

# NASA Pocket Statistics

1997 Edition

NASA-TM-112623

About  
the  
cover:

**Mars Pathfinder on the Surface in Ares Vallis Region of Mars**

In this first color panorama mosaic, the Sojourner rover sits on a solar panel of the *Sagan Memorial Station* (the lander) waiting for the command to roll off onto the Martian surface. Pathfinder landed July 4, 1997.

## Foreword

POCKET STATISTICS is published by the NATIONAL AERONAUTICS AND SPACE ADMINISTRATION (NASA). Included in each edition is Administrative and Organizational information, summaries of Space Flight Activity including the NASA Major Launch Record, Aeronautics and Space Transportation and NASA Procurement, Financial and Workforce data.

The NASA Major Launch Record includes all launches of Scout class and larger vehicles. Vehicle and spacecraft development flights are also included in the Major Launch Record. Shuttle missions are counted as one launch and one payload, where free flying payloads are not involved. All Satellites deployed from the cargo bay of the Shuttle and placed in a separate orbit or trajectory are counted as an additional payload. For a yearly breakdown of charts shown by decade, refer to the issues of POCKET STATISTICS published prior to 1995. Changes to this book may be made to Ron Hoffman at, (202) 358-1596, or E-mail; rhoffman@hq.nasa.gov

# Excerpts From The National Aeronautics And Space Act Of 1958, As Amended

AN ACT To provide for research into problems of flight within and outside the Earth's atmosphere, and for other purposes.

## Declaration Of Policy And Purpose

Sec. 102 (a) The Congress hereby declares that it is the policy of the United States that activities in space should be devoted to peaceful purposes for the benefit of all mankind.

(b) The Congress declares that the general welfare and security of the United States require that adequate provision be made for aeronautical and space activities. The Congress further declares that such activities shall be the responsibility of, and shall be directed by, a civilian agency exercising control over aeronautical and space activities sponsored by the United States, except that activities peculiar to or primarily associated with the development of weapons systems, military operations, or the defense of the United States (including the research and development necessary to make effective provision for the defense of the United States) shall be the responsibility of, and shall be directed by, the Department of Defense; and that determination as to which such agency has responsibility for and direction of any such activity shall be made by the President in conformity with section 201(e).

(c) The Congress declares that the general welfare of the United States requires that the National Aeronautics and Space Administration (as established by title II of this act) seek and encourage to the maximum extent possible the fullest commercial use of space.

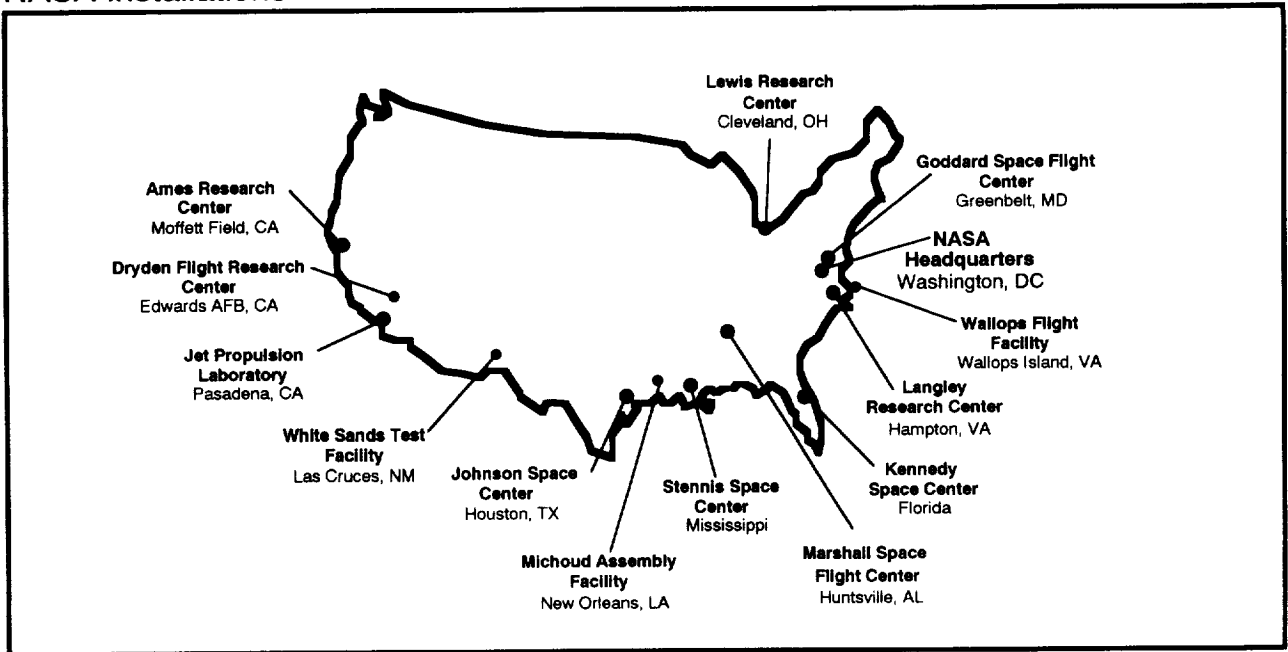

(d) The aeronautical and space activities of the United States shall be conducted so as to contribute materially to one or more of the following objectives:

- (1) The expansion of human knowledge of the Earth and of phenomena in the atmosphere and space;
- (2) The improvement of the usefulness, performance, speed, safety, and efficiency of aeronautical and space vehicles;
- (3) The development and operation of vehicles capable of carrying instruments, equipment, supplies, and living organisms through space;
- (4) The establishment of long-range studies of the potential benefits to be gained from, the opportunities for, and the problems involved in the utilization of aeronautical and space activities for peaceful and scientific purposes;
- (5) The preservation of the role of the United States as a leader in aeronautical and space science and technology and in the application thereof to the conduct of peaceful activities within and outside the atmosphere;
- (6) The making available to agencies directly concerned with national defense of discoveries that have military value or significance, and the furnishing by such agencies, to the civilian agency established to direct and control nonmilitary aeronautical and space activities, of information as to discoveries which have value or significance to that agency;

# Excerpts From The National Aeronautics And Space Act Of 1958, As Amended

Declaration Of Policy And Purpose (Continued)	Functions Of The Administration
<p>(7) Cooperation by the United States with other nations and groups of nations in work done pursuant to this Act and in the peaceful application of the results thereof; and</p> <p>(8) The most effective utilization of the scientific and engineering resources of the United States, with close cooperation among all interested agencies of the United States in order to avoid unnecessary duplication of effort, facilities, and equipment.</p> <p>(e) The Congress declares that the general welfare of the United States requires that the unique competence in scientific and engineering systems of the National Aeronautics and Space Administration also be directed toward ground propulsion systems research and development.</p> <p>(f) The Congress declares that the general welfare of the United States requires that the unique competence in scientific and engineering systems of the National Aeronautics and Space Administration also be directed toward the development of advanced automobile propulsion systems.</p> <p>(g) The Congress declares that the general welfare of the United States requires that the unique competence in scientific and engineering systems of the National Aeronautics and Space Administration also be directed to assisting in bioengineering research, development, and demonstration programs designed to alleviate and minimize the effects of disability.</p> <p>(h) It is the purpose of this Act to carry out and effectuate the policies declared in subsections (a), (b), (c), (d), (e), (f), and (g).</p>	<p>Sec. 203 (a) The Administration, in order to carry out the purpose of this Act, shall --</p> <ol style="list-style-type: none"><li>(1) plan, direct, and conduct aeronautical and space activities;</li><li>(2) arrange for participation by the scientific community in planning scientific measurements and observations to be made through use of aeronautical and space vehicles, and conduct or arrange for the conduct of such measurements and observations; and</li><li>(3) provide for the widest practicable and appropriate dissemination of information concerning its activities and the results thereof.</li></ol> <p>(b) (1) The Administration shall, to the extent of appropriated funds, initiate, support, and carry out such research, development, demonstration, and other related activities in ground propulsion technologies as are provided for in sections 4 through 10 of the Electric and Hybrid Vehicle Research, Development, and Demonstration Act of 1976.</p> <p>(2) The Administration shall initiate, support, and carry out such research, development, demonstration, and other related activities in solar heating and cooling technologies (to the extent that funds are appropriated therefor) as are provided for in sections 5, 6 and 9 of the Solar Heating and Cooling Demonstration Act of 1974.</p>

# NASA Installations

# NASA Installations

## **NASA HEADQUARTERS** **Washington, DC 20546**

NASA Headquarters exercises management over the space flight centers, research centers, and other installations that constitute the National Aeronautics and Space Administration.

Responsibilities of Headquarters cover the determination of programs and projects; establishment of management policies; procedures and performance criteria; evaluation of progress; and the review and analysis of all phases of the aerospace program.

Management of NASA's research and development programs is the responsibility of program offices which report to and receive overall guidance and direction from an associate administrator.

## **AMES RESEARCH CENTER** **Moffett Field, CA 94035**

Ames Research Center's responsibilities are concentrated in computer science and applications, computational and experimental aerodynamics, flight simulation, flight research, hypersonic aircraft, rotorcraft and powered-lift-technology, aeronautical and space human factors, life sciences, solar systems exploration, air-borne science and applications and infrared astronomy.

Ames is home to more than a dozen major wind tunnels, including the world's largest; several advanced flight simulators, a variety of supercomputers, including some of the world's fastest, and several unique aircraft -- both fixed-wing and rotorcraft -- used for aeronautical flight research and for flying laboratories. It also includes a variety of unique facilities for life sciences research.

Through its research efforts, the center supports military programs, the Space Shuttle and various civil aviation projects. These projects and responsibilities will continue to evolve as NASA's needs change and Ames' capabilities develop.

## **HUGH L. DRYDEN FLIGHT RESEARCH CENTER** **Edwards, CA 93523**

The Dryden Flight Research Center was named after Hugh L. Dryden, an internationally known aeronautical scientist. In 1946, he was appointed NACA's Director of Aeronautical Research, and was responsible for making the center a permanent facility in 1947. His vision was "to separate the real from the imagined problems and to make known the overlooked and the unexpected problems."

Dryden acts as the flight arm of NASA's aeronautics enterprise. Dryden is the "Center of Excellence" for atmospheric flight operations and its primary mission is flight research. Dryden's charter is to research, develop, verify and transfer advanced aeronautics, space, and related technologies.

Dryden's primary research tools are research aircraft. The center operates approximately 20 flight research aircraft consisting of SR-71s, F-15s, F-16s, F-18s and a B-52. Experimental aircraft types vary greatly, ranging from the SR-71s that fly at speeds of Mach 3 to the Pathfinder solar powered Remotely Powered Aircraft (RPA) that flies at 25mph.

The center's ground-based facilities complement Dryden's flight research mission and include a highly-developed aircraft flight instrumentation capability; a data analysis facility for processing of flight research data; flight simulators and a test range communications and data transmission capability that links NASA's Western Aeronautical Test Range facilities.

## NASA Installations

<p>Dryden continues to serve as the "back-up" landing site for the Space Shuttle Orbiters as well as processing the vehicles for ferry flights back to the Kennedy Space Center.</p> <p><b>GODDARD SPACE FLIGHT CENTER</b> Greenbelt, MD 20771</p> <p>This NASA field center, 10 miles northeast of Washington, DC, has one of the worlds leading groups of scientists, engineers and administrative managers. It has the largest scientific staff of all the NASA centers.</p> <p>With its more than 12,000 civil service and contract employees, including its facility at Wallops Island, VA, the center's work includes research in the Earth and space sciences and the design, fabrication and testing of scientific satellites that survey the Earth and the universe. Goddard also has a leading role in tracking satellites and suborbital space vehicles.</p> <p>Controllers in the Payload Operations Control Center maintain a 24-hour vigil every day of the year for more than a dozen orbiting spacecraft. Spacecraft being watched include Tracking and Data Relay Satellites which serve as vital communications links between orbiting spacecraft and Earth through a Goddard-managed ground terminal in White Sands, NM. One of those spacecraft is the world renowned Hubble Space Telescope which was launched in 1990. Other more recent payloads which remain under the watchful eyes of Goddard controllers include: Polar, Rossie X-ray Timing Explorer and the Solar and Heliospheric Observatory.</p> <p>The Compton Gamma Ray Observatory, launched in April 1991, also is managed by Goddard. Compton's mission is to study gamma ray emitting objects in the Milky Way galaxy and beyond. Within its first three months of operation, the</p>	<p>Energetic Gamma Ray Experiment Telescope, one of four instruments aboard Compton, detected one of the most luminous gamma-ray sources ever seen. The source of this radiation was identified with the variable Quasar 3C279 located in the constellation Virgo, approximately seven billion light years from Earth.</p> <p><b>JET PROPULSION LABORATORY</b> Pasadena, CA 91109</p> <p>The laboratory is engaged in exploring the Earth and the solar system with automated spacecraft. In addition to the Pasadena site, JPL manages the Deep Space Communications Complex, a station of the Worldwide Deep Space Network (DSN) located at Goldstone, CA, on 40,000 acres of land occupied under permit from the U.S. Army. The DSN allows for spacecraft communications, data aquisition and mission control, and for the study of space with radio science.</p> <p>Current NASA flight projects under JPL management include Galileo, Mars Pathfinder and Mars Global Surveyor, New Millennium, Stardust, TOPEX/Poseidon, Ulysses, Voyager and the planned Cassini mission. Major space science instruments include the second-generation Wide Field and Planetary Camera-2 for the Hubble Space Telescope, the NASA Scattometer and the Spaceborne Imaging Rader. The laboratory designs flight systems, including complete spacecraft and provides technical direction to contractor organizations.</p> <p>The laboratory conducts research in a variety of fields, including microelectronics, biomedical and communications technologies, information and advanced computer systems.</p>
---	---

# NASA Installations

## **LYNDON B. JOHNSON SPACE CENTER Houston, TX 77058**

JSC manages the selection and training of astronauts for Space Shuttle and future Space Station missions. All U.S. human space flights, from launch to landing, are controlled from the Mission Control Center at JSC, a new flight control Center at JSC. A new flight control facility came on line in 1995 and will replace the historic control rooms used since the Gemini program.

JSC manages a fleet of specialized aircraft at Ellington Field, located about seven miles north of the Center, used in training Shuttle pilot astronauts and for microgravity research. JSC also operates the White Sands Missile Range at Las Cruces, NM. WSTF tests Shuttle propulsion systems, powers systems and materials.

JSC is NASA's lead center for life science research, working with medical researchers around the country to study the effects of spaceflight on astronauts and to develop countermeasures that also have applications on Earth. JSC is teaming with researchers from academia and the private sector to form a Biomedical Science Institute, a world class life science research center for human space flight located in the Houston area.

Many of the facilities at JSC contain equipment unique to human space flight programs. Astronauts use the Mockup and Integration Laboratory to become familiar with the Shuttle and Space Station crew environments, to practice emergency procedures, and to rehearse on-orbit tasks. The Manipulator Development Facility employs a hydraulic robotic arm to allow astronauts to practice the precise on-orbit movements required of Shuttle's robotic arm during payload deployment and spacewalks.

Space Shuttle simulators provide realistic training for all phases of flight. The motion base simulator, a duplicate of the Orbiter flight deck, recreates the sights, sounds and feel of launch and entry. The fixed base simulator provides training for on-orbit activities.

The Weightless Environment Training Facility is a large water tank that uses neutral buoyancy to help astronauts practice for spacewalks. This facility will soon be augmented by a much larger Neutral Buoyancy Laboratory which will hold major Space Station components.

## **JOHN F. KENNEDY SPACE CENTER Kennedy Space Center, FL 32899**

The Kennedy Space Center was established in the early 1960s as the launch site for the Apollo lunar landing missions. KSC pioneered the mobile launch technique in which space vehicles are built up inside protective structures and moved to their launch pads a short time before launch, reducing their exposure to the corrosive sea shore environment to a minimum.

After the Apollo program was concluded in 1972, KSC's Complex 39 was used for the launch of four Skylab missions and for the Apollo spacecraft used in the Apollo-Soyuz Test Project. The center's facilities were modified for the Space Shuttle program during the 1970s. The shuttle era began with the launch of the STS-1 mission on April 12, 1981. Since then, more than 75 Shuttle missions have been launched and the current forecast calls for the launch of approximately seven missions per year from KSC's twin pads.

## NASA Installations

KSC is NASA's prime center for the test, checkout and launch of payloads and space vehicles. This includes launch of manned vehicles at KSC and oversight of NASA missions launched on unmanned vehicles from Cape Canaveral Air Station, FL, and Vandenberg Air Force Base (VAFB) in California.

The Center is responsible for the assembly, checkout and launch of Space Shuttle vehicles and their payloads, landing operations and turn-around of Shuttle Orbiters between missions. KSC also is responsible for the operation of the KSC Vandenberg Launch Site Resident Office located at VAFB.

### **LANGLEY RESEARCH CENTER** Hampton, VA 23665-5225

Langley's primary mission is basic research in aeronautics and space technology. Major research fields include aerodynamics, materials, structures, flight controls, information systems, acoustics, aeroelasticity, atmospheric sciences and non-destructive evaluation.

Approximately 60 percent of Langley's efforts are in aeronautics, working to improve today's aircraft and to develop concepts and technology for future flight. Over 40 wind tunnels, other unique research facilities and testing techniques aid in the investigation of the full range-from general aviation and transport aircraft through hypersonic vehicles.

Langley's goal is to develop technologies to enable aircraft to fly faster, farther, safer and to be more maneuverable, quieter, less expensive to manufacture and more energy efficient.

Researchers are studying improved flight control systems to aid aircraft in operating more efficiently in all kinds of weather and in crowded terminal airways.

Langley is lead center for management of the agency's technology development program for the future High Speed Civil Transport program. Langley will manage high-speed technology in areas of aerodynamic performance, airframe materials and structures, the flight deck and airframe systems integration. Improvements in supersonic (Mach 1-5) engine performance, fabrication of composite materials and laminar flow airfoil technology are spawning a new era in long-distance air travel. Passengers in the next century will benefit from current research programs at Langley.

### **LEWIS RESEARCH CENTER** Cleveland, OH 44135

In 1941 the National Advisory Committee for Aeronautics (NACA) established the NASA Lewis Research Center as a flight propulsion laboratory. The Center, which was named for George W. Lewis, NACA's Director of Research from 1924 to 1947, developed an international reputation for its research on jet propulsion systems.

Lewis mission involves aeropropulsion, space power, space communications, electric propulsion and microgravity science, including fluid physics, combustion and materials. In addition, Lewis is a supporting Center for chemical propulsion and expendable launch vehicles.

The Center conducts research for NASA's High-Speed Research Program in the areas of combustor design and enabling propulsion materials; for the Advanced Subsonic Technology Program and is advancing technologies to support advance short take-off and vertical landing aircraft; is managing the Advanced Communications Technology Satellite; and is playing a role in NASA's program to enable more effective access to Earth orbit and geosynchronous orbit.

# NASA Installations

The Center has been advancing propulsion technology to enable aircraft to fly faster, farther and higher, and has also focused its research on fuel economy, noise abatement, reliability and reduced pollution.

Facilities at Lewis include a Space Experiments Lab, Zero-Gravity Drop Tower, Aero-Acoustic Propulsion Laboratory, an Icing Research Tunnel, four (4) unique wind tunnels, space tanks, chemical rocket thrust stands, and chambers for testing jet engine efficiency.

## **MARSHALL SPACE FLIGHT CENTER** **Marshall Space Flight Center, AL 35812**

Marshall is NASA's lead center for space transportation systems development and is the agency's center of excellence for space propulsion. Marshall is also NASA's lead center for microgravity, specializing in materials science and biotechnology research.

Marshall led the development of the main propulsion system for the Space Shuttle and for each flight provides the main engines, the external tank that carries liquid oxygen and liquid hydrogen for those engines, and the solid rocket boosters that, together with the engines, lift the Shuttle into orbit.

Additionally, Marshall is managing development of the super light-weight External Tank, planned to replace the current external tank in 1997. It is being fabricated of aluminum alloys and incorporates an orthogrid design for the panels that together make the tank 8,000 pounds lighter than the current configuration.

Marshall is NASA's host center for the Reusable Launch Vehicle (RLV) technology program, a partnership among NASA, the United States Air Force and private industry to conduct cutting-edge research needed to develop a new generation of single-stage-to-orbit launch vehicles. It includes the X-33

advanced technology demonstrator, the X-34 small technology vehicle, and the Delta Clipper-Experimental Advanced (DC-XA) single-stage rocket.

Marshall is NASA's host center for the Reusable Launch Vehicle (RLV) technology program, a partnership among NASA, the United States Air Force and private industry to conduct cutting-edge research needed to develop a new generation of single-stage-to-orbit launch vehicles. It includes the X-33 advanced technology demonstrator, the X-34 small technology vehicle, and the Delta Clipper-Experimental Advanced (DC-XA) single-stage rocket.

Marshall is a manager of scientific payloads and experiments to be flown aboard the Shuttle. Many of these payloads to be flown in Spacelab, a reusable, modular research facility carried in the Shuttle's cargo bay. The center also operates NASA's Spacelab Mission Operations Control Center, from which all NASA Spacelab missions are controlled.

To prepare astronauts for Spacelab missions, the center also operates a Payload Crew Training Complex. Here, science astronauts train in Shuttle and Spacelab simulators to conduct the research they will perform in space.

A designated NASA center of excellence in space optical systems, Marshall is managing the Advanced X-ray Astrophysics Facility, a major astronomy observatory that will provide scientists with roughly a ten-fold improvements in resolving power over previous X-ray telescopes. The center previously managed development and initial checkout of the Hubble Space Telescope which is now relaying a wealth of new knowledge about the universe from distant galaxies to neighboring planets.

Other work assigned to Marshall includes the International Space Welding Experiment being jointly developed with Ukraine. Scheduled to fly aboard the Space Shuttle, the experiment will test a Ukrainian Universal hand Tool electron beam welding system as a potential technology for contingency space repairs.

# NASA Installations

## **MICHOUD ASSEMBLY FACILITY** **New Orleans, LA 70189**

The primary mission of the Michoud Assembly Facility is the systems engineering, engineering design, manufacture, fabrication, assembly, and related work for the Space Shuttle external tank. Marshall Space Flight Center exercises overall management control of the facility.

## **JOHN C. STENNIS SPACE CENTER** **Stennis Space Center, MS 39529**

NASA's John C. Stennis Space Center (SSC), located near the Mississippi Gulf Coast, is NASA's primary center for testing and flight certifying large rocket propulsion systems for the Space Shuttle and future generations of space vehicles. Because of its important role in engine testing for more than three decades, Stennis Space Center has been designated NASA's Center of Excellence for rocket propulsion testing. SSC will be responsible for the Agency's rocket propulsion test programs. The center is a unique test facility and is available to support the national interest in propulsion systems development testing. Additionally, the center has developed into a scientific community actively engages in research and development programs involving space, oceans and Earth.

Since 1975, SSC's primary mission has been the testing of Space Shuttle Main Engines to include research and development testing and flight acceptance testing. Static testing is conducted on the same concrete and steel stands used from 1966 to 1970 to captive-fire all first and second stages of the Saturn V rocket used in the Apollo manned lunar landing and Skylab programs.

Stennis Space Center is working toward testing advances space propulsion hardware for future vehicles. Preparations are under way at Stennis for testing

associated with the Reusable Launch Vehicle and Evolved Expendable Launch Vehicle programs. These two new programs are being designed by the aerospace industry, which is working with NASA and the Department of Defense to make space launch more accessible and affordable.

