

Climate-driven Mosquito Population Modeling

Cory Morin

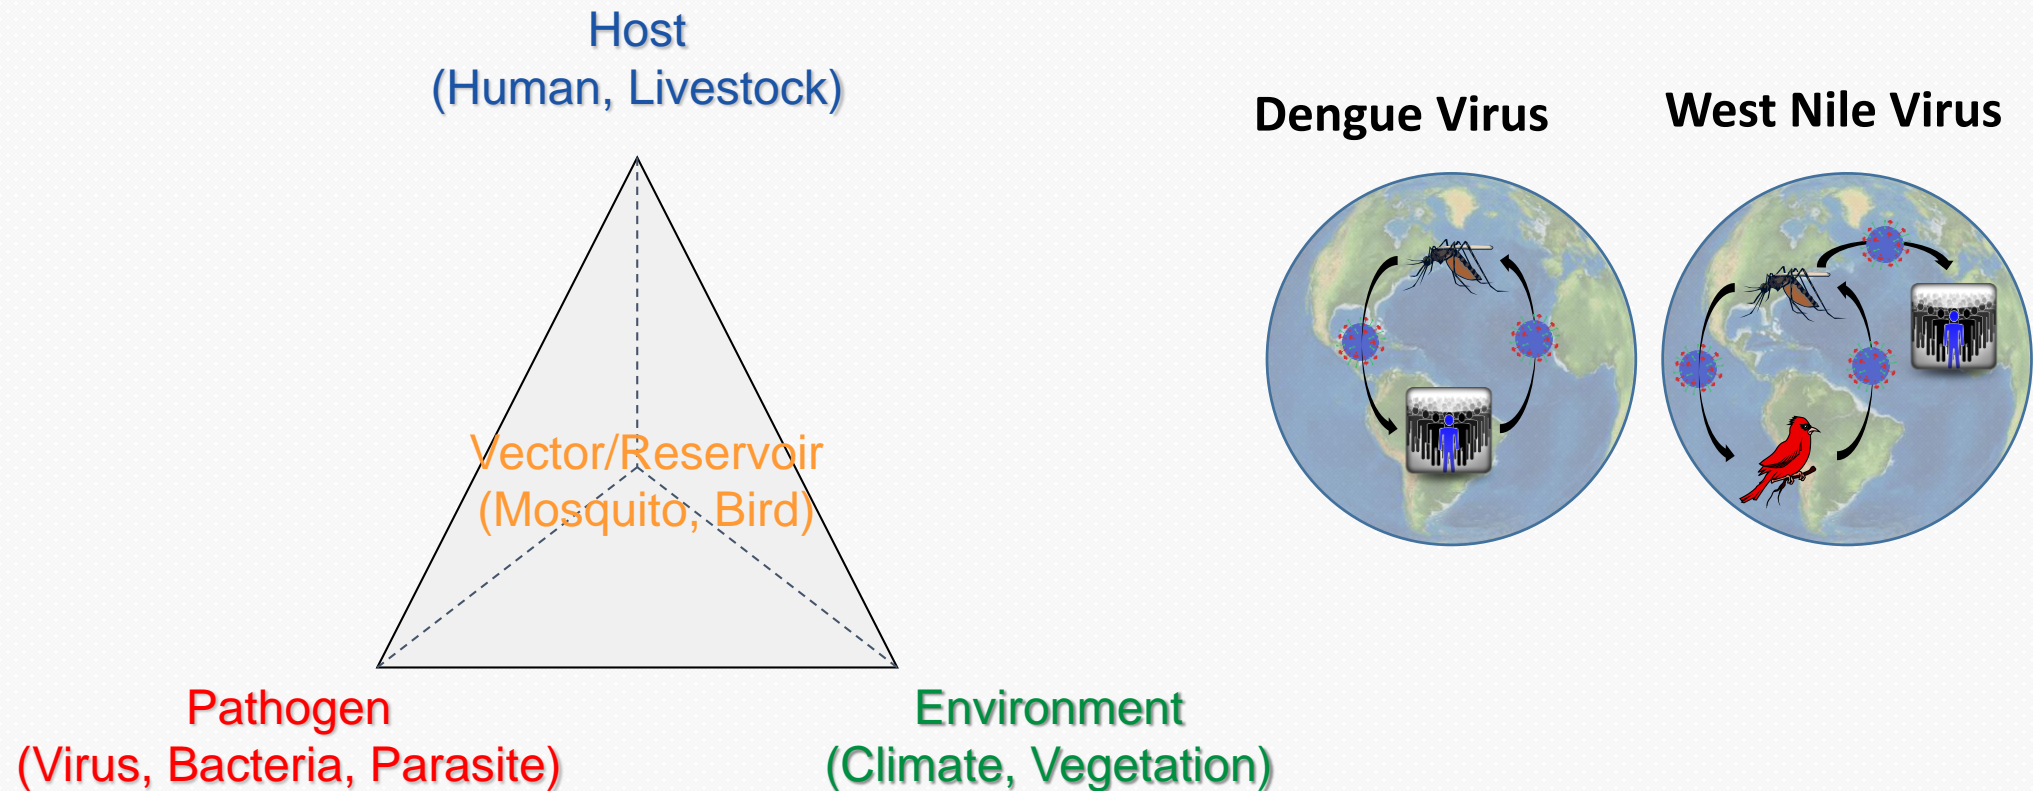

