Introduction and Overview

Background

The Institute for Global Change Research and Education (IGCRE) is a joint initiative of the Universities Space Research Association (USRA) and the University of Alabama in Huntsville (UAH) for coordinating and facilitating research and education relevant to global environmental change. Created in 1992 with primary support from the National Aeronautics and Space Administration (NASA), IGCRE fosters participation by university, private sector and government scientists who seek to develop long-term collaborative research in global change science, focusing on the role of water and energy in the Earth's atmosphere and physical climate system. IGCRE is also chartered to address educational needs of Earth system and global change science, including the preparation of future scientists and training of primary and secondary education teachers.

IGCRE strives to develop activities that have a national scope and character. These involve outreach and service to the university constituency at large, based on the outreach capabilities of USRA's nationally-based consortium of universities. The Institute also promotes long-term cooperative research and regional outreach to other federal and state agencies or industries. The Institute, through USRA-affiliated universities and UAH, promotes training of young scientists in the technology and techniques of global change and Earth system research, especially the utilization of remotely sensed data.

Since its inception, IGCRE has maintained a research staff of approximately 30 scientists, who are actively involved in earth science and global change investigations. In addition to research, IGCRE activities and functions include sponsorship, organization and coordination of scientific meetings, workshops and colloquia related to earth system and global change research, as well as logistical support for scientists from universities and other organizations who wish to visit NASA/Marshall Space Flight Center's Global Hydrology Research Office (formerly known as the Earth System Science Division).

In September 1994, IGCRE moved from its Marshall Space Flight Center location into the new Global Hydrology and Climate Center (GHCC), which is near both UAH and MSFC. Also located at the GHCC are MSFC's Global Hydrology Research Office (formerly known as the Earth System Science Division), the MSFC Global Hydrology Research Center (formerly known as the Hydrologic Data Active Archive Center--DAAC), the UAH Atmospheric Science Department and various NASA support contractors.

Since its inception, the IGCRE Executive Board has been jointly appointed by USRA and UAH, and includes senior executive and research management personnel. This Board then appoints the IGCRE Director, currently Dr. Donald J. Perkey, who oversees the operations of a research and management support group, as well as the scientific research personnel. The Board meets at least annually to evaluate the performance of the Director, to review and approve budget proposals, and to give general

guidance on the management and research associated with the Institute. Current Executive Board members are the following:

- Dr. Paul Coleman, President, Universities Space Research Association
- Dr. Graeme Duthie, Dean, College of Science, University of Alabama in Huntsville
- Dr. George Fisher, Convener, USRA Earth Sciences Council and Johns Hopkins University
- Dr. Frank Franz, President, University of Alabama in Huntsville
- Dr. Kenneth Harwell, Senior Vice President for Research, University of Alabama in Huntsville
- Dr. Donald Johnson, Director of USRA's Division of Earth Sciences, University of Wisconsin

Dr. Arthur Few, of Rice University, has also served on the IGCRE Executive Board in the past four years.

IGCRE is also reviewed by the USRA Science Council for Earth Sciences, to ensure the scientific programs continue to meet high standards. Science Council members during the past four years have been as follows:

- Dr. Arthur Few (Convener), Rice University
- Dr. George Fisher (Convener), Johns Hopkins University
- Dr. Robert D. Hudson, University of Maryland
- Mr. Roy Jenne, National Center for Atmospheric Research
- Dr. Peter Lamb, University of Oklahoma
- Dr. Ellen Mosley-Thompson, Ohio State University
- Dr. Gerald North, Texas A&M University
- Dr. Paola M. Rizzoli, Massachusetts Institute of Technology
- Dr. William H. Schlesinger, Duke University

IGCRE Scientific Research Programs

The emphasis of IGCRE research is on integrating observations, models and diagnostic studies to yield increased knowledge and understanding of the role of atmospheric water substance in climate and global change. This increased understanding and quantification of hydrologic and energetic processes is being used to validate parameterizations and models of physical processes that can be embedded within the framework of coupled earth system models.

More specifically, to enhance the scientific knowledge and educational benefits obtained from NASA's Earth Science Enterprise (formerly known as Mission to Planet Earth), and the U. S. Global Change Research Program, IGCRE scientists and their university and NASA colleagues

1. Facilitate research with and access to Earth Observing System and other Earth data sets, and assist scientists with the utilization and application of these data to global change research. Specifically, IGCRE global change research programs include the following:

- using surface- and space-based observations to determine past and present fluxes of water and energy to analyze components of the hydrologic cycle;
- employing the full range of models including conceptual, diagnostic, and one-, two- and three-dimensional complex numerical models to integrate and interpret the observations and analyses of the hydrologic cycle;
- predicting global change by increasing understanding, both qualitatively and quantitatively, of the hydrologic processes affecting global change, and
- developing specifications and requirements for development of future observing systems of the hydrologic cycle.

2. Participate in data management activities that aid scientific research.

Specifically, IGCRE data management activities include:

- Participating in field studies and the processing, quality control and archiving of large data sets, and
- Developing specifications and requirements for development of data management systems and analysis tools.

3. Stimulate involvement of university, private-sector and government agency scientists who seek to develop long-term collaborative research in global change science. Specifically, IGCRE scientific outreach functions include

- collaborating and cooperating with Alabama A&M University faculty and research scientists to establish and promote The Center for Hydrology, Soil Climatology and Remote Sensing, funded by a NASA Minority University Research Centers contract. This has involved field experiments in 1996 and 1997 in the area of remote sensing of soil moisture, using ground-based radiometers and radars for measuring moisture in the surface layer of soil.
- sponsoring, organizing and coordinating scientific seminars, meetings, workshops and colloquia related to global change research, as well as encouraging and supporting visits by scientists from universities and other organizations.

Stated from a scientific perspective, the mission of IGCRE research is to advance understanding of the role of water in the energetics and dynamics of global change, and to foster scientific interaction between NASA scientists and university, industry and other-agency scientists. As such, we envision studies that

- provide a nationally recognized catalyst and focal point for research on the role of water in earth system dynamics and global change, and

- offer a creative and supporting research environment in which university and private-sector scientists can build meaningful and lasting research collaborations on the problems of earth system and global change science.

IGCRE Educational Programs

IGCRE scientists strive to develop programs that integrate research and educational programs to help universities prepare future global change scientists and to aid university, secondary and primary teachers communicate the importance and challenges of global change science. Specifically, educational initiatives over the past four years have included the following:

- development of visiting graduate student programs to promote student and faculty interest in global change research;
- establishing both university-based and pre-college education programs to encourage development of Earth system science curricula; (These have included the USRA-initiated Earth System Science Education [ESSE] Program, conceived and implemented as part of IGCRE, to support the development of undergraduate curricula emphasizing a multidisciplinary approach to the study of the planet Earth as a unified physical system. In addition, there has been the creation of a Precollege Curriculum Development and Testing Program to generate enthusiasm and increase environmental awareness about science among pre-college students.
- creating the EarthBase Student Participation program, allowing students to gain a better understanding of their environment through hands-on daily and weekly observations of soil moisture, precipitation and temperature at their school EarthBases.
- establishing the Mission To Planet Earth (MTPE) Teacher Workshops Program to train teachers to communicate the importance and challenges of Earth's system. This uses the Ground Truth Studies, an interdisciplinary, hands-on K-12 education project, and the EarthBase data collection analysis activities as vehicles to provide teachers with the knowledge and materials for introducing MTPE concepts into the classroom.
- assisting Alabama A&M University's Center for Hydrology, Soil Climatology and Remote Sensing in creating and continuing a summer internship program for minority and women undergraduates as part of that center's ongoing mandate from NASA's Minority University Research Centers' thrust. This program was established in 1996, and will continue at least through the summer of 1999.
- creating the Global Learning and Observation to Benefit the Environment (GLOBE) Program in 1997, at the GHCC. This hand-on environmental science and education program for grade levels K-12 joins students, educators and scientists from around the world in studying the global environment; students make a core set of environmental observations at or near their schools, report their data through the Internet to a GLOBE data archive, and then study images created from worldwide GLOBE school data.

Outreach Activities

IGCRE sponsors, organizes and coordinates scientific seminars, meetings colloquia and workshops related to global change research. During the last four years, these have included (but were not limited to) the following:

- LAWS Science Team Meeting (February 1994)
- Global Hydrology Workshop (May 1995)
- Hydrologic Cycle Data Access and Archive Working Group (April 1994 and July 1995)
- GLOBE SWG Meeting (May 1994)
- Working Group on Space-Based Lidar Winds (June 1995, February and July 1996, July 1997)
- Remote Sensing Workshop (November 1995)
- NOAA GCIP Working Group Meeting (November 1996)
- Lightning Science Workshop (March 1997)
- CAMEX3 Planning Workshop (March 1997)

IGCRE also promotes scientific interaction among university and industry scientists and IGCRE and NASA scientists, as well as developing visiting programs to promote student and faculty interest in Earth system science research. For example, the Institute sponsors undergraduate students working on specific research, graduate students engaged in thesis or dissertation research, and short- and long-term visiting scientists and educators.

Facilities Activities

By providing IGCRE and NASA scientists with the centralized location of the Global and Hydrology and Climate Center, IGCRE has continued to support scientific and educational activities regarding the role of water and energy in the dynamics of the Earth's atmosphere and physical climate system. Also under this cooperative agreement, IGCRE has provided a support system for scientists in the GHCC by means of facilities management, building reception, network and computer support teams.

Scientific Publications, Presentations and Other Communications

Attached appendices provide lists of publications and conference presentations that have been communicated to the scientific community by IGCRE scientists. Appendices also include information on scientists' travel to conferences and workshops, and in-house visits from scientists and faculty throughout the university community. These are arranged by year, in reverse chronological order.

<u>Name</u>	<u>Dates</u>	<u>Location</u>	<u>Reason</u>
Bowdle, D.	8/16-9/20/97	Denver, CO	To participate in NASA Dryden flight Test for ACLAIM
Bowdle, D.	7/12-17/97	Northglenn, CO	To attend NOAA Working Group Meeting on Space-Based Lidar Winds
Bowdle, D.	10/30-11/01/96	Ann Arbor, MI/ Madison, WI	To present aerosol model plan and results to ALOADS at University of Michigan and discuss plans for aerosol transport model at University of Wisconsin
Buechler, D.	7/30-8/04/96	Washington, DC	To support LIS testing at GSFC
Chang, F.-C.	2/02-08/97	Long Beach, CA	To present paper at AMS Conferences on Hydrology and Climate Variations
Christy, J.	12/09/96	Washington, DC	To brief White House Science Office on global warming
Conover, H.	1/27-29/97	Greenbelt, MD	To attend Release B client workshop
Conway, D.	3/31-4/03/97	Arlington, VA	To attend EOSDIS Instrument Teams Metadata Workshop
Conway, D.	10/21-23/96	GSFC, MD	To attend AMSR Science Team meeting
Cox, G.	7/97	Airlie, VA	To give invited presentation at the 1997 International GLOBE Partners Conference
Cox, G.	7/97	Clemson, SC	To represent Alabama at the 1997 Southeast MAPS Conference
Cox, G.	4/97	New Orleans, LA	To present at the 1997 National Science Teachers Association meeting

Cox, G.	10/96	Rostov-on-Don, Russia	To co-chair a conference on the Municipal Applica- tions of Geographic Information Systems
Crosson, W.	2/02-08/97	Long Beach, CA	To present paper at AMS Conference on Hydrology
Crosson, W.	8/26-27/96	Beltsville, MD	To attend planning work- shop for 1997 Southern Great Plains experiment
Cutten, D.	10/15-17/96	Boulder, CO	To attend MACAWS workshop to discuss progress on data analysis and future flights
Drewry, M.	3/31-4/04/97	Washington, DC/ Landover, MD	To attend DMWS and IMS meetings
Drewry, M.	2/04-07/97	Long Beach, CA	To attend AMS Annual Meeting
Drewry, M.	7/29-8/03/97	Greenbelt, MD	To participate in V0 IMS meeting and V0 Guide meeting
Ellett, W.	9/16-19/96	Washington, DC	To attend GSFC Mass Storage Conference
Estes, M.	9/97	Atlanta, GA	To attend EPA Global Change Impacts in the Southeast Conference
Estes, M.	9/97	Atlanta, GA	To attend Project ATLANTA Applications Working Group meeting
Estes, M.	6/24-27/97	Nashville, TN	To attend Southeast Regional Assessment Workshop
Estes, M.	4/97	Austin, TX	To attend National Con- ference on Undergraduate Research
Estes, M.	2/97	Albuquerque, NM	To attend Technical Con- ference for the Minority Universities Research and Education Program
Graves, S.	8/18-21/97	Woods Hole, MA	To attend EOSDIS Data Panel meeting

Graves, S.	3/17-20/97	Greenbelt, MD	To attend DAAC Managers' Meeting
Graves, S.	2/08-14/97	Mayaguez, PR/ Boulder, CO	To attend Review Panel for University of Puerto Rico and EOS Data Panel
Hardin, D.	6/23-28/97	Hampton, VA	To attend DAAC Managers' Meeting
Hardin, D.	3/17-20/97	Greenbelt, MD	To attend DAAC Managers' Meeting
Hardin, D.	1/27-29/97	Greenbelt, MD	To attend ECS Release B client workshop
Harrison, S.	6/02-06/97	Asheville, NC	To attend User Services Working Group meeting
Laymon, C.	2/02-08/97	Long Beach, CA	To attend AMS 13 th Conference on Hydrology
Laymon, C.	1/06-09/97	Oklahoma City, OK	To coordinate meeting for 1997 Southern Great Plains experiment
Laymon, C.	8/26-28/96	Beltsville, MD	To attend planning workshop for the 1997 Southern Great Plains Experiment
Lobl, E.	8/07/96	Greenbelt, MD	To participate in follow-up meeting with sea ice team members and to decide on an AMSR team members and to decide on sea ice algorithm
Lobl, E.	7/28-31/96	Annapolis, MD	To participate in payload panel meeting
Lobl, E.	2/22-27/97	Los Angeles, CA	To present at EOS-IWG poster session (AMSR)
Lobl, E.	10/21-23/96	GSFC, MD	To attend AMSR Science Team meeting
Lobl, E.	9/24/96	Baltimore, MD	To attend meeting on status of the Sea Ice ATBD
Lobl, E.	8/24-26/96	Frascati, Italy	To attend meeting of the Microwave Calibration Group

Mach, D.	12/14-21/96	San Francisco, CA	To present OTD results at AGU Fall Meeting
McCaul, W.	1/21-23/97	Miami, FL	To attend meetings at NOAA, AOML, HRD PDT
McCoy, S.	7/29-8/01/96	Greenbelt, MD	To participate in V0 IMS meeting
Paech, S.	6/04/97	Birmingham, AL	To work with data on the NWS PUP terminal
Perkey, D.	6/24-27/97	Nashville, TN	Attend NASA workshop on Climate Variability and Water Resource Management in the Southeast U.S.
Perkey, D.	3/26-27/97	Washington, DC	To participate in the USRA Directors' Meeting
Perkey, D.	2/21-28/97	Philadelphia, PA	To participate in the Ph.D. dissertation defense of Kevin Doty at Drexel University
Perkey, D.	2/01-09/97	Long Beach, CA	To present paper at AMS Annual Meeting
Perkey, D.	10/07-11/96	Boulder, CO	To participate in UCAR members' representatives meeting as Chair of the Membership Committee
Ritschard, R.	8/18/97	Washington, DC	To brief Bill Townsend (MTPE) on developing a Southeast Regional Assessment Center in Huntsville, AL
Ritschard, R.	7/23-24/97	Washington, DC	To attend meeting at GSFC on MTPE outreach strategy
Ritschard, R.	7/21/97	Washington, DC	To brief NASA HQ and GSFC on Southeast Regional Workshop
Ritschard, R.	6/24-27/97	Nashville, TN	To chair and attend the Southeast Regional Workshop at Vanderbilt University (NASA, NOAA and USGS)

Ritschard, R.	6/09-12/97	Seattle, WA	To attend Assessment of the Use of Climate Predictions for Water Resources Management workshop and the Water Resources Users Group meeting
Ritschard, R.	3/19/97	Tallahassee, FL	To meet with Jim O'Brien at Florida State University and discuss program committee duties for Southeast Regional Workshop
Ritschard, R.	2/26-27/97	Washington, DC	To visit NASA HQ, attend USGCRP and Regional Workshop meeting at NSF
Ritschard, R.	9/23-25/96	Washington, DC/ Boulder, CO	To convene planning meeting for Regional Workshop on Climate Variation and Water Resources Management Decisions and to present CADSWESO to USBG, USGC, etc.
Spiers, G.	9/18/21/96	Sunnyvale, CA	To present at the Windsat design review meeting
Srivastava, V.	5/19-23/97	Ft. Collins, CO	To present paper at the 22 nd Conference on Hurricanes and Tropical Meteorology
Stewart, M.	5/13-15/97	Greenbelt, MD	Calibrate LIS on TRMM spacecraft
Stewart, M.	7/30-31/96	Tampa, FL	To inspect NASA G-IV aircraft for fieldmill installation
Wang, S.	7/28-8/01/97	Vancouver, BC	To present papers at 12 th Boundary Layer Turbulence Conference
Wang, S.	4/97	Boulder, CO	To attend FIRE III Science Team Mtg.
Wang, S.	10/96	Boulder, CO	To attend FIRE III ScienceTeam Mtg.

Workshops, Seminars and Other Communications

- Beaumont, B., 1997:** Development Hydrology System Action Logger (HAL) and File Ingest Directory Overseer (FIDO) software, June.

- Beaumont, B., M. Smith, H. Conover**, 1996: Development and delivery of a Dataset- Independent Subset prototype software system to Hughes Applied Information Systems (part of the EOSDIS Core System). Final Delivery 20 Dec.
- Beaumont, B.**, in cooperation with the Sensor Data Processing Facility (SDPF), 1996: Creation of ingest software for the LIS instrument from the TRMM mission. Nov.
- Beaumont, B.**, 1996: LISARD User's Manual, 22 Nov.
- Bowdle, David A.**, 1997: Atmospheric aerosol measurement and modeling for Doppler lidar performance simulations. Invited presentation, IEEE Luncheon Seminar, Huntsville, AL, 2 May.
- Bowdle, D. A.**, 1997: Aerosol backscatter spatial structure: Preliminary results. Final Contract Report, University of Alabama in Huntsville, Huntsville, AL.
- Bowdle, D. A.**, 1996: Three-year appointment, Coordinating Committee for Upper Tropospheric and Stratospheric Aerosols within the International Global Aerosol Chemistry Project. Focus on Atmospheric Aerosols.
- Bowdle, D. A.**, and D. R. Johnson, 1996: Aerosol backscatter modeling for operational airborne Doppler lidars. Presentation, *Fifth Meeting of the Affordable Low-Observable Air Data System (ALoads) Integrated Product Team*, Ann Arbor, MI, 31 Oct.
- Christy, J. R.**, 1997: Global climate and satellite detection of global temperatures. Presentation, Canadian Coal Assoc., Vancouver, BC, Canada, 20 Mar.
- Christy, J. R.**, 1997: Creation/Evolution Panel. Presenter, University of Alabama in Huntsville, Huntsville, AL, 27 Feb.
- Christy, J. R.**, 1997: Global climate and satellite detection of global temperatures. Presentation, Marshall Institute, Washington, DC, 20 Feb.
- Christy, J. R.**, 1997: Accuracy of MSU temperature datasets. Several media interviews appearing in *Washington Post*, *New York Times*, *Boston Globe*, National Public Radio. Various dates.
- Christy, J. R.**, 1997: NOAA/NASA Climate Change and Detection Program. Proposal Review, Asheville, NC, 22-24 Jan.
- Christy, J. R.**, 1996: Development of computer code to analyze daily surface temperatures over long time periods to discover and extract spurious trends and perturbations. *State Climatologist Exchange Program*, NCDC/NOAA, Asheville, NC.
- Conover, H.**, 1997: Electronic publication, Revision 5, Summary of Extensions for IMS V0 Client/Server Messages, 18 April.
- Conover, H.**, 1997: Electronic publication, V0 IMS Server Cookbook, 28 May.
- Conover, H.**, 1997: Release 5.2c, CINTeX V0 IMS Server, 30 May.
- Conover, H.**, and **K. Regner**, 1996: First CINTeX revision of the MSFC V0 IMS Server. 19 Nov.
- Conover, H.**, 1996: Updates to Summary of extensions proposed for IMS V0 client/server messages. Electronic Publication, http://harp.gsfc.nasa.gov/documents/odl_extensions.html 3 Oct. and 22 Oct.

- Conover, H.**, 1996: Revision, expansion and conversion of V0 IMS Server Cookbook to HTML. Published on the Internet, <http://harp.gsfc.nasa.gov/documents/Server-cookbook.html>, 10 Oct.
- Conover, H., B. Beaumont, and S. Graves**, 1996: Information systems research at the Global Hydrology and Climate Center. *Amer. Inst. of Aeronautics and Astronautics (AIAA)*, Huntsville, AL, 24-26 Sept.
- Conover, H.**, 1996: Proposed extensions to IMS client/server messages. Presentation, *CEOS Interoperability Experiment (CINTEX) Workshop*, Committee on Earth Observation Satellites (CEOS) Joint Subgroup Meetings, Sioux Falls, SD, 15 Sept.
- Conover, H., S. Fick, R. Goebel, D. Sundius**, 1996: Summary of extensions proposed for IMS V0 client/server messages. Electronic Publication, http://harp.gsfc.nasa.gov/documents/odl_extensions.html
- Conover, H.**, 1996: ODL extensions for better support of CINTEX partners. Presentation, *EOSDIS Version 0 Information Mgmt. Sys. (IMS) Developers' Mtg.*, Landover, MD, 30 July-1 Aug.
- Criswell, E.**, 1997: Revision, Optical Disk Jukebox software, May.
- Criswell, E.**, 1996: A platform-independent OLS data reader software. Development and delivery to MSFC DAAC, Dec.
- Criswell, E.**, 1996: The effects of data storage paradigms on custom order processing, Rev. 1.00. Electronic publication, <http://mickey.cs.uah.edu/~criswell/dsp.html> 21 Nov.
- Crosson, W. A.**, 1997: Earth's surface energy balance. Lecture, 1997 Summer Enrichment Program class, NASA Internships for Minority and Women Undergraduates, Center for Hydrology, Soil Climatology, and Remote Sensing, *Alabama A&M University*, Normal, AL, 26 June.
- Drewry, M.**, 1997: Presentation, Global Hydrology Resource Center (GHRC) status report. *Information Management System (IMS) V0 Developers Meeting*, Landover, MD, 3-4 April.
- Drewry, M. H.**, 1996: MSFC DAAC Status and Transition Report. Presentation, *EOSDIS V0 IMS Mtg.*, NASA/GSFC, Landover, MD, 2 Aug.
- Drewry, M. H., and S. T. McCoy**, 1996: Tour of the MSFC DAAC/Lightning Imaging Sensor Science Computing Facility (LIS SCF) for the Alabama Supercomputing Program to Inspire Computation Research in Education (ASPIRE). Presentation, Global Hydrology and Climate Center, Huntsville, AL, 25 July.
- Driscoll, K. T.**, 1997: Presentation, Remote Sensing for Undergraduate Science Education Workshop. *Community Colleges for Innovative Technology Transfer (NASA)*, Huntsville, AL, 23 May.
- Ellett, W., and S. Jones**, 1996: GHCC SysAdmin Resource Center. Electronic publication, <http://wwwdaac.msfc.nasa.gov:3945/sysadmin>, Nov.
- Gillani, N.**, 1996: Relevance of the SOS-Nashville 1995 field study data base for Plume-in-Grid model evaluation. *EPRI Contractors' Meeting*, Palo Alto, CA, Nov.
- Gillani, N., and A. Biazar**, 1996: Development of the Plume-in-Grid module of Models3. Presentation, *EPA Models3 Developers' Meeting*, Research Triangle Park, NC, Oct.