## **WALLOPS FLIGHT FACILITY** **Wallops Island, VA 23337**

Wallops Flight Facility, a part of the Goddard Space Flight Center, is one of the oldest launch sites in the world. Established in 1945, the facility covers 6,166 acres, including about 1,100 acres of marshland, in three separate areas of marshland, in three separate areas of Virginia's Eastern Shore.

Wallops manages and implements NASA's sounding rocket program which uses solid-fueled launch vehicles to accomplish approximately 30 scientific, suborbital missions each year. Launches are conducted at Wallops and other ranges worldwide.

Wallops manages and coordinates NASA's Scientific Balloon Program using thin-film, helium-filled balloons to provide approximately 30 scientific missions each year. Launches are conducted at Palestine, TX, Ft. Sumner, NM, and sites throughout the world.

Wallops supports NASA, the Department of Defense and other agencies in aeronautical research. Approximately 150-200 test operations, concentrating on aircraft/airport interface and aircraft operating problems research, are conducted each year at the research airport.

# The Year in Review

## DISCOVERIES AND NEW CHALLENGES FOR NASA

A rock, a record, a rover and a new rocket were among the top NASA stories for 1996. Background material, video and still images are available to news media to illustrate these stories, with supporting material also available via the Internet and the World Wide Web.

### LIFE ON MARS? TANTALIZING CLUES FROM AN ANCIENT ROCK

In an announcement that caused all humankind to take pause, NASA Administrator Daniel S. Goldin and a team of scientists revealed in August that a meteorite from Mars strongly suggested that primitive life may have existed on that planet more than 3 billion years ago. In a press conference at NASA Headquarters, a research team showed the world pictures of the first organic molecules thought to be of Martian origin; several features characteristic of biological activity, and possible microscopic fossils of primitive, bacteria-like organisms inside the ancient meteorite. In vowing to pursue the investigation of this historic discovery, Goldin said "The evidence is exciting, even compelling, but not conclusive. It is discovery that demands further scientific investigation. NASA is ready to assist the process of rigorous scientific investigation and lively scientific debate that will follow this discovery." Goldin invited governments from around the globe to participate in the continuing investigation of the meteorite.

### LUCID SETS U.S. RECORD FOR STAY IN SPACE

Astronaut Dr. Shannon Lucid set a new record for an American living in space and broke the world's record for a woman living in space by spending 181 days aboard the Russian Mir Space Station. Lucid, who conducted microgravity and life sciences experiments aboard the Mir with two Russian cosmonauts, returned to Earth aboard Space Shuttle Atlantis in November. President Clinton presented Lucid with the Congressional Space Medal of Honor in an early December ceremony, citing Lucid "for her contributions to

international cooperation in space ... Shannon Lucid is an explorer in the best tradition of those who dare to challenge the unknown." Lucid's stay on Mir was part of continuing U.S. - Russian space cooperation, which is setting the foundation for the International Space Station.

### TWO PROBES LAUNCHED TO STUDY THE RED PLANET

In a continuing effort to learn more about Mars, the United States launched two new spacecraft to the Red Planet in 1996. The Mars Global Surveyor and the Mars Pathfinder missions were both successfully launched from NASA's Kennedy Space Center, FL. Mars Global Surveyor, due to rendezvous with Mars in September 1997, will spend four months dipping into Mars' atmosphere using a technique called "aerobraking." Starting in 1998, the Surveyor will begin compiling a systematic database as it surveys the Martian landscape and photographs unique features, such as polar caps and Mars' network of sinuous, intertwining river channels. Mars Pathfinder, set to land on Mars July 4, 1997, is designed to test the feasibility of a new low-cost method of delivering a spacecraft, science payload and free-ranging rover to the surface of the Red Planet. Once deployed, the lander will transmit back to Earth science data collected during descent through Mars' atmosphere. The rover, named Sojourner, will then activate an onboard camera and send back images to Earth, signifying the start of its exploration.

# The Year in Review

## **GALILEO UNRAVELS MYSTERIES OF JUPITER AND ITS MOONS**

Mars was not the only planet to reveal startling new secrets in 1996. NASA's Galileo spacecraft, in its flyby and probe deploy at Jupiter, revealed many previously unknown facts about our Solar System's largest planet. Galileo's Probe, which was successfully sent into Jupiter's violet atmosphere in December 1995, provided new discoveries for NASA scientists. New information on the extent of water, clouds, and the chemical composition of Jupiter's atmosphere was revealed. As Galileo sped by Jupiter's moons, new details of the satellites began to emerge. On Ganymede, Jupiter's largest moon, scientists were intrigued by three-dimensional pictures of giant, icy fissures and evidence of a magnetic field. Galileo also reported that "warm ice" or even liquid water may have existed, and perhaps still exists, beneath the cracked icy crust of the moon Europa. Galileo found that the volcanically-active moon Io had noticeably changed since it was last observed 17 years ago by the Voyager spacecraft. In November, Galileo flew by Jupiter's moon Callisto, investigating the strange, pockmarked fourth moon, so different from its other active siblings.

## **HUBBLE SPACE TELESCOPE CONTINUES TO AMAZE ASTRONOMERS**

Living up to its role as one of the "Great Observatories," the Hubble Space Telescope showed images of galaxies colliding, the surface of Pluto, and the birth of stars during 1996. In April, Hubble sent back dramatic of gigantic tadpole-shaped objects surrounding a dying star. The "cometary knots" are probably the result of a dying star's final outbursts, seen in the Helix nebula. The Space Telescope continues on track for measuring the expansion of the universe, sending back information that fine-tunes the Hubble Constant. Scientists are using the telescope to try and place the Hubble Constant to within a ten percent accuracy. Compiling a "cosmic Movie" of the Crab Nebula, Hubble found the Nebula even more dynamic than previously understood. Hubble measured the diameters of a special class of pulsating star called Mira variables, which rhythmically change size.

At 11 billion light-years away, they existed during the epoch when it is commonly believed galaxies started to form. Hubble concluded the gigantic, old stars are not round but rather egg-shaped. That discovery may preview the fate of our Sun five billion years from now. Hubble also surveyed the "homes" of quasars, showing that they live in a remarkable variety of galaxies, many of which are violently colliding. The complicated image Hubble sent back suggests there may be a variety of mechanisms for "turning on" quasars, the universe's most energetic objects. Hubble introduced us to images of what may be galaxies under construction in the early universe, being made out of a long sought ancient population of "galactic building blocks." Those images show a grouping of 18 gigantic star clusters that appear to be the same distance from Earth, and close enough to each other that they will eventually merge into a few galaxy-sized objects. In October, Hubble followed the spectacular dance of Jupiter's aurora, allowing astronomers to map Jupiter's immense magnetic field and better understand how it generates such phenomena.

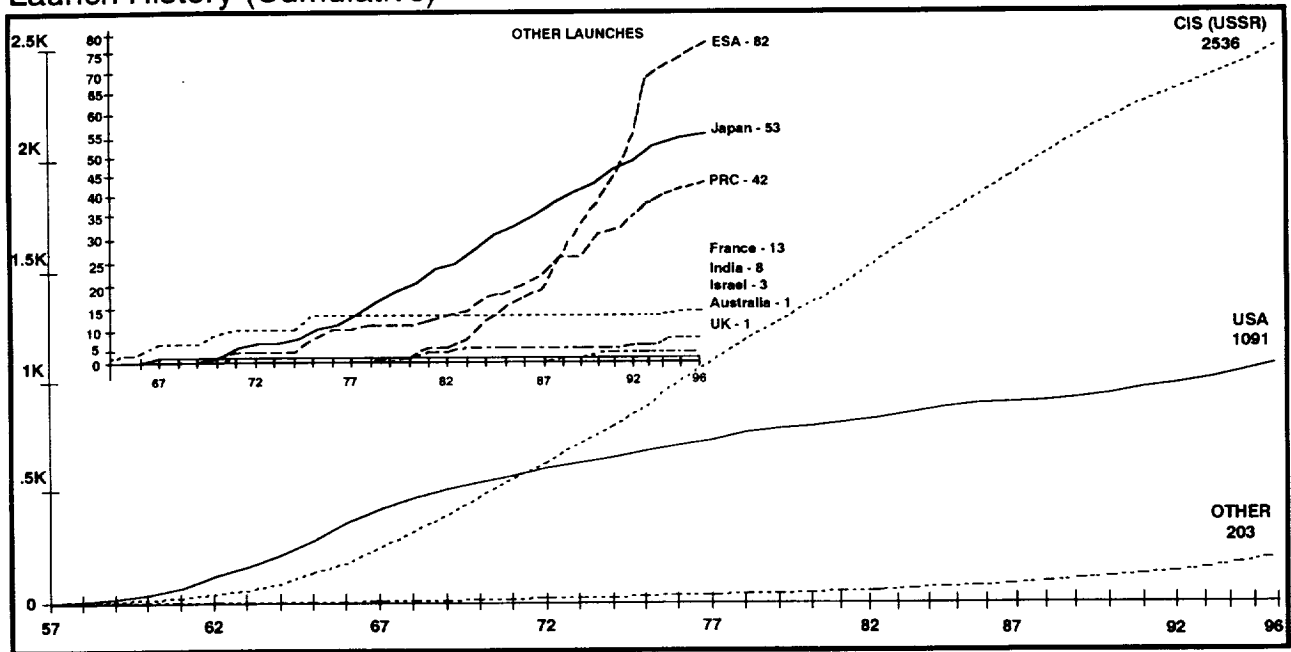

## **NEXT GENERATION LAUNCH VEHICLE CHOSEN FOR DEVELOPMENT**

In a quest for a faster, better, cheaper access to space in the 21st Century, Vice President Al Gore and Administrator Goldin announced that Lockheed Martin was selected to build the X-33 technology demonstrate vehicle, a one-half scale prototype of the Reusable Launch Vehicle which will be used to demonstrate advanced technologies that will dramatically increase reliability and lower the costs of putting payloads into space. Lockheed Martin will design, build and conduct the first test flight of the X-33 test vehicle by March 1999, and conduct up to fifteen flights by December 1999. NASA has budgeted \$941 million for the project through 1999, with Lockheed Martin contributing over \$200 million. Called "VentureStar," the unpiloted vehicle will launch vertically like a rocket and land horizontally like an airplane.

# Shuttle Approach and Landing Tests

Flight	Flight Date	Weight (kg)	Description of Flight
Captive Inert Flight 1	Feb 18, 1977	64,717.0	Unmanned inert Orbiter (Enterprise) mated to Shuttle Carrier Aircraft (SCA) to evaluate low speed performance and handling qualities of Orbiter/SCA combination. SCA Crew: Fitzhugh L. Fulton, Jr., Thomas C. McMurtry, Vic Horton, and Skip Guidry. Flight Time: 2 hours 10 minutes.
Captive Inert Flight 2	Feb 22, 1977	64,717.0	Unmanned inert Orbiter (Enterprise) mated to SCA to demonstrate flutter free envelope. SCA Crew: Fitzhugh L. Fulton, Jr., Thomas C. McMurtry, Vic Horton, and Skip Guidry. Flight Time: 3 hours 15 minutes.
Captive Inert Flight 3	Feb 25, 1977	64,717.0	Unmanned inert Orbiter (Enterprise) mated to SCA to complete flutter and stability testing. SCA Crew: Fitzhugh L. Fulton, Jr., Thomas C. McMurtry, Vic Horton, and Skip Guidry. Flight Time: 2 hours 30 minutes.
Captive Inert Flight 4	Feb 28, 1977	64,717.0	Unmanned inert Orbiter (Enterprise) mated to SCA to evaluate configuration variables. SCA Crew: Fitzhugh L. Fulton, Jr., Thomas C. McMurtry, Vic Horton, and Skip Guidry. Flight Time: 2 hours 11 minutes.
Captive Inert Flight 5	Mar 2, 1977	65,142.0	Unmanned inert Orbiter (Enterprise) mated to SCA to evaluate maneuver performance and procedures. SCA Crew: Fitzhugh L. Fulton, Jr., A. J. Roy, Vic Horton, and Skip Guidry. Flight Time: 1 hour 40 minutes.
Captive Active Flight 1A	Jun 18, 1977	68,462.3	First manned captive active flight with Fred W. Haise, Jr. and C. Gordon Fullerton, Jr. Manned active Orbiter (Enterprise) mated to SCA for initial performance checks of Orbiter Flight Control System. SCA Crew: Fitzhugh L. Fulton, Jr., Thomas C. McMurtry, Vic Horton, and Skip Guidry. Flight Time: 56 minutes.
Captive Active Flight 1	Jun 28, 1977	68,462.3	Manned captive active flight with Joe H. Engle and Richard H. Truly. Manned active Orbiter (Enterprise) mated to SCA to verify conditions in preparation for free flight. SCA Crew: Fitzhugh L. Fulton, Jr. and Thomas C. McMurtry. Flight Time: 1 hour 3 minutes.
Captive Active Flight 3	Jul 26, 1977	68,462.3	Manned captive active flight with Fred W. Haise, Jr. and C. Gordon Fullerton, Jr. Manned active Orbiter (Enterprise) mated to SCA to verify conditions in preparation for free flight. SCA Crew: Fitzhugh L. Fulton, Jr. and Thomas C. McMurtry. Flight Time: 59 minutes.
Free Flight 1	Aug 12, 1977	68,039.6	First manned free flight with Fred W. Haise, Jr. and C. Gordon Fullerton, Jr. Manned Orbiter (Enterprise) with tailcone on, released from SCA to verify handling qualities of Orbiter. SCA Crew: Fitzhugh L. Fulton, Jr. and Thomas C. McMurtry. Flight Time: 53 minutes 51 seconds.
Free Flight 2	Sep 13, 1977	68,039.6	Manned free flight with Joe H. Engle and Richard H. Truly. Manned Orbiter (Enterprise) released from SCA to verify characteristics of Orbiter. SCA Crew: Fitzhugh L. Fulton, Jr. and Thomas C. McMurtry. Flight Time: 54 minutes 55 seconds.
Free Flight 3	Sep 23, 1977	68,402.4	Manned free flight with Fred W. Haise, Jr. and C. Gordon Fullerton, Jr. Manned Orbiter (Enterprise) released from SCA to evaluate Orbiter handling characteristics. SCA Crew: Fitzhugh L. Fulton, Jr. and Thomas C. McMurtry. Flight Time: 51 minutes 12 seconds.
Free Flight 4	Oct 12, 1977	68,817.5	Manned free flight with Joe H. Engle and Richard H. Truly. Manned Orbiter (Enterprise) with tailcone off and three simulated engine bells installed, released from SCA to evaluate Orbiter handling characteristics. SCA Crew: Fitzhugh L. Fulton, Jr. and Thomas C. McMurtry. Flight Time: 1 hour 7 minutes 48 seconds.
Free Flight 5	Oct 26, 1977	68,825.2	Manned free flight with Fred W. Haise, Jr. and C. Gordon Fullerton, Jr. Manned Orbiter (Enterprise) with tailcone off, released from SCA to evaluate performance of landing gear on paved runway. SCA Crew: Fitzhugh L. Fulton, Jr. and Thomas C. McMurtry. Flight Time: 54 minutes 42 seconds.

# CIS (USSR) Spacecraft Designations

The Union of Soviet Socialist Republics (USSR) became the Confederation of Independent States (CIS) on December 25, 1991.	
<b>ALMAZ:</b> Study geology, cartography, oceanography, ecology, and agriculture.	<b>MOLNIYA</b> (Lightning): Part of the domestic communications satellite system.
<b>BURAN</b> (Snowstorm): Reusable orbital space shuttle.	<b>NADEZHDA:</b> Navigation satellite.
<b>COSMOS:</b> Designation given to many different activities in space.	<b>OKEAN:</b> Oceanographic satellite to monitor ice conditions.
<b>EKRAN</b> (Screen): Geosynchronous comsat for TV services.	<b>PHOBOS:</b> International project to study Mars and its moon Phobos.
<b>ELECTRO:</b> Geosynchronous meteorological satellite	<b>PION:</b> Scientific satellite for research of the upper atmosphere.
<b>ELEKTRON:</b> Dual satellites to study the radiation belts.	<b>POLYOT:</b> Maneuverable satellite capable of changing orbits.
<b>FOTON:</b> Scientific satellite to continue space materials studies.	<b>PROGNOZ</b> (Forecast): Scientific interplanetary satellite.
<b>GALS:</b> Geosynchronous Direct Broadcast TV satellite.	<b>PROGRESS:</b> Unmanned cargo flight to resupply manned space stations.
<b>GAMMA:</b> Radiation detection satellite.	<b>PROTON:</b> Scientific satellite to investigate the nature of Cosmic Rays.
<b>GORIZONT</b> (Horizon): Geosynchronous comsat for international relay.	<b>RADIO:</b> Small radio relay satellite for use by amateurs.
<b>GRANAT:</b> Astrophysical orbital observatory.	<b>RADUGA:</b> Geosynchronous comsat for telephone, telegraph, and domestic TV.
<b>INFORMATOR:</b> Collect and transmit information for the Ministry of Geology.	<b>RESURS:</b> Earth resources satellite.
<b>INTERCOSMOS:</b> International scientific satellite.	<b>SALYUT:</b> Manned scientific space station in Earth orbit.
<b>ISKRA:</b> Amateur radio satellite.	<b>SOYUZ</b> (Union): Manned spacecraft for flight in Earth orbit.
<b>KORONAS:</b> Earth orbiting satellite for scientific study of the sun.	<b>SPUTNIK:</b> Early series of satellites to develop manned spaceflight.
<b>KRISTALL:</b> Module carrying technical and biomedical instruments to MIR.	<b>VEGA:</b> Two spacecraft international project to study Venus and Halley's Comet.
<b>KVANT:</b> MIR space station astrophysics module.	<b>VENERA:</b> Spacecraft to explore the planet Venus.
<b>LUNA:</b> Lunar exploration spacecraft.	<b>VOSKHOD:</b> Modified Vostok capsule for two and three Cosmonauts.
<b>MARS:</b> Spacecraft to explore the planet Mars.	<b>VOSTOK</b> (East): First manned capsule; placed six Cosmonauts in orbit.
<b>METEOR:</b> Polar orbiting meteorological satellite.	<b>ZOND:</b> Automatic spacecraft development tests. Zond 5 was the first spacecraft to make a circumlunar flight and return safely to Earth.
<b>MIR</b> (Peace): Advanced manned scientific space station in Earth orbit.

# Summary of Shuttle Payloads and Experiments

Flight	Launch Date	Landing Date	Crew	Payloads and Experiments	
STS-29 Discovery	Mar 13, 1989 KSC	Mar 17, 1989 EAFB	Cdr: Michael L. Coats Pit: John E. Blaha MS: James P. Bagian MS: James F. Buchli MS: Robert C. Springer	<b>Deployable Payloads:</b> 1. TDRS-D/IUS: Tracking and Data Relay Satellite/ Inertial Upper Stage. One of four identical communications satellites providing support for STS and other customers. <b>Attached PLB Payloads:</b> 1. SHARE (Space Station Heat Pipe Advanced Radiator Element) 2. OASIS-1 (Orbiter Experiments Autonomous Supporting Instrumentation System)	<b>GAS (Getaway Special): None</b> <b>Crew Compartment Payloads:</b> 1. Protein Crystal Growth (PCG-111-1) 2. Chromosome and Plant Cell Division in Space (CHROMEX) 3. IMAX Camera 4. Air Force Maui Optical Site Calibration Test (AMOS) 5. Chicken Embryo Development (CHIX) in space. 6. Effects of Weightlessness of Bones (SSIP 82-08) <b>Special Payload Mission Kits: None</b>
STS-30 Atlantis	May 4, 1989 KSC	May 8, 1989 EAFB	Cdr: David M. Walker Pit: Ronald J. Grabe MS: Norman E. Thagard MS: Mary L. Cleave MS: Mark C. Lee	<b>Deployable Payloads:</b> 1. Magellan/IUS - Unmanned three-axis attitude-controlled exploration spacecraft containing systems required to achieve orbit of Venus and map its surface. <b>Attached PLB Payloads: None</b>	<b>GAS (Getaway Special): None</b> <b>Crew Compartment Payloads:</b> 1. Fluids Experiment Apparatus (FEA) 2. Mesoscale Lightning Experiment (MLE) 3. Air Force Maui Optical Site Calibration Test (AMOS) <b>Special Payload Mission Kits: None</b>
STS-28 Columbia	Aug 8, 1989 KSC	Aug 13, 1989 EAFB	Cdr: Brewster H. Shaw Pit: Richard N. Richards MS: David C. Leetsma MS: James C. Adamson MS: Mark N. Brown	<b>Deployable Payloads:</b> Data not available, DOD Classified Mission. <b>Attached PLB Payloads:</b> Data not available, DOD Classified Mission. <b>GAS (Getaway Special):</b> Data not available, DOD Classified Mission.	<b>Crew Compartment Payloads:</b> Data not available, DOD Classified Mission. <b>Special Payload Mission Kits:</b> Data not available, DOD Classified Mission.
STS-34 Atlantis	Oct 18, 1989 KSC	Oct 23, 1989 EAFB	Cdr: Donald E. Williams Pit: Michael McCulley MS: Ellen S. Baker MS: Franklin R. Chang-Diaz MS: Shannon W. Lucid	<b>Deployable Payloads:</b> 1. Galileo/IUS - Unmanned spin-stabilized exploration spacecraft comprising a Jupiter orbiter and a Jupiter atmospheric entry probe mated to the IUS. <b>Attached PLB Payloads:</b> 1. Shuttle Solar Backscatter Ultraviolet (SSBUV) <b>GAS (Getaway Special):</b> 1. Zero Gravity Growth of Ice Crystals	<b>Crew Compartment Payloads:</b> 1. Polymer Morphology 2. Growth Hormone Concentration & Distribution in Plants 3. Sensor Technology Experiment 4. IMAX Camera 5. Mesoscale Lightning Experiment 6. Air Force Maui Optical Site Calibration Test (AMOS) <b>Special Payload Mission Kits: None</b>

