct a statistical analysis of data collected during fleet antisubmarine warfare exercises. The object of the investigation was the identification of those variables which had greatest influence on a destroyer's ability to detect a submarine under certain conditions. The variables were treated as a random vector arising from one of two multivariate normal populations with common covariance matrix. An artificial regression relation was formulated to facilitate development of a linear discriminant function in a Subset of those variables found to be of dominant importance. This latter Subset was identified by examination of multiple correlation coefficients. The discriminant function was found to be seventy five per cent effective in classifying the experimental data correctly.

Timmerman, Michael Jay. **Genetic Algorithm Based Anti-Submarine Warfare Simulator**. Monterey, CA: Naval Postgraduate School, 1993. (ADA274956). 110p. Thesis (Master of Computer Science) -- Naval Postgraduate School, September 1993. Abstract: This research was aimed at improving the genetic algorithm used in an earlier anti-submarine warfare simulator. The problem with the earlier work was that it focused on the development of the environmental model, and did not optimize the genetic algorithm which drives the submarine. The improvements to the algorithm centered on finding the optimal combination of mutation rate, inversion rate, crossover rate, number of generations per turn, population size, and grading criteria. The earlier

simulator, which was written in FORTRAN-77, was recoded in Ada. The genetic algorithm was tested by the execution of several thousand runs of the simulation, varying the parameters to determine the optimal solution. Once the best combination was found, it was further tested by having officers with antisubmarine warfare experience run the simulation in various scenarios to test its performance. The optimum parameters were found to be: Population size of eight, five generations per turn, mutation rate of 0.001, inversion rate of 0.25, crossover rate of 0.65, grading criteria of sum of the fitness values of all alleles while building the strings, and checking the performance against the last five environments for the final string selection. The use of these parameters provided for the best overall performance of the submarine in a variety of tactical situations. The submarine was able to close the target and execute an attack in 73.1% of the two hundred tests of the final configuration of the genetic algorithm.

Tisdale, Vance S. Investigation of Initial Detection Models in the Search and Localization Tactical Decision Aid (SALT). Monterey, CA: Naval Postgraduate School, 1990. (ADA238698). 52p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, September 1990. Abstract: The goal of this thesis is to investigate the initial search planning phase of the Search and Localization Tactical Decision Aid (SALT) developed by METRON, Incorporated of McLean, VA. SALT is a Computer Assisted Search (CAS) program intended for use by P3 UPDATE IV crews to assist them in optimal deployment of a sonobuoy field to prosecute a submarine threat. The initial search planning phase of SALT takes as user inputs environmental data, an initial elliptical Search Probability Area, an assumed target motion model, and the duration of the search. Outputs include a recommended sonobuoy pattern and the probability of detection of this pattern. The investigation of this phase of the algorithm is conducted in two parts. First, a series of simulation routines is used to ensure that the probability of detection of the sonobuoy patterns generated by SALT is mathematically correct. Second, these same computerized simulation routines are used to determine if there are alternate sonobuoy patterns that result in higher probabilities of detection.

Trelles Sánchez, Jorge. **Prediction of the Far-Field Beam Pattern of a Random Noise Source from Measurements Made in the Near-Field**. Monterey, CA: Naval Postgraduate School, 1976. (ADA035850). 54p.

Thesis (M.S. in Engineering Acoustics) -- Naval Postgraduate School, 1976.

Abstract: A theory is presented for computing the far field beam patterns from distributed random noise sources. The theoretical model uses the Green's Function for the wave equation and the space-time autocorrelation function for determining the radiation from a randomly vibrating area. The actual far field beam pattern of a horn speaker in an anechoic chamber was obtained, and also near field measurements were taken to obtain the correlation distance and the mean square of the particle velocity using the autocorrelation function. Finally a computer program was written to evaluate the integral wave equation by numerical methods. It was found that the critical parameters in the mathematical model were the correlation distance and the frequency limits of integration. Small variations in the correlation distance modified greatly the width of the predicted beam pattern, while changes in the limits of integration had a moderate effect. The Frequency Spectrum was obtained in the anechoic chamber and it was used to determine the limits of integration of the integral solution for the intensity field.

Van Train, William. A. **Submarine Barrier Analysis by a Computer War Game Method**. Monterey, CA: Naval Postgraduate School, 1961. (AD0480912). 69p. Thesis (M.S. in ??) -- Naval Postgraduate School, 1961.

Abstract: The computer War game is emerging as a vital tool for finding near-optimal solutions to current military problems. A computer War game designed to permit parametric analysis of a submarine barrier is developed. Simulation techniques both mathematical and computer, are discussed. The effects of assumptions inherent in the computer War game are described. Illustrative analyses conducted through use of this computer War game are exhibited. Potential uses and methods for improvement of the developed War game are discussed.

Vebber, Paul W. Examination of Target Tracking in the Antisubmarine Warfare Systems Evaluation Tool (ASSET). Monterey, CA: Naval Postgraduate School, 1991. (ADA245802). 129p.

Thesis (M.S. in Applied Science) -- Naval Postgraduate School, September 1991. Abstract: The role of the Maneuvering Target Statistical Tracker (MTST), a Kalman filter tracking algorithm based on the Integrated Ornstein-Uhlenbeck (IOU) motion process, in the Antisubmarine Warfare System Evaluation Tool (ASSET) is examined and its operation described. ASSET is a campaign simulation which models open-ocean ASW scenarios featuring prosecution of hostile submarines by friendly submarines and aircraft based on cues provided by data fusion centers. The heart of each data fusion center is an MTST which integrates new contact information into tracks. Comparing the level of sophistication of the tracking algorithm to that of the contact data provided to it, a number of simplifications are proposed. These include using reduced complexity IOU prediction and Kalman filter equations; the use of preprocessed variance data together with the true position of targets to estimate, rather than explicity calculate, updated track states; and limiting contact processing based on information content. Results indicate a good simulation of tracker output is produced using a greatly simplified algorithm. This technique can be generalized to other types of simulations involving target tracking. Walsh, Raymond Michael. **The Effect of False Contacts on the Probability of Detecting a Submarine**. Monterey, CA: Naval Postgraduate School, 1970. (AD0713394). 65p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1970.

Abstract: A computer War game is developed to measure the effect of false contacts on the probability of detecting a submarine. The variables are the probability of correctly classifying a non-submarine contact, the probability of correctly classifying a submarine contact, and the false contact density. A scenario is developed to focus on the false contact problem while holding other ASW variables constant. It is concluded from the output of the game that the effect of false contacts is deeply embedded in the interrelationships between units.

Washburn, Alan. **TBMs and the Flaming Datum Problem**. Monterey, CA: Naval Postgraduate School, 1993. (NPS-OR-93-015, ADA273215). 13p.

Abstract: Theater Ballistic Missile launching systems are vulnerable just after a missile is launched because the missile's track can be extrapolated backwards to the location of the launcher. The situation is similar to one where a submarine torpedoes a ship, thus creating a flaming datum near which ASW forces may concentrate a search for the submarine. This report describes how some simple analytic methods adapted from ASW can be applied to the task of locating the TBM launcher. TBM, Scud, Search.

Waterman, Larry Wayne. **Officer Education and Training in Oceanography for ASW and Other Naval Applications**. Monterey, CA: Naval Postgraduate School, 1972. (AD0741135). 218p.

Thesis (M.S. in Oceanography) -- Naval Postgraduate School, 1972.

Abstract: The study into the knowledge and experience required for optimum performance by officers assigned to operational, R+D, and managerial duties in Anti-submarine Warfare concludes that oceanography should receive the major emphasis in an interdisciplinary graduate level program of the contributing disciplines in ASW. In planning education and training for officers in ASW and other oceanography-related duties the total Service experience should be considered. Oceanography graduate curricula are recommended which will provide knowledge for developing careers of three categories of officers who respectively will: 'specialize' in ASW; become special duty 'environmentalists'; and serve in technical management assignments. Billets are identified for each of these categories.

Whalen, Harold R. III. **Preliminary Software Design for a Personal Computer-Based Antisubmarine Warfare Tactical Flight Simulator**. Monterey, CA: Naval Postgraduate School, 1985. (ADA162255). 75p.

Thesis (M.S. in Information Systems) -- Naval Postgraduate School, 1985.

Abstract: This thesis provides a preliminary software design for an Antisubmarine Warfare Tactical Flight Simulator. The simulation uses AN/ASN-123 Tactical Navigation Set (TACNAV) display symbology and selectable graphic functions to track and localize a single fully-evasive submarine. The primary design objectives are flexibility, utility, and understandability. A composite design methodology including

levels of abstraction, information hiding, coupling, and cohesion as modularization criteria is used to effect a top-down modular decomposition of the simulation. A hierarchical structure is developed and modular packaging is discussed. Some aspects of physical implementation are also discussed and appropriate recommendations made.

Wichert, Terry S. **Feature Based Neural Network Acoustic Transient Signal Classification**. Monterey, CA: Naval Postgraduate School, 1993. (ADA263437). 111p.

Thesis (M.S. in Applied Physics) -- Naval Postgraduate School, March 1993.

Abstract: Utilization of neural network techniques to recognize and classify acoustic signals has long been pursued and shows great promise as a robust application of neural network technology. Traditional techniques have proven effective but in some cases are quite computationally intensive, as the sampling rates necessary to capture the transient result in large input vectors and thus large neural networks. This thesis presents an alternative transient classification scheme which considerably reduces neural network size and thus computation time. Parameterization of the acoustic transient to a set of distinct characteristics (e.g. frequency, power spectral density) which capture the structure of the input signal is the key to this new approach. Testing methods and results are presented on networks for which computation time is a fraction of the necessary with traditional methods, yet classification reliability is maintained. Neural network acoustic classification systems utilizing the above techniques are compared to classic time domain classification networks. Last, a case study is presented which looks at these techniques applied to the acoustic intercept problem.

Wilde, Robert L. Comparative Analysis of a CV Helicopter and a JVX (Joint Services Advanced Vertical Lift) Tilt-Rotor Aircraft in an Aircraft Carrier Based ASW (Anti-Submarine Warfare). Monterey, CA: Naval Postgraduate School, 1985. (ADA156871). 134p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, March 1985. Abstract: This thesis analyzes the environmental compatibility and the potential performance capabilities of two proposed types of vertical flight capable aircraft in an aircraft carrier Anti-Submarine role. The aircraft compared are the CV Helicopter(SH-60F) and an ASW variant of the Joint Services Advanced Vertical Lift (JVX) tilt-rotor aircraft. This thesis compares their adaptability and relative expected mission effectiveness by analyzing their physical dimensions and characteristics and their projected flight performance parameters. Their expected performance in a specific scenario, an ASW pouncer mission employing active dipping sonar, is analyzed using a simulation model. Keywords: Time On-Station; Search and rescue; Flight deck; Detection probability; Helicopter in-flight refueling; Tilt-rotor; and Dipping sonar.

Wile, Ted Shannon. **Sealane Defense: An Emerging Role for the JMSDF**. Monterey, CA: Naval Postgraduate School, 1981. (ADA114547). 176p.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, 1981

Abstract: Japan's economy, the third largest in the world, is totally dependent on the sea lines of communication for the importation of 90 percent of its energy requirements and strategic metals and for over 70 percent of its food. Despite the importance of the sealanes to Japanese security, the Japanese Maritime Self Defense Force (JMSDF) remains incapable of protecting those sealanes against interdiction. Although the JMSDF is currently the seventh largest navy in the world, future expansion has been stymied by Japan's steadfast refusal to increase defense spending above one percent of the GNP. Long-range procurement plans focus on qualitative improvements with a primary emphasis on anti-

submarine warfare, a strategy which could foreshadow a building program to enable the JMSDF to control the vital sea lanes. On the other hand, political and domestic constraints on a strong military indicate a continuing reliance on the United States for Japan's security. This study examines the factors affecting military decision-making in Japan, looks into the problems and realities of sealane defense and analyzes the future prospects for the JMSDF.

Woelper, Eric P. **The Impacts of Academic Background on Submariner Performance, Retention, and Promotion**. Monterey, CA: Naval Postgraduate School, 1998. (ADA343427). 105p.

Thesis (M.S. in Management) -- Naval Postgraduate School, March 1998.

Abstract: This thesis analyzes the relationship between pre-commissioning academic background and submarine officer performance. Four measures of officer performance are used: (1) probability of completing the nuclear training pipeline; (2) probability of receiving an early promotion recommendation on greater than 75 percent of LT fitness reports; (3) probability of remaining in the Navy for 10 years of commissioned service (until the O4 board); and (4) probability of promoting to LCDR. Navy Promotion History files, Officer Data Cards, Fitness Report files, and Loss files are used to statistically analyze the impacts of college grades and major, college guality, and commissioning source on submariner performance and retention. Non-linear maximum likelihood techniques are used to estimate the four performance models. The findings reveal that good grades and engineering majors have a significant positive impact on all four performance measures including retention. There are exceptions among OCS graduates. Grades have an insignificant effect on the probability of completing the training pipeline and of remaining in the Navy until the O4 board. Also, non-technical majors are more likely to remain in the Navy than engineering majors. USNA graduates fare best on all performance measures with the exception of completing the training pipeline. ROTC graduates generally fare better than OCS graduates. Among ROTC and OCS graduates, greater college selectivity leads to higher performance but lower retention rates for OCS graduates. There is no difference in retention rates for ROTC graduates with respect to college selectivity.

Wright, Sherman E. A Proposed Tactical Antisubmarine Warfare Service Utilizing Resonant Bubbles. Monterey, CA: Naval Postgraduate School, 1973. (AD0772789). 43p.

Thesis (M.S. in Engineering Acoustics) -- Naval Postgraduate School, 1973.

Abstract: An experimental investigation was made of the scattering properties of a bubble cloud in a sound field in a fresh water medium. The size of the bubbles was on the order of 0.125 cm radius, and was far above resonant size for the ensonifying sound field. It was determined that the bubbles scattered coherently in the forescatter direction, and incoherently in the backscatter direction. Based upon the

scattering properties of the bubble cloud, it appears feasible to develop a device that could have tactical applications in the prosecution of long-range submarine contacts held by active sonars. Such a device would utilize the principle of resonant bubbles, and would require approximately 2.5 cubic feet of air (corrected to STP) to maintain a +20dB target strength for five minutes of continuous operation.

Acker, David D. Evaluation of the Effectiveness of the Defense Systems Acquisition Review Council (DSARC). Volume I. Technical Report with Appendices A and B. Arlington VA: Information Spectrum Inc., 1983. (ADA129795; ISI-V-3824-03-VOL-1). 149p.

Final Report 1969-1982.

Abstract: The objective of this study is to evaluate the Defense System Acquisition Review Council (DSARC) process since its inception and to assess, in a qualitative sense, the degree to which the process has proved to be effective and efficient. In contrast to earlier studies, this study focuses on both the process and the supporting procedures from the standpoint of the program by examining impacts on programs reviewed. The study focuses on two specific areas, the actual process; and the procedures. The process in defined as the basic concept of decentralized management with centralized control of key decisions. The procedures are defined as those activities required to support the process.

Alexander, Kristina. Environmental Exemptions for the Navy's Mid-Frequency Active Sonar Training Program. Washington, DC: Congressional Research Service, Library of Congress, 2008. (CRS report for Congress; RL34403).

Abstract: Mid-frequency active (MFA) sonar emits pulses of sound from an underwater transmitter to help determine the size, distance, and speed of objects. The sound waves bounce off objects and reflect back to underwater acoustic receivers as an echo. MFA sonar has been used since World War II, and the Navy indicates it the only reliable way to track submarines, especially more recently designed submarines that operate more quietly, making them more difficult to detect. Scientists have asserted that sonar may harm certain marine mammals under certain conditions, especially beaked whales. Depending on the exposure, they believe that sonar may damage the ears of the mammals, causing hemorrhaging and/or disorientation. The Navy agrees that the sonar may harm some marine mammals, but says it has taken protective measures so that animals are not harmed. MFA testing must comply with a variety of environmental laws, unless an exemption is granted by the appropriate authority. Marine mammals are protected under the Marine Mammal Protection Act (MMPA) and some under the Endangered Species

Act (ESA). The training program must also comply with the National Environmental Policy Act (NEPA), and in some cases the Coastal Zone Management Act(CZMA). Each of these laws has provisions where a federal action may be exempted from compliance. The Navy has invoked all of the exemptions to continue its sonar training exercises.

Arends, S.R., J.H. Harrington, C.R. Karlsson, A.E. Pellerin and M.M. Staley. **Military Use of Offshore Platforms**. Newport, RI: Naval War College, 1979. (ADA075840). 62p.

Abstract: A feasibility study as to the possible use of offshore oil platforms as operating bases for Anti-Submarine Warfare (ASW) helicopters and/or as sensor stations in a sea lines of communication/sea surveillance mission. The capability of existing platforms is investigated as to their physical properties to support such operations, their locations, and possible political and legal problems that may impact the military use. The platforms are found to be capable of supporting an ASW/sea surveillance mission but legal constraints and the location of existing platforms could limit such use to U.S. coastal waters. Examination of the feasibility of the mission for and compatibility with the operation of Naval Air Reserve ASW Helicopter Squadrons indicates that these squadrons could conduct detachment size operations from the offshore platforms, during peacetime for training and wartime mobilization to provide ASW/sea surveillance missions for protection of U.S. coastal waters.

Berni, A. and L.Mozzone. **Wireless Tactical Networks in Support of Undersea Research**. La Spezia (Italy): SACLANT Undersea Research Centre, 2001. 10p.

Presented at RTO information Systems Technology Panel (IST), Istanbul, Turkey 9-11 October 2000. This article is from ADA391919, New Information Processing Techniques for Military Systems (les Nouvelles techniques de traitement de l'information pour les Systemes militaires)p.16-1/16-9.

Abstract: Emerging concepts for Anti-Submarine Warfare (ASW) and Rapid Environmental Assessment (REA) increasingly rely on communication technology in order to implement distributed information networks and to exchange information between naval units and military commands ashore. The necessary communication links could be accomplished using a variety of solutions: Our main focus is on radio frequency (RF) links which offer easy deployment and flexible operations. This document illustrates how spread-spectrum techniques can be adopted to Substitute and enhance existing communications systems to permit the deployment of distributed scalable networks of ships and sensors characterized by reliable performance (resistance to hostile jamming and environmental interference) and low probability of interception. An overview of real applications in ASW and REA is presented.

Bischoff, D.E. and R.E. Palmer. **Development of Lateral-Directional Equivalent System Models for Selected U. S. Navy Tactical Aircraft**. Warminster, PA: Naval Air Development Center Aircraft and Crew Systems Technology Directorate, 1983. (ADA141672; NADC-83116-60). 100p.

Abstract: The high order transfer functions representing the lateral directional responses to pilot control inputs were matched with low order equivalent forms in the frequency domain for five Navy tactical aircraft: The A-6, A-7, S-3, F-14, and F-18. The candidate low order equivalent forms investigated were: 1) the complete three degree of freedom representation of roll and sideslip angle responses, and 2) the single degree of freedom roll mode and Dutch roll approximations. Acceptable models were generally obtained for both forms. Simultaneous matching of sideslip and roll angle responses and/or apriori information for the roots was required to match the full three degree of freedom forms. The equivalent system models are discussed in terms of their match statistics. The equivalent system modal parameters, when compared against the requirements of the military flying qualities specification, demonstrate level 1 flying qualities for the conditions analyzed with the exception of roll angle time delay for the A-7 and F-18 airplanes. The A-7's lateral command augmentation structure results in Level 2-3 equivalent time delays, while the F-18's control force inputs produce Level 2 equivalent time delays.

Bollman, McWilliam V., Jr. **Joint Vision 2010 and Anti-Submarine Warfare: The Missing Doctrinal Link**. Newport, RI: Naval War College, 1997. (ADA328244). 25p.

Abstract: Joint and naval doctrine published in the wake of the Goldwater- Nichols Act of 1986 does not sufficently address Anti-Submarine Warfare (ASW). ASW must assume an integral role in the Joint Vision 2010 precepts of operational force protection and battlespace dominance. The global proliferation of diesel submarines capable of conducting sea denial operations in the littoral, and the continued production and employment of Russian nuclear submarines, have generated renewed interest in antisubmarine warfare. To sustain and swiftly project joint forces into and across the littoral will require that U. S. joint force commanders be prepared to quickly neutralize the submarine threat. ASW must, therefore, be fully integrateable into the joint force that will simultaneously conduct the operational protection missions of missile defense, air defense and mine warfare. The Navy, as the ASW core competency leader, needs to develop an ASW vision statement and corresponding naval and joint doctrine. Such doctrine will serve to guide joint ASW force procurement, training and employment in accordance with the tenants outlined in Joint Vision 2010.

Electromagnetic Signal, Underwater Measurements**. Colorado Springs, CO: Kaman Nuclear, 1985. (ADA995288; DNAPOR-2033(EX); DOEPOR-2033(EX)). 96p.

Abstract: This project was conducted to obtain measurements of the electromangetic (EM) signals from nuclear detonations at large distances from the detonation point, above and beneath the sea surface. The planned use of the data is that of determining the feasibility of an Indirect Bomb Damage Assessment (IBDA) system based on the nuclear EM signature. The specific tests were conducted from two ships. The EM signatures recorded both above and below the water surface for the various nuclear events are unique, recognizable, and predictable to a useful degree. It appears entirely feasible to utilize this nuclear EM signal as a method of IBDA. The significance of the data presented herein lies primarily in the demonstrated ability to detect an above-water EM signal with an underwater antenna system. Signal characteristics are changed in magnitude and phase but are very easily recognizable with but a minimum of measuring equipment. (Author)

## Brook, Linton F. **Pricing Ourselves Out of the Market: The Attack Submarine Program**. Newport, RI: Naval War College, 1979. (ADA079599). 47p.

Abstract: Present high costs of nuclear attack submarines have led to reduced procurement rates and will lead to significantly reduced force levels in the 1990's. The paper examines the impact of these reduced levels in order to suggest possible steps to mitigate their severity. An analysis is first made of possible roles for submarines under a variety of Wartime scenarios; submarine employment is determined to depend more on invariant Soviet naval missions than on the precise nature of a future War. The interaction of U. S. submarine capabilities and Soviet Navy missions suggests the most important use of submarines is in anti-submarine warfare, both for sea control and for protection of carrier power projection forces. Dealing with the projected decrease in submarine force levels by reducing missions, improving effectiveness of existing forces and building more submarines are each examined; the examination suggests that no totally satisfactory solution exists given the probability of continued austere shipbuilding budgets. The analysis concludes that a mixed approach including procurement of less expensive (and less capable) nuclear submarines after 1985, extension of service life of some existing submarines, and various other steps is required to maintain submarine warfare capabilities.

CALS Test Network. Technical Engineering Drawing Transfer Using: Loral Defense Systems' Data. Supporting: Naval Undersea Warfare Center, Vertical Launch ASROC Program (Code 416). MIL-STD-1840A, MIL-D-28000A (IGES). Quick Short Test Report. Wright-Patterson AFB, Oh: CALS Test Network, 1994. (ADA 312310; AFCTN-TR-94-097; AFCTB-ID-94-055). 57p.

Abstract: The purpose of the informal test, reported in this QSTR, was to analyze moral Defense System's interpretation and use of the CALS standards in transferring technical engineering data. Loral used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff using an electronic ftp transfer. The stated purpose of this test was to evaluate the data and not the CALS format.

Channell, Ralph C. **Human Factors In the Design of Airships**. Stamford, CT: Dunlap and Associates Inc., June 1950. (AD0643118; SPECDEVCEN-641-2-9). 89p.

Abstract: This study was conducted to determine personnel requirements and optimum equipment design and arrangement for ASW airships. The problem was to increase airship effectiveness in antisubmarine combat by improving the efficiency of human performance. Information with respect to airship-types, operations, and tactics was obtained by interviews with LTA personnel. The basic data of this investigation consist of observer samplings, sound recordings, and motion pictures of the activities of airship crewmen during simulated anti-submarine missions. The critical characteristics of airship performance were determined by analytical evaluations. These findings were used to specify personnel requirements and to improve the particular man-man and man-machine linkages crucial to combat success. Finally, human engineering researches and principles of work simplification were examined to derive recommendations.

Cooper, Keith and Ted Jones. **Project Execution Plan for the Installation of the SOCAL Acoustic Range (SOAR)**. Washington, DC: Chesapeake Division, Naval Facilities Engineeering Command, 1984. (CHES/NAVFAC-FPO-1-84(4); ADA168632). 72p.

Abstract: The Southern California Acoustic Range (SOAR) is designed to provide a 100 square mile Anti Submarine Warfare training range in 4000 feet of sea water west of San Clemente Island, California. SAR will provide accurate tracking of air, surface and submerged targets. This plan is a working document that details the mobilization, execution and demobilization of the underwater portion of the SOAR project. The overall scenario of the project is to accomplish the following; (a) Prefabrication and assemble project materials at NOSC, San Diego; (b) Conduct training near Coronado beach; (c) Mobilize the OCP SEACON and UCT-2 personnel and equipment at West Cove, San Clemente Island; (d) Land the SSL cable and deploy the SSL system at sea; (e) Land the WQC cable and deploy the WQC transducer at sea; (f) Conduct a complete as-built survey (g) Demobilize SEACON and return all equipments and (h) Prepare a detail completion report.

Davies, Alan and Rodger Poore. **Impact of Dynamic Reliability on Airborne ASW Search: A General Approach and a Case Study of the P-3C.** Arlington, VA: Analytic Sciences Corp., 1972. (AD0894745). 133p.

Abstract: This study examines the impact of catastrophic and degradative equipment failures on systems effectiveness, using the P-3C aircraft as an example. The methods are generally applicable to systems having many independent sensors and weapons where the loss of any particular equipment does not necessarily reduce system effectiveness to zero. The major problem in assessing the impact of equipment failure results from the fact that an ASW mission has a complex time history. detection, localization and attack may occur at virtually any time throughout the mission. Therefore the timing of equipment failures is important, since an early failure of a critical sensor causes a much greater reduction in effectiveness than a late one. A series of simplied models are developed to illustrate the time-dependent effects of failure. Using these models with actual failure data for the P-3C, results suggest that current reliability experience reduces potential system effectiveness on the order of 25% or less. A new

approach to the problem of estimating failure effects is attempted. The fractional cost concept yields a precise measure of the importance of each equipment to mission success.

DiOrio, David R. Forward .... From Under the Sea Historical Perspective and Future Vision of Submarine Littoral Warfare. Newport, RI: Naval War College Department of Operations, 1995. (ADA293706). 21p.

Abstract: This paper addresses the role of submarine warfare in today's national strategy. Analysis of submarine coastal operations during the Pacific War, specifically during the final campaign to invade mainland Japan, provides insight into submarine littoral warfare today. Following the decline of the Soviet Union, U.S. forces have focused on the application of maneuver Warfare against emerging regional threats. Undoubtedly, this means control of the littoral regions of the world, where joint forces, including submarines, can influence events ashore. Included within the text is a historical perspective and future vision of submarine littoral warfare as it relates to operational maneuver from the sea.

Domselaar, Gijsbertus E. Van. **Some Models Relating to Encounters Between Ships in Transit and Submarines on Patrol**. La Spezia, Italy: SACLANT ASW Research Centre, 1980. (ADA095111; SACLANTCEN-SM-145). 31p.

Abstract: Recently in force employment studies several high level campaign models have been developed. These models mainly describe the interactions between Soviet submarines and NATO reinforcement and resupply shipping. Values of input parameters are required, which could either be determined by submodelling or simply be given. The choice highly depends on the sensitivity of the results to these input parameters and to the available information for developing submodels. This memorandum describes submodels for two input parameters to higher models: The encounter rate between transitting NATO ships and a submarine on patrol, and the average time a submarine will spend inside the convoy defences when attempting to attack a convoy.

Dutton, L.M. Flight Test Techniques Employed in the Nimrod MR Mk 2 Weapon System Performance Trials. Boscombe Down, England: Aeroplane and Armament Experimental Establishment, 1984. (ADA147625). 13p.

This article is from the Proceedings of the Flight Mechanics Panel Symposium Held in Lisbon, Portugal on 2-5 April 84, ADA147625, p. 14-1 - 14-13.

Abstract: The Nimrod MR Mk 2 represents a large step forward in antisubmarine warfare (ASW) technology. Therefore aircraft operators need to know not only how accurately the new systems and sensors work, but also the best ways in which to use the overall system as a fighting machine. A&AEE Boscombe Down and the RAF Central Tactics and Trials Organisation joined forces to assess the ASW performance of the Nimrod in as near an operational environment as possible. The paper shows how the potential accuracy of the Nimrod's ASW system had to be matched by the precision of trials data collection, in the air and both on and below the sea surface. To gain such precision, the aircraft were extensively instrumented and the majority of the trials were conducted at the AUTEC Range in the Bahamas. The paper continues by explaining how the trials analysis technique had to match the variety of combinations of the data which were needed to make a statement on overall system performance.