NASA Postdoctoral Program Fellow

cory.morin@nasa.gov

Infectious Disease Ecology

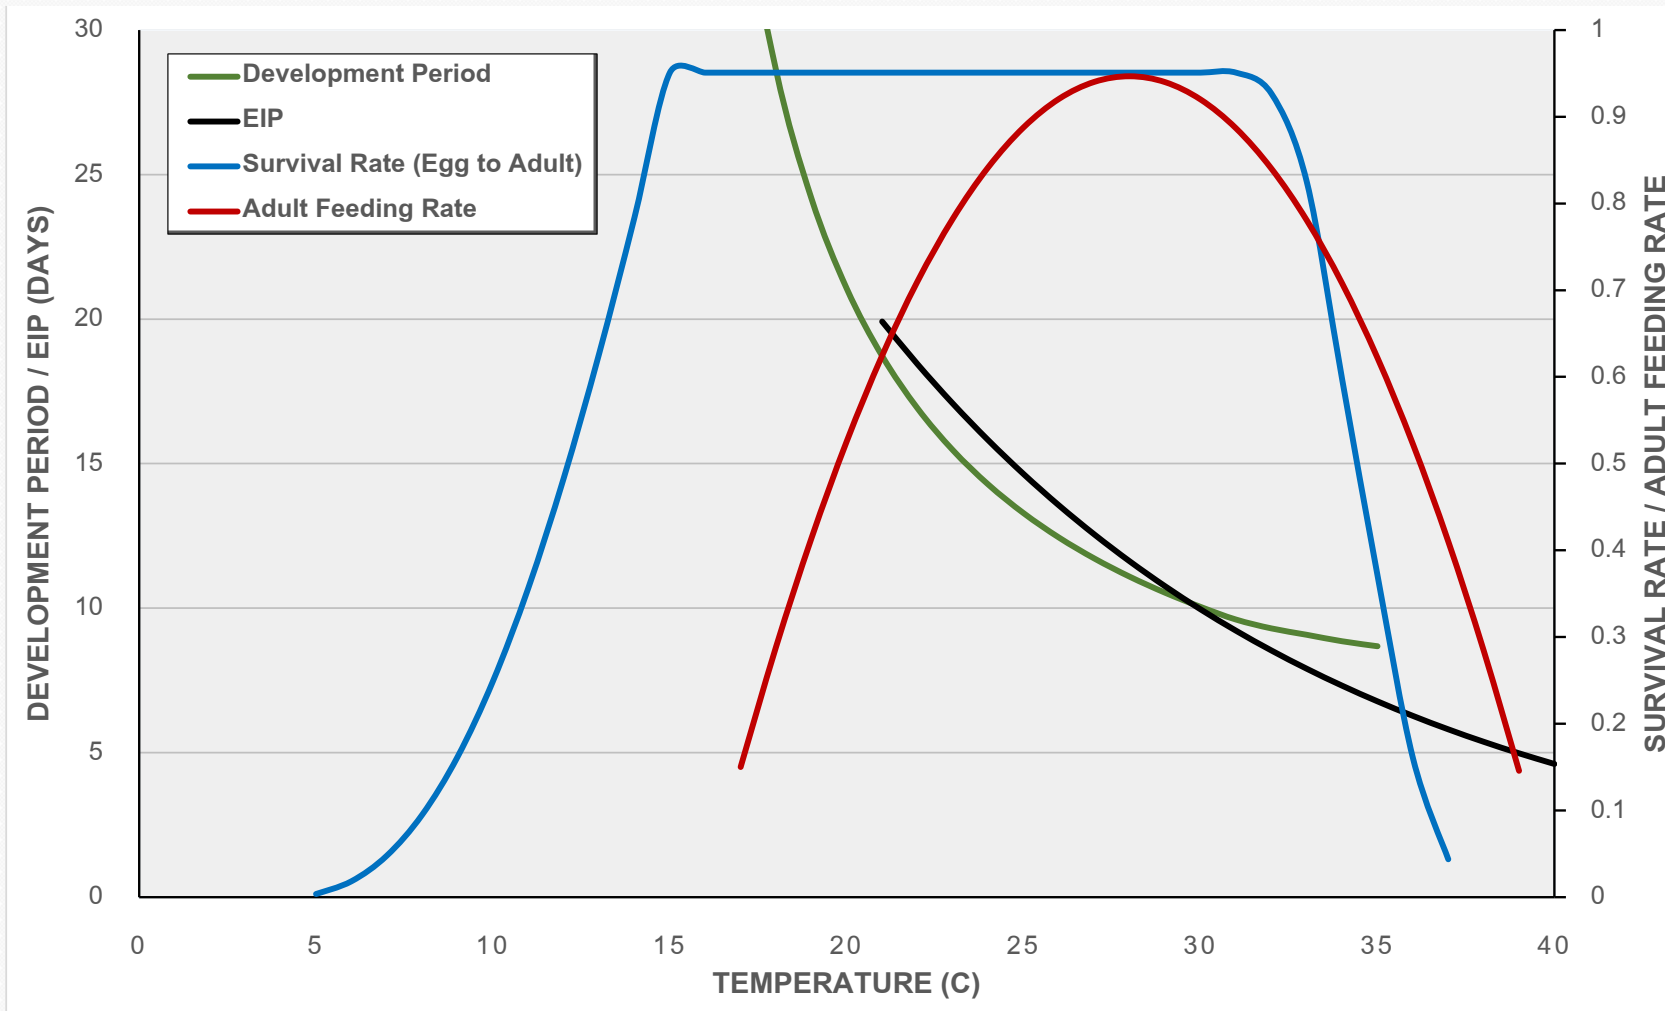