# Summary of Shuttle Payloads and Experiments

Flight	Launch Date	Landing Date	Crew	Payloads and Experiments	
STS-33 Discovery	Nov 22, 1989 KSC	Nov 27, 1989 EAFB	Cdr: Frederick D. Gregory Pit: John E. Blaha MS: Manley L. Carter MS: Franklin Musgrave MS: Kathryn C. Thornton	<b>Deployable Payloads:</b> Data not available, DOD Classified Mission. <b>Attached PLB Payloads:</b> Data not available, DOD Classified Mission. <b>GAS (Getaway Special):</b> Data not available, DOD Classified Mission.	<b>Crew Compartment Payloads:</b> Data not available, DOD Classified Mission. <b>Special Payload Mission Kits:</b> Data not available, DOD Classified Mission.
Mission Duration: 120 hrs 6 mins 46 secs					
STS-32 Columbia	Jan 9, 1990 KSC	Jan 20, 1990 EAFB	Cdr: Daniel C. Brandenstein Pit: James D. Wetherbee MS: Bonnie J. Dunbar MS: Marsha S. Ivins MS: G. David Low	<b>Deployable Payloads:</b> 1. Syncom IV-5, a geostationary communications satellite also known as Leasat; leased to U.S. Navy <b>Attached PLB Payloads:</b> <b>None</b> <b>Returned Cargo:</b> 1. LDEF, a non-powered space vehicle containing experiments - Deployed on STS-41C. <b>Crew Compartment Payloads:</b> 1. American Flight Echocardiograph (AFE) 2. Air Force Maui Optical Site Calibration Test (AMOS) 3. Characterization of Neurospora Circadian Rhythms (CNCRI)	4. Fluids Experiment Apparatus 5. IMAX Camera 6. Latitude/Longitude Locator (L3) 7. Mesoscale Lightning Experiment (MLE) 8. Protein Crystal Growth (PCG) <b>GAS (Getaway Special): None</b> <b>Special Payload Mission Kits:</b> 1. Remote Manipulator System (RMS) 2. Galley 3. MADS
Mission Duration: 261 hrs 0 mins 37 secs					
STS-36 Atlantis	Feb 28, 1990 KSC	Apr 14, 1990 DFRF	Cdr: John D. Creighton Pit: John H. Casper MS: David C. Hilmers MS: Richard M. Mullane MS: Pierre J. Thuot	<b>Deployable Payloads:</b> Data not available, DOD Classified Mission. <b>Attached PLB Payloads:</b> Data not available, DOD Classified Mission. <b>GAS (Getaway Special):</b> Data not available, DOD Classified Mission.	<b>Crew Compartment Payloads:</b> Data not available, DOD Classified Mission. <b>Special Payload Mission Kits:</b> Data not available, DOD Classified Mission.
Mission Duration: 106 hrs 18 mins 22 secs					
STS-31 Discovery	Apr 24, 1990 KSC	Apr 29, 1990 EAFB	Cdr: Loren J. Shriver Pit: Charles F. Bolden MS: Bruce McCandless MS: Steven A. Hawley MS: Kathryn D. Sullivan	<b>Deployable Payloads:</b> 1. Hubble Space Telescope (HST), a large aperture optical telescope. <b>Attached PLB Payloads:</b> 1. IMAX Cargo Bay Camera (ICBC) 2. Ascent Particle Monitor (APM) <b>GAS (Getaway Special): None</b> <b>Crew Compartment Payloads:</b> 1. Air Force Maui Optical Site Calibration Test (AMOS)	2. IMAX Camera 3. Investigation into Polymer Membrane Processing (IPMP) 4. Protein Crystal Growth (PCG) 5. Radiation Monitoring Experiment (RME) 6. Investigation of Arc and Ion Behavior in Microgravity (Student Experiment 82-16) <b>Special Payload Mission Kits:</b> 1. Remote Manipulator System (RMS) 2. Galley 3. HST EVA Tools
Mission Duration: 121 hrs 16 mins 6 secs					

# Summary of Shuttle Payloads and Experiments

Flight	Launch Date	Landing Date	Crew	Payloads and Experiments	
STS-41 Discovery	Oct 6, 1990 KSC	Oct 10, 1990 DFRF	Cdr: Richard N. Richards Pft: Robert D. Cabana MS: Bruce E. Melnick MS: William M. Shepherd MS: Thomas D. Akers	<b>Deployable Payloads:</b> 1. Ulysses/IUS/PAM-S <b>Attached PLB Payloads:</b> 1. Shuttle Solar Backscatter Ultraviolet (SSBUV) 2. Intelsat Solar Array Coupon (ISAC) - Attached to RMS arm <b>GAS (Getaway Special): None</b> <b>Crew Compartment Payloads:</b> 1. Chromosome and Plant Cell Division in Space (CHROMEX) 2. Solid Surface Combustion Experiment (SSCE)	3. Voice Command System (VCS) 4. Physiological Systems Experiment (PSE) 5. Radiation Monitor Experiment (RME-III) 6. Investigation into Polymer Membrane Processing (IPMP) 7. Air Force Maui Optical Site (AMOS) <b>Special Payload Mission Kits:</b> 1. Remote Manipulator System (RMS) 2. Galley 3. Radioisotope Generator (TRG) Cooling System
STS-38 Atlantis	Nov 15, 1990 KSC	Nov 20, 1990 KSC	Cdr: Richard O. Covey Pft: Frank L. Culbertson MS: Robert C. Springer MS: Carl J. Meade MS: Charles D. Gemar	<b>Deployable Payloads:</b> Data not available, DOD Classified Mission. <b>Attached PLB Payloads:</b> Data not available, DOD Classified Mission. <b>GAS (Getaway Special):</b> Data not available, DOD Classified Mission.	<b>Crew Compartment Payloads:</b> Data not available, DOD Classified Mission. <b>Special Payload Mission Kits:</b> Data not available, DOD Classified Mission.
STS-35 Columbia	Dec 2, 1990 KSC	Dec 11, 1990 DFRF	Cdr: Vance Brand Pft: Guy S. Gardner MS: John M. Lounge MS: Jeffrey A. Hoffman MS: Robert A. R. Parker PS: Ronald A. Parise PS: Samuel T. Durrance	<b>Deployable Payloads:</b> None <b>Attached PLB Payloads:</b> 1. Astro-1 - Three ultraviolet telescopes attached to an Instrument Pointing System (IPS): a. Wisconsin UV Photopolarimeter Experiment (WUPPE) b. UV Imaging Telescope (UIT) c. Hopkins UV Telescope (HUT) 2. BBXRT - Broad Band X-ray Telescope. Attached to its own two-axis pointing system (TAPS)	<b>GAS (Getaway Special): None</b> <b>Crew Compartment Payloads:</b> 1. Shuttle Amateur Radio Experiment (SAREX) 2. Air Force Maui Optical Site (AMOS) <b>Special Payload Mission Kits:</b> 1. Galley 2. Aerodynamic Coefficient Identification Package (ACIP)
STS-37 Atlantis	Apr 5, 1991 KSC	Apr 11, 1991 EAFB	Cdr: Steven R. Nagel Pft: Kenneth D. Cameron MS: Linda M. Godwin MS: Jerome Apt MS: Jerry L. Ross	<b>Deployable Payloads:</b> 1. Gamma Ray Observatory (GRO), an unmanned astronomical observatory designed to image objects at high energy (gamma ray) wavelengths. <b>Attached PLB Payloads:</b> 1. Crew and Equipment Translation Aids (CETA) - designed to evaluate candidate techniques/equipment for EVA crewmember translation 2. Ascent Particle Monitor (APM) - designed to assess the particulate contamination in the Orbiter PLB during ascent.	<b>GAS (Getaway Special): None</b> <b>Crew Compartment Payloads:</b> 1. Protein Crystal Growth (PCG)-II 2. Air Force Maui Optical Site (AMOS) 3. Radiation Monitoring Equipment (RME)-III 4. Shuttle Amateur Radio Experiment (SAREX)-II 5. Bioserve/Instrumentation Technology 6. Associates Materials Dispersion Apparatus (BIMDA) <b>Special Payload Mission Kits:</b> 1. Remote Manipulator System (RMS) S/N 301

Mission Duration: 193 hrs 15 mins 43 sec					

# Summary of Shuttle Payloads and Experiments

Flight	Launch Date	Landing Date	Crew	Payloads and Experiments	
STS-45 Atlantis	Mar 24, 1992 KSC	Apr 2, 1992 KSC	Cdr: Charles F. Bolden Prt: Brian K. Duffy MS: Kathryn D. Sullivan MS: David C. Leestma MS: C. Michael Foale PS: Dirk D. Frimout PS: Bryon K. Lichtenburg	<p><b>Deployable Payloads: None</b></p> <p><b>Attached PLB Payloads:</b> ATLAS-1 (2 Spacelab Pallet and Igloo) - Objective: Study the composition of the middle atmosphere and its variations over an 11 year solar cycle. This is the first of 10 planned ATLAS missions over the next 11 years.</p> <p><b>Atmosphere Physics:</b> 1. Atmosphere Trace Molecule Spectroscopy (ATMOS) - Previously flown on Spacelab 1, Reflight from Spacelab 3 2. Millimeter Wave Atmospheric Sounder (MAS) - First flight 3. Atmospheric Lyman Alpha Emissions (ALAE) - Previously flown on Spacelab 1 4. Grille Spectrometer (GRILLE) - Previously flown on Spacelab 1 5. Imaging Spectrometric Observatory (ISO) - Previously flown on Spacelab 1</p> <p><b>Solar Science:</b> 1. Active Cavity Radiometer Irradiance Monitor (ACRIM) - ACRIM 1 flown on the solar maximum satellite 2. Measurement of the Solar Constant (SOLCON) - Previously flown on Spacelab 1 3. Solar Spectrum Measurement from 180 to 3200 Nanometers (SOLSPEC) - Previously flown on Spacelab 1 4. Solar Ultraviolet Spectral Irradiance Monitor (SUSIM) - Previously flown on Spacelab 2 and on the Upper Atmosphere Research Satellite (UARS)</p> <p><b>Space Plasma Physics:</b> 1. Atmospheric Emissions Photometric Imaging (AEP1) - Previously flown on Spacelab 1 2. Space Experiments with Particle Accelerators (SEPAC) - Previously flown on Spacelab 1 3. Energetic Neutral Atom Precipitation</p>	<p><b>Ultraviolet Astronomy:</b> 1. Far Ultraviolet Space Telescope (FAUST) - Previously flown on Spacelab 1 2. Shuttle Solar Backscatter Ultraviolet/A (SSBUV/A) - Objective: To provide more accurate and reliable readings of global ozone to aid in the calibration of backscatter ultraviolet instruments being flown on free-flying satellites</p> <p><b>GAS (Gateway Special):</b> 1. Gateway Special 229 (GAS-229) - Objective: To melt and regrow gallium arsenide crystals with convective effects absent</p> <p><b>Crew Compartment Payload:</b> 1. Investigation into Polymer Membranes Processing (IPMP) - Objective: To flash evaporate mixed solvent systems in the absence of convection to control the porosity of the polymer membrane in microgravity 2. Space Tissue Loss-01 (STL-01) - Objective: To monitor the activities of tissue samples at the cellular level under the influence of microgravity 3. Radiation Monitoring Equipment-III (RME-III) - Objective: To measure ionizing radiation over repeated time intervals and digitally store the resulting data 4. Visual Function Tester-2 (VFT-2) - Objective: To measure basic vision performance parameters in an orbital space flight environment 5. Cloud Logic to Optimize Use of Defense System - Objective: To obtain photographic sequences of cloud fields of interest as targets of opportunity 6. Shuttle Amateur Radio Experiment (SAREX II) - Objective: To demonstrate voice, slow-scan television (SSTV), and pocket radio. All transmitted on 2 meter capabilities and fast scan television (FSTV) transmitted on 70 cm capability.</p>
Mission Duration: 214 hrs 10 mins 24 secs

# The Solar System

Our automated spacecraft have traveled to the Moon and to all the planets beyond our world except Pluto; they have observed moons as large as small planets, flown by comets, and sampled the solar environment. The knowledge gained from our journeys through the solar system has redefined traditional Earth sciences like geology and meteorology and spawned an entirely new discipline called comparative planetology. By studying the geology of planets, moons, asteroids, and comets, and comparing differences and similarities, we are learning more about the origin and history of these bodies and the solar system as a whole. We are also gaining insight into Earth's complex weather systems. By seeing how weather is shaped on other worlds and by investigating the Sun's activity and its influence through the solar system, we can better understand climatic conditions and processes on Earth.

## The Sun

Many spacecraft have explored the Sun's environment, but none have gotten any closer to its surface than approximately two-thirds of the distance from Earth to the Sun. Pioneers 5-11, the Pioneer Venus Orbiter, Voyagers 1 and 2, and other spacecraft have all sampled the solar environment. The Ulysses spacecraft, launched Oct 6, 1990, is a joint solar mission of NASA and the European Space Agency. After using Jupiter's gravity to change its trajectory, Ulysses will fly over the Sun's polar regions during 1994 and 1995 and will perform a wide range of studies using nine onboard scientific instruments.

The Sun dwarfs the other bodies in the solar system, representing approximately 99.86 percent of all the mass in the solar system. All of the planets, moons, asteroids, comets, dust, and gas add up to only about 0.14 percent. This 0.14 percent represents the material left over from the Sun's formation. One hundred and nine Earths would be required to fit across the Sun's disk, and its interior could hold 700,000 Earths.

As a star, the Sun generates energy by the process of fusion. The temperature at the Sun's core is 15 million degrees Celsius (27 million degrees Fahrenheit), and the pressure there is 340 billion times Earth's air pressure at sea level. The Sun's surface temperature of 5,500 degrees Celsius (10,000 degrees Fahrenheit) seems almost chilly compared to its core temperature. At the solar core, hydrogen can fuse into helium, producing energy. The Sun produces a strong magnetic field and streams of charged particles, extending far beyond the planets.

The Sun appears to have been active for 4.6 billion years and has enough fuel for another 5 billion years or so. At the end of its life, the Sun will start to fuse helium into heavier elements and begin to swell up, ultimately growing so large that it will swallow Earth. After a billion years as a "red giant," it will suddenly collapse into a "white dwarf" -- the final end product of a star like ours. It may take a trillion years to cool off completely.

## Mercury

Obtaining the first close-up views of Mercury was the primary objective of the Mariner 10 spacecraft, launched Nov 3, 1973. After a journey of nearly 5 months, including a flyby of Venus, the spacecraft passed within 703 km (437 mi) of the solar system's innermost planet on Mar 29, 1974. Until Mariner 10, little was known about Mercury. Even the best telescopic views from Earth showed Mercury as an indistinct object lacking any surface detail. The planet is so close to the Sun that it is usually lost in solar glare. When the planet is visible on Earth's horizon just after sunset or before dawn, it is obscured by the haze and dust in our atmosphere. Only radar telescopes gave any hint of Mercury's surface conditions prior to the voyage of Mariner 10.

Mariner 10 photographs revealed an ancient, heavily cratered surface, closely resembling our Moon. The pictures also showed high cliffs crisscrossing the planet, apparently created when Mercury's interior cooled and shrank, buckling the planet's crust. The cliffs are as high as 3 km (2 mi) and as long as 500 km (310 mi).

Instruments on Mariner 10 discovered that Mercury has a weak magnetic field and a trace of atmosphere -- a trillionth the density of Earth's atmosphere and composed chiefly of argon, neon, and helium. When the planet's orbit takes it closest to the Sun, surface temperatures range from 467 degrees Celsius (872 degrees Fahrenheit) on Mercury's sunlit side to -183 degrees Celsius (-298 degrees Fahrenheit) on the dark side. This range in surface temperature is the largest for a single body in the solar system. Mercury literally bakes and freezes at the same time.

Days and nights are long on Mercury. The combination of a slow rotation relative to the stars (59 Earth days) and a rapid revolution around the Sun (88 Earth days) means that one Mercury solar day takes 176 Earth days or two Mercury years, the time it takes Mercury to complete two orbits around the Sun.

# The Solar System

Mercury appears to have a crust of light silicate rock like that of Earth. Scientists believe Mercury has a heavy iron-rich core making up slightly less than half of its volume. That would make Mercury's core larger, proportionally, than the Moon's core of those of any of the planets.

After the initial Mercury encounter, Mariner 10 made two additional flybys -- on Sep 21, 1974, and Mar 16, 1975 -- before control gas used to orient the spacecraft was exhausted and the mission was concluded. Each flyby took place at the same local Mercury time when the identical half of the planet was illuminated; as a result, we still have not seen one-half of the planet's surface.

## Venus

Veiled by dense cloud cover, Venus -- our nearest planetary neighbor -- was the first planet to be explored. The Mariner 2 spacecraft, launched Aug 27, 1962, was the first of more than a dozen successful American and Soviet missions to study the mysterious planet. On December 14, 1962, Mariner 2 passed within 34,839 kilometers (21,648 miles) of Venus and became the first spacecraft to scan another planet; onboard instruments measured Venus for 42 minutes. Mariner 5, launched in June 1967, flew much closer to the planet. Passing within 4,094 kilometers (2,544 miles) of Venus on the second American flyby, Mariner 5's instruments measured the planet's magnetic field, ionosphere, radiation belts, and temperatures. On its way to Mercury, Mariner 10 flew by Venus and transmitted ultraviolet pictures to Earth showing cloud circulation patterns in the Venusian atmosphere.

On Dec 4, 1978, the Pioneer Venus Orbiter became the first spacecraft to orbit the planet. Five days later, the five separate components making up a second spacecraft, the Pioneer Venus Multiprobe, entered the Venusian atmosphere at different locations above the planet. The four small probes and the main body radioed atmospheric data back to Earth during their descent toward the surface. Although designed to examine the atmosphere, one of the probes survived its impact with the surface and continued to transmit data for another hour.

Venus resembles Earth in size, physical composition, and density more closely than any other known planet. However, significant differences have been discovered. For example, Venus' rotation (west to east) is retrograde (backward) compared to the east-to-west spin of Earth and most of the other planets.

Approximately 96.5 percent of Venus' atmosphere (95 times as dense as Earth's) is carbon dioxide. The principal constituent of Earth's atmosphere is nitrogen. Venus' atmosphere acts like a greenhouse, permitting solar radiation to reach the surface but trapping the heat that would ordinarily be radiated back into space. As a result, the planet's average surface temperature is 482 degrees Celsius (900 degrees Fahrenheit), hot enough to melt lead.

A radio altimeter on the Pioneer Venus Orbiter provided the first means of seeing through the planet's dense cloud cover and determining surface features over almost the entire planet. NASA's Magellan spacecraft, launched on May 5, 1989, has orbited Venus since August 10, 1990. The spacecraft used radar-mapping techniques to provide ultrahigh-resolution images of the surface.

Magellan has revealed a landscape dominated by volcanic features, faults, and impact craters. High areas of the surface show evidence of multiple periods of lava flooding with flows lying on top of previous ones. An elevated region named Ishtar Terra is a lava-filled basin as large as the United States. At one end of this plateau sits Maxwell Montes, a mountain the size of Mount Everest. Scarring the mountain's flank is a 100-km (62-mi) wide, 2.5-km (1.5 mi) deep impact crater named Cleopatra. (Almost all features on Venus are named for women: Maxwell Montes, Alpha Regio, and Beta Regio are the exceptions.) Craters survive on Venus for perhaps 400 million years because there is no water and very little wind erosion.

The successful Magellan mission ended on October 12, 1994, when the spacecraft was commanded to drop lower into the fringes of the Venusian atmosphere during an aerodynamic experiment and it burned up, as expected. Magellan mapped 98 percent of the planet's surface with radar and compiled a high-resolution gravity map of 95 percent of the planet.

Extensive fault-line networks cover the planet, probably the result of the same crustal flexing that produces plate tectonics on Earth. But on Venus the surface temperature is sufficient to weaken the rock, which cracks just about everywhere, preventing the formation of major plates and large earthquake faults like the San Andreas Fault in California.

# The Solar System

Venus' predominant weather pattern is a high-altitude, high-speed circulation of clouds that contain sulfuric acid. At speeds reaching as high as 360 km (225 mi) per hour, the clouds circle the planet in only 4 Earth days. The circulation is in the same direction -- west to east -- as Venus' slow rotation of 243 Earth days, whereas Earth's winds blow in both directions -- west to east and east to west -- in six alternating bands. Venus' atmosphere serves as a simplified laboratory for the study of our weather.

## Earth

As viewed from space, Earth's distinguishing characteristics are its blue waters, brown and green land masses, and white clouds. We are enveloped by an ocean of air consisting of 78 percent nitrogen, 21 percent oxygen, and 1 percent other constituents. The only planet in the solar system known to harbor life, Earth orbits the Sun at an average distance of 150 million km (93 million mi). Earth is the third planet from the Sun and the fifth largest in the solar system, with a diameter a few hundred kilometers larger than that of Venus.

Our planet's rapid spin and molten nickel-iron core give rise to an extensive magnetic field, which, along with the atmosphere, shields us from nearly all of the harmful radiation coming from the Sun and other stars. Earth's atmosphere protects us from meteors as well, most of which burn up before they can strike the surface. Active geological processes have left no evidence of the pelting Earth almost certainly received soon after it formed -- about 4.6 billion years ago.

From our journeys into space, we have learned much about our home planet. The first American satellite -- Explorer 1 -- launched Jan 31, 1958, discovered an intense radiation zone, called the Van Allen radiation belts, surrounding Earth. Other research satellites revealed that our planet's magnetic field is distorted into a tear-drop shape by the solar wind. We've learned that the magnetic field does not fade off into space but has definite boundaries. And we now know that our wispy upper atmosphere, once believed calm and uneventful, seethes with activity -- swelling by day and contracting by night. Affected by changes in solar activity, the upper atmosphere contributes to weather and climate on Earth.

Besides affecting Earth's weather, solar activity gives rise to a dramatic visual phenomenon in our atmosphere. When charged particles from the solar wind become trapped in Earth's magnetic field, they collide with air molecules above our planet's magnetic poles. These air molecules then begin to glow and are known as the auroras or the northern and southern lights.

Satellites 36,000km (22,000 mi) out in space play a major role in daily local weather forecasting. These watchful electronic eyes warn us of dangerous storms. Continuous global monitoring provides a vast amount of useful data and contributes to a better understanding of Earth's complex weather systems.

The TOPEX/POSEIDON satellite, a joint NASA/French mission and part of the Mission to Planet Earth, is providing information of unprecedented accuracy about global ocean circulation. Radar altimeter measurements of sea height level in the mid Pacific, accurate within 5 cm (2 in.), demonstrate the presence of a strong El Nino current in the 1994-95 winter. This has great importance for long range weather forecasting. Another element of the Mission to Planet Earth, the Total Ozone Monitoring Satellite (TOMS), stopped transmitting in Dec. '94 after exceeding its design lifetime by a year. This joint NASA/Russian effort provided essential data on ozone density and global distribution for the past 3 years. TOMS data are showing us how human activities can alter Earth's global environment. Two more TOMS satellites are to be flown by February, 1996.

## The Moon

The Moon is Earth's single natural satellite. The first human footsteps on an alien world were made by American astronauts on the dusty surface of our airless, lifeless companion. In preparation for the Apollo expeditions, NASA dispatched the automated Ranger, Surveyor, and Lunar Orbiter spacecraft to study the Moon between 1964 and 1968.

NASA's Apollo program left a large legacy of lunar materials and data. Six 2-astronaut crews landed on and explored the lunar surface between 1969 and 1972, carrying back a collection of rocks and soil weighing a total of 382 kg (842 lb) and consisting of more than 2,000 separate samples. From this material and other studies, scientists have constructed a history of the Moon that includes its infancy.

# The Solar System

Rocks collected from the lunar highlands date to about 4.0-4.3 billion years old. The first few million years of the Moon's existence were so violent that few traces of this period remain. As a molten outer layer gradually cooled and solidified into different kinds of rock, the Moon was bombarded by huge asteroids and smaller objects. Some of the asteroids were as large as Rhode Island or Delaware, and their collisions with the Moon created basins hundreds of kilometers across.

This catastrophic bombardment tapered off approximately 4 billion years ago, leaving the lunar highlands covered with huge, overlapping craters and a deep layer of shattered and broken rock. Heat produced by the decay of radioactive elements began to melt the interior at depths of about 200 km (125 mi) below the surface. For the next 700 million years, lava rose from inside the Moon and gradually spread out over the surface, flooding the large impact basins to form the dark areas that Galileo Galilei, an astronomer of the Italian Renaissance, called maria, meaning seas. As far as we can tell, there has been no significant volcanic activity on the Moon for more than 3 billion years. Since then, the lunar surface has been altered only by micrometeorites, atomic particles from the Sun and stars, rare impacts of large meteorites, and spacecraft and astronauts.