Ford, Robert D. The Excedrin Headache of ASW: From U-Boats to the New Boats. Newport, RI: Naval War College, 1997. (ADA328139). 21p.

Abstract: US forces today are under-trained in antisubmarine warfare, at a time when the world conventionally powered submarine base is at an all-time high. The conventional submarine poses a unique and potent threat to US forces, particularly in the littoral regions where ASW is the most difficult. The lessons of World War II, in which German U-Boats inflicted great damage and caused a disproportionate diversion of Allied ASW assets, and the inability of British forces to detect the single Argentine submarine San Luis in the Falklands War underscore the relevance of proper planning to deal with the submarine threat in today's joint littoral warfare arena. The approach taken by JTF and Maritime Component staffs in countering the conventional submarine is critical in the success of the maritime forces achieving dominance as an enabling force in the joint littorals.

Friedman, M.J., L.J. Cowles and R.C. Carson, Jr. **Application of Flight Performance Advisory Systems to U.S. Navy Aircraft**. Warminster PA: Naval Air Development Center, 1986. (ADA182150). 14p.

This article is from 'Efficient Conduct of Individual Flights and Air Traffic or Optimum Utilization of Modern Technology for the Overall Benefit of Civil and Military Airspace Users; Conference Proceedings of the Symposium of the Guidance and Control Panel (42nd) Held in Brussels, Belgium on 10-13 June 1986,' ADA182150, p. 62-1-62-14. Abstract: The U.S. Navy, is currently investigating methods for improving the fuel efficiency of Navy aircraft. Fuel saving concepts include an aircraft integrated flight performance advisory system, a pre-flight mission planning program using a desk type computer and an aircraft performance advisory system using an HP-41 DV hand-held calculator. The integrated flight performance advisory system for the F/A-18, the A-7E, and the S-3 are described in detail by reviewing the displayed outputs to the pilots and describing the required inputs and their sources. Features of each aircraft system are described in accordance with the development status of the program. The preflight mission planning program using an HP-9845 desktop computer is described for the P-3C aircraft. The approach to weather, takeoff and cruise are described by specifying input and output data. Sample displays are also shown. The hand-held HP-41 CV calculator used for flight performance predictions is described for takeoff and cruise flight modes of this aircraft.

Gabriel, V.T., R.D. Berlin and Y. Bar-Shalom. **Data Association in an Ocean Environment**. Syracuse, NY: General Electric Co. Undersea Electronics Programs Dept, 1981. (R0145; ADA108594). 94p.

Final report: 15 July 1979-15 December 1980.

Abstract: A multisensor data association technique was developed utilizing an expected likelihood approach to link time discontinuous tracks or those simultaneously held by multiple sensors. Nonlinear propagation loss/detection performance, prior target speed/heading distributions, gaussian measurement errors and frequency spectrum comparison are included in the resulting algorithm. Single/multiple lookback techniques are used for link decisions. The technique is considered practical for the low data rates typical of ASW. (Author).

Grant, S.C. Assessing Intelligent Software Agents for Training Maritime Patrol Aircraft Crews. Downsview (Ontario): Defence and Civil Institute of Environmental Medicine, 2001. (DCIEM-TR-2001-036); (ADA400717). 36p.

Abstract: Training simulators often require the participation of several people to play the role of supporting players in the simulated operation. Use of intelligent software agents to play the role of these personnel has the potential to reduce support staff and increase an instructor's control of training. This report evaluates a simulator prototype developed for the CP140 Aurora maritime patrol aircraft that incorporated intelligent software agents to play the roles of the Tactical Navigator and an Acoustic Sensor Operator. Human crews, intelligent agent crews, and mixed human-agent crews performed a simulated antisubmarine mission. Mission performance and crew communications were recorded and rated to determine whether the intelligent software agents could perform individual crewmember functions and whether they could provide the interaction necessary for crew coordination training. The results indicate that: (1) agents can perform individual crewmembers' functions; (2) agent interaction with humans is sufficient to allow humans to perform their own tasks; and (3) the agents did not interact in a way suitable for crew coordination training. It is concluded that the prototype is suitable for supporting individual training, but the agents' knowledge base must explicitly address team dynamics if crew coordination training is to be supported.

Greenhill, S., S. Venkatesh, A. Pearce, T.C. Ly. **Representations and Processes in Decision Modelling**. Victoria: Defence Science and Technology Organisation, Aeronautical and Maritime Research Laboratory, 2002. (DSTOGD0318; DSTOAR012146; ADA405860). 75p.

Abstract: This report contains a survey by Curtin University on decision modelling which covers: (1) Our current understanding of how we make decisions, and points out our qualities, our weaknesses and the types of aids that could help us. Of note is the theory that people commit to options even though alternatives exist once a situation has been recognised. (2) Techniques useful for eliciting and representing knowledge about how experts make decisions. (3) What is situation assessment, and how others have tried to capture the process and use the captured information. (4) The different technologies that could be employed to represent the process of situation assessment. This report represents the first step of a larger project to represent how submarine commanders assess situations.

Guidry, M., S. Whitley and B. Markowich. **Boeing 767 Proximity Evaluation with F/A-18C and S-3B Aircraft**. Patuxent River, MD: Naval Air Warfare Center Aircraft Division, 2001. (ADA389851; NAWCADPAX/RTR-2001/17). 74p.

Abstract: The Boeing Company participated in the Future Strategic Tanker Aircraft program which was intended to provide aerial refueling and aerial transport capability to the United Kingdom Royal Air Force under a Private Finance Initiative. Boeing contracted NAWCAD Patuxent River, Maryland, under a commercial service agreement to determine if an area of acceptable wake turbulence existed in the proximity of a 767 aircraft in order to perform the aerial refueling mission. This was accomplished by evaluating the 767 aerodynamic and wake turbulence effects on two receiver aircraft (F/A-18C and S-3B) at locations behind the 767, which approximated potential aerial refueling engagement areas. During the period of 22 and 23 June 2000, three F/A-18 and three S-3B flights were flown totaling 5.8 F/A-18 flight-hours, 6.7 S-3B flight-hours, and 12.5 767 flight-hours. A Lear 35 cinematography aircraft was used to document test results. The test program consisted of proximity evaluations only with no aerial refueling pods installed on the 767 aircraft and no receiver-to-"tanker" engagements. All flights were conducted within the Patuxent River restricted or local Warning areas. At the positions evaluated, areas of acceptable wake turbulence existed for the F/A-18C and the S-3B in the proximity of the 767 aircraft in order to perform the aerial refueling mission. Recommend that testing continue to evaluate the 767 tanker

aircraft.

Guy, C. R., M. J. Williams and N. E. Gilbert. **A Mathematical Model of the Sea King Mk50 Helicopter in the ASW Role**. Melbourne: Aeronautical Research Laboratories, 1981. (ADA112502; ARL-AERO-156). 29p.

Abstract: A mathematical model of the Sea King Mk. 50 Anti-Submarine Warfare (ASW) helicopter and its sonar system is presented. The model represents both performance and dynamic flight behaviour over a range of conditions and incorporates the aerodynamics and kinematics of the helicopter, the control systems, pilot inputs, the cable and sonar dynamics, plus wind and sea state data. The aerodynamics and kinematics model is a three-dimensional representation covering the operating flight envelope, where rotor aerodynamics are based on blade-element and actuator-disc theory, and the control systems contain models of both the flying controls and automatic flight control system. The sonar cable and transducer model is formed by a number of attached, rigid links, where consideration of the forces acting on each link enable the three-dimensional shape and motion of the complete cable and transducer to be predicted. A description of the computer program for the mathematical model is given and sample results are included.

Haralabus, G., E. Capriulo and W.M. Zimmer. **SWAC 4: Broadband Data Analysis Using Sub-Band Processing**. La Spezia (Italy): SACLANT Undersea Research Centre, 2000. (SACLANTCEN-SR-320, ADA378129). 41p.

Abstract: The frequency dependence of broadband active detection/localization is examined. The analysis is based on 1200 Hz (2300-3500 Hz) LFM signals acquired during the SWAC 4 sea trial. A subband matched filter scheme is devised according to which a replica of the transmitted pulse is segmented into ten 120 Hz sub-bands and processed independently through a matched filter detector. Comparison of target detection and ranging results indicate comparable performance for all sub-bands. However, ping-to-ping variability of the ten correlator outputs suggest that the detection performance may be improved by employing incoherent processing schemes. Signal-to-noise ratio is proved to be controlled mainly by noise (reverberation is the predominant noise source) rather than signal variations. The signal intensity remains proportional to the distance between source and receiver due to favorable propagation conditions. Doppler effects and sub-band detection synchronization problems which may lead to performance degradation in large time-bandwidth signal processing are addressed. A method to estimate range rate (relative velocity between source and receiver) based on single ping differential time delay between sub-band MF outputs is developed. This intra-ping technique is an alternative to the standard inter-ping method which requires multiping detection history.

Haralabus, G., E. Capriulo and W. M. Zimmer. **SWAC 4: Broadband Data Analysis Using Sub-Band Processing - Part 2**. La Spezia (Italy): SACLANT Undersea Research Centre, 2001. (SACLANTCEN-SR-337; ADA389996). 38p.

Abstract: The frequency dependence of reverberation is examined using the processing method as for the frequency analysis of target detection during the same experiment. In this experiment, reverberation is induced by abrupt changes in the bottom bathymetry (a 200 m sea mount). For the analysis of the received signal a sub-band matched filter scheme is devised, according to which, a replica of the transmitted pulse (2300 Hz-3500 Hz LFM signal) is segmented into ten 120 Hz sub-bands, each of which is processed independently through a matched filter detector. Following the necessary corrections for array gain and calibration, transmitted power spectrum and propagation loss, the matched filter data are compared to reveal the frequency dependence of reverberation. Due to insufficient in situ measurements, the propagation loss estimate is based on model calculations - a challenging task for the range dependent seafloor at the experimental site. After examining a large number of pings it is concluded that the reverberation energy calculated at the correlator output is comparable for all ten sub-bands. This

leads to the conclusion that for the particular environment and experimental geometry, the frequency spectrum is not sufficiently wide to allow significant frequency variability which may indicate an optimum operational frequency.

Ingenito, F., R. H. Ferris, W. A. Kuperman, S. N. Wolf. **Shallow Water Acoustics: Summary Report on Phase 1**. Washington, DC: Naval Research Laboratory, 1978. (ADA057691, NRL-8179). 57p.

Abstract: In response to the Navy's need for a submarine warfare capability in shallow water areas of the oceans, NRL has been conducting a research program in shallow-water acoustics. The goal of the first phase of this program has been to determine if wave theory can be used to predict the acoustic field at long rangesfrom a submerged acoustic source. The approach used an iterative process involving trial models and at-sea measurements. The wave equation for the physical model is solved by numerical methods and implemented on a high-speed general-purpose computer. Since the acoustic field at long ranges is propagated in the discrete normal modes of the duct, special experimental methods were used to resolve individual modal fields so that their measured characteristics could be compared with predictions. This report presents a detailed description of the NRL normal-mode model in its current form and describes the experimental evaluation procedures and results. Salient features of the model include variable sound speed in the water, slowly variable water depth, statistically rough boundaries, sediment layering, and both shear-wave and compressional-wave propagation in the bottom. Although certain recognized problems remain to be solved, it has been demonstrated that the model can in most cases predict the characteristics of the signal field with sufficient accuracy to be a sueful tool in system design, performance prediction, and tactics.

Jorgensen, Jason T. **The United States Navy's Ability to Counter the Diesel and Nuclear Submarine Threat With Long-Range Antisubmarine Warfare Aircraft**. Fort Leavenworth, KS: Army Command and General Staff College, 2002. (ADA406874). 119p.

Master's thesis.

Abstract: The threat of the Soviet Union and Communism to the United States diminished with the end of the Cold War in the early 1990s. Instead, the asymmetric threat of terrorism has spread throughout the world and become a grave danger to Amen can citizens at home and abroad. Throughout these changes in global landscape, the US Navy has adapted and given new emphasis to a variety of missions during these times of fiscal challenge. However, one of the most dangerous weapons of the Cold War, the submarine, still exists and is being proliferated widely today. Once the primary ASW aircraft used in the prosecution of submarines, the P-3C Orion, has added new equipment to perform its added warfare missions. Thus, the central focus of the thesis: Does the US Navy have the airborne capability to defend itself from current as well as projected submarine threats? The thesis will examine the relevancy of ASW today and determine whether current and future submarines pose a threat to US, its interests as well as its military. The final analysis involves an evaluation of P-3C Orion's capability to detect adversary submarines in the contemporary as well as future operating environment.

Jung, P.A. and R.C. Shaw. Water Entry Structural Technique (WEST): An Analytical Technique to Determine Frangible Nosecap Behavior During Water Entry. San Diego, CA: Naval Ocean Systems Center, 1989. (ADA219641; NOSC-TR-1317). 251p.

Abstract: Described here is a computational method to design frangible nosecaps for air- and surface-launched undersea weapons (such as for ASROC, VLA, and Mk-50 torpedoes). WEST is a technique that can rapidly and accurately assess the state of stress and deformation of missile nosecaps intended to break up at water entry. WEST links the powerful geometry and FEM pre- and post-processor PATRAN, a potential-flow computer code that can calculate dynamic pressure-time histories of an arbitrary entry body, and the nonlinear FEA code ABAQUS. This code linkage has been validated through comparison with experimental work. WEST is a valuable analytical tool that reduces the design cycle time for frangible nosecaps.

Karlsson, P.A., K. Ohlson and L. Pers. **Modellering av Tradstyrning av Torped Fran Ubatsjaktenyheter med Aktiva Sonarer (Modelling of Wire-Guidance of Torpedoes Fired by Anti-Submarine Units with Active Sonars).** Stockholm: Division of Systems Technology, Swedish Defence Research Agency, 2001. (FOI-R-0212-SE). 32p. In Swedish.

Abstract: Duels between torpedoes and ships with counter measures for protection can be simulated with the computer model MUMS. In earlier versions of the model the simulated torpedoes are autonomous after firing. Recently passive sonars have been included which allows simulation of wire-guided torpedoes from submarines. The development described in this report comprises modeling of wire-guided torpedoes from submarines. The development described in this report comprises modeling of wire-guided torpedoes launched from surface ships and/or helicopters with active sonars.

Kaufman, A.I. and E. Zdankiewicz. **Gauging the Military Value of Naval Infrastructure**. Alexandria, VA: Istitute for Defense Analyses, 2001. (IDA-P-3605; IDA/HQ01-000666; ADA394149). 47p.

Abstract: This paper proposes a methodology for relating investments in naval infrastructure programs to investment programs in naval structure and illustrates the utility of such a methodology in trading infrastructure for structure by applying the methodology to organic mine countermeasure and shallow water antisubmarine operations.

Kaye, G. T., Roger Nies and Michael Lovern. **Uplink Laser Propagation Measurements Through the Sea Surface, Haze and Clouds**. San Diego, CA Naval Command Control and Ocean Surveillance Center RDT&E Division, 1993. (ADA264687). 14p.

Abstract: An Airborne Optical Receiver (AOR) was developed and tested to investigate the propagation and reception of optical communications uplinks from a submerged laser source to an overflying fleet aircraft. The AOR was flown in a P-3C Orion aircraft for an at-sea test off the southern California coast in August, 1990. A green laser transmitter was suspended from the Research Platform FLIP at depths of 15 to 45 m. During six nights of operations, the AOR received the laser light at various test geometries and through clear and cloudy conditions. This represents the first optical uplink cloud experiment at visible wavelengths. Results show that optical pulses in clouds are significantly more forward-scattered than modeled. The results can be explained by Mie scattering theory. Measured cloud attenuation and pulse stretching agreed with an existing optical propagation model. Significant attenuation and signal spreading due to haze and fog was measured and compared with theory.

Kessel, Ronald T. and Reginald D. Hollett. **Underwater Intruder Detection Sonar for Harbour Protection: State of the Art Review and Implications**. La Spezia (Italy): NATO Undersea Research Centre, 2006. (ADA457007; NURC-PR-2006-027). 13p. Presented at the IEEE International Conference on Technologies for Homeland Security and Safety (2nd) held in Istanbul, Turkey on 9-13 October 2006. Published in the Proceedings of the IEEE International Conference on Technologies for Homeland Security and Safety (2nd), 2006.

Abstract: Sonar is the sensor of choice for wide-area underwater surveillance because sonar (based on sound waves) typically provides a much larger area of coverage than radar (electromagnetic waves) or video (visible light) can provide under water. Of particular interest of late is sonar for detecting and tracking underwater intruders in harbours, to provide an element of protection for ships, harbour infrastructure, nuclear power plants, and so forth, against terrorist attacks carried out from underwater. Sonar has long been used for detection and tracking by the military, but the application against intruders is relatively new as the mandate of civilian security agencies and the military expands now to include protection against terrorist attacks and counter terrorism. This paper reports the general results of a survey of commercial sonar systems (not including system-by-system rankings or detailed matters of procurement), as well their validation in part through sea trials and modeling, and on factors relevant to their use as a component in harbour protection.

Kneipfer, Ronald R. **Sonar Beamforming - An Overview of Its History and Status**. New London, CT: Naval Undersea Warfare Center, New London Detachment, 1992. (NUWC-NL-TR-10003; ADA250189). 26p. 7 April 1992.

Abstract: This report was prepared at the request of the Program Executive Office for Surface Ship ASW Systems to provide high level managers with a concise overview of the history and status of sonar beamforming. The publication should also serve as an introduction to the subject for new professionals. The history of sonar beamforming is traced from World War II to the present, ending with the topic of adaptive beamforming. A minimum of mathematics is used to facilitate rapid reading, with numerous references provided for the reader who wishes to delve further into the theory.

Koehler, Kim A., Michael M. Harris, Leonard D. Bibee, Chad A.Steed and David Bates. **Ocean Through the Sensor (TTS) Update**. Stennis Space Center, MS: Naval Research Laboratory Marine Geosciences Division, 2003. (ADA421907; NRL/PP/7440--03-1031) 12p.

Abstract: Traditional geoacoustic and ocean data collection efforts by skilled scientists will always be a cornerstone of the Naval Meteorology and Oceanography (MetOc) Program. In recent years however, other methods have been explored to further expand the scope of these data collection efforts. This effort has been driven, in part, by a declining MetOc Program Budget combined with other programmatic considerations both within and outside the Naval MetOc Program. PEO C41 and Space PMW 150, in conjunction with CNMOC, NAVOCEANO, NAVSEA, NAVAIR, and scientists from ONR, NRL, and various National Laboratories and industry, are focused on developing new methods to sense the environment, either through direct or inferred measurements, using tactical sensors. One of these efforts is focused on the development of Through-The-Sensor (TTS) technology. This effort seeks to use data from tactical sensors to characterize the battlespace environment. These data can then be used in Fleet Tactical Decision Aids (TDAs) to modify ASW and MIW tactics and enhance situational awareness at the single ship, Carner Strike Group (CSG), Expeditionary Strike Group (ESG) and theater USW (TUSW) level. Near term efforts include the exploitation of various mine-hunting sensors such as the AOS-20 and side

scan sonar and submarine sensors such as the Precision Undersea Mapper (PUMA) and tactical towed arrays. Exploitation of sensors further on the horizon include submarine sensors such as the submarine CTD and fathometer (BON-17), the surface ship Instrumented Tow Cable (ITC), and the air community's Tactical Acoustic Measurement (TAM) Buoy.

Washington, DC: General Accounting Office National Security and International Affairs Division., 1994. (ADA283196; GAO/NSIAD94-192). 29p. Abstract: The Navy plans to have 10 Trident II submarines by the end of fiscal year 1997. Currently, it has six operational Trident II submarines and four others are under construction. Each Trident II submarine carries 24 D-5 missiles. Each D-5 missile is equipped with the MK-6 guidance system, which is comprised of an inertial measurement unit and an electronics assembly. The inertial measurement unit senses velocity and direction and relays this data to the electronics assembly, which issues flight control commands to the missile.

Kusumoto, Neal J. **The Lost Art of Maritime Mining**. Newport, RI: Naval War College, 1995. (ADA293379). 34p.

Final Report, 13 Feb 1995.

Abstract: Maritime minefields have been employed to achieve strategic and operational objectives in the five major American wars of the 20th Century. The United States has been both the miner and, most recently, the victim. Mining can strike at the heart of the enemy, take advantage of an Achilles' heel, or compensate for one's own weakness. The U.S. Navy maintains a modest inventory of mines which can be laid in volume by Navy and Air Force aircraft, or covertly by submarines. Today's operational commander faces an increasingly challenging task: Tackle a diverse, changing threat with fewer forces and resources without alienating the American public. Minefields can be an integral part of the plan to achieve battlespace dominance and project power. Mining can seize the initiative through surprise, enhance mass and maneuver by achieving economy of force, and expand the commander's battlespace and timeline while compressing those of the enemy. A minefield is a stealthy, persistent, and economical weapon which can deter without killing. Against a maritime foe, the operational commander should consider mining's strategic and operational potential when planning a major operation. (MM). Lahey, George F. and Dewey Slough. Relationships Between Communication

**Variables and Scores in Team Training Exercises.** San Diego CA: Navy Personnel Research and Development Center, 1982. (ADA110117; NPRDC-TR-82-25). 25p. Interim rept.

Abstract: As investigation was made of the practicality of assessing anti-submarine warfare (ASW) team performance by means of measures of the volume of communications. A system for classifying communications was developed based on an analysis of published data on communication rates (e.g., number of evaluative messages sent per minute) of ASW helicopter crews. Next, communication rates were recorded for ship's teams during two exercises in the 14A2 ASW team trainer. Communication rates were computed for various types of messages over the ship-to-ship and ship-to-air circuits. Rates were compared against instructor grades for individuals, subteams, and teams. Communication rates on the intership circuit tended to be negatively correlated with grades, primarily because instructors gave lower grades to teams doing excessive talking. Rates on the ship to air circuit were positively correlated with performance on the later exercise where two aircraft were used rather than one and where a much greater volume of information needed to be transmitted. On the internal circuits, few significant relationships were found between communication rates and performance. Implications of the findings for development of an objective performance measurement system for team training are discussed. NPS/DKL Location: MICROFORM ADA110117

Landry, Normand. The Canadian Air Force Experience: Selecting Aircraft Life Extension as the Most Economical Solution. Ottawa: Department Of National Defence, 2000. (ADA381871). 11p.

Presented at RTO SCI Symposium on Aircraft Update Programmes, The Economical Alternative?, Ankara, Turkey, 26-28 April 1999. This article is from ADA381871 Advances in Vehicle Systems Concepts and Integration. (les Avancees en concepts Systemes pour Vehicules et en integration).

Abstract: Canada like several other countries has limited resources to trade-in its outdated and ageing fleets for state-of-the-art weapon systems. With the CF188 and the CP140, the Canadian Forces (CF) have chosen, as with the CF116 before, to perform a structural and systems upgrade. These upgrades will allow the aircraft to meet their operational requirements until the first quarter of the next century. The choice for this course of action is based on option analysis studies. In the end, fleet modernisation has proven to be The most economical solution. This paper will present the approach taken and the assumptions made for the various scenarios studied to reach That conclusion. Avionics packages are readily available off-the-shelf and in most cases the decision is based mostly on structural limitations. Hence in-service failures and results of full scale fatigue tests obtained through collaborative agreements can be a cost effective way to determine The cost of ownership of each fleet. The paper will briefly talk about The concept taken for the CP140 but will use the CF188 as the demonstration test case. Electronic access: http://handle.dtic.mil/100.2/ADA381871

Lawton, Frank C. The Third World Submarine Threat - Another Great Equalizer. Newport, RI: U. S. Naval War College Dept. Of Operations, 1991. (ADA236879). 39p. Abstract: This paper examines the growing submarine capability in the third world and the possible impact on the U.S. Navy's ability to execute its deterrence, sea control, and power projection missions in the near future. The effect of submarines on a naval force executing sea control and power projection in World War II and the Falklands War is reviewed. The third world's capabilities in submarine warfare as they exist today and in the future are also examined. Finally, the lessons of the past and capabilities of the future are applied from the viewpoint of a Task Force Commander neutralizing a third world submarine threat.

Leidy, K. L. and H. D. Cubbage. **A Towable Electronic Communications Buoy**. Washington, DC: Naval Research Laboratory Communications Branch Radio Division,

1958. (ADA456631; NRL-5075). 13p.

Abstract: An experimental towable electronic communications buoy is described which provides a means for a submerged submarine to communicate with surface craft, aircraft, and other submerged submarines. A size No. 5 OROPESA type minesweeping float is used as a basic vehicle and modified to mount various antennas and their associated equipment. The buoy has been installed and tested on the USS BLENNY using HF, UHF, and IFF antennas. Satisfactory communications were established from sea to sea and sea to air, and the buoy displayed desirable hydrodynamic properties.

Lohrenz, M., M. Trenchard and S. Edwards. **On-Line Evaluation of Cockpit Moving-Map Displays to Enhance Situation Awareness in Anti-Submarine Warfare and Mine Countermeasures Operations**. Stennis Space Center, MS: Naval Research Laboratory Marine Geosciences Division, 2001. (NRL/PP/7440-01-1008; ADA393119). 4p.

Abstract: Cockpit moving-map systems have provided heightened situation awareness to the fighter pilot for more than ten years, but these systems have yet to be integrated into military helicopters. The Navy now plans to install a moving-map system into its new, multi-functional MH-60S helicopter, which will perform mine countermeasures (MCM), combat search and rescue, special operations, and logistics. Other H-60 variants (e.g., SH-60B) perform Anti-Submarine Warfare (ASW), surface warfare, surface surveillance, and other missions. Naval Research Laboratory scientists were tasked to demonstrate and evaluate the potential of a cockpit moving-map for enhanced situation awareness during multi-functional helicopter missions (particularly MCM and ASW). This project consisted of three main tasks: (1) conduct a web-based survey of pilots and aircrew experienced in MCM and ASW for their preferences with respect to various environmental data that could be displayed in a moving-map; (2) demonstrate and evaluate pilot-preferred data on existing moving-map displays; and (3) recommend potential data types to be collected and displayed in a multi- mission helicopter.

Lorch, Dan. **Development of an Ejection Seat Ballast Block for the S-3A Aircraft**. Warminster, PA: Naval Air Development Center Aircraft and Crew Systems Technology Directorate, 1981. (ADA109808; NADC-81272-60). 18p.

Abstract: The purpose of this Ballast Block is to ballast an unoccupied ejection seat in the S-3A aircraft. The block adjusts the mass of the seat and the center of gravity to fall within acceptable limits to prevent rapid seat acceleration and tumbling both of which might cause interference with an ejected occupied seat.

NPS/DKL Location: MICROFORM ADA109808

Lorch, Dan and John Quartuccio. **S-3A Ballast Block Final Design and Engineering Tests; Final Report**. Warminster, PA: Naval Air Development Center Aircraft and Crew Systems Technology Directorate, 1984. (ADA147685; NADC-84015-60). 50p.

Abstract: The S-3A aircraft has (4) ejection seats. Both the pilot and copilot have Comand Eject Selector levers which allow them the option to eject all crewmembers or 'Self Eject.' If one of the aft seats is unoccupied, and 'Command Eject' is selected, the unoccupied seat will accelerate ahead of the occupied seat next to it. Two hazards exist; first, the crewmember next to the unoccupied seat could be burned by the rocket plume from the empty seat which has a higher acceleration; second, the empty seat could tumble into one of the other seats because the center of gravity and the center of rocket thrust are too far apart. To eliminate these hazards it is necessary to ballast the unoccupied seat. This is presently being done with anthropomorphic test dummies, if they can be obtained. Unfortunately these dummies have various weights and are usually damaged (i.e. arms, legs, or head missing). There is no guarantee that the center of gravity is in the proper location to prevent tumbling. To correct this potentially dangerous situation the Naval Air Systems Command tasked the Naval Air Development Center to design

a ballast vk. After the initial prototype was developed and tested, references (1) and (2) recommended changes to be incorporated into the final design. All of these recommendations have been incorporated into the final design. The S-3A Ballast Block is a 169 pound (77 Kg) assembly of four (4) interlocking aluminum blocks. It is used to control the trajectory of an unoccupied 1E-1 ejection seat. Tests indicate that it meets all functional and structural requirements for use in the S-3A aircraft.

NPS/DKL Location: MICROFORM ADA147685

Lorch, Dan and John Quartuccio. **S-3A Ballast Block Final Design and Engineering Tests; Final Report**. Warminster, PA: Naval Air Development Center Aircraft and Crew Systems Technology Directorate, 1984. (ADA327372; NADC-84015-60) 58p.