- Graves, S.**, 1997: Chair, Earth Observing System Data and Information System (EOSDIS) External Review Group, Washington, DC, April.
- Graves, S.**, 1997: Presentation, Mission to Planet Earth (MTPE) Biennial Review, Washington, DC, June.
- Hnilo, J. J.**, 1996: Passed final examination for the Ph.D. degree, Dept. of Atmospheric Science, University of Alabama in Huntsville, Huntsville, AL.
- Laymon, C. A.**, 1997: Soil and soil moisture. Lectures, *GLOBE Teacher Training Workshop*, 9-13 June, Huntsville, AL.
- Laymon, C. A.**, and HSCaRS Team Members, 1996: Application of remote sensing to hydrological modeling: Overview of the Huntsville '96 field experiment. Poster presentation, *Planning Workshop for the Southern Great Plains Experiment 1997*, USDA-Agricultural Research Service, Beltsville, MD, 26-28 Aug.
- McCaul, E. W., Jr.**, 1996: Sky and weather photography. Presentation, *Meeting of the Nature Photography Society*, Huntsville, AL, 16 Sept.
- McCoy, S.**, 1997: Revision, V0 IMS Server Version 6.3, 6 June.
- McCoy, S.**, 1997: Revision, Data Order Tracking System (DOTS), User Services and Production Editions, V. 6.1, 9 June.
- McCoy, S.**, 1997: Revision, Data Archive Inventory System (DAISY), V. 6.1, 24 June.
- McCoy, S. T.**, 1996: Revision, Data Order Tracking System (DOTS) software document. *MSFC DAAC GEWEX Continental-Scale International Project (GCIP)*, 20 Dec.
- McCoy, S. T.**, 1996: Revision, V0 IMS Server V. 6.2, 25 Nov.
- McCoy, S. T.**, 1996: Date Order Tracking System (DOTS) software document. *MSFC DAAC GEWEX Continental-Scale International Project (GCIP)*.
- Perkey, D. J.**, 1996: Report on the Institute for Global Change Research and Education. Presentation, *Universities Space Research Association Earth Science Council Meeting*, Greenbelt, MD, 11-12 Nov.
- Perkey, D. J.**, 1996: Research at the Global Hydrology and Climate Center. Presentation, *Amer. Soc. of Civil Engineering*, Huntsville Branch Meeting, Huntsville, AL, 5 Nov.
- Perkey, D. J.**, 1996: Regional and mesoscale atmospheric studies. Presentation, *Space Science and Technology Alliance Regional Assessments Meeting*, Birmingham, AL, 30 Oct.
- Ritschard, R.**, 1997: Chair, *Regional Workshop on "Climate Variability and Water Resource Management in the Southeastern United States"* (NASA, NOAA, USGS), Nashville, TN, 25-27 June.
- Smith, M.**, 1997: Poster presentation, *Workshop on Climate Variability and Water Resources Management in the Southeastern United States*, Nashville, TN, 25-26 June.
- Smith, M.**, 1997: Design and implementation, Browse Product Generation software for OTD, June.

APPENDIX C

EDUCATION ACTIVITIES

<u>Scientist</u>	<u>Date</u>	<u>Location</u>	<u>Activity</u>
Cox, G. N.	July 1997	Airlie, Virginia	Invited presentation at the 1997 International GLOBE Partners Conference
Cox, G. N.	July 1997	Clemson, SC	Represented Alabama at the 1997 SE MAPS Conference
Cox, G. N.	June 1997	Nashville, TN	Co-chaired the Education Section of the Southeastern Regional Workshop on Climate Variability and Water Resources Management
Cox, G. N.	June 1997	Huntsville and Mentone, AL	Conducted teacher training workshops for the GLOBE Program
Cox, G. N.	April 1997	Huntsville and Mentone, AL	Conducted teacher training workshops for the GLOBE Program
Cox, G. N.	April 1997	New Orleans, LA	Presentation at the 1997 National Science Teachers Association meeting
Cox, G. N.	January-May 1997	Huntsville, AL	Mentored five high school students from the Huntsville City School District's New Century Technology Demonstration High School
Cox, G. N.	October 1996	Rostov-on-Don, Russia	Co-chaired a conference on the Municipal Applications of Geographic Information Systems
Crosson, W. L.	June-August 1997	Huntsville, AL	Mentored undergraduate student participating in HSCaRS 1997 Summer Enrichment Program
Perkey, D. J.	June-August 1997	Huntsville, AL	Mentored two undergraduate students participating in HSCaRS 1997 Summer Enrichment Program
Perkey, D.	June 1997	Huntsville, AL	Conducted teacher training workshop for the GLOBE Program
Soman, V.	June-August 1997	Huntsville, AL	Mentored undergraduate student participating in HSCaRS 1997 Summer Enrichment Program

APPENDIX D

UNIVERSITY, INDUSTRY AND GOVERNMENT COLLABORATIONS

<u>IGCRE Scientist</u>	<u>Collaborator/ Affiliation</u>	<u>Nature of Collaboration</u>
Crosson, W. L.	Drs. Claude Duchon and Baxter Vie/University of Oklahoma	Testing SHEELS using data from the Oklahoma Mesonet and coupling SHEELS and DRUM
Crosson, W. L.	Dr. Tom Coleman and Others/ Alabama A&M University	Performing Huntsville '96 and Southern Great Plains '97 field experiments and analyzing data collected
Crosson, W. L.	Dr. Tom Jackson/USDA	Collaborated in the Huntsville '96 and Southern Great Plains '97 field experiments
Crosson, W. L.	Dr. Peggy O'Neill/NASA GSFC	Collaborated in the Huntsville '96 and Southern Great Plains '97 field experiments
Crosson, W. L.	Dr. Ramarao Inguva/ Huntsville, AL	Developing and testing a forward radiative transfer model applicable to remote sensing of soil moisture.
Laymon, C. A.	Dr. Tom Coleman and Others/ Alabama A&M University	Soil moisture remote sensing and modeling
Laymon, C. A.	Utah State University	Discussions and exchanges regarding the Goshute Valley, Nevada, project
Laymon, C. A.	Jay Famiglietti/University of Texas, Austin	Developing a soil moisture variability study with associated science plan to compliment the Southern Great Plains '97 experiment
Laymon, C. A.	Dr. Peggy O'Neill/NASA GSFC	Microwave remote sensing of soil moisture.
Laymon, C. A.	Dr. Tom Jackson/USDA	Microwave remote sensing of soil moisture.
Laymon, C. A.	Intergraph Corporation	Application of image processing software to land surface processes research.
Laymon, C. A.	Mr. Greg Bowling/Intergraph Services Corporation	Direction of Mr. Bowling as he assists us in developing workflow to expedite the use of Intergraph software
McCaul, W. E., Jr.	Dr. Morris L. Weisman/NCAR	Numerical simulations of convective storm dynamics in landfalling hurricane and related environments
McCaul, W. E., Jr.	Dr. Robert T. Menzies/NASA JPL	Analysis of GLOBE lidar data
McCaul, W. E., Jr.	Dr James D. Spinhirne/ NASA GSFC	Analysis of GLOBE lidar data
McCaul, W. E., Jr.	Dr. Frank Marks/NOAA-AOML-HRD	Hurricanes at landfall experiment

McCaul, W. E., Jr.	Dr. Michael Cammarata/ NOAA/NWS (Columbia, SC)	Analysis of WSR-88D data collected during T. S. Beryl tornado outbreak
McCaul, W. E., Jr.	Dr. David Sharp/NOAA/NWS (Melbourne, FL)	Analysis of WSR-88D data collected during tropical cyclones
McCaul, W. E., Jr.	Members of Prospectus Development Team 5/USWRP	Research opportunities and needs in landfalling hurricanes
Perkey, D. J.	Dr. Tom Coleman and Others/ Alabama A&M University	Collaborating in the 1997 Summer Enrichment Program for Women and Minority Undergraduates
Raghavan, R.	Dr. Bart Geerts/Embry Riddle University (Arizona)	Characterizing mesoscale convective systems over the continental United States
Raghavan, R.	Dr. Earle Williams/Parsons Lab, Massachusetts Institute of Technology	Real-time study of total lightning characteristics in Florida thunderstorms
Raghavan, R.	Drs. M. Weber, B. Boldi, E. Williams, A. Matlin/Lincoln Lab, Massachusetts Institute of Technology	Real-time study of total lightning characteristics in Florida thunderstorms
Srivastava, V.	Dr. A. D. Clarke/University of Hawaii	Aerosol microphysics and GLOBE data
Srivastava, V.	Dr. J. Spinhirne/NASA GSFC	Pulsed Nd: Yag lidar data-GLOBE
Srivastava, V.	Dr. R. Menzies/NASA JPL	Pulsed CO ₂ lidar data-GLOBE, MACAWS
Srivastava, V.	Dr. R. D. Pueschel/NASA ARC	FSSP aerosol distribution data-GLOBE, MACAWS
Srivastava, V.	Dr. R. J. Atkinson/Lockheed Martin Corporation	GOES satellite imagery
Wang, S.	Dr. Mark Miller/Brookhaven National Laboratory	Boundary layer chemistry

APPENDIX E

SEMINARS

<u>Date</u>	<u>Title</u>	<u>Name</u>	<u>Affiliation</u>
<u>1997</u>			
June, July, August	No Seminars Scheduled		
May 28	Fractal Characterization in Remote Sensing and GIS	Nina Lam	Louisiana State Univ.
May 21	Teleconnections of Middle East Climate: Physical Reality or Spurious Correlation?	Fong-Chiau Chang Gary Jedlovec	UAH MSFC
May 14	Behind the Scenes Development Activities at CNN Weather	Mike Cavanaugh	CNN Weather
May 8	The Classic Maya Collapse: An Ecological Disaster?	Pat Culbert	Univ. of Arizona
May 6	Linking Atmospheric and Hydrologic Models Through Hydrologic Response Units	Ashutosh Limaye	Utah State University
April 30	New Views of Earth from Radar Satellites	Diana L. Evans	JPL
April 25	Stochastic-Dynamic Hydrologic Forecasting and Its Application to Reservoir Operations in the Pacific Northwest	Young-Oh Kim	Univ. of Washington
April 23	Comparison of Ozone Control Strategies	Robert Imhoff	TVA
April 9	Assessing Impacts of Climate on Water Resources	Eric Barron	Penn State University
April 2	United Nations Environment Programme: Four Years' Experience with Telecom- munications for Environment Information	Ray Arnold	MSFC
March 27	Monitoring of Tropospheric Chemistry from Geostationary Orbit	Mark Abrams	ITT-Aerospace
March 26	Teleconnections of the Central United States Great Plains Drought Episodes over the Last Century (1895-1996)	Fong-Chiau Chang	UAH
March 25	Low-Cost Access to Space: The Future of Space-Based FTS Remote Sensing	Mark Abrams	ITT-Aerospace
March 17	NCEP's Water and Energy Budget Analysis Residuals	John Roads	Scripps Institute
March 13	A New Approach Toward Forecasting the Initial Onset of Damaging Downburst Winds Associated with Mesoscale Convective Systems	Ron Przybylinski	NOAA/NWS

March 12	Modeling and Experimental Verification of Scattering from Complex Atmospheric Particles: Snow, Hail, Aerosols	Vandana Srivastava	USRA
March 7	Mesoscale Modeling at NOAA/FSL with Mesoscale Model MM5	Jennifer Cram	NOAA/FSL
March 5	Lightning Detection from Space: Optical Transit Detection (OTD) Results Update and Lightning Imaging Sensor (LIS) Development and Flight Plans	Hugh Christian	MSFC
February 26	Global Warming—Science of Politics?	John Christy	UAH
February 19	Planners' Use of Intelligence Information (Remote Sensing, etc.) in Advising Public Officials	Donald Outland	Alabama A&M Univ.
February 12	Research in GSFC Atmospheric Chemistry and Dynamics Branch: 25 Years of Atmospheric Observations from Space	P. K. Bhartia	GSFC
February 5	Russian Interoperability with EOSDIS: Results on Visit to Institute of Radio Engineering and Electronics, Russian Academy of Science	Helen Conover	UAH
January 31	The Optical Transient Detector and the LISDAD Project: The Lincoln Laboratory Perspective	Earle Williams	MIT
January 29	Water Vapor and Radiation Interactions During El Nino/La Nina	Pete Robertson	MSFC
January 22	Physical Processes of Marine Boundary Layer Clouds	Shouping Wang	USRA
January 15	Ozone Trends and Issues	Mike Newchurch	UAH
January 8	Land Surface Mesoscale Modeling	Bill Lapenta	MSFC
1996			
December 18	Structure and Mesoscale Organization of 1994 Palm Sunday Tornadoic Storms	Kevin Knupp	UAH
December 11	Satellite Versus Surface Estimates of Global Temperature Since 1979	James Hurrell	NCAR
December 4	Galileo Probe Design and Flight Results	Bernie Dagarin	Hughes STX

November 19	Electric Fields and Charges Inside Thunderstorms	Monte Bateman	Langmuir Lab for Atmos. Research
November 15	An Evaluation of Data Needs for Regulated Flood Frequency Estimation	Rocky Durrans	Univ. of Alabama
November 13	Hydroclimate Research at a Range of Spatio-Temporal Scales	Norm Miller	Lawrence Livermore Labs
November 6	Current NASA Hydrological Processes Research Activities	Jim Arnold	MSFC
October 23	Formation Mechanisms for Uncommon Winter Precipitation Bands	Robert Rauber	Univ. of Illinois
October 16	Huntsville '96 Experiment: Soil Moisture Technology	Steve Wu, Robbie Hood Chip Laymon, Bill Crosson	MSFC USRA
October 9	Russian Interoperability with EOSIDS: Results of Visit to Institute of Radio Engineering and Electronics, Russian Academy of Science	Helen Conover	UAH
October 2	Advances in National Weather Service Forecasts and Warnings	Lou Uccellini	NWS
September 27	Tropical Plumes in a Barotropic Model	Keith Blackwell	Univ. of So. Alabama
September 18	Data Mining Related to Phenomena Observed by Meteorological Satellites	Tom Hinke	UAH
September 11	Sediment and Carbon Flux in a Shallow Coastal Estuary Relative to Global Change and Climatology Issues	James Cruise	UAH
September 6	Biomass Burning, Fires, CO and Radiative Forcing	Sundar Christopher	So. Dakota School of Mines & Tech.
September 4	Short-Range Weather Forecast Experiment and Evaluation for the Tennessee Valley with a High Resolution Nested Regional Spectral Model	Qi Mao	FSU/TVA

APPENDIX F

SCIENTIFIC CONFERENCES AND WORKSHOPS

Year	Conference/Workshop Name	Location	Organized by
1997	International Conference on Environmental Health	London, UK	World Health Organization
1998	Workshop on Environmental Health and Development	Geneva, Switzerland	World Health Organization
1999	International Conference on Environmental Health	London, UK	World Health Organization
2000	Workshop on Environmental Health and Development	Geneva, Switzerland	World Health Organization
2001	International Conference on Environmental Health	London, UK	World Health Organization
2002	Workshop on Environmental Health and Development	Geneva, Switzerland	World Health Organization
2003	International Conference on Environmental Health	London, UK	World Health Organization
2004	Workshop on Environmental Health and Development	Geneva, Switzerland	World Health Organization
2005	International Conference on Environmental Health	London, UK	World Health Organization
2006	Workshop on Environmental Health and Development	Geneva, Switzerland	World Health Organization
2007	International Conference on Environmental Health	London, UK	World Health Organization
2008	Workshop on Environmental Health and Development	Geneva, Switzerland	World Health Organization
2009	International Conference on Environmental Health	London, UK	World Health Organization
2010	Workshop on Environmental Health and Development	Geneva, Switzerland	World Health Organization
2011	International Conference on Environmental Health	London, UK	World Health Organization
2012	Workshop on Environmental Health and Development	Geneva, Switzerland	World Health Organization
2013	International Conference on Environmental Health	London, UK	World Health Organization
2014	Workshop on Environmental Health and Development	Geneva, Switzerland	World Health Organization
2015	International Conference on Environmental Health	London, UK	World Health Organization
2016	Workshop on Environmental Health and Development	Geneva, Switzerland	World Health Organization
2017	International Conference on Environmental Health	London, UK	World Health Organization
2018	Workshop on Environmental Health and Development	Geneva, Switzerland	World Health Organization
2019	International Conference on Environmental Health	London, UK	World Health Organization
2020	Workshop on Environmental Health and Development	Geneva, Switzerland	World Health Organization

Topic**Dates****Location****Meeting of the NOAA Working Group
on Space-Based Lidar Winds**

July 15-17, 1997

North Glenn, CO

Meeting Attendees:

<u>Name</u>	<u>Affiliation</u>	<u>Name</u>	<u>Affiliation</u>
James B. Abshire	NASA/GSFC	Robert Atias	NASA/GSFC
Wayman Baker	NOAA/NWS/NCEP	David Bowdle	UAH/GHCC
Alan Brewer	NOAA	Robert Brown	Univ. of Washington
G. D. Emmitt	Simpson Weather Assoc.	Renny Fields	Aerospace Corp.
Pierre H. Flamant	Ecole Polytechnique (France)	Rex Fleming	NOAA/OGP
Jerry Gelbwachs	Aerospace Corp.	Bruce Gentry	NASA/GSFC
Jim Gurka	NWS	Mike Hardesty	NOAA
Sammy Henderson	Coherent Technologies	Milton Huffaker	Coherent Technologies
Gary Kamerman	Microcraft, Inc.	Michael J. Kavaya	NASA/MSFC
Stephen Mango	NPOESS/IPO	Scott Manilief	TRW
Jack McKay	Remote Sensor Concepts	Tim Miller	NASA/MSFC/GHCC
Gil Moore	Utah State Univ.	Jan Paegle	Univ. of Utah
Madison J. Post	NOAA	Carol Raymond	JPL
Jeffry Rothermel	NASA/MSFC/GHCC	Barry Rye	NOAA
Geary Schwemmer	NASA/GSFC	Ron Schwiesow	Ball Aerospace
Upendra Singh	NASA/GSFC	Bud Sleek	
Gary Spiers	Univ. of Alabama in Huntsville	Christopher Stevens	NASA/JPL
David Tratt	JPL	Vincent Wickwar	Utah State Univ.
Tom Wilkerson	Utah State Univ.	Jim Yoe	NOAA/NESDIS
J. I. Rong Yu	Science Technology Corp.		

CAMEX3 Planning Workshop

March 31-April 2, 1997

Miami, FL

Meeting Attendees:

<u>Name</u>	<u>Affiliation</u>	<u>Name</u>	<u>Affiliation</u>
Alan Cartledge	NASA/Ames Lab	John Molinari	SUNY-Albany
Ramesh Kakau	NASA HQ	Anthony Guillory	NASA/MSFC/GHCC
Gerry Heymsfield	NASA/GSFC	Naomi Surgi	Natl. Hurricane Ctr.
Da-lin Zhang	Univ. of Maryland	Wallace McMillan	U. of Maryland/Baltimore
Edward V. Browell	NASA/Langley Res. Ctr.	Jeffry Rothermel	NASA/MSFC/GHCC
Miriam Baltuck	NASA HQ	Vasubandhu Misra	Florida State Univ.
Melville E. Nicholls	Colorado State Univ.	Lauraleen O'Connor	NPOESS/USAF
Steve Nelson	National Science Foundation	Zhan Zhang	Florida State Univ.
Sean P. McCartney	Computer Science Corp.	James D. McFadden	NOAA/AOC
Robert M. Banta	NOAA/ERL	Lynn K. Nide-Shay	Univ. of Miami
James Franklin	NOAA/HRD	William L. Smith	Univ. of Wisconsin
Edward J. Walsh	NASA/GSFC	Geary Schwemmer	NASA/GSFC
James R. Wang	NASA/GSFC	G. David Emmitt	Simpson Weather Assoc.
Steven Greco	Simpson Weather Assoc.	Robbie Hood	NASA/MSFC/GHCC
T. N. Krishnamurti	Florida State Univ.	Roger Pielke, Sr.	Colorado State Univ.
S. H. Melfi	U. of Maryland-Baltimore	V. Mohan Karyampudi	NASA/GSFC

Frank Marks	NOAA/AOML	Al Gasiewski	Georgia Tech.
Hugh Willoughby	NOAA/HRD	Chris Miller	NASA/Ames Lab
Chris Velden	Univ. of Wisconsin	George Alger	NASA/Ames Lab
Syed Ismail	NASA/Langley	Ed Rappaport	Natl. Hurricane Ctr.
Peter Black	NOAA/HRD	Paul Wills	NOAA/HRD
Sam Houston	NOAA/HRD	John Kaplan	NOAA/HRD
Dean Churchill	Univ. of Miami	Al Moore	NASA/Langley

Lightning Science Workshop (LIS)

March 11-12, 1997

Guntersville, AL

Meeting Attendees:

<u>Name</u>	<u>Affiliation</u>	<u>Name</u>	<u>Affiliation</u>
Marcia Baker	Univ. of Washington	Jim Dye	NCAR/MMM
Paul Krehbiel	New Mexico Tech.	Phil Krider	Univ. of Arizona
John Latham	NCAR/MMM	Steve Rutledge	Colorado State Univ.
Earle Williams	MIT/Parsons Laboratory	Monte Bateman	
Zipsper, Ed	Texas A&M Univ.		