A *multi-factorial* relationship between hosts, agents, environment, and vector

Weather/Climate Influences on Vector-borne Disease Ecology

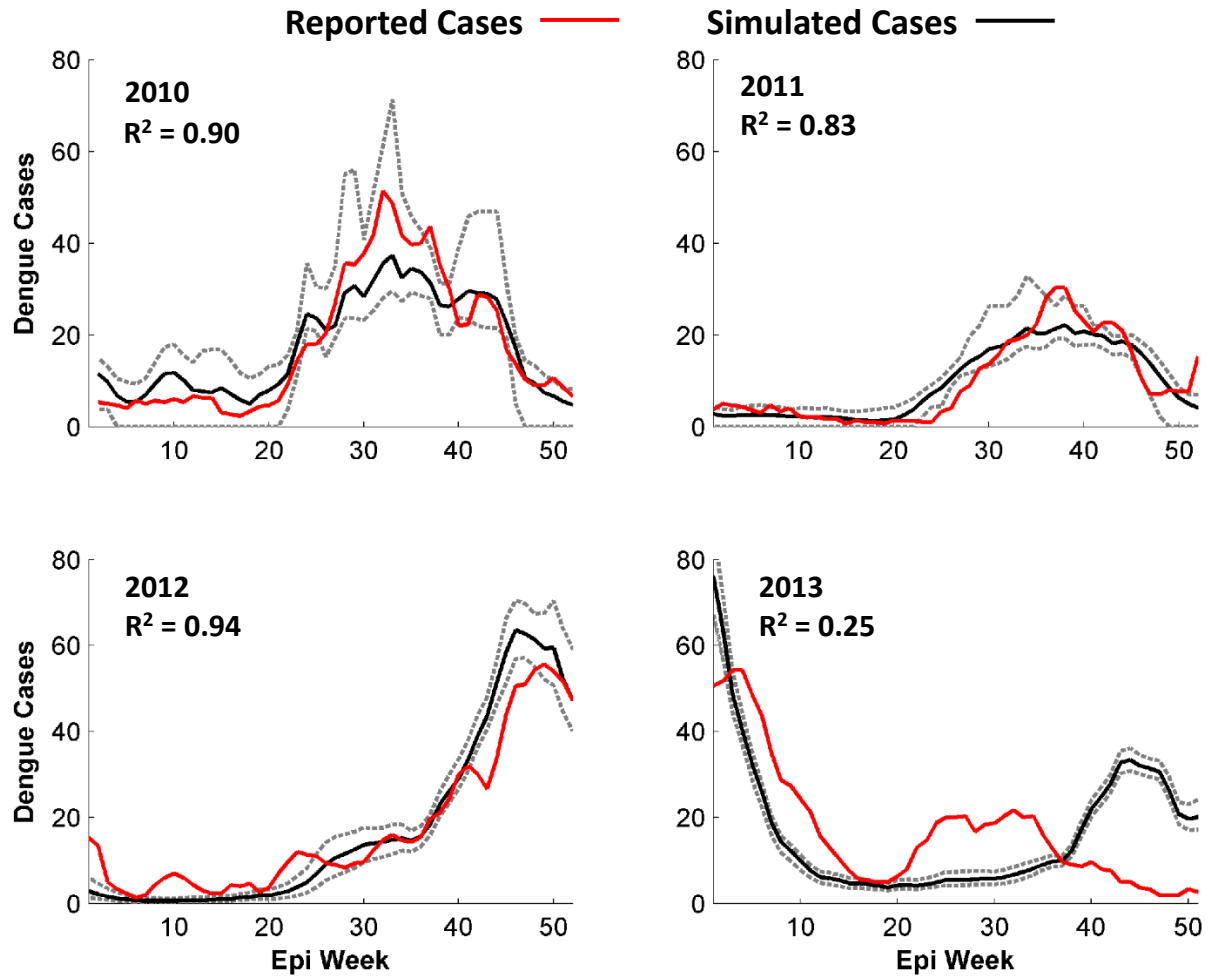

Temperature Relationships