The origin of the Moon is still a mystery. Four theories attempt an explanation: The Moon formed near Earth as a separate body; it was torn from Earth; it formed somewhere else and was captured by our planet's gravity, or it was the result of a collision between Earth and an asteroid about the size of Mars. The last theory has some good support but is far from certain.

## Mars

Mars has long been considered the solar system's prime candidate for harboring extraterrestrial life. Astronomers studying the red planet through telescopes saw what appeared to be straight lines criss-crossing its surface. These observations, later determined to be optical illusions, led to the popular notion that intelligent beings had constructed a system of irrigation canals. Another reason for scientists to expect life on Mars was the apparent seasonal color changes on the planet's surface. This phenomenon led to speculation that conditions might support vegetation during the warmer months and cause plant life to become dormant during colder periods.

Seven American missions to Mars have been carried out. Four Mariner spacecraft, three flying by the planet and one placed into marian orbit, surveyed the planet extensively before the Viking Orbiters and Landers arrived. Mariner 4, launched in late 1964, flew past Mars on Jul 14, 1965, within 9,846 km (6,118 mi) of the surface. Transmitting to Earth 22 close-up pictures of the planet, the spacecraft found many craters and naturally occurring channels but no evidence of artificial canals or flowing water. The Mariners 6 and 7 flybys, during the summer of 1969, returned 201 pictures. Mariners 4, 6, and 7 showed a diversity of surface conditions as well as a thin, cold, dry atmosphere of carbon dioxide.

On May 30, 1971, the Mariner 9 Orbiter was launched to make a year-long study of the martian surface. The spacecraft arrived 5-1/2 months after liftoff, only to find Mars in the midst of a planet-wide dust storm that made surface photography impossible for several weeks. After the storm cleared, Mariner 9 began returning the first of 7,329 pictures that revealed previously unknown martian features, including evidence that large amounts of water once flowed across the surface, etching river valleys and flood plains.

In Aug and Sep 1975, the Viking 1 and 2 spacecraft, each consisting of an orbiter and a lander, were launched. The mission was designed to answer several questions about the red planet, including, is there life there? Nobody expected the spacecraft to spot martian cities, but it was hoped that the biology experiments would at least find evidence of primitive life, past or present.

Viking Lander 1 became the first spacecraft to successfully touch down on another planet when it landed on Jul 20, 1976. Photographs sent back from Chryse Planitia ("Plains of Gold") showed a bleak, rusty-red landscape. Panoramic images revealed a rolling plain, littered with rocks and marked by rippled sand dunes. Fine red dust from the martian soil gives the sky a salmon hue. When Viking Lander 2 touched down on Utopia Planitia on Sep 3, 1976, it viewed a more rolling landscape, one without visible dunes.

# The Solar System

The results sent back by the laboratory on each Viking Lander were inconclusive. Small samples of the red martian soil were tested in three different experiments designed to detect biological processes. While some of the test results seemed to indicate biological activity, later analysis confirmed that this activity was inorganic in nature and related to the planet's soil chemistry. Is there life on Mars? No one knows for sure, but the Viking mission found no evidence that organic molecules exist there.

The Viking Landers became weather stations, recording wind velocity and direction as well as atmospheric temperature and pressure. The highest temperature recorded by either spacecraft was -14 degrees Celsius (7 degrees Fahrenheit) at the Viking Lander 1 site in midsummer. The lowest temperature, -120 degrees Celsius (-184 degrees Fahrenheit), was recorded in the more northerly Viking Lander 2 site during winter. Near-hurricane wind speeds were measured at the two martian weather stations during global dust storms, but because the atmosphere is so thin, wind force is minimal. Viking Lander 2 photographed light patches of frost, probably water-ice, during its second winter on the planet.

The martian atmosphere, like that of Venus, is primarily carbon dioxide. Nitrogen and oxygen are present only in small percentages. Martian air contains only about 1/1,000 as much water as our air, but this small amount can condense out, forming clouds that ride high in the atmosphere or swirl around the slopes of towering volcanoes. Patches of early morning fog can form in valleys. There is evidence that in the past a denser martian atmosphere may have allowed water to flow on the planet. Physical features closely resembling shorelines, gorges, riverbeds, and islands suggest that great rivers once marked the planet.

Mars has two moons, Phobos and Deimos. They are small and irregularly shaped and possess ancient, cratered surfaces. It is possible the moons were originally asteroids that ventured too close to Mars and were captured by its gravity.

The Viking Orbiters and Landers exceeded their design lifetimes of 120 and 90 days, respectively. The first to fail was Viking Orbiter 2, which stopped operating on Jul 24, 1978, when a leak depleted its attitude-control gas. Viking Lander 2 operated until Apr 12, 1980, when it was shut down due to battery degeneration. Viking Orbiter 1 quit on Aug 7, 1980, when the last of its attitude-control gas was used up. Viking Lander 1 ceased functioning on Nov 13, 1983. Despite the inconclusive results of the Viking biology experiments, we know more about Mars than any other planet except Earth. The Mars Observer mission, launched on Sept. 25, 1992, lost contact with Earth on April 21, 1993, just 3 days before it was to enter orbit around Mars.

NASA will continue to explore Mars, which a new exploration strategy called the Mars Surveyor program, calls for start of development of a small orbiter that will be launched in November 1996 to study the surface of the red planet.

The Mars Surveyor orbiter will lay the foundation for a series of missions to Mars in a decade-long program of Mars exploration. The missions will take advantage of launch opportunities about every 2 years as Mars comes into alignment with Earth.

The orbiter planned for launch in 1998 would be even smaller than the initial Mars Surveyor orbiter and carry the remainder of the Mars Observer science instruments. It would act as a communications relay satellite for a companion lander, launched the same year, and other landers in the future, such as the Russian Mars '96 lander. The U.S. Pathfinder lander, set to land on Mars in 1997, will operate independently of the Mars orbiter.

## Asteroids

The solar system is populated by thousands of small planetesimals called asteroids that orbit the Sun in a broad belt between Mars and Jupiter. Some of these are of rocky composition, others are mainly iron and nickel; they are fragments and rocky splinters generated by the same processes that built the planets some four and a half billion years ago. Metallic asteroids are thought to be fragments of the central cores of small short-lived planets that were broken up soon

after they formed by massive collisions with other similar objects; some of the rocky splinters may be pieces of the outer layers of such exploded planets while others could be primitive planet-building materials accumulated into rocks but that was never used in planet building

# The Solar System

The largest asteroid is called 1 Ceres (all asteroids have a number in their name) and is only 770km (480 mi) across; much smaller than the Moon. Most of the thousands of asteroids that are known are much smaller, in the 1 to 10 km size range. Innumerable, still small, fragments frequently collide with the Earth and, as they burn-up in the atmosphere, causing meteor trails. Some of the larger fragments reach the ground intact and become part of the meteorite collections in our museums. A few large asteroid collisions are recorded on the Earth's surface as craters. One of the best examples is the Baringer Meteor Crater near Winslow, Arizona. Some of the best preserved meteorites are found on the ice cap of Antarctica, however, not all of these come from asteroids, some may be debris from comets, and some pieces are thought to have originated on the surface of Mars.

The Galileo spacecraft passed twice through the asteroid belt on its six year journey from the Earth to Jupiter. On each occasion it visited an asteroid and made scientific measurements impossible from the Earth. On October 29, 1991, Galileo encountered 951 Gaspra at a distance of 1600 km to reveal a conical shaped, scored and fractured, rock some 18 km long with a lightly cratered landscape; almost two years later, on August 28, 1993, Galileo passed by another larger asteroid, 243 Ida, at a distance of 2400 km to reveal an object of even more bizarre shape. In addition the data from the spacecraft showed that this asteroid has a satellite in orbit around it which has been named Dactyl. Ida itself is irregular in shape, some 56 km long and 24 km across. Its surface is covered by a deep layer of rubble on which many craters, fractures and boulders are superposed. Before the Galileo encounters it was expected that Ida, which is a member of the Koronis family of asteroids (an asteroid family is a group of asteroids on very small orbits that formed as the result of a catastrophic collision that broke up the parent asteroid), was relatively young, that is, it formed as the result of a recent collision, while Gaspra was expected to be relatively old. The surprising result of the Galileo investigations was to turn these ideas entirely around. Ida's densely cratered surface proved it to be very old, perhaps 1-2 billion years. Gaspra's lightly cratered surface showed it to have been formed relatively recently, a mere 200 million years ago.

NASA will send the Near Earth Asteroid Rendezvous (NEAR) spacecraft to orbit the asteroid 433 EROS in January 1999. The density, rotation, composition, and topography of the silicate rock asteroid will be measured.

## Jupiter

Beyond Mars and the asteroid belt, in the outer regions of our solar system, lie the giant planets of Jupiter, Saturn, Uranus and Neptune. In 1972, NASA sent the first of four spacecraft to conduct the initial surveys of these colossal worlds of gas and their moons of ice and rock.

Pioneer 10, launched in March 1972, was the first spacecraft to penetrate the asteroid belt and travel to the outer regions of the solar system. In December 1973, it returned the first close-up images of Jupiter, flying within 132,252 km (82,178 mi) of the planet's banded cloud tops. Pioneer 11 followed a year later. Voyagers 1 and 2, launched in the summer of 1977, returned spectacular photographs of Jupiter and its family of satellites during flybys in 1979. These travelers found Jupiter to be a whirling ball of liquid hydrogen and helium, topped with a colorful atmosphere composed mostly of gaseous hydrogen and helium. Ammonia ice crystals form white Jovian clouds. Sulfur compounds (and perhaps phosphorus) may produce the brown and orange hues that characterize Jupiter's atmosphere.

It is likely that methane, ammonia, water and other gases react to form organic molecules in the regions between the planet's frigid cloud tops and the warmer hydrogen ocean lying below. Because of Jupiter's atmospheric dynamics, however, these organic compounds, if they exist, are probably short-lived.

The Great Red Spot has been observed for centuries through telescopes on Earth. This hurricane-like storm in Jupiter's atmosphere is more than twice the size of our planet. As a high-pressure region, the Great Red Spot spins in a direction opposite to that of low-pressure storms on Jupiter; it is surrounded by swirling currents that rotate around the spot and are sometimes consumed by it. The Great Red Spot might be a million years old.

Our spacecraft detected lightning in Jupiter's upper atmosphere and observed auroral emissions similar to Earth's northern lights at the Jovian polar regions. Voyager 1 returned the first images of a faint, narrow ring encircling Jupiter. Largest of the solar system's planets, Jupiter rotates at a dizzying pace, once every 9 hours 55 minutes 30 seconds. The massive planet takes almost 12 Earth years to complete a journey around the Sun. With 16 known moons, Jupiter is something of a miniature solar system.

# The Solar System

A new mission to Jupiter, the Galileo Project, is underway. After a 6-year cruise that so far has taken the Galileo Orbiter once past Venus, twice past Earth and the Moon, and once past two asteroids, the spacecraft will drop an atmospheric probe into Jupiter's cloud layers and relay data back to Earth. The Galileo Orbiter will spend 2 years circling the planet and flying close to Jupiter's large moons, exploring in detail what the two Pioneers and two Voyagers revealed.

The year 1994 was one of great excitement in space science. In July some 20 fragments of the comet Shoemaker-Levy 9 crashed into Jupiter. An event of this magnitude occurs perhaps once in 1000 years. The knowledge that the comet would hit Jupiter came far too late to launch a spacecraft from earth that could arrive in the near vicinity in time for the event. The initial impacts were on the far side of the planet and went unobserved. However Jupiter's very rapid rotation (1 day = 10 hours) allowed the Hubble Space Telescope (HST) and other earth based and space based telescopes to observe the impact scars when they were only a few minutes old. Some of them were as large as Earth. The time evolution of the scars serves to test our understanding of energy deposition and fluid dynamics. The impacts briefly removed the curtain of high clouds that normally obscure our view to reveal details about the composition of Jupiter's lower atmosphere. There is controversy about how much of the sulfur and water observed arose from Jupiter as opposed to the cometary matter. Our observations yielded a rich store of data that will keep scientists occupied for some time to come.

## Galilean Satellites

In 1610, Galileo Galilei aimed his telescope at Jupiter and spotted four points of light orbiting the planet. For the first time, humans had seen the moons of another world. In honor of their discoverer, these four bodies would become known as the Galilean satellites or moons. But Galileo might have happily traded this honor for one look at the dazzling photographs returned by the Voyager spacecraft as they flew past these planet-sized satellites.

One of the most remarkable findings of the Voyager mission was the presence of active volcanoes on the Galilean moon Io. Volcanic eruptions had never before been observed on a world other than Earth. The Voyager cameras identified at least nine active volcanoes on Io, with plumes of ejected material extending as far as 280 km (175 mi) above the moon's surface. Io's pizza-colored terrain, marked by orange and yellow hues, is probably the result of sulfur-rich materials brought to the surface by volcanic activity. Volcanic activity on this satellite is the result of tidal flexing caused by the gravitational tug-of-war between Io, Jupiter, and the other three Galilean moons.

## Galilean Satellites

In 1610, Galileo Galilei aimed his telescope at Jupiter and spotted four points of light orbiting the planet. For the first time, humans had seen the moons of another world. In honor of their discoverer, these four bodies would become known as the Galilean satellites or moons. But Galileo might have happily traded this honor for one look at the dazzling photographs returned by the Voyager spacecraft as they flew past these planet-sized satellites.

One of the most remarkable findings of the Voyager mission was the presence of active volcanoes on the Galilean moon Io. Volcanic eruptions had never before been observed on a world other than Earth. The Voyager cameras identified at least nine active volcanoes on Io, with plumes of ejected material extending as far as 280 km (175 mi) above the moon's surface. Io's pizza-colored terrain, marked by orange and yellow hues, is probably the result of sulfur-rich materials brought to the surface by volcanic activity. Volcanic activity on this satellite is the result of tidal flexing caused by the gravitational tug-of-war between Io, Jupiter, and the other three Galilean moons.

Europa, approximately the same size as our Moon, is the brightest Galilean satellite. The moon's surface displays an array of streaks, indicating the crust has been fractured. Caught in a gravitational tug-of-war like Io, Europa has been heated enough to cause its interior ice to melt, producing a liquid-water ocean. This ocean is covered by an ice crust that has formed where water is exposed to the cold of space. Astronomers using NASA's Hubble Space Telescope (HST) have identified the presence of an extremely tenuous atmosphere of molecular oxygen around Europa. It is so thin that the surface pressure is barely one hundred billion that of Earth. Free molecular oxygen is expected from the action of extreme ultraviolet radiation of Europa's water. The greatest significance of the observation is the astonishing sensitivity afforded by the HST. Europa's core is made of rock that sank to its center. Like Europa, the other two Galilean moons - Ganymede and Callisto - are worlds of ice and rock. Ganymede is the largest satellite in the solar system -- larger than the planets Mercury and Pluto. The satellite is composed of about 50 percent water or ice and the rest rock. Ganymede's surface has areas of different brightness, indicating that, in the past, material oozed out of the moon's interior and was deposited at various locations on the surface.

# The Solar System

Callisto, only slightly smaller than Ganymede, has the lowest density of any Galilean satellite, suggesting that large amounts of water are part of its composition. Callisto is the most heavily cratered object in the solar system; no activity during its history has erased old craters except more impacts.

Detailed studies of all the Galilean satellites will be performed by the Galileo Orbiter.

## Saturn

No planet in the solar system is adorned like Saturn. Its exquisite ring system is unrivaled. Like Jupiter, Saturn is composed mostly of hydrogen. But in contrast to the vivid colors and wild turbulence found in Jovian clouds, Saturn's atmosphere has a more subtle, butterscotch hue, and its markings are muted by high-altitude haze. Given Saturn's somewhat placid-looking appearance, scientists were surprised at the high-velocity equatorial jet stream that blows some 1,770 km (1,100 mi) per hour.

Three American spacecraft have visited Saturn. Pioneer 11 sped by the planet and its moon Titan in September 1979, returning the first close-up images. Voyager 1 followed in November 1980, sending back breathtaking photographs that revealed for the first time the complexities of Saturn's ring system and moons. Voyager 2 flew by the planet and its moons in August 1981.

The rings are composed of countless low-density particles orbiting individually around Saturn's equator at progressive distances from the cloud tops. Analysis of spacecraft radio waves passing through the rings showed that the particles vary widely in size, ranging from dust to house-sized boulders. The rings are bright because they are mostly ice and frosted rock.

The rings might have resulted when a moon or a passing body ventured too close to Saturn. The object would have been torn apart by great tidal forces on its surface and in its interior. Or the object may not have been fully formed and disintegrated under the influence of Saturn's gravity. A third possibility is that the object was shattered by collisions with larger objects orbiting the planet.

Unable either to form into a moon or to drift away from each other, individual ring particles appear to be held in place by the gravitational pull of Saturn and its satellites. These complex gravitational interactions form the thousands of ringlets that make up the major rings.

Radio emissions quite similar to the static heard on an AM car radio during an electrical storm were detected by the Voyager spacecraft. These emissions are typical of lightning but are believed to be coming from Saturn's ring system rather than its atmosphere, where no lightning was observed. As they had at Jupiter, the Voyagers saw a version of Earth's auroras near Saturn's poles.

The Voyagers discovered new moons and found several satellites that share the same orbit. We learned that some moons shepherd ring particles, maintaining Saturn's rings and the gaps in the rings. Saturn's 18th moon was discovered in 1990 from images taken by Voyager 2 in 1981.

Voyager 1 determined that Titan has a nitrogen-based atmosphere with methane and argon -- one more like Earth's in composition than the carbon dioxide atmosphere of Mars and Venus. Titan's surface temperature of -179 degrees Celsius (-290 degrees Fahrenheit) implies that there might be water-ice islands rising above oceans of ethane-methane liquid or sludge. Unfortunately, Voyager 1's cameras could not penetrate the moon's dense clouds.

Continuing photochemistry from solar radiation may be converting Titan's methane to ethane, acetylene and, in combination with nitrogen, hydrogen cyanide. These conditions may be similar to the atmospheric conditions of primeval Earth between 3 and 4 billion years ago. However, Titan's atmospheric temperature is believed to be too low to permit progress beyond this stage of organic chemistry.

A mission to Saturn, planned for launch in October 1997, may help answer many of the questions raised by the Voyager flybys about the Saturnian system. Called Cassini, the joint U.S. European Space Agency mission consists of an Orbiter and an instrumented probe called Huygens supplied by ESA. The mission is designed to complete an orbital surveillance of the planet and unveil Saturn's largest moon, Titan, by dropping the Huygens probe through Titan's intriguingly Earth-like atmosphere.

Cassini will fly by Venus twice as well as by Earth and Jupiter before arriving at Saturn in November 2004 to begin a 4-year orbital tour of the ringed planet and its 18 moons. The Huygens probe will descend to the surface of Titan in June 2005.

# The Solar System

## Uranus

In January 1986, 4-1/2 years after visiting Saturn, Voyager 2 completed the first close-up survey of the Uranian system. The brief flyby revealed more information about Uranus and its moons than had been gleaned from ground observations since its discovery over 2 centuries ago by English astronomer William Herschel.

Uranus, third largest of the planets, is an oddball of the solar system. Unlike the other planets (with the exception of Pluto), this giant lies tipped on its side with its north and south poles alternately facing the Sun during an 84-year swing around the solar system. During Voyager 2's flyby, the south pole faced the Sun. Uranus might have been knocked over when an Earth-sized object collided with it early in the life of the solar system.

Voyager 2 discovered that Uranus' magnetic field does not follow the usual north-south axis found on the other planets. Instead, the field is tilted 60 degrees and offset from the planet's center. A phenomenon that on Earth would be like having one magnetic pole in New York City and the other in the city of Jakarta, on the island of Java in Indonesia.

Uranus' atmosphere consists mainly of hydrogen, with some 12 percent helium and small amounts of ammonia, methane, and water vapor. The planet's blue color occurs because methane in its atmosphere absorbs all other colors. Wind speeds range up to 580 km (360 mi) per hour, and temperatures near the cloud tops average -221 degrees Celsius (-366 degrees Fahrenheit).

Uranus' sunlit south pole is shrouded in a kind of photochemical "smog" believed to be a combination of acetylene, ethane, and other sunlight-generated chemicals. Surrounding the planet's atmosphere and extending thousands of kilometers into space is a mysterious ultraviolet sheen known as "electroglow." Approximately 8,000 km (5,000 mi) below Uranus' cloud tops, there is thought to be a scalding ocean of water and dissolved ammonia some 10,000 km (6,200 mi) deep. Beneath this ocean is an Earth-sized core of heavier materials.

Voyager 2 discovered 10 new moons, 16-169 km (10-105 mi) in diameter, orbiting Uranus. The five previously known -- Miranda, Ariel, Umbriel, Titania, and Oberon -- range in size from 520 to 1,610 km (323 to 1,000 mi) across. Representing a geological showcase, these five moons are half-ice, half-rock spheres that are cold and dark and show evidence of past activity, including faulting and ice flows.

The most remarkable of Uranus' moons is Miranda. Its surface features high cliffs as well as canyons, crater-pocked plains, and winding valleys. The sharp variations in terrain suggest that, after the moon formed, it was smashed apart by a collision with another body -- an event not unusual in our solar system, which contains many objects that have impact craters or are fragments from large impacts. What is extraordinary is that Miranda apparently reformed with some of the material that had been in its interior exposed on its surface.

Uranus was thought to have nine dark rings; Voyager 2 imaged 11. In contrast to Saturn's rings, composed of bright particles, Uranus' rings are primarily made up of dark, boulder-sized chunks.

## Neptune

Voyager 2 completed its 12-year tour of the solar system with an investigation of Neptune and the planet's moons. On Aug 25, 1989, the spacecraft swept to within 4,850 km (3,010 mi) of Neptune and then flew on to the moon Triton. During the Neptune encounter, it became clear that the planet's atmosphere was more active than Uranus'.

Voyager 2 observed the Great Dark Spot, a circular storm the size of Earth, in Neptune's atmosphere. Resembling Jupiter's Great Red Spot, the storm spins counter-clockwise and moves westward at almost 1,200 km (745 mi) per hour. Voyager 2 also noted a smaller dark spot and a fast-moving cloud dubbed the "Scooter," as well as high-altitude clouds over the main hydrogen and helium cloud deck. The highest wind speeds of any planet were observed, up to 2,400 km (1,500 mi) per hour.

# The Solar System

Like the other giant planets, Neptune has a gaseous hydrogen and helium upper layer over a liquid interior. The planet's core contains a higher percentage of rock and metal than those of the other gas giants. Neptune's distinctive blue appearance, like Uranus' blue color, is due to atmospheric methane.

Neptune's magnetic field is tilted relative to the planet's spin axis and is not centered at the core. This phenomenon is similar to Uranus' magnetic field and suggests that the field of the two giants are being generated in an area above the cores, where the pressure is so great that liquid hydrogen assumes the electrical properties of a metal. Earth's magnetic field, on the other hand, is produced by its spinning metallic core and is only slightly tilted and offset relative to its center.