**Meeting of the NOAA
GCIP Group**

November 19, 1996

Huntsville, AL

Meeting Attendees:

<u>Name</u>	<u>Affiliation</u>	<u>Name</u>	<u>Affiliation</u>
Jim Arnold	NASA/HQ	Rick Lawford	NOAA/OGP/GCIP
Alan Betts	Unknown	Ken Mitchell	NOAA/NWS/NCEP
Yongkang Xue	COLA	Ravi Avissar	Rutgers Univ.
Jim Shuttleworth	Univ. of Arizona	Eli Foufoula-Georgiou	Univ. of Minnesota
Robert Houze	Univ. of Washington	Mercedes N. Lakhtakia	Penn State Univ.
Rachel Pinker	Univ. of Maryland	Dan Tarpley	NOAA/NESDIS
John Schaake	NOAA/NWS/Off. of Hydrology	Dennis Lettenmaier	U. of Washington
Konstantin Vinnikov	Univ. of Maryland	Pavel Groisman	UCAR Visiting Scientist at NDC/NOAA
Chet Ropelewski	NOAA/Climate Pred. Ctr.	Jan Paegle	Univ. of Utah
Pete Robertson	NASA/GHCC	Steve Dumolt	Univ. of Oklahoma
Claude E. Duchon	Univ. of Oklahoma	Darren McMicken	Hughes STX
Dale Quattrochi	NASA/GHCC	Richard Dirks	UCAR/JOSS
Bill Lapenta	NASA/GHCC	Don Perkey	IGCRE/GHCC
Scot Loehrer	UCAR/JOSS	Steve Williams	UCAR/JOSS
Hugh Christian	NASA/MSFC	John Roads	Scripps/UCSD
Susan Marshall	UNCC	Gary Bates	NCAR
Jeanne Schneider	NOAA/ERL/NSSL	George Leavesley	USGS
John Leese	GCIP Office	Doug Miller	Penn State Univ.
Robert Dickinson	Univ. of Arizona	Xiaogong Gao	Univ. of Arizona
John H. Brown	NOAA/ERL/Forecast Sys. Lab.	E. Hugo Berbery	Univ. of Maryland
Alan Hall	UCAR/NOAA/NWS Hydrology		

**TVA/UAH Technology
Exchange Meeting**

October 22, 1996

Global Hydrology Climate Center,
Huntsville, AL; University of Alabama in
Huntsville; TVA/Muscle Shoals

Meeting Attendees:

<u>Name</u>	<u>Affiliation</u>
Harold Buie	UAH/CETAC
Ron Ritschard	UAH/JRC
Donald J. Perkey	IGCRE/GHCC
Dick McNider	UAH/ESSL
Tony Zarate	TVA/ERC
Ron Williams	TVA/ERC

<u>Name</u>	<u>Affiliation</u>
David W. Sorrelle	TVA/ERC
Jim Meagher	TVA/ERC
Les Behrends	TVA/ERC
Willie Buchanan	TVA/ERC
John Shipp	TVA/TVAE
Ron Greenwood	NASA/GHCC

APPENDIX G

STUDENTS

<u>Name</u>	<u>Affiliation</u>	<u>Research Area</u>
Doty, Kevin	Drexel University	Impact of Convective Downdrafts on Moisture Budgets
Lecue, Juan	Institute of Space Studies of Catalonia (Spain)	GOES Satellite Remote Sensing
Lerner, Jeff	Univ. of Alabama in Huntsville	Comparison of VAS and SSM/I Precipitable Water
Paech, Simon	Univ. of Alabama in Huntsville	Case Study of the May 18, 1995 "Anderson Hills" Tornado
Ramachandran, Rahul	Univ. of Alabama in Huntsville	NEXTRAD and LDAR Data Applications: Preparing for TRMM Data Analysis
Reid, John	Univ. of Alabama in Huntsville	Lightning Spectrometer Calibration and Testing
*Whitworth, Brandon	Univ. of Alabama in Huntsville	GOES Data Analysis
Wohlman, Richard	Univ. of Alabama in Huntsville	LIS Data Analysis

*Denotes Undergraduate Student

APPENDIX H

K-12, UNIVERSITY AND INDUSTRY VISITORS TO IGCRC

<u>Name</u>	<u>Dates</u>	<u>Affiliation</u>	<u>Reason</u>
Emmitt, Dave	June 2-4	Simpson Weather Assoc.	To collaborate with Dr. Tim Miller and others on the development of a concept for Doppler lidar on the space shuttle
Culbert, Pat	May 7-10	Univ. of Arizona	To collaborate with Dr. Tom Sever and other GHCC scientists to share expertise on the demise of the Mayans
Bergstrom, Jim	May 1-4	Self	To complete the assembly and testing of lightning spectrometers.
Limaye, Ashutosh	April 28-29	Self	To interview with Dr. Ron Ritschard & Dr. Jim Cruise
Kim, Young-Oh	April 23	Self	To interview with Dr. Ron Ritschard & Dr. Jim Cruise
Baker, Marcia	December 14-17	Univ. of Washington	Present research on thunderstorm electrification & collaborate with Dr. Hugh Christian
Bateman, Monte	November 19	Langmuir Lab/ New Mexico Tech	Present research on electric fields and charges inside thunderstorms

APPENDIX I

UNIVERSITY AND INDUSTRY TRAVEL IN SUPPORT OF IGCRE ACTIVITIES

<u>Name</u>	<u>Dates</u>	<u>Affiliation</u>	<u>Reason</u>
Anderson, John	July 14-17	Univ. of Wisconsin	To attend the LIDAR Working Group Meeting in Northglenn, CO
Brown, Robert	July 14-17	Univ. of Washington	To attend the LIDAR Working Group Meeting in Northglenn, CO
Emmitt, Dave	July 14-17	Simpson Weather Assoc.	To attend the LIDAR Working Group Meeting in Northglenn, CO
Krishnamurti, T.	July 14-17	Florida State Univ.	To attend the LIDAR Working Group Meeting in Northglenn, CO
Paegle, Jan	July 14-17	Univ. of Utah	To attend the LIDAR Working Group Meeting in Northglenn, CO
Williford, C. Eric	July 14-17	Florida State Univ.	To attend the LIDAR Working Group Meeting in Northglenn, CO
Krishnamurti, T.	March 30-April 2	Florida State Univ.	To attend the Convection and Moisture Experiment (CAMEX3) Workshop in Miami, FL
Nichols, Melville E.	March 30-April 2	Colorado State Univ.	To attend the Convection and Moisture Experiment (CAMEX3) Workshop in Miami, FL
Pielke, Roger	March 30-April 2	Colorado State Univ.	To attend the Convection and Moisture Experiment (CAMEX3) Workshop in Miami, FL
Baker, Marcia	March 10-14	Univ. of Washington	To attend MTPE/USWRP Lightning Science Workshop and LIS Science Meeting in Guntersville and Huntsville, AL
Bateman, Monte	March 13-14		To attend the LIS Science Meeting in Huntsville, AL

Dye, Jim	March 10-14	NCAR/MMM	To attend MTPE/USWRP Lightning Science Workshop and LIS Science Meeting in Guntersville and Huntsville, AL
Krehbiel, Paul	March 10-14	New Mexico Tech	To attend MTPE/USWRP Lightning Science Workshop and LIS Science Meeting in Guntersville and Huntsville, AL
Krider, Phil	March 10-14	Univ. of Arizona	To attend MTPE/USWRP Lightning Science Workshop and LIS Science Meeting in Guntersville and Huntsville, AL
Latham, John	March 10-14	NCAR/MMM	To attend MTPE/USWRP Lightning Science Workshop and LIS Science Meeting in Guntersville and Huntsville, AL
Rutledge, Stee	March 10-14	Colorado State Univ.	To attend MTPE/USWRP Lightning Science Workshop and LIS Science Meeting in Guntersville and Huntsville, AL
Williams, Earle	March 10-14	MIT/Parsons Laboratory	To attend MTPE/USWRP Lightning Science Workshop and LIS Science Meeting in Guntersville and Huntsville, AL
Zipser, Ed	March 13-14	Texas A&M Univ.	To attend the LIS Science Meeting in Huntsville, AL

APPENDIX J

1997 SUMMER ENRICHMENT PROGRAM

For the 1997 Summer Enrichment Program for Women and Minority Students at Alabama A&M University, 600 announcements were sent to departments of Chemistry, Physics, Computer Science, Plant and Soil Science, Geography and others at approximately 250 colleges and universities throughout the United States and Puerto Rico. Included in the mailings were all Historically Black Colleges and Universities, Historically Spanish Institutions and institutions with a relatively high percentage of Native American students, in addition to other major colleges and universities. Coming from 17 colleges and universities across the country, 18 students participated in this prestigious internship, which was held from June 1 through July 25, 1997. (Two students, Tomeka Prioleau and Mario Thomas, returned from the 1996 program, although an additional two had also been invited.)

During the summer program, the students took a course in Global Change Science and completed a research project with mentors from NASA, Alabama A&M and IGCRE. Several students have expressed an interest in returning for next year's program, which will again accept up to 20 students. Students from the 1997 program are listed below:

<u>1997 SEP Students</u>			
<u>Student/Research Area</u>	<u>University</u>	<u>Major</u>	<u>Class Year</u>
Birvid Atkins/Neural Networks	Stillman College	Computer Science	Junior
Christine Bowman/Hydrologic Modeling	Susquehanna Univ.	Physics/Env. Science	Junior
Stacy Carr/Hydr. Mod.-Soil Data Analysis	Michigan Tech. Univ.	Envir. Engineering	Senior (11/97)
Terrence Ferguson/Soil Data Analysis	Norfolk State Univ.	Pre-Chem. Engineering	Junior
Carol Hayes/Dataset Analysis	Auburn University	Math/Physics Education	Senior (5/98)
Andre Jackson/Soil Moist. Instr.	Lincoln Univ.-PA	Physics	Senior (5/97)
Rohan Kennedy/Soil Moist. Instr.	Marquette University	Electrical Engineering	Senior (12/97)
Dana Kuan/GIS Analysis	Univ. of Maryland	Cartography	Junior
Jennifer McClain/GIS Analysis	Dillard University	Computer Science	Junior
Elvis Niba/Hydr. & Meteor. Modeling	Central State Univ. -OH	Water Resources Mgmt.	Junior
Tomeka Prioleau/Soil Data Analysis	Alabama A&M Univ.	Environmental Science	Senior (5/98)
Susan Rains/Data Analysis-Microwaves	Salisbury State Univ.	Mathematics	Senior (5/97)
Morgan Ruark/Hydr. & Meteor. Modeling	Michigan Tech. Univ.	Civil & Envir. Engrg.	Senior (5/98)
Theresa Soliz/Data Analysis-Crops	CA State Univ. -Monterey	Earth Sys. Sci. & Policy	Senior (5/98)
Stacy Steinfeld/GIS Analysis	Penn State University	Earth Science	Junior
LaToya Suber/Data Analysis-Microwaves	U. of Arkansas-Pine Bluff	Mathematics	Sophomore
Mario Thomas/Soil Moist. Instr.	Jackson State University	Physics	Senior (5/97)
Thomas Yates/Neural Networks	Oakwood College	Mathematics	Junior

1. The first part of the document discusses the importance of maintaining accurate records of all transactions.

2. It is essential to ensure that all data is entered correctly and consistently across all systems.

3. Regular audits should be conducted to verify the accuracy and integrity of the information.

4. The second section covers the various methods used to collect and analyze data.

5. These methods include surveys, interviews, and focus groups, each with its own strengths and limitations.

6. The third part of the document addresses the challenges of data collection and analysis.

7. Common challenges include low response rates, data quality issues, and the complexity of analyzing large datasets.

8. To overcome these challenges, it is recommended to use a combination of methods and to invest in data management tools.

9. The final section discusses the future of data collection and analysis.

10. Emerging technologies such as artificial intelligence and machine learning are expected to revolutionize the field.

11. In conclusion, maintaining accurate records and using effective data collection methods are crucial for success.

12. This document provides a comprehensive overview of the current state of the field and offers practical advice for improvement.

**INSTITUTE FOR
GLOBAL CHANGE RESEARCH AND EDUCATION**

*Jointly operated by the
University of Alabama in Huntsville and Universities Space Research Association*

Annual Report for
September 1, 1995 - August 31, 1996

**“GLOBAL CHANGE RESEARCH RELATED TO THE EARTH’S
ENERGY AND HYDROLOGIC CYCLE”**

Under
Cooperative Agreement: NCC8-22

Submitted to
**THE GEORGE C. MARSHALL SPACE FLIGHT CENTER
MARSHALL SPACE FLIGHT CENTER
HUNTSVILLE, ALABAMA 35812**

by
THE UNIVERSITY OF ALABAMA IN HUNTSVILLE

on behalf of the
**INSTITUTE FOR GLOBAL CHANGE RESEARCH AND EDUCATION
Global Hydrology and Climate Center
977 Explorer Drive
Huntsville, Alabama 35806**

Approved by:

Donald J. Perkey, Director
Institute for Global Change Research and Education

Date

9/10/96

APPENDIX A

STAFF TRAVEL ACTIVITIES

<u>Name</u>	<u>Dates</u>	<u>Location</u>	<u>Reason</u>
Bowdle, D.	6/18-20/96	San Jose, CA	To participate in discussions on a joint satellite Doppler Wind Lidar with Lockheed Martin Corp.
Bowdle, D.	5/28-30/96	Los Alamos, NM	To participate in discussions about joint development of a wind satellite
Bowdle, D.	2/7-9/96	Daytona Beach, FL	To attend meeting of the NOAA Working Group on Space-Based Lidar Winds
Bowdle, D.	11/28-30/95	Boulder, CO	To participate in the Critical Design Review for the Airborne Coherent Lidar for Advanced Inflight Measurements
Bowdle, D.	11/1-3/95	Columbia, MD	To participate in Tropospheric Aerosol Radiative Forcing Observational Experiment Workshop
Bowdle, D.	10/28/95-11/1/95	Columbia, MD	To participate in NASA's Aerosol Interdisciplinary Program Workshop
Bowdle, D.	7/23-27/95	Keystone, CO	To present paper at Coherent Laser Radar Conference
Bowdle, D.	7/19-21/95	Frisco, CO	To attend meeting of the NOAA Working Group on Space-Based Lidar Winds
Bowdle, D.	7/11-14/95	Boulder, CO	To present paper at IUGG/IAMAP Mtg.
Buechler, D.	2/18-27/96	San Francisco, CA	To make two presentations at the AMS Conference on Severe Local Storms
Christy, J.	1/28-2/2/96	Atlanta, GA	To present paper at the 7th Symposium on Global Change Studies at Annual AMS Meeting
Conover, H.	5/20-24/96	Fryazino, Russia	To collaborate with the Institute of Radioengineering and Electronics of the Russian Academy of Sciences

Conover, H.	4/17-18/96	Washington, D.C.	To attend ECS Release B Critical Design Review as a member of the Client Subsystem Detailed Review Team
Conover, H.	8/13-18/95	Greenbelt, MD	To attend ECS Critical Design Review as member of Review Board and representative of MSFC DAAC
Conover, H.	7/16-20/95	Greenbelt, MD	To attend ECS Critical Design Review as a member of Review Board and representative of MSFC DAAC
Conway, D.	6/12-15/96	GSFC, MD	To attend AMSR Team Meeting
Conway, D.	4/23-25/96	Baltimore, MD	To attend AMSR Team Meeting
Cox, G.	6/17-24/96	Rostov-on-Don, Russia	To present seminar on GPS Technology in the classroom
Cox, G.	6/9-16/96	Krasnodar Krai, Russia	To present seminar on environmental education and outreach programs in the U.S.
Cox, G.	3/28-30/96	St. Louis, MO	To make presentation at the National Science Teachers Assoc. Convention in support of NASA's MTPE
Cox, G.	1/25-31/96	Rostov-on-Don, Russia	To provide GIS technology training for public administration
Cox, G.	1/17-24/96	Rostov-on-Don, Russia	To present seminar on BPS technology in the classroom
Crosson, W.	3/20-22/96	Washington, D. C.	To participate in NASA Hydrology proposal review at NASA Headquarters
Crosson, W.	9/18-19/95	State College, PA	To discuss regional modeling assessment at Penn State Univ.
Crosson, W.	8/24-25/95	Calverton, MD	To attend ISLSCP Global Soil Wetness Project Workshop
Cutten, D.	5/28-6/9/96	Ames Research Center, CA	To participate in second NASA MACAWS field experiment

Cutten, D.	8/21-9/9/95	Ames Research Center, CA	To participate in NASA MACAWS field experiment
Drewry, M.	6/24-25/96	Greenbelt, MD	To speak at EOSDIS V0 IMS Metadata meeting
Drewry, M.	4/15-18/96	Washington, D. C.	To attend IEEE Metadata Conference
Drewry, M.	8/13-18/95	Greenbelt, MD	To attend ECS Critical Design Review as a member of Review Board and representative of MSFC DAAC
Drewry, M.	7/16-20/95	Greenbelt, MD	To attend EOSDIS VO Developers meeting as a representative of MSFC DAAC
Driscoll, K.	12/9-16/95	San Francisco, CA	To attend and present at AGU Fall Conference
Hallmark, D.	7/18-23/95	Frisco, CO	To support LIDAR SWG meeting
Lerner, J.	1/28-2/1/96	Atlanta, GA	To attend Annual AMS meeting
Lobl, E.	6/12-15/96	Greenbelt, MD	To attend AMSR Team Meeting and PM SWAMP Meeting
Lobl, E.	4/22-24/96	Baltimore, MD	To attend AMSR Science Team Meeting for coordination of the algorithms assignments
Lobl, E.	12/17-20/95	Greenbelt, MD	To attend AMSR/SC Interface meeting with NASDS and Mitsubishi
Lobl, E.	11/27-30/95	Annapolis, MD	To attend EOS-Payload Panel Meeting
Lobl, E.	10/11-15/95	Boston, MA	To present the terms and definitions at the Microwave Sensors Subgroup Working Group on Calibration and Validation
Lobl, E.	9/19-23/95	Tokyo, Japan	To participate in the first science meeting with Japan and assess the status of AMSR
McCaul, W.	4/30-5/2/96	Tallahassee, FL	To attend meeting of Prospectus Development Team 5, USWRP

McCaul, W.	11/ 7/95	Raleigh, NC	To make presentation at the Training Symposium for Operational Forecasters in the Carolinas and Virginia
McCaul, W.	8/18/95	Lawrence County, TN	To make presentation at the Emergency Management Assoc.
Perkey, D.	1/29-2/2/96	Atlanta, GA	To attend Annual AMS Meeting
Raghavan, R.	12/11-15/95	San Francisco, CA	To present paper at Fall AGU Meeting
Srivastava, V.	10/30-11/5/95	Columbia, MD	To present paper at NASA Aerosol Interdisciplinary Workshop and Tarfox Workshop
Srivastava, V.	8/15-10/4/95	Mountain View, CA	To integrate, calibrate and operate two MSVC Doppler LIDARs for participation in the 1995 MACAWS flight mission
Srivastava, V.	7/23-28/95	Keystone, CO	To present papers at Coherent Laser Radar Topical Meeting
Stewart, M.	10/13-11/3/95	Darwin, Australia	To install lightning direction finder systems to support MCTEX and LIS/TRMM
Wang, S.	2/12-15/96	Williamsburg, VA	To attend and present paper at FIRE III Science Team Meeting
Wang, S.	7/6-8/95	Boulder, CO	To present paper at IUGG meeting

APPENDIX B

PUBLICATIONS AND PRESENTATIONS

Refereed Publications

Submitted

- Spencer, R. W., and W. D. Braswell, 1996: Satellite measurements show no water vapor feedback during post-Pinatubo warm-up. Submitted, *Science*.
- Christy, J. R., 1996: Arctic temperatures above the surface layer from the microwave sounding unit. Submitted, *Arctic Monitoring and Assessment Program's Scientific Report*.
- Spencer, R. W., J. R. Christy, and N. C. Grody, 1996: Analysis of "Examination of 'Global atmospheric temperature monitoring with satellite microwave measurements.'" Submitted, *Climatic Change*.
- Ritchie, A. A. Jr., M. R. Smith, H. M. Goodman, R. L. Schudalla, D. K. Conway, F. J. LaFontaine, D. Moss, and B. Motta, 1996: Critical analyses of data differences between FNMOC and AFGWC-spawned SSM/I data sets. Submitted, *J. Atmos. Sci.*
- D. R. Cutten, J. D. Spinhirne, R. T. Menzies, D. A. Bowdle, V. Srivastava, R. F. Pueschel, A. D. Clarke, and J. Rothermel, 1996: Intercomparison of remote and flight-level measured aerosol backscatter coefficient during GLOBE II Pacific survey mission. Submitted, *J. Geophys. Res.-Atmos.*
- Laymon, C. A., and G. N. Cox, 1995: Project EarthSense: Environmental education using hydrology field measurement sites. Submitted, *Science Education*.
- Lu, H.-I., and T. L. Miller, 1996: Characteristics of annulus baroclinic flow structure during amplitude vacillation. Submitted, *Dynamics of Atmospheres and Oceans*.
- Lu, H.-I., and T. L. Miller, 1996: Wave dispersion in a rotating, differentially-heated fluid model. Submitted, *Dynamics of Atmospheres and Oceans*.
- McNider, R. T., J. A. Song, W. B. Norris, W. L. Chameides, and P. R. Zimmerman, 1996: Interpreting the effect of turbulence on observations made in the convective boundary layer. Submitted, *J. Geophys. Res.*

Accepted

- Crosson, W. L., Duchon, C. E., R. Raghavan, and S. J. Goodman, 1996: Rainfall estimation for central Florida using standard and probability matching method Z-R relationships applied to composite radar data. In press, *J. Appl. Meteor.*
- Driscoll, K. T., and R. J. Blakeslee, 1996: Comment on "Current budget of the atmospheric electric global circuit," by Heinz W. Kasemir. Accepted, *J. Geophys. Res.*
- Knupp, K. R., 1996: Structure and evolution of a long-lived, microburst-producing storm. Accepted, *Mon. Wea. Rev.*
- Ramachandran, R., A. Detwiler, J. Helsdon, P. Smith and V. N. Bringi, 1995: Precipitation development and electrification in Florida thunderstorm cells during CAPE. Accepted, *J. of Geophys. Res.*
- Soman, V. V., J. B. Valdes, and G. R. North, 1996: Estimation of sampling errors and scale parameters using 2-D and 3-D rainfall data analyses. Accepted, *J. Geophys. Res.-Atmos.*
- Mueller, S. V., A. Song, W. B. Norris, S. Gupta, and R. T. McNider, 1996: Modeling pollutant transport during high ozone episodes in the southern Appalachian Mountains. Accepted, *J. Appl. Meteor.*
- Jarzembski, M. A., and V. Srivastava, 1996: Low pressure experimental simulation of electrical discharges above and inside a cloud. Accepted, *J. of Atmos. and Terres. Phys.*
- Betchtold, P., S. K. Krueger, W. S. Lewellen, E. V. Meijgaard, C.-H. Moeng, D. A. Randall, A. van Ulden, and S. Wang, 1996: Modeling a stratocumulus-topped PBL: Intercomparison among different 1D codes and with LES. Accepted, *Bull. Amer. Meteor. Soc.*

Published

- Rothermel, J., D. A. Bowdle, and V. Srivastava, 1996: Mid-tropospheric aerosol backscatter background mode over the Pacific Ocean at 9.1 micrometer wavelength. *Geophys. Res. Lett.*, **23**:3, 281-284.
- Balling, R.C., and J.R. Christy, 1996: Analysis of satellite-based estimates of tropospheric diurnal temperature range. *J. Geophys. Res.*, **101-D8**, 12,827-12,832.

APPENDIX C

EDUCATION ACTIVITIES

<u>Scientist</u>	<u>Date</u>	<u>Location</u>	<u>Activity</u>
Cox, G. N.	July 1996	Huntsville, AL DeSoto State Park, AL	Coordinated and led week-long workshop, "An Earth Science Teacher Training Program for Alabama Teachers"
Laymon, C. A.	July 1996	Huntsville, AL	Presented "Fundamentals of Hydrology" workshop at Earth Science Teacher Training Program for Alabama Teachers
Perkey, D. J.	July 1996	Huntsville, AL	Presented "What Is Global Change?" for Earth Science Teacher Training Program for Alabama Teachers
Cox, G. N.	July 1996	Huntsville, AL Azov, Russia	Coordinated EcoBridge Internet Event, CU-SeeMe video conference with Russian and American high school students
Crosson, W. L.	June-Aug. 1996	Huntsville, AL	Mentored a NASA/Alabama A&M Univ./IGCRE SEP student
Laymon, C. A.	June-Aug. 1996	Huntsville, AL	Mentored a NASA/Alabama A&M Univ./IGCRE SEP student
Soman, V. V.	June-Aug. 1996	Huntsville, AL	Mentored a NASA/Alabama A&M Univ./IGCRE SEP student
Cox, G. N.	June 1996	Rostov-on-Don, Russia	Presented GPS Technology in the Classroom at the Rostov State Pedagogical Institute
Cox, G. N.	June 1996	Huntsville, AL Azov, Russia	Taught GPS instruction and World Wide Web development to Eco-Bridge students and teachers
Crosson, W. L.	June 1996	Huntsville, AL	Lectured Global Climate Change class for NASA/Alabama A&M Univ./IGCRE SEP students at Alabama A&M Univ.
Laymon, C. A.	June 1996	Huntsville, AL	Lectured Global Climate Change class for NASA/Alabama A&M Univ./IGCRE SEP students at Alabama A&M Univ.
Bowdle, D. A.	Apr. 1996	Huntsville, AL	Reviewed written science reports for the High School Div., Alabama Computational Science Expo
Laymon, C. A.	Mar.-May 1996	Huntsville, AL	Mentored five high school students on the Supercomputing Project
Cox, G. N.	Jan. 1996	Rostov-on-Don Russia	Presented BPD Technology in the Classroom at the Rostov State Pedagogical Institute
Crosson, W. L.	Nov. 1995	Huntsville, AL	Lectured Global Climate Change class at Univ. of Alabama in Huntsville

Miller, K. (student)	Alan Gadian UMIST (United Kingdom)	Development of a two-dimensional numerical thundercloud model
Miller, K. (student)	Clive Saunders UMIST (United Kingdom)	Investigation of charge transfer parameterization in relation to lightning type and frequency using a one-dimensional computer model
Miller, K. (student)	Alan Blyth New Mexico Institute of Technology	Role of multithermal dynamics in cloud electrification
Miller, K. (student)	John Latham NCAR	Studying the effect of various cloud parameters on the lightning frequency in a single thundercloud using numerical models
Raghavan, R.	M. Weber, B. Boldi, E. Williams MIT/Lincoln Laboratory	Lightning Mapper pilot study
Srivastava, V.	A. D. Clarke University of Hawaii	Aerosol microphysics data
Srivastava, V.	J. Spinhirne NASA/Goddard	Pulsed Nd: Yag lidar data--GLOBE project
Srivastava, V.	R Menzies NASA/JPL	Pulsed CO ₂ lidar data--GLOBE and MACAWS projects
Srivastava, V.	R. D. Pueschel NASA/ARC	FSSP aerosol distribution data--GLOBE and MACAWS projects
Wang, S.	Christopher Bretherton (Univ. of Washington); Qing Wang (Naval Postgraduate School)	Coastal boundary layers
Wang, S.	Carmen M. Benkovitz and Mark Miller Brookhaven Natl. Laboratory	Boundary layer chemistry

APPENDIX E

EARTH SYSTEM SCIENCE EDUCATION (ESSE) ACTIVITIES

In 1991 the Universities Space Research Association (USRA) and the National Aeronautics and Space Administration (NASA) initiated the Cooperative University-based Program in Earth System Science Education (ESSE). The program concept is designed to create a university-based cooperative effort in Earth Science curriculum development, with a framework that would overcome traditional barriers to interdisciplinary science education. Twenty-two universities were competitively selected to participate in the program initially. During the past year, an additional group of 22 universities submitted successful proposals to join the ESSE program.