Abstract: The third prototype S-3A Ballast Block weighs 169 pounds (77 Kg). It is an assembly of four interlocking aluminum blocks. One crewman can carry two blocks at a time into the aircraft where he can quickly assemble the unit either on the 1E-1 ejection seat or on the avionics aisleway step Restraint on the ejection seat is obtained by connecting the four quick disconnect adjuster fittings on the ejection seat to fittings on the Ballast Block. When the Assembly is placed on the avionics aisle steps it is restrained with two aluminum locking plates which are bolted to the top block. These plates extend beyond the edges of the block and fit into keyways on either side of the main bulkhead forgings directly behind the aft ejection seats. When the Block is secured on the 1E1-1 seat the overall center of gravity falls 0.72 inches below the centerline of rocket thrust. The Ballast Block meets all operational and structural requirements for safe function in the aircraft. It can be maintained at the Operational level; the only parts that may need replacement are straps which are readily available. The S-3A Ballast Block provides a simple and cost effective replacement for anthropomorphic dummies presently being used to ballast unoccupied 1E1 ejection seats.

Magill, DS. **Antisubmarine Warfare: Still a Vital Mission**. Newport, RI: Naval War College, Department of Operations, 1992. (ADA253131). 28p.

Abstract: Antisubmarine warfare, once the number one priority of the United States Navy, seems to have faded into the background amidst the clamor over the demise of the Soviet Union and military operations in Southwest Asia. Despite perceptions to the contrary, ASW is still a vital mission in the post Cold War world. The former Soviet Union continues to operate a formidable submarine fleet, albeit at a reduced tempo, and Third World navies collectively possess an enormous conventionally powered submarine fleet. Emerging technology and the continued proliferation of sensors and weapons, project the ASW problem well into the future. Antisubmarine warfare must be kept in the forefront of military planning as the Navy builds down in size. Acquisition strategies, training and tactical doctrine must keep pace with the reality of the submarine threat in the new regionally focused National Military Strategy. Electronic access: <a href="http://handle.dtic.mil/100.2/ADA253131">http://handle.dtic.mil/100.2/ADA253131</a>

Martin, C. Joseph and Basil Papadales, Jr. **Remotely Piloted Seaplane for Antisubmarine Warfare**. Bethesda, MD: David W Taylor Naval Ship Research and Development, 1980. (ADA086932; DTNSRDC-80/078, DTNSRDC-AERO-1267). 28p.

Presented at the Advanced Concepts Workshop in ASW Weapon Systems, 7-9 August 79, Naval Ocean Systems Center.

Abstract: The remotely piloted seaplane (RPS) for antisubmarine warfare (ASW) is a small, relatively inexpensive, unmanned water-based aircraft that provides excellent time-on-station performance, tactical flexibility, and energy efficiency. In the 1980's, command, control, and communications (C3) technology will be available which will permit a seaplane to be designed with no crew on board. Such a vehicle would be capable of performing military ASW operations in open ocean areas while taking full advantage of its waterborne capability. The removal of a crew from the seaplane has a Substantial impact on the aircraft design. A RPS having a 1200 n mi radius of action and 72 hr time-on-station would weigh only 34,800 lb (15,764 kgm) and would incorporate a 5300 lb (2400 kg) ASW payload.

Matzelevich, William W. Real-Time Condition Based Maintenance for High Value Systems. Arete Associates, Arlington VA, 2001. (ADA412395). 11p. Presented at the Meeting of the Society for Machinery Failure Prevention Technology (55th) held in Virginia Beach, VA on 2-5 April 2001, p. 57-67. This article is from ADA412395, New Frontiers in Integrated Diagnostics and Prognostics, Proceedings of the 55th Meeting of the Society for Machinery Failure Prevention Technology. Virginia Beach, Virginia, April 2-5, 2001.

Abstract: Many industries operate high value equipment often remotely -- that requires reliable performance in severe environments. Similarly, the U.S. Navy's submarine p (TASs) stress conventional approaches to operating and maintaining this system level capability comprised of integrated hydraulic, mechanical, electronic and acoustic sub-systems. The Navy invested in a Condition Based Maintenance (CBM) proof of concept for an individual ship TAS by developing the Thinline Health Monitoring System (THMS). THMS collects real-time discrete reliability data and synchronizes this data with other historical information and the TAS's current condition assessment. As a predictive "intelligent code" it uses Bayesian Belief Networks (BBNs) to extract the full value of real-time data and provide a complete range of system performance evaluations -- from diagnosis to prediction. Drawing upon THMS' success, the U.S. Navy supported expanding this capability fleet- wide to encompass health assessments of the entire submarine TASs population. Plans have been developed to build a relational database that is accessible to a geographically separated towed systems community via the Internet for interactive analysis and diagnostics. These system level analyses and first principal processes are directly translatable to other government and commercial critical systems that cannot afford unscheduled -- or unnecessary -- maintenance.

McConnell, James M. A Possible Change in Soviet Views on the Prospects for Anti-Submarine Warfare. Alexandria, VA: Center for Naval Analyses, Naval Planning, Manpower, and Logistics Division, 1985. (ADA153610; Professional paper; 431; Soviet Union Special Studies, 1982-1985; 9; Special Studies series (University Publications of

America, Inc.)). 19p.

Abstract: In the summer of 1982 there was an apparent shift in Soviet views on the future potential for combating submarines. The following points trace the perceived evolution of this shift. (1) From the early 1970s, Soviet emphasis had been on the submarine's great capacity for concealment and the decreasing cost effectiveness of Anti-Submarine Warfare (ASW) as a 'law-governed' trend extending into the foreseeable future: (2) The first sign of a new perspective came in 1979-80; here, the Soviets implied that no significant breakthrough in ASW was expected during the next five-year plan (1981-85), but they did not rule out an effective innovation after that; (3) In 1982, however, the Soviets apparently saw an operational capability arising ahead of this schedule. Using alleged U.S. views as an almost certain surrogate for their own, they indicated that a 'technological break-through' in ASW (possibly nonacoustic and space- based) was imminent, perhaps (this is the best interpretation) before the end of the current planning period in 1985. A new 'law-governed' trend in naval affairs was set out: The growing susceptibility of submarines to detection and the increasing cost effectiveness of ASW; (4) If Moscow is on the verge of a long- range detection capability, then one might want to speculate on the means they would develop for submarine kill. It is conceivable thay they might revive the concept, abandoned in the 1970s, of using a submarine-launched ballistic-missile (SLBM) system for hitting mobile targets as sea. McElhannon, Timothy S. **Operational Maneuver and Anti-Submarine Warfare.** Newport, RI: Naval War College Dept of Operations, 1995. (ADA298144). 21p.

Abstract: Operational maneuver, one of the principles of operational art, is key to the Navy's doctrine in From the Sea and Forward From the Sea. The objective of operational maneuver is to strike quickly and violently to isolate and frustrate the enemy and destroy their forces and will to fight. The application of operational maneuver can enable U.S. forces to overcome the shallow-water diesel submarine threat by using speed and concentrated fires to avoid the enemy's strengths and attack their weaknesses, thus isolating, neutralizing and destroying the threat.

McMillan, T., W.P. de La Houssaye and C.T. Johnson. **OPERATION DOMINIC, SHOT SWORD FISH. Project Officer's Report - Project 1.3b; Effects of an Underwater Nuclear Explosion on Hydroacoustic Systems**. San Diego, CA: Naval Electronics Laboratory, 1985. (ADA995394; DNA-POR-2003(EX); DOE-WT-2003(EX)). 62p. Extracted version of Report no. POR-2003(WT-2003).

Abstract: The objectives of Project 1.2 were to determine and evaluate the effects of an underwater nuclear explosion on the operational capabilities of shipboard sonar and other types of hydroacoustic systems. Project 1.3b included all measurements at ranges greater than 10 nautical miles and the results of these measurements constitute the subject of this report. This report concerns the effects of the underwater nuclear explosion, Sword Fish, on: (a) Long-range active detection systems at the first convergence zone (25 to 30 miles); (b) Passive shipboard or submarine sonars at a few hundred miles; and (c) Long-range passive detection and surveillance at Sound Surveillance System (SOSUS) and Missile Impact Locating System (MILS) stations at several hundred to several thousand miles. A submarine station at the first convergence zone and five shipboard stations at ranges from 200 miles to 5,000 miles recorded signals from hydrophones suspended at various depths to approximately 2,000 feet. Submarines on other assignments recorded signals on standard submarine sonar equipment on a not-to interfere basis. SOSUS and MILS stations operated normally during the period and also made special magnetic-tape and strip-chart recordings of signals from single hydrophones from before burst time to several hours after burst.

Mizrahi, M. M. Can Authoritative Studies Be Trusted? [Critique of OTA's MX Missile Basing. Alexandria, VA: Center for Naval Analyses Naval Studies Group, 1982. (CNAPP415; ADA145909). 14p.

Abstract: A study known as Strat-X, published in 1967, was probably the broadest and most influential study ever conducted on strategic options. Its results have been used or quoted countless times over the years, the latest instance being MX Missile Basing, a study conducted last year by the Congressional Office of Technology Assessment (OTA). In the course of examining the possibility of ship-basing the MX, I found mathematical errors in Strat-X, one of which is quite significant. It has nothing to do with the assumptions, only with a faulty understanding of the ship-trailing process being modeled. This Strat-X error is a simple example of averages being taken too soon, a frequent malady of expected-value approaches. In this case, it takes little extra effort to get the right answer. Further, a more detailed Markov-chain trailing model that also includes trail reacquisition is not difficult to build. In addition, the Strat-X formula for the required number of Soviet trailing ships, duly retranscribed and used in the OTA MX study is not explained, could not be rederived, and does not make sense for certain values of the parameters. A correct expression is also not difficult to find.

Montana, P.S. Use of Helicopters to Develop Operational Concepts for V/STOL (Vertical and Short Takeoff and Landing) Aircraft in Naval Missions. Bethesda, MD: David W Taylor Naval Ship Research and Development Center Aviation and Surface Effects Department, 1983. (ADA139354; DTNSRDC/ASED-83/07). 20p. Abstract: Vertical and short takeoff and landing (V/STOL) aircraft promise new operational capabilities for the Navy. In the past, new vehicle types have been slow in gaining acceptance because of the difficulty in visualizing how these new vehicles should be employed. Once built, experience gained with the vehicle evolved into an operational concept exploiting its best qualities. Now, competition for fiscal resources has reached a level from which it may be difficult to justify the development of any new vehicle without having a well-defined operational concept in hand. This report discusses the use of existing large helicopters to develop operational concepts for V/STOL in naval applications.

Naval Underwater Systems Center (U.S.) **Naval Underwater Systems Center Brief**. Newport, RI: NUSC, 1978. (ADA103242; NUSC-TD-5740). 17p.

Abstract: The Naval Underwater Systems Center was formed in 1970 by the merger of two independent laboratories of the Naval Material Command: The Naval Underwater Weapons Research and Engineering Station (NUWS), Newport, Rhode Island, and the Naval Underwater Sound Laboratory (NUSL), New London, Connecticut. These two complexes are now the principal laboratories of NUSC. In July 1971, the Atlantic Undersea Test and Evaluation Center (AUTEC) in the Bahamas was made a detachment of NUSC. A basic and applied research program supporting systems development is a major thrust at the Center, and activities at NUSC cover all phases of the Center's primary mission responsibilities as the Navy's principal research, development, test, and evaluation center for submarine warfare and submarine weapons systems. These activities include responsibilities in programs in surface ship and submarine

sonars, ASW weapons, combat control, and in undersea ranges--including the management of the AUTEC range complex.

Nedresky, Donald L. **Aircraft Avionics Nonsupportability and Microcircuit Obsolescence**. Patuxent River, MD: Naval Air Warfare Center Aircraft Division, 1996. (ADA309766). 11p.

Abstract: The declining military budget has resulted in service life extensions for many weapons systems. Conversely, mission essential systems, such as the avionics suite, on naval aircraft extend, must contend with the scheduled phase out of subcomponents and microcircuits over the next few years. This unplanned obsolescence will have a costly impact on the ability of naval aviation to maintain weapons systems in a high state of operational readiness. Identifying the size of this problem is made more complex because provisioning data (for older systems) is often incomplete or inaccurate, making it difficult to cross obsolete part numbers to specific system applications. This paper describes a proactive process for analyzing avionics system supportability issues involving microcircuit obsolescence and other factors, such as mission criticality, reliability, supply and demand, and aircraft allowance. Based on this analysis, a comprehensive, life cycle model is developed to predict time critical mission degraders and offers solutions for solving supportability issues.

# Nero, R.W. Estimates of Low Frequency Volume Scattering Off the Oregon-Washington Coast. Stennis Space Center, MS: Naval Oceanographic and Atmospheric Research Laboratory, 1992. (NOARL-TN-206; ADA249775). 42p.

Abstract: Estimates are made of low frequency volume scattering using average numbers of animals for the shell break and offshore waters off the Oregon-Washington coast. Animal densities were derived from fisheries assessments and surveys of marine mammals. Target strengths were based on resonant models of fish with swimbladders and in situ measurements of mammals. Average volume reverberation levels of -60 dB at 1 00 Hz, and -44 dB at 1 00 Hz are expected at both offshore and shelf break locations during summernights (July-September). These levels will decline by about 7dB by day. During winter (January- March) scattering will be low at offshore sites, less than -90 dB at 1 00 Hz and -60 dB at 1000 Hz but will remain high at the shelf break, near -61 dB at 1 00 Hz to -48 dB near 1 000 Hz. Spring and fall are transitional between winter and summer, and hence, will have volume reverberation levels between those of summer and winter. A model of school encounter suggests that when schools of pomfret jack mackerel, anchovy, and rockfish are present they will be sufficiently widespread to appear as average reverberation levels. Schools of. albacore, coho, and chinook salmon will be sufficiently rare and compact so as to cause discrete echoes.

# Operational Test and Evaluation Force. **Follow-On Operational Test and Evaluation of the CPU-152/A Standard Central Air Data Computer (SCADC).** Norfolk, VA: Operational Test and Evaluation Force, 1990. (ADA226310). 5p.

Abstract: The purpose of the evaluation was to verify that all the deficiencies from OT-IIC OPEVAL has been corrected prior to approval for full fleet introduction. The evaluation was based on the results of non-scenario operational tests conducted under Project M756, supplemented by the results of OPEVAL, developmental testing, and operational experience. Based on this evaluation, the CPU-152/A SCADC as installed in the S-3A/B aircraft is determined to be operationally effective and operationally suitable. Approval for full fleet introduction of the CPU-152/A is recommended. The SCADC uses air pressure from the pitot static system and temperature signals from the temperature probe to provide air data outputs for navigation, cockpit display, sonobuoy and weapon delivery systems, Automatic Flight Control System (AFCS), and altitude reporting. While the digital SCADC is a form, fit, and function replacement for the existing S-3 Airspeed Altitude Computer Set (AACS), it has, in addition, a Built-in-test (BIT) function allowing maintenance personnel to determine system status without removing the unit. Optical Communications Research Laboratory. **The Mk 15 Destroyer-Launched Torpedo: End of an Era**. Stanford, CA: Optical Communications Research Laboratory, 1993. (ADA274999; NUWC-NPT-TD-10132). 19p.

Abstract: The Mk 15 torpedo, designed and developed by the former Naval Torpedo Station in Newport, Rhode Island, in the 1930s, was the last destroyer-launched antisurface ship weapon to see wide service use. Longer, heavier, and more powerful than its predecessors, it was the Navy's principal destroyer torpedo when World War II began. During the early war years, three new classes of improved Navy destroyers having twin deck mounts of multiple torpedo tubes began entering the fleet. As is recounted in this booklet, salvos of Mk 15 torpedoes launched from those destroyer tubes proved decisive on several occasions in the Pacific campaign.

Phillips, D. E.. Rectification Of Oblique Photographs To Obtain Base Surge Contours. White Oak, MD: Naval Ordnance Laboratory, 1964. (AD0603252; NOLTR-64-91). 20p.

Abstract: Rectification of oblique aerial photographs is one means used to obtain contours of the base surge formed by an underwater nuclear explosion. An analytic photogrammetric method of rectification, based on the visible horizon and altitude of the photo aircraft, is described. This method gives the position of any point on the photograph in terms of its coordinates on a rectangular grid system on the water surface. The supplemental information needed to rectify an oblique photograph is discussed. (Author) Identifiers: BASE SURGE, DOMINIC OPERATION.

Rich, H.L., R.L. Bort, E.T. Habib, R.E. Baker and W. E. Carr. **OPERATION HARDTACK. Project 3.3. Shock Loading in Ships from Underwater Bursts and Response of Shipboard Equipment**. Washington, DC: David Taylor Model Basin, 1985. (ADA995438; DOE-WT-1627(EX)). 209p.

Extracted version of report dated 30 September 1961.

Abstract: The shock loading in ships and the response of shipboard machinery were measured during Shots Wahoo and Umbrella to: (1) determine safe- and shock-damage ranges, particularly with respect to shipboard machinery and equipment, for delivery of antisubmarine nuclear weapons by destroyers and submarines; (2) determine the intensity and character of the shock motions on a submarine and on a merchant ship under quasi-lethal attack by and underwater nuclear explosion; and (3) acquire shock-motion data and correlate such data with other measurements and with theory in order to extrapolate the results to other attack geometries. Conclusions include: (1) The shock damaging ranges for ships from underwater explosions depend greatly on the design and condition of the machinery and equipments as well as on charge size, burst depth, water depth, and the like. (2) Immobilization ranges for a destroyer are given as horizontal ranges from surface zero to the center of the ship. (3) Temperature gradients in the water increase or decrease the damage ranges.

Thesis (M.S. in Electrical Engineering)--University of Rhode Island, 1992.

Ruffilli, Dean C. Operational Research and the Royal Canadian Air Force Eastern Air Command's Search for Efficiency in Airborne Anti-Submarine Warfare, 1942-1945. Waterloo, Ontario: Wilfrid Laurier University, 2001. 196p.

Thesis (M.A.) -- Wilfrid Laurier University, Department of History, 2001.

Abstract: This thesis analyses the contributions of operational research to the work of the Royal Canadian Air Force Eastern Air Command during the Second World War. The efforts of the handful of Canadian operational researchers in the Allied campaign against the German U-Boat force, although having produced only modest results, did make a small but important contribution to the War which have been neglected by historians. The techniques of operational research, first promulgated during the British experiments with radar during the 1930s, were, by 1941, applied to assist Royal Air Force Coastal Command in its campaign against the German U-Boats which were taking an ever-increasing toll of Allied shipping. The work of P. M. S. Blackett and his staff at Coastal Command Operational Research Section would serve as the foundation upon which Eastern Air Command's Operational Research Section (ORS) would be constructed when it was created in November 1942. Under the leadership of Professor Colin Barnes and later Dr. J. W. T. Spinks, Eastern Air Command ORS produced a series of studies which explored issues of concern to the Command's anti-submarine (bomber-reconnaissance) squadrons.

## Russell, Jerry C. **Ultra and the Campaign Against the U-Boats in World War II**. Carlisle Barracks, PA: Army War College, 1980. (ADA089275). 45p.

Abstract: The problem addressed is the extent to which the United States Navy used Ultra, or Special Intelligence, in the campaign against the German U-Boats. Information was gathered through published and unpublished sources. Through a chronological approach, United States Navy involvement is traced from entry into the War until its conclusion. Many factors are involved in the final outcome of the War and Ultra is only one. The Battle of the Atlantic was long and gruesome rather than short and spectacular. The United States Navy used Ultra along with technology, tactics, brilliant leadership and courageous men at sea to win the Battle of the Atlantic in World War II. The lessons for the future are clear. If the United States intends to oppose the Soviet submarine force at sea anywhere in the world, then we must maintain the lead in intelligence, tactics and technology. Further, and most importantly, we must strive to regain superiority of forces in those ocean areas where our interests are at stake.

Russotti, Joseph S. and Mark A. Creese. **Advanced Binaural Sonar Display for Collision Avoidance: Applying Spatial Vernier Beamforming to the Wide Aperture Array**. Groton, CT: Naval Submarine Medical Research Laboratory, 2006. (ADA456692; NSMRL-1246). 20p.

Abstract: Operating in a dangerously sensor-limited closed environment, submarine sonar operators are plaqued by primitive sensory interfaces inherited from earlier hardware designs. The inefficient match to the operator's perceptual capability is exacerbated as submarines increasingly operate in the littoral where, at now reduced ranges from quieter threat targets, detection requires immediate action for crew safety. Present use of the sonar operator's auditory ability ignores the superior acuity of the mammalian binaural system. In humans, this system is sensitive to minute instantaneous differences in phase, intensity and time of arrival between its two channels. This research developed, and perceptually tested, a binaural auditory display that optimized the essential noise correlation between a pair of formed listening beams. To generate the necessary perceptual characteristics for the binaural display, a breakthrough audio beamforming process formed beams from a hull mounted wide-aperture hydrophone array (WAA) which were focused at two different distances but in the same direction. This unique processing, named Spatial Vernier Beamforming (SVBF), maintained the essential high noise correlation between the pair of formed directional beams. Once appropriate beamforming was proven feasible, laboratory testing was undertaken to quantify perceptual performance. A representative sample of 15 sonar contacts were beamform processed, stored as wavefiles and systematically presented to a group of 18 highly experienced sonar operators. Results show a highly significant 8.6 dB detection improvement over the current single beam display. This improvement represents the ability to acoustically detect targets at more than twice the distance currently achieved.

Schank, John F. (John Frederic) et al. **Finding the Right Balance: Simulator and Live Training for Navy Units**. Santa Monica, CA: Rand, 2002. (MR-1441; ADA402212). 194p.

Abstract: The Navy trains its forces with a combination of classroom, simulated, and actual training events. The relation of these types of training events to each other and their relative proportions have not been closely examined in decades. However, the technological capabilities of simulators and classroom instruction have grown enormously. At the same time, the cost of actual training events has increased, and the opportunities to conduct them have decreased. Environmental restrictions, encroachment on training areas, and the decreasing tolerance of the civilian populace for the intrusion of military training have combined to make it more difficult to carry out the type of live training activities common 20 or even 10 years ago. The Navy asked RAND's National Defense Research Institute to examine the three types of training to determine if a different mix of the three types might offer either training efficiencies or synergies.

Shaw, R. C. Nonlinear Dynamic Analysis of Frangible Nosecap for Vertical Launch Antisubmarine Rocket (VLA). San Diego, CA Naval Command Control and Ocean Surveillance Center RDT&E Division, 1994. (ADA276835). 31p.

Abstract: Described here is the application of a nonlinear finite element analysis (FEA) technique to predict the structural behaviors for a class of brittle materials that shows near-complete brittleness when loaded in tension, but exhibits some ductility when compressed. An ABAQUS constitutive model, consisting of an isotropically hardening yield surface, which is active when the stress state is dominantly compressive, and an independent crack detection surface to determine if a point in the material fails by cracking in tension, is employed to simulate the failure of the brittle material. The application of the technique to determine if a potential frangible nosecap design of the Vertical Launch Antisubmarine Rocket (VIA) would break up as intended upon water impact for a given entry condition is presented as an example. **Documentation of Nodestar**. Washington, DC: Naval Research Laboratory, 1995. (ADA302458; NRL/FR/5580-95-9788). 70p.

Interim Report, 11 December 1995

Abstract: This report presents a general framework for the process of multiple-target, multiple-sensor data fusion. With that framework in place, those areas in which the methodology is mature and ripe for implementation and those areas that require further development are identified. One area in which the methodology is well advanced is nonlinear tracking. For that area, a basic engine, Nodestar, which has been developed to perform nonlinear, multiple-target tracking, is described. The version of Nodestar that has been developed for the Spotlight Advanced Technology Demonstration is described. A discussion of extensions to this version of Nodestar is also included. Interim Report, 1 January 1980.

Abstract: This report examines the feasibility of detecting submerged vessels during darkness applying bioluminescence imaging. First, the most recent information on the physical properties of marine bioluminescence (spectral distribution, intensity, duration) are reviewed. Secondly, a simple model of bioluminescence and light transmission is constructed to estimate luminance contrasts for the detection of a submerged vessel. Finally, recommendations for exploiting the Navy's Antisubmarine Warfare (ASW) potential of bioluminescence imaging are made.

Torkelson, Kai Oscar. **Comparative Naval Architecture Analysis of Diesel Submarines**. Cambridge, MA: Massachusetts Institute of Technology, Department of Ocean Engineering, c2005. (ADA447063). 94p.

Thesis (M.S. in Naval Architecture and Marine Engineering and M.S. in Ocean Systems Management)--Massachusetts Institute of Technology, June 2005.

Abstract: Many comparative naval architecture analyses of surface ships have been performed, but few published comparative analyses of submarines exist. Of the several design concept papers, reports and studies that have been written on submarines, no exclusively diesel submarine comparative naval architecture analyses have been published. One possible reason for few submarine studies may be the lack of complete and accurate information regarding the naval architecture of foreign diesel submarines. However, with some fundamental submarine design principles, drawings of inboard profiles and plan views, and key assumptions to develop empirical equations, a process can be developed by which to estimate the submarine naval architectural characteristics. comparative naval architecture analysis creates an opportunity to identify new technologies, review the architectural characteristics best suited for submarine missions and to possibly build more effective submarines. An accurate observation is that submarines designed for different missions possess different capabilities. But are these unique capabilities due to differences in submarine naval architecture? Can mission, cost, or other factors affect the architecture? This study examines and compares the naval architecture of selected diesel submarines from data found in open literature. The goal is to determine weight group estimates and analyze whether these estimates provide a relevant comparison of diesel submarine naval architecture.

### Torres, M. T. **The Role of the Army Air Corps in Antisubmarine Warfare in World War II**. Maxwell AFB, AL: Air Command and Staff College, 1985. 41p.

Abstract: This historical review traces the development of the role of the Army Air Corps in antisubmarine warfare. Pre-war plans exempted the Air Corps from this duty. Despite lack of training and equipment, the Air Corps contributed significantly to the defeat of the submarine threat. In defeating this threat, the Air Corps had to first battle the Navy's strategy of using airplanes to escort convoys. Before being relieved of antisubmarine warfare duty, the Air Corps had proved the necessity of using the airplane in an offensive role to search and destroy submarines.

Trinca, Joseph J. **Defense of North America During a NATO-Warsaw Pact Conflict: Some Implications of the USSR's Power Projection Capabilities**. Fort Leavenworth, KS: Army Command and General Staff College, 1980. (ADA094983; SBI-ADE750063). 122p.

Master's thesis.

Abstract: This study attempts to determine whether or not the existing conventional military forces and

defense systems in North America are adequate both to meet commitments to NATO in the event of a major European conflict and provide for continental security. Investigation reveals that Canada is weakly defended relative to the capabilities of the USSR to project forces onto her territory. Thus, should the USSR choose to exploit this vulnerability by executing rear area military operations on the North American flank at the outset of a NATO-Warsaw Pact conflict, she could succeed in diverting crucial U.S. and Canadian reinforcements away from their primary missions on the battlefields of Europe. Tripp, Scot T. Autonomous Underwater Vehicles (AUVs): A Look at Coast Guard Needs to Close Performance Gaps and Enhance Current Mission Performance. Groton, CT: Coast Guard Research and Development Center, 2006. (ADA450814). 14p.

Abstract: The Coast Guard has declared its intentions to exploit emerging technologies as it moves toward its vision of the Coast Guard in the year 2020. Attaining this vision requires the appropriate integration of technology as part of the solution to close gaps in mission performance. For this to happen, the Coast Guard must make concerted and deliberate efforts to exploit technology, moving effectively from ideation through development, acquisition, implementation, and life-cycle support. The role of the Research and Development (R&D) Center in exploiting technology is to anticipate future needs, create ideas, and insert new technologies. As a platform for various sensors, the Autonomous Underwater Vehicle (AUV) is one such technology with the potential to close the gaps in Coast Guard performance as well as enhance current mission capabilities. This paper addresses the Coast Guard's AUV needs for specific mission areas. The variety and unique nature of Coast Guard missions add a high degree of complexity to technological solutions. In a world where high complexity often equals high cost, development does not always follow a path that resolves the issues encountered by the Coast Guard. By working to articulate its needs now, the Coast Guard hopes to influence AUV development in such a way that off-the-shelf items eventually can meet its operational needs. Several areas show that AUV developments are already taking this path. AUV complexity can be addressed through the ever-reducing costs of computing ability, modularization, sensor packaging, communication networking, and miniaturization. The following mission areas are addressed in this paper: Fisheries Management, Port Safety and Security, and Law Enforcement. For each mission area, an AUV application is described that could meet Coast Guard needs for that particular mission.

Turk, Lawrence A., Allen E. Barnes and Louis P.Solomon. **CHURCH OPAL: Surveillance of Shipping**. Mclean,VA: Planning Systems, Inc., 1976. (ADC007024; PSI-TR-036027). 143p.