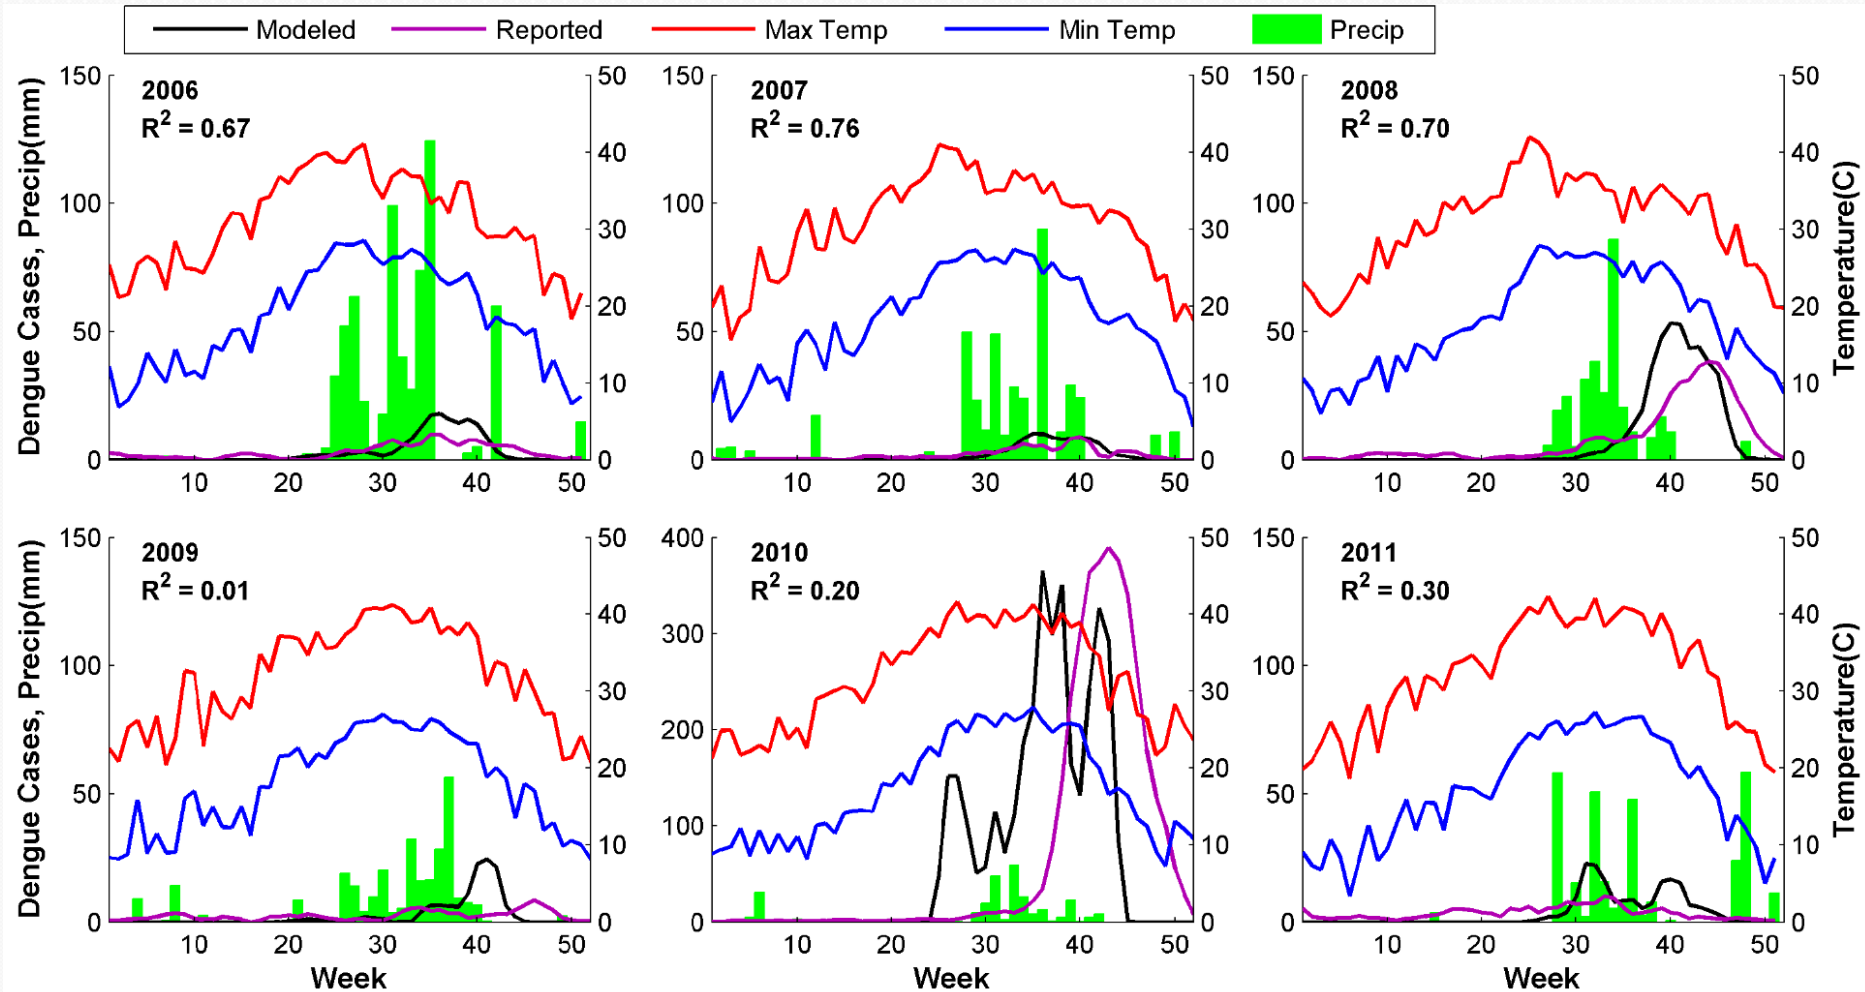

Modeling *Aedes aegypti* and Dengue Virus Ecology

Example Results (San Juan, PR)