The ESSE Program has been conducting workshops for its participants over the past four years. Topics have included hands-on training in the use of Internet resources, the use of modeling software in the classroom (STELLA) and multimedia global change education (GEOSCOPE). A workshop focusing on the physics of remote sensing and geographic information systems was conducted for the ESSE participants in November 1995 in Santa Barbara, CA. The most recent ESSE steering meeting was held at the NASA-sponsored Classroom of the Future facility in Wheeling, West Virginia, in August 1996. The ESSE program has also supported the participation of graduate teaching assistants and faculty in the NASA/GSFC Summer Lecture Series.

ESSE Associated Travel

ESSE Curriculum Development Workshop

Berkeley Springs, WV

August 11-16, 1996

Participant

Aker, B.
 Berkman, P.
 Edelson, D.
 Fisher, G.
 Gregoret, A.
 Jones, C.
 Lerman, A.
 Morris, G.

Other ESSE Travel Activities

<u>Traveler</u>	<u>Affiliation</u>	<u>Dates</u>	<u>Destination and Purpose of Travel</u>
Johnson, D.	University of Wisconsin	1/28/96-2/4/96	Atlanta, to attend AMS Annual Meeting and participate in the Education and Global Change sessions
Ruzek, M.	USRA	12/9-16/95	San Francisco, to attend Fall AGU Meeting and meeting at Lawrence Hall of Science (Berkeley)
Johnson, D.	University of Wisconsin	12/7-15/95	San Francisco, to attend Fall AGU Meeting
Johnson, D.	University of Wisconsin	11/25-20/95	Santa Barbara and Long Beach, CA to lead ESSE Workshop on Remote Sensing and GIS in the Classroom, and to meet with Project ALERT re: Earth System Science Education
Mackenzie, F.	University of Hawaii	11/6-11/95	Northwestern University, to lecture on "Industrial and Agricultural Emissions of Atmospheric Gases," "The Role of Coastal Ocean in Climate Change" and "Biogeochemistry of the Carbon Cycle"
Ruzek, M.	USRA	10/16/95	To University of Michigan (Ann Arbor) to attend NRC/NSF Regional Symposium for Undergraduate Science, Math, Engineering and Technology Education

APPENDIX F

SEMINARS

<u>Date</u>	<u>Title</u>	<u>Name</u>	<u>Affiliation</u>
<u>1996</u>			
June 26	Climate Variability Studies Using NCAR GCM's	Robert J. Oglesby	Purdue Univ.
May 29	Ozone Sulfate and Regional Climate Change	Bill Chameides	Georgia Tech
May 22	Russian EcoBridge: Russian-American Secondary Environment Research	Greg Cox	UAH
May 15	Hierarchy of Mesoscale Models and Recent Results from the EURBMET/TVM Model	Robert Bornstein	San Jose State Univ.
May 8	Dynamic Influence of Antarctic Continent on Current Climate	Tom Parish	Univ. of Wyoming
May 1	What is the Link Between the South Atlantic Tropospheric Ozone Maximum and Biomass Burning? Answers from Satellite and the 1992 SAFARI and TRACE-A Experiments	Anne Thompson	GSFC
April 25	Photochemical Modeling Plan Using Atmospheric Science in K-12 Education	Perry Samson	Univ. of Michigan
April 24	Decision Support System for Water Resource Management	A. P. Georgakakos	Georgia Tech
April 17	Modeling Topographic Effect of Digital Remotely Sensed Data	Ahmed Fahsi	Alabama A&M Univ.
April 3	Simulation and Evaluation of Meteorology and Chemistry at a Rural SOS Superchemistry Site	Arastoo (Alan) Biazar	UAH
March 28	Variability of Integrated Water Content from GOES Pathfinder Data	Anthony Guillory	MSFC
March 20	Microwave Measurements of Soil Moisture in Hydrometeorology	Ted Engman	GSFC
March 13	The Role of Soil Water in Hydrometeorology	Konstantino Georgakakos	Hydrologic Research Center
March 7	Numerical Study of Propagation of Gravity Waves from Lower Atmosphere into Lower Thermosphere	Mike Hickey	UAH
March 6	Global Positioning System (GPS)/ Meteorology and Use for Climate and Global Change Studies	Rick Anthes	UCAR
February 27	Experiences in Orbit on the Space Shuttle	Fred Leslie	MSFC
February 21	Precipitating Cloud Systems and Global Climate Problems	Mitch Moncrief	NCAR
February 14	A Regional-Scale Four-Dimensional Data Assimilation with the RAMS-3A Model Incorporating the NMCETA Forecast and the Satellite GOES VIS/IR Data Over Complex Terrain	Jeff Lerner	UAH

January 25	Precipitable Water Variability Using SSM/I and GOES VAS Pathfinder Data Sets	Jeff Lerner	UAH
January 18	Water Vapor Feed Back Deduced from Interannual Variability in ERBE Fluxes	Pete Robertson	MSFC
January 17	Satellite Simulation of Passive Microwave Ocean Wind Vector Remote Sensing	Robbie Hood	NASA
January 10	Testing validity of SSM/I Latent Heat Retrieval with Large Scale Diagnostic Budget and Zonal Balance Mode	Eric Smith	Florida State Univ.

1995

December 13	Statistical versus Physical Retrieval Methods for Water Vapor From SSM/T-2	Danny Braswell	NRC
December 6	Integrated Water Content Retrieved from Goes 7 and 8	Ron Suggs	MSFC
November 29	Improved Space Time Model for Visualization and Analysis	Mike Botts	UAH
November 20	Designing the TOMS (Total Ozone Mapping Spectrometer)	Bob Hudson	Univ. of Maryland
November 15	Comparison of SAGE Ozone Measurement to Umker Observing System Retrieved Ozone Profiles	Jing Cao	UAH
November 8	Modeling Pollutant Transport in the Southern Appalachian Mountains	Steve Mueller Benjie Norris	TVA UAH
November 7	Tornadoes Spawned by Tropical Cyclones	E. W. McCaul, Jr.	USRA
November 1	Effects of Clouds on the Urban Heat Island	Oskar Essenwanger	UAH
October 25	A View of Lightning from the Space Shuttle, Red Sprites and Blue Jets	O. H. "Skeet" Vaughan	MSFC
October 18	Integrated Scientific Data Systems	Sara Graves	UAH
October 11	New Geostationary Satellite Series (GOES 8)	Gary Jedlovec	MSFC
October 4	Visualization of 4-D Atmospheric Data Sets	Paul Meyer	MSFC
September 27	Severe Thunderstorms Forming Along Low Level Shear Boundaries	Robert Clymer	UAH
September 20	Effects of Clouds on the Urban Heat Island	Oskar Essenwanger	UAH
September 13	Microwave Measurements and Climate	Roy Spencer	MSFC
September 6	Results from the MSFC On-Orbit Optical Transient Detector Lightning Sensor	Hugh Christian	MSFC

APPENDIX G

SCIENTIFIC CONFERENCES AND WORKSHOPS

Topic**Dates****Location**

**Meeting of the NOAA
Working Group on
Space-Based LIDAR Winds**

July 10-12, 1996

Frisco, CO

Meeting Attendees:

<u>Name</u>	<u>Affiliation</u>	<u>Name</u>	<u>Affiliation</u>
Bruce Gentry	NASA/GSFC	Vernon Keller	NASA/MSFC
Julie Williams-Byrd	NASA/LaRC	Jim Butts	bd System
Farzin Amzajerdian	Univ. of Alabama/Huntsville	Eric Williford	Florida State University
Milton Huffaker	Coherent Technologies	Freeman Hall	Harrin Consultants
Bob Otto	Lockheed Martin	Stan Czyzuk	Phillips Lab
Bob Menzies	JPL	Stephen Mango	NPOESS/IPO
Steve Moody	ORCA Photonic Systems	James L. Duda	NPOESS/IPO
Hilmer Swenson	NPOESS/Aerospace	Steve Czuchlewski	L.A.N.L.
Jerry Gelbwachs	The Aerospace Corp.	Barry Rye	CIRES (CU/NOAA)
Alain Dabas	Meteo-France	G. Daniel Hickman	NRL/FALCON
Jim Yoe	NOAA/NESDIS	Michael J Kavaya	NASA/MSFC
Jeff Sroga	Lockheed Martin	Renny Fields	Aerospace Corp.
Ron Greenwood	NASA/GHCC	Pierre H. Flamant	Ecole Polytechnique
Rod Frehlich	Univ. of Colorado/CIRES	Jacques Pelon	Univ. of Paris/CNRS
Ron Koczor	NASA/MSFC	Bob Atlas	NASA/Goddard
Richard Beranek	MSFC/GHCC	Ron Schwiesow	Ball Aerospace
Jim Kao	Los Alamos Natl. Lab	Scott Manlief	TRW
Gary Spiers	Univ. of Alabama/Huntsville	Russell Targ	Lockheed Martin
Madison J. Post	NOAA/ETL	R. A. Brown	Univ. of Washington
Jan Paegle	Univ. of Utah	Arnold Oldach	UPS Airlines
Rex J. Fleming	NOAA/OGP	John F. Schultz	Los Alamos Natl. Lab
Wayman Baker	NOAA/NWS/NCEP	David Bowdle	Univ. of Alabama/Huntsville
John Anderson	University of Wisconsin		

**Meeting of the NOAA
Working Group on
Space-Based LIDAR Winds**

February 7-9, 1996

Daytona Beach, FL

Meeting Attendees:

<u>Name</u>	<u>Affiliation</u>	<u>Name</u>	<u>Affiliation</u>
Bob Atlas	NASA	Wayman Baker	NOAA/NCEP
Norman Barnes	NASA/Langley	David Bowdle	IGCRE/GHCC

APPENDIX H

STUDENTS

Name

Affiliation

Research Topic

Doty, K.

Drexel Univ.

Impact of Convective Downdrafts
on Moisture Budgets

Lemer, J.

Univ. of Alabama in Huntsville

Comparison of VAS and SSM/I
Precipitable Water

Miller, K.

Univ. of Manchester, England

Lightning Frequency

Paech, S.

Univ. of Alabama in Huntsville

Case Study of the May 18, 1995
"Anderson Hills" Tornado

APPENDIX I

K-12, UNIVERSITY AND INDUSTRY VISITORS TO IGCRE

<u>Name</u>	<u>Dates</u>	<u>Affiliation</u>	<u>Reason</u>
Mulligan, J.	7/96	Arkansas K-12 Teacher	NASA Science Teacher Enhancement Program
Sisk, J.	7/96	Tennessee K-12 Teacher	NASA Science Teacher Enhancement Program
Oglesby, R.	6/23/96-7/02/96	Purdue University	Work with Dr. Pete Robertson and present seminar on "Climate Variability Studies Using NCAR GCMs"
Solakiewicz, R.	6/3-8/9/96	Chicago State Univ.	Work with Dr. William Koshak on new type of atmospheric electric field sensor
Latham, J.	3/18-22/96	Univ. of Colorado	Collaborate with NASA and IGCRES scientists on development of energy budget/prediction algorithms and determination of lightning initiation thresholds
Soman, V.	1/11-12/96	Texas A&M Univ.	Interview for Research Associate position and present seminar on statistical sampling errors in rainfall observations
Coleman, P.	10/25-26/95	Univ. of California, Los Angeles	Attend the IGCRES Executive Board Meeting
Few, A.	10/25-26/95	Rice Univ.	Attend the IGCRES Executive Board Meeting
Johnson, D.	10/25-26/95	Univ. of Wisconsin	Attend the IGCRES Executive Board Meeting
Sohn, B. J.	7/1-9/1/95	Seoul National Univ.	Perform scientific research studies with IGCRES and NASA scientists in the GHCC

APPENDIX J

UNIVERSITY AND INDUSTRY TRAVEL IN SUPPORT OF IGCRE ACTIVITIES

<u>Name</u>	<u>Dates</u>	<u>Affiliation</u>	<u>Reason</u>
Krishnamurti, T.	8/26-29/96	Florida State Univ.	Present paper at CAMEX Workshop in Washington, D. C.
Nicholls, M.	8/26-29/96	Colorado State Univ.	Present paper at CAMEX Workshop in Washington, D. C.
Surgi, N.	8/26-29/96	National Hurricane Center	Present paper at CAMEX Workshop in Washington, D. C.
Brown, B.	2/5-9/96	Univ. of Washington	Participate in the Lidar Working Group Meeting, Daytona Beach, FL
Emmitt, D.	2/5-9/96	Simpson Weather Assoc.	Participate in the Lidar Working Group Meeting, Daytona Beach, FL
Krishnamurti, T.	2/5-9/96	Florida State Univ.	Participate in the Lidar Working Group Meeting, Daytona Beach, FL
Molinari, J.	2/5-9/96	S.U.N.Y. at Albany	Participate in the Lidar Working Group Meeting, Daytona Beach, FL
Paegle, J.	2/5-2/9/96	Univ. of Utah	Participate in the Lidar Working Group Meeting, Daytona Beach, FL
Emmitt, D.	9/19-22/95	Simpson Weather Associates	Present paper at two workshops at the European Space Research and Technical Center, The Netherlands

APPENDIX K

1996 SUMMER ENRICHMENT PROGRAM

For the 1996 Summer Enrichment Program for Women and Minority Students at Alabama A&M University, 375 announcements were sent to departments of Chemistry, Physics, Computer Science, Plant and Soil Science, Geography and others at approximately 200 colleges and universities throughout the United States and Puerto Rico. Included in the mailings were all Historically Black Colleges and Universities, Historically Spanish Institutions and institutions with a relatively high percentage of Native American students, in addition to other major colleges and universities. Approximately 250 students requested applications, and 150 completed ones were received. Only 10 students were chosen for this prestigious internship, which was held from June 3 through August 9.

During the summer program, the students took a course in Global Change Science, participated in a field project in remote sensing of soil moisture, and completed a research project with mentors from Alabama A&M and IGCRC. Several students have expressed an interest in returning for next year's program, which will accept up to 20 students. Students from the 1996 program are listed below:

1996 SEP Students

<u>Student/Research Area</u>	<u>University</u>	<u>Major</u>	<u>Class Year</u>
Latricia Birgan/Soil Hydrology	Alabama A&M Univ.	Math	Senior
Barbara Cosgriff/Computer Science	Fayetteville State Univ.	Computer Science	Junior
Lucretia Jones/Hydrologic Modeling	Miles College	Chemistry	Junior
Carrie Kienenberger/GIS Analysis	Univ. of Oklahoma	Geophysics	Sophomore
Latousha Parker/GIS Analysis	Norfolk State Univ.	Biology	Junior
Tomeka Prioleau/Soil Data Analysis	Alabama A&M Univ.	Environmental Science	Sophomore
Malinda Taylor/Micrometeorology	Univ. of Maryland	Geography	Junior
Mario Thomas/Instrumentation	Jackson State Univ.	Physics	Junior
Kim Williams/Instrumentation	Spelman College	Chemistry/Chemical Engr.	Junior
Ann Zawistoski/Hydrologic Modeling	Carleton College	Geology	Junior

STAFF TRAVEL ACTIVITIES

<u>Name</u>	<u>Dates</u>	<u>Location</u>	<u>Reason</u>
Bowdle, D.	1/24-26/95	Boulder, CO	Present Design Review model to ACLAIM
Bowdle, D.	1/30-2/2/95	Tampa, FL	To attend Lidar WGM
Buechler, D.	5/27-6/2/95	Baltimore, MD	To attend AGU spring meeting
Christy, J.	1/15-19/95	Dallas, TX	To attend AMS Annual Meeting
Christy, J.	5/29-6/2/95	Baltimore, MD	To attend AGU spring meeting
Conover, H.	2/5-12/95	Greenbelt, MD	To attend EOSDIS information management system development team meeting
Crosson, W.	1/15-22/95	Dallas, TX	To attend AMS Annual Meeting
Crosson, W.	5/31-6/4/95	Greenbelt, MD	To attend Evapotranspiration Meeting
Crosson, W.	6/12-13/95	Reston, VA	To attend NASA Space Grant Conference
Crosson, W.	6/14-16/95	Washington, DC	To attend Global Hydrology Workshop
Drewery, M.	8/28-9/1/94	Landover, MD	To attend EOSDIS Data modeling meeting
Drewry, M.	2/5/12/95	Greenbelt, MD	To attend EOSDIS information management development team meeting
Drewry, M.	4/23-29/95	Landover, MD	To attend DBA training
Drewry, M.	5/3-6/95	Landover, MD	To attend Data modeling working group meeting
Drewry, M.	6/18-24/95	Landover, MD	To attend Oracle DBA II Class/Miaco Corp/support of MSFC VODAAC (EOSDIS)
Graves, S.	11/28-12/1/94	Landover, MD	To attend User Working Group meeting for MSFC DAAC
Graves, S.	6/14-16/95	Washington, DC	To attend Global Hydrology Workshop
Hallmark, D.	1/28-2/2/95	Clearwater, FL	To support LIDAR SWG meeting
Laymon, C.	9/29-10/08/94	Oklahoma	Set up instruments and collect data during space shuttle mission

Laymon, C.	5/29-6/2/95	Baltimore, MD	To attend AGU spring meeting
Lobl, E.	4/18-21/95	Mt. View	Present C-STAR at systems review at AMES, investigate collaboration with JPL and WINDRAD
Lobl, E.	2-1-2/95	Greenbelt, MD	To attend MIMR Science Team meeting
Lobl, E.	2/22-26/95	Los Angeles, CA	To attend JPL meeting
Lobl, E.	6/13-14/95	Greenbelt, MD	To attend PMMI GSFC
McCaul, W.	1/15-22/95	Dallas, TX	To attend AMS Annual Meeting
Perkey, D.	5/14-19/95	Monterey, CA	To attend AMIP meeting
Perkey, D.	6/14-16/95	Washington, DC	To attend Global Hydrology Workshop
Perkey, D.	3/12-14/95	University of Wisconsin	Collaborate with researchers on water vapor projects
Srivastava, V.	7/23-28/95	Mountain View, CA	To integrate, collaborate and operate two MSFC Doppler LIDARS
Srivastava, V.	8/15-10/4/95	Mountain View, CA	To integrate, collaborate and operate two MSFC Doppler LIDARS
Srivastava, V.	8/30-9/03/94	UCLA	To attend 4th International Aerosol Conference
Stewart, M.	11/29-12/2/94	Washington, DC	Calibration check of OTD
Stewart, M.	3/26-27/95	Vandenburg AFB, CA	Perform check on OTD
Stewart, M.	3/3-7/95	Vandenburg AFB, CA	To perform check of OTD in Microlab spacecraft
Wang, S.	6/5-10/95	Beijin, PRC	To attend Pacific Science Congress
Wang, S.	8/15-21/94	Boulder, CO	To attend Cloud Modeling Workshop

APPENDIX B

PUBLICATIONS AND PRESENTATIONS

- Beaumont, B., H. Conover, T. Hinke, and S. Graves, 1995:** Scientific data access for EOSDIS: A look into information management at the Marshall Space Flight Center Distributed Active Archive Center. Submitted to *Information & Management: The International Journal of Information Systems Applications*.
- Bowdle, D.A., 1994:** Aerosol backscatter modeling at 2 μm . Presented at *National Aeronautics and Space Administration Technical Working Group Meeting on the Airborne Coherent Lidar for Advanced Inflight Measurements (ACLAIM)*, Boulder, CO, 21-22 Sept.
- Bowdle, D.A., 1995:** Tropospheric aerosol backscatter modeling at 2 μm wavelength. Presented at *National Aeronautics and Space Administration Preliminary Design Review for the Airborne Coherent Lidar for Advanced Inflight Measurements (ACLAIM)*, Boulder, CO, 25-26 Jan.
- Bowdle, D.A., 1995:** Tropospheric aerosol backscatter modeling. Presented at *United States Air Force Second Integrated Product Team Meeting for the Affordable Low Observable Air Data System (ALOADS)*, Dayton, OH, 2-4 May.
- Bowdle, D.A., 1995:** Multiwavelength tropospheric aerosol backscatter model. Presented at: *Radiative Processes in Climate Symposium, International Association of Meteorology and Atmospheric Physics (IAMAP) Program, International Union of Geodesy and Geophysics (IUGG) XXI General Assembly*, Boulder, CO, 2-14 Jul. (In press).
- Baker, W.E., G.D. Emmitt, P. Robertson, R.M. Atlas, J.E. Molinari, D.A. Bowdle, J. Paegle, R.M. Hardesty, R.T. Menzies, T.N. Krishnamurti, R.A. Brown, M.J. Post, J.R. Anderson, A.C. Lorenc, T.L. Miller, and J. McElroy, 1995:** Lidar measured winds from space: An essential component for weather and climate prediction. *Bull. Amer. Meteor. Soc.*, 76, 869-888.
- Rothermel, J., D.M. Chambers, M.A. Jarzembki, D.A. Bowdle, V. Srivastava, and W.D. Jones, 1995:** Continuous-wave focused CO2 Doppler lidars for atmospheric backscatter measurements. Submitted to *Appl. Opt.*, First review completed, resubmitted.
- Bowdle, D.A., V. Srivastava, D.R. Cutten, E.W. McCaul, J. Rothermel, and M.A. Jarzembki, 1995:** The GLOBal Backscatter Experiment (GLOBE): Overview, results, and applications. Presented at *8th Coherent Laser Radar Conf.*, Keystone, CO, 23-27 Jul.
- Bowdle, D.A., V. Srivastava, M.A. Jarzembki, J. Rothermel, D.M. Chambers, and D.R. Cutten, 1995:** Multiwavelength comparison of modeled and measured remote tropospheric aerosol backscatter over Pacific Ocean. Submitted to *J. Geophys. Res.*
- Braswell, W.D., and R.W. Spencer, 1995:** Diurnal differences in thick layer temperatures from TOVS MSU temperature fields, Presented at *Spring American Geophysical Union Meeting*, Baltimore, MD, 30 May - 2 Jun.
- Braswell, W.D., and R.W. Spencer, 1995:** Diurnal differences in thick layer temperatures: Observations from MSU and tidal theory comparisons. To be submitted to *J. Geophys. Res.*
- Braswell, W.D., and R.W. Spencer, 1996:** Comparison of statistical and physical methods for retrieval of humidity profiles from SSM/T2. Submitted to *Conf. on Satellite Meteorology and Oceanography*.
- Spencer, R.W., and W.D. Braswell, 1995:** Microwave sounding unit six-hourly datasets for climate and process studies. Presented at *Spring American Geophysical Union Meeting*, Baltimore, MD, 30 May - 2 Jun.
- Spencer, R.W., and W.D. Braswell, 1996:** Water vapor feedback in the tropics deduced from SSM/T2 water vapor and MSU temperatures. Submitted to *Symp. on Global Change Studies*.
- Buechler, D.E., M. Cammarata, and E.W. McCaul, 1996:** Observations of shallow supercells during a major tornado outbreak. Submitted to *AMS 18th Severe Storms Conf.*, San Francisco, CA, Feb.
- Buechler, D.E., S.J. Goodman, E.W. McCaul, and K. Knupp, 1996:** Cloud-to-ground lightning activity during tornadic storms in the Tennessee Valley. Submitted to *AMS 18th Severe Storms Conf.*, San Francisco, CA, Feb.
- Buechler, D.E., R. Raghavan, M. Smith, P. Meyer, and S. Goodman, 1995:** Lightning and rainfall maps of the United States for climate and hydrology Studies, 1995. Presented at *International Union of Geodesy and Geophysics (IUGG) XXI, General Assembly*, Boulder, CO, 2-14 Jul.

Buechler, D.E., R. Raghavan, M. Smith, P.J. Meyer, S.J. Goodman, and H.J. Christian, 1995: Rainfall and lightning variability over the United States. Presented at *Spring American Geophysical Union Meeting*, Baltimore, MD, 30 May - 2 Jun.

Christy, J.R., 1994: Revising global tropospheric and stratospheric temperatures due to satellite orbit-time degradation. *Proc. 19th Climate Diagnostics Workshop*, College Park, MD, 15-19 Nov.

Christy, J.R., 1995: Temperature above the surface layer. *Climatic Change* (In Press).

Christy, J.R., 1995: Forcing factors on the global lower tropospheric and stratospheric temperatures. *Proc. AMS 6th Symp. Global Change*, Dallas TX, 16-20 Jan.

Christy, J.R., 1995: Optimizing the merging strategy of MSU satellite data. Presented at the *Spring American Geophysical Union Meeting*, Baltimore, MD, 1 Jun.