Abstract: The CHURCH OPAL Exercise is one of a series of LRAPP Exercises designed specifically to acquire environmental acoustic data required for ASW program decisions. At-sea operations were conducted during September 1975 in a region of the Northeast Pacific Ocean. This exercise includes the following ocean acoustic experiments related to the Moored Surveillance System (MSS), the Sound Surveillance System (SOSUS), and the Surveillance Towed Array Sonar System (SURTASS): (1) Noise Floor Characteristics, (2) ASEPS Evaluation; Coherent Multi Array Processing, (3) Horizontal irectionality of Ambient Noise; Towed Array Performance. The objective of the Noise Floor Verification Experiment is to verify the noise floor concept. The noise floor is a depth below which distance shipping noise is significantly reduced and where short range acoustic sensors could attain a Substantial performance gain.

U.S. Congress. Office of Technology Assessment. **MX Missile Basing**. Washington, DC: Congress of the U.S., Office of Technology Assessment, 1981. (OTAISC140; PB82108077). 335p.

Abstract: This report reviews the various ways in which the MX intercontinental ballistic missile could be based, and assesses the technical issues, the advantages, and the disadvantages associated with each major option. The report explores a wide variety of military technologies and issues, ranging from antiballistic missile defense to antisubmarine warfare to the impact of major construction projects on arid Western lands. A wide variety of possible basing modes is identified and evaluated in terms of: Technical risk; degree of survivability; endurance; contribution to weapon effectiveness; effectiveness of command, control and communications; arms control impacts; institutional considerations; impacts on the deployment region; costs; schedule; and impact on stability. Five basing modes were found that appear feasible and offer reasonable prospects of survivability, but none of them is without serious risks, high cost, important uncertainties, or significant drawbacks.

U.S. Department of Defense. Inspector General,. **Second Source Procedures for the ANSQQ-89 Combat System**. Arlington, VA: Dept of Defense, 1991. (ADA379828; IG/DOD-91-088). 35p.

Abstract: This audit was performed at the request of Representative John Conyers, Jr., Chairman of the House Committee on Government Operations. The Chairman requested that we perform an audit of the procedures used by the Navy in soliciting a second source for the production of the AN/SQQ-89 ASW Combat System. The request was based on information that GE's cost and pricing data may have been disclosed to WEC, and that WEC may not have been qualified to produce the combat system.

U.S. Department of Defense. Inspector General. Research, Development, Test and Evaluation Budget. **Estimates for the SSN-21 Submarine Program**. Arlington, VA: Office of the Inspector General 1992. (IG/DOD-92-122; ADA377672). 27p. 30 June 1992.

Abstract: The SSN-21 Class Attack Submarine (SSN-21) is a nuclear powered attack submarine that was designed to meet threats well into the 21st Century. The SSN-21's missions include antisubmarine and antisurface warfare, strike warfare, ocean surveillance, and electronic and mine warfare. Research and development (R&D) of the SSN-21 began in 1984, and as of August 1991, about \$1.6 billion of research, development, test, and evaluation (RDT&E) funds had been expended for the SSN-21. At the time of the audit, the FY 1992 through FY 1997 RDT&E budget for continued development was \$776.2 million. No funds were requested in the DOD FY 1992 budget; however, the Program Office believes that Substantial requirements remain.

U.S. Department of Defense. Office of the Assistant Inspector General for Audit (DOD) Systems and Logistics. **Acquisition: Acquisition of the Advanced Deployable System (ADS)**. Arlington, VA: OAIG-AUD, 2002. (OAIG-AUD-D-2003-004O; ADA406702). 38p.

Abstract: This report should be read by all who are interested in the acquisition of the Navy's Advanced

Deployable System (the System). The report addresses acquisition issues that require higher management attention before the System program should be allowed to progress further through the acquisition process. The System, a Navy Acquisition Category II program, is a next-generation, ship-deployable, undersea surveillance system that is designed to operate in littoral waters, The System is linked to a land facility for data processing, evaluation, and reporting. The System will be used to conduct missions, such as threat port surveillance, friendly port protection, area defense, area sanitization, and strategic indications and warnings. The System will have the ability to be installed overtly or covertly, depending on the needs of the Joint Task Force Commander. The program office's estimate includes \$793.7 million for research, development, test, and evaluation for all four blocks of the evolutionary acquisition strategy and \$785 million for procurement for the first two blocks.

U.S. Navy. Electronics Laboratory. **Milestones in the NEL Deep Submergence Program: Special Progress Report**. San Diego, CA: Navy Electronics Laboratory, 1965. (ADA074138). 9p.

Abstract: This report summarizes the scientific efforts of the Deep Submergence Program at the Navy Electronics laboratory, San Diego, California. Since its inception in 1958, the program has been vitally concerned with development of techniques, instrumentation, and vehicles to fulfill its assignment -- research of the marine environment, from the continental shelf to the abyssal sea floor. While NEL's primary interests are in relating applied research data in marine acoustics, biology, geology, and physical oceanography to antisubmarine and submarine warfare projects, the Deep Submergence Program has also added significantly to man's basic knowledge of the ocean sciences.

Werking, William E. and Jeffery A. Kuhlman. **S-3B Small-Scale Applique Coupon Flight Test Evaluation Results**. Patuxent River, MD: Naval Air Warfare Center Aircraft Division, 2001. (ADA388188; NAWCADPAX/RTR-2000/97). 32p.

Abstract: An evaluation of FP500 and FP1500 paint replacement film (applique) small-scale coupons with 52-4 adhesive installed on the S-3B aircraft was conducted during 225 hr of laboratory tests and 2 flights totaling 2.0 flight-hours to determine system suitability for large-scale coupon evaluation. Complete adhesion of the film to the surface of the aircraft during basic maneuvers is an enhancing characteristic that will promote reliable performance of FP500 and FP1500 applique material reducing corrosion and maintenance down time aircraft. Tattering of prepeeled (failed) sections of the applique was an enhancing characteristic that will prevent any in-flight failures from becoming catastrophic failures. The capability of the adhesive to adhere to the film and not the aircraft surface during applique removal is an enhancing characteristic that will facilitate the rapid removal of the applique. There are no deficiencies.

West, Bo. **Analytic Optimizations in Crisis Stability**. Los Alamos, NM: Los Alamos National Laboratory, 1991. (ADA344705; LA-11959-MS). 33p.

Abstract: Second strikes are dominated by submarine-launched missiles in the absence of defenses, but shift to aircraft at modest levels of defense. Defenses protect some retaliatory missiles, but not enough to retaliate strongly. With defenses, missiles should be vestigial and could be eliminated without penalty. Then aircraft could also be significantly reduced without impacting stability. The combination of parameters that maximizes cost effectiveness also maximizes midcourse effectiveness and crisis stability. Weston, David Mark. **DIFAR Bearing Estimation Using Wavelet Transforms =** L'évaluation du Relèvement DIFAR en Utilisant la Méthode des Ondelettes.

Kingston, Ontario: Royal Military College of Canada, 2001. 109p.

Thesis (M.Sc.) -- Royal Military College of Canada, 2001.

Abstract: One of the most difficult acoustic signal processing tasks in Anti-Submarine warfare (ASW) is the accurate estimation of passive acoustic source bearings from Directional Frequency Analysis and Recording (DIFAR) sonobuoys in high directional noise environments. The Maximum-Likelihood Adaptive Beamforming (MLAB) technique solved using Fourier analysis is well suited for estimating the DIFAR bearing to continuous wave (CW) sources. This thesis proposes exploiting the similarity between transient sources and Wavelet Transforms in the estimation of transient source DIFAR bearings. The Wavelet MLAB exploits the filtering effect of the Wavelet Transform through appropriate matching of its analysing function, or wavelet, to the transient source. Since Wavelet Transforms have not been previously applied to DIFAR adaptive beamformers, the Wavelet MLAB is presented here as a proof of concept. A limited comparison is made with the results of the Fourier MLAB in order to gauge the performance of the Wavelet MLAB under similar circumstances.

Whymark, Roy R. **High Power Magnetostrictors for Sonar Applications**. Chicago, IL: IIT Research Institute, 1965. (IITRI-N149-7; AD0471004). 99p. Final Report: 1 June 59-31 July 65, Most Project-4.

Abstract: This report summarizes research on both metallic and ferrite magnetostrictive type transducers. The research was directed toward (1) establishing methods for calculating how a magnetostrictor responds to large amplitude excitation, (2) determining how magnetostrictive elements respond to uniaxial static compressive stresses, (3) investigating the effect of hydrostatic stress on the important magnetostrictive parameters lambda and mu, (4) extending existing theory to include the dissipative forces inside a vibrating magnetostrictor, (5) investigations of the coupled vibrational modes of a ferrite tube magnetostrictor, and (6) investigations of magnetostrictive ferrite transducers for high power sonar applications. The lack of a suitable nonlinear theory for the behavior of magnetostrictors under large amplitude excitations dictated the empirical approach taken. However, throughout the contract limited work was directed, based upon these empirical results, toward the possible formulation of a nonlinear theory.

Patent, Filed 28 December 64, patented 23 March 99 PATENT-5 886 285, supersedes PAT-APPL-423 642-64. Government-owned invention available for U.S. licensing and possibly, for foreign licensing. Copy of patent available Commissioner of Patents, Washington, DC 20231.

Abstract: The invention pertains to an arming system for a missile which prevents destruction of the missile outside of a specified area. The missile may be launched from a submarine, and follow a water-air-trajectory, and includes a variable-range timer acting in conjunction with an impact detection system. The timer drives arming switches to the armed condition after a predetermined time, and then opens the switches after a second predetermined time, which establishes a maximum range for detonation of the missile warhead.

Withers, J.D. Antisubmarine Warfare: Considerations for Future Operations in Third World Regions. Newport, RI: Naval War College Department of Operations, 1992. (ADA250015). 42p.

Abstract: Recent world change requires that the United States Navy review strategic objectives, operational concepts, and supporting warfare applications among them antisubmarine warfare (ASW). This paper reviews possible implications from an ASW perspective as the U.S. shifts focus from the former Soviet threat to the Third World. The purpose of this paper is not to speculate in which areas the U.S. might become involved. Nor does the paper address detailed strategic or tactical implications. Instead, this paper addresses what operational ASW-related areas might possibly require review nd modification, providing rationale regarding why these areas might be affected. ASW doctrine in the past has focused on the former Soviet nuclear submarine threat operating in open blue water. New doctrine and operational concepts must be developed which are applicable to conventionally-powered (non-nuclear propulsion) submarines operated by Third World countries in littoral shallow water regions. Revised concepts must be developed which consider threat diversity, the environment, and technology. Electronic access: http://handle.dtic.mil/100.2/ADA250015

Xonics Inc. **CHURCH OPAL Exercise Summary**. Van Nuys, CA: Xonics Inc., 1975. (ADC004343). 84p.

Abstract: The CHURCH OPAL Exercise is one of a series of LRAPP Exercises specifically designed to acquire environmental acoustic data required for ASW program decisions. It will be conducted during September 1975 in a region of the Northeast Pacific Ocean in accordance with the CHURCH OPAL Exercise Plan (U), August 1975 (Secret). This Exercise includes the following ocean acoustic experiments related to the Moored Surveillance System (MSS), the Sound Surveillance System (SOSUS), and the Surveillance Towed Array Sonar System (SURTASS): (1) Noise Floor Characteristics, (2) ASEPS Evaluation - Inter-Array Coherent Processing, and (3) Horizontal Directionality of Ambient Noise - Towed Array Performance. The objective of the Noise Floor experiment is to establish the characteristics, persistence, and geographic extent of the low frequency ambient noise floor. The noise floor is a depth below which distant shipping noise is dramatically reduced, thereby providing the opportunity for short range acoustic sensors to attain a Substantial performance gain.

Young, G.A. and D.E. Phillips. **OPERATION DOMINIC, SHOT SWORD FISH. Project Officers Report-Project 1.2 Surface Phenomena**. White Oak, MD: Naval Ordnance Laboratory, 1985. (ADA995301; DASA-POR-2001(EX); DASA-WT-2001(EX)0). 140p. Extracted version of report dated 14 August 64.

Abstract: Shot Sword Fish was an operational test of the ASROC antisubmarine weapon system. The general objectives of the project were (1) to record and measure the formation, growth, and dissipation of the visible surface phenomena, including slicks, spray domes, plumes, fallout, base surge, and foam patch resulting from the underwater detonation of an ASROC weapon; (2) to use the data obtained to estimate the actual depth of burst, position of burst, yield, and bubble period; (3) to determine the location of ships and platforms in the experimental array before, during and after the test; (4) to provide surface-phenomena time-of-arrival data at platforms and ships in the array for use by other projects; and 85) to make the results available for improving the surface-phenomena scaling and prediction techniques which are currently employed for establishing delivery and lethal ranges for fleet nuclear weapons. In general, there was good agreement between the observed dimensions of the Sword Fish phenomena and the predictions.

Thesis (Ph.D.) -- Uppsala universitet, 2003.

Abstract: This dissertation analyzes the submarine problem in Sweden as an object of security politicization. It investigates how politicians and military officers dealt with the submarine incidents of the 1980s and 1990s, and how their actions were portrayed in the media. A popular assumption in modern literature on media and politics is that the media arena helps define the political arena; which players are important, what issues are placed on the political agenda, and which options are available for competitive political elites in democratic systems of government. By quantitatively analyzing the media image of the submarine "threat", and comparing those results with indicators of public opinion and policy change, the dissertation investigates the influence of the media image on security policy over time. The results of the quantitative analysis inform a number of qualitative case studies, highlighting the important events and developments of the submarine threat and the causal mechanisms by which media and public opinion may have influenced Swedish security policy. The dynamics by which the political and military levels interact in creating a public image of the submarine threat are a particular focus in the strategically selected cases over the period—including both events that can be seen as escalating threat perceptions and those that have de-escalated such public anxieties. In the end, it is found that several problems relating to organizational coherence, institutional legitimacy and political controversy led the uncontrolled fashion in which the submarine issue became a publicly perceived threat.

Joubert, P. N. Some Aspects of Submarine Design Part 1. Hydrodynamics.

Victoria (Australia): Defence Science and Technology Organisation Platform Sciences Laboratory, 2004. (ADA428039; DSTO-TR-1622). 75p.

Abstract: The history of submarines shows there were two significant advances in the performance of submarines, which occurred after full scientific studies were undertaken. The first was by the Germans at the end of World War II when they produced the Type 21, which could have upset the balance in the U-

Boat campaign if it had arrived earlier. The second was by the US Navy with Albacore which had a submerged speed of over 30 knots. To neglect full scientific studies would be a serious mistake in the design of any future replacement submarine. Design is shown to be like a jigsaw puzzle where altering one piece requires alterations in all surrounding features to make a workable complete design. The basis of improved hydrodynamic features is discussed. A new nose shape is presented which should improve the performance of the forward passive sonar up to operational speeds. Other major sources of resistance may be improved. It is proposed a first major step should be to establish the detailed performance of Collins using wind tunnels and computational fluid dynamics which will serve as the comparative foundation for any new design.

Jones, Eric R. The Proliferation of Conventionally-Powered Submarines: Balancing U.S. Cruise Missile Diplomacy? The Cases of India and Iran. Monterey, CA: Naval Postgraduate School, 1997. (ADA333352). 98p.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, 1997.

Abstract: The end of the Cold War has left the United States as the world's sole superpower. The ability of the United States to strike deep into the territories of most nations with impunity represents a new security threat to many nations. Defeating the U.S. military is not feasible in mostcases, but balancing the United States may be possible, especially with weapons of mass destruction (WMD). Although WMD might provide a formidable deterrent, their technical, political, and economic costs preclude most nations from pursuing them. On the other hand, modern conventionally powered submarines are easier to obtain and operate and could present a significant deterrent to U.S. military force. This thesis assesses whether the perceived threat posed by the United States has emerged as a motivation for acquiring conventionally powered submarines since the end of the Cold War. After examining the motivations behind the recent submarine acquisitions of India and Iran, this thesis presents an economic model to predict when developing nations will be able to afford submarines if they choose to acquire them.

Penzance: Periscope Publishing, 2002. 184p.

Synopsis: This book brings to life the tales of the 121 submarines that lie entombed on the seabed of the English Channel. Most of them got there as the result of war and peacetime accident. The first was lost in 1774; the last was the tragic accident that befell HMS Affray in 1951, the last British submarine to have been lost at sea.

Nat, Clemens Gerardus Johannes Maria van der. **A Knowledge-Based Concept Exploration Model for Submarine Design**. Delft, Netherlands: Delft University Press, c1999. 233p.

Thesis (Ph.D.)-- Technische Universiteit Te Delft, 1999.

Abstract: A knowledge-based shell QUAESTOR, developed by Maritime Research Institute Netherlands, is chosen for assisting the designer in solving complex design problems. One of the key features of such a shell is the distinction it makes between numerical knowledge, represented by the parameters, relations and constraints, and the way this knowledge is used for predicting the performance of a design. The conceptual design stage of a Submarine is complex, because the relationship between the design characteristics and its performance is not always straight forward. Changing a characteristic may improve one specific performance while worsening another. The traditional way of dealing with this complexity was to base a new concept on well-described previous designs. These traditional systems have two major limitations: (1) Limiting free creativity. The conceptual design can be characterised by an intensive dialogue between a client and a design team. This implies that the control of the design process should be data-driven, as opposed to procedure-driven in the traditional systems. (2) Design knowledge is represented in numerical format only. An internal arrangement can only be modelled by numerical knowledge, making it difficult to change the geometrical and topological knowledge of a concept. To overcome these drawbacks an un-directed network approach is used, which includes design knowledge in numerical, geometrical and topological format. This thesis describes the major issues which have risen during the development of a conceptual design tool based on this approach. The developed prototype, called SUBCEM, shows the feasibility of the tool for predicting the size and performances of submarines in the conceptual stage of the design process.

Abstract: This document presents the Department of the Navy (DON) Exploratory Development (6.2) Investment Strategy, which establishes the focus and major thrusts of the 6.2 Program. The Navy's investment strategy for its exploratory development activities is derived from a national security strategy that mandates continued fulfillment of U.S. responsibilities in both Europe and Asia. In addition, the changing world environment will increase our responsibilities with respect to Third World nations. Successful implementation of U.S. strategy presumes that our naval forces will maintain technical superiority in their weaponry and platforms. As such, our warfighting strategy is achievable only if our nation maintains its current technological leadership. The Soviet Union's quantitative advantages and qualitative advances in space, submarine warfare, cruise missiles, and electronic warfare are tangible evidence that our ability to maintain a technological edge clearly is being challenged. Proliferation of high technology will continue to expand on the world arms market and will become prevalent in the Third World. Therefore, the requirement to maintain technological superiority remains absolutely essential. NPS/DKL Location: MICROFORM ADA229337

Siebe, Michael A. Force Protection of Sea Based Logistics, A Historical Perspective. Newport, RI: Naval War College, 1991. (ADA370875). 21p.

Abstract: The United States is heavily reliant on sea based logistics shipping. This shipping gives the United States great flexibility but it is also a critical vulnerability. During WW II Japan was a nation dependent on maritime shipping and Japan failed to provide adequate resources to protect that shipping. The results were disastrous. The U.S. and Great Britain also experienced attacks on maritime shipping in WW I and II. Resources were allocated and tactics developed to counter the German submarine threat. Current U.S. doctrine addresses protection of maritime shipping, but without a credible threat and with ever decreasing Naval resources, it is doubtful that the issue of maritime force protection will be seriously addressed until disaster strikes.

Cox, Tommy. **Tango Charlie: The Cold War Adventures of U.S. Navy Submarine Spook and Singer-Songwriter Tommy Cox**. Riverdale, GA: Riverdale Books, c2006. 169p.

Contents: 1. Scorpion. -- 2. Big Black Submarine. -- 3. Gitmo Blues. -- 4. Torpedo in the Water. -- 5. Ballad of Whitey Mack. -- 6. The Sacrifice. -- 7. Boomer Patrol. -- 8. Diesel Boats Forever. -- 9. Long Separation. -- 10. Seawolf. -- 11. Freedom Patrol. -- 12. Sailor's Prayer. -- 13. Bring the Nautilus Home. -- 14. Kursk. -- 15. Blind Man's Bluff. -- 16. Still on Patrol. -- 17. Paybacks are Hell. -- 18. Mighty Mine Dodgers. -- 19. Slade Cutter. -- 20. Frenchie. -- 21. Paybacks. -- 22. The Dives We've Known. -- 23. Run Silent, Run Deep. -- 24. Navy SEALs. -- 25. Tango Charlie.

Synopsis: Tango Charlie, the military phonetic alphabetic for the letters T and C, was Tommy Cox's operator's sign during his years in the Navy. Retired as a Senior Chief Cryptologic Technician in 1979, Cox spent much of his career riding submarines as a part of the Naval Security Group. The first part of this book is a fascinating memoir of the Cold War, written by someone who was in the middle of a lot of the action. During and after his military career, Tommy Cox had a second career as a singer-songwriter. The second part of his book contains the lyrics to 25 of his songs, and discusses how they came to be written. Cox has created his own musical genre, writing and singing songs about submarines and the men who serve in them. -- http://riverdaleebooks.com/tangocharlie.html

Grass, Günter. **Crabwalk**; translated from the German by Krishna Winston. 1st ed. Orlando: Harcourt, c2002. 234p.

Publisher's blurb: Gunter Grass has been wrestling with Germany's past for decades now, but no book since The Tin Drum has generated as much excitement as this engrossing account of the sinking of the Wilhelm Gustloff. A German cruise ship turned refugee carrier, it was attacked by a Soviet submarine in January 1945. Some 9,000 people went down in the Baltic Sea, making it the deadliest maritime disaster of all time.

Abstract: This thesis compares the development of fleet ballistic missile systems in the United States and Soviet Union and their contribution to the achievement of national security objectives of each nation. To this end, submarine and missile technologies, elements of operational practices and support, and general strategic doctrine, are traced. A comparative assessment of weapon system effectiveness and potential in achieving stated objectives is derived from capabilities, peacetime employment, and wartime plans as stated in open doctrinal documents.

Reynolds, Guy B. The Nuclear-Armed Tomahawk Cruise Missile: Its Potential Utility on United States and United Kingdom Attack Submarines. Monterey, CA: Naval Postgraduate School, 1998. (ADA359545). 70p.

Thesis (M.Ā. in National Security Affairs) -- Naval Postgraduate School, December 1998.

Abstract: In July 1998, Britain published its Strategic Defense Review(SDR). The SDR outlined significant changes for Britain's nuclear weapons program and formalized the policy of sub-strategic deterrence using the Trident missile. It is unprecedented for a nuclear power to haveconsolidated its strategic and sub- strategic nuclear forces into a single system. The benefits offered by the British choice might be enjoyed for only a short time. The British have slashed their nuclear forces and eliminated the range of options previously available to their national command authority. Dependence on a single delivery system could result in the inability to respond to crises, to act autonomously, or to negotiate effectively with other nuclear weapon states. This thesis analyzes the benefits that nuclear Tomahawk could provide the British. Since the United States owns the system, the future of the nuclear Tomahawk in the American arsenal is crucial to any British decision to adopt it or a similar system. An unmanned nuclear cruise missile weapon offers many advantages in today's security environment. The United States should retain nuclear Tomahawk and Britain, with its mature maritime force, should consider acquiring a similar capability. The elimination of nuclear Tomahawk from the U.S. arsenal would be a mistake.

Gray, Edwyn. Captains of the Underwater War: Submarine Commanders in Action. Barnsley, South Yorkshire: Leo Cooper, 2004. 256p.

Synopsis: Submarines have only one operational purpose, namely the destruction of enemy shipping. This book tells the story of seventeen captains drawn from six nations in two World wars. Germany is represented by the likes of Weddigen who sank three cruisers in an afternoon, Von Spiegel (WW2) and Von Arnauld arguably the most successful submarine commander of all time. Britain fields Holbrook as the first submariner to win the VC, Sandford of Zeebrugge fame and Wanklyn VC, one of our top aces in WW2. The US provides four true heroes including Dealey who sank six Japanese

destroyers and won the Congressional Medal of Honour and Dudley Morton, the legendary skipper of Wahoo, Not to be overlooked are Italy's de la Penne (of Alexandria two-man sub fame), the Pole Jan Grudinski and Japan's Hasimoto who sank USN Indianapolis in the closing stages of WW2. <a href="http://www.amazon.co.uk/Captains-Underwater-War-Submarine-Commanders/dp/1844151107/sr=11-1/gid=1168834469/ref=sr">http://www.amazon.co.uk/Captains-Underwater-War-Submarine-Commanders/dp/1844151107/sr=11-1/gid=1168834469/ref=sr</a> 11 1/202-0680589-2267804

Anstract: This work assesses the nature of the submarine forces in the German and United States navies before and during the Second World War by studying their logistics. It examines five elements of the submarine forces in these navies: The construction of boats, their repair, the selection and training of crews, their supply with food, fuel and weapons, and the solution of the problems in their torpedoes. These elements reveal that each navy possessed a distinct conception for what a submarine was and before the Second World War, a conception that played a direct role in combat during the conflict.

Pearsall, G. H. The Effects of World War II Submarine Campaigns of Germany and the United States; A Comparative Analysis. Newport, RI: Naval War College, 1994. (ADA283407). 43p.

Abstract: The effectiveness of the German and United States submarine campaigns during World War II is compared by analyzing the genesis of each campaign, the commitment to each and the effort to overcome the losses imposed by submarine warfare. This comparison highlights one aspect of the strategic and operational consequences of conflict with an adversary able to build and maintain a superior industrial base in support of the military effort. This analysis places primary focus on German U-Boat efforts in the Battle of the Atlantic and the U.S. submarine efforts in the Western Pacific. Ultimately, the overriding factor in the outcomes of both campaigns was the ability of the United States to produce more ships than the Germans could sink, to build more submarines than the Japanese could sink, and to sink more Japanese ships than the Japanese could build. As a result, the United States was able to sustain its total military effort against Germany; Japan was not able to sustain its efforts in the Pacific.

Beckman, Philip J. **Scheduling Attack Submarine Deployments**. Monterey, CA: Naval Postgraduate School, 1997. (ADA331771). 47p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 1997.

Abstract: The Navy's peacetime mission is "to conduct forward presence operations to help shape the strategic environment by deterring conflict, building interoperability, and by responding, as necessary, to fast breaking crises with the demonstration and application of credible combat power." (OPNAV INSTRUCTION 3501.316, February 1995) The ability to carry out this mission hinges on the Navy's ability to maintain ships and submarines forward deployed in regions where such crises may occur. The end of the Cold War and current budget constraints have caused a drawdown in the number of ships and submarines with which to provide forward presence. Coupled with the continued requirement to maintain a certain level of forward presence, this drawdown creates shortfalls when attempting to deploy ships or submarines to fill certain mission requirements. To minimize these shortfalls, this thesis formulates the problem of scheduling attack submarine deployments as an integer program. Due to its size and complexity, heuristic algorithms are developed to provide near-optimal solutions in a reasonable amount of time. In addition to providing near-optimal deployment schedules, results from the algorithms are also useful in evaluating changes in maintenance and operational policies.

Thesis (Ph.D.) -- Duke University, Department of History, 2004.

Abstract: From 1923 to 1940 the U.S. Navy held Twenty-one major exercises, known as "Fleet Problems." While only part of annual fleet training, these exercises differed from routine maneuvers and gunnery exercises. All available fleet units were integrated into a single major action.... Concepts such as dive-bombing, independent submarine operations, antisubmarine warfare, and amphibious operations were explored in a medium that stressed the thinking of naval officers as how best to fight a naval war with modern weapons.

Hastings, Scott A. An Assessment of Future United States Naval Force Structure in the Pacific Theater. Fort Leavenworth, KS: Army Command and General Staff College, 1994. 178p.

Master's thesis.

Abstract: The naval force structure proposed by the 1993 Department of Defense 'Bottom Up Review' was analyzed in terms of three force planning cases built around illustrative scenarios using representative depictions of future threats. Each case included: Regional analysis in terms of mission, forces, area, and command and control; development of military requirements; and comparison of requirements and capabilities, identification of shortfalls, and characterization of risk. A notional U.S. carrier battle group and air wing for the year 2000 were examined in scenarios involving a conventional global war with a reconstituted Russia, a major regional contingency on the Korean peninsula, and a lesser regional contingency involving a freedom of navigation dispute with Indonesia. The scenarios represent different levels from the spectrum of conflict. The future naval force was found insufficient to ensure victory in global conventional war, the scenario which involved the greatest risk to U.S. interests. The future force, optimized for blue-water operations, was also shown seriously deficient in countering mines and diesel submarines, another threat which entailed the potential for damage to U.S. interests.