Voyager 2 also shed light on the mystery of Neptune's rings. Observations from Earth indicated that there were arcs of material in orbit around the giant planet. It was not clear how Neptune could have arcs and how these could be kept from spreading out into even, unclumped rings. Voyager 2 detected these arcs, but they were, in fact, part of thin, complete rings. A number of small moons could explain the arcs, but such bodies were not spotted.

Astronomers had identified the Neptunian moons Triton in 1846 and Nereid in 1949. Voyager 2 found six more. One of the new moons -- Proteus -- is actually larger than Nereid, but since Proteus orbits close to Neptune, it was lost in the planet's glare for observers on Earth.

Triton circles Neptune in a retrograde orbit in under 6 days. Tidal forces on Triton are causing it to spiral slowly toward the planet. In 10-100 million years (a short time in astronomical terms), the moon will be so close that Neptunian gravity will tear it apart, forming a spectacular ring to accompany the planet's modest current rings.

Triton's landscape is as strange and unexpected as those of Io and Miranda. The moon has more rock than its counterparts at Saturn and Uranus. Triton's mantle is probably composed of water-ice, but its crust is a thin veneer of nitrogen and methane. The moon shows two dramatically different types of terrain: the so-called "cantaloupe" terrain and a receding ice cap.

Dark streaks appear on the ice cap. These streaks are the fallout from geyser-like volcanic vents that shoot nitrogen gas and dark, fine-grained particles to heights of 1-8 km (1-5 mi). Triton's thin atmosphere, only 1/70,000th as thick as Earth's, has winds that carry the dark particles and deposit them as streaks on the ice cap -- the coldest surface yet discovered in the solar system (-235 degrees Celsius, -391 degrees Fahrenheit). Triton might be more like Pluto than any other object spacecraft have so far visited.

## Pluto

Pluto is the most distant of the planets, yet the eccentricity of its orbit periodically carries it inside Neptune's orbit, where it has been since 1979 and where it will remain until March 1999. Pluto's orbit is also highly inclined -- tilted 17 degrees to the orbital plane of the other planets.

Discovered in 1930, Pluto appears to be little more than a celestial snowball. The planet's diameter is calculated to be approximately 2,300 km (1,430 mi), only 2/3 the size of our Moon. Ground-based observations indicate that Pluto's surface is covered with methane ice and that there is a thin atmosphere that may freeze and fall to the surface as the planet moves away from the Sun. Observations also show that Pluto's spin axis is tipped by 122 degrees.

The planet has one known satellite, Charon, discovered in 1978. Charon's surface composition is different from Pluto's: the moon appears to be covered with water-ice rather than methane ice. Its orbit is gravitationally locked with Pluto, so both bodies always keep the same hemisphere facing each other. Pluto's and Charon's rotational period and Charon's period of revolution are all 6.4 Earth days.

No spacecraft has ever visited Pluto, however, a Pluto Fast Flyby mission is being studied for a possible launch in 1999-2000.

# The Solar System

## Comets

The outermost members of the solar system occasionally pay a visit to the inner planets. As asteroids are the rocky and metallic remnants of the formation of the solar system, comets are the icy debris from that dim beginning and can survive only far from the Sun. Most comet nuclei reside in the Oort Cloud, a loose swarm of objects in a halo beyond the planets and reaching perhaps halfway to the nearest star.

Comet nuclei orbit in this frozen abyss until they are gravitationally perturbed into new orbits that carry them close to the Sun. As a nucleus falls inside the orbits of the outer planets, the volatile elements of which it is made gradually warm; by the time the nucleus enters the region of the inner planets, these volatile elements are boiling. The nucleus itself is irregular and only a few miles across, and is made principally of water-ice with methane and ammonia.

As these materials boil off of the nucleus, they form a coma or cloud-like "head" that can measure tens of thousands of kilometers across. The coma grows as the comet gets closer to the Sun. The stream of charged particles coming from the Sun pushes on this cloud, blowing it back and giving rise to the comet's "tails." Gases and ions are blown directly back from the nucleus, but dust particles are pushed more slowly. As the nucleus continues in its orbit, the dust particles are left behind in a curved arc.

Both the gas and dust tails point away from the Sun; in effect, the comet chases its tails as it recedes from the Sun. The tails can reach 150 million km (93 million mi) in length, but the total amount of material contained in this dramatic display would fit in an ordinary suitcase. Comets -- from the Latin *cometa*, meaning "long-haired" -- are essentially dramatic light shows.

Some comets pass through the solar system only once, but others have their orbits gravitationally modified by a close encounter with one of the giant outer planets. These latter visitors can enter closed elliptical orbits and repeatedly return to the inner solar system.

Halley's Comet is the most famous example of a relatively short period comet, returning on an average of once every 76 years and orbiting from beyond Neptune to within Venus' orbit. Confirmed sightings of the comet go back to 240 B.C. This regular visitor to our solar system is named for Sir Edmund Halley, because he plotted the comet's orbit and predicted its return, based on earlier sightings and Newtonian laws of motion. His name became part of astronomical lore when, in 1759, the comet returned on schedule. Unfortunately, Sir Edmund did not live to see it.

A comet can be very prominent in the sky if it passes comparatively close to Earth. Unfortunately, on its most recent appearance, Halley's Comet passed no closer than 62.4 million km (28.8 million mi) from our world. The comet was visible to the naked eye, especially for viewers in the southern hemisphere, but it was not spectacular. Comets have been so bright, on rare occasions, that they were visible during daytime. Historically, comet sightings have been interpreted as bad omens and have been artistically rendered as daggers in the sky.

Several spacecraft have flown by comets at high speed; the first was NASA's International Cometary Explorer in 1985. An armada of five spacecraft (two Japanese, two Soviet, and the Giotto spacecraft from the European Space Agency) flew by Halley's Comet in 1986.

# Planetary Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Venera 1 USSR	Venus Probe	Feb 12, 1961		First Soviet planetary flight; launched from Sputnik 8. Radio contact was lost during flight; spacecraft was not operating when it passed Venus.
Mariner 1 USA	Venus Flyby	Jul 22, 1962		Destroyed shortly after launch when vehicle veered off course.
Sputnik 19 USSR	Venus Probe	Aug 25, 1962		Unsuccessful Venus attempt.
Mariner 2 USA	Venus Flyby	Aug 27, 1962	Dec 14, 1962	First successful planetary flyby. Provided instrument scanning data. Entered solar orbit.
Sputnik 20 USSR	Venus Probe	Sep 1, 1962		Unsuccessful Venus attempt.
Sputnik 21 USSR	Venus Probe	Sep 12, 1962		Unsuccessful Venus attempt.
Sputnik 22 USSR	Mars Probe	Oct 24, 1962		Spacecraft and final rocket stage blew up when accelerated to escape velocity.
Mars 1 USSR	Mars Probe	Nov 1, 1962		Contact was lost when the spacecraft antenna could no longer be pointed towards Earth.
Sputnik 24 USSR	Mars Probe	Nov 4, 1962		Disintegrated during an attempt at Mars trajectory from Earth parking orbit.
Zond 1 USSR	Venus Probe	Apr 2, 1964		Communications lost. Spacecraft went into solar orbit.
Mariner 3 USA	Mars Flyby	Nov 5, 1964		Shroud failed to jettison properly; Sun and Canopus not acquired; spacecraft did not encounter Mars. Transmissions ceased 9 hours after launch. Entered solar orbit.
Mariner 4 USA	Mars Flyby	Nov 28, 1964	Jul 14, 1965	Provided first close-range images of Mars, confirming the existence of surface craters. Entered solar orbit.
Zond 2 USSR	Mars Probe	Nov 30, 1964		Passed by Mars; failed to return data. Went into solar orbit.

# Planetary Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Venera 2 USSR	Venus Probe	Nov 12, 1965	Feb 27, 1966	Passed by Venus, but failed to return data.
Venera 3 USSR	Venus Probe	Nov 16, 1965	Mar 1, 1966	Impacted on Venus, becoming the first spacecraft to reach another planet. Failed to return data.
Venera 4 USSR	Venus Probe	Jun 12, 1967	Oct 18, 1967	Descent capsule transmitted data during parachute descent. Sent measurements of pressure, density, and chemical composition of the atmosphere before transmissions ceased.
Mariner 5 USA	Venus Flyby	Jun 14, 1967	Oct 19, 1967	Advanced instruments returned data on Venus' surface temperature, atmosphere, and magnetic field environment. Entered solar orbit.
Venera 5 USSR	Venus Probe	Jan 5, 1969	Mar 16, 1969	Entry velocity reduced by atmospheric braking before main parachute was deployed. Capsule entered atmosphere on planet's dark side; transmitted data for 53 minutes while traveling into the atmosphere before being crushed.
Venera 6 USSR	Venus Probe	Jan 10, 1969	Mar 17, 1969	Descent capsule entered the atmosphere on the planet's dark side; transmitted data for 51 minutes while traveling into the atmosphere before being crushed.
Mariner 6 USA	Mars Flyby	Feb 24, 1969	Jul 31, 1969	Provided high-resolution photos of Martian surface, concentrating on equatorial region. Entered solar orbit.
Mariner 7 USA	Mars Flyby	Mar 27, 1969	Aug 5, 1969	Provided high-resolution photos of Martian surface, concentrating on southern hemisphere. Entered solar orbit.
Venera 7 USSR	Venus Lander	Aug 17, 1970	Dec 15, 1970	Entry velocity was reduced aerodynamically before parachute deployed. After fast descent through upper layers, the parachute canopy opened fully, slowing descent to allow fuller study of lower layers. Gradually increasing temperatures were transmitted. Returned data for 23 minutes after landing.

# Planetary Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Cosmos 359 USSR	Venus Lander	Aug 22, 1970		Unsuccessful Venus attempt; failed to achieve escape velocity.
Mariner 8 USA	Mars Orbiter	May 8, 1971		Centaur stage malfunctioned shortly after launch.
Cosmos 419 USSR	Mars Probe	May 10, 1971		First use of Proton launcher for a planetary mission. Placed in Earth orbit but failed to separate from fourth stage.
Mars 2 USSR	Mars Orbiter and Lander	May 19, 1971	Nov 27, 1971	Landing capsule separated from spacecraft and made first, unsuccessful attempt to soft land. Lander carried USSR pennant. Orbiter continued to transmit data.
Mars 3 USSR	Mars Orbiter and Lander	May 28, 1971	Dec 2, 1971	Landing capsule separated from spacecraft and landed in the southern hemisphere. Onboard camera operated for only 20 seconds, transmitting a small panoramic view. Orbiter transmitted for 3 months.
Mariner 9 USA	Mars Orbiter	May 30, 1971	Nov 13, 1971	First interplanetary probe to orbit another planet. During nearly a year of operations, obtained detailed photographs of the Martian moons, Phobos and Deimos, and mapped 100 percent of the Martian surface. Spacecraft is inoperable in Mars orbit.
Pioneer 10 USA	Jupiter Flyby	Mar 2, 1972	Dec 3, 1973	First spacecraft to penetrate the Asteroid Belt. Obtained first close-up images of Jupiter, investigated its magnetosphere, atmosphere and internal structure. Still operating in the outer Solar System.
Venera 8 USSR	Venus Lander	Mar 27, 1972	Jul 22, 1972	As the spacecraft entered the upper atmosphere, the descent module separated while the service module burned up in the atmosphere. Entry speed was reduced by aerodynamic braking before parachute deployment. During descent, a refrigeration system was used to offset high temperatures. Returned data on temperature, pressure, light levels, and descent rates. Transmitted from surface for about 1 hour.
Cosmos 482 USSR	Venus Lander	Mar 31, 1972		Unsuccessful Venus probe; escape stage misfired leaving craft in Earth orbit.

# Planetary Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Pioneer 11 USA	Jupiter/Saturn Flyby	Apr 5, 1973	Dec 2, 1974 (Jupiter) Sep 1, 1979 (Saturn)	The successful encounter of Jupiter by Pioneer 10 permitted Pioneer 11 to be retargeted in flight to fly by Jupiter and encounter Saturn. Still operating in the outer Solar System.
Mars 4 & 5 USSR	Mars Orbiters and Landers	Jul 21, 1973 Jul 25, 1973	Feb 10, 1974 Feb 12, 1974	Pair of spacecraft launched to Mars. Mars 4 retro rockets failed to fire, preventing orbit insertion. As it passed the planet, Mars 4 returned one swath of pictures and some radio occultation data. Mars 5 was successfully placed in orbit, but operated only a few days, returning photographs of a small portion of southern hemisphere of Mars.
Mars 6 & 7 USSR	Mars Orbiters and Landers	Aug 5, 1973 Aug 9, 1973	Mar 12, 1974 Mar 9, 1974	Second pair of spacecraft launched to Mars. Mars 6 lander module transmitted data during descent, but transmissions abruptly ceased when the landing rockets were fired. Mars 7 descent module was separated from the main spacecraft due to a problem in the operation of one of the onboard systems, and passed by the planet.
Mariner 10 USA	Venus/Mercury Flyby	Nov 3, 1973	Feb 5, 1974 (Venus) Mar 29, 1974 (Mercury) Sep 21, 1974 (Mercury) Mar 16, 1975 (Mercury)	First dual-planet mission. Used gravity of Venus to attain Mercury encounter. Provided first ultraviolet photographs of Venus; returned close-up photographs and detailed data of Mercury. Transmitter was turned off March 24, 1975, when attitude control gas was depleted. Spacecraft is inoperable in solar orbit.
Venera 9 USSR	Venus Orbiter and Lander	Jun 8, 1975	Oct 22, 1975	First spacecraft to transmit a picture from the surface of another planet. The lander's signals were transmitted to Earth via the orbiter. Utilized a new parachute system, consisting of six chutes. Signals continued from the surface for nearly 2 hrs 53 mins.
Venera 10 USSR	Venus Orbiter and Lander	Jun 14, 1975	Oct 25, 1975	During descent, atmospheric measurements and details of physical and chemical contents were transmitted via the orbiter. Transmitted pictures from the surface of Venus.

# Planetary Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Viking 1 USA	Mars Orbiter and Lander	Aug 20, 1975	Jul 19, 1976 (in orbit) Jul 20, 1976 (landed)	First U.S. attempt to soft land a spacecraft on another planet. Landed on the Plain of Chryse. Photographs showed an orange-red plain strewn with rocks and sand dunes. Both Orbiters took a total of 52,000 images during their mission; approximately 97% percent of the surface was imaged. Orbiter 1 operated until August 7, 1980, when it used the last of its attitude control gas. Lander 1 ceased operating on Nov 13, 1983.
Viking 2 USA	Mars Orbiter and Lander	Sep 9, 1975	Aug 7, 1976 (in orbit) Sep 3, 1976 (landed)	Landed on the Plain of Utopia. Discovered water frost on the surface at the end of the Martian winter. The two Landers took 4,500 images of the surface and provided over 3 million weather reports. Orbiter 2 stopped operating on July 24, 1978, when its attitude control gas was depleted because of a leak. Lander 2 operated until April 12, 1980, when it was shut down due to battery degeneration.
Voyager 2 USA	Tour of the Outer Planets	Aug 20, 1977	Jul 9, 1979 (Jupiter) Aug 25, 1981 (Saturn) Jan 24, 1986 (Uranus) Aug 25, 1989 (Neptune)	Investigated the Jupiter, Saturn and Uranus planetary systems. Provided first close-up photographs of Uranus and its moons. Used gravity-assist at Uranus to continue on to Neptune. Swept within 1280 km of Neptune on August 25, 1989. The spacecraft will continue into interstellar space.
Voyager 1 USA	Tour of Jupiter and Saturn	Sep 5, 1977	Mar 5, 1979 (Jupiter) Nov 12, 1980 (Saturn)	Investigated the Jupiter and Saturn planetary systems. Returned spectacular photographs and provided evidence of a ring encircling Jupiter. Continues to return data enroute toward interstellar space.
Pioneer Venus 1 USA	Venus Orbiter	May 20, 1978	Dec 4, 1978	Mapped Venus' surface by radar, imaged its cloud systems, explored its magnetic environment and observed interactions of the solar wind with a planet that has no intrinsic magnetic field. Provided radar altimetry maps for nearly all of the surface of Venus, resolving features down to about 50 miles across. Still operating in orbit around Venus.
Pioneer Venus 2 USA	Venus Probe	Aug 8, 1978	Dec 9, 1978	Dispatched heat-resisting probes to penetrate the atmosphere at widely separated locations and measured temperature, pressure, and density down to the planet's surface. Probes impacted on the surface.

# Planetary Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Venera 11 USSR	Venus Orbiter and Lander	Sep 9, 1978	Dec 25, 1978	Arrived at Venus 4 days after Venera 12. The two landers took nine samples of the atmosphere at varying heights and confirmed the basic components. Imaging system failed; did not return photos. Operated for 95 minutes.
Venera 12 USSR	Venus Orbiter and Lander	Sep 14, 1978	Dec 21, 1978	A transit module was positioned to relay the lander's data from behind the planet. Returned data on atmospheric pressure and components. Did not return photos; imaging system failed. Operated for 110 minutes.
Venera 13 USSR	Venus Orbiter and Lander	Oct 31, 1981	Mar 1, 1982	Provided first soil analysis from Venusian surface. Transmitted eight color pictures via orbiter. Measured atmospheric chemical and isotopic composition, electric discharges, and cloud structure. Operated for 57 minutes.
Venera 14 USSR	Venus Orbiter and Lander	Nov 4, 1981	Mar 3, 1982	Transmitted details of the atmosphere and clouds during descent; soil sample taken. Operated for 57 minutes.
Venera 15 USSR	Venus Orbiter	Jun 2, 1983	Oct 10, 1983	Obtained first high-resolution pictures of polar area. Compiled thermal map of almost entire northern hemisphere.
Venera 16 USSR	Venus Orbiter	Jun 7, 1983	Oct 16, 1983	Provided computer mosaic images of a strip of the northern continent. Soviet and U.S. geologists cooperated in studying and interpreting these images.
Vega 1 & 2 USSR	Venus/Halley	Dec 15, 1984 Dec 21, 1984	Jun 11, 1985 (Venus) Mar 6, 1986 (Halley) Jun 15, 1985 (Venus) Mar 9, 1986 (Halley)	International two-spacecraft project using Venusian gravity to send them on to Halley's Comet after dropping the Venusian probes. The Venus landers studied the atmosphere and acquired a surface soil sample for analysis. Each lander released a helium-filled instrumented balloon to measure cloud properties. The other half of the Vega payloads, carrying cameras and instruments, continued on to encounter Comet Halley.

# Planetary Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Phobos 1 & 2 USSR	Mars/Phobos	Jul 7, 1988 Jul 12, 1988	Jan 1989 (Mars) Jan 1989 (Mars)	International two-spacecraft project to study Mars and its moon Phobos. Phobos 1 was disabled by a ground control error. Phobos 2 was successfully inserted into Martian orbit in January 1989 to study the Martian surface, atmosphere, and magnetic field. On March 27, 1989, communications with Phobos 2 were lost and efforts to contact the spacecraft were unsuccessful.
Magellan USA	Venus Radar Mapping	May 4, 1989	Aug 1990	Returned radar images that showed geological features unlike anything seen on Earth. One area scientists called crater farms; another area was covered by a checkered pattern of closely spaced fault lines running at right angles. Most intriguing were indications that Venus still may be geologically active. Will continue to map the entire surface and observe evidence of volcanic eruption into 1991.
Galileo USA	Jupiter Orbiter and Probe	Oct 18, 1989	Dec 8, 1990 (Earth) Feb 1991 (Venus)	A sophisticated two-part spacecraft; an Orbiter will be inserted into orbit around Jupiter to remotely sense the planet, its satellites and the Jovian magnetosphere and a Probe will descend into the atmosphere of Jupiter to make in situ measurements of its nature. Galileo flew by Venus, conducting the first infrared imagery and spectroscopy below the planet's cloud deck and used the Earth's gravity to speed it on its way to Jupiter.
Mars Observer USA	Mars Orbiter	Sep 25, 1992		Communication was lost with the Mars Observer on August 21, 1993, 3 days before the orbit insertion burn.
Galileo Probe USA	Jupiter Orbiter	Oct 18, 1989	Dec 7, 1995	A Planetary Probe was released from the Galileo Spacecraft with seven instruments: a helium abundance detector, an atmospheric structure instrument, a neutral mass spectrometer, a radiometer, a nephelometer, a lightning detector and an energetic particle detector. When the probe enters the Jupiter atmosphere the Galileo spacecraft will have been maneuvered overhead to receive the telemetry signals.

# Planetary Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Mars Global Surveyor (MGS)	Remote-sensing Orbiter	Nov. 7, 1996		Provide mapping of soil and atmospheric composition from two different orbits. After 180 days of high apogee atmospheric mapping the Surveyor will be "aerobraking" into a lower orbit to map the surface features. The mapping will be done by a thermal emission spectrometer, a laser altimeter and three linescan cameras at visual wavelengths. The telemetry signals from the spacecraft will enable estimation of Martian atmospheric profile.
Mars Pathfinder	Mars Lander	Dec. 4, 1996		Pathfinder along with a small rover named Sojourner on board, will land on the surface of Mars cushioned by balloons. The lander and rover are both solar powered with backup batteries. The lander has three instruments: an Imager for the Mars Pathfinder (IMP), Atmospheric Structure Instrument/Meteorology package (ASI/MET); the rover houses an Alpha, Proton, X-ray Spectrometer (APXS), and color cameras. The lander has one-gigabyte of memory to store and transmit data from its instruments as well as from the instruments on the rover.

# Lunar Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Pioneer 1 USA	Lunar Orbit	Oct 11, 1958		Did not achieve lunar trajectory; launch vehicle second and third stages did not separate evenly. Returned data on Van Allen Belt and other phenomena before reentering on October 12, 1958.
Pioneer 2 USA	Lunar Orbit	Nov 8, 1958		Third stage of launch vehicle failed to ignite. Returned data that indicated the Earth's equatorial region has higher flux and energy levels than previously believed. Did not achieve orbit.
Pioneer 3 USA	Lunar Probe	Dec 6, 1958		First stage of launch vehicle cut off prematurely; transmitted data on dual bands of radiation around Earth. Reentered December 7, 1958.
Luna 1 USSR	Lunar Impact	Jan 2, 1959		Intended to impact the Moon; carried instruments to measure radiation. Passed the Moon and went into solar orbit.
Pioneer 4 USA	Lunar Probe	Mar 3, 1959	Mar 4, 1959	Passed within 37,300 miles from the Moon; returned excellent data on radiation. Entered solar orbit.
Luna 2 USSR	Lunar Impact	Sep 12, 1959	Sep 15, 1959	First spacecraft to reach another celestial body. Impacted east of the Sea of Serenity; carried USSR pennants.
Luna 3 USSR	Lunar Probe	Oct 4, 1959		First spacecraft to pass behind Moon and send back pictures of far side. Equipped with a TV processing and transmission system, returned pictures of far side including composite full view of far side. Reentered Apr 29, 1960.
Pioneer P-3 USSR	Lunar Orbit	Nov 26, 1959		Payload shroud broke away 45 seconds after liftoff. Did not achieve orbit.
Ranger 1 USA	Lunar Probe	Aug 23, 1961		Flight test of lunar spacecraft carrying experiments to collect data on solar plasma, particles, magnetic fields, and cosmic rays. Launch vehicle failed to restart resulting in low Earth Orbit. Reentered August 30, 1961.