Christy, J.R. and J. Goodridge, 1995: Precision global temperatures from satellites and urban warming effects of non-satellite data. *Atmos. Environ.* (In press)

Christy, J.R., R.W. Spencer, and R.T. McNider, 1995: Reducing noise in the MSU daily lower-tropospheric global temperature dataset. *J. Climate*, 8, 888-896.

Allen, M.R., J.R. Christy, M.J. Murray and C.T. Mutlow, 1994: Potential impact of satellite-derived data sets on global change detection. *Proc. 19th Climate Diagnostics Workshop*, College Park MD, 15-19 Nov.

Hnilo, J.J. and J.R. Christy, 1995: Comparison of GCM and MSU temperatures for the AMIP experiment. Presented at *Global Change Conference*, Tuscaloosa, AL, 27 Apr.

Conover, H., 1994: MSFC DAAC IMS status, *Earth Science Information Systems Configuration Control Board*, Huntsville, AL., 3 Oct.

Conover, H., 1994: MSFC DAAC software development current status, Presented at *Earth Science Information Systems Configuration Control Board*, Huntsville, AL, 7 Nov.

Conover, H., 1994: Information Management Systems: Status and plans, Presented at *Hydrologic Cycle Data Access And Archive Working Group*, Landover, MD., 1 Dec.

Conover, H., 1994: How to use the IMS, Class for *MSFC DAAC User Services*, Huntsville, AL, 15 Dec.

Conover, H., 1995: MSFC DAAC software development current status, Presented at *Earth Science Information Systems Configuration Control Board*, Huntsville, AL, 6 Feb.

Conover, H., 1995: MSFC DAAC IMS current status and development priorities, Presented at *EOSDIS V0 IMS Development Team Meeting*, Greenbelt, MD, 8 Feb.

Conover, H., 1995: Review of IMS team meeting, Presented at *Earth Science Information Systems Configuration Control Board*, Huntsville, AL, 6 Mar.

Conover, H., 1995: Information management and software development current status, Presented at *Earth Science Information Systems Configuration Control Board*, Huntsville, AL, 3 Apr.

Conover, H., 1995: Information management and software development current status, Presented at *Earth Science Information Systems Configuration Control Board*, Huntsville, AL, 1 May.

Conover, H., 1995: Version 0 data and information access systems, Presented at *Hydrologic Cycle Data Access and Archive Working Group*, Huntsville, AL, 22 Jun.

APPENDIX C

EDUCATION WORKSHOPS

<u>Topic</u>	<u>Dates</u>	<u>Location</u>
<u>GPS Technology in the Classroom</u> Attended by 25 teachers from the Rostov region	Oct. 1994	Rostov State Pedagogical Institute Rostov-on-Don, Russia
<u>GIS Technology for Public Administration</u> A seminar for professional level managers and department heads from the Rostov region.	Oct. 1994	Rostov Regional Environmental Protection Agency, Rostov-on-Don
<u>GLOBE Program - Train-the-Trainer Workshop</u> Attended by 48 professional educators and scientists.	Feb. 1995	UAH Campus
<u>Co-Hosted Live Satellite Video Conference</u> <u>NASA "On the Cutting Edge" Educational</u> <u>EOSDIS Video Program</u> Broadcast live to hundreds of schools in North America. Rebroadcast dozens of times over the last several months.	Feb. 1995	Global Hydrology and Climate Center
<u>Environmental Education and Outreach Programs in the United States. First Annual Environmental Management Symposium</u> Attended by 50+ educators, professionals, and environmental managers.	May 1995	Primosko-Aktarsk Krasnodar Krey, Russia
<u>GLOBE Program Teacher Workshops (2)</u> First workshop attended by 36 teachers. Second workshop attended by 32 teachers.	Jul. 1995	UAH Campus
<u>EarthSense Teacher Workshop</u> Attended by 25 teachers from around Alabama.	Jul. 1995	Global Hydrology and Climate Center and DeSoto State Park
<u>U.S. Global Change Forum</u> <u>Southeastern Region Delegation</u> Attended by 25 educators, scientists, and administrators from around AL, GA, FL, NC, SC.	Aug. 1995	Global Hydrology and Climate Center

Contributions to Various Other Programs

Summer 1995

Huntsville, AL

1. UAH Summer Explorations Program - GTS activity
2. Camp Botanica HSV Botanical Gardens - GTS activity
3. EcoBridge students and teachers - GPS instruction

150 kids in total for all of these activities

APPENDIX D

UNIVERSITY AND INDUSTRY COLLABORATIONS

ScreenScope, Inc., (Mr. Hal Weiner)

4/21/95-8/31/95

To inspire young people with new insights into the natural processes that govern the Earth and tell tens of millions of students about changes that may occur in the atmosphere, on the land, and in the oceans as a result of human activities. Features five one-hour television specials each year that will illustrate how the Earth works as a system.

Lassen Research, (Mr. Robert Lee)

9/94-8/95

To gather a database of high-resolution measurements of aerosol particle density and the two-dimensional atmospheric flow fields associated with those measurements.

Nichols Research Corporation, (Ms. Anita Hall)

To perform the following tasks: Information Systems Research and Implementation; IGCRE Facilities Startup; Ozone/Temperature Correlation Analysis.

University of Bristol, (Dr. Eric C. Barrett)

9/1/94-1/31/95

The WETNET Project: Rainfall Algorithm Intercomparison and Development Intercomparison and Development, Stage VI Part Two.

2/1/94-8/31/95

Stage VII (Continuation of work).

Drexel University, (Mr. Scott Dembek)

7/1-8/31/95

To develop, maintain, and test the evolving code for the Limited Area Mesoscale Prediction System (LAMPS); test codes to diagnose atmospheric moisture and energy budgets as applied to LAMPS and other model simulations. Included working with (a) Donald Perkey, IGCRE and NASA scientist Dr. Franklin Robertson to develop and test cloud radiation diagnostics; Charles Cohen to test new cloud and ice parameterization in the LAMPS model, (b) NASA scientists Dr. Franklin Robertson and Mr. Kevin Doty to modify the LAMPS code to run across the equator and the international dateline.

University of Manchester, (Dr. John Latham)

9/1/94-2/28/95

Work with Dr. Hugh Christian on research directed toward assessing the value of the lightning mapper sensor; To develop energy budget/prediction algorithms to correlate cloud dynamics and precipitation with lightning and electric field measurements; Analyze radar aircraft-based cloud microphysical and electric field data from the caPE and TOGA-COARE experiments. Compare and correlate analyses with predictions of the formation of precipitation and the generation/distribution of electric fields in clouds from current understanding and the results of explicit cloud physics models; Interpret LIS observations and analyses in terms of accepted cloud microphysical and electrification theories; Based on the interpretation of the existing LIS database, to develop as feasible specific concepts with regard to the categorization of the electrical properties of tropical clouds on the basis of cloud type and stage of cloud development.

APPENDIX E

EARTH SYSTEM SCIENCE EDUCATION (ESSE) ACTIVITIES

In 1991 the Universities Space Research Association (USRA) and the National Aeronautics and Space Administration (NASA) initiated the Cooperative University-based Program in Earth System Science Education (ESSE). The program concept is designed to create a university-based cooperative effort in Earth Science curriculum development, with a framework designed to overcome traditional barriers to interdisciplinary science education. Twenty-two universities were competitively selected to participate in the program.

The direct and indirect accomplishments of the ESSE Program are many. In the last year of the Program nearly 4000 students were enrolled at the twenty-two universities in ESSE sponsored survey and senior courses, with well over 100 professors and teaching assistants directly involved. In the 1993-1994 academic year with twenty-two universities, enrollments were 3304 and 562 in the survey level and senior levels respectively. Reporting on the 1994-1995 academic year is not yet complete.

Development of formalized Earth Systems programs has been stimulated within many of the ESSE universities based on visibility of NASA/USRA sponsorship of ESSE and internal leveraging of funds. In part stimulated by ESSE, and concurrent with participation in ESSE, undergraduate Earth Systems degree programs are being developed and evolved at Penn State University, New York University and Stanford. Other ESSE universities have established certificate programs for elective work having an Earth System Science emphasis, coupled with B.S. and B.A. degrees in a parent discipline. Earth Systems courses have been formally accepted into the general university curriculum and are being offered at ESSE schools as a result of the commitment shown by NASA to education and the development of such courses. Geology Departments in particular have openly embraced ESSE in evolving their curriculum from emphasis on mineral resources and oil exploration to holistic concepts of the Earth System.

Many ESSE participants have also been able to exploit the visibility provided by participation in ESSE to attract additional resources from other state and national activities as a means to further enhance their local efforts. For example, Professor Ellen Mosley-Thompson, principal participant at Ohio State, has secured funding from Batelle for Earth Systems K-12 education within the state. Professor Catherine Gautier, principal participant at the University of California at Santa Barbara, has secured private funding for the development of Earth Systems educational modules. The University of Arizona has created an Earth System Science Institute with Professor Lisa Graumlich, principal participant in the ESSE Program, as the new Director.

Up to this point in time, the focus of the ESSE Program has been on access and utilization of EOS space-based data for Earth System Science and NASA involvement. As the Program evolves, the ESSE steering committee desires to extend the Program to include Global Change issues that are of prime societal importance and are fundamental to emerging national and international interests. As such, this emerging strategy is being extended across an increased range of interests in view of the broader needs of Global Change. The principal participants of the ESSE program recognize the importance of these dimensions within an educational setting where attitudes and careers are being formed.

Many of the educational materials developed for a class at each ESSE university are computer oriented, and are suitable for electronic delivery. The development and delivery of these materials resides within the participating departments, schools and/or colleges. The principal participants have recommended that the ESSE Program seek to provide for exchange of educational resources via the Internet, and through collaboration jointly create in the immediate future a World Wide Web Electronic Global Change Notebook as part of an Extended ESSE Program. Thus, in the last year, a World Wide Web (WWW) electronic information server was established (<http://www.usra.edu/esse/ESSE.html>) to foster the interdisciplinary geophysical perspectives needed to understand the Earth System by providing for efficient collaborative development and access to publishable quality educational modules among the ESSE participants and the Internet

community at large. Of equal and longer range importance, the server functions to provide an electronic educational forum promoting understanding of the connections between the global climate system, global and regional ecosystems, remote sensing, and the needs of humanity (societal, economic, national security, etc.).

The ESSE Program has been conducting workshops for its participants over the past four years. Topics have included hands-on training in the use of Internet resources, the use of modeling software in the classroom (STELLA) and multimedia global change education (GEOSCOPE). The most recent ESSE steering meeting was held at the NASA-sponsored Classroom of the Future facility in Wheeling, West Virginia in June 1995. A workshop focusing on the physics of remote sensing and geographic information systems is being planned for the ESSE participants in November 1995 in Santa Barbara CA.

ESSE Associated Travel

<u>Name</u>	<u>Dates</u>	<u>Affiliation</u>	<u>Reason</u>
Arthur, M.	9/94	Penn State Univ.	Travel to the University of Florida to present ESSE seminar and collaborate with Dr. Hodell
Bartlein, P.	4/3-6/95	Univ. of Oregon	Travel to the University of Minnesota at Minneapolis, MN to collaborate with Dr. Kerry Kelts concerning development/issues of undergraduate ESSE courses and to present a lecture and seminar while at the University.
Binder, J.	6/17-18/94	Utah State Univ.	Traveled to College Park, MD to participate in the ESSE Meeting at the Univ. of Maryland
Boeck, W.	4/17-19/95	Niagra Univ.	Travel to Landover, MD to attend the Science Software Interpretation and Test Workshop at the Hughes Site Facility in Landover
Bryson, Reid	5/5-12/95	Univ. of Wisconsin	Travel to Univ. of Min to attend Archeology Conference Workshop
Bryson, Robert	5/2-13/95	Univ. of Wisconsin	Travel to Univ. of Min to attend Archeology Conference Workshop
Graumlich, L.	9/6-10/94	University of Arizona	Travel to Washington, DC to attend the American Geophysical Union's Chapman Conference
Johnson, D.	1/13-22/95	USRA/Univ. of Wis.	Travel to Dallas, TX to attend AMS Meeting
Johnson, D.	3/22-31/95	USRA/Univ. of Wis.	Travel to Washington, DC to meet with Dunbar
Johnson, D.	9/28/94	USRA/Univ. of Wis.	Travel to NY, NY to attend Dr. Nay Htun briefing
Johnson, D.	9/7-11/94	USRA/Univ. of Wis.	Travel to Washington, DC to attend Chapman conference
Johnson, D.	4/2-10/95	USRA/Univ. of Wis.	Travel to San Diego, State Univ. and California State Univ. in CA for faculty discussions

Kalb, M.	4/17-19/95	USRA/GSFC	Travel to Landover, MD to attend the Science Software Interpretation and Test Workshop at the Hughes Site Facility in Landover
Kalb, M.	10/13-10/16/95	USRA/GSFC	Travel to Ohio State Univ. To attend ESSE Symposium for High School Science
Kump, L.	10/10/94	Penn State Univ.	Travel to Evanston, IN to collaborate with Dr. Abraham Lerman concerning issues/development of undergraduate ESSE courses and to present several lectures and a seminar in the Department of Geological Sciences
Mackenzie, F.	10/17	Univ. of Hawaii	Travel to Northwestern University in Evanston, IN to collaborate with Dr. Abraham Lerman concerning issues/development of undergraduate ESSE courses as well as presentation of several lectures and a seminar in the Department of Geological Sciences
McKenzie, G.	9/10-11/94	Univ. of Ohio	Travel to Washington, DC to attend AGU Chapman Conference
McGinnis, D.	4/19-23/95	CIRES	Travel to University of Arizona in Tucson, Arizona for guest lectures in undergraduate ESS classes, presentation of seminar
Ogg, J.	3/21-24/95	Purdue Univ.	Travel to NYU in New York, NY to collaborate with Dr. Michael Rampino concerning development issues of undergraduate ESSE courses and to present a lecture and seminar while at the University
Rampino, M.	11/1/94	NYU	Travel to Purdue University to collaborate with Dr. James Ogg concerning development issues of undergraduate ESSE courses and to

				present a seminar while at the university
Ruzek, M.	4/16-21/95	USRA		Travel to Washington, DC to attend NSF meeting
Ruzek, M.	5/15-17/95	USRA		Travel to Washington, DC to attend CENR Committee meeting
Tarboton, D.	1/31/95	Utah State Univ.		Travel to University of Arizona in Tucson, AZ for guest lectures in undergraduate ESS classes, presentation of seminar and faculty discussion

APPENDIX F

SEMINARS

<u>Date</u>	<u>Title</u>	<u>Name</u>	<u>Affiliation</u>
November 18	The Geolocation and Interuse of EOS Data	Mike Botts	UAH
November 23	Lightning Observations From Space and Associated Research	Hugh Christian, Steve Goodman, Bill Kosnak	MSFC
November 29	Modeling of Chemical and Hydrological Transport Processes for Climate and the Southern Hemisphere Ozone Experiment	Don Johnson	University of Wisconsin
December 1	Quantitative Analysis of the Predictability of Mesoscale Connective Initiation in Regions of Weak Synoptic Scale Forcing Over the Southeastern United States	Dan Casey	UAH
December 7	Reducing Errors in Satellite Global Temperatures	John Christy	UAH
December 14	Scale Persistence of Soil Moisture as Simulated in a Global Model	Dan Fitzjarrald	MSFC
January 4	Characterizing Sub-Grid Scale Processes and Assessing Satellite Doppler Wind Lidar with MACAWS	Jeff Rothermel	MSFC
January 11	Special Sensor Microwave Images (SSM/I) Antenna Temperature Comparison	Adrian Ritchie	Hughes STX
January 18	Mission to Planet Earth Flight Program and Plans	Vern Keller	MSFC
January 25	Coupled Katabatic/Ocean System of Antarctic and Implications for Climate Change	Dick McNider	UAH
February 1	Ice Budget Diagnostics Over the Western Pacific During TOGA-COARE and CEPEX	Pete Robertson	MSFC
February 8	Fractional Activation of Accumulation Mode Particles in Continental Stratiform Clouds Plus Overview of Nashville Field Study	Noor Gallini	TVA/North Carolina State
March 1	Global Aerosol Climatology Implications for Climate and Remote Sensing	Dave Bowdle	IGCRE/UAH
March 8	Remote Sensing-Based Technique to Account for Sub-Grid Scale Variability of Land Surface Properties	Bill Crosson	IGCRE/USRA
March 15	Near Term Climate Variations and Improved Weather Prediction Techniques for Relation to Water Resources Management and Power Operations	Norris Neilsen	TVA
March 22	Structure of a Squall Like Winter Time Narrow Cold Frontal Rain Band Over the Gulf Stream	Bart Geerts	UAH
April 5	Surface and Subsurface Hydrology of Karst Terrains	Warren Campbell	UAH
April 12	A Dan Data Miner for Mining the MSFC DAAC	Tom Hinke	UAH

April 19	Model Simulations of Water and Energy Budgets for Convectively Active Seasons	Don Perkey	IGCRE
May 10	New Lidar Technique to Estimate Atmospheric Sulfate Aerosol Chemistry	Vandana Srivastava	IGCRE/USRA
May 17	Simulation of Upper Atmosphere Discharges Above Thunderstorms	Maurice Jarzembski	MSFC
May 24	Laboratory and Numerical Models of Spherical Convection and Overview of the Shuttle GFFC Experiment	Tim Miller	MSFC
June 14	Atmospheric Trace Molecule Spectroscopy (ATMOS) Chemical Partitioning and Ozone Loss from '85, '92, '93, and '94	Mike Newchurch	UAH
June 28	Anomalous Cloud Absorption: Real or Imaginary	Jere Justus	CSC
July 5	Near Miss Tornado of May 10, 1995	Kevin Knupp	UAH
July 12	GHCC - Where We're Going and How We Plan to Get There	Greg Wilson	MSFC
July 20	Multispectral Instrument Modeling: The Imaging Spectrometer Evaluation System (ISES)	Mike Flaherty	Nichols Research Corporation
July 26	The DAAC - What Is It All About:	Cathy Lapenta	MSFC
August 2	Marine Boundary Layer Clouds and Their Parameterizations	Shouping Wang	IGCRE/USRA
August 7	Thermal Signatures of Urban Land Cover Types: High-Resolution Thermal Infrared Remote Sensing of the Urban Heat Island in Huntsville, AL	C. P. Lo	University of Georgia
August 9	Advanced Data Compression Technologies for High Fidelity Applications	Alan Scales	Nichols Research Corporation
August 16	Korean Rainuage Precipitation Records and their Association to Northern Hemisphere Circulations	Gyu-Ho Lim	Seoul National University
August 17	The Seismic Detection of Tornadoes	Jim Dorman Frank Tatum	Univ. of Memphis Engineering Analysis Inc.
August 23	Precipitation Over the Pacific Ocean as Measured by MSU	Andy Milman	Consultant
August 30	On the Relationship Between Microwave Soundings and Surface Pressure	Stan Kidder	UAH

Educational Outreach

Mr. Gregory N. Cox, Research Scientist, UAH

Dr. Charles Laymon, Associate Scientist, USRA

One objective of IGCRE's educational outreach programs are to generate enthusiasm about science among pre-college students, to increase environmental awareness, and to educate students on the important role that space-based observations play in understanding the environment. Because Mission to Planet Earth poses questions whose answers require research that spans decades, building and maintaining the long-term supply of research scientists is strategically important to the success of the mission. The recruitment of future scientists begins at the primary and secondary education level.

Mr. Gregory N. Cox, research interest continues to lie in the validation (or ground truth) and visualization of remotely sensed data sets. Mr. Cox is responsible for coordinating the K-12 education related activities of the Institute for Global Change Research and Education focusing on NASA's Mission to Planet Earth and related global change issues.

Educational Outreach

Global Environmental Change Education Curriculum Development: Since 1990, Mr. Cox has served on the curriculum development team for a new K-12 curriculum to teach how the fundamentals of remote sensing can be used to understand global environmental change. Mr. Cox has lead the pilot testing effort for the Aspen Global Change Institute's (Aspen, Colorado) Ground Truth Studies (GTS) program in the southeastern United States and is working closely with the Alabama Department of Education to provide teacher training for GTS to Alabama teachers. Mr. Cox has also been instrumental in gaining the support of international business via the donation of computer hardware and software to help support the Ground Truth Studies program and other related global change education programs.

UAH Environmental Education Center: Mr. Cox has served as the Director since October, 1991. In addition to administering several education and research contracts with federal agencies, he has become actively involved in an effort to assist Russian environmental education professionals in creating an environmental education network in the Rostov-on-Don region of southern Russia, as well as other areas of the former Soviet Union. He has established an electronic communications network using packet radio between students and teachers in the Rostov Oblast with students and teachers in the Tennessee Valley region. Mr. Cox has also been actively involved in international environmental education as a founding member of the Global Network of Environmental Education Centers (GNEEC).

Dr. Charles Laymon

Educational Outreach:

Ground Truth Studies Program (Alabama State Department of Education): Two weeks of the subject period were directed toward preparation of course curricula and serving as an instructor and advisor for "A Mission to Planet Earth: A Ground Truth Studies Teacher Workshop conducted in June 1994 by the Northeast Alabama Environmental Education Consortium, IGCRE and the Division of Continuing Education, The University of Alabama, Huntsville. The goal of this workshop was to teach K-12 teachers the basics of remote sensing and how to utilize remote sensing imagery within their existing curricula and to educated students about global change.

Development of Earthbase (DOE National Inst. for Global Environmental Change): A proposal was prepared, submitted, and accepted for funding to develop an Earthbase at the Huntsville Botanical Gardens. The proposal was prepared to increase research efforts under IGCRE and preparations were the 'Bid and Proposal' account. The facility includes meteorological and hydrological instrumentation to demonstrate measurement technology associated with the hydrologic cycle in connection with

remote sensing research on global change. Four middle schools in the area will also receive modest instrumentation. Dr. Laymon designed the Earthbase, selected a site at the Gardens, procured and installed the necessary instrumentation.

Dr. Laymon as an advisor to the Mission Arkansas '95 project. This project is an educational initiative somewhat analogous to the Ground Truth Studies program described above.

He has reviewed a proposal for NASA's Global Change Fellowship program, two proposals from NASA-EPSCoR, and a manuscript from the Soil Conservation Service.

Dr. Laymon submitted the following proposal entitled, "A Ground Truth Studies Earthbase funded by DOE NIGEC", and is currently awaiting funding. The proposals were prepared to increase IGCRC research efforts. Proposal preparations were charged to the 'Bid and Proposal' account.

Student Mentorship:

Dr. Cox and Dr. Laymon served as mentors by supervising three college students with the NASA SPACE Academy in this summer's internship program and one UAH student.

- 1) Chadwick Hill, Undergraduate, The University of Alabama in Huntsville, Earth System Science Laboratory
- 2) Ms. Jessica Miller, Undergraduate, University of New Hampshire, NASA Summer Academy Student
- 3) Ms. Ruth Jones, Graduate, University of Arkansas at Pine Bluff, NASA Summer Academy Student
- 4) Ms. Jennifer Tesch, Undergraduate, University of Idaho, NASA Summer Academy Student

Geophysical Modeling and Processes

Dr. John Christy, Assistant Professor, UAH

Dr. Charles Cohen, Research Associate, USRA

Dr. Charles Laymon, Associate Scientist, USRA

Dr. Huei-Iin Lu, Associate Scientist, USRA

Ms. Jayanthi Srikishen, Research Associate, USRA

Dr. Shouping Wang, Associate Scientist, USRA

Dr. Takmeng Wong, USRA

Geophysical modeling and process studies involve numerical models ranging from global scale climate models (for example, the National Center for Atmospheric Research Community Climate Model, NCAR/CCM), to mesoscale prediction models (such as the Drexel University Limited Area Mesoscale Prediction System, LAMPS and the Colorado State University Regional Atmospheric Modeling System, RAMS), to models that isolate and treat component processes in great detail. Employing a hierarchy of models enables investigations into the time evolution of the phase, transformation, and redistribution of water and energy within the atmosphere over a continuous range of time and space scales. The detailed process models contribute to development of parameterizations for moist convection, cloud and rain microphysics, land-surface hydrology, and other processes that require improved representation in current climate and regional models.

A number of investigations focus on the coupling of atmospheric dynamics to external boundary conditions, including topography, but emphasizing surface and boundary layer fluxes of moisture and energy associated with the spatial distribution vegetation and soil properties. Specific studies entail development of modified Boundary Atmosphere Transfer Schemes (BATS) parameterizations for including surface processes in climate models. Within regional models, the role of mesoscale variations of soil moisture and vegetation in organizing regional and mesoscale circulations and convective precipitation is examined using BATS.