Abstract: The end of the Cold War has been the watershed event for changes in the international and national security environments that present tremendous implications for the US submarine force. These changes include calls for significant US defense cuts to reap a peace dividend, the increasing importance of economics as a determinant of defense spending, and the disintegration of the Soviet Union resulting in the absence of a clear tangible global threat to US national interests. What has resulted from these chances is the formulation of a new US national security strategy that focuses on regional contingencies, and the decision to cut US defense forces by at least 25% over five years including the cancellation of the Seawolf submarine program. This thesis addresses the implications of these tremendous changes on the US submarine force. Specifically, issues that are addressed include roles and missions, force structure, submarine design, and changing the institutional mindset of the submarine community. The issue of roles and missions involves demonstrating the applicability of the submarine to regional warfare. The issue of submarine force structure deals with both the short term and long term factors affecting submarine force reductions and ultimate submarine force size. The issue of submarine design addresses concerns over the submarine industrial base, the Centurion program, and design requirements for a regional warfighting submarine.

Jorgensen, Eric J., Joseph J. Fuller, Samuel C. Rainey and theodore J. Post. **Potential Benefits to Navy Training Programs Resulting from Increased Use of Interactive Electronic Technical Manuals. Phase 1. Initial Evaluation of IETM Applicability to Schoolhouse and Worksite Training Functions: Interim Report March-October <b>1995**. Bethesda, MD: Naval Surface Warfare Center Carderock Division, 1995. (ADA309992; NSWCCARDIV-TR-96/016). 118p.

Abstract: This report summarizes Phase I of a study entitled Training Benefit Analysis of the Accelerated Use of Interactive Electronic Technical Manuals (IETM's). An initial evaluation of the interactive, computer controlled display of technical information has been carried out by the Navy training community. Results indicate the use of IETM's, integrated with automated courseware, could significantly improve training processes. Forty-seven candidate projects covering surface, air and submarine warfare areas were identified. Fifteen IETM hypotheses and associated implementation scenarios were evaluated. Of these, twelve were supported by more than two-thirds of the participants in this study. Candidate projects were identified for business-case-analyses to be performed in Phase II. This report also identifies technical and administrative issues which must be addressed before the full potential of IETM's can be realized. Measures needed for greater integration, infrastructure support and standardization of IETM's in training are recommended. Phase II of the study will consist of a more detailed analysis of the selected candidate projects, particularly from the standpoint of return on investment. This will provide the Chief of Naval Operations with the basis for training input to the Program Objective Memorandum (POM) '98 preparation process.

Mielcarz, Diane C. **Submarines - Who Needs Em?** Newport, RI: Naval War College, 1995. 23p.

Abstract: The current military/political climate of budget cuts, downsizing, the demise of the Soviet Union, and the establishment of a new world order has forced all services to reexamine and justify their existence. I will specifically examine what U.S. submarine has to offer in the defense of America in relation to the National Military Strategy, to include deterrence, forward presence, crisis response and reconstitution; enduring characteristics which include stealth, endurance and agility; critical roles such as peacetime engagement, surveillance, deterrence, regional sea denial, precision strike, task group support, ground warfare support and battlespace dominance; and contributions that the submarine can make to the post-Cold War era. While there is no possible way to predict where or when the next conflict will occur, the submarine possesses valuable attributes which can be successfully utilized at the operational level to enhance the mission and achieve success.

Moss, Lee O. Operational Employment of Fast Attack Submarines in Littoral Warfare-A Force Multiplier or a Force. Newport, RI: Naval War College, 1996. 22p. Abstract: With the Navy's shift in focus from blue water operations to littoral warfare, significant effort has been expended toward developing operational concepts that optimize the employment of naval forces, with the emphasis being placed on the Naval Expeditionary Task Force (Carrier Battle group and Amphibious Ready Group). Submarines play a key role in tactical operations within the battle group, but also have the potential to have a significant impact on the operational level of war, if properly utilized by the theater CINC. In order to get the most out of the submarine force, the CINC must balance operational tasks with the tactical needs of the CJTF. If the CINC allows the CJTF to control the SSNs to conduct littoral warfare tasks, he is forfeiting some of his operational flexibility. By viewing the JTF as a unit operating at the operational/tactical level, the CINC can better focus on tasks that need to be accomplished at the operational level. Employment of SSNs at this level of warfare can fill the gap that has been left by the Navy's concentration on littoral warfare. Emphasis on the development of doctrine for littoral warfare need to focus on the value of the SSN at all levels of warfare. Proper integration at all levels will result in maximum flexibility and will restore blue water Navy capabilities to the theater commander.

Norris, David Thomas. **Strategic Planning, Polaris, and Tomahawk: Technological Imperative Hypotheses**. Monterey, CA: Naval Postgraduate School, 1987. (ADA193027). 126p.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, 1987.

Abstract: This thesis examines the force procurement element of the military strategic planning process and is comprised of two parts. First, models are constructed to depict ideal strategic planning. The initial step in each model is the formulation of the national interest. The national interest is defined in terms useful to strategic planners by creating a unique paradigm based on the Constitution. The technological imperative hypothesis is explored as an aberration to the ideal strategic planning process. Second, the technological imperative hypothesis is tested with case studies of the Polaris and the Tomahawk. Even though the hypothesis was disproved in each case, the case studies yielded useful relationships between technology, strategy, and doctrine.

Osborn, Christopher M. An Analysis of the Effectiveness of a New Watchstanding Schedule for U.S. Submariners. Monterey, CA: Naval Postgraduate School, 2004. (ADA427686). 81p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, September. 2004. Abstract: This study compares an experimental watchstanding schedule derived at Naval Submarine Medical Research Laboratory (NSMRL) with the schedule currently used onboard the submarine USS HENRY M. JACKSON (SSBN 730 GOLD). It analyzes subjective and objective data to determine if the new schedule is compatible in an operational submarine environment. This study reviews sleep and fatigue literature to emphasize important concepts needed to make schedule comparisons. Results from this study indicate a need exists among the U.S. submarine force to employ an operational schedule which provides more sleep and which is in better alignment with human circadian rhythms, thus improving cognitive effectiveness. One of the experimental schedules tested in this study yielded results similar to those of the existing submarine watchstanding schedule. This experimental schedule employed a validated model of human performance and fatique to assess individual cognitive effectiveness. However, the results also indicate that the existing schedule is better suited in its accommodation of operational scheduling constraints which, in turn, allow watchstanders to receive more sleep. Recommendations address the need for the U.S. submarine force to continue to pursue a watchstanding schedule that provides better sleep while still accommodating operational constraints. Recommendations also address improvements in experiment implementation which can be integrated into future studies.

Smith, Carole J. Small Fleet -- Big Risk. Newport, RI: Naval War College, 1995. 21p. Abstract: In any future conflict, the U.S. Navy will most likely enjoy a significant technological and numerical superiority over its adversary. A relatively small navy may, however, avoid decisive battle and influence events at sea indefinitely. Naval strategists have coined the terms fleet in being, fortress fleet, and risk fleet to describe strategies designed to use inferior forces to an advantage. Through an examination of these strategies as analyzed by both Alfred Thayer Mahan and Julian Corbett and study of historical examples of each, the relevance of these strategies to current naval thought can be determined. While fortress fleet and risk fleet have very limited value today, a diesel submarine fleet in being poses a significant threat that must be addressed in future U.S. naval strategy.

Soto, Alberto A. **The Flaming Datum Problem With Varying Speed**. Monterey, CA: Naval Postgraduate School, 2000. (ADA379766). 49p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, 2000.

Abstract: The problem of detecting an enemy submarine whose possible position was revealed by the hit of a torpedo is known as the "Flaming Datum" problem. All previous studies devoted to this theme make unrealistic assumptions about the speed of the escaping target when dealing with a diesel-electric submarine. In this kind of submarine the constraint imposed by the remaining charge of its batteries determines that its behavior is essentially conservative in how fast it should escape. The objective of this thesis is to explore the idea of varying speed in the flaming datum problem. Two different approaches are considered. An analytical model is developed based on the relationship among some of the physical factors that could determine or constrain the behavior of a diesel submarine while escaping from the area of the flaming datum. The second approach considers a discrete event simulation using the Java-based Simkit package. Data analysis is used to determine a possible fit for the simulation results. Several tactics are explored to determine their effects on detection probability.

Thompson, Roger. Brown Shoes, Black Shoes, and Felt Slippers: Parochialism and the Evolution of the Post-War U.S. Navy. Newport, RI: Naval War College, 1995. 70p.

Abstract: This report examines how intra-service parochialism has affected the United States Navy since the end of the Second World War. It traces the development of naval bureaucratic dominance from the prewar battleship admirals, through the rise of naval aviators to the eventual dominance by nuclear submariners. The author posits that the Navy may now have entered a new era once again dominated by surface warfare officers and wonders what the consequences of this change may be. The study argues for balance and urges naval leadership to rise above the natural tendency to square the past by primarily promoting the interests of the dominant warfare group.

Tritten, James John. **The Submarine's Role in Future Naval Warfare**. Monterey, CA: Naval Postgraduate School, 1992. (NPS-NS-92-010; ADA252808). 43p.

Abstract: The three basic elements where we traditionally commence strategic planning have changed dramatically in the past two years. A new national security strategy recasts the roles and missions of the armed forces in new terms. The submarine force needs to be justified under the new grammar for warfare as a part of the four new mission areas under the new national military strategy. The submarine force alone can perform the strategic deterrence and defense missions. The submarine's role in presence involves a high/low mix choice. There should be increased emphasis on the submarine force for crisis response: (1) rapid response (2) shore bombardment and strike (3) as the initial leading maritime component for second major regional contingencies, and (4) initial and limited sea control. A European regional war evolving out of a major regional contingency is not the same thing as the old European-centered global war with the USSR. Decreased emphasis should be placed on strategic anti-submarine warfare. Reconstitution goals could be met with at-sea nuclear weapons.

United States. General Accounting Office. **DEFENSE ACQUISITIONS: Testing Needed to Prove SURTASS/LFA Effectiveness in Littoral Waters**. Washington, DC: General Accounting Office, 2002. (ADA402657, GAO-02-692). 19p.

Abstract: For decades, the Navy has been striving to improve its ability to detect potential enemy submarines before they can get within effective weapons range of U.S. forces. In 1985, the Navy established the Surveillance Towed Array Sensor System (SURTASS) Low Frequency Active (LFA) sonar program to develop a long-range capability for detecting a new generation of quieter Soviet nuclear and diesel submarines operating principally in the open ocean. Since the end of the Cold War, the Navy has shifted its focus to include regional conflicts and the threat posed by diesel-electric submarines operating in littoral waters. The Navy continued to develop SURTASS/LFA because it showed technological potential to detect objects at great distances. Sound produced at low frequencies can travel further underwater than sound produced at higher frequencies.2 However, as the Navy conducted testing of the system in the mid-199Os, some public interest groups and scientists raised concerns that SURTASS/LFA may cause harm to marine mammals. The Navy discontinued operational testing of the system and initiated an environmental impact statement process. Currently, the Navy will not begin testing or operating the system until it receives a Letter of Authorization from the National Marine Fisheries Service. According to Navy officials, a decision on the authorization is expected later in 2002. In addition, some of the same groups that have raised environmental concerns have questioned whether SURTASS/LFA will increase the Navy's undersea detection capabilities and whether the Navy has an alternative for the system.

United States. General Accounting Office, National Security and International Affairs Division. **Navy Maintenance: The P-3 Aircraft Overhaul Program Can Be Improved**. Washington, DC: General Accounting Office National Security and International Affairs Division, 1987. (ADA182095; GAO/NSIAD87-157). 29p.

Abstract: The P-3 is a shore-based, long-range aircraft designed to combat submarines. The Navy has 24 active P-3 squadrons, 13 reserve squadrons, and 5 squadrons for training and special projects. The P-3 inventory totals 441 aircraft. During its 30-year life, a P-3 is expected to undergo six overhauls at one of two Naval Air Rework Facilities, also known as depots. The study's objective was to determine whether the Navy could reduce depot overhaul turnaround time for the P-3 aircraft by improving overhaul procedures. Topics examined include: Selecting aircraft for overhaul; Inspections needed to ensure overhauls are necessary; Overhauls can be scheduled more efficiently; Laboratory resources can be applied more efficiently; and Depots have excess overhaul capacity.

United States. General Accounting Office, National Security and International Affairs Division. **Undersea Surveillance: Navy Continues to Build Ships Designed for Soviet Threat**. Washington, DC: General Accounting Office National Security and International Affairs Division, 1992. (ADA258570; GAO/NSIAD-93-53). 40p. Report to the Acting Secretary of the Navy, 3 December 1992.

Abstract: The Navy's Surveillance Towed Array Sensor System (SURTASS) program, like other

defense programs, has been caught in the midst of rapidly changing world events. SURTASS sensors 'listen' for acoustic signals from enemy submarines in the deep, open ocean. However, the submarine threat for which SURTASS was designed has declined dramatically with the collapse of the Soviet Union. The United States no longer faces a well-defined nuclear submarine threat in the deep water ocean areas where strategic naval conflict and antisubmarine warfare operations were expected to occur. Instead, the Navy faces an ill-defined, less predictable regional threat from diesel submarines operating in shallow water areas. Yet, the Navy continues to build SURTASS surveillance ships designed for the deep water threat. In light of the recent world changes, we examined (1) how the submarine threat environment has changed and (2) what changes the Navy has proposed regarding its SURTASS program.

United States. General Accounting Office, National Security and International Affairs Division. Weapon Systems Overview: A Summary of Recent GAO (General Accounting Office) Reports, Observations and Recommendations on Major Weapon Systems. Washington, DC: GAO, 1983. (ADA133323; GAO/NSIAD83-7). 103p.

Report to the Congress.

Abstract: To aid the Congress in its deliberations on the fiscal year 1984 defense budget, The General Accounting Office issued, from August 1982 through July 1983, 17 reports on selected weapon systems. Chapter 2 summarizes the potential impact of GAO's recommendations and observations. Chapter 3 categorizes and summarizes the major issues highlighted in each report. These issues could have a direct impact on the systems' efficient acquisition and/or operational effectiveness. These issues formed the bases for GAO's recommendations and observations. Chapters 4 through 7 contain individual report summaries. The systems which were reviewed and which are included in this overview are: AH-64; Army Helicopter Improvement Program; Patriot; Sergeant York; Stinger POST; S-3A; CG-47; Rapidly Deployable Surveillance System; TOMAHAWK; F/A-18; Over-the-Horizon Backscatter Radar; The antisatellite development program; The Wide Area Antiarmor Munitions; The B-1B Bomber; Light Armored Vehicle; Advanced Medium Range Air-to-Air Missile; and Trainer aircraft.

Woolf, Amy F. **U.S. Strategic Nuclear Forces: Background, Developments, and Issues**. Washington, DC: Congressional Research Service, Library of Congress, 2007. (CRS report for Congress; RL33640). 29p.

Description based on title screen as viewed on Jan. 31, 2008.

Abstract: During the Cold War, the U.S. nuclear arsenal contained many types of delivery vehicles for nuclear weapons. The longer range systems, which included long-range missiles based on U.S. territory, long-range missiles based on submarines, and heavy bombers that could threaten Soviet targets from their bases in the United States, are known as strategic nuclear delivery vehicles. At the end of the Cold War, in 1991, the United States deployed more than 10,000 warheads on these delivery vehicles. That number has declined to around 6,000 warheads today, and is slated, under the 2002 Moscow Treaty, to decline to 2,200 warheads by the year 2012.--p. 2.

## **KOREAN WAR**

Billy, Gregory M. An Operational Analysis of United States Submarine Employment in the Korean War. Newport, RI: Naval War College, 1994. (ADA279727). 29p.

Abstract: United States submarine operations during the Korean War are critically analyzed from an

operational perspective. The Korean War represented a prototype for future Major Regional Conflicts (MRCs). Examining the Operational Commander's use of submarines against a relatively weak naval power, in a conflict dominated by land battle, provides lessons which may be applicable to future MRCs. Brief historical and operational overviews are followed by operational analyses of submarine command and control, operational reconnaissance missions, and the war's impact on the submarine force. Conclusions discuss lessons learned for present and future operational planning. Compared to their significant contribution during World War II, U.S. submarines did not play a major role in Korea. Their employment was mostly directed towards training and reconnaissance operations. Korean War operational reconnaissance set the stage for submarine operations throughout the Cold War. Submarine employment in the Korean War was affected by three key issues: Difficulty in preventing blue-on-blue engagements, communications limitations which inhibited rapid, reliable submarine operational tasking, and defensive mining of the littoral region. These three issues will continue to challenge operational Commanders when employing submarines in future MRCS.

Govan, Dale R. **The Submarine Contribution to Operational Protection**. Newport, RI: Naval War College, 1997. 24p.

Abstract: How can nuclear powered submarines (SSNs) contribute to joint force protection? Are these submarines essential to a joint force commander's concept of operations? Would their absence significantly alter his branch and sequel plans? Although SSNs represent a significant combat capability, do they possess the necessary range of capabilities to enhance operational protection in a given theater? SSNs can be a force multiplier in the right scenario. 'The modern attack submarine is a versatile multimission warship that is more survivable than any other naval vessel in history.' However, just as the special operating forces complement ground troops, SSNs complement the naval forces. SSNs can not accomplish all tasks all the time, but the capabilities they bring to joint force operations can free other forces to act in contributing areas to accomplish the overall mission. This is their forte. The principle missions submarines can perform have grown tremendously from the pre-World War II tasks. These tasks included covert strike warfare, surface warfare, undersea warfare, intelligence collection and surveillance, covert indication and warning, electronic warfare, special warfare, covert mine warfare, and battlegroup support. With so many capabilities available, the operational commander must rely on doctrine to incorporate these tasks into his concept of operations. This paper will attempt to articulate the fundamental principles to guide the use of SSNs in warfare. Just as air superiority against an adversary requires phasing of operations, so does undersea superiority. Submarines can best combine time and space with stealth to help prepare the littoral battlespace for future operations.

LaCroix, F. W. et al. **A Concept of Operations for a New Deep-Diving Submarine**. Santa Monica, CA: RAND, 2001. (MR-1395). 153p.

Abstract: By 2012, the reactor on the U.S. Navy's only deep-diving research submarine will be exhausted, making it necessary to either refuel the reactor or replace the submarine. If the Navy opts for a new submarine, what capabilities should it retain and what capabilities should be added? What would be its most important missions and what would be required for it to perform those missions? In this report, the authors worked with panels of qualified scientists, defense experts, and naval officers to develop a concept of operation for a possible replacement platform, analyzing which military and scientific missions should have the highest priorities. The authors conclude by offering a list of the highest-priority missions and two design concepts that would best be able to achieve them.

Title from title screen (viewed on Sept. 4, 2007); "Updated August 16, 2007."

Abstract: Of the 281 ships in the Navy at the end of FY2006, 55 were nuclear-powered attack Submarines (SSNs). The Navy wants to maintain in coming years a fleet of 313 ships, including 48 SSNs. The Navy is currently procuring Virginia (SSN-774) class SSNs. The First was procured in FY1998, a total of nine have been procured through FY2007, and the first two had entered service as of the end of FY2006. The FY2008-FY2013 Future Years Defense Plan (FYDP) proposes procuring one Virginia-class boat per year through FY2011, and then two boats per year starting in FY2012.

Spinardi, Graham. The Development of U.S. Fleet Ballistic Missile Technology: Polaris to Trident. University of Edinburgh, 1988. 258p.

(Ph.D.) -- University of Edinburgh, 1988

Abstract: The main aim of the study is to document the development of US Fleet Ballistic Missile technology from its mid-1950s beginnings through to Trident II D5. This historical documentation is framed by a perspective which seeks to understand how technology evolves and what the relationship is between, to put it simply, technology and strategy, or technology and politics. Of particular interest in this case study is the relationship between technology and nuclear strategy. It is a commonplace assertion that technology is a dominant, determining factor in the arms race, that indeed there is a technological imperative. In particular there are many who argue that improvements in missile accuracies have driven changes in nuclear strategy away from counter-city retaliatory deterrence to war-fighting counter-force postures. Tracing the history of FBM development from Polaris, considered by many the archetypal counter-city deterrent, to Trident II, with hard-target kill capability comparable to MX, helps our understanding of this issue.

Tritten, James J. A New Case for Naval Arms Control: Interim Report September-December 1992. Monterey, CA: Naval Postgraduate School Department of National Security, 1992. (ADA259759). 1v.

Abstract: This paper opens with an examination of existing legal restraints on naval forces and arms control agreements and concludes that the U.S. is already heavily engaged in naval arms control. Given the new international security environment and the new U.S. regionally-oriented national security and military strategies, the author then recommends a series of additional naval arms control measures that

should be taken: Exchanges of data, transparency, INCSEA, cooperative measures, an agreement on the laws of submarine warfare, abolishing NCND, no first tactical nuclear use at sea, NWFZs, advanced notification of operational-level exercises, environmental protection measures, controls over maritime technologies, armed escorts of nuclear shipments, new Roes, PALs, the resolution of outstanding political issues at sea, deep cuts in nuclear forces, CFE follow-on, limits on specific types of naval forces, geographic limits, expanded standing naval forces, and a re negotiation of the ABM Treaty. The paper then addresses verification and compliance issues. Author concludes that since the U.S. Navy has already managed to avoid major arms control while balanced on the precarious 'slippery slope', there is no reason to continue its stonewalling policies.

United States. Department of the Navy. **Draft Environmental Impact Statement. Shock Testing the Seawolf Submarine**. Washington, DC: Department of the Navy, 1996. (ADA311510). 411p.

Abstract: This Draft Environmental Impact Statement (DEIS) evaluates the environmental consequences of shock testing the SEAWOLF submarine at an offshore location. The submarine would be subjected to a series of five 4,536 kg (10,000 lb) explosive charge detonations of incrementally increasing intensity sometime between 1 April and 30 September 1997. The DEIS evaluates a 'no action' alternative and analyzes in detail two alternative areas offshore of Mayport, Florida and Norfolk, Virginia. Alternatives are compared with respect to project purpose and need, operational criteria, and environmental impacts. Most environmental impacts of shock testing would be similar at Mayport or Norfolk. These include minor and/or temporary impacts to the physical and biological environments and existing human uses of the area. However, the number of marine mammals potentially affected by the detonations would be about eight times lower at Mayport than at Norfolk. Thus, the preferred alternative is to shock test the SEAWOLF offshore of Mayport, Florida, with mitigation to minimize risk to marine mammals and turtles. If the Mayport area is selected, the shock tests would be conducted between 1 May and 30 September 1997 to minimize risk to sea turtles, which are more abundant at the Mayport area during April. The USS SEAWOLF is the first of a new class of submarines being acquired by the Navy. The class is expected to consist of three submarines, with the second currently under construction. SEAWOLF class submarines will be the largest and most capable fast attack submarines in the fleet. Features include reduced acoustic and electromagnetic signatures, improved speed, greater triaximum operating depth, greater ordnance capacity, and other technological improvements reflecting the state-ofthe-art in submarine design.

United States. Department of the Navy. Request for Letter of Authorization for the Incidental Take of Marine Mammals Associated with Shock Testing the Seawolf Submarine. Washington, DC: Department of the Navy, 1996. (ADA311509). 214p. Abstract: The purpose of this project is to shock test the SEAWOLF submarine so that the resultant data can be used to assess the survivability of the submarine. This project is needed because computer modeling and component testing on machines or in surrogates does not provide adequate information to assess the survivability of the submarine in accordance with Section 2366, Title 10, United States Code (10 USC 2366). Only by testing the submarine manned with the appropriate systems operating can the shock response of the entire ship, including the interaction of ship systems and components, be obtained and an adequate assessment of the survivability of the submarine be determined in accordance with 10 USC 2366. Shock tests have proven their value as recently as the Persian Gulf War when ships were able to survive battle damage and continue their mission because of ship design, crew training, and

survivability lessons learned during previous shock tests. The Final, specific site for shock testing would not be selected until 2 to 3 days before the test based on marine mammal and turtle surveys (see Section 4). Three weeks prior to the shock test, a single aerial survey would be conducted over the selected area (i.e., Mayport or Norfolk) to identify a single primary test site and two secondary test sites based on the lowest relative abundance of marine mammals and turtles. Two to three days prior to each detonation, an aerial survey would be conducted at the primary and secondary sites, and a final test site would be selected on the basis of scarcity of marine mammals and turtles. This would ensure that the final test site would be selected where shock testing poses the least risk to the marine environment.

United States. Department of the Navy. **Shock Testing the Seawolf Submarine: Final Environmental Impact Statement**. Washington, DC: Department of the Navy, 1998. (ADA346334). 563p.

Abstract: This FEIS evaluates the environmental consequences of shock testing the SEAWOLF submarine at an offshore location. The submarine would be subjected to a series of five 4,536 kg (10,000 lb) explosive charge detonations of incrementally increasing intensity sometime between 1 April and 30 September 2000. The FEIS evaluates a no action alternative and analyzes in detail two alternative areas offshore of Mayport, Florida and Norfolk, Virginia. Alternatives are compared with respect to project purpose and need, operational criteria, and environmental impacts. Most environmental impacts of shock testing would be similar at Mayport or Norfolk. These include minor and/or temporary impacts to the physical and biological environments and existing human uses of the area. Using 1995 survey data from both areas as the most appropriate basis for comparison, the risk of mortality and injury of marine mammals is about 5 to 7 times lower at Mayport than at Norfolk, whereas the risk to sea turtles is about the same at the two areas. Thus, the preferred alternative is to shock test the SEAWOLF offshore of Mayport, Florida, with mitigation to minimize risk to marine mammals and turtles. If the Mayport area is selected, the shock tests would be conducted between 1 May and 30 September to minimize risk to sea turtles, which may be more abundant there during April.

Williams, Gorfon C. Employment of Fast Attack Submarines by the Operational Commander. Newport, RI: Naval War College, 1998. (ADA348604). 27p.

Abstract: For operational commanders, the use of military force today requires flexibility, efficiency, and careful risk management among joint forces. In light of these requirements, this paper examines the influence of the fast attack nuclear submarine (SSN) and the Joint Force Commander's JFC) employment of SSNs as an operational-level asset. The history of submarine warfare provides many lessons regarding submarine employment. Although the JFC can use submarines to accomplish or support a broad scope of missions, optimum employment requires analysis of the characteristics, capabilities, and expertise of submarines. The intrinsic and enduring characteristics of the SSN are stealth, mobility, endurance, and flexibility. The SSN also possesses diverse capabilities that allow it to perform a number of missions in support of the operational commander. These include theater ISR, support of ground components and operations ashore, and attacks on sea-based threats and objectives. Matching the submarine's characteristics with these capabilities yields several employment principles. For the JFC, SSNs are flexible assets that are best employed operationally deep where autonomous, survivable, or enabling forces are required. As an operational asset, the SSN contributes directly to several of the JFC's operational functions. First, submarines are important to the JFC because of their role in operational intelligence. Because of their stealth and forward positions, SSNs are able to conduct ISR directed at the enemy's operational weaknesses and centers of gravity. Second, the SSN's mobility and endurance enable it to execute operational maneuver. Third, through their USW, SUW and MIW capabilities. SSNs provide superb operational protection of naval forces. Finally, the SSN's extensive operational reach and autonomy make it particularly effective at conducting operational fires. Effective employment of SSNs will help the JFC achieveleverage and freedom of action in the theater. Electronic access: http://handle.dtic.mil/100.2/ADA348604

Abstract: This paper analyzes the United States use of unrestricted submarine warfare against the Japanese in World War II. Within the framework of the principles of war, the paper critically analyzes the strategy of the use of submarines during the war and how the operational strategy changed during the course of the war. This paper also critically surveys the use (or misuse) of the key tenets of modern, fundamental military thought. Recommendations and observations are offered which are considered applicable to modern warfare.

Author's note: During the closing stages of the war, Lockwood detailed his operations officer, Richard Voge, to write an official administrative and operational history of the submarine war. Voge was assisted in this large undertaking by W.J. Holmes, W.H. Hazard, D.S. Graham and H.J. Kuehn.

The Administrative History forms a portion of the Navy's unpublished known as "United States Naval Administration in World War II." It is subtitled "Submarine Commands, Volumes 1 and 2." Copies are on file in the Navy Library, Washington, D.C., and at the Submarine Force Library and Museum, Submarine Base, New London. The Administrative History deals with personnel, bases, submarine construction, repair and refit, communications, and other matters. The author made extensive use of these volumes and it grateful to the Submarine Force Library for their long-term loan.

The Operational History produced by Voge et al. is a massive document of more than 1,500 pages dealing with every conceivable operational aspect of the submarine War. No one attempting a serious submarine history should begin without consulting it. Generally it tells a positive story; the "skipper problem," for example, is not dealt with. However, the torpedo section contains a long and frank account of torpedo problems which the author has consulted extensively, along with other sources.

After the War, John M. Will, while attached to the Bureau of Personnel (Assistant Director of Training), hired a writer, Theodore Roscoe, to reduce the Operational History to publishable form. The result was United States Submarine Operations in World War II, published in 1949 by the U.S. Naval Institute, Annapolis, Maryland. It is in effect a truncated version of the Operational History (sometimes reproduced word for word). Since it was produced by the navy, it too is a positive story--the Operational History in a more manageable form. This work was published in condensed form in paperback by Bantam Books, 1976, under the title Pigboats [i.e., Pig Boats]. pp. 979-980.