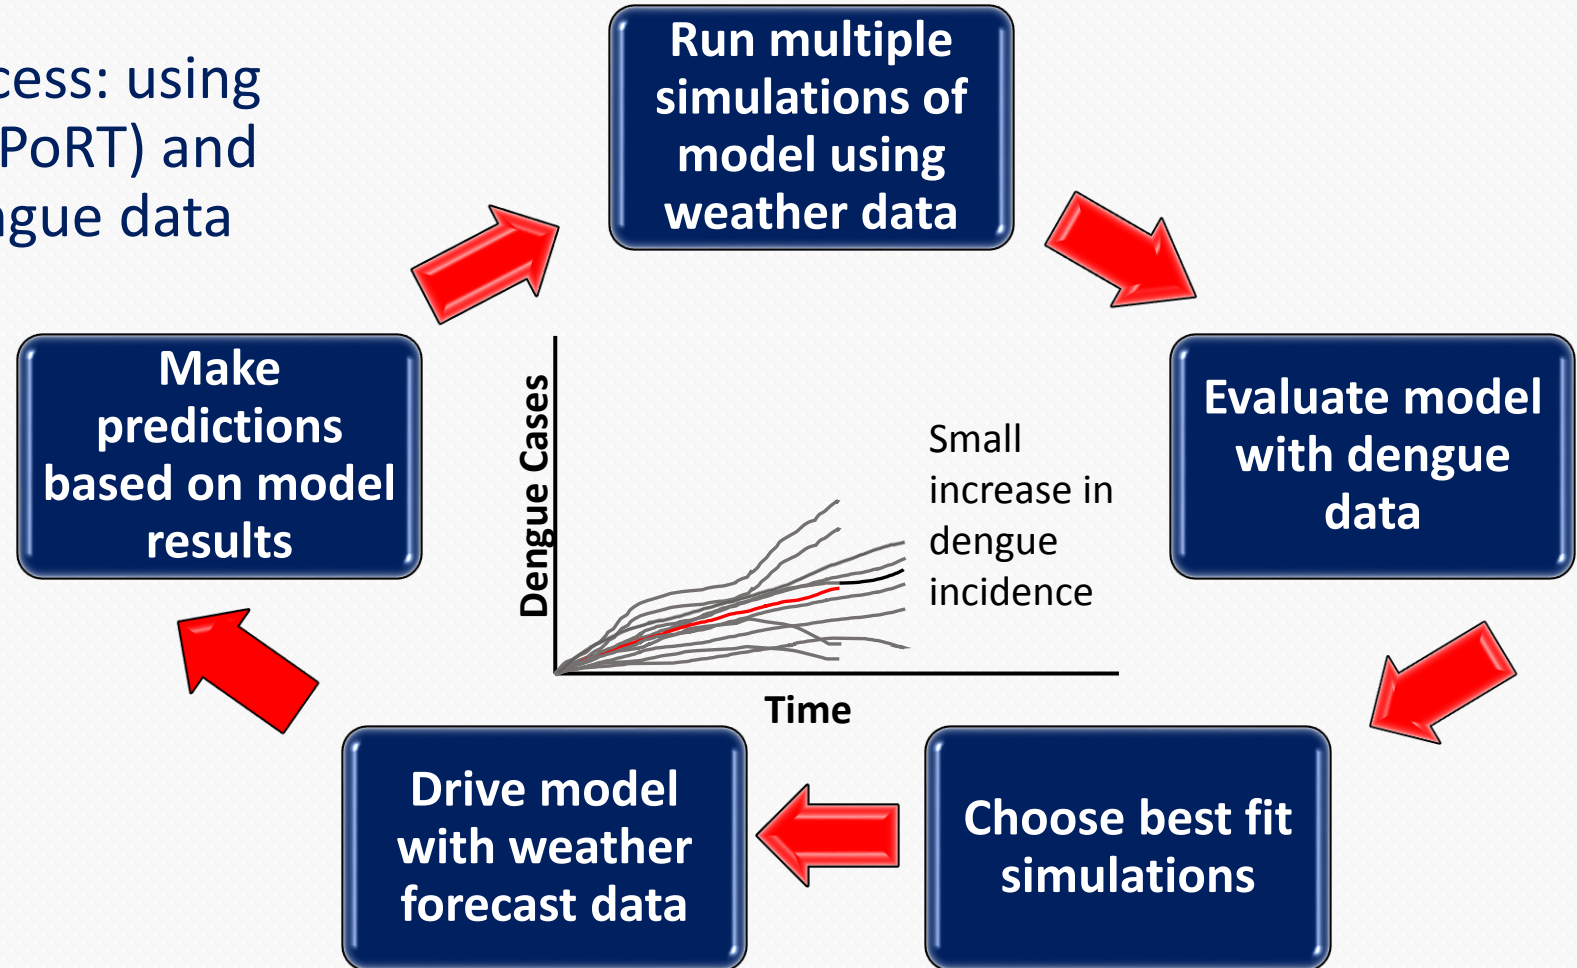

Example Results (Hermosillo, MX)

Forecasting Techniques

- Iterative weekly process: using weather forecasts (SPoRT) and weekly reported dengue data

Challenges and Opportunities for Forecasting Vector-borne Disease Risk

- Knowledge gaps

- Vector population dynamics
- Extrinsic Incubation Period (EIP)
- Transmission probabilities

- Vector-Disease

- Misdiagnosis
- Subclinical cases
- Availability of data

- Environmental data

- Availability/Reliability
- Resolution
- Predictability

- Surveillance Data

- Model parameterization
- Model evaluation
- Data integration

- Expertise

- Behavioral risk factors
- Demographic risk factors
- GIS and mapping

- Environmental data

- Observations