# Lunar Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Ranger 2 USA	Lunar Probe	Nov 18, 1961		Flight test of spacecraft systems for future lunar and interplanetary missions. Launch vehicle altitude control system failed, resulting in low Earth orbit. Reentered November 20, 1961.
Ranger 3 USA	Lunar Landing	Jan 26, 1962		Launch vehicle malfunction resulted in spacecraft missing the Moon by 22,862 miles. Spectrometer data on radiation were received. Entered solar orbit.
Ranger 4 USA	Lunar Landing	Apr 23, 1962	Apr 26, 1962	Failure of central computer and sequencer system rendered experiments useless. No telemetry received. Impacted on far side of the Moon.
Ranger 5 USA	Lunar Landing	Oct 18, 1962		Power failure rendered all systems and experiments useless; 4 hours of data received from gamma ray experiment before battery depletion. Passed within 450 miles of the Moon. Entered solar orbit.
Sputnik 25 USSR	Lunar Probe	Jan 4, 1963		Unsuccessful lunar attempt.
Luna 4 USSR	Lunar Orbiter	Apr 2, 1963		Attempt to solve problems of landing instrument containers. Contact lost as it passed the Moon. Barycentric orbit.
Ranger 6 USA	Lunar Photo	Jan 30, 1964	Feb 2, 1964	TV cameras failed; no data returned. Impacted in the Sea of Tranquility area.
Ranger 7 USA	Lunar Photo	Jul 28, 1964	Jul 31, 1964	Transmitted high quality photographs, man's first close-up lunar views, before impacting in the Sea of Clouds area.
Ranger 8 USA	Lunar Photo	Feb 17, 1965	Feb 20, 1965	Transmitted high quality photographs before impacting in the Sea of Tranquility area.
Ranger 9 USA	Lunar Photo	Mar 21, 1965	Mar 24, 1965	Transmitted high quality photographs before impacting in the Crater of Alphonsus. Almost 200 pictures were shown live via commercial television in the first TV spectacular from the Moon.

# Lunar Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Luna 5 USSR	Lunar Lander	May 9, 1965	May 12, 1965	First soft landing attempt. Retrorocket malfunctioned; spacecraft impacted in the Sea of Clouds.
Luna 6 USSR	Lunar Lander	Jun 8, 1965		During midcourse correction maneuver, engine failed to switch off. Spacecraft missed Moon and entered solar orbit.
Zond 3 USSR	Lunar Probe	Jul 18, 1965		Photographed lunar far side and transmitted photos to Earth 9 days later. Entered solar orbit.
Luna 7 USSR	Lunar Lander	Oct 4, 1965	Oct 7, 1965	Retrorockets fired early; crashed in Ocean of Storms.
Luna 8 USSR	Lunar Lander	Dec 3, 1965	Dec 6, 1965	Retrorockets fired late; crashed in Ocean of Storms.
Luna 9 USSR	Lunar Lander	Jan 31, 1966	Feb 3, 1966	First successful soft landing; first TV transmission from lunar surface. Three panoramas of the lunar landscape were transmitted from the eastern edge of the Ocean of Storms.
Cosmos 111 USSR	Lunar Probe	Mar 11, 1966		Unsuccessful lunar attempt. Reentered March 16, 1966.
Luna 10 USSR	Lunar Orbiter	Mar 31, 1966		First lunar satellite. Studied lunar surface radiation and magnetic field intensity; monitored strength and variation of lunar gravitation. Selenocentric orbit.
Surveyor 1 USA	Lunar Lander	May 30, 1966	Jun 2, 1966	First U.S. spacecraft to make a fully controlled soft landing on the Moon; landed in the Ocean of Storms area. Returned high quality images, from horizon views of mountains to close-ups of its own mirrors, and selenological data.
Lunar Orbiter 1 USA	Lunar Orbiter	Aug 10, 1966	Aug 14, 1966	Photographed over 2 million square miles of the Moon's surface. Took first photo of Earth from lunar distance. Impacted on the far side of the Moon on October 29, 1966.
Luna 11 USSR	Lunar Orbiter	Aug 24, 1966		Second lunar satellite. Data received during 277 orbits. Selenocentric orbit.

# Lunar Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Surveyor 2 USA	Lunar Lander	Sep 20, 1966	Sep 22, 1966	Spacecraft crashed onto the lunar surface southeast of the crater Copernicus when one of its three vernier engines failed to ignite during a mid-course maneuver.
Luna 12 USSR	Lunar Orbiter	Oct 22, 1966		TV system transmitted large-scale pictures of Sea of Rains and Crater Aristarchus areas. Tested electric motor for Lunokhod's wheels. Selenocentric orbit.
Lunar Orbiter 2 USA	Lunar Orbiter	Nov 6, 1966	Nov 10, 1966	Photographed landing sites, including the Ranger 8 landing point, and surface debris tossed out at impact. Impacted the Moon on October 11, 1967.
Luna 13 USSR	Lunar Lander	Dec 21, 1966	Dec 24, 1966	Soft landed in Ocean of Storms and sent back panoramic views. Two arms were extended to measure soil density and surface radioactivity.
Lunar Orbiter 3 USA	Lunar Orbiter	Feb 4, 1967	Feb 8, 1967	Photographed lunar landing sites; provided gravitational field and lunar environment data. Impacted the Moon on October 9, 1967.
Surveyor 3 USA	Lunar Lander	Apr 17, 1967	Apr 19, 1967	Vernier engines failed to cut off as planned and the spacecraft bounced twice before landing in the Ocean of Storms. Returned images, including a picture of the Earth during lunar eclipse, and used a scoop to make the first excavation and bearing test on an extraterrestrial body. Returned data on a soil sample. Visual range of TV cameras was extended by using two flat mirrors.
Lunar Orbiter 4 USA	Lunar Orbiter	May 4, 1967	May 8, 1967	Provided the first pictures of the lunar south pole. Impacted the Moon on Oct 6, 1967.
Surveyor 4 USA	Lunar Lander	Jul 14, 1967	Jul 17, 1967	Radio contact was lost 2-1/2 minutes before touchdown when the signal was abruptly lost. Impacted in Sinus Medii.
Lunar Orbiter 5 USA	Lunar Orbiter	Aug 1, 1967	Aug 5, 1967	Increased lunar photographic coverage to better than 99%. Used in orbit as a tracking target. Impacted the Moon on January 31, 1968.

# Lunar Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Surveyor 5 USA	Lunar Lander	Sep 8, 1967	Sep 10, 1967	Technical problems were successfully solved by tests and maneuvers during flight. Soft-landed in the Sea of Tranquility. Returned images and obtained data on lunar surface radar and thermal reflectivity. Performed first on-site chemical soil analysis.
Surveyor 6 USA	Lunar Lander	Nov 7, 1967	Nov 9, 1967	Soft-landed in the Sinus Medii area. Returned images of the lunar surface, Earth, Jupiter, and several stars. Spacecraft engines were restarted, lifting the spacecraft about 10 feet from the surface and landing it 8 feet from the original site.
Surveyor 7 USA	Lunar Lander	Jan 7, 1968	Jan 9, 1968	Landed near the crater Tycho. Returned stereo pictures of the surface and of rocks that were of special interest. Provided first observation of artificial light from Earth.
Luna 14 USSR	Lunar Orbiter	Apr 7, 1968		Studied gravitational field and "stability of radio signals sent to spacecraft at different locations in respect to the Moon." Made further tests of geared electric motor for Lunokhod's wheels. Selenocentric orbit.
Zond 5 USSR	Circumlunar	Sep 15, 1968		First spacecraft to circumnavigate the Moon and return to Earth. Took photographs of the Earth. Capsule was recovered from the Indian Ocean on September 21, 1968. Russia's first sea recovery.
Zond 6 USSR	Circumlunar	Nov 10, 1968		Second spacecraft to circumnavigate the Moon and return to Earth "to perfect the automatic functioning of a manned spaceship that will be sent to the Moon." Photographed lunar far side. Reentry made by skip-glide technique; capsule was recovered on land inside the Soviet Union on November 17, 1968.
Luna 15 USSR	Lunar Sample Return	Jul 13, 1969	Jul 21, 1969	First lunar sample return attempt. Began descent maneuvers on its 52nd revolution. Spacecraft crashed at the end of a 4 minute descent in the Sea of Crises.
Zond 7 USSR	Circumlunar	Aug 7, 1969		Third circumlunar flight. Far side of Moon photographed. Color pictures of Earth and Moon brought back. Reentry by skip-glide technique on August 14, 1969.

## Lunar Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Cosmos 300 USSR	Lunar Probe	Sep 23, 1969		Unsuccessful lunar attempt. Reentered September 27, 1969.
Cosmos 305 USSR	Lunar Probe	Oct 22, 1969		Unsuccessful lunar attempt. Reentered October 24, 1969.
Luna 16 USSR	Lunar Sample Return	Sep 12, 1970	Sep 20, 1970	First recovery of lunar soil by an automatic spacecraft. Controlled landing achieved in Sea of Fertility; automatic drilling rig deployed; samples collected from lunar surface and returned to Earth on September 24, 1970.
Zond 8 USSR	Circumlunar	Oct 20, 1970		Fourth circumlunar flight. Color pictures taken of Earth and Moon. Russia's second sea recovery occurred on October 27, 1970, in the Indian Ocean.
Luna 17 USSR	Lunar Rover	Nov 10, 1970	Nov 17, 1970	Carrying the first Moon robot, soft landed in Sea of Rains. Lunokhod 1, driven by 5-man team on Earth, traveled over the lunar surface for 11 days; transmitted photos and analyzed soil samples.
Luna 18 USSR	Lunar Lander	Sep 2, 1971		Attempted to land in Sea of Fertility on September 11, 1971. Communications ceased shortly after command was given to start descent engine.
Luna 19 USSR	Lunar Orbiter	Sep 28, 1971		From lunar orbit, studied Moon's gravitational field; transmitted TV pictures of the surface. Selenocentric orbit.

# Lunar Exploration

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Luna 20	Lunar Sample Return	Feb 14, 1972		Soft landed in Sea of Crises. Used "photo-telemetric device" to relay pictures of surface. A rotary-percussion drill was used to drill into rock; samples were lifted into a capsule on ascent stage and returned to Earth on Feb 25, 1972.
Luna 21	Lunar Rover	Jan 8, 1973	Jan 15, 1973	Carried improved equipment and additional instruments; second Lunokhod rover soft landed near the Sea of Serenity. Lunar surface pictures were transmitted and experiments were performed. Ceased operating on the 5th lunar day.
Luna 22	Lunar Orbiter	May 29, 1974	Jun 2, 1974	Placed in circular lunar orbit then lowered to obtain TV panoramas of high quality and good resolution. Altimeter readings were taken and chemical rock composition was determined by gamma radiation. Selenocentric orbit.
Luna 23	Lunar Sample Return	Oct 28, 1974		Landed on the southern part of the Sea of Crises on November 6, 1974. Device for taking samples was damaged; no drilling or sample collection possible.
Luna 24	Lunar Sample Return	Aug 9, 1976	Aug 14, 1976	Landed in Sea of Crises on August 18, 1976. Carried larger soil carrier. Core samples were drilled and returned. U.S. and British scientists were given samples for analyses.
Clementine USA	Lunar Flyby	Jan 25, 1994		Carrying ultraviolet/visible and near-infrared cameras, mineralogical mapping of the moon will enhance the scientific knowledge of the surface for future exploration. The mission failed in its attempt to flyby the asteroid Geographos.

MISSION/ Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
<b>1958</b>								<b>1958</b>
Pioneer I (U) Eta I	Thor-Able I 130 (U)	Oct 11		DOWN OCT 12, 1958			34.2	Measure magnetic fields around Earth or Moon. Error in burnout velocity and angle; did not reach Moon. Returned 43 hours of data on extent of radiation band, hydromagnetic oscillations of magnetic field, density of micrometeors in interplanetary space, and interplanetary magnetic field.
Beacon I (U)	Jupiter C (U)	Oct 23		DID NOT ACHIEVE ORBIT			4.2	Thin plastic sphere (12-feet in diameter after inflation) to study atmosphere density at various levels. Upper stages and payload separated prior to first-stage burnout.
Pioneer II (U)	Thor-Able I 129 (U)	Nov 8		DID NOT ACHIEVE ORBIT			39.1	Measurement of magnetic fields around Earth or Moon. Third stage failed to ignite. Its brief data provided evidence that equatorial region about Earth has higher flux and higher energy radiation than previously considered.
Pioneer III (U)	Juno II (U)	Dec 6		DOWN DEC 7, 1958			5.9	Measurement of radiation in space. Error in burnout velocity and angle; did not reach Moon. During its flight, discovered second radiation belt around Earth.
<b>1959</b>								<b>1959</b>
Vanguard II (U) Alpha 1	Vanguard (SLV-4) (U)	Feb 17	122.8	3054	557	32.9	9.4	Sphere (20 inches in diameter) to measure cloud cover. First Earth photo from satellite. Interpretation of data difficult because satellite developed precessing motion.
Pioneer IV (S) Nu 1	Juno II (S)	Mar 3		HELIOCENTRIC ORBIT			6.1	Measurement of radiation in space. Achieved Earth-Moon trajectory; returned excellent radiation data. Passed within 37,300 miles of the Moon on March 4, 1959.
Vanguard (U)	Vanguard (SLV-5) (U)	Apr 13		DID NOT ACHIEVE ORBIT			10.6	Payload consisted of two independent spheres: Sphere A contained a precise magnetometer to map Earth's magnetic field, Sphere B was a 30-inch inflatable sphere for optical tracking. Second stage failed because of damage at stage separation.
Vanguard (U)	Vanguard (SLV-6) (U)	Jun 22		DID NOT ACHIEVE ORBIT			9.8	Magnesium alloy sphere (20 inches in diameter), to measure solar-Earth heating process which generates weather. Faulty second-stage pressure valve caused failure.
Explorer (S-1) (U)	Juno II (U)	Jul 16		DID NOT ACHIEVE ORBIT			41.5	To measure Earth's radiation balance. Destroyed by Range Safety Officer 5-1/2 seconds after liftoff; failure of power supply to guidance system.

# NASA Major Launch Record

1959

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS  (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Explorer 6 (S-2) (S) Delta 1	Thor-Able III 134 (S)	Aug 7		DOWN PRIOR TO JULY 1961			64.4	Carried instruments to study particles and meteorology. Helped in the discovery of three radiation levels, a ring of electric current circling the Earth, and obtained crude cloud cover images.
Beacon II (U)	Juno II (U)	Aug 14		DID NOT ACHIEVE ORBIT			4.5	Thin plastic inflatable sphere (12-feet in diameter) to study atmosphere density at various levels. Premature fuel depletion in first stage caused upper stage malfunction.
Big Joe (Mercury) (S)	Atlas 10 (S)	Sep 9		SUBORBITAL FLIGHT				Suborbital test of the Mercury Capsule. Capsule recovered successfully after reentry test. (WFF)
Vanguard III (S) Eta 1	Vanguard (SLV-7) (S)	Sep 18	127.4	3417	512	33.4	45.4	Solar-powered magnesium sphere with magnetometer boom; provided a comprehensive survey of the Earth's magnetic field, surveyed location of lower edge of radiation belts, and provided an accurate count of micrometeorite impacts. Last transmission December 8, 1959.
Little Joe 1 (S)	Little Joe (LV #6) (S)	Oct 4		SUBORBITAL FLIGHT				Suborbital test of the Mercury Capsule to qualify the booster for use with the Mercury Test Program.
Explorer 7 (S-1a) (S) Iota 1	Juno II (S)	Oct 13		DOWN JULY 16, 1989			41.5	Provided data on energetic particles, radiation, and magnetic storms. Also recorded the first micrometeorite penetration of a sensor.
Little Joe 2 (S)	Little Joe (LV #1A) (S)	Nov 4		SUBORBITAL FLIGHT				Suborbital test of Mercury Capsule to test the escape system. Vehicle functioned perfectly, but escape rocket ignited several seconds too late. (WFF)
Pioneer P-3 (U)	Atlas-Able 20 (U)	Nov 26		DID NOT ACHIEVE ORBIT			168.7	Lunar Orbiter Probe; payload shroud broke away after 45 seconds.
Little Joe 3 (S)	Little Joe (LV #2) (S)	Dec 4		SUBORBITAL FLIGHT				Suborbital test of the Mercury Capsule, included escape system and biomedical tests with monkey (Sam) aboard, to demonstrate high altitude abort at max q. (WFF)
<b>1960</b>								
Little Joe 4 (S)	Little Joe (LV #1B) (S)	Jan 21		SUBORBITAL FLIGHT				Suborbital test of Mercury Capsule included escape system and biomedical test with monkey (Miss Sam) aboard. (WFF)
Pioneer V (P-2) (S) Alpha 1	Thor-Able IV 219 (S)	Mar 11		HELIOCENTRIC ORBIT			43.0	Sphere, 26 inches in diameter, to investigate interplanetary space between orbits of Earth and Venus; test long-range communications; and determine strength of magnetic fields.
Explorer (S-46) (U)	Juno II (U)	Mar 23		DID NOT ACHIEVE ORBIT			16.0	Analyze electron and proton radiation energies in a highly elliptical orbit. Telemetry lost shortly after first stage burnout; one of the upper stages failed to fire.

# NASA Major Launch Record

1960

MISSION/ Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS  (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Tiros I (S) Beta 2	Thor-Able II 148 (S)	Apr 1	98.3	695	658	48.4	122.5	First successful weather-study satellite. Demonstrated that satellites could be used to survey global weather conditions and study other surface features from space. Transmitted 22,952 good-quality cloud-cover photographs.
Scout X (U)	Scout X (U)	Apr 18		SUBORBITAL FLIGHT				Suborbital Launch Vehicle Development Test with live first and third stages. Vehicles broke up after first-stage burnout.
Echo A-10 (U)	Thor-Delta (1) (U)	May 13		DID NOT ACHIEVE ORBIT			75.3	100-foot passive reflector sphere to be used in a series of communications experiments. During coast period, attitude control jets on second stage failed.
Scout I (S)	Scout 1 (S)	Jul 1		SUBORBITAL FLIGHT				Launch Vehicle Development Test; first complete Scout vehicle. (WFF)
Mercury (MA-1) (U)	Atlas 50 (U)	Jul 29		DID NOT ACHIEVE ORBIT				Suborbital test of Mercury Capsule Reentry. The Atlas exploded 85 seconds after launch.
Echo I (A-11) (S) Iota 1	Thor-Delta (2) (S)	Aug 12		DOWN MAY 24, 1968			75.3	First passive communications satellite (100-foot sphere). Reflected a pre-taped message from President Eisenhower across the Nation, demonstrating feasibility of global radio communications via satellite.
Pioneer (P-30) (U)	Atlas-Able 80 (U)	Sep 25		DID NOT ACHIEVE ORBIT			175.5	Highly instrumented probe, in lunar orbit, to investigate the environment between the Earth and the Moon. Second stage failed due to malfunction in oxidizer system.
Scout II (S)	Scout 2 (S)	Oct 4		SUBORBITAL FLIGHT				Launch Vehicle Development Test; second complete Scout vehicle, reached an altitude of 3,500 mi. (WFF)
Explorer 8 (S-30) (S) XI 1	Juno II (S)	Nov 3	102.5	1361	395	49.9	40.8	Contained instrumentation for detailed measurements of the ionosphere. Confirmed the existence of a helium layer in the upper atmosphere.
Little Joe 5 (U)	Little Joe (LV #5) (S)	Nov 8		SUBORBITAL FLIGHT				Suborbital test of Mercury Capsule to qualify capsule system. Capsule did not separate from booster. (WFF)
Tiros II (S) Pi 1	Thor-Delta (3) (S)	Nov 23	96.3	614	549	48.5	127.0	Test of experimental television techniques and infrared equipment for global meteorological information system.
Explorer (S-56) (U)	Scout 3 (U)	Dec 4		DID NOT ACHIEVE ORBIT			6.4	12-foot sphere to determine the density of the Earth's atmosphere. Second stage failed to ignite.
Pioneer (P-31) (U)	Atlas-Able 91 (U)	Dec 15		DID NOT ACHIEVE ORBIT			175.9	Highly instrumented probe, in lunar orbit, to investigate the environment between the Earth and the Moon. Vehicle exploded about 70 seconds after launch due to malfunction in first stage.
Mercury (MR-1A) (S)	Redstone (S)	Dec 19		SUBORBITAL FLIGHT				Unmanned Mercury spacecraft, in suborbital trajectory, impacted 235 miles down range after reaching an altitude of 135 miles and a speed of near 4,200 mph. Capsule recovered about 50 minutes after launch.

<b>1961</b>								
Mercury (MR-2) (S)	Redstone (S)	Jan 31		SUBORBITAL FLIGHT			1315.0	Suborbital test of Mercury Capsule; 16-minute flight included biomedical test with chimpanzee (Ham) aboard.
Explorer 9 (S) Delta 1	Scout 4 (S)	Feb 16		DOWN APR 9, 1964			6.8	12-foot sphere to determine the density of the Earth's Atmosphere. First spacecraft orbited by an all-solid rocket. (WFF)
Mercury (MA-2) (S)	Atlas 67 (S)	Feb 21		SUBORBITAL FLIGHT			1315.0	Suborbital test of Mercury Capsule; upper part of Atlas strengthened by an 8-inch wide stainless steel band. Capsule recovered less than 1 hour after launch.
Explorer (S-45) (U)	Juno II (U)	Feb 24		DID NOT ACHIEVE ORBIT			33.6	Investigate the shape of the ionosphere. A malfunction following booster separation resulted in loss of payload telemetry; third and fourth stages failed to ignite.
Little Joe 5A (U)	Little Joe (L/V #5A) (U)	Mar 18		SUBORBITAL FLIGHT			1315.0	Suborbital test of Mercury Capsule. Escape rocket motor fired prematurely and prior to capsule release. (WFF)
Mercury (MR-BD) (S)	Redstone (S)	Mar 24		SUBORBITAL FLIGHT			1315.0	Suborbital test of launch vehicle for Mercury flight to acquire further experience with booster before manned flight was attempted.
Explorer 10 (S) Kappa 1	Thor-Delta (4) (S)	Mar 25		DOWN JUN 1968			35.8	Injected into highly elliptical orbit. Provided information on solar winds, hydromagnetic shock waves, and reaction of the Earth's magnetic field to solar flares.
Mercury (MA-3) (U)	Atlas 100 (U)	Apr 25		DID NOT ACHIEVE ORBIT			907.2	Orbital flight test of Mercury capsule. Destroyed after 40 seconds by Range Safety Officer when the inertial guidance system failed to pitch the vehicle over toward the horizon.
Explorer 11 (S) Nu 1	Juno II (S) (4 stages)	Apr 27	14.5	1485	479	28.8	37.2	Placed in elliptical orbit to detect high energy gamma rays from cosmic sources and map their distribution in the sky.
Little Joe 5B (S)	Little Joe (L/V #5B) (S)	Apr 28		SUBORBITAL FLIGHT			1315.0	Suborbital flight test to demonstrate the ability of the escape and sequence systems to function properly at max q. (WFF)
Mercury (S) (Freedom 7)	Mercury- Redstone-3 (S)	May 5		SUBORBITAL FLIGHT LANDED MAY 5, 1961			1315.0	First manned suborbital flight with Alan B. Shepard, Jr. Pilot and spacecraft recovered after 15 minute 22 second flight.
Explorer (S-45a) (U)	Juno II (U)	May 24		DID NOT ACHIEVE ORBIT			33.6	Investigate the shape of the ionosphere. Second stage ignition system malfunctioned.
Meteoroid Sat A Explorer (S-55) (U)	Scout 5 (U)	Jun 30		DID NOT ACHIEVE ORBIT			84.8	Evaluate launch vehicle; investigate micrometeoroid impact and penetration. Third stage failed to ignite. (WFF)
Tiros III (S) Rho 1	Thor-Delta (5) (S)	Jul 12	100.0	791	723	47.9	129.3	Development of meteorological satellite system. Provided excellent photos and infrared data. Photographed many tropical storms during 1961 hurricane season; credited with discovering Hurricane Esther.