Crowell, Charles D. SHO-1 Versus KING II - Victory at Leyte Gulf - Was it United States Luck or Japanese Mistakes? Carlisle Barracks, PA: Army War College, 1989. 88p.

Abstract: The Battle for Leyte Gulf was the greatest naval battle of all time in terms of number of ships involved, losses of ships and aircraft and size of area over which the battle was fought. The American victory effectively marked the end of the Japanese Navy in World War Two. The battle was marked by furious surface, air and submarine action at sea and fierce fighting ashore on Leyte Island by US Army and Marine ground forces. While U.S. Navy dealt devastating losses to the Japanese fleet and claimed a resounding victory, the battle continues to be discussed for the significant operational, tactical and judgmental errors made by commanders of both sides. This study examines the errors made, the reasons for the errors and the effect the errors had toward deciding the outcome of this battle. It investigates the Japanese plan for the battle and the Japanese philosophy toward the war in 1944 and how these issues affected the outcome. It also considers the American chain of command in the Pacific theater and the problems caused by that unique setup. The paper discusses what we have learned, if anything from Leyte Gulf, and if in a similar situation would we make the same mistakes again. Finally the paper evaluates the composite effect of errors on both sides.

Dienesch, Robert M. Submarine Against the Rising Sun: The Impact of Radar on the American Submarine War in 1943, the Year of Change. Fredericton: University of New Brunswick. 1996. 227 l.

Thesis (M.A.) -- University of New Brunswick, Department of History 1996.

Abstract: In the opening year of World War II, the American submarine fleet faced many problems that limited their ability to sink Japanese merchant shipping. By 1944, most of these had been overcome, leading to the destruction of millions of tons of shipping and the establishment of an effective blockade of the Japanese home islands in 1945. The reason for this change in effectiveness during 1943 has never really been adequately explained. The accepted explanation is that three faults crippled US submarine performance in 1942: Faulty torpedoes, over cautious captains and a lack of submarines. When these were fixed, historians argue, submarine effectiveness greatly improved. However, this explanation does not seem complete. This thesis demonstrates that the adoption of an effective surface search radar in 1943 was the catalyst that fused all the more familiar corrections together, making the submarine fleet effective by late 1943.

### Fluckey, Eugene B. Thunder Below!: The USS Barb Revolutionizes Submarine Warfare in World War II. Urbana: University of Illinois Press, c1992. 444p.

Publlisher's synopsis: The thunderous roar of exploding depth charges was a familiar and comforting sound to the crew members of the USS Barb, who frequently found themselves somewhere between enemy fire and Davy Jones's locker.

Under the leadership of her fearless skipper, Captain Gene Fluckey, the Barb sank the greatest tonnage of any American sub in World War II. At the same time, the Barb did far more than merely sink ships-she changed forever the way submarines stalk and kill their prey.

This is a gripping adventure chock-full of "you-are-there" moments. Fluckey has drawn on logs, reports, letters, interviews, and a recently discovered illegal diary kept by one of his torpedomen. And in a fascinating twist, he uses archival documents from the Japanese Navy to give its version of events. The unique story of the Barb begins with its men, who had the confidence to become unbeatable. Each team helped develop innovative ideas, new tactics, and new strategies. All strove for personal excellence, and success became contagious. Instead of lying in wait under the waves, the USS Barb pursued enemy ships on the surface, attacking in the swift and precise style of torpedo boats. She was the first sub to use rocket missiles and to creep up on enemy convoys at night, joining the flank escort line from astern, darting in and out as she sank ships up the column.

Surface-cruising, diving only to escape, "Luckey Fluckey" relentlessly patrolled the Pacific, driving his boat and crew to their limits. There can be no greater contrast to modern warfare's long-distance, videogame style of battle than the exploits of the captain and crew of the USS Barb, where they sub, out of ammunition, actually rammed an enemy ship until it sank.

Thunder Below! is a first-rate, true-life, inspirational story of the courage and heroism of ordinary men under fire. -- <a href="http://www.press.uillinois.edu/books/catalog/23wqh3fb9780252019258.html">http://www.press.uillinois.edu/books/catalog/23wqh3fb9780252019258.html</a> NPS/DKL Location: GENERAL D783.5 .B36 F58 1992

Gannon, Robert. Hellions of the Deep: The Development of American Torpedoes in World War II. University Park, PA: Pennsylvania State University Press, 1996. 241p.

Publisher's synopsis: The stirring account of how the U.S. Navy's inferior torpedo program caught up to those of Japan and Germany and helped win World War II.

"The U.S. Navy's failure to provide its submarines with effective torpedoes was one of the great near disasters of the Second World War. Gannon offers us a finely crafted, thoroughly informative study of the failure and the successful technical effort to develop winning weapons for the fleet."—Harvey M. Sapolsky, Massachusetts Institute of Technology

Ultimately, World War II was the first war won by technology, but within only a few weeks after the war began, the U.S. Navy realized its torpedo program was a dismal failure. Submarine skippers reported that most of their torpedoes were either missing the targets or failing to explode if they did hit. The United States had to work fast if it expected to compete with the Japanese Long Lance, the biggest and fastest torpedo in the world, and Germany's electric and sonar models. Hellions of the Deep tells the dramatic story of how Navy planners threw aside the careful procedures of peacetime science and initiated "radical research": Gathering together the nation's best scientists and engineers in huge research centers and giving them freedom of experimentation to create sophisticated weaponry with a single goal—winning the war.

The largest center for torpedo work was a requisitioned gymnasium at Harvard University, where the most famous names in science worked with the best graduate students from all around the country at the business of war. They had to produce tangible weapons, to consider production and supply tactics, to take orders from the military, and, in many cases, also to teach the military how to use the weapons they developed. World War II grew into a chess match played by scientists and physicists, and it became the only war in history to be won by weapons invented during the conflict.

For this book, Robert Gannon conducted numerous interviews over a Twenty-year period with scientists, engineers, physicists, submarine skippers, and Navy bureaucrats, all involved in the development of the advanced weapons technology that won the war. While the search for new weapons was deadly serious, stretching imagination and resourcefulness to the limit each day, the need was obvious: American ships were being blown up daily just outside the Boston harbor. These oral histories reveal that, in retrospect, surprising even to those who went through it, the search for the "Hellions of the Deep" was, for many, the most exciting period of their lives.-- <a href="http://www.psupress.org/books/titles/0-271-01508-X.html">http://www.psupress.org/books/titles/0-271-01508-X.html</a> NPS/DKL Location: GENERAL V850 .G36 1996

Holwitt, Joel Ira. "Execute Against Japan": Freedom-of-the-Seas, the U.S. Navy, Fleet Submarines, and the U.S. Decision to Conduct Unrestricted Warfare, 1919-

**1941**. Columbus, OH: Ohio State University, 2005. 346p. Thesis (Ph. D.) -- Ohio State University, 2005.

Abstract: On 7 December 1941, the U.S. Navy began unrestricted warfare against Japan, attacking "noncombatant" Japanese merchant ships. The decision violated international law and directly cost the lives of thousands of civilian Japanese sailors as well as possibly hundreds of thousands of Japanese civilians on shore. The conditions for unrestricted warfare were created during the interwar period by impractical naval treaties that did not prohibit armed merchant ships that could easily sink surfaced submarines attempting to conduct search-and-seizure operations. Many U.S. naval officers understood the importance of commerce warfare and they suggested changes like prohibiting armed merchant ships in order to permit legitimate submarine warfare. However, the U.S. Navy's fleet submarine was designed not as a commerce raider but as a warship that could operate in support of the battle fleet in the Pacific Ocean. Fortunately, the abilities required for such a difficult mission gave U.S. submarines the versatility to shift from naval warfare to commerce warfare when the time came. The decision to conduct unrestricted warfare began to coalesce with the acceptance of Plan Dog as the United States' national military strategy in December 1940. By late September 1941, Chief of Naval Operations Admiral Harold R. Stark and his Director of War Plans, Rear Admiral Richmond K. Turner, had decided to commence unrestricted warfare almost immediately upon the outbreak of hostilities. They did so with no documented approval from their civilian chain-of-command and in contravention of repeated public statements by President Franklin D. Roosevelt, who urged defense of absolute freedom-of-the-seas. Stark, Turner, and other naval leaders had a number of reasons for conducting unrestricted warfare. Chief among these was a pragmatic strategic objective: To economically strangle Japan by completely cutting off the shipping lanes. The American strategy was also influenced by decades of naval training, as well as culturally inculcated Eurocentricism and racism. Although there were a number of ramifications of U.S. unrestricted warfare, the most important and lasting ramification was the end of previous paradigms of freedom-of-theseas and the introduction of a new and more pragmatic freedom-of-the-seas that classified merchant sailors as combatants and their cargoes as legitimate military targets. This study is the story of that transition.

Hunnicutt, Thomas G. The Operational Failure of U.S. Submarines at the Battle of Midway - and Implications for Today. Newport, RI: Naval War College, 1996. 31p. Abstract: U.S. submarine operational failure led to tactical insignificance at the Battle of Midway. This was a remarkable outcome since interwar U.S. policy, submarine design, and fleet exercises dictated fleet support by submarines. From today's view this failure is neither unique to a platform nor specific to an operation. It can and does cross all services. The operational failure at Midway resulted from the failure to abide by the operational art factors of synergy, simultaneity and depth, anticipation, and leverage. These were compounded by failure to provide adequate C31 system operational support. These failures were a consequence of the submarine force, and the Navy, not adequately addressing and training on operational art during the interwar years. Today, Navy doctrine and training still have not adequately addressed operational art though it is an essential part of joint warfare. The present use of exercises designed only to test and build tactical proficiency of air, land, or sea forces risk the same type of operational failure in future wars. Suggestions on developing operational art proficiency through innovation as a function of today's forces, budgets, and training technology are presented for consideration.

Orloff, Lars R. H. Analysis of Fratricide in United States Naval Surface and Submarine Forces in the Second World War. Monterey, CA: Naval Postgraduate School, 1999. (ADA374561). 84p.

Thesis (M.S. in Operations Research) -- Naval Postgraduate School, September 1999. Abstract: Friendly fire in naval warfare is a virtually unstudied phenomenon. In order to prepare future U.S. naval forces for the inevitable losses that will occur as a result of fratricide, we must look to the past to discover the role it has played in this century's wars at sea. This study examines the significance of friendly fire in U.S. naval surface and submarine operations during World war II and argues that the occurrence of self-inflicted casualties is a function primarily of the frequency and intensity of naval combat. Additionally, the causes of and factors contributing to naval fratricide are identified and discussed in detail using historical cases. The crucial result of this thesis is that even the most technologically advanced and highly trained force is subject to surprisingly high rates of friendly fire. Only when the vulnerability of every navy to fratricide is officially acknowledged can technology and doctrine be developed to reduce the risk of accidentally engaging one's own forces.

Watrous, Allen E. **Encounter!: The Timosa [Tinosa] in Combat**. 1st ed. Manchester,

MO: P.W. Wittmer, 1988 1v.

On 24 July, 1943, Tinosa encountered the cargo ship Tonan Maru no. 3 sailing from Palau to Truk. Tinosa found itself in a favorable firing position and fired on Tonan Maru no. 3, but was unable to do considerable damage to the vessel, even after firing all save one of the boat's torpedoes at the ship, due to the faulty design of the magnetic detonators of the Mark 14 Torpedo. Afterwards, the boat's skipper, Lieutenant Commander L. R. Daspit, ordered Tinosa to Pearl Harbor for resupply. While there, the incident was logged with Rear Admiral Charles Lockwood, commander of all American submarines in the Southwest Pacific. It was Tinosa's attack on Tonan Maru no. 3 that finally convinced the Navy that the torpedoes were unacceptably faulty, and changes were made to reduce the chance of misfires. -- <a href="http://en.wikipedia.org/wiki/USS Tinosa %28SS-283%29">http://en.wikipedia.org/wiki/USS Tinosa %28SS-283%29</a>

Wolborsky, Stephen L. Choke Hold: The Attack on Japanese Oil In World War II. Maxwell AFB, AL: Air University School Of Advanced Airpower Studies, 1994.

(ADA425684). 116p. Master's thesis, June 1994.

Abstract: After WWI, Army airmen like Billy Mitchell, in a bid for service independence, touted landbased air power's dominance over ships. Later, airmen at the Air Corps Tactical School developed a theory of independent air power application based on strategic bombing. These airmen persuaded Congress to purchase the tools to implement strategic bombing-fleets of heavy bombers-by citing these aircraft as optimum for defending the US coasts against enemy ships. However, when the opportunity to test the efficacy of bombers against ships presented itself in WWII's Pacific Theater, Army Air Force (AAF) leaders proved reluctant to throw their full support behind such an effort. A key aspect of the US Navy's Pacific strategy was an intense campaign against Japanese commercial shipping. This blockade, primarily targeting oil after late 1943, was spearheaded by US Navy submarines. A blockade proved the most effective means of attacking Japan's oil, although AAF leaders preferred strategic bombing of the Japanese home islands, including oil facilities, over blockade support. This thesis analyzes the campaign against Japanese oil to explore why an oil blockade was effective against Japan and, more important, to examine how service parochialism distorted the development of a rational military strategy in the Pacific Theater. The US will not likely enjoy such luxury again. Hence, this study's implications and recommendation concern the future of the Air Force's maritime role. After WWII, the USAF let their maritime capability atrophy. The USAF and US Navy, fearing an emergent Soviet naval threat, revitalized USAF maritime capabilities in the 70s and 80s. However, with the Cold War's end, the emergence of "hyperwar" airpower theory, and slashed defense budgets, the USAF now finds itself with little maritime capability once more. While this may be an appropriate course for today, tomorrow's strategic environment may require the USAF to maintain a robust, fast response maritime capability. Buckley, Patrick E. **The Submarine Threat to Naval Operations** ... **From the Sea**. Newport, RI: Naval War College, 1995. (ADA293726). 19p.

Abstract: The virtually unknown operations of the Argentinian Type-209 diesel- electric submarine ARA San Luis during the Falkland Islands war highlights the significance of a littoral submarine threat to naval operations. As the U.S. Navy focuses on future participation in joint operations in the littoral environment, operational planners must carefully assess the risk posed by a capable regional submarine force. Third World submarine force capabilities are improving significantly as new submarine technology and advanced weapons systems are incorporated into many Third World submarine forces. The potential impact that a future adversary's submarine operations could have on currently envisioned naval operations must be carefully evaluated. In preparing to counter a potential littoral submarine threat, the U.S. Navy should: (1) closely monitor and evaluate Third World submarine proliferation issues and current capabilities, (2) emphasize shallow water ASW tactical development and training, (3) develop technologies to exploit the shallow water environment, and (4) be prepared to incorporate an effective

ASW strategy into future littoral operations.

Cole, Christopher J. P. (Christopher John Paul). **The Near Boiling Reactor Conceptual Design of a Small Inherently Safe Nuclear Reactor to Extend the Operational Capability of the Victoria Class Submarine**. Kingston, Ontario: Royal Military College of Canada. 334p.

Thesis (Ph.D.)--Royal Military College of Canada, 2005.

Abstract: Nuclear power has several unique advantages over other air independent energy sources for nuclear combat submarines. An inherently safe, small nuclear reactor, capable of supply the hotel load of the Victoria Class submarines, has been conceptually developed. The reactor is designed to complement the existing diesel electric power generation plant presently onboard the submarine. The reactor, rated at greater than 1 MW thermal, will supply electricity to the submarine's batteries through an organic Rankine cycle energy conversion plant at 200 kW. This load will increase the operational envelope of the submarine by providing up to 28 continuous days submerged, allowing for an enhanced indiscretion ratio (ratio of time spent on the surface versus time submerged) and a limited under ice capability. The power plant can be fitted into the existing submarine by inserting a 6 m hull plug. With its simplistic design and inherent safety features, the reactor plant will require a minimal addition to the crew.

Preston, Antony. The Royal Navy Submarine Service: A Centennial History.

London: Conway Maritime, 2001. 192p.

Summary: In honor of the one hundredth anniversary of the Royal Naval Submarine Service, renowned naval historian Antony Preston has written a day-by-day account of the history and achievements of the Royal Navy's submarine fleet. From the Controversial launch of the Holland One in 1901 through the modern nuclear submarine of today, Preston celebrates the heroic feats and everyday life above and under the sea. His chronological analysis is rich in such details as the award of nine Victoria Crosses, the use of caged mice to detect exhaust gases in early submarines, and the fact that during the peak of the Battle of the Atlantic the chances of a submarine returning from patrol were only 65 percent. Published in association with the Royal Navy Submarine Museum in Gosport, England, this volume is a noteworthy centennial commemorative of Great Britain's silent service.

Schank, John F. (John Frederic), Raj Raman et al. **The United Kingdom's Nuclear Submarine Industrial Base**. Santa Monica, CA: RAND, 2005-. (MG-326/1; MG-326/3). 3v.

Contents: V. 1. Sustaining design and production resources; John F. Schank, Jessie Riposo, J.L. Birkler, James Chiesa. v. 3. Options for initial fuelling; Raj Raman, Robert Murphy, Laurence Smallman, John F. Schank, J.L. Birkler, James Chiesa.

Abstract: V. 1: The complexity and uniqueness of a nuclear submarine require special skills, facilities, and oversight not supported by other shipbuilding programmes. In fact, a single shipyard, Barrow-in-Furness, designs and builds the United Kingdom's nuclear submarines, and many of the vendors that support submarine construction are sole-source providers. With such specialisation, in addition to a limited design and production demand, there is concern about whether the submarine industrial base can maintain its viability into the future. This report seeks to determine what actions should be taken to maintain nuclear submarine design capabilities and how nuclear submarine production should be scheduled for efficient use of the industrial base. Based on their findings, the authors recommend that the Ministry of Defence determine the scheduling of construction for future submarine contracts as soon as possible; plan to retain a design core of designers, engineers, and draughtsmen during periods of reduced demand; and take steps towards collaboration with other countries. v. 3: Currently in the United Kingdom, BAE Systems' Barrow-in-Furness shipyard builds and fuels new submarines, while Devonport Management Limited (DML) refuels existing submarines-once their initial fuel load is depleted-and defuels them at retirement. Cost increases in maintaining regulating licenses at both facilities have led the UK Ministry of Defence (MOD) to consider the possibility of consolidating its nuclear fuel-handling capabilities at the existing refuelling site at DML. Consolidation would, however, have complex implications for cost and scheduling of the Astute programme, which is already under way. The authors of this report compare various aspects of the two shipyards, including facility conflicts, workload, nuclear regulation, and contractual issues, in regard to three cases hypothesized for distributing the share of Astute's fuelling between the yards. As a result of this analysis, it is recommended that the MOD not consider refuelling the Astute first of class at DML. The authors also look briefly at BAE Systems' recent proposal to fuel the submarines at Barrow in a way that reduces the risks of nuclear accidents and recommend that the MOD take immediate action in reviewing this proposal. They also suggest that the MOD promptly examine the transportation challenges associated with moving the Astute submarines from the Barrow docks to the

Compton-Hall, Richard. **Submarines and the War at Sea, 1914-18**. Penzance, Cornwall: Periscope Pub, 2004. 345p.

Synopsis: This book is a landmark history of submarine warfare during World War One. An-ex submariner, the author captures the very essence of what is what like to operate in these new and lethal craft. This periscope eye view introduces the reader to the great submarine commanders, the tactics they employed and the often-futile attempts made to sink them.

Blamey, Joel C. E. A Submariner's Story: The Memoirs of a Submarine Engineer in Peace and in War. Penzance, Cornwall: Periscope Publishing, 2002. 278p.

Synopsis: "Joe's length of service in submarines and the breadth of his experience puts him in a special and rare category, and the account that he has written is a unique record, in peace and war, of submarine life...." Vice Admiral Sir Ian McIntosh, KBE, DSO, MBE, DSC. After six years in the Royal Navy, Joel Blamey was conscripted into Britain's submarine service in 1926, aged 22. He went on to serve an unprecedented Twenty-eight years as a submariner, surviving both peacetime accidents and World War Two. At the age of Fifty, Joe returned to general service. He served on several submarines, surviving many hair-raising accidents, such as hitting an underwater pinnacle in Sidon and a collision in Seahorse, from which he was transferred before it was lost to enemy action. While Joel served in Porpoise, it supplied Malta with fuel and ammunition and sank several supply ships. The captured U570 was shortly under his jurisdiction. He also later survived almost certain destruction in Strongbow. In all Joel survived more than two hundred depth charges.

Mars, Alastair. **Unbroken, the Story of a Submarine**. Barnsley, South Yorkshire: Pen & Sword 2006. (Pen & Sword Military classics; no. 67). 223p.

Originally published: London: Muller, 1953; London: Pan Books, 1954; London: Corgi, 1975.

Sysnopsis: During the bleak, heartbreaking days of early 1942, when beleaguered Malta was reeling under bombardment and blockade and Rommel was making his last desperate thrust towards Egypt, only one British submarine was operating in the western Mediterranean - the tiny, 600-ton Unbroken. In twelve months in the Med, Unbroken sank over 30,000 tons of enemy shipping, took part in four secret operations, three successful gun actions, and survived a total of over 400 depth charges, as well as innumerable air and surface attacks. This account of the 26-year-old Alastair Mars' command of this outstandingly successful submarine embraces her construction, sea trials and voyage to Gibraltar preparatory to her vital role in the Mediterranean. Once there, she was responsible for the destruction of two Italian cruisers and played a pivotal part in Operation Pedestal, the convoy that saved Malta from surrender. Alastair Mars writes simply and without pretension, and his words evoke the claustrophobic yet heroic world of the Submariner. -- P&S

Partial contents: 14. Malta Submariner Supreme Malcolm Wanklyn

On 24 May 1941 in the Mediterranean, south of Sicily, Lieutenant-Commander Wanklyn, commanding HM Submarine Upholder on her seventh patrol, torpedoed an Italian troopship (the 18,000 ton former liner Conte Rosso) which was with a strongly protected convoy. As the submarine's listening equipment was broken the approach to the attack was made entirely using the periscope without going deep and approaching the convoy by navigating towards the sounds of the propellers.—http://en.wikipedia.org/wiki/Malcolm David Wanklyn

22. Bomb-Disposal On Submarine Peter Roberts, Thomas Gould

On 16 February 1942 north of Crete, in the Mediterranean, HM Submarine Thrasher, after attacking and sinking a supply ship, was itself attacked, and later, after surfacing, two unexploded bombs were discovered in the gun-casing. The First lieutenant (Peter Scawen Watkinson Roberts) and Petty Officer Gould removed the first one without too much difficulty, but the second was lying in a very confined space and they had to approach it lying full length. Petty Officer Gould then lay on his back with the bomb in his arms while the lieutenant dragged him along by the shoulders. It was 40 minutes before they got the bomb clear and dropped it over the side. -- <a href="http://en.wikipedia.org/wiki/Thomas\_William\_Gould">http://en.wikipedia.org/wiki/Thomas\_William\_Gould</a> 23. Submarine Attack In Corfu Harbour Anthony Miers

On 4 March 1942 in Corfu Harbour, north-western Greece, Commander Miers, commanding HM Submarine Torbay, having followed an enemy convoy into the harbour the previous day, fired torpedoes at a destroyer and two 5,000-ton transports, scoring hits on the two supply ships, which almost certainly sank. -- <a href="http://en.wikipedia.org/wiki/Anthony Miers">http://en.wikipedia.org/wiki/Anthony Miers</a>

37. HM Submarine Turbulent John Linton

From the outbreak of the war in 1939 to May 1943 which was the month of HMS Turbulent's last patrol in the Mediterranean, Commander Linton was responsible for sinking approximately 100,000 tons of enemy shipping, including a cruiser, a destroyer, a U-Boat and 28 other ships. In addition Turbulent destroyed three trains by gun fire. In his last year Commander Linton spent 254 days at sea, submerged for nearly half the time, his ship was hunted 13 times and had 250 depth charges aimed at her. -- <a href="http://en.wikipedia.org/wiki/John Wallace Linton">http://en.wikipedia.org/wiki/John Wallace Linton</a>

Wingate, John. The Fighting Tenth: The Tenth Submarine Flotilla and the Siege of Malta. Penzance, Cornwall: Periscope Publishing Ltd., 2003. 384p.

Synopsis: This is the remarkable story of the Tenth Submarine Flotilla and its part in the Second World War in the Mediterranean. In the words of its second commander, Captain George Phillips, between 1940 and 1944, the 'Tenth' "fought the most concentrated Submarine battle in history, from the beleaguered island of Malta."

# Karau, Mark D. "Lost Opportunities": The Marinekorps Flandern and the German War Effort 1914-1918. Florida State University, 2000. 600 l.

Thesis (Ph.D.)--Florida State University, 2000.

Abstract: In August 1914 Admiral Alfred von Tirpitz, with the assent of the German army, sponsored the creation of a new naval command, the MarineDivision Flandern. This unit was intended as a garrison for the Belgian and French coastlines and was to eventually command German naval operations against Great Britain in the English Channel and the southern North Sea. The stalemate that settled in on the western front in November 1914 left the MarineDivision, by this point it had been expanded into the MarineKorps Flandern, in control of the right flank of the German army on the western front. From that point until the end of the war the MarineKorps was involved in both the land and naval campaigns in the west. The primary mission of the MarineKorps was to conduct naval "Guerilla" operations against British shipping. The Germans called this strategy "kleinkrieg" and its instruments were torpedo craft; submarines and torpedo-boats.

Adviser: Paul Halpern.

Summary: On Sept. 17, 1940, at a little after ten at night, a German submarine torpedoed the passenger liner S.S. City of Benares in the North Atlantic. There were 406 people on board, including 90 children headed for peaceful Canada, their parents having elected to send them away from Great Britain to escape the ravages of World War II. The Benares sank in half an hour, in a gale that sent several of her lifeboats pitching into the frigid sea, more than three hundred miles from the nearest rescue vessel. Not one of the survivors had any reasonable hope of rescue. The initial "miracle" involves one British destroyer's race to the scene; the second is the story of Lifeboat 12, missed by the destroyer, 46 people jammed for eight days in a craft built for 30. Based on first hand accounts from the child survivors and other passengers.—From publisher description.

Abstract: This study is based on extensive research in the official records of the U.S. Shipping Board and Navy, and in the private papers of leading government officials--including the first two heads of the Shipping Board (William Denman and Edward N. Hurley) and the Secretary of the Navy (Josephus Daniels). The dissertation also makes extensive use of the published papers of President Woodrow Wilson. The narrative reveals the confusion and disputes that hampered the initial efforts of the Wilson Administration to meet the merchant shipping crisis caused by U-Boat attacks. Special emphasis is placed on the impracticality of the Shipping Board's plans for building a large fleet of wooden steamers, the personality conflicts that delayed the implementation of a logical merchant ship construction program

for almost half a year, and the indecisiveness of President Wilson in dealing with these challenges. Late in July 1917 Wilson appointed new officials to head the merchant shipbuilding effort. The dissertation describes the actions these men took to speed both wood and steel construction, to commandeer all partially completed steel hulls, and to provide for the "mass production" of commercial tonnage in "fabricated shipyards." The study also examines the Navy's wartime shipbuilding program and shows that Secretary Daniel's delay in proceeding with a massive destroyer construction effort was prudent in light of the conflicting advice he was receiving from senior naval officers. Once Daniels decided to focus on the production of anti-submarine craft, the Navy developed a logical building program, although the Secretary's cautiousness and political sensitivity did cause some additional delay in the implementation of construction plans. The dissertation describes, as well, the labor situation in American shipyards during 1917 and provides a thorough explanation of the behind-the-scenes disputes involved in the development of the Shipbuilding Labor Adjustment Board. It fully discusses the attitudes and actions of shipyard owners, shipworkers, and labor unions during the rapid expansion of the shipbuilding industry. The basic theme is that by December 1917 the Wilson Administration had formulated a comprehensive and rational policy for the construction of merchant and naval tonnage--and had begun work on an ambitious shipbuilding program.

Andrade, Allan. **S.S. Leopoldville Disaster, December 24, 1944**. 1st ed. New York: Tern Book Co., 1997. 268p.