Other investigations focus on the role of cloud-radiation interactions in general circulation dynamics. Since low level oceanic stratocumulus sheets represent a major component of total global cloud-radiative forcing, efforts include modeling the marine planetary boundary layer coupled with cloud microphysical processes that sustain or deplete marine stratocumulus.

Regional models such as LAMPS and RAMS that are initialized with, or assimilate satellite and conventional data from the Global Energy and Water cycle Experiment Continental-scale International Project (GEWEX/GCIP) and the U.S. Weather Research Program field programs provide data sets for diagnosing moisture and energy budgets, and understanding the evolution and dynamics of regional and mesoscale precipitation systems.

Dr. John Christy, continue efforts in the area of identifying systematic biases between NOAA polar orbiters as they related to the stability of long-term trends in temperature. Data are continued to be offered to NOAA and researchers around the world in a timely fashion for assessment of global climate change issues.

In November 1993, Dr. Christy briefed Robert Watson of the White House Office of Science Advisor on pending publication of the Nature paper and how this might affect public policy.

Dr. Charles Cohen, continues to work on Mesoscale convective systems. A variety of environments were simulated with the Regional Atmospheric Modeling System, with the aim of determining whether the vertical motion in clouds can be diagnosed from a satellite image of the precipitating ice. Averaged over the whole model domain, there are strong correlations between the amount of precipitating ice and the vertical motion above the melting level averaged over the previous hour. The quantitative relationship that would allow a diagnosis of the mass flux from the ice content varies among the simulations.

There is relatively less ice remaining aloft for a given amount of vertical motion when a greater quantity of large and rapidly falling ice particles exist, or when the atmosphere is colder. The ice provides a more accurate diagnosis of the net mass flux when the downdraft mass flux above the melting level is small compared to the updraft mass flux above the melting level.

Dr. Charles Laymon continues performing research in the following areas:

Large Scale Water and Energy Budgets through the Convection and Precipitation/Electrification (CaPE) Research (NASA RTOP): Soil data were obtained from the United States Dept. of Agriculture (USDA) Soil Conservation Service in digital form State Soil Geographic (STATSGO) and converted and ingested these into the Intergraph Geographic Information System (GIS). The data structure of the acquired data was inconsistent with Intergraphs data structure, therefore requiring development of an unusual data manipulation scheme to convert the graphic information into graphic elements within the GIS. Another scheme was developed to populate the relational database tables with the associated attribute information. With considerable difficulty, a procedure was developed to extract the desired information needed for our land surface model.

Expanding on earlier investigations of the rainfall-runoff relationship for the CaPE study area, Dr. Laymon completed an estimate of Evapotranspiration (ET) for the CaPE study area using a water balance method. These results, which are used as an independent validation of model results, compared remarkably well with pan evaporation data and modeled ET that used an aggregate of Portable Atmospheric Mesonet (PAM) station data.

Working with Dr. W. Crosson, a gridded version of the land surface model (Simulator for Hydrology and Energy Exchange at the Land Surface--SHEELS) was produced. The treatment of soil hydrology to accommodate data available from the STATSGO data set was modified. The model was successfully run over a seven day period for a small (35 x 50 km) region within the CaPE domain and the sensitivity of the model to soil and landcover characterization was examined.

Desert Hydrometeorology Research (NASA RTOP): Eight Advanced Very High Resolution Radiometer (AVHRR) scenes, about two weeks apart during the summer of 1993, were obtained from Louisiana State University Computer Mapping Laboratory. An AVHRR Land Cover data set for the conterminous US was obtained from the USGS for use in georegistering these images.

Nearly coincident SPOT and Landsat Thematic Mapper (TM) images were purchased for the Goshute Valley for the summer of 1993 when vegetation was senescent. These images were converted for use in the Intergraph Image Station and georegistered. Normalized Difference Vegetation Index (NDVI)'s were computed for both datasets and a first order, unsupervised vegetation classification was performed on the Landsat data. This classification was ground truthed in June 1994 during field work which coincided with another Landsat image acquisition when vegetation is in full "bloom". Work is underway to examine the relationship between radiance values over the Bowen ratio stations with the in situ measurements as the precursor to spatial extrapolation.

Assessment of the Urban Heat Island Using Remote Sensing (NASA/MSFC/Center Director's Discretionary Fund CDDF): Work has commenced on a research project to assess the ability to use remote sensing to characterize the urban heat island. Dr. Laymon is developing the necessary structure for GIS and future image processing using design files obtained from the Huntsville City Planning Office. He will be activating his Bowen Ratio station at MSFC and managing the instruments at the Earthbase during the field campaign in late August. He will assist in image processing and data analysis following the field experiment.

The following proposals were prepared by Dr. Laymon to increase IGCRE research efforts. Proposal preparations were charged to the 'Bid and Proposal' account.

- "A Technique to Account for Sub-grid Scale Variability Using Remote Sensing for Land-Atmospheric Modeling" submitted to Water Cycle Processes Program, NASA, \$408 K.
- "Investigations of the Hydrologic Cycle of the Central Tennessee River Valley with Emphasis on Soil Moisture Remote Sensing" submitted to NASA Equal Opportunity Office, Historically Black Colleges and Universities, \$901 K.

Dr. Huei-Iin Lu, continues to use the Geophysical fluid flow Simulation model (GEOSIM) to study the predictability of flow regime and the dynamics of amplitude vacillation in the rotating annulus flow system. The following is the summary of the results:

A survey of flow regimes was conducted, each starting with a quiescent condition. As the model traverses across nondimensional parameter space by increasing the rotation rate, regular wave regimes of the same wavenumber are indicated within a small parameter range. In that region, the wavenumber increases with rotation rate in the same way as predicted by laboratory experiments and linear baroclinic wave theories. In addition to regular wave regimes, however, "wavenumber transition zones" exist which can be characterized by one or more of the following behavioral states: two-state equilibration, irregular wavenumber selection, and side-banded wave dispersion. Inside the wavenumber transition regions, the wavenumber selection behavior is very sensitive to the physical and numerical parameters as well as to the initial conditions. However, the definition of the boundaries of these regions may not be sensitive, making their prediction feasible.

It is found that amplitude vacillation is characterized by periodic change of vertical wave structure in concert with a growth and decay of the wave amplitude and phase speed. In contrast to the common idealization of baroclinic wave with single mode structure, the baroclinic wave apparently consists of a boundary layer mode, a lower heavy mode and an upper heavy mode which evolve with a short time lag. Two types of amplitude vacillation differing in the vertical variations of mean drift speeds are found. By performing eigen value analyses with respect to the instantaneous zonal-mean basic state, we illustrated that the mechanics of amplitude vacillation involve a rather simple wave-mean interaction.

Ms. Jayanthi Srikishen, continues performing the following activities:

Numerical Models: Working with Drs. Fitzjarrald and Robertson on the GENESIS on the CRAY at MSFC and Alabama Supercomputer. Benchmark runs and evaluation of C-90 at Alabama Supercomputer with Dr. Robertson. She performed analysis, data processing, and data archival of the GENESIS model.

System Migration: Installed NCAR Graphics, GENESIS, RAMS and LAMPS code on the CRAY Y-MP. Ms. Srikishen provided user support to CRAY X-MP users until it was turned off on July 31, 1994.

Visualization: Used the graphics package GRADS for visualizing GENESIS model output. She provided data visualization support to ES42 users.

User Interface: Assisted the scientists with their problems in computing and provided computer support for NASA Summer Faculty visitors in the Division. Provided benchmarking codes on the SGI's latest and greatest R4400 ONYX workstation.

Dr. Shouping Wang, continues work on the research entitled, "Modeling Marine Boundary Layer Clouds." The following describes his activities:

He has implemented a new prognostic scheme to define cloud cover and mean liquid water in the boundary-layer model following the Tiedtke's method. This method provides a unified approach to predict any type of cloud. One-dimensional

version of the model was used to simulate the climatic downstream variation of boundary layer clouds from eastern North Pacific to central Pacific oceans. The results of the simulation is in good agreement with observations. The climate simulation predicted the decrease of cloud cover and liquid water path from stratocumulus to trade-wind cumulus regions. This decrease is clearly associated with decoupling between cloud and subcloud layer and the development of vertical gradient of the boundary layer structure. With the prognostic scheme of clouds, not only are they able to obtain liquid water content that is crucial parameter for radiation calculation, but are also able to study hydrological cycle associated with these clouds through a budget analysis of cloud variables.

He has also used a regional version of the boundary layer model to simulate the boundary layer structure during ASTEX. The diurnal variation of boundary layer clouds are well simulated compared with that from satellite data. The decoupling between cloud and subcloud layer caused the solar warming inside clouds is responsible for the variation. During daytime, solar warming inside clouds stabilize the boundary layer so that a weak stable layer forms at the base of the cloud layer. Thus the mass flux at the cloud base from the model is significantly reduced, and consequently, the detrainment of mass from updrafts decreases during the day. The source term of the predictive equations of mean liquid water and cloud cover becomes very weak, which leads to a reduction in these cloud variables. During night, solar warming disappears and the longwave radiative cooling at the cloud top is strong enough to maintain a well-mixed structure. Thus the mass flux at the cloud base and the detrainment in the cloud layer and in the inversion are significantly larger than those in the daytime, which gives more clouds. These simulations demonstrate that the mass flux parameterization with a Tiedtke's cloud prognostic scheme provides a physically based parameterization for a general circulation.

Dr. Wang studied the simulations of stratocumulus clouds with GENESIS climate model. In general, the model simulates the correct locations of maximum values of low-level cloud fractional coverage. Seasonal variations of these clouds in mid- and high-latitudes are reasonably simulated by the model compared with those diagnosed from the ground observations by Warren et al. (1988). However, it seems that the seasonal variations in subtropics are poorly represented by the model. The probability is caused by stratocumulus clouds in subtropics being closely linked to Hadley circulation and turbulent mixing processes in the boundary layer which are difficult to simulate in the model.

Dr. Takmeng Wong, joined IGCRE on March 7, 1994, to concentrate on formulating a scientific research for understanding the effects of cloud radiative forcing on the energetics and circulations of the global atmosphere. This work was performed in collaboration with Dr. Franklin Robertson of NASA/MSFC. A research strategy was developed during this period for improving the vertical profile of cloud radiative forcing using satellite information and examining the effects of this forcing on the energetics and circulations of the atmosphere. Specifically, he plans to calculate the vertical profile of cloud radiative forcing using a large-scale semi-prognostic model of water vapor and condensate, observationally constrained by SSM/I data, and a detailed radiative transfer model. The derived radiative heating profiles will then be used to drive a diagnostic model of energy and thermally-forced circulations to examine the effects of atmospheric cloud forcing on the energetics and circulations of the atmosphere.

Finally, energy and thermally-driven circulations diagnostics from these studies will be compared with the similar quantities derived from general circulations in order to understand (1) the robustness of cloud radiative forcing response in current climate model, and (2) model biases and weakness. An unsolicited proposal was submitted to NASA to perform the scientific research, entitled, "On the Cloud Radiative Forcing Effects and Global Energetics." The proposal was prepared to increase Dr. Wong's research efforts under IGCRE. The proposal preparation was charged to USRA's Bid and Proposal account.

Land Surface Processes and Atmospheric Interactions

Mr. David Bowdle, Research Scientist, UAH

Dr. Bill Crosson, Research Associate, USRA

Dr. Dean Cutten, Research Scientist, UAH

Dr. Dick McNider, Associate Professor and Director of ESSL, UAH

Dr. Ravikumar Raghavan, Research Associate, USRA

Dr. Aaron Song, Senior Research Associate, UAH

A central theme of this research is to observe geographic distributions of surface properties and fluxes, and quantify the contribution of the surface to observed regional and global budgets of water and thermal energy. Fluxes of water and energy to and from the surface are complex functions of highly heterogeneous surface properties such as slope, albedo, soil porosity, vegetation cover, soil temperature, soil moisture, and meteorological conditions. Correct representation of area integrated fluxes in numerical models requires development of new measurements, parameterization, and data assimilation techniques. Considerable effort is being devoted to developing parameterizations for surface sensible and latent heat fluxes based on the hydrology of vegetated surfaces encompassing a variety of climatic regimes and biomes.

The primary data that are employed in developing these parameterizations are from The First International Satellite Land Surface Climatology Project (ISLSCP) Field Experiment (FIFE), conducted in Kansas in 1987 and 1989, and from the Convection and Precipitation /Electrification Experiment (CaPE) conducted in the summer of 1991 over Florida. These data provide detailed surface radiation and energy budget measurements over a network of observation sites including: directional shortwave and longwave radiation fluxes, sensible, latent and ground heat fluxes, soil temperatures and moisture, precipitation, winds, and air temperature and relative humidity. These are complemented by remote surface observations in the visible, near-infrared, and infrared regions from four operational satellites (Geodetic Observing Satellite/Visible Infrared Spin Scan Radiometer, GOES/VISSR; National Oceanic and Atmospheric Administration/Advanced Very High-Resolution Radiometer, NOAA/AVHRR; System Probatoire d'Observation de la Terre/High-Resolution Visible Imager, SPOT/HRV; and Defense Meteorological Satellite Program/Operational Linescan System, DMSP/OLS) and research aircraft (Multispectral Atmospheric Mapping Sensor, MAMS). These data are used to derive surface temperature, albedo and vegetation indices for the CaPE and FIFE domains. The complement of *in situ* land surface measurements during CaPE and FIFE is used to calibrate and validate satellite and aircraft algorithms employed in estimating relevant surface properties. GEWEX/GCIP and Boreal Ecosystems Atmosphere Study (BOREAS) field programs are also expected to yield data useful in land processes research.

Mr. David Bowdle, continues research on the Doppler lidar. The activities performed during this reporting period concentrated on scientific issues that provided important inputs to the restructuring of the Laser Atmospheric Wind Sounder (LAWS) and GLOBE Backscatter Experiment (GLOBE) programs.

GLOBE Science Coordination: Responsibilities involved informally coordinating data processing, analysis, and publications within the external GLOBE Science Working Group (SWG) and the internal MSFC Aerosol/Lidar Group; hosting GLOBE investigator visits to MSFC; distributing GLOBE results to the science and aerospace communities; and planning the next GLOBE SWG meeting. Mr. Bowdle also began a journal paper on the GLOBE program and prepared a draft GLOBE "white paper," consisting of recommendations to NASA Headquarters (HQ) for GLOBE research activities during the next few years.

LAWS Science Team Membership: Contributed a GLOBE section to a journal paper on LAWS. He attended the winter LAWS meeting and gave a presentation on GLOBE. Mr. Bowdle has been an Associate Member of an official EOS LAWS Science Team since January 1989 through December 1993. In December, LAWS was officially de-selected from EOS. In February 1994, he became a full member of an ad hoc LAWS Science Team.

LAWS Mission Development: Developed estimates of aerosol backscatter at the 2.1 micron wavelength, for inputs to NASA's systems study on a 2 micron version of LAWS, and presented the results at NASA's 2 micron technology review. He also conducted a parametric assessment of various Doppler lidar design concepts for LAWS. This task included attending a short course on coherent Doppler lidar, reviewing incoherent Doppler lidar technology at the University of Michigan, and assessing the impact of backscatter magnitude and backscatter wavelength dependence on various LAWS design concepts. Mr. Bowdle evaluated the impact of these results on MSFC plans for a LAWS science demonstration mission, presented the results in numerous internal meetings at MSFC, and began to incorporate the results in a comprehensive journal paper.

GLOBE Analysis and Modeling: Routinely coordinates and reviews internal and external GLOBE data analysis and modeling, with particular attention to quality control and internal/external consistency. He used GLOBE results provided by Dr. Dean Cutten (IGCRE) and Dr. Vandana Srivastava to develop empirical global backscatter models for wavelength combinations of 9.1 microns versus 0.53, 1.06, and 1.54 microns. These empirical models validated IGCRE's earlier theoretical global backscatter models for 9.1 microns versus 2.1 microns.

Reviews: Reviewed two proposals for NASA's Atmospheric Effects of Aviation Program/Subsonic ASSESSment (AEAP/SASS) and one proposal for NASA's Tropical Rainfall Measurement Mission (TRMM).

Reviewed draft plans for an Optical Atmospheric Measurements (OAM) program by NASA's Dryden Flight Research Facility. This prospective program is designed to develop the scientific and technological basis for operational Doppler lidar systems for high-altitude airspeed and turbulence measurements on a wide variety of commercial, military, and high-performance test aircraft. The OAM program relies heavily on GLOBE results to provide initial inputs to prototype lidar design studies.

Dr. Bill Crosson, continues working toward modeling surface energy and hydrologic processes utilizing data collected during the Convection and Precipitation /Electrification Experiment (CaPE) held in east central Florida in 1991. The objectives of this project are to establish and apply methodologies for the diagnosis of land and atmospheric water budget components for the CaPE region (approximately 25000 km²). The underlying philosophy guiding this study is that these techniques can be applied on scales consistent with GCIP activities such as the CARTARM experiment and ultimately the Mississippi basin. The surface energy and water flux component of this investigation is being carried out using a land surface model based on the Biosphere-Atmosphere Transfer Scheme (BATS), in conjunction with data from a wide array of measurement systems. The model has been validated using data from the two Florida State University flux sites. These stations were used because of the availability of model input variables: wind, temperature, humidity, pressure, precipitation and solar and longwave downwelling radiation, as well as flux measurements necessary for model validation. Results from these simulations indicate that the model, using soil and vegetation parameter values appropriate for the local conditions, is capable of accurately estimating surface energy and moisture fluxes.

Model simulations have been performed for each of the 38 PAM sites within the study area, producing initial estimates of areal heat and moisture fluxes. Thirteen of the PAM stations measured incident shortwave radiation; 4 of these also collected reflected shortwave, emitted longwave and net radiation, and soil temperatures. Model sensitivity to radiation input is currently being tested using a variety of methods for specifying solar and longwave fluxes using the point measurements.

A more sophisticated modeling scheme for estimating areal fluxes for the CaPE domain has been designed. This new model, the Simulator for Hydrology and Energy Exchange at the Land Surface (SHEELS) is a gridded model based on the physics of BATS but also incorporating geographic information on landcover and soil properties. In order to diagnose daily areal mean heat and moisture fluxes, SHEELS has been run over the CaPE domain with each grid cell having specified landcover and soil types. Meteorological forcing for the model was supplied by measurements from ground-based stations and by rainfall derived from raingages and radar.

Dr. Crosson participated in the Boreal Ecosystem-Atmosphere Study (BOREAS) during July and August, 1994. The his team role was to measure surface net radiation at each of 21 surface sites, consisting of flux towers and automated meteorological stations. These measurements will be used to standardize net radiation observations made by other investigators at each of the sites.

To add further realism to the SHEELS model, the statistical distributions of surface properties such as leaf area index, albedo and fractional vegetation cover within each landcover 'patch' will be represented via a discrete probability density function. These distributions will be inferred from the observed distributions of NDVI and spectral albedo which have been derived from 20 m resolution SPOT imagery for each of the 18 land cover classes in the study area. Scale issues will be addressed with a series of model runs in which the resolution of remotely sensed data, used to establish the nature of surface variability, is degraded. Preliminary analyses have shown that degradation of SPOT data from 20 m up to 1 km resolution (simulating AVHRR footprints) results in large changes in both mean and variance of surface properties.

SHEELS will continue to undergo modifications to improve the representation of surface and sub-surface water routing. Appropriate algorithms will be integrated into the model, and digital elevation data will be incorporated to drive these processes.

He was involved in writing and submitting the proposals listed below. Preparation of the proposals were charged to the Bid and Proposal Account.

Principle Investigator - "A Technique to Account for Sub-Grid Scale Variability of Remotely-Sensed Land Surface Properties for Application in Coupled Land-Atmosphere Models," submitted in May 1994 under IGCRE to Water Cycles Processes Program, NASA Headquarters. Funding pending. This proposal establishes the plan to transfer a modeling strategy developed in CaPE to a new environment--the Red River and Arkansas River Basins in the Great Plains. Then, advantage will be taken of many existing networks measuring meteorological and radiation parameters, as well as modeling activity planned as precursor activity to GCIP. The opportunity exists here to test SHEELS in different hydrometeorological conditions and also to compare modeling results with other investigators.

Co-Investigator - "Intelligent Data Requester for Exploitation Access to the EOSDIS," submitted to NASA, March 1994 by Intergraph Corporation, J. R. Herring, P. I. Currently not funded.

Dr. Dean Cutten continues to perform research in the following areas:

GLOBE Backscatter Calculations: Work continued on aspects of scientific applications using the GLOBal Backscatter Experiment (GLOBE) data at MSFC. Most GLOBE data were obtained during Pacific Ocean Survey Missions in Fall 1989 (GLOBE I) and Spring 1990 (GLOBE II) on the NASA Ames Research Center (ARC) DC-8 aircraft.

In this period activities concentrated on deriving aerosol backscatter coefficients at 0.53, 1.06, 9.1, 9.25 and 10.59 μm wavelengths using ARC Forward Scattering Spectrometer Probe (FSSP) size distribution data. Part of this analysis has involved procedures to minimize the variations of the FSSP-derived aerosol backscatter. The first step was to recalibrate the FSSP size data, accounting for multivalued bins, and average these data to 100 s periods. Each of the resulting volume size distributions was then fitted by a single mode lognormal curve, which generally exhibits a pronounced peak in the size range 1-3 μm diameter. The calculated backscatter coefficients were then smoothed temporally using a four point running average to give 300 s averages. Refractive index data available at 0.53, 1.06 μm , 9.1 and 10.59 μm wavelengths were obtained from the University of Hawaii Laser Optical Particle Counter (LOPC) data. Comparisons were made with pulsed lidar aerosol backscatter coefficient measurements (0.53, 1.06 and 9.25 μm) 1 - 2 km above or below the DC-8 aircraft. The MSFC continuous wave doppler lidars (9.1 and 10.59 μm) operating at flight level, also provided data to validate the calculated aerosol backscatter coefficient.

For seven of the GLOBE II flights examined the computed aerosol backscatter coefficient most of the time, follows the main temporal trends exhibited in the measured aerosol backscatter near or at flight level for all five wavelengths studied. Known

inhomogeneities in the aerosol field account for some of the discrepancies when measured data at 1 - 2 km from the aircraft are compared. However, some large absolute backscatter fluctuations were observed at flight level for the derived backscatter coefficient data at infrared wavelengths. These can be traced mostly to poor count statistics in the FSSP bins larger than 0.8 μ m diameter. This underestimating of the backscatter does not affect the shorter wavelength aerosol backscatter.

A manuscript covering the above work is close to completion and will be submitted to the refereed journal, Atmospheric Environment, in Sept., 1994.

GLOBE Database Activities: Further work continued on reviewing GLOBE data quality for certain datasets in conjunction with the Principal Investigators (PI's) responsible for these data. Further beta copies of the data visualization/analysis program LINKWINDS (being developed by Jet Propulsion Laboratory (JPL)) were received during this period for evaluation. This program has been used as the main tool for examining and analyzing much of the data in the GLOBE database.

GLOBE Data Archival Software: Continued to monitor the work being done by Simpson Weather Associates (SWA) who are refining the code he wrote earlier to archive the GLOBE data in the Hierarchical Data Format (HDF). This software will provide a standardized means of reading the various datasets which GLOBE PI's provided using their own format. It will also allow a means of implementing a basic data security scheme to allow dataset integrity to be checked.

Dr. Ravikumar Raghavan, continues to work on the following activities:

Development, implementation and integration of radar software to create radar browse products at the Marshall DAAC: Algorithm design and implementation for processing the real-time U.S. National Composite Radar Data being received at the Marshall Space Flight Center Distributed Active Archive Center (DAAC) via satellite link. The WSI radar data is received via satellite every 5 and 15 minutes and is being stored in the Marshall DAAC. The U.S. National radar composite image is then converted to a U.S. National Precipitation (Rainfall) image. This image will be stored in the DAAC and will be made available as a browse product. The rainfall image will also be made available for distribution to the science community within MSFC on the LAN. Rigorous testing of the algorithm is being conducted in a modular mode and final implementation is being incorporated. The software was delivered June 22 1994. Upgrade to newer version will be subsequently accomplished.

Thunderstorm Electrification Studies: Ongoing analysis of multiparameter radar data from the CaPE field campaign to study the microphysical characteristics, kinematics and morphology of clouds as well as the various processes that lead to the electrification and the subsequent production of lightning.