# NASA Major Launch Record

1961

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Mercury (S) (Liberty Bell 7)	Mercury- Redstone-4 (S)	Jul 21		SUBORBITAL FLIGHT LANDED JUL 21, 1961			1470.0	Second manned suborbital flight with Virgil I. Grissom. After landing, spacecraft was lost but pilot was rescued from surface of water. Mission Duration 15 minutes 37 seconds.
Explorer 12 (S-3) (S) Upalton 1	Thor-Delta (6) (S)	Aug 16		DOWN SEP 1963			37.6	First of a series to investigate solar winds, interplanetary magnetic fields, and energetic particles. Identified the Van Allen Belts as a magnetosphere.
Ranger I (U) Phi 1	Atlas-Agena B 111 (U)	Aug 23		DOWN AUG 30, 1961			306.2	Flight test of lunar spacecraft carrying experiments to investigate cosmic rays, magnetic fields, and energetic particles. Agena failed to restart, resulting in low Earth orbit.
Explorer 13 (U) Chi 1	Scout 6 (U)	Aug 25		DOWN AUG 28, 1961			84.8	Evaluate launch vehicle; investigate micrometeoroid impact and penetration. Third stage failed to ignite. (WFF)
Mercury (MA-4) (S) A-Alpha 1	Atlas 88 (S)	Sep 13		DOWN SEP 13, 1961			1224.7	Orbital test of Mercury capsule to test systems and ability to return capsule to predetermined recovery area after one orbit. All capsule, tracking, and recovery objectives met.
Probe A (P-21) (S)	Scout 7 (S)	Oct 19		SUBORBITAL FLIGHT				Vehicle test/scientific Geoprobe. Reached altitude of 4,261 miles; provided electron density measurements. (WFF)
Saturn Test (SA-1) (S)	Saturn I (S)	Oct 27		SUBORBITAL FLIGHT				Suborbital launch vehicle development test of S-1 booster propulsion system; verification of aerodynamic/structural design of entire vehicle.
Mercury (MS-1) (U) A-Iota 1	AF 609A Blue Scout (U)	Nov 1		DID NOT ACHIEVE ORBIT			97.1	Orbital test of the Mercury Tracking Network. First Stage exploded 26 seconds after liftoff; other three stages destroyed by Range Safety Officer 44 seconds after launch.
Ranger II (U) A-Theta 1	Atlas-Agena B 117 (U)	Nov 18		DOWN NOV 20, 1961			306.2	Flight test of spacecraft systems designed for future lunar and interplanetary missions. Inoperative roll gyro prevented Agena restart resulting in a low Earth orbit.
Mercury (MA-5) (S) A-Iota 1	Atlas 93 (S)	Nov 29		DOWN NOV 29, 1961			1315.4	Final flight test of all Mercury systems prior to manned orbital flight; chimpanzee Enos on board. Spacecraft and chimpanzee recovered after two orbits.
<b>1962</b>							<b>1962</b>	
Echo (AVT-1) (S)	Thor 338 (S)	Jan 15		SUBORBITAL FLIGHT			256.0	Suborbital Communications Test. Canister ejection and opening successful, but 135-foot sphere ruptured.
Ranger III (U) Alpha 1	Atlas-Agena B 121 (U)	Jan 26		HELIOCENTRIC ORBIT			329.8	Rough land instrumented capsule on the Moon. Booster malfunction resulted in the spacecraft missing the Moon by 22,862 miles and going into solar orbit. TV pictures were unusable.

1962

MISSION/ Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS  (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Tiros IV (S) Beta 1	Thor-Delta (7) (S)	Feb 8	99.9	812	694	48.3	129.3	Continued research and development of meteorological satellite system. U.S. Weather Bureau initiated international radio facsimile transmission of cloud maps based on data received.
Mercury (MA-6) (Friendship 7) (S) Gamma 1	Atlas 109 (S)	Feb 20		LANDED FEB 20, 1962			1354.9	First U.S. manned orbital flight. John H. Glenn, Jr. made three orbits of the Earth. Capsule and pilot recovered after 21 minutes in the water. Mission Duration 4 hours 55 minutes 23 seconds.
Reentry I (U)	Scout 8 (S)	Mar 1		SUBORBITAL FLIGHT				Launch vehicle development test/Reentry test. Desired speed was not achieved. (WFF)
OSO-I (S) Zeta 1	Thor-Delta (8) (S)	Mar 7		DOWN OCT 8, 1981			207.7	Carried 13 instruments to study Sun-Earth relationships. Transmitted almost 1,000 hours of information on solar phenomena, including measurements of 75 solar flares.
Probe B (P-21a) (S)	Scout 9 (S)	Mar 29		SUBORBITAL FLIGHT				Suborbital vehicle test/scientific geoprobe. Reached an altitude of 3,910 miles; provided electron density measurements. (WFF)
Ranger 4 (U) Mu 1	Atlas-Agena B (S)	Apr 23		IMPACTED MOON ON APR 26, 1962			331.1	Second attempt to rough land instrumented capsule on Moon. Failure of central computer and sequencer system rendered experiments useless. Impacted on far side of Moon after flight of 64 hours.
Saturn Test (SA-2) (S)	Saturn I (S)	Apr 25		SUBORBITAL FLIGHT			86167.0	Suborbital launch vehicle test; carried 95 tons of ballast water in upper stages which was released at an altitude of 65 miles to observe the effect on the upper region of the atmosphere (Project High Water).
Ariel I (S) Omicron 1	Thor-Delta (9) (S)	Apr 26		DOWN MAY 24, 1976			59.9	Carried six British experiments to study the ionosphere, solar radiation, and cosmic rays. First International Satellite. Cooperative with UK.
Centaur Test 1 (AC-1)(U)	Atlas-Centaur (F-1) (U)	May 8		SUBORBITAL FLIGHT				Launch vehicle development test. Centaur exploded before separation.
Mercury (MA-7) (Aurora 7) (S) Tau 1	Atlas 107 (S)	May 24		LANDED MAY 24, 1962			1349.5	Second orbital Manned Flight with M. Scott Carpenter. Reentered under manual control after three orbits. Mission Duration 4 hours 56 minutes 5 seconds.
Tiros V (S) A-Alpha	Thor-Delta (S)	Jun 19	99.4	889	573	58.1	129.3	Continued research and development of meteorological satellite system. Extended observations to higher latitudes. Observed ice breakup in northern latitudes and storms originating in these areas.
Teletar 1 (S) A-Epsilon	Thor-Delta (10) (S)	Jul 10	157.8	5642	947	44.8	77.1	First privately built satellite to conduct communication experiments. First telephone and TV experiments transmitted. Reimbursable (AT&T).
Echo (AVT-2) (S)	Thor-Delta (11) (S)	Jul 18		SUBORBITAL FLIGHT			256.0	Suborbital communications test. Inflation successful, radar indicated that the sphere surface was not as smooth as planned.

MISSION/ Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS  (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Mariner I (P-37) (U)	Atlas-Agena B 145 (U)	Jul 22		DID NOT ACHIEVE ORBIT			202.8	Venus Flyby. Vehicle destroyed by Range Safety Officer about 290 seconds after launch when it veered off course.
Mariner II (P-38) (S) A-Rho 1	Atlas-Agena B 179 (S)	Aug 27		HELIOCENTRIC ORBIT			202.8	Second Venus flyby. First successful interplanetary probe. Passed Venus on December 14, 1962, at 21,648 miles; 109 days after launch. Provided data on solar wind, cosmic dust density, and particle and magnetic field variations.
Reentry II (U)	Scout 13 (U)	Aug 31		SUBORBITAL FLIGHT				Reentry test at 28,000 fps: late third stage ignition; desired speed was not achieved. (WFF)
Tiros VI (S) A-Pai 1	Thor-Delta (12) (S)	Sep 18	97.6	652	635	58.3	127.5	Provide coverage of the 1962 hurricane season. Returned high quality cloud cover photographs.
Alouette I (S) B-Alpha 1	Thor-Agena B (S)	Sep 29	105.2	1022	987	80.5	145.2	Designed and built by Canada to measure variations in the ionosphere electron density distribution. Returned excellent data to 13 Canadian, British, and U.S. stations. Cooperative with Canada.
Explorer 14 (S-3a) (S) B-Gamma 1	Thor-Delta (13) (S)	Oct 2		DOWN JULY 1, 1966			40.4	Monitor trapped corpuscular radiation, solar particles, cosmic radiation, and solar winds. Placed into a highly elliptical orbit; excellent data received.
Mercury (MA-8) (Sigma 7) (S) B-Delta 1	Atlas 113 (S)	Oct 3		LANDED OCT 3, 1962			1360.8	Manned Orbital Flight with Walter M. Schirra, Jr. Made six orbits of the Earth. Mission Duration 9 hours 13 minutes 11 seconds.
Ranger V (U) B-Eta 1	Atlas-Agena B 215 (S)	Oct 18		HELIOCENTRIC ORBIT			342.5	Rough land instrumented capsule on the Moon. Malfunction caused power supply loss after 8 hours 44 minutes. Passed within 450 miles of the Moon.
Explorer 15 (S-3b) (S) B-Lambda	Thor-Delta (14) (S)	Oct 27		DOWN OCT 5, 1967			44.5	Study location, composition, and decay rate of artificial radiation belt created by high altitude nuclear explosion over the Pacific Ocean. Despin device failed; considerable useful data transmitted.
Saturn (SA-3) (S)	Saturn I (S)	Nov 16		SUBORBITAL FLIGHT			86167.0	Suborbital launch vehicle development flight. Second "Project High Water" using 95 tons of water released at an altitude of 90 n.mi.
Relay I (S) B-Upsilon 1	Thor-Delta (15) (S)	Dec 13	185.1	7436	1323	47.5	78.0	Test intercontinental microwave communication by low-altitude active repeater satellite. Initial power failure overcome. Over 500 communication tests and demonstrations conducted.
Explorer 16 (S-55b) (S) B-Chi 1	Scout 14 (S)	Dec 16	104.1	1159	745	52.0	100.7	Measure micrometeoroid puncture hazard to structural skin samples. First statistical sample; flux level found to lie between estimated extremes. (WFF)

# NASA Major Launch Record

1963

MISSION/ Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
<b>1963</b>								
Syncom I (U) 1963 04A	Thor-Delta (18) (S)	Feb 14		CURRENT ELEMENTS NOT MAINTAINED			39.0	First test of a communication satellite in geosynchronous orbit. Initial communication tests successful; all contact was lost 20 seconds after command to fire apogee motor.
Saturn Test (SA-4) (S)	Saturn I (S)	Mar 28		SUBORBITAL FLIGHT				Suborbital launch vehicle development test. Programmed in-flight cutoff of one of eight engines; successfully demonstrated propellant utilization system function.
Explorer 17 (SA-4) (S) 1963 09A	Thor-Delta (17) (S)	Apr 3		DOWN NOV 24, 1966			183.7	Measure density, composition, pressure and temperature of the Earth's atmosphere. Discovered a belt of neutral helium around the Earth.
Telesat II (S) 1963 13A	Thor-Delta (18) (S)	May 7	225.3	10807	967	42.8	79.4	Conduct wideband communication experiments. Color and black and white television successfully transmitted to Great Britain and France. Reimbursable (AT&T).
Mercury (MA-9) (Faith 7) (S) 1963 15A	Atlas 130 (S)	May 15		LANDED MAY 16, 1963			1360.8	Fourth Orbital Manned flight with L. Gordon Cooper, Jr. Various tests and experiments were performed. Capsule reentered after 22 orbits. Mission Duration 34 hours 19 minutes 49 seconds.
RFD-1 (S)	Scout 19 (S)	May 22		SUBORBITAL FLIGHT			217.6	Suborbital reentry flight test; carried AEC Reactor mockup. Reimbursable (AEC). (WFF)
Tiros VII (S) 1963 24A	Thor-Delta (19) (S)	Jun 19	92.7	415	398	58.2	134.7	Continued meteorological satellite development. Furnished over 30,000 useful cloud cover photographs, including pictures of Hurricane Ginny in its early stages in mid-October.
CRL (USAF) (S) 1963 26A	Scout 21 (S)	Jun 28		DOWN DEC 14, 1963			99.8	Cambridge Research Lab geophysics experiment test. Reimbursable (DOD). (WFF)
Reentry III (U)	Scout 22 (U)	Jul 20		SUBORBITAL FLIGHT				Suborbital reentry flight demonstration test of an ablation material at reentry speeds. Vehicle failed. (WFF)
Syncom II (S) 1963 31A	Thor-Delta (20) (S)	Jul 26		CURRENT ELEMENTS NOT MAINTAINED			39.0	Geosynchronous communication satellite test. Voice, teletype, facsimile, and data transmission tests were conducted.
Little Joe II Test (S)	Little Joe II #1 (S)	Aug 28		SUBORBITAL FLIGHT				Suborbital Apollo launch vehicle test. Booster qualification test with dummy payload. (White Sands)
Explorer 18 (S) (IMP-A) 1963 46A	Thor-Delta (21) (S)	Nov 27		DOWN DEC 30, 1965			62.6	First in a series of Interplanetary Monitoring Platforms to observe interplanetary space over an extended period of the solar cycle. Discovered a region of high-energy radiation beyond the Van Allen belts; reported stationary shock wave created by the interaction of the solar wind and geomagnetic field.

# NASA Major Launch Record

1963

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Centaur Test II (S) 1963 47A	Atlas-Centaur (AC-2) (S)	Nov 27	104.6	1485	468	30.4	4620.8	Launch vehicle development test. Instrumented with 2,000 pounds of sensors, equipment, and telemetry; performance and structural integrity test.
Explorer 19 (AD-A) (S) 1963 53A	Scout 24 (S)	Dec 19					7.7	DOWN MAY 10, 1981 Sphere, 12 feet in diameter, was optically tracked after tracking beacon failed, to obtain long-term atmospheric density data and study density changes. (WSMC)
Tiros VIII (S) 1963 54A	Delta 22 (S)	Dec 21	98.5	711	663	58.5	120.2	Continued meteorological satellite development; initial flight test of Automatic Picture Transmission camera system which made it possible to obtain local cloud cover pictures using inexpensive ground stations.
<b>1964</b>								
Relay II (S) 1964 03A	Delta 23 (S)	Jan 21	194.7	7535	1966	46.4	85.3	Modified communication satellite with a capability of TV or 300 one-way voice transmissions or 12 two-way narrowband communication. Completed more than 230 demonstrations and tests; also obtained over 600 hours of radiation data.
Echo II (S) 1964 04A	Thor-Agena B (S)	Jan 25					348.4	DOWN JUN 7, 1969 Rigidized sphere, 135 feet in diameter, to conduct passive communication experiments (radio, teletype, facsimile tests). Good experiment results obtained; data exchanged with USSR. (WSMC)
Saturn I (SA-5) (S) 1964 05A	Saturn I (S)	Jan 29					17,554.2	DOWN APR 30, 1966 Launch vehicle development test. Fifth flight of Saturn, first Block II Saturn, first live flight of the LOX/LH2 fueled second stage (S-IV). 11,146 measurements taken.
Ranger VI (U) 1964 07A	Atlas-Agena B 199 (S)	Jan 30					364.7	IMPACTED MOON ON FEB 2, 1964 Photograph lunar surface before hard impact. No video signals received. Impacted on west side of Sea of Tranquility, within 20 miles of target, after 65.6 hour flight.
Beacon Explorer A (S-66) (U)	Delta 24 (U)	Mar 19					54.7	DID NOT ACHIEVE ORBIT Provide data on ionosphere; conduct laser and Doppler shift geodetic tracking experiments. Vehicle third stage malfunctioned.
Ariel II (UK) (S) 1964 15A	Scout 25 (S)	Mar 27					74.8	DOWN NOV 18, 1967 Carried three British experiments to measure galactic radio noise. Cooperative with UK. (WFF)
Gemini I (S) 1964 18A	Titan II 1 (S)	Apr 8					3175.2	DOWN APR 12, 1964 Qualification of Gemini spacecraft configuration/Gemini launch vehicle combination in launch environment through orbital insertion phase.
Fire I (S)	Atlas-Antares 263 (S)	Apr 14					1995.6	SUBORBITAL FLIGHT Reentry Test to study the heating environment encountered by a body entering the Earth's atmosphere at high speed.
Apollo Abort A-001 (S)	Little Joe II (S)	May 13						SUBORBITAL FLIGHT Vehicle development test to demonstrate Apollo spacecraft atmospheric abort system capabilities. (White Sands)

# NASA Major Launch Record

1964

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS  (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Saturn I (SA-6) (S) 1964 25A	Saturn I (SA-6) (S)	May 28		DOWN JUN 1, 1964			17644.9	Vehicle development test. First flight of unmanned model of the Apollo spacecraft. 106 measurements obtained.
Centaur Test III (S)	Atlas-Centaur (AC-3) (S)	Jun 30		SUBORBITAL FLIGHT				Launch vehicle development test; performance and guidance evaluation.
SERT I (S)	Scout 28 (S)	Jul 20		SUBORBITAL FLIGHT				Test ion engine performance in space. Confirmed that high prevalence ion beams could be neutralized in space. (WFF)
Ranger VII (S) 1964 41A	Atlas-Agena B 250 (S)	Jul 28		IMPACTED MOON ON JUL 31, 1964			364.7	Photograph lunar surface before hard impact. Transmitted 4,316 high quality photographs showing amazing detail before impacting in Sea of Clouds; flight time 68 hours 35 minutes 55 seconds.
Reentry IV (S)	Scout 29 (S)	Aug 18		SUBORBITAL FLIGHT				Reentry Test. Demonstrated the ability of the Apollo spacecraft to withstand reentry conditions at 27,950 fps.
Syncom III (S) 1964 47A	Delta 25 (S)	Aug 19		CURRENT ELEMENTS NOT MAINTAINED			65.8	Experimental geosynchronous communications satellite. Provided live TV coverage of the Olympic games in Tokyo and conducted various communications tests.
Explorer 20 (S) 1964 51A	Scout 30 (S)	Aug 25	103.6	1001	855	79.9	44.5	Ionosphere Explorer to obtain radio soundings of upper ionosphere as part of the Topside Sounder program.
Nimbus I (S) 1964 52A	Thor-Agena B (S)	Aug 28		DOWN MAY 16, 1974			376.5	Improved meteorological satellite; Earth oriented to provide complete global cloud cover images. Returned more than 27,000 excellent photographs; APT system supplied daytime photos to low-cost ground stations.
OGO I (U) 1964 54A	Atlas-Agena B 195 (S)	Sep 4		CURRENT ELEMENTS NOT MAINTAINED			487.2	Standardized spacecraft capable of conducting related experiments. Carried 20 instruments to investigate geophysical and solar phenomena. Boom deployment anomaly obscured horizon scanner's view of Earth. Varying quality data received from all experiments.
Saturn I (SA-7) (S) 1964 57A	Saturn I (S)	Sep 18		DOWN SEP 22, 1964				Demonstrate Launch Vehicle/spacecraft compatibility and test launch escape system. Telemetry obtained from 131 separate and continuous measurements.
Explorer 21 (U) 1964 60A	Delta 26 (U)	Oct 4		DOWN JAN 30, 1966				Interplanetary Monitoring Platform to obtain magnetic fields, radiation, and solar wind data. Failed to reach planned apogee, provided good data.
RFD-2 (S)	Scout 31 (S)	Oct 9		SUBORBITAL FLIGHT			217.6	Reentry flight carried AEC Reactor Mockup. Reimbursable (AEC).
Explorer 22 (S) 1964 64A	Scout 32 (S)	Oct 10	104.3	1054	872	79.7	52.6	Beacon Explorer; to provide data on variations in the ionosphere's structure and relate ionospheric behavior to solar radiation. Low-cost ground stations throughout the world received uncoded radio signals. Laser tracking accomplished on October 11, 1964. (WSMC)

1964

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Mariner III (U) 1964 73A	Atlas-Agena D 289 (U)	Nov 5		HELIOCENTRIC ORBIT			260.8	Mars flyby. Fiberglass shroud failed to jettison properly, solar panels failed to extend, Sun and Canopus not acquired. Transmissions ceased 9 hours after launch.
Explorer 23 (S-55C) (S) 1964 74A	Scout 33 (S)	Nov 6		DOWN JUN 29, 1983			133.8	Provided data on meteoroid penetration and resistance of various materials to penetration.
Explorer 24 (S) 1964 76A	Scout 34 (S)	Nov 21		DOWN OCT 18, 1968			8.6	First dual payload (Air Density/Injun); two satellites provided detailed information on complex radiation-air density relationships in the upper atmosphere. (WSMC)
Explorer 25 (S) 1964 78B			114.6	2354	522	81.3	34.0	
Mariner IV (S) 1964 77A	Atlas-Agena D 288 (S)	Nov 28		HELIOCENTRIC ORBIT			260.8	Second of two 1964 Mars flyby launches. Encounter occurred on July 14, 1965, with closest approach at 6,118 miles of the planet. Transmitted 22 pictures.
Apollo Abort A-002 (S)	Little Joe II (S)	Dec 8		SUBORBITAL FLIGHT			42593.0	First test of Apollo emergency detection system at abort altitude. (White Sands)
Centaur 1964 82A	Atlas-Centaur (AC-4) (S)	Dec 11		DOWN DEC 12, 1964			2993.0	Vehicle development flight carried mass model of Surveyor spacecraft; propulsion and stage separation test.
San Marco 1 (S) 1964 84A	Scout 35 (S)	Dec 15		DOWN SEP 13, 1965			115.2	Flight test of satellite to furnish data on air density and ionosphere characteristics. Launch vehicle provided by NASA; launched by Italian launch crew. Cooperative with Italy. (WFF)
Explorer 26 (S) 1964 86A	Delta 27 (S)	Dec 21		CURRENT ELEMENTS NOT MAINTAINED			45.8	Energetic Particles Explorer; carried five experiments to provide data on high-energy particles.
<b>1965</b>								
Gemini II (S)	Titan II 2 (S)	Jan 19		SUBORBITAL FLIGHT			3133.9	Demonstrate structural integrity of reentry module heat protection during maximum heating rate reentry and demonstrate variable lift on reentry module.
Tiros IX (S) 1965 04A	Delta 28 (S)	Jan 22	118.9	2564	702	96.4	138.3	First "Cartwheel" configuration for Weather Bureau's Operational system. Provided increased coverage of global cloud cover with pictures of excellent quality.
OSO B-2 (S) 1965 07A	Delta 29 (S)	Feb 3		DOWN AUG 9, 1969			244.9	Second in a series to measure the frequency and energy of solar electromagnetic radiation in the ultraviolet, X-ray and gamma-ray regions of the spectrum.
Pegasus I (S) 1965 09A	Saturn I (SA-9) (S)	Feb 16		DOWN SEP 17, 1978			1451.5	Obtained scientific and engineering data on the magnitude and direction of meteoroids in near-Earth orbit.