On Christmas Eve, 1944 U-486 torpedoed the SS Leopoldville in the English Channel just 5 miles from the port of Cherbourg, France. The troopship was transporting 2235 American soldiers from regiments of the 66th Infantry Division. The ship finally sank 2 1/2 hours later. Everything that could went wrong; calls for help were mishandled, rescue craft were slow to the scene and the weather was unfavorable. 763 American soldiers died that night, making this the worst loss an American Infantry Division suffered from a U-Boat attack during the war. The Allied authorities were embarrassed by the incident and decided to bury the case. Many loved ones were told the men were missing in action although they were already dead by then, later to be classified as killed in action. It was not until 1996 that the files were opened to the public. -- <a href="http://www.uboat.net/boats/u486.htm">http://www.uboat.net/boats/u486.htm</a>

Bradham, Randolph. **Hitler's U-Boat Fortresses**. Westport, CT: Praeger, 2003. 196p. The French naval bases at St. Nazaire and Lorient, occupied by the Germans in June 1940, quickly became the homes of massive U-Boat fortresses--nearly indestructible submarine pens, built by mostly slave labor. The Royal Air Force began an all-out bombardment of the two ports. Despite their extensive

efforts--and those of the Americans who joined them in 1942--the fortresses would survive, surrounded by the decimated French towns and countryside. This is the story of what was, perhaps, the longest ongoing battle in Europe during the Second World War, seen through the eyes of someone who experienced much of it firsthand. <a href="http://www.greenwood.com/books/printFlyer.aspx?sku=C8133">http://www.greenwood.com/books/printFlyer.aspx?sku=C8133</a> NPS/DKL Location: GENERAL D781.B68 2003

Cosgrove, Brian A. **From the Sea Versus The U-Boat**. Newport, RI: Naval War College Department of Operations. (ADA279488). 1994. 36p.

Abstract: This paper will analyze World War II U-Boat operations against Allied sealift with focus on the period from May 1943 to the end of the War. It will show the relevance of the operational and strategic decisions of this historical campaign to the challenges of today's potential regional conflicts. In 1943, Allied technological innovations and convoy employment precipitated a decline in U-Boat successes and changes to the final portion of the U-Boat campaign produced fewer U-Boat victories, yet remained an effective operational scheme. It is relevant that the inability of Allied forces to consistently thwart successful U-Boat attacks, along their own coastlines, emphasizes a weakness in our Naval Strategy Today, insufficient and usually lightly protected sealift. The Navy and Marine Corps joint White Paper, From the Sea, articulates Navy support of the National Security and National Military Strategies of the United States with a commitment to concentrate more on capabilities required in the complex operating environment of the 'littoral' or coastlines of the earth.

Davis, Donald L. A New Look at the Battle of the Atlantic. Newport, RI: Naval War

College, 1993. (ADA266796). 37p.

Abstract: The paper examines the Battle of the Atlantic from an operational rather than the usual strategic perspective. The impressive achievements of the small force of German submarines against such overwhelming odds was a direct result of Admiral Karl Doenitz's skillful practice of the Operational Art. An examination of his attributes and methods may provide useful guidance for the commander of the small, austere force of the future. Superior numbers or technology does not guarantee for military success. Sound doctrine, vision, operational excellence, initiative and audacity, on the other hand, can produce Substantial advantages. The paper also cautions that the dramatic Allied reconstitution which did so much to turn the tide in the Battle of the Atlantic, is unlikely to reoccur and that the large, costly multi-purpose weapons platforms of today may be as ineffective in fighting the low intensity naval battle on the littoral as the large capital ships were in the Battle of the Atlantic.

Felton, Mark. Yanagi: The Underwater Trade Between Germany and Japan, 1942-45. Barnsley, South Yorkshire: Pen & Sword Maritime, 2005. 256p.

Synopsis: This fascinating book examines the exchange of information and goods by long range submarine voyages between Germany and Japan during the second half of WW2. Known as 'Yanagi' this trade was a high priority to both Axis partners. As the Allies' grip on control of the oceans and air tightened, it became necessary to rely on submarines. This posed an increasingly heavy but necessary burden on tight resources. Thanks to the Author's research, here is the first full account of these operations with descriptions of individual missions be they by German or Japanese submarines and crews. Even by modern standards these were of impressive duration and demanded the highest standards of seamanship and discipline.

Filipowski, Sean R. **Operation PAUKENSCHLAG: An Operational Analysis**. Newport, RI: Naval War College, 1994. (ADA279625). 44p.

Abstract: Operation Paukenschlaq, a German U-Boat operation against Allied shipping along the East Coast of the United States and Canada in early 1942, is analyzed from the perspective of the operational level of war. The plan and its execution are examined to provide conclusions and lessons learned for future operational planning considerations. Chapter One provides a short historical summary of the German U-Boat Force and the Battle of the Atlantic. Chapter Two analyzes the operational design of Paukenschlaq. Chapter Three discusses the execution of the operation. Finally, Chapter Four offers information from the operation which could be useful for future commanders. This analysis of Operation Paukenschlag shows that an operation conceived, planned, and executed in as short as time as Paukenschlaq was, can be successful, provided several critical factors prevail.

Review: The first comprehensive treatment of World War II S-boats to be published in English, this book provides operational details of the German schnellboot, or motor torpedo boat, in all theaters where they were deployed During the war. With the help of a multitude of maps, photographs, and drawings, Frank chronicles every incident that involved the 53-knot fast attack craft. The author examines the S-boat's effectiveness as an integral part of the German military objectives of the time. This study of the schnellboot's successes and failures offers a first-class account of the surface warship that carried the Offensive to the Enemy longer than any other. -- www.amazon.com

Grier, Howard D. **Hitler's Baltic Strategy, 1944-1945**. University of North Carolina: Chapel Hill, NC, 1991. 641p.

Thesis (Ph. D.)--University of North Carolina at Chapel Hill, 1991.

Abstract: Hitler had military, diplomatic and economic reasons for stubbornly clinging to the Baltic coast. Control of the Baltic was essential to guarantee imports of Swedish iron ore and Finnish nickel, both vital to Germany's war economy. Hitler also required domination of the Baltic to maintain the sea route to Finland and ensure the Finns' continued participation in the war. Furthermore, German military leaders, especially in the Navy, regarded control of the Baltic as an effective means to ensure Swedish neutrality and to maintain communications with German troops in Norway. Finally, the German Navy considered domination of the eastern Baltic absolutely essential to provide a testing and training area for new types of technologically-advanced submarines, with which Hitler and Admiral Karl Dönitz planned to turn the tide in the war at sea. As a result of Dönitz's devotion to Hitler and his repeated promises never to give up the fight, Hitler selected Dönitz as his successor.

Grooms, Bruce E. **Critical German Submarine Operations Versus Allied Convoys During March 1943: An Operational Analysis**. Newport, RI: Naval War College, 1993. (ADA264185). 46p.

Abstract: German submarine operations against Allied convoys, during March 1943 is critically analyzed from an operational perspective. The theater commander's operational scheme is dissected for the purpose of identifying lessons which can be applied to the planning and execution of today's theater operations. A brief historical account of the early phases of the war and the events and decisions which preceded the critical convoy battles will be followed by an analysis of the operational scheme employed by Admiral Doenitz. German victory during the spring offensive clearly demonstrated numerous operational successes, a reasonably well conceived operational plan, and proof positive of the potential for a larger scale victory, yet history recorded Germany's ultimate defeat in the Battle of the Atlantic. This analysis identified three significant flaws which led to the German demise; first, strategic guidance and operational means were inadequately reconciled.

Hasslinger, Karl M. **The U-Boat War in the Caribbean: Opportunities Lost**. Newport, RI: Naval War College, 1995. (ADA297938). 22p.

Abstract: This paper reviews the specific segments of the Battle of the Atlantic that were conducted in and around the Caribbean Sea. The background information explores Germany's political goals and policies in the years prior to the Second World War, and the military situation that resulted. The Battle of the Atlantic is reviewed to determine the reasons for sending U-Boats to the Caribbean theater, which was at the effective limit of their operational endurance. Further, the operational art aspects of the use of

U-Boats in the Caribbean theater and the results they achieved are examined in detail. The Subsequent withdrawal of U-Boats from the Caribbean after only eleven months in the theater is specifically evaluated in light of the personal leadership and operational art abilities of the Command in Chief of the U-Boat Arm, Admiral Karl Doenitz. The paper's conclusion is an evaluation of the title question. Despite the acknowledged tactical success of sinking 400 merchant ships, with the loss of only seventeen U-Boats, the author concluded that the Germans did not exploit all available opportunities that may have allowed them to achieve an even greater operational success in the prosecution of the Battle of the Atlantic. King, Joyce E. **Admiral Karl Doenitz: A Legacy of Leadership**. Newport, RI: Naval War College, 1995. (ADA297842). 23p.

Abstract: A study of the operational leadership exhibited by ADM Karl Doenitz, Commander in Chief, Submarines, German Navy, during World War II. An examination of his planning, preparation and conduct of the U-Boat war in the Atlantic Theater of Operations against the British, and later, the Americans. His objective of sinking the merchant fleet of the British nearly brought Britain to defeat. He displayed great talent in his dedicated fight for resources, innovative tactics of using wolfpacks, his intensive training program and unique command and control system, of these innovations enabled him to maximize use of his limited resources in the optimum way possible to achieve the strategic and operational objectives in the theater. He was also a master of operational maneuver and shifted his focus and his assets within his theater to take advantage of Allied vulnerabilities. His personal character traits served him well as he inspired trust and unparalleled loyalty from his subordinates. His operational thinking and practice of operational art throughout this campaign remain a relevant model of operational leadership.

Kosich, Francis X. **Strategic Implications of the Battle of the Atlantic**. Carlisle Barracks, PA: Army War College, 2000. (ADA378290). 26p.

Abstract: The battle of the Atlantic is perhaps the most pivotal battle of the Second World War. In it, Germany's use of asymmetric warfare, mines and submarines, once again threatened Britain's economic survival. Although Hitler correctly identified Britain's economy as its center of gravity and had success in attacking it through 1943, he failed to demonstrate the strategic vision necessary to achieve a decisive victory in the Atlantic. Hitler failed because he did not grasp the impact that submarine warfare had in WWII, he wanted a quick, decisive victory like Poland, and he underestimated both the will of the British leadership and the industrial capacity of the United States. Allied success in this campaign enabled the successful prosecution of the war on the European continent through the sallyport of England. From an Allied perspective the Atlantic became the proving ground for the advancement of the carrier-based navy and emerging technology, gave Roosevelt a means with which to invigorate an isolationist society, and gave Britain the time she needed to develop and improve measures to fight the asymmetric threat confronting them. This study looks at the battle of the Atlantic in closer detail while examining Hitler's overarching strategic objectives and those in this decisive theater in an attempt to explain why Hitler allowed it to simply run its course.

Lundeberg, Philip Karl. American Anti-Submarine Operations in the Atlantic, May

**1943-May 1945**. Cambridge, MA: Harvard University, 1954. 2v. Thesis (Ph.D.) -- Harvard University, 1954.

Abstract: This detailed operational history, based on action reports, ship logs, command summaries, survivors' accounts, after-action analyses and postwar interviews, delineates the course of American antisubmarine operations in the Atlantic from the spring of 1943, when Allied air and surface forces first inflicted heavy losses on the U-Waffe. Thanks to mounting aircraft and escort vessel production in the United States, Anglo-American anti-submarine groups then moved to the offensive, initially in support of North Atlantic convoys and against U-Boats transiting the Bay of Biscay. Prosecution of American efforts was facilitated by Admiral Ernest J. King's establishment of the Tenth Fleet anti-submarine command at COMINCH headquarters in Washington.

Paterson, Lawrence. **Hitler's Grey Wolves: U-Boats in the Indian Ocean**. London: Greenhill; Mechanicsburg, PA: Stackpole Books, 2004. 287p.

Synopsis: Next to nothing has been written about the U-Boat war in the Indian Ocean. This is the story of a forgotten campaign. The battle began in August 1943, when a German submarine arrived in the Malaysian harbour of Georgetown. In total, nearly fourty U-Boats were assigned to penetrate the Indian Ocean, serving alongside troops of the occupying Imperial Japanese forces. The Japanese allowed U-Boats to use Malaysia as an operational station. From that base, they mixed with Japanese forces on a hitherto unseen scale: A move which spread the U-Boat war throughout the vast Indian Ocean and into the Pacific. Success in this theatre of war held a real chance to swing the tide of battle in North Africa in favour of Rommel, but the Germans essentially did too little too late. The joint action also gave U-Boats the opportunity to penetrate the Pacific Ocean for the first time, attacking shipping off the Australian coast and hunting off New Zealand. Plans were even afoot for an assault on American supply lines. The cooperation' also brought into stark relief the fundamental differences of German and Japanese war aims. After the crews of Italian supply submarines joined the Germans and Japanese, relations between the fighting men of the three main Axis powers were often brutal and almost constantly turbulent. Stories of

U-Boats laden with gold and treasure stem almost exlusively from boats destined to and returning from Japanese-controlled Malaysia, laden with material exchanged between the two major partners of the Triple Axis Alliance. -- <a href="http://www.loc.gov/catdir/enhancements/fy0662/2004276198-d.html">http://www.loc.gov/catdir/enhancements/fy0662/2004276198-d.html</a>

Roberts, Raymond J. The Leopoldville Trilogy: Survivors of the Leopoldville Disaster; Sequel to Survivors of the Leopoldville Disaster; More Tales of the Leopoldville Disaster. United States: Raymond J. Roberts, 2001. 148, 103, 50p. Cover title./ Includes reprints of two previously published titles: Survivors of the Leopoldville Disaster, 1997; and Sequel to survivors of the Leopoldville Disaster, 1999. On Christmas Eve, 1944 U-486 torpedoed the SS Leopoldville in the English Channel just 5 miles from the port of Cherbourg, France. The troopship was transporting 2235 American soldiers from regiments of the 66th Infantry Division. The ship finally sank 2 1/2 hours later. Everything that could went wrong; calls for help were mishandled, rescue craft were slow to the scene and the weather was unfavorable. 763 American soldiers died that night, making this the worst loss an American Infantry Division suffered from a U-Boat attack during the war. The Allied authorities were embarrassed by the incident and decided to bury the case. Many loved ones were told the men were missing in action although they were already dead by then, later to be classified as killed in action. It was not until 1996 that the files were opened to the public. -- http://www.uboat.net/boats/u486.htm

Russell, Jerry C. **Ultra and the Campaign Against the U-Boats in World War II**. Carlisle Barracks, PA: Army War College, 1980. (ADA089275). 45p.

Abstract: The problem addressed is the extent to which the United States Navy used Ultra, or Special Intelligence, in the campaign against the German U-Boats. Information was gathered through published and unpublished sources. Through a chronological approach, United States Navy involvement is traced from entry into the war until its conclusion. Many factors are involved in the final outcome of the war and Ultra is only one. The Battle of the Atlantic was long and gruesome rather than short and spectacular. The United States Navy used Ultra along with technology, tactics, brilliant leadership and courageous men at sea to win the Battle of the Atlantic in World War II. The lessons for the future are clear. If the United States intends to oppose the Soviet submarine force at sea anywhere in the world, then we must maintain the lead in intelligence, tactics and technology. Further, and most importantly, we must strive to regain superiority of forces in those ocean areas where our interests are at stake.

Note: Memoirs, 1942-1945, of the former commanding officer of the Italian submarine Barbarigo which sank two U.S. battleships in 1942.

Comp note: "Only after the war, it would be discovered that the mysterious battleship was instead the cruiser Milwaukee. Certainly, the attack took place, but the Subsequent sinking 'witnessed' by the crew must have been one of those rare cases of collective illusion." The second battleship, a "Mississippi class", was the British corvette Petunia, untouched because the draught was mistakenly computed. Commander Grossi's promotion and M.O.V.M. (Gold Medal for Bravery) were eventually revoked.—http://www.regiamarina.net/Subs/submarines/barbarigo/barbarigo\_us.htm

Felton, Mark. Yanagi: The Underwater Trade Between Germany and Japan, 1942-45. Barnsley, South Yorkshire: Pen & Sword Maritime, 2005. 256p.

Synopsis: This fascinating book examines the exchange of information and goods by long range submarine voyages between Germany and Japan during the second half of WW2. Known as 'Yanagi' this trade was a high priority to both Axis partners. As the Allies' grip on control of the oceans and air tightened, it became necessary to rely on submarines. This posed an increasingly heavy but necessary burden on tight resources. Thanks to the Author's research, here is the first full account of these operations with descriptions of individual missions be they by German or Japanese submarines and crews. Even by modern standards these were of impressive duration and demanded the highest standards of seamanship and discipline.

Gibson, Walter. **The Boat**. London: W.H. Allen, 1974. (Star Books). 96p. In February 1942 British Malaya and Singapore had surrendered to the Japanese Army. Over 100,000 British and Empire military personnel had become prisoners as well as thousands of civilians. A few thousand more were escaping to the nearby Netherlands East Indies and from there to Australia, Ceylon or India in any ship that could be found. Many of these ships were lost to Japanese attacks amongst the islands scattered around Sumatra and Java whilst attempting to escape. The Rooseboom under Captain M.C.A.Boon, was taking around 500 passengers (mainly British military personnel and civilians) from Padang to Colombo in Ceylon. On the 1st March 1942 at 11.35pm the Rooseboom was steaming west of Sumatra when it was spotted by the Japanese Submarine I-59 and torpedoed. It capsized and sank rapidly leaving one life boat (designed to hold 28) and 135 people in the water. 80 people were in the lifeboat the rest clung to flotsam or floated in the sea.— <a href="http://en.wikipedia.org/wiki/Rooseboom">http://en.wikipedia.org/wiki/Rooseboom</a> Originally published: London: W.H. In late 1994, a salvage operation named Project Orca was launched to try and locate the I-52 and retrieve her valuable cargo of gold. Despite the commissioning of the Russian research ship Akademik Keldysh for the project, and an extensive search, by March 1995 the search had proved to be a failure (Hamilton-Paterson 1998). Very shortly afterwards, however, in May 1995 Paul Tidwell located the wreck 5,240 meters deep, mostly upright. Her conning tower is intact and her hull number is still visible. http://en.wikipedia.org/wiki/Japanese\_submarine\_I-52

Horn, Alton Stephenson. The Story of Operation K and the Second Attack on Pearl Harbor. Ashville, NC: University of North Carolina, 2000. 194p.

Thesis (Master of Liberal Arts) -- University of North Carolina, 2000.

Abstract: "Operation K" was a plan to use flying boats operating from bases in the Marshall Islands for armed reconnaissance raids on the Hawaiian bases. These aircraft would be refueled by submarines at an atoll west of Oahu to extend their range for the attacks. Only one such attack took place on the night of March 3-4, 1942. Because of cloud cover, the targets were not visible and the Japanese bombers did no real damage. Brilliant intelligence work by U.S. intelligence officers and cryptanalysists thwarted the planned follow-on raids. Denied the knowledge of the location of American aircraft carriers, the Japanese suffered a disaster in the Battle of Midway, the crucial "turning point" in the Pacific War.

### **KOREAN**

Lodmell, Joseph C. The Impact of the North Korean Submarine Force at the Operational Level of War. Newport, RI: Naval War College, 1996. (ADA312031). 26p.

Report Date: 14 JUN 1996.

Abstract: The threat of the North Korean submarine force, with its obsolete submarines, may easily be dismissed by a capable navy. For the Joint Task Force (JTF) Commander in a major regional conflict (MRC) involving North Korea, however, this submarine force could affect many operational level decisions. The Falkland Islands war showed that a Small, tactically ineffective submarine force could impact the operational commander's decisions just by being at sea and unlocated. In a Korean MRC, the North Koreans could do the same, except the North Korean submarine force is several times larger. From open source literature on U.S. Antisubmarine Warfare (ASW) methods and littoral ASW problems, the North Koreans can learn how to best keep the submarines unlocated. Using these lessons, the North Koreans can develop a submarine employment plan that can impact the JTF Commander's decisions involving operational design and operational function, such as movement, maneuver, protection, and logistics. In a worst case, the North Korean submarine threat could make all maritime operations so risky as to virtually suspend use of the seas in the Korean region until the threat is eliminated. The only effective way to counter this threat is to neutralize the submarines before they leave port. Failing in this, it becomes a time consuming and asset intensive operation to regain control of the sea or to provide protection for those ships in threatened areas.

Thesis (M.A. in National Securty Affairs) -- Naval Postgraduate School, 2000.

Abstract: This thesis examines the 1986 Chernobyl accident and its consequences as the basis for an analysis of the possible dimensions of the nuclear catastrophes that could occur during the dismantlement process of Russia's Northern Fleet nuclear submarines. It assesses the potential demographic, ecological, and economic consequences of a nuclear accident. Given the systemic problems at Russian nuclear facilities, the risks of a catastrophic event in the poorly maintained and operated submarine yards housing over 100 operating nuclear reactors are significant. A major nuclear accident at these facilities could cause damage to the environment of global proportions. This thesis considers the potential environmental impact of a nuclear accident during the nuclear submarine dismantlement process and discusses the environmental damage that has already occurred as a result of Soviet and Russian practices. This thesis also evaluates the risk of diversion of nuclear materials to proliferators or terrorists. Lastly, this thesis examines how the United States, the European Union, and perhaps others could assist Russia in reducing the environmental and proliferation risks in this dismantlement process.

# "A Project of Air Force report prepared for the United States Air Force."

Abstract: The Soviets have conducted submarine operations in Swedish waters continuously since World War II. Although the evidence of these violations of Sweden's territorial waters is incomplete, Swedish authorities indicate that foreign submarine operations were carried out infrequently and at irregular intervals during the 1960s and into the late 1970s. The scope and character of Soviet operations in Sweden changed in or around 1980, however, becoming much more frequent, penetrating the heart of Sweden's coastal defense zones, and involving the use of multiple submarines, mini-submarines, and combat swimmers operating in a coordinated manner. This report examines the strange case of Soviet submarine operations in Swedish waters since 1980. It discusses the nature of these operations as well as related activities being carried out on Swedish soil, the political and strategic context within which these operations have evolved, the objectives that apparently underlie these activities, and the continuity in Soviet civil-Military decisionmaking on the submarine question.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, 2001.

Abstract: This thesis analyzes the factors likely to shape the future of the Russian submarine force. It examines key events affecting this force since the collapse of the Soviet Union in 1991, and explores the determinants of these events. The Russian Federation inherited a huge submarine fleet from the Soviet Union. Due to the changing conditions in the world and in Russia, its future status is in doubt. The thesis begins by analyzing the development and roles of the Soviet submarine force. It then considers the four most significant factors that have affected the submarine force since 1991: 1) Russia's poor economic performance, 2) Russia's changing national security requirements, 3) competition from the other military services for a limited defense budget, and 4) changes within the military and society. The thesis concludes that the Russian submarine force is unlikely to undergo a major revival. The most probable scenario involves a smaller and less capable force. The most influential factors may be Russia's economic performance and the military reform plans of Russian President Vladimir Putin and Defense Minister Sergey Ivanov.

Ministry of Defence. Sweden will Conduct Joint Submarine Exercises with the United States of America [press release]. Stockholm, 28 October 2004. The Swedish armed forces will conduct joint submarine exercises with the United States of America. A Gotland-class submarine with Swedish military personnel will conduct joint exercises with the US Navy for a year. The submarine will be stationed on American naval bases on both the west- and the eastcoast.

The purpose of the Swedish participation is to increase the capability to cooperate in international peace support operations with the armed forces of other countries. The cooperation will also have positive synergy effects for the development of submarines and sensors and the continuous cooperation within the field of materiel development. The exercises will commence during the first half of 2005.

Dumbaugh, Kerry. **Taiwan: Recent Developments and U.S. Policy Choices**. Washington, DC: Congressional Research Service, Library of Congress, 2006]. (CRS Issue brief for Congress; RL33510). 19p.

Contents: Summary. -- Most recent developments. -- Background and analysis. -- U.S. interests in Taiwan. -- Basis for U.S. Defense Commitments to Taiwan. -- Key current Issues in Taiwan. -- Taiwan-Mainland relations. -- Economic and Trade Issues. -- SARS, Avian Flu, and WHO observer status. -- Policy trends in the George W. Bush administration. -- Implications for U.S. Policy.

Abstract: Under the Bush Administration, U.S.- China-Taiwan relations have undergone a number of changes. Initially, the new Administration seemed to abandon the long-standing U.S. policy of "strategic ambiguity" on Taiwan in favor of "strategic clarity" that placed more emphasis on Taiwan's interests and less on PRC concerns. Among other things, President Bush publicly stated that the United States would do "whatever it takes" to help Taiwan's defense -- a position more support ive of Taiwan than had been articulated by previous U.S. presidents. In April 2001, the President also approved a Substantial sale of U.S. weapons to Taiwan, including Kidd-class destroyers, anti-submarine \P-3 "Orion" aircraft, and diesel submarines. The White House also was more accommodating to visits from Taiwan officials than previous U.S. Administrations, and permitted visits from Taiwan's president in 2001 and 2003, and from Taiwan's vice president and defense minister in 2002. Political trends in Taiwan have raised anxieties about its future and the implications for U.S. policy. Some are concerned that a Continued emphasis on "Taiwan identity" may lead to ethnic polarization and conflict. Others are concerned about the implications that these trends have for a possible declaration of Taiwan independence, which Beijing has vowed to "pay any Price" to prevent. In recent months, political developments in Taiwan appear to be causing the Bush Administration to dial back its earlier enthusiasm for supporting Taiwan, U.S. officials now appear to be balancing criticisms of the PRC military buildup opposite Taiwan with periodic cautions and warnings to the effect that U.S. support for Taiwan is not unconditional, but has limits. This issue brief tracking the situation in Taiwan will be updated as events warrant.

Thesis (Ph.D.) -- Duke University, Department of History, 2004.

Abstract: From 1923 to 1940 the U.S. Navy held Twenty-one major exercises, known as "Fleet Problems." While only part of annual fleet training, these exercises differed from routine maneuvers and gunnery exercises. All available fleet units were integrated into a single major action.... Concepts such as dive-bombing, independent submarine operations, antisubmarine warfare, and amphibious operations were explored in a medium that stressed the thinking of naval officers as how best to fight a naval war with modern weapons.

Abstract: This study was undertaken to determine why the "ancient practice of convoy" was not universally adopted until well into World War I and why it was not adopted sooner in World War II despite its proven success under modern conditions against the submarine version of the guerre de course in World War I. The major conclusions of the study are as follows. Since the last decade of the Nineteenth century, Captain Alfred Thayer Mahan, United States Navy, has had more influence worldwide on the formulation of national policies and naval strategy in general and the protection of shipping in wartime in particular than any other individual in modern times. Specifically, his conclusions regarding the superiority of "capital ships," the decisiveness of "big battles," and the "irregular secondary ... inconclusive ... {and} indecisive" nature of commerce destroying have been accepted almost without question as the foundation upon which navies have been built and employed. Conversely, his strong support of convoying as being superior to hunting for marauders has been virtually ignored.

Abstract: Written by a former merchant mariner, the dissertation aims to show that convoying was Substantially effective in reducing merchant shipping losses in the Atlantic and contiguous sea areas during the 1917-18 convoy period. Among the conclusions reached is that convoying was a vitally significant factor in allowing the Allies to keep their sea lanes open and thereby prosecute their war effort to a successful conclusion by transporting foodstuffs, military supplies, and troops sufficient to that end.

Abstract: Canadian naval aviation during the Second World War and post-war period has, for the most part, been ignored in the scholarship. This is especially true in the case of the helicopters. This dissertation is an examination of the origins of rotary-wing aircraft and the development of the helicopter carrying destroyer escort from the Canadian perspective.

Levitt, Martin L. The **United States Navy and Lighter-Than-Air.** Philadelphia, PA: Temple University, 1991. 250 l.

Thesis (Ph.D.) -- Temple University, 1991.

Abstract: In the early development of naval aviation, advocates of the new technology anticipated that the airship would play a significant role in the projection of air power by the fleet. World War I proved that the gigantic rigid airship was a vulnerable tactical bomber, but the United States Navy remained anxious to develop these craft as long range scouts. After a period of experimentation and design improvements, the rigid airship evolved into an aircraft carrier in the sky. By carrying aloft a fleet of airplanes, the rigid airship expanded its previous mission capabilities. Unfortunately, though promising, this collaboration of lighter-than-air and heavier-than-air technology was abandoned when American rigid airships proved disaster-prone in unstable weather. On the other hand, the non-rigid airship, developed in the shadow of the glamorous rigid, by World War II proved to be a versatile and utilitarian aircraft. The blimp was particularly useful in convoy escort missions, anti-submarine operations, minespotting, and air-sea rescue. American blimps were deployed on four continents during the war, and successfully escorted some 89,000 transport ships.

Jackson, John. **Ultra's Arctic War**. Milton Keynes: Military Press, 2003. (Bletchley archive; v. 2). 124p.

Abstract: The Arctic convoys that took vital supplies at enormous risk to Russia during the Second World War did so within range of Germany's Luftwaffe, surface ships and U-Boats. These convoys were watched over by Bletchley Park codebreakers and intelligence officers, through decrypts of the German Enigma coding machine. In particular, these decrypts were closely involved in three of the key actions of the Arctic battles, the sinking of the battlecruiser Scharnhorst, the destruction of the battleship Tirpitz and the disastrous PQ17 convoy. This book examines the Ultra decodes, and for the first time lists the key details in these events in chronological order, detailing the role of the decrypts in a virtual minute-byminute breakdown of how the signals were used in these key actions.

