Prof. Marcello Tomaselli

ANNO ACCADEMICO 2007/2008

Contents

Chapter 1 Background

Importance of barley	3
Mapping quantitative variation in barley	7
<i>Single-marker analysis by linear regression</i>	7
<i>Simple interval mapping</i>	8
<i>Multiple QTL mapping</i>	9
<i>Analysis of multiple traits</i>	10
<i>From quantitative trait loci to quantitative trait nucleotides.</i>	11
<i>A new paradigm</i>	12
Barley seed: development and differentiation	14
Malting quality	17
<i>The malting process</i>	20
<i>Barley malting quality traits</i>	21
<i>Secondary malting quality traits</i>	32
QTL analysis of malting quality	34
Genetics of barley adaptation to the environment	48
<i>Growth habit and frost tolerance</i>	49
Marker assisted selection	55
<i>MAS for the improvement of quantitative traits</i>	59
The concept of the winter habit malting barley	62
References	64

Chapter 2 QTLs for malting quality in the ‘Nure’ x ‘Tremois’ mapping population	77
QTL alleles from a winter feed type can improve malting quality in barley	79
Introduction	80
Material and Methods	83
<i>Plant materials and field trials</i>	83
<i>Malting quality evaluation</i>	84
<i>Statistical and QTL analyses</i>	85
Results	86
<i>Phenotypic data</i>	86
<i>QTL analyses</i>	90
Discussion	95
References	100
Chapter 3 Malting quality QTL validation and Marker Assisted Selection for malting quality, winter growth habit and frost tolerance in the winter x spring cross ‘Nure x Tremois’	105
Introduction	107
Material and Methods	110
<i>QTL position and effects</i>	110
<i>Plant material and markers used</i>	112
<i>Selection strategy and field trial</i>	113
<i>Malting quality analysis</i>	113
Results	114
<i>MAS for Malting quality traits</i>	114
<i>QTLs of Frost tolerance and winter growth habit</i>	116
Discussion	118
References	122

Chapter 4 Fine mapping at the frost resistance locus <i>Fr-H2</i> in barley	125
Fine mapping of a HvCBF gene cluster at the frost resistance locus <i>Fr-H2</i> in barley	127
Introduction	129
Material and Methods	132
<i>Plant material and DNA extraction</i>	132
<i>Molecular marker analysis</i>	133
<i>Linkage analysis and genetic distance</i>	135
<i>Phenotypic evaluation and data analysis</i>	135
Results	137
<i>Validation of <i>Fr-H1</i> and <i>Fr-H2</i> loci in the NxT cross</i>	137
<i>A refined genomic interval of <i>Fr-H2</i> QTL</i>	141
<i>Construction of a high-resolution genetic map of a cluster of a cluster of seven HvCBF candidate genes at <i>Fr-H2</i> locus</i>	144
Discussion	145
References	150
Chapter 5 General discussion	155
Malting quality and winterhardiness in barley: genetic approaches	157
Marker-assisted selection for winter growth habit, frost tolerance and high malting quality in barley	162
References	167
Acknowledgements	171