Precipitation Intercomparison Project (PIP-2): Developing rainfall products from WSI radar data obtained during hurricane Andrew to serve as ground truth in satellite derived rainfall intercomparison studies.

A Radar, Electrical and Microphysical Study of Hector in McTEX: A multi-institutional proposal is being submitted to NSF which will increase research efforts under IGCRE. Proposal preparation was charged to the 'Bid and Proposal' account. The science plan involves using research and operational radars, aircraft, field mills and various other sensors for studying the microphysical and electrical characteristics of tropical convective thunderstorms (Hector) in the proximity of Melville/Bathurst islands near the Darwin coast in Australia. Dr. Ravikumar Raghavan will serve as the PI on the proposal being submitted on behalf of the Institute for Global Change Research and Education (IGCRE). Time spent preparing the proposal was charged to the 'Bid and Proposal' account.

Dr. Raghavan coordinated and directed research efforts and analyses of a UAH Ph.D. graduate student currently working with Dr. S. Goodman.

Dr. Dick McNider and Dr. J. Aaron Song, has derived an assimilation technique in which satellite observed surface skin temperature data are used in a model surface energy budget so that the predicted rate of surface temperature change in the model more closely agrees with the satellite observation. Both the visible and infrared GOES

satellite data are used in the assimilation. More detailed discussion on the assimilation technique is included in McNider et al. (1993), while the related satellite insolation assimilation is included in McNider et al. (1994). Preliminary model verifications of a selected case using the observation of Rabin et al. (1990) shows that the technique appears to correctly adjust the model response to agree better with observation.

In the aforementioned model simulations incorporating the assimilation technique, only "clear sky" situations were chosen. When cumulus clouds pop out, even though there is negligible large scale disturbance, it would be much more difficult to perform the assimilation technique. An extended application of the aforementioned assimilation technique has lately been performed using the observation of COHMEX (Williams et al.,1987), which will be discussed in more details in Song et al.(1994) as well as in the next report.

Remote Sensing Technology and Geophysical Retrievals

Mr. Dennis Buechler, Senior Research Associate, UAH

Dr. Doug Mach, Research Scientist, UAH

Dr. Eugene W. McCaul, Associate Scientist, USRA

Dr. Michael Newchurch, UAH

Mr. Michael Stewart, Senior Research Engineer, UAH

These studies aim to determine the extent to which distributions of geophysical parameters and processes can be measured with current technology and observing systems, and to determine how proposed EOS sensors can improve current capabilities to observe these same processes on mesoscale to short climate time scales. Important emphases of remote sensing studies include:

- Application of Special Sensor Microwave/Imager (SSM/I) for mapping the seasonal and interannual variability of water vapor, and precipitation on a regional and global basis.
- Continued processing of Microwave Sounding Unit (MSU) channel 2 data for mapping the seasonal and inter-annual variability of temperature on a regional and global basis.
- Quantifying the magnitude of cloud-radiative forcing on the global energy budget, and its impact on the general circulation and global dynamics; use of multi-channel radiances to examine the vertical distribution of cloud forcing.
- Analysis and interpretation of Global Backscatter Experiment (GLOBE) aerosol data; and development of a global atmospheric aerosol backscatter model for establishing Laser Atmospheric Wind Sounder (LAWS) performance criteria for measuring global winds, cloud, planetary boundary layer height distribution; experimental and theoretical laser backscatter investigations leading to final configuration of the LAWS.
- Development of multispectral imaging and parameter retrieval techniques for atmospheric temperature and moisture, distributions of soil moisture, surface emissivity, vegetation stress, and other geophysical and biological parameters. Data used for these purposes over the next three years will include satellite observations from High-Resolution Infrared Sounder (HIRS), MSU, SSM/I, AVHRR, GOES, MAMS, and SPOT.
- Development of advanced system concepts including: electro-optical sensors for lightning detection, IR interferometry for temperature and moisture profiling, and use of microwave frequencies for sounding and precipitation monitoring all from geostationary orbit. Development of strategies for use of Molniya orbits.
- Continued development of WetNet analysis software and science support; and intercomparison of SSM/I algorithms for obtaining rain rate, precipitable water, cloud liquid water, oceanic wind speed, land classification, land surface temperature, snow-water equivalent and depth, soil moisture, and sea-ice concentration.
- Correlative studies between global/regional distributions of lightning and convective precipitation, leading to a space-based Lightning Imaging System (LIS) proposed for EOS Tropical Rainfall Measurement Mission (TRMM) and eventually for geostationary orbit. Research is needed to understand lightning production as a function of the internal dynamics of convective cells leading to charge separation. This analysis will involve synthesis of multiparameter Doppler radar, lightning strike, and aircraft microphysical measurements for individual cells and complexes of convective cells. Initial global lightning studies will involve processing back-inventories of DMSP/OLS imagery.

Mr. Dennis Buechler, continues to perform research in the following areas:

LIS Simulation Study: This study investigates the effect of satellite sampling error of monthly lightning estimates due to the intermittent nature of the satellite observations. Based on cloud-to-ground lightning data in vicinity of Huntsville, AL, this error will be on the order of 35-40%.

Lightning/Precipitation Study: The purpose of this task is to develop an algorithm whereby lightning flash observations can be used to estimate convective rainfall. A simple relationship was developed using data over Florida on 12-13 Aug 1991. The rainfall estimated from the lightning during the period closely matched the radar derived convective rainfall both in amounts, pattern, and spatial coverage.

Geolocate OTD Pixels: The Optical Transient Detector (OTD) is an instrument designed to detect optical pulses from lightning. This instrument was launched in June 1994. The location of the lightning pulses detected by OTD need to be determined with respect to the earth (i.e. latitude and longitude). Mr. Buechler began working with a system called SPICE (Spacecraft, Planet, Instrument, Camera, Events) which contains subroutines that can be used to geolocate pixels in the OTD array. He attended a meeting November 16, 1993; the 3rd NASA EOS (Earth Observing System)/Pathfinder Interuse workshop to meet with Bill Taber of JPL (Jet Propulsion Laboratory) who helped develop SPICE. He also spoke with Bill Taber at the Interuse Workshop.

Interuse Workshop: He attended an Interuse Workshop held in Boulder, CO on 6-7 July 1994, and made a presentation that described the types of data which (ground and space based lightning observations, rainfall from radar and microwave measurements) would be intercompared. Interuse would be useful in accomplishing this.

DAAC Lightning Product: He wrote an algorithm to produce daily and 15 minute lightning products for the Marshall DAAC (Data Archive and Acquisition Center). This algorithm reads in the ground based lightning data and counts the number of flashes in 8 km by 8 km bins over the United States.

Dr. Douglas M. Mach, developed the software for the Lightning Imaging Sensor (LIS) that will be launched on the Tropical Rainfall Measuring Mission (TRMM). The basic LIS instrument will also be launched on a quick-sat this fall. The 20,000 lines of code that he has written so far will ingest the raw data from the satellite and convert it into lightning pulse and background data along with satellite and instrument health data. The pulse and background data will then be processed into EVENT, GROUP, FLASH and AREA data as detailed in the Algorithm Theoretical Basis Document (ATBD) that he co-authored (attached). Once the LIS is launched, his software will do all of the processing of the LIS data.

He also have worked with NASA code M on shuttle lightning safety. We have completed the initial analysis of a field program has been completed in Florida where he measured the electrical properties of marginal clouds (non-lightning producing) to determine how to make both the launch and landing lightning avoidance rules safer while allowing the greatest access to launch and landing opportunities.

Dr. Eugene W. McCaul, continues to perform activities in two principal areas.

Develop a Gobar Water Budget Model: The water budget model which has been constructed in collaboration with Dr. F. R. Robertson, and is designed to facilitate diagnosis of the three-dimensional global-scale fields of water vapor, clouds and precipitation, fields which are not yet well-understood. Preliminary results appear encouraging, and work continues to refine and improve the model. Three conference publications have followed already from this work: two already presented (see publications list), and another anticipated.

Continue Analysis of Lidar and Meteorological Data From the Global Backscatter Experiment (GLOBE): GLOBE data analysis has been completed, and a journal manuscript is in the final stages of preparation for submission (see publications list). In addition, co-workers are preparing other manuscripts that will benefit from discussion of the meteorological

conditions encountered during GLOBE, and for which he will be listed as coauthor. These will be included in the publications list for the next fiscal year.

In the area of professional service, he served as a member of the Program Committee of the 17th Severe Storms Conference in St. Louis, and continues to serve on the AMS Severe Storms Committee. In November 1993, he participated in WLRH's "Tech Talk" forum on severe weather safety. He was invited as an informed private citizen, to submit an opinion on the adequacy of Doppler weather radar coverage in the Huntsville area under the National Weather Service's proposed switch to the WSR-88D network, which will require the termination of service from the locally operated Doppler WSR-74C. A letter is currently being prepared.

Work will continue on the development, testing and application of the water budget model, and on preparation of a conference manuscript describing the model and its results. It is likely that a formal journal manuscript and proposal to NASA will follow from this. Work will also continue on finalizing the GLOBE data analysis manuscript. This involves final figure preparation, internal review, and review by collaborators at other sites.

Some further involvement in the study of the Huntsville Doppler radar coverage seem probable. Membership on the AMS Severe Storms Committee continues, with additional committee work possible.

Dr. Michael Newchurch, has contributed Stratospheric chlorine partitioning using ATMOS measurements and the Cal Tech/JPL 1-D photochemical model in collaboration with Dr. Mark Allen/JPL and Dr. Bob Stachnik/JPL. The results were presented at AGU and at an ATMOS science team meeting.

NOx diurnal corrections for ATMOS retrievals: Accounting for the diurnal variation of NO and NO₂ is essential to producing accurate profiles of these important stratospheric gases. Results of this work were presented at both ATMOS and SAGE II science team meetings.

ATLAS science directions: These planning meetings focused on outlining the important science issues for ATLAS-1, 2, and 3.

ATLAS-3 mission support: As an assistant mission scientist, he will participate in the ATLAS-3 mission scheduled for 10/94 launch. In addition, three of his coop students and one graduate student will participate as members of the ATMOS instrument team.

SAGE/Umkehr analysis: As a member of the SAGE II Science team, he is comparing SAGE and Umkehr ozone measurements and analyzing Umkehr aerosol effects. Results of this research have been published in JGR and presented at both the SAGE II science team meeting and DOE Atmospheric Chemistry Program meeting.

Dr. Newchurch has developed a strategy to assess diurnal ozone effects on ATLAS/MAS measurements, diurnal ClO effects on ATLAS/MAS measurements, and diurnal NO₂ effects on POAM measurements and collaborated with MSFC scientists concerning ATMOS retrievals and data distribution.

He is directing three undergraduate co-op students and one graduate student in areas of ATLAS and SAGE science studies.

Mr. Michael Stewart, continues collaborating with Drs. Hugh Christian, Bill Koshak, and Jim Bergstrom in the development and performance of calibration methodologies and procedures for the Lightning Imaging Sensor (LIS) and the Optical Transient Detector (OTD). The latest procedures are specified in the OTD Calibration Facility Procedures Document, dated February 19, 1994.

He assisted the MSFC EB-Lab to improve the performance of the analog signal processing electronics in the OTD Real Time Event Processor while it was at the LIS/OTD calibration facility. The estimated optical lightning detection efficiency for this spacecraft instrument was improved from 20% to 70% as a result of this work.

For the actual TRMM/LIS instrument, he has redesigned the analog signal processing electronics to remove the false imaging artifacts that were present in the OTD version and improve the signal-to-noise performance by a factor of 2 to 4. The redesign includes a new printed circuit board layout using surface mount components on both sides of the board.

Preparations for the McTEX field research program in Australia have begun. Mr. Stewart's participation will include ground-based electric field measurements. Nine electric field mill instruments originally developed for the NASA/KSC Launch Pad Lightning Warning System will be modified to operate from solar power and use GPS receivers for time synchronization. The feasibility of adding the capability to detect and time-stamp electric field changes so that cloud charge centers and charge moments may be located by both amplitude and time-of-arrival information is being investigated.

An all-sky optical lightning detector to be used for ground truth measurements at NASA/KSC in support of satellite observations has been designed and tested. Final installation in a weatherproof housing has been delayed due to institutional problems.

Scientific Data Management and Visual Analysis

Dr. Sara Graves, Professor and Director of SISL, UAH

Dr. Thomas Hinke, Professor, UAH

Mr. Don Moss, Senior Research Associate, UAH

Ms. Helen Conover, Senior Research Associate, UAH

Ms. Marilyn H. Drewry, Senior Research Associate, UAH

Mr. Bruce Beaumont, Research Scientist, UAH

Ms. Susan T. McCoy, Research Associate, UAH

Mr. Evans A. Criswell, Research Associate, UAH

Ms. C. Vada LaFontaine, Research Associate, USRA

The success of earth science research programs requires the ability to efficiently manipulate large data sets. The studies at IGCRE are engaged in data management activities that aid scientists with their investigations. Activities include participation in field studies; processing, quality control, and archival of large data sets; and development of computer software and tools to visualize and synthesize data from multiple sources. These analysis tools support development, testing and validation of remote sensing algorithms with respect to data from past and future field programs such as Tropical Ocean-Global Atmosphere (TOGA) Coupled Ocean-Atmosphere Response Experiment (COARE), TRMM, the National Weather Research Program, GEWEX/GCIP, CaPE and ISLSCP/FIFE.

IGCRE scientists contribute to the research effort by managing compilation, archival, formatting, quality control and distribution of GLOBE, NESDIS (National Environmental Satellite, Data and Information Service) SSM/I and other data bases. This includes development of a Silicon Graphics-based "workbench", with a hierarchical data format that will allow data from different sensors to share common visualization and analysis programs. Supported analysis tools also include existing hardware/software systems such as McIDAS (Man-Computer Interactive Data Access System), the McIDAS-based WetNet system, and Geographic Information Systems, or other technologies as may be required by a particular scientific need.

Dr. Sara Graves, unfunded by the agreement, coordinated the activities of Scientific Information Systems Laboratory (SISL).

Overview of Scientific Information Systems Laboratory Activities

UAH's SISL joined the IGCRE contract on March 1, 1994, continue working with the MSFC EOSDIS Distributed Active Archive Center (DAAC). This lab's work has been central to development of the MSFC DAAC since 1991 under other contracts and grants. SISL is responsible for development of all information management software for the DAAC, including the MSFC DAAC Information Management System (IMS) Server, which is an integral part of the prototype EOSDIS Version 0 IMS. Other recent and ongoing SISL work for the MSFC DAAC includes an IMS Data Dictionary, a local user interface into the IMS database, a Data Order Tracking System (DOTS), a File Location Database for the mass storage system, a satellite orbit model display system and a Data Miner. In addition, SISL is responsible for sustaining engineering of the Interactive Data Integration and Management System (IDIMS), a UAH-developed information management tool used in ES41.

The EOSDIS Version 0 IMS is a distributed system providing catalog interoperability among the inventories of all EOSDIS DAACs. This federation of DAACs, led by the Earth Science Data and Information System (ESDIS) project at GSFC, has built the Version 0 IMS to allow the scientist to search the metadata at all eight centers from a common user interface. Because the DAACs are geographically dispersed, archive a wide variety of data, use several different of database management systems, and organize their metadata differently, presenting a common interface to the user is quite a challenge. This task, through much cooperative effort, was accomplished using a series of messages between the client user interface and the IMS database servers at the DAACs. The server at each DAAC is responsible for mapping a message from the client to an appropriate database transaction. SISL continues to play an important role in the cooperative design, development, and testing of this system, and of the MSFC DAAC IMS Server in particular.

A companion task to the development of the distributed IMS is the development and maintenance of a Data Dictionary at each DAAC. Version 0 links existing data centers, each with their own system of data description; the Data Dictionaries provide a standard reference model for describing the diverse holdings at the DAACs.

While the distributed IMS provides a common user interface for accessing data from all the DAACs, making it an excellent general search tool, a local IMS user interface for the MSFC DAAC can provide access to special data search or description features, unique to local data holdings. For example, particular attributes are cataloged for different datasets at MSFC, including a characterization of content for one dataset, or an indication of missing data for another. Also, MSFC DAAC science users have requested that the user interface provide a means for condensing lengthy search results listings, for easier perusal. SISL has designed these features into the MSFC DAAC inventory after consultation with science users. In order to provide effective user access to these unique inventory features, SISL is also designing and building a local IMS user interface for the DAAC.

Another analysis tool designed and built by SISL in response to DAAC user requests is a satellite orbit model display system. This tool uses the X-Windows system to display the locations of up to four earth science satellites at any given time. The tool can also be used as a satellite coincidence search engine, to determine where the paths of two satellites come within a user-specified distance of one another. This tool will be incorporated into the X-Windows version of the local IMS user interface.

To provide a richer set of content-based metadata, SISL is also developing a data miner. The data miner will permit DAAC personnel to extract information on the content of the various data holdings. The initial data mining capability provides an ability to identify where SSM/I Pathfinder data has holes in its data coverage.

In addition to providing user access tools for the DAAC, SISL is responsible for internal data management systems as well. The DAAC's Data Order Tracking System (DOTS), which interfaces with the IMS, stores contact information for all DAAC users, and tracks each data order from the time it comes into the DAAC until receipt of the data is confirmed by the user. SISL has provided two user interfaces for DOTS, one for User Services, and another for Order Production.

SISL software also provides information management for the DAAC's optical jukebox mass storage system. The jukebox driver software, which allows archivers to specify the optical platter on which each file is to be stored, also expects the user to specify the platter and offset when retrieving the file. SISL has developed jukebox read and write routines which interface with a file location database to track jukebox platter information for each archived file.

This is a general overview of SISL work performed for the MSFC DAAC under the IGCRC agreement. Specific activities of each member of the SISL team follow.

Dr. Thomas H. Hinke, began supporting this project on March 1, 1994, to continue leading the development of the Data Miner. The data miner is a general purpose data archive search engine that will be used to derive information on the contents of datasets held by the MSFC, EOSDIS Distributed Active Archive Center. This content-based information will be used to enhance the information that is used by the DAAC's Information Management System to assist scientists in identifying data relevant to their research.

During this period work was performed to extend the capability of the version 1 data miner, which was designed and implemented under Dr. Hinke's leadership. The version 1 miner identifies missing data within datasets, with an initial focus on the SSM/I Pathfinder data. During this period the version 1 miner was extended to produce mining results in the standard HDF data format. These HDF mining results can then be viewed using HDF visualization tools such as Collage.

The second major thrust of the research during this period was the design and initial implementation work of the version 2 data miner. The focus of this research is the development of a number of standard mining operators that can be applied to any dataset. To support these universal operators, the miner uses appropriate mapping functions to map the source data into a canonical gridded format. The version 2 miner will support value mining using a grid algebra that is analogous to relational algebra. The approach follows one of the useful features of the relational model used in database technology in which the result of most relational operators is another relation. In a similar way, the result of most grid operators is another grid, which can then be further operated on by another grid operator or compared with grids derived from other data products. In addition, the research during this period has also focused on the development of various data structures to efficiently support the mining effort, since for example, a single day of SSM/I data consists of approximately 90 megabytes of data.

Mr. Don Moss, continues to train DAAC operations personnel in level 1b data ingest and archival procedures. He wrote a technical document entitled, "MSFC DAAC 8mm Tape Instructions" for DAAC User Services group to be included in standard package shipped with orders on 8mm tapes. He also wrote technical document entitled, "NESDIS Level 1B SSM/I Tape Archival Procedure," a guide for DAAC operations personnel.

Precipitation Intercomparison Project 2 (PIP-2) input file production and utility software were completed. PIP-2 files were generated from Wentz and National Environmental Satellite Data and Information System (NESDIS) data and were sent to project coordinators at Florida State University for further processing. After retrieval from FSU, files were prepared and submitted for CD production. Ingest software was successfully tested on SGI Onyx system.

Software was developed for the following functions:

- Add batch mode option to daily backup program.
- Incorporate new method of background processing into full backup program.
- Find latest two-line orbital elements, reformat, add to McIDAS preprocessed one-line element file.
- Adapt orbital element conversion program to the DMSP-F8 satellite.
- Automatically rename Special Sensor Microwave/Imager (SSM/I) level 1b files transferred from Engineering and Analysis Data System (EADS).
- Display highest memory usage jobs in system.
- Improve SSM/I level 1b geographical filter program.
- Read SSM/I sensor count level 1b file, output antenna temperatures or brightness temperatures, satellite ID #, time, revolution #, latitudes, and longitudes.
- Adapt above program to increase precision.
- Read Fleet Numerical Oceanographic Center (FNOC) Temperature Data Record (TDR) files in Data Exchange Format (DEF) which have been reformatted for the Shared Processing Network (SPN).
- Analyze TDR files to determine and document data structures and detect and deal with anomalies.
- Add options to SSM/I level 1b merge program to restrict scans to specified scan numbers.
- Filter a character stream to allow text to be analyzed despite the presence of control characters.
- C subroutines to allow a WetNet FORTRAN program to read a TDR file and make McIDAS areas.
- Analyze TDR interscan time deviation.
- Improve level 1b scan summary by making output easier to read.
- Modify daily ingest, merge, and housekeeping programs to use new INGEST environment variable. This will make adapting to future operating system environment changes much

easier, quicker, and more reliable.

- Make it easier to input data to satellite polar crossing perdition program.
- Find, display, and remove files of a specified size.
- Filter log file to remove unwanted information.
- Automatically create new numbered versions of files being edited.
- Show all user processes.
- Allow WetNet program which makes global composite McIDAS SSM/I images to specify a control file name on the command line, enabling simultaneous multiple runs. Modify driver program accordingly. Also improve organization of driver program.

Ms. Helen Conover, began supporting this project on March 1, 1994, to continue work with the MSFC DAAC. Ms. Conover is the Information Management Systems lead for the DAAC, and coordinates all IMS activities in preparation for the beginning of EOSDIS Version 0 operations in July 1994. The highlight of her work in this area is the continued development of the MSFC IMS Server, part of a distributed client/server prototype system that will allow science users to access, browse, and order from the data inventories of any of the EOSDIS V0 Distributed Active Archive Centers (DAACs) through a single user interface. In this stage of development, the focus has been on testing and refining the software, and coordinating information on how data will be packaged for distribution to the users.

Ms. Conover also coordinates other software development activities, including porting the distributed IMS Client to MSFC, as well as development of a Data Order Tracking System, a specialized local IMS interface into the DAAC inventory, and a Satellite Orbit Model Display system. As the IMS lead, she consults with data producers, user services and archive personnel on the DAAC file naming conventions, and Global Change Master Directory entries for DAAC data. She has contributed to the MSFC DAAC 'Home Pages' on the Internet World Wide Web.

In addition, Ms. Conover is participating in review activities related to development of the EOSDIS Core System (ECS). During this reporting period, these activities have included consulting with ECS developers, making comments to ECS documents, attending telecons and local ECS seminars, and attending the ECS System Design Review and Data Organization and Access Focus Team meetings, June 27 - July 1.

Ms. Marilyn H. Drewry, began supporting ICGRE on March 1, 1994, to continue work in the following areas in support of the MSFC DAAC and EOSDIS V0 IMS development.

MSFC IMS Development and EOSDIS IMS support: Ms. Drewry actively participated in the testing of the EOSDIS V0 IMS clients and servers. Stress Tests-- tests using distributed, coordinated users with large queries were performed in addition to testing of local and distributed clients and servers. Ms. Drewry co-coordinated the EOSDIS IMS V0 TECHNICAL meeting held at Huntsville, March 1-3, 1994. She also participated in the MSFC DAAC Hydrologic Cycle Data Access and Archive Working Group (HDAAWG) meeting. Additional support is provided through participation in telecons for the IMS, Guide, test and CCB tasks. Ms. Drewry contributed to the design of the MSFC DAAC Home Page for user on the Internet World Wide Web (WWW).

IMS Dataset Validates Entry: Information such as source, sensor, parameter must be defined and entered into the database prior to entry into the EOSDIS system. Once defined locally, the information is coordinated with EOSDIS GSFC. Ms. Drewry has been instrumental in locally tracking and entering dataset information into the database and coordinating with GSFC for system validates update. Additionally, she designed, developed, and documented automated procedures to enter multiple datasets into the database.