Partial contents: 33. Russian Convoy Robert Sherbrooke

On 31 December 1942 off North Cape, Norway in the Barents Sea, Captain Sherbrooke in HMS Onslow was senior officer in command of destroyers escorting an important convoy for North Russia, when he made contact with a vastly superior enemy force--the cruiser Hipper and the pocket battleship Lutzow.

Four times the enemy tried to attack the convoy but was forced back each time. Early in the action Captain Sherbrooke was seriously wounded in the face and temporarily blinded. Nevertheless he continued to direct the ships under his command and even when the next senior officer had assumed control, he insisted on receiving all reports of the action until the convoy was out of danger. His actions—and the Nazi ships' failure to neutralize the convoy despite its superior force—are pivotal for Hitler's order to scrap the Kriegsmarine in the beginning of 1943. — http://en.wikipedia.org/wiki/Robert St Vincent Sherbrooke

Cafferky, Michael Shawn. **Towards The Balanced Fleet: A History of The Royal Canadian Naval Air Service, 1943-1945**. Victoria: University Of Victoria, 1989. 244 I. Thesis (M.A. History) -- University Of Victoria, 1989.

Abstract: On December 19, 1945, the Canadian government approved in principle the formation of the Royal Canadian Naval Air Service. The origins of Canadian naval aviation, however, can be traced to the fortunes of the Royal Canadian Navy in its battle for the convoys during 1942, and its drive to gain operational control of the ships. Furthermore, the history of the Royal Canadian Naval Air Service was inextricably intertwined with the navy's desire to obtain a balanced fleet, in which aircraft carriers were deemed to be an integral component. Canadian naval aviation during the Second World War has, for the most part, been ignored in the scholarship.

Milner, Marc. No Higher Purpose: The Royal Canadian Navy's Mid-Atlantic War, 1939-1944. Fredericton: University Of New Brunswick, 1983. 525 l.

Thesis (Ph.D.) -- University Of New Brunswick, 1983.

Abstract: The Royal Canadian Navy played an important role in the Battle of the Atlantic, but little is known of the background of Canada's naval war. Generally, historians treat Canada and the RCN as benign elements: Suppliers of men and ships, and little more. As a result, general histories of the Battle almost totally ignore one of the major participants. It is this distortion of history which the thesis attempts to redress. Before the war the RCN never considered trans-Atlantic anti-submarine escort of convoys

and initially developed its auxiliary fleet for inshore work. However, in the spring of l941 the Navy was forced to commit its auxiliary fleet to the ocean escort of trade convoys.

Partial contents: 10. Saga of the Jervis Bay Edward Fogarty Fegen

Sole escort for 37 merchant ships in Convoy HX-84 from Halifax, Nova Scotia to Britain, when the convoy encountered the Admiral Scheer, the Captain of Jervis Bay, Edward Fegen, ordered the convoy to scatter and closed with the German Warship. The 11-inch guns of the German ship easily outranged Jervis Bay and she was sunk with the loss of 190 crew. However, while Admiral Scheer went on to sink five merchant ships out of the convoy, Jervis Bay's sacrifice bought enough time for the convoy to scatter, and the remaining ships escaped. -- <a href="http://en.wikipedia.org/wiki/HMS">http://en.wikipedia.org/wiki/HMS</a> Jervis Bay

Abstract: The Royal Canadian Navy in World War II played a role second only to that of the Royal Navy in the Battle of the Atlantic, the German assault on the ocean trade routes. Required to act independently

because of the nationalistic policies of the government of Mackenzie King, and to provide for its own high technology needs as a result of the Royal Navy's failure to allocate adequate equipment, the RCN was forced to attempt to develop from an almost non-existent prewar infrastructure a system of supplying its escort vessels with the necessary electronic detection systems and anti-submarine weaponry.

On 24 May 1941 in the Mediterranean, south of Sicily, Lieutenant-Commander Wanklyn, commanding HM Submarine Upholder on her seventh patrol, torpedoed an Italian troopship (the 18,000 ton former liner Conte Rosso) which was with a strongly protected convoy. As the submarine's listening equipment was broken the approach to the attack was made entirely using the periscope without going deep and approaching the convoy by navigating towards the sounds of the propellers.--http://en.wikipedia.org/wiki/Malcolm David Wanklyn

Beer, Robert M. **The U.S. Navy and the Cuban Missile Crisis**. Annapolis MD, US Naval Academy School, 1990. (ADA227065; USNA-TSPR-165). 205p.

Abstract: This study examines the traditional interpretation of the 1962 Cuban Missile Crisis and the Navy's quarantine of the island. An impressive literature on the Cuban Missile Crisis has been compiled, but most accounts draw heavily on the memoirs of former Kennedy insiders, especially Robert Kennedy and Arthur Schlesinger, Jr. Based on recently declassified records and interviews with participants, this study corrects some of the misinterpretion of naval operations, reveals new evidence about U.S. intelligence, and throws into doubt the Kennedy/Schlesinger account. Based on intelligence gleaned from communications intercepts, Kennedy was alerted in early June to Soviet Premier Khrushchev's plan to deploy ballistic missiles in Cuba. This intelligence was confirmed by the Subsequent Soviet sealift effort, communications, intercepts, and CIA agents on the island. Yet, Kennedy did little to prepare his administration to deal with the dilemma. He moved forcefully to restrict intelligence on the buildup, but did nothing to prevent it. Kennedy moved only in mid-October when he had irrefutable photographs of the missiles. He imposed a limited naval blockade around Cuba and coerced the Soviets to remove the missiles through frantic back-door diplomacy. This included a trade for American Jupiter missiles in Turkey. This study considers several issues related to the developement of intelligence before and during the crisis, command and control of naval operations, and the Navy's ASW operations.

Berkoff, Russ H. Artificial Intelligence and Foreign Policy Decision-Making. Monterey, CA: Naval Postgraduate School, 1997. (ADA340985). 170p. Thesis (M.S. in Defense Analysis) -- Naval Postgraduate School, December 1997. Abstract: With the advent of a global information society, the US will seek to tap the potential of advanced computing capability to enhance its ability to conduct foreign policy decision making. This thesis explores the potential for improving individual and organizational decision making capabilities by means of artificial Intelligence (AI). The use of AI will allow us to take advantage of the plethora of information available to obtain an edge over potential adversaries. Another purpose of this thesis is to give guidance to the software community as to what policymakers will need in order to improve future decision making processes. The third purpose is to encourage government and private sector decision makers to allocate adequate resources to actualize the potential of AI. The method of analysis this thesis uses is to examine US foreign policy decision making on the cognitive or individual, group, and organizational levels. Using the Cuban Missile Crisis and the Yom Kippur War as test beds for critical analysis, identification of both decision enhancing and impeding functions is accomplished. Finally, a counterfactual analytic framework, using an Al model, tests the likely influence of Al on decision making. The results Substantiate the value of AI as both a decision making enhancer and an impediment reducer for the policymaker. Additional conclusions are derived that improve the decision making system and its processes by means of introducing an AI capability.

Thesis (M.A. in National Security Affairs) -- Naval Postgraduate School, December 1989.

Abstract: This thesis addresses one dimension of 'naval diplomacy', namely submarine naval diplomacy. It examines the suitability and/or desirability of employing submarine forces for naval-diplomatic purposes. It reviews the historical record of 'underwater gunboat diplomacy', the particular aims that its practitioners have sought to achieve, and it examines the opportunities and constraints for the assignment of submarines for future naval diplomacy purposes.

Matthews, Lloyd J. **The Political-Military Rivalry for Operational Control in U.S. Military Actions: A Soldier's Perspective**. Carlisle Barracks, PA: Strategic Studies Institute, U.S. Army War College, 1998. 43p.

Abstract: The author presents a soldier's perspective of the operational implications of instant access to the battlefield by civilian leaders in Washington. It also suggests steps that might be taken to assure constructive collaboration between military and civil authorities, leaving each group to make its ownessential contribution to success in the nation's military undertakings around the world.

Contents: PQ 17 convoy Disaster. -- Sinking of the Scharnhorst. -- Hunting the Tirpitz.

Abstract: "The Arctic convoys that took vital supplies at enormous risk to Russia during the Second World War did so within range of Germany's Luftwaffe, surface ships and U-Boats. These convoys were watched over by Bletchley Park codebreakers and intelligence officers, through decrypts of the German Enigma coding machine. In particular, these decrypts were closely involved in three of the key actions of the Arctic battles, the sinking of the battlecruiser Scharnhorst, the destruction of the battleship Tirpitz and the disastrous PQ17 convoy. This book examines the Ultra decodes, and for the first time lists the key details in these events in chronological order, detailing the role of the decrypts in a virtual minute-byminute breakdown of how the signals were used in these key actions."

Abstract: For almost four desperate years, from 1939 to mid-1943, the British and American Navies fought a savage, losing battle against German submarine wolfpacks. The Allies might never have turned the tide of that historic battle without an Intelligence coup, and the race to break the German U-Boat Codes is one of the last great untold stories of World War II. David Kahn, the world's leading historian of cryptology, brings to life this tense, behind-the-scenes drama for the first time. Seizing the Enigma provides the definitive account of how British and American code-breakers fought a war of wits against Nazi Naval communications-and helped lead the Allies to Victory in the crucial Battle of the Atlantic. -- Ashland, OR: Blackstone Audio Inc., 2006.

Large, Christine. **Some Human Factors in Codebreaking**. Neuilly-Sur-Seine, France: NATO Research And Technology Organization. DTIC: NTIS, , 2003. (ADA422371). 13p.

ADM001577. Presented at the RTO HFM Symposium on "The Role of Humans in Intelligent and Automated Systems," held in Warsaw, Poland, 7-9 Oct 2002. Published in report number RTO-MP-088

Abstract: Christine Large, who has been Director at Bletchley Part since 1998, describes how human ingenuity and, in particular, the Poles' early contribution, led to breaking a seemingly insoluble Problem: The Enigma machine. She speaks in reference to Dillwyn Knox's seminal meeting with Marian Rejewski and the collaboration between men and machines that flowed thereafter. Some human factors that can lead to vital "breaks" are highlighted. Bletchley Park's current role in Anglo-Polish diplomatic relations, including a joint public information campaign instigated as a result of the film, "Enigma," is explained. Russell, Jerry C. **Ultra and the Campaign Against the U-Boats in World War II**. Carlisle Barracks, PA: US Army War College, 1980. (ADA089275). 45p.

Abstract: The problem addressed is the extent to which the United States Navy used Ultra, or Special Intelligence, in the campaign against the German U-Boats. Information was gathered through published and unpublished sources. Through a chronological approach, United States Navy involvement is traced from entry into the war until its conclusion. Many factors are involved in the final outcome of the war and Ultra is only one. The Battle of the Atlantic was long and gruesome rather than short and spectacular. The United States Navy used Ultra along with technology, tactics, brilliant leadership and courageous men at sea to win the Battle of the Atlantic in World War II. The lessons for the future are clear. If the United States intends to oppose the Soviet submarine force at sea anywhere in the world, then we must maintain the lead in intelligence, tactics and technology. Further, and most importantly, we must strive to regain superiority of forces in those ocean areas where our interests are at stake.

Stripp, Alan. Codebreaker in the Far East. London, England; Totowa, NJ: F. Cass, c1989.

Summary: Codebreaker in the Far East is the first book to describe how Bletchley Park and its Indian and Far Eastern outposts broke a series of Japanese codes and cipher systems of dazzling variety and complexity. Their achievements made a major contribution to the Allied victory in Burma, and probably helped to shorten and win the war, perhaps by two or three years. Alan Stripp gives his first-hand account of the excitement of reading the enemy's mind, of working against the clock, hampered by one of the world's most daunting languages and the knowledge that they were facing an unyielding and resourceful enemy who had never known defeat.

Contents: Contents: PART ONE: TOURS OF DUTY: Cambridge, Bedford and Yorkshire; Bletchley Park; Marching Orders; Delhi; Naini Tal, Agra and Abbottabad; Bangalore, Singapore and Cambridge. --PART TWO: JAPANESE PUZZLES: Japanese Codes and Ciphers: What were they like?; What did they tell us?; How were they sent?; How were they intercepted?; How were they broken?; What is so Special about Signals Intelligence?; Loose ends; Traffic analysis; The index; Interrogation; Japanese cryptographic Security; The Japanese as Codebreakers; The Japanese language; The Chinese Telegraphic Code; Japanese language courses; Glossary of Technical terms; Cover-names. -- PART THREE: A TANGLED WEB: Clandestine Groups and their Signals; General Slim and Signals Intelligence; Phuket Island; Deception in the Burma Campaign.

Description: For five years before the Falklands War, Hugh Bicheno was one of the top British spies in Argentina. As such, he gathered hard, corroborated intelligence on Argentine intentions over the Falklands - which the British establishment then chose to ignore. The reasons behind this British decision, and its disastrous and inevitable consequences in the South Atlantic, are the main story of this book. There were three main players in the war, each of them trying to overcome their own cultural baggage. The Argentinians were riddled with quilt: After years of fighting a morally repugnant campaign against its own people, the Argentine military saw a war for the Malvinas islands as a perfect opportunity to win back their self-respect. The hands of the Americans were also bloody from the likewise dirty wars they had sponsored and abetted in Central America. For Britain, baffled by the parlous state of the country at the beginning of the 1980s, the defence of the Falklands was a gesture towards their long-gone imperial splendour. -- http://www.amazon.com/Razors-Edge-Hugh-Bicheno/dp/0753821869/ Originally published: London: Weidenfeld & Nicolson, 2006.

Abstract: Soldiers, sailors, and airmen must always think, plan, and practice for the unknown. No matter how realistic the conduct of exercises and training, it is impossible to simulate combat. Wars invariably expose deficiencies in peacetime planning. Before World War I, most soldiers planned and practiced for a war of maneuver and the offensive, yet the Western Front rapidly evolved into a static battle of attrition. Prior to 1914, admirals planned and trained to fight massive and decisive fleet actions on the model of Trafalgar and Tsushima; four years of conflict witnessed only one such action—the Battle of Jutland—and it did not prove decisive. New weapons systems—aircraft, warships, and fighting vehicles—continually enter inventories. Escalating costs have led to the extensive modification of weapons systems to maintain fighting effectiveness. Sometimes peacetime 'fixes' can be found in innovative tactics and operational concepts. Actual combat compresses the adaptive process. Britain's experience during the South Atlantic war perhaps illustrates this process at its most extreme. Literally overnight, Britain was faced with a war for which it had no plans. Failures in the British intelligence community had led to a total lack of strategic warning. Britain's military Forces were mainly configured to fight in Europe in conjunction with powerful allies

Thesis (M.M.S.) -- U.S. Marine Corps Command and Staff College, 2002.

Abstract: This essay examines the British sea-based aviation in support of two modern amphibious Campaigns: The British campaign in Norway in 1940 and the Falkland Islands War in 1982. Expeditionary maneuver warfare (EMW) operations and sustainable littoral power projection will require versatile and flexible sea-based airpower to establish local air superiority over the fleet. Whereas land-based aircraft

can attack fleets from great distances, current land-based fighters cannot protect the fleet from attack without extended aerial refueling. When air superiority cannot be maintained over the fleet, as evidenced in Norway and the Falklands, Naval Forces become prey to land-based airpower. Power projection from the sea occurs as a result of maintaining local air superiority, not in spite of it. Until a space-based system capable of providing air superiority for ships at sea is fielded, 'Legacy Platforms' such as aircraft carriers and their embarked air wings, despite their high cost, will remain essential Naval Warfare Platforms. Further, however, and perhaps of greatest importance to this study, amphibious forces ashore cannot rely on aircraft carrier (sea-based) air support if a credible land-based aircraft or missile threat to supporting aircraft carriers exists.

Abstract: In 1982 Argentina and the United Kingdom faced an unwanted war for the sovereignty over the Malvinas, Georgias and Sandwich del Sur Islands. A 149 years territorial conflict, developed into a high-intensity war only few days a minor incident had occurred in a remote and isolated place called Leith, in Georgias del Sur. The study analyzes and evaluates the information from first sources available in 2002, but discarding opinions, false information or misinterpretations from other authors. The study describes the evolution of the conflict, the daily development of the crisis generated in Georgias based on their protagonists' testimonies and documents. It seeks to determine the real facts, decisions, and declarations that led two friendly nations to war. Twenty years ago, the forces were marching south in order to solve an old issue over the disputed archipelagos. Today, as in the past, the central issue of sovereignty remains unsolved due to British intransigency. It is time to learn the real lessons of this unwanted, misunderstood war.

Abstract: (U) Soviet Naval officers perceive the Falkland Islands War as one manifestation of increasing rivalry among capitalist states of different levels of development. This circumstance suggests greater Soviet efforts to undermine the U.S. alliance system and to increase its Problems of coalition

management. Two other trends which the Falklands seemed to confirm are: The emergence of the possibility of resource wars between the North and South, and the increased reliance of the West upon an 'oceanic strategy'. Both trends will be used to promote the growth of the Soviet Navy. Another ground for Soviet Naval officers' satisfaction with the Falklands Conflict was precisely what can be learned about trends in warfare at sea. The Falklands Conflict offers major dividends to its naval and military researchers. The research apparatus of the General Staff of the Soviet Armed Forces are now making a sustained effort to reshape their perceptions about modern warfare on the basis of the lessons derived from the Falklands Conflict. Judging by the articles in Morskoi sbornik, this effort will be professionally competent, extensive and sustained. While Soviet military thinkers warn that it is necessary to take into account the peculiarities of all such local wars, they nonetheless see them as having 'an importance for the perfection of military theory'. The Falklands Conflict, like other local wars, will allow them to perfect their conception of modern warfare, i.e, 'that they are grasped through the prism of contemporaneity. Keywords: Naval Tactics; Air Defense; Logistics support; Amphibious landings; Surface to surface missiles.

Strategic Issues Research memo: 01 Aug 1983.

Abstract:: (U) This memorandum explores the lessons of the Malvinas/Falklands War of 1982 for the United States and Latin America. Central to the discussion is an analysis of the motivating factors of the principal actors. The policy implications apply to US military policy, diplomacy, posture toward military governments, arms transfers to Latin America, territorial disputes, and the potential for conflict, and the agenda for inter-American security.

Abstract: This monograph analyzes the 1982 war between the United Kingdom and Argentina over possession of the Falklands in regard to several of the foundations of military theory. It uses this recent campaign which combines air, land, and sea forces armed with modern technologies as a case study of the applicability of traditional military theory to modern warfare. The monograph first reviews the general political background leading up to the outbreak of hostilities on 2 April 1982, then summarizes the salient military events of the war. Next it offers analyses of how politics and military action were interrelated throughout the campaign, how tactics, operations, and strategy interacted during the course of the war, and where the centers of gravity were situated for the opposing forces. It concludes with an overview as to the applicability of traditional military theory to this particular campaign. The monograph concludes that the war in the Falklands was a unique opportunity to contrast two widely divergent approaches to warfare, one which paid heed to military theory and the doctrinal implications that the stem from it and one which ignored many of its foundations.

Zellem, Edward B. Clausewitz and Seapower: Lessons of the Falkland Islands War. Maxwell AFB, AL: Air Command & Staff College, 1999. (AU/ACSC/237/1999-03; ADA398885). 49p.

Abstract: This paper explores the hypothesis that although Clausewitz has been criticized for not specifically addressing naval warfare in his seminal work On War, Clausewitzian principles are in fact not only applicable, but highly relevant to the modern conduct of war at sea. The 1982 Falkland Islands conflict between Great Britain and Argentina will be used as the framework to examine this hypothesis. As the largest and most significant series of naval engagements since World War II, the Falklands War provides a rich database of both traditional and nontraditional lessons learned about the conduct of war at sea. This paper begins with a brief discussion of critiques of Clausewitz and his apparent lack of focus on the naval element of warfare. It will be followed by a historical review of significant events leading up to, and during the Falkland Islands War. Key events in the war will then be reviewed and examined within a framework of Clausewitzian principles. The motives, key assumptions, military strategy, and tactics of Great Britain and Argentina will be discussed within the context of the Clausewitzian dictum that war is the continuation of politics by other means. Selected specific events in the campaign will then be addressed in terms of Clausewitzian principles of war to determine their relevance or irrelevance to modern naval strategy and campaigning.

Hough, Richard Alexander. **The Great Dreadnought; the Strange Story of H.M.S. Agincourt, the Mightiest Battleship of World War I**. New York, Harper & Row, 1967. 193p.

The war broke out before delivery during the trials. Even though the Turkish crew had arrived to collect her, the British Government took over the vessel for incorporation into the Royal Navy. At the same time the British also took over a second Turkish battleship, a King George V vessel being built by Vickers - The Reshadieh which was renamed HMS Erin. Such an action was allowed for in the contracts, as then-First Lord of the Admiralty Winston Churchill did not want to risk the ships being used against the British, but it had consequences. The takeover caused considerable ill-feeling in Turkey, where public Subscriptions had partially funded the ships. The battleships had cost £4 million pounds but the British refused the refund the payments. This proved an important factor in turning Turkish public opinion against Britain, especially as the Turkish Navy had been pro-Britain - the Army having been pro-German. It helped put Ottoman Empire into the war on the side of Germany and the Austro-Hungarian Empire against the Triple Entente of Britain, France and Russia (29 October 1914). -- <a href="http://en.wikipedia.org/wiki/HMS">http://en.wikipedia.org/wiki/HMS</a> Agincourt %281913%29

Christ, Robert D. and Robert L. Wernli Sr. **The ROV Manual: A User Guide to Observation-Class Remotely Operated Vehicles**. 1st ed. Amsterdam; Boston; London: Butterworth-Heinemann, 2007. 308p.

Contents: 1. A bit of History -- 2. ROV Design. -- 3. ROV Components. -- 4. Underwater Acoustics and Positioning. -- 5. Sonar. -- 6. Oceanography. -- 7. Environment and Navigation. -- 8. Homeland Security. -- 9. MCM and EOD.-- 10. Public Safety Diving. -- 11. Commercial, Scientific and Archeological. -- 12. Standard Operating Procedures. -- 13. Servicing and Troubleshooting. -- 14. Putting It All Together. Abstract: Many underwater operations that were once carried out by divers can now be carried out more

efficiently and with less risk with Remotely Operated Vehicles (ROVs). This is the first ROV how-to manual for those involved with smaller observation class ROVs used for surveying, inspection, observation and research purposes. As ROV technology becomes increasingly efficient and affordable, their use is rapidly spreading throughout a myriad of industries, everything from aquaculture to port and harbour security to underwater crime scene investigation, marine salvage, deep sea archaeology and commercial diving even deep sea rescue missions are handled by ROVs. Any industry involved with underwater investigation and surveying will inevitably rely on these machines. The ROV Manual is the first user guide to provide complete training and knowledge on ROV operations for engineers, technicians or underwater recreational enthusiasts, whether working inland or offshore. \*The first book to focus on observation class ROV underwater deployment and usage in real conditions for industrial, commercial, scientific and recreational tasks \*A complete user guide to ROV operation with basic information on the usage of underwater robotics and navigation equipment to obtain mission results quickly and efficiently \*Ideal for anyone involved with ROVs whether in research, business or leisure underwater activities, or for heavier offshore, complete with self-learning questions and answers.

Schofield, William G. and p.J. Carisella. **Frogmen: First Battles**. Boston, MA: Branden Pub. Co., c1987. 187p.

Synopsis: They blasted trails of destruction from Cadiz to Crete, from Alexandria to Gibraltar, leaving in their wake the sunken hulls & twisted wreckage of dozens of ships of the Allied Naval Forces. They were the men of the Italian Navys 10th Light Flotilla, the original frogmen who, in WW II, introduced a new concept of undersea warfare into the ongoing history of naval conflict. This book tells the Frogmen story as it has never before been recorded. Parts are in the attested & taped words of the sea-going warriors themselves; parts drawn directly from British & Italian Navy Archives, all accurately documented.—Publisher.

Partial contents: 41. Midget Sub Versus Tirpitz / Donald Cameron, Basil Place

On 22 September 1943 at Kåfjord, North Norway, Lieutenant Cameron, commanding Midget Submarine X.6, and another lieutenant (Basil Charles Godfrey Place) commanding Midget Submarine X.7, carried out a most daring and successful attack on the German Battleship Tirpitz. The submarines had to travel at least 1,000 miles from base, negotiate a minefield, dodge nets, gun defences and enemy listening posts. Having eluded all these hazards they finally placed the charges underneath the ship where they went off an hour later, doing so much damage that the Tirpitz was out of action for months. -- http://en.wikipedia.org/wiki/Donald Cameron %28VC%29

67. Midget Sub In Singapore / Ian Fraser, James Magennis

On 31 July 1945 in the Straits of Johor, Singapore, Lieutenant Fraser, in command of XE-3, attacked the Japanese heavy cruiser Takao, after making a long and hazardous journey through mined waters. Fraser slid the submarine under the Takao, which lay over a depression in the sea bed, and his diver Acting Leading Seaman James Joseph Magennis went out to fix the limpet mines to the bottom of the ship. The XE-3's two side-charges then had to be released, but the starboard charge stuck and Magennis climbed

out again and after a nerve-wracking five minutes released the charge. XE-3 then made for home. Magennis was also awarded a Victoria Cross, and Fraser became a lieutenant-commander. -- <a href="http://en.wikipedia.org/wiki/lan Edward Fraser">http://en.wikipedia.org/wiki/lan Edward Fraser</a>

Auten, Harold. **Q Boat Adventures, the Exploits of the Famous Mystery Ships**. Penzance, Cornwall: Periscope Publishing Ltd, 2003. 320p.

Synopsis: In 1915, Harold Auten was one of the first officers selected for Q-Ship service, along with Gordon Campbell. As one of the pioneers, he helped develop the Q-Ship's designs and tactics. His third command, HMS Stock Force was involved in a fierce encounter with a U-Boat off Start Point in July 1918. Although the submarine survived, the Q-ship did not, foundering on tow. For this action Auten was awarded the Victoria Cross. "Q-Boat Adventures" was the first book to be published about the Q-Ships and made Auten into a household name. The tales described therein remain as exciting today as in 1919 when the world first read of the brave exploits of the decoy ships.

Synopsis from 2002 edition: Gordon Campbell remains one of the Royal Navy's greatest heroes. His exploits as the most successful Q-ship captain of World War I made him into a household name. His mystery ships, Farnborough, Pargust and Dunraven fought the most gruelling duels with German submarines, sinking three of them. Campbell developed the desperate tactic of deliberately allowing himself to be torpedoed to lure the U-Boats to surface, where the Q-ship's hidden guns could then open fire. As the war progressed, the enemy became more difficult to deceive, Dunraven being sunk by a U-Boat that escaped destruction. No less than five Victoria Crosses were awarded to him and his men, with Campbell also winning the DSO with two bars. This book tells the tales of the most courageous of naval men, those who served in Campbell's Q-ships.

Abstract: Lacking adequate antisubmarine warfare tactics and technologies to combat the German unrestricted submarine campaign during the Great War, the Allies turned to deception or "ruse de guerre" as a means to counter the U-Boat menace. Armed decoys, known as Q-ships, manned by naval crews and outfitted with hidden guns, were introduced to deceive, trap, and destroy U-Boats. Registering early

kills, Q-ships served as a valuable deterrent and had a demoralizing effect on previously bold U-Boat crews. Q-ships successfully filled Britain's void in antisubmarine warfare through 1917. By 1918, the Q-ship campaign ground to a halt when these intrepid decoys lost their usefulness through frequency of use and lost surprise. This paper examines the employment of Q-ships in the Allied maritime strategy during the Great War, focusing on the requisite elements and specific tactics associated with this unique form of deception. Significant engagements are examined to assess the effect Q-ships had against U- boats and their overall impact during the course of the war. (26 refs.).

Abstract: The fascinating story of two very different German surface raiders and the havoc they caused amongst Allied shipping in the Second World War. One was the 8-inch gun cruiser Admiral Hipper, fast, powerful and Navy-manned; the other a converted merchantman, Hansa Line's Kandelfels armed with a few 5.9s, crewed largely by reservists, and sailing under the nom de guerre of Pinguin. Contrary to all expectations, the amateur man-of-War reaped a rich harvest and went out in a blaze of glory. Her purpose-built sister, on the other hand, was hard-pressed to make her mark on the War and ended her days in ignominy.

Oskar Kusch was executed by a firing squad on 12 May 1944 in Kiel-Holtenau. In 1996
Kusch's legal record was finally wiped clean, and in 1998 the city of Kiel erected a memorial and renamed a street in his honor not far from the military range along the Kiel Canal where he had been shot 54 years before. <a href="http://www.uboat.net/men/kusch.htm">http://www.uboat.net/men/kusch.htm</a>
