longer CNVs than the non-syndromic or controls (p = 1.50 × 10^{-5}), non-syndromic patients were enriched in CNV number when compared to controls (p = 4.00 × 10^{-6}) or the syndromic counterpart. Our results suggest a role for NRG3 in HSCR etiology and provide insights into the relative contribution of structural variants in both syndromic and non-syndromic HSCR. This would be the first genome-wide catalog of copy number variants identified in HSCR. © 2012 Tang et al.

Abstract
Gabapentin is a second generation anticonvulsant that is effective in the treatment of chronic neuropathic pain. It was not, until recently, thought to be useful in acute perioperative conditions. However, a growing body of evidence suggests that perioperative administration is efficacious for postoperative analgesia, preoperative anxiety, attenuation of the haemodynamic response to laryngoscopy and intubation, and preventing chronic postsurgical pain, postoperative nausea and vomiting, and delirium. This article reviews the clinical trial data describing the efficacy and safety of gabapentin in the setting of perioperative anesthetic management. © The Board of Management and Trustees of the British Journal of Anaesthesia 2007.