IMS Guide: The IMS Guide, a function of the EOSDIS IMS V0 System, supplies additional information about the source, sensors, and datasets, to the user through the IMS interface using WWW. Ms. Drewry has installed the System EOSDIS V0 Guide software on the local host system and updated the Guide software as patches have been released. Ms. Drewry has assisted with the formatting of the documents to specified standards and has integrated new documents into the Guide subsystem.

IMS MSFC Data Dictionary Report: The IMS MSFC Data Dictionary Report defines the MSFC database schema describing the metadata kept on each dataset and defined valid values for each field. During the reporting period, Ms. Drewry revised and enhanced the existing Automated Data Dictionary (ADD) scripts, generated, and submitted MSFC Data Dictionary Reports to EOSDIS IMS.

Oracle Database Administration: The MSFC IMS system is built upon the ORACLE RDBMS. As Database Administrator, Ms. Drewry is responsible for maintenance of the ORACLE RDBMS. Memory usage was analyzed for both tables and users, and augmented as necessary. An ORACLE license upgrade for the number of users was completed. Ms. Drewry created UNIX/Database scripts that perform exports of the database files as an additional data backup method. Running of the scripts is an ongoing task; automation of this task is under development. Ms. Drewry initiated definition of an IMS/ORACLE schedule to obtain an overall view of the host systems. She also initiated the coordination with the System Management team, and co-designed a UNIX script reusing existing software that resulted in an automated daily backup of the ORACLE database.

Data Order Tracking System (DOTS) Automated IMS Product Request Entry: The Automated IMS Product Request Entry is the handshake between the IMS System and the Data Order Tracking System. During this time frame, Ms. Drewry retrieved from the database the data location field for visibility by the DOTS GUI. Ms. Drewry also enhanced the User product request letter with coordination from User Services. User Services order feedback was improved by the addition of pointers to differences in the Order's user address and the Database user's address. Code was developed that retained the order message in case of a system error for use with the Resubmit program by User Services. Resubmit was updated.

Processing History Database: Ms. Drewry collaborated with scientists determining information needed to perform reprocessing of a dataset product. The type of required information was analyzed, database design completed, and initial code implementation begun.

Mr. Bruce Beaumont, began work on the IGCRC contract on March 1, 1994, continuing his work on the EOSDIS V0 IMS for the MSFC DAAC. His accomplishments to date are as follows:

- An interactive graphical Orbit Plotting program has been developed which allows users to select up to four satellites, a time range, and a geographical area and then plot the orbits on a display device using any one of three map projections.
- The Coincidence Search Engine has been developed as a adjunct to the Orbit Plotter. It permits users to select up to four satellites, a time range, a geographical area, and an inter-satellite distance and then determine whenever any or all of the satellites satisfied the search criteria. This program is useful to scientists who wish to discover if multiple instruments observed a given event, or to find occasions when multiple satellites observed an area simultaneously.
- To support the previous software, a source for satellite element set (ephemeris) data was needed. Mr. Beaumont located an on-line source for these data and then developed an automated procedure that ingests, filters, and validates these data on a daily basis to provide the DAAC users with the most up-to-date data possible.
- A Browse Description X-Windows module has been developed for the EOSDIS IMS Client software. IMS Client users may use this module from a number of screens to view the description of the browse data.
- A Legend X-Windows module has been designed and implemented for the EOSDIS IMS Client software. IMS Client users may use this module to display an interpretation of the color set used in a browse image. Ancillary software has been developed to view and insert legend data in browse data files.
- A Software Modification Request application has been developed to simplify and standardize problem reporting for the IMS Client.

In addition, Mr. Beaumont has been given the ongoing tasks of porting the IMS Client software from Goddard Space Flight Center (GSFC) and the IMS Access Script software from Langley Research Center (LaRC).

Current projects include the design and development of enhanced local versions the IMS Client and Access Scripts, including the encapsulation of the LaRC Timeline X-Windows interface. Mr. Beaumont is also a member of the Browse Working Group, which is tasked with the design of browse data for the next version of the IMS Client software.

Ms. Susan T. McCoy, began supporting this project March 1, 1994, to continue working with the MSFC DAAC IMS development team. During this reporting period, Ms. McCoy has been working on the following tasks:

Data Order Tracking System (DOTS): Ms. McCoy completed the design and development of a graphical user interface for both the User Services and Production Offices of the DAAC. The current user interfaces are part of the Data Order Tracking System and are linked to the Order Tracking database. She has worked closely with both offices through the requirements definition, design review, and testing phases.

IMS Local Character User Interface (CHUI): The design and development of the Logon and User Profile screens for the IMS Local CHUI were completed by Ms. McCoy. These screens have been integrated with the series of Search and Results screens developed by Evans Criswell. In the next month, she plans on completing development and integration of the Order screen where a data order is placed. The order is then entered into the Order Tracking database and tracked with DOTS.

IMS Database Inventory: Ms. McCoy was responsible for populating the IMS inventory tables. She has talked with scientists to gather dataset and granule information and written scripts to insert this information into the database.

Pathfinder HDF Routines: The Pathfinder project has requested several variations of two C routines written by Ms. McCoy. The routines read daily Pathfinder files which contain a set of HDF objects. The first routine extracts an object and creates a new HDF of the same type. This routine is also used as the basis for interfacing the Data Miner with the Pathfinder files. The other routine extracts an orbit from any one of the objects and creates a new HDF object of the same type. Since March, variations of the original routines have been written for Atmospheric Moisture, Land Products, and Marine Wind Speed Product Pathfinder files.

ES41 Division Interactive Data Integration and Management System (IDIMS): Ms. McCoy was also responsible for continued sustaining engineering on IDIMS, which is a complex menu-driven system developed on the EADS 3090. She has spent a considerable amount of time debugging problems which have occurred because of various system upgrades. IDIMS is now working properly.

Mr. Evans A. Criswell, began working on this project March 1, 1994, continuing his work with the MSFC DAAC.

File Location Database for the Optical Disc Jukebox Mass-Storage System: Mr. Criswell is the primary responsible person for the software which reads and writes files to the optical disc jukebox platters, updating the file location database as new files are written. This database provides the directory information for the jukebox, since the jukebox platters are not self-directing (platter name, start block and file size are required to read a file). Files are organized by dataset and this level of organization is implemented in the database and in Mr. Criswell's jukebox read and write routines. This added organization allows one platter to contain several datasets, and allows one dataset to span several platters, in a manner which is transparent to the user of the read routine.

During the reporting period, Mr. Criswell made the following improvements to the jukebox access programs and file location database:

- The speed and efficiency of the jukebox read and write routines were improved by modifying them to read or write all the necessary files to or from a particular jukebox platter before dequeuing it, instead of issuing separate "self-contained" calls for each file which queue a platter, read or write one file, and dequeue the platter. The main reason for the change was to prevent read or write requests from interrupting read or write requests that are already in progress.

- Signal handlers were added to the routines to clean up in case a read or write is abnormally terminated, such as by being killed, control-c, disk full, or other common problems. The platter in use is unmounted to release the drive it was using, preventing the user from having to manually unmount the platter before issuing another request.
- A column was added to the jukebox database to indicate whether a particular copy of a file within its dataset is the most recent copy. Since filenames can be reused (allowing new, improved versions of files to be archived), this flag was necessary so that jukebox statistics could be gathered for the most recent files, ignoring older copies, in a reasonable amount of time. The flag allowed considerable simplification of the read routine, which reads the most recent copy of each requested file. The flag is maintained by the write routine, but a script was written to reset the flag appropriately for all files in the database in case the database ever needs to be rebuilt or other errors are found.

It should also be noted that the jukebox access software is used by the Data Miner to retrieve files from archival storage.

Marshall DAAC Local IMS Character-based User Interface: Mr. Criswell is the primary developer of the character-based user interface for the Marshall DAAC Local IMS. The interface allows the user to enter search parameters for querying the database to determine what datasets and files are available at the Marshall DAAC.

During the reporting period, the following parts of the user interface were developed:

- The search screen allows the user to enter the parameters for his database query. The valid values for the parameter, source, sensor, project, and dataset name fields are retrieved from the database so they can change automatically as the database changes without modifying the interface itself. For each of the valid values, there is a brief description which can be displayed by hitting a key. The ability to save and load queries from files was added.
- The code which actually executes the database query was cleaned up considerably and was modified to read the query produced by the search screen, execute it, and write the results to a directory which is read by the result screen. This code is a totally separate module, but it seamlessly links the search and result screens when a query is executed.
- The result screen displays the query results, grouped by dataset, and allows the user to select files from each dataset for order. Details about each dataset are shown (one dataset per page). The files for each dataset and some details for each are shown in scrolling lists, from which selections can be made for ordering. A subscreen was added to show the detailed information about a file that will not fit in the 47-character column on the result screen. The option of viewing the query results by supergranule is available. This feature is especially useful when dealing with datasets having one file per day. The files for each month are grouped into one supergranule, allowing one month worth of files to be selected by choosing the supergranule. The ability to email the results to the user is also available.
- A package screen showing the pre-packaged data available has also been included. It shows the packages on a per-dataset basis in the same format as the query result screen.
- A dataset information screen, developed previously, which provides descriptions of each dataset, was linked into the interface.

System Administration for the Scientific Information Systems Lab: Mr. Criswell was responsible for system administration on the two Silicon Graphics UNIX workstations currently located in the UAH Computer Science Building. Mr. Criswell configured and managed the system hardware and software. Software, such as Gnu C 2.5.8, Gnu Make, Gnu Emacs, HDF (Hierarchical Data Format) Utilities, Collage, Xv, and X Mosaic were installed, which were needed for the development of Dr. Thomas Hinke's Data Mining project.

Ms. C. Vada LaFontaine, continued participation in WetNet and MSFC DAAC activities at MSFC and has provided network.

During the year the MSFC DAAC activity increased dramatically. Ms. LaFontaine was involved with providing input to the development of the Information Management System (IMS) and the MSFC DAAC Data Order and Tracking System (DOTS). Much of her input was based on experience with the WetNet project. She was able to provide specific examples to back up her suggestions. She has also taken over work on data set information files that are used by the IMS and the Master Directory. She continued involvement with the User Services Working Group (USWG). This group has become highly visible during the year and is often called upon to represent the scientist's point of view during system development. The group also supports splinter work groups. She became involved with the two groups, one that is working to revise order and user statistics and another that is working with the IMS development team.

Ms. LaFontaine has become much more familiar with using the resources on the internet and using the UNIX operating system this year. Both of these skills help her to work with scientists to assist them in finding sources of information and new ways to communicate. She has been involved in the design and implementation of the MSFC DAAC and WetNet WWW home pages. These pages will be widely used in the coming year and will be highly visible to the science community and to the public.

Although the data center was not operational we began to process requests for data in order to refine order filling procedures. She has also added new data sets and documentation to the DAAC holdings. She has become more familiar with the DAAC data.

Ms. LaFontaine's activities with the WetNet project has decreased. Most of the questions from scientists now involve data access and use rather than computer hardware configuration. She continues to produce a WetNet newsletter. The newsletter has been distributed to the WetNet scientists, but now will be distributed to EOSDIS managers at NASA HQ and GSFC. She has also assisted in the design and installation of a local area network at the USRA office. This involved upgrading and replacing PCs, installing network cards and installing TCP/IP software.

Research and Technology Operating Plan (RTOP)

6/28-29/94

MSFC

USRA

The activities under the Physical Climate and Atmospheric Dynamics Research tasks, a subset of the Mission to Planet Earth Program, were reviewed. The review was attended by Drs. John Theon and Ramesh Kakar of Code YSC at NASA Headquarters. Scientists and engineers in ES and EB labs here at Marshall and from the external University community made presentations on their progress and future plans. The information presented at the review provided Marshall and NASA Headquarters program managers and technical monitors an opportunity to better understand the research that is ongoing in their discipline areas and will be used as input into FY95 funding decisions. The review was quite successful and should provide adequate justification to maintain a strong funding level for Marshall RTOP programs in FY95. Dr. Gary Jedlov - Coordinator.

Special Projects

PROGRAM - University-Based Cooperative Program in Earth Systems Science Education (ESSE) - The University-based Cooperative Program in Earth System Science Education supports development of undergraduate curricula emphasizing a multidisciplinary approach to the study of the planet Earth as a unified physical system. Nationwide, twenty-two universities take part in the program. Each university offers an introductory survey course, together with a senior course. IGCRE performs the local coordination of these activities by helping to identify universities and their associated scientists for participation in this program. We also encourage and support participation of qualified IGCRE scientists in this program where appropriate

ELIGIBLE PARTICIPANTS - The program is targeted for universities throughout the United States with a commitment to developing an interdisciplinary Earth science program at their institution. The audience served by the project is undergraduate students. Since this program has proven to be successful, it has been expanded to include other universities and graduate-level students, as well as arrangements for postdoctoral research opportunities at NASA and universities.

PROGRAM DESCRIPTION - Under this pilot program, selected universities are participating cooperatively with other universities and NASA in two inter-related activities--curriculum development and scientific exchange. Each university is required to develop and offer an introductory survey course in Earth systems science and senior-level, interdisciplinary course. The introductory course presents an overview of Earth systems science to a broad segment of the student body, including both science and non-science majors. The purpose of the senior level course is to attract those undergraduate science majors with solid foundations in relevant sciences to future studies and work in Earth systems science. The senior level course is taught jointly by faculty members from at least two academic departments with supplemental lectures from other in-house faculty, advanced graduate students, postdoctoral students, as well as visiting faculty and researchers from other universities or NASA laboratories. In addition, to the curriculum development portion of the program, each university participates in an effort involving short-term visiting scientists from other participating universities and NASA Field Centers. These visitors provide additional technical insight and foster interdisciplinary education and research through their special expertise from a NASA Center who serves as a sponsor for their academic program. The NASA-sponsoring scientist may join in the identification and formulation of course work and relevant projects, facilitate access to NASA data, technical material, and other resources, and locate other NASA-based scientists to serve in a resource lecture pool from which universities may draw visiting lecturers.

Each participating university and the principal investigator are required to report on courses taught during the year and provide travel records for the visiting faculty.

ESSE Program Overview: 1993-94 Academic Year: A total of twenty five universities participated in the Earth System Science Education (ESSE) program in the 1993-94 academic year. Significant progress continues to be made in teaching both survey and senior level courses. The accomplishments of the ESSE faculty are being documented in annual progress reports which are compiled at this time. This data is being compiled into a 1993-94 academic year status report that will quantify accomplishments in terms of courses taught, enrollments, student characteristics, departments involved in team teaching etc.

Although the format varies from university to university, typically, the survey courses are being taught by one faculty member and the senior courses are being taught by faculty teams. The faculty teams usually include faculty from various departments (often including social science and economics) within the university and the occasional use of a guest lecturer. In most cases the principal investigator serves as the coordinator of the teaching team. Generally, two or more departments are represented on the faculty team. The departments and academic programs involved in teaching these courses include:

Agricultural and Irrigation Engineering
Atmospheric and Oceanic Sciences
Biology
Chemical and Biochemical Engineering

Civil and Environmental Engineering
Economics
Earth and Space Sciences
Earth and Planetary Sciences
Ecology and Evolutionary Biology
Forest Resources
Geography
Geology
Geosciences
Marine Science
Meteorology
Physiology and Biophysics
Physics
Plant, Soils, and Biometeorology
Soil and Water Sciences
Tree-Ring Laboratory

The development and teaching of these courses has been enhanced by faculty exchange activities and special workshops funded by this program. Travel funds to support the faculty exchange and attendance at special workshops were made available to all 25 universities. During the past year, ESSE faculty participated in workshops regarding the use of Geoscope in the classroom. Geoscope is an interactive database of earth science related text and images stored on CD-Rom. The previous year a special workshop on the use of Stella software as a modeling tool were conducted for the ESSE faculty. Workshops such as these are making significant contributions to the development of the survey and senior earth system science courses.

In May 1994 a special ESSE session was conducted as part of the Spring Meeting of the American Geophysical Union (AGU). The session included presentations from participating faculty, guest lecturers with creative teaching ideas and techniques, teaching assistants developing courses in ESSE, and others interested in earth system science curricula. This well attended session produced some interesting and potentially productive discussions on the development of earth system science curricula. A key issue that was raised again in discussion is how the ESSE materials developed in this program will be packaged and shared with the broader university community.

Finally, in June 1994 the ESSE program participants and management met to discuss the progress in the program and to plan for future activities. Most of the original 25 schools have received their full allotment of funding for curriculum development (\$25,000 over two years). Funds for faculty exchange, workshops, and program meetings are expected to be available for the next year or two. In order to build on the program's success, it is important to establish and implement a plan for continuation in the near future.

SPECIAL WORKSHOPS/MEETINGS

The following consultants were retained to attend the American Geophysical Union's session on Global Change Education in Baltimore, Maryland, May 22-28, 1994:

Dr. Robert Bereman from North Carolina State University
Mr. Maury Estes
Dr. Arthur Few from Rice University
Dr. George W. Fisher from Johns Hopkins University
Dr. Catherine H. Gautier from the University of California, San Diego
Mr. Paul J. Kinder from Byrd Polar Research Center
Ms. Lisa Leffler from Northwestern University
Dr. James Miller from Cook College, Rutgers University
Dr. Michael Rampino from New York University

Dr. Rejean Simard from the Canadian Space Agency
Dr. John Snow from Purdue University

The consultants listed below were retained to travel to College Park, MD, to participate in the Earth System Science Education Meeting at the University of Maryland, June 16-18, 1994.

Dr. John Binder from Utah State University
Dr. Robert Ford from Utah State University
Dr. Donald Jensen from Utah State University
Dr. Abraham Lerman from Northwestern University
Dr. Ellen-Mosley-Thompson from Ohio State University
Mr. Ray Thomas from the University of Florida

ESSE TRAVEL (listed in alphabetical order)

Faculty Exchange Travel:

Dr. Michael Arthur from Pennsylvania State University traveled to the University of Florida, February 9-12, 1994, to participate in the travel-exchange of faculty between the participating schools to become a resource for the development of interdisciplinary earth science courses.

Dr. Roger Bales from the University of Arizona traveled to Utah State University, February 7-8, 1994, to provide special expertise and perspectives to benefit their curriculum development.

Dr. Gary Ernst from Stanford University traveled to the University of Minnesota, November 10-12, 1993, to discuss the development of Earth System Science courses and other ESSE related issues at Minnesota with Dr. Kerry Kelts. Dr. Ernst gave two presentations, one entitled, "Petrotectonic Evolution of Klamath Arc," and one entitled, "Earth Systems Science Curricula: How We Did It at Stanford."

Dr. Arthur Few from Rice University attended the Earth System Science Education Meeting June 17-18, 1994, at the University of Maryland.

Dr. Catherine H. Gautier from the University of California, San Diego, traveled to London, Ontario, Canada, to attend the NATO Advanced Research Workshop on training Global Change scientists, June 5-8, 1994.

Dr. Harshvardhan from Purdue University traveled to Stanford, CA, and NASA/Ames Research Center, to discuss and collaborate with Dr. Gary Ernest and Dr. Susan Alexander at Stanford University concerning development of undergraduate Earth System Science courses and ideas on classroom presentations of remote sensing, June 12-14, 1994.

Dr. Fred Mackenzie from the University of Hawaii traveled to Northwestern University to visit with Dr. Abraham Lerman, February 18-24, 1994. He gave a lecture to the ESS undergraduate classes and presented a seminar.

Dr. Richard Minnich from the University of California in Riverside, CA, traveled to Utah State University to meet and hold discussions with Dr. Robert Ford, February 21-24, 1994.

Dr. Donald Perkey traveled to Purdue University, April 4-5, 1994, to discuss global change science with Dr. James Ogg and other Purdue scientists, to present a lecture relevant to atmospheric numerical modeling to Dr. James Ogg's upper division global change class and present a departmental seminar entitled, "Heat Moisture and Radiation Diagnostics of Convectively Active Storms Over the GCIP Area."

Dr. Martin Ruzek from Milwaukee, WI, Philadelphia, PA, to attend a CAUSE/CNI Conference, June 2-3, 1994.

Mr. Arturo Sanchez from the University of New Hampshire traveled to Greenbelt, MD, to participate in the USRA/NASA Goddard Lecture Series, "Observing, Modeling and Prediction of the Earth System and Global Change," June 13-17, 1994.

Dr. Jerald L. Schnoor from the University of Iowa traveled to Ohio State University to interact with Dr. Ellen Mosely-Thompson under the ESSE program, May 10-12, 1994.

Other Travel/Visits (listed in alphabetical order)

Dr. Donald R. Johnson was invited to Purdue University to present Earth System Science Seminar and discuss ESSE program with faculty, November 11-12, 1993. He also traveled to San Francisco, CA, to present a paper on NASA/USRA Earth System Science Education at the American Geophysical Union Meeting, Fall meeting held December 2-13, 1993. A preprint of his paper presented is attached as Appendix 11. He also traveled to Salt Lake City, Utah, to give a presentation on the ESSE Program, April 7-8, 1994. During May 1, 1994, through June 19, 1994, he provided management, coordination, and direction of NASA/USRL Cooperative University Program in Earth System Science Education including correspondence and discussion with participants.

Publications and Presentations

Bowdle, D.A., D.R. Cutten, V. Srivastava, E.W. McCaul, J. Rothermel, and M. Jarzembki, 1993: Estimating aerosol backscatter coefficients at 2 microns using GLOBE measurement and modeling results. Presented at the *NASA 3rd Two Micron Solid-State Laser Technology Review*, 8-9 Nov., Washington D.C.,

Bowdle, D.A., D.R. Cutten, V. Srivastava, and E.W. McCaul, Jr., 1994: The Global backscatter experiment (GLOBE): status, results, and plans. Presented at the *LAWS Science Team Meeting*, 1-3 Feb., Clearwater, FL.

Buechler, D.E., 1993: Preliminary investigation of using lightning data as an indicator of convective precipitation. *American Geophysical Union, Fall Meeting*. 153, 6-12 Dec. San Francisco, CA.

Stewart, M.F. and L.R. Barnum, 1993: Maintenance manual for the advanced ground-based field mill instrument. Vol. 1 & 2. Marshall Space Flight Center.

Vinz, L.B. and S.J. Graves, 1994: An interpolated counterpropagation approach for determining target spacecraft attitude. Presented at the *INNS World Congress on Neural Networks*, 6-10 June, San Diego, CA.

Vinz, L.B. and S.J. Graves, 1994: A counterpropagation neural network for determining target spacecraft orientation. Presented at the *IEE World Congress on Computational Intelligence/IEEE Conference on Neural Networks*, 26 Jun.-2 Jul., Orlando, FL.

Wang, S. and Q. Wang, 1994: Roles of drizzle in a one-dimensional third-order turbulence closure model of the nocturnal stratus-topped marine boundary layer. *J. Atmos. Sci.*, **51**, 1559-1576.

Wang, S., 1994: Seasonal simulations of marine stratocumulus clouds with GENESIS climate model: A comparison with observations. *American Geophysical Union 1994 Spring Meeting*, May, Baltimore, MD.

Wang, S. and P. Minnis, 1994: Application of Tiedtke's prognostic cloud scheme in a simple boundary-layer model: A comparison with satellite data. Presented at the *2nd International Conference on Air-Sea Interaction and On Meteorology and Oceanography of Coast Zone*. 22-27 Sept., Lisbon, Portugal.

Wang, S., 1994: A mass flux parameterization of stratocumulus-topped boundary layers. Presented at the *Workshop on Modeling Boundary-Layer Clouds*. 23-27 Aug., Boulder, CO.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions.

2. It then goes on to describe the various methods used to collect and analyze data.

3. The next section details the results of the study and the conclusions drawn from the data.

4. Finally, the document provides a list of references and a bibliography.

5. The document is well-organized and easy to read, providing a clear and concise overview of the research.

6. The data presented is thorough and detailed, allowing for a deep understanding of the subject matter.

7. The conclusions drawn are well-supported by the data and provide a clear direction for future research.

8. The document is a valuable resource for anyone interested in the field of research.

9. The references and bibliography are comprehensive and provide a wealth of information for further study.

10. Overall, the document is a high-quality piece of research that provides a clear and concise overview of the subject matter.

11. The document is well-organized and easy to read, providing a clear and concise overview of the research.

12. The data presented is thorough and detailed, allowing for a deep understanding of the subject matter.

13. The conclusions drawn are well-supported by the data and provide a clear direction for future research.

14. The document is a valuable resource for anyone interested in the field of research.

15. The references and bibliography are comprehensive and provide a wealth of information for further study.

16. Overall, the document is a high-quality piece of research that provides a clear and concise overview of the subject matter.