B-97

# NASA Major Launch Record

1965

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS  (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Ranger VIII (S) 1965 10A	Atlas-Agena B 196 (S)	Feb 17		IMPACTED MOON ON FEB 20, 1965			364.7	Photograph lunar surface before hard impact. Transmitted 7,137 high quality photographs before impacting in the Sea of Tranquility; flight time 64.54 hours.
Centaur Test (U)	Atlas-Centaur (AC-5) (U)	Mar 2		SUBORBITAL FLIGHT			2548.0	Vehicle development test; Atlas stage failed 4 seconds after liftoff.
Ranger IX (S) 1965 23A	Atlas-Agena B 204 (S)	Mar 21		IMPACTED MOON ON MAR 24, 1965			364.7	Photograph lunar surface before hard impact. Transmitted 5,814 excellent quality pictures; about 200 pictures relayed live via commercial TV. Flight time 64.52 hours.
Gemini III (S) 1965 24A	Titan II 3 (S)	Mar 23		LANDED MAR 23, 1965			3236.9	First manned orbital flight of the Gemini program, with astronauts Virgil I. Grissom and John W. Young. Manually controlled reentry after three orbits. Mission Duration 4 hours 52 minutes 31 seconds.
Intelsat 1 (F-1) (S) 1965 28A	Delta 30 (S)	Apr 6		CURRENT ELEMENTS NOT MAINTAINED			38.5	First operational satellite for Comsat Corp., to provide commercial trans-Atlantic communications. Reimbursable (Comsat).
Explorer 27 (S) 1965 32A	Scout 36 (S)	Apr 29	107.7	1312	929	41.2	60.8	Beacon Explorer: obtained data on Earth's gravitational field. Also carried laser tracking experiments.
Apollo Abort A-003 (U)	Little Joe II (U)	May 19		SUBORBITAL FLIGHT				Demonstration of abort capability of Apollo spacecraft. Launch escape vehicle at high altitude not accomplished due to malfunction of Little Joe II Booster.
Fire II (S)	Atlas-Antares 264 (S)	May 22		SUBORBITAL FLIGHT			2005.8	Second Reentry Test to study heating environment encountered by a body entering the Earth's atmosphere at high speed.
Pegasus II (S) 1965 39A	Saturn I (SA-8) (S)	May 25		DOWN NOV 3, 1979			1451.5	Micrometeoroid detection experiment confirmed lower meteoroid density than expected.
Explorer 28 (S) 1965 42A	Delta 31 (S)	May 29		DOWN JUL 4, 1968			59.0	Third Interplanetary Monitoring Platform, carrying eight scientific instruments, to measure magnetic fields, cosmic rays, and solar wind beyond the Earth's magnetosphere.
Gemini IV (S) 1965 43A	Titan II 4 (S)	Jun 3		LANDED JUN 7, 1965			3537.6	Second manned Gemini flight with James A. McDivitt and Edward H. White. During flight, White performed a 22 minute EVA using the Zero-G Integral Propulsion Unit. Mission Duration: 97 hrs 56 mins 12 secs.
Tiros X (S) 1965 51A	Delta 32 (S)	Jul 1	100.1	807	722	98.8	127.0	First U.S. Weather Bureau-funded Tiros; obtained maximum coverage of 1965 hurricane and typhoon season.
Pegasus III (S) 1965 60A	Saturn I (SA-10) (S)	Jul 30		DOWN AUG 4, 1969			1451.5	Final micrometeoroid detection experiment. Results of Pegasus program indicated that the flux of small particles was less than expected, the flux of large particles was more than expected, and the flux of medium-sized particles was about as predicted.

MISSION/ Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Scout Test (S) Secor (S) 1965 63A	Scout 37 (S)	Aug 10	122.2	2419	1134	69.2	20.0	Vehicle development test. Carried U.S. Army Secor geodetic satellite. Reimbursable (DOD).
Centaur Test (S) 1965 64A	Atlas-Centaur (AC-8) (S)	Aug 11		BARYCENTRIC ORBIT			952.6	Vehicle development test. Carried Surveyor dynamic model. Direct-ascent test for guidance evaluation.
Gemini V (S) 1965 68A REP 1965 68C	Titan II 5 (S)	Aug 21		LANDED AUG 29, 1965			3175.2	Third manned orbital flight with L. Gordon Cooper and Charles Conrad, Jr. Ejected Rendezvous Evaluation Pod (REP) for simulated rendezvous maneuvers experiment; participated in communications and other on-board experiments. Mission Duration: 190 hours 55 minutes 14 seconds.
				DOWN AUG 27, 1965				
OSO-C (U)	Delta 33 (U)	Aug 25		DID NOT ACHIEVE ORBIT			281.2	Third in a series to maintain continuity of observations during solar activity cycle. Vehicle third stage ignited prematurely.
OGO II (U) 1965 81A	Thor-Agena D (S)	Oct 14		DOWN SEP 17, 1961			507.1	Carried 20 experiments to investigate near-Earth space phenomena on an interdisciplinary basis. Failure of primary launch vehicle guidance resulted in higher than planned orbit. Nineteen experiments returned useful data. (WSMC)
Gemini VI (U)	Atlas-Agena D 5301 (U)	Oct 25		DID NOT ACHIEVE ORBIT				Agna target vehicle. Simultaneous countdown of the Gemini spacecraft and Atlas-Agena Target Vehicle. Telemetry was lost 375 seconds after launch of the target vehicle; Gemini launch was terminated at T-42 minutes.
Explorer 29 (S) 1965 89A	Delta 34 (S)	Nov 6	120.3	2274	1113	59.4	174.6	GEOS-A, part of U.S. Geodetic Satellite Program to provide new geodetic data about the Earth.
Explorer 30 (S) 1965 93A	Scout 38 (S)	Nov 18	100.4	881	664	59.7	56.7	Monitor solar X-rays and ultraviolet emissions during final portion of IQSY. Data acquired by NRL and foreign stations in 13 countries. Cooperative with NRL. (WFF)
Explorer 31 (S) 1965 98B	Thor-Agena B (S)	Nov 29	120.0	2859	501	79.8	98.9	Make related studies of ionospheric composition and temperature variations. Provided excellent data from regions of the ionosphere never before investigated. Cooperative with Canada. (WSMC)
Alouette II (S) 1965 98A			118.3	2708	501	79.8	146.5	
Gemini VII (S) 1965 100A	Titan II 6 (S)	Dec 4		LANDED DEC 18, 1965			3628.8	Fourth manned mission with Frank Borman and James A. Lovell, Jr. Astronauts flew part of the mission without wearing pressure suits. Mission Duration: 330 hours 35 minutes 01 seconds.
French 1A (S) 1965 101A	Scout 39 (S)	Dec 6	98.8	708	696	75.9	71.7	Study VLF wave propagation in the ionosphere and magnetosphere and measure electron densities. Cooperative with France. (WSMC)

# NASA Major Launch Record

1965

MISSION/ Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS  (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Gemini VI-A (S) 1965 104A	Titan II 7 (S)	Dec 15		LANDED DEC 16, 1965			3175.2	Fifth manned mission with Walter M. Schirra, Jr. and Thomas P. Stafford. First rendezvous in space accomplished with Gemini VII spacecraft. Mission Duration 25 hours 51 minutes 24 seconds.
Pioneer VI (S) 1965 105A	Delta 35 (S)	Dec 16		HELIOCENTRIC ORBIT			63.5	Operated in solar orbit to provide data on solar wind, interplanetary magnetic fields, solar physics, and high-energy charged particles and magnetic fields.
<b>1966</b>								
Apollo Abort A-004 (S)	Little Joe II (S)	Jan 20		SUBORBITAL FLIGHT			4989.0	Apollo development flight to demonstrate launch escape vehicle performance. Last unmanned ballistic flight. (White Sands)
ESSA I (S) 1966 08A	Delta 36 (S)	Feb 3	99.7	806	684	97.8	138.3	Sun-synchronous orbit permitted satellite to view weather in each area of the globe each day, photographing a given area at the same local time every day. First Advanced Vidicon Camera System provided valuable information about weather patterns and conditions. Reimbursable (NOAA). (WSMC)
Reentry V (S)	Scout 42 (S)	Feb 9		SUBORBITAL FLIGHT			95.0	Test to investigate the heating environment of a body reentering the Earth's atmosphere at 27,000 fps. (WFF)
Apollo Saturn (AS-201) (S)	Saturn IB (S)	Feb 26		SUBORBITAL FLIGHT			20820.1	Launch Vehicle development flight; carried unmanned Apollo spacecraft.
ESSA II (S) 1966 16A	Delta 37 (S)	Feb 28	113.4	1412	1352	101.0	131.5	Provided direct readout of cloud cover photos to local users. Along with ESSA I, completed the initial global weather satellite system. Reimbursable (NOAA). (WSMC)
Gemini VIII (U) 1966 20A GATV (S) 1966 19A	Titan II 8 (S)  Atlas-Agena D 5302 (S)	Mar 16  Mar 16		LANDED MAR 17, 1966  DOWN SEP 15, 1967			3788.0	Agna Target Vehicle launched from Complex 14 and manned Gemini launched from Complex 19. Astronauts Neil A. Armstrong and David R. Scott accomplished rendezvous and docking. Attitude and maneuver thruster malfunction caused the docked spacecraft to tumble. Astronauts separated the vehicles and terminated the mission early; EVA was not accomplished. First Pacific Ocean landing. Mission Duration 10 hours 41 minutes 26 seconds.
Centaur Test (U) 1966 30A	Atlas-Centaur (AC-8) (U)	Apr 8		DOWN MAY 5, 1966			784.7	Launch vehicle development flight; carried Surveyor model. Second Centaur Engine firing unsuccessful.
DAO I (U) 1966 31A	Atlas-Agena D 5002C (S)	Apr 8	100.6	793	783	35.0	1769.0	Carried four experiments to study UV, X-ray and gamma-ray regions. Primary battery malfunctioned.
Nimbus II (S) 1966 40A	Thor-Agena D D 5303 (S)	May 14	108.0	1174	1091	100.6	413.7	Provided global weather photography on 24-hour basis for meteorological research and operational use. (WSMC)

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Gemini IX (U)	Atlas-Agena D 5303 (U)	May 17		DID NOT ACHIEVE ORBIT			3252.0	Target vehicle for Gemini IX; vehicle failure caused by a short in the servo control circuit.
Explorer 32 (S) 1966 44A	Delta 38 (S)	May 25		DOWN FEB 22, 1965			224.5	Atmosphere Explorer; carried 8 experiments to measure temperatures, composition, density and pressures in the upper atmosphere.
Surveyor I (S) 1966 45A	Atlas-Centaur (AC-10) (S)	May 30		LANDED ON MOON JUN 2, 1966			995.2	Achieved soft lunar landing in Ocean of Storms. Performed engineering tests and transmitted photography. Landing pads penetrated the lunar surface to a maximum depth of 1 inch.
Gemini IXA (U) 1966 47A GATV (U) 1966 48A	Titan II 9 (S) Atlas-Agena D 5304 (S)	Jun 3 Jun 1		LANDED JUN 6, 1966 DOWN JUN 11, 1966			3705.3	Seventh manned mission with Thomas P. Stafford and Eugene A. Cernan. Target vehicle shroud failed to separate; docking was not achieved. EVA was successful, but evaluation of AMU was not achieved. Mission Duration 72 hours 20 minutes 50 seconds.
OGO III (S) 1966 49A	Atlas-Agena B 5601 (S)	Jun 7		CURRENT ELEMENTS NOT MAINTAINED			514.8	Carried 21 experiments to obtain correlated data on geophysical and solar phenomena in the Earth's atmosphere. First 3-axis stabilization in highly elliptical orbit.
OV-3 (S) 1966 52A	Scout 46 (S)	Jun 9	142.9	4703	645	40.8	173.0	Radiation research satellite for the USAF. Reimbursable (DOD). (WFF)
Pageos I (S) 1966 56A	Thor-Agena D (S)	Jun 23	177.0	5599	2533	84.5	56.7	Sphere, 100 feet in diameter, to determine the location of continents, land masses, and other geographic points using a world-wide triangulation network of stations. (WSMC)
Explorer 33 (S) 1966 58A	Delta 39 (S)	Jul 1		CURRENT ELEMENTS NOT MAINTAINED			93.4	Interplanetary Monitoring Platform to study, at lunar distance, the Earth's magnetosphere and magnetic tail. Planned anchored lunar orbit was not achieved; useful data obtained from Earth orbit.
Apollo Saturn AS-203 (S) 1966 59A	Saturn IB (S)	Jul 5		DOWN JUL 5, 1966			2635.4	Launch vehicle development flight to evaluate the S-IVB stage vent and restart capability.
Gemini X (S) 1966 66A GATV (S) 1966 65A	Titan II 10 (S) (S) Atlas-Agena D 5305 (S)	Jul 18 Jul 18		LANDED JUL 21, 1966 DOWN DEC 29, 1966			3762.6	Eighth manned mission with John W. Young and Michael Collins. Performed first docked vehicle maneuvers; standup EVA of 89 minutes; umbilical EVA of 27 minutes. Mission duration 70 hours 46 minutes 39 seconds.
Lunar Orbiter I (S) 1966 73A	Atlas-Agena D 5801 (S)	Aug 10		DOWN OCT 29, 1966			385.6	Photograph landing sites for Apollo and Surveyor missions from lunar orbit. Photographed over 2 million square miles of the Moon's surface, took the first two photos of the Earth from the distance of the Moon. Demonstrated maneuverability in lunar orbit.

# NASA Major Launch Record

1966

MISSION/ Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS  (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Pioneer VII (S) 1966 75A	Delta 40 (S)	Aug 17		HELIOCENTRIC ORBIT			63.5	Second in a series of interplanetary probes to provide data on solar wind, magnetic fields, and cosmic rays.
Apollo Saturn AS-202 (S)	Saturn IB (S)	Aug 25		SUBORBITAL FLIGHT			25809.7	Apollo launch vehicle/spacescraft development flight to test Command Module heat shield and obtain launch vehicle and spacecraft data.
Gemini XI (S) 1966 81A	Titan II 11 (S)	Sep 12		LANDED SEP 15, 1966			3798.4	Ninth manned mission with Charles Conrad, Jr. and Richard F. Gordon, Jr. Rendezvous and docking achieved. Umbilical and standup EVA performed and as well as tethered spacecraft experiment. Mission Duration 71 hours 17 minutes 8 seconds.
GATV (S) 1966 80A	Atlas-Agena D 5306 (S)	Sep 12		DOWN DEC 30, 1966				
Surveyor II (U) 1966 84A	Atlas-Centaur (AC-7) (S)	Sep 20		IMPACTED MOON ON SEP 23, 1966			1000.2	Second soft lunar landing planned. One vernier engine did not fire for midcourse correction, sending the spacecraft into a tumbling mode. Crashed southeast of crater Copernicus after 62.8 hour flight.
ESSA III (S) 1966 87A	Delta 41 (S)	Oct 2	114.5	1483	1384	100.9	147.4	Replaced ESSA I in Tiros Operational Satellite (TOS) system. Sophisticated cameras and sensors provided valuable information about the world's weather patterns/conditions. Reimbursable (NOAA) (WSMC).
Centaur Test (AC-9) (S) 1966 95A	Atlas-Centaur (AC-9) (S)	Oct 26		DOWN NOV 6, 1966			952.6	Launch vehicle development flight; Surveyor model injected into simulated lunar transfer orbit. Demonstrated two-burn parking orbit operational capability.
Intelsat II F-1 (U) 1966 96A	Delta 42 (S)	Oct 26	717.7	37229	3123	16.9	87.1	Comsat commercial communications satellite. Apogee monitor malfunction resulted in elliptical orbit. Reimbursable (Comsat).
Lunar Orbiter 2 (S) 1966 100A	Atlas-Agena D 5802 (S)	Nov 6		DOWN OCT 11, 1967			385.6	Photographed lunar landing sites from lunar orbit; provided new data on lunar gravitational field; photographed Ranger VIII landing point and surface debris tossed out at impact.
Gemini XII (S) 1966 104A	Titan II 12 (S)	Nov 11		LANDED NOV 15, 1966			3762.1	Tenth and last manned Gemini flight with James A. Lovell, Jr. and Edwin E. Akin, Jr. Rendezvous and docking achieved. Two EVA's performed. Mission duration 94 hours 34 minutes 31 seconds.
GATV (S) 1966 103A	Atlas-Agena D 5307 (S)	Nov 11		DOWN DEC 23, 1966				
ATS I (S) 1966 110A	Atlas-Agena D 5101 (S)	Dec 7	1436.0	35817	35750	14.3	703.1	Perform various communication, meteorology, and control technology experiments and carry out scientific measurements of orbital environment. Experiments results outstanding. Spin-scan cloud camera photographed changing weather patterns; air-to-ground and air-to-air communications demonstrated for the first time.
Biosatellite I (U) 1966 114A	Delta 43 (S)	Dec 14		DOWN FEB 15, 1967			426.4	Carried biological specimens to determine the effects of the space environment on life processes. Reentry vehicle separated but rocket failed, leaving the capsule in orbit. No useful scientific data obtained.

1967

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
<b>1967</b>								
1967								1967
Intelsat I F-2 (S) 1967 01A	Delta 44 (S)	Jan 11		CURRENT ELEMENTS NOT MAINTAINED			87.1	Comsat commercial communication satellite. Reached intended location on February 4, 1967. Reimbursable (Comsat).
ESSA IV (S) 1967 06A	Delta 45 (S)	Jan 26	113.4	1437	1323	102.0	131.5	Replaced ESSA II in TOS system. Provided daily coverage of local weather systems to APT receivers. Shutter malfunction rendered one camera inoperative. Reimbursable (NOAA). (WSMC)
Lunar Orbiter 3 (S) 1967 08A	Atlas-Agena D 5803 (S)	Feb 5		DOWN OCT 9, 1967			385.6	Photographed lunar landing sites from lunar orbit; also returned 600,000 sq. mi. of front and 250,000 sq. mi. of back side lunar photography; provided gravitational field and lunar environment data.
OSO III (S) 1967 20A	Delta 46 (S)	Mar 8		DOWN APR 4, 1967			284.4	Carried 9 experiments to study structure, dynamics and chemical composition of the outer solar atmosphere through X-ray, visible, and UV radiation measurements.
Intelsat II F-3 (S) 1967 26A	Delta 47 (S)	Mar 22		CURRENT ELEMENTS NOT MAINTAINED			87.1	Comsat commercial communication satellite. Completed Intelsat II system. Reimbursable (Comsat).
ATS II (U) 1967 31A	Atlas-Agena D 5102 (U)	Apr 6		DOWN SEP 2, 1969			324.3	Test of the gravity gradient control system; carried microwave communications, meteorological cameras, and eight scientific experiments. Second stage failed to restart, resulting in an elliptical orbit. Limited data obtained.
Surveyor III (S) 1967 35A	Atlas-Centaur (AC-12) (S)	Apr 17		LANDED ON MOON APR 20, 1967			1035.6	Vernier engines failed to cut off as planned; spacecraft bounced twice before landing. Surface sampler was used for pressing, digging, trenching, scooping, and depositing surface material in view of the camera. Returned over 6,300 photographs, including pictures of the Earth during lunar eclipse.
ESSA V (S) 1967 36A	Delta 48 (S)	Apr 20	113.5	1419	1352	102.0	147.4	Replaced ESSA III in TOS System. Furnished daily global coverage of weather systems. Reimbursable (NOAA). (WSMC)
San Marco II (S) 1967 38A	Scout 52 (S)	Apr 26		DOWN OCT 14, 1967			129.3	First satellite launch attempt from a mobile sea-based platform in the Indian Ocean; launched conducted by Italian crew. Provided continuous equatorial air density measurements. Cooperative with Italy. (SM)
Lunar Orbiter IV (S) 1967 41A	Atlas-Agena D 5804 (S)	May 4		DOWN OCT 6, 1967			385.6	Lunar orbit achieved. Photographed 99% of the Moon's front side and additional back side areas.
Ariel III (S) 1967 42A	Scout 53 (S)	May 5		DOWN DEC 14, 1970			102.5	First UK-built satellite to extend atmospheric and ionospheric investigations. Cooperative with UK. (WSMC)
Explorer 34 (S) 1967 51A	Delta 49 (S)	May 24		DOWN MAY 3, 1969			73.9	Fifth in Interplanetary Monitoring Platform series to study Sun-Earth relationships. Elliptical orbit achieved. Useful data returned. (WSMC)

# NASA Major Launch Record

1967

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS  (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
ESRO II-A (U)	Scout 55 (U)	May 29		DID NOT ACHIEVE ORBIT			89.1	Carried 7 experiments to study solar and cosmic radiation. Third stage vehicle failure. Cooperative with ESRO. (WSMC)
Mariner V (S) 1967 60A	Atlas-Agena D 5401 (S)	Jun 14		HELIOCENTRIC ORBIT			244.9	Venus flyby. Returned data on planet's atmosphere, radiation, and magnetic field environment.
Surveyor IV (U) 1967 68A	Atlas-Centaur (AC-11) (S)	Jul 14		IMPACTED MOON ON JUL 17, 1967			1037.4	Lunar soft landing mission. All systems were normal until 2 seconds before retro rocket burnout (2-1/2 minutes before touchdown) when the signal was abruptly lost.
Explorer 35 (S) 1967 70A	Delta 50 (S)	Jul 19		SELENOCENTRIC ORBIT			104.4	Interplanetary Monitoring Platform to study solar wind and interplanetary fields at lunar distances. Lunar orbit achieved. Results indicated no shock front precedes the Moon, no magnetic field, no radiation belts or evidence of lunar ionosphere.
OGO IV (S) 1967 73A	Thor-Agena D (S)	Jul 28		DOWN AUG 16, 1972			551.6	Study relationship between Sun and Earth's environment. Near-polar orbit achieved, 3-axis stabilized. (WSMC)
Lunar Orbiter V (S) 1967 75A	Atlas-Agena D 5805 (S)	Aug 1		DOWN JAN 31, 1968			385.6	Fifth and final mission to photograph potential landing sites from lunar orbit. Increased lunar photographic coverage to better than 99%.
Biosatellite II (S) 1967 83A	Delta 51 (S)	Sep 7		DOWN SEP 9, 1967			425.4	Carried 13 experiments to conduct biological experiments in low Earth orbit. Reentry initiated 17 orbits early because of communications difficulties and storm in recovery area. Air recovery successful.
Surveyor V (S) 1967 84A	Atlas-Centaur (AC-13) (S)	Sep 8		LANDED ON MOON SEP 11, 1967			1006.1	Lunar soft landing accomplished; returned TV photos of lunar surface and data on chemical characteristics of lunar soil.
Intelsat II (S) 1967 94A	Delta 52 (S)	Sep 28		CURRENT ELEMENTS NOT MAINTAINED			87.1	Comsat commercial communications satellite to provide 24-hour transoceanic service. Reimbursable (Comsat).
OSO-IV (S) 1967 100A	Delta 53 (S)	Oct 18		DOWN JAN 15, 1982			276.7	Continuation of OSO program to better understand the Sun's structure and determine the solar influence upon the Earth. Obtained the first pictures made of the Sun in extreme ultraviolet.
RAM C-1 (S)	Scout 57 (S)	Oct 19		SUBORBITAL FLIGHT			116.6	Reentry test to investigate communications problems experienced during reentry. (WFF)
ATS III (S) 1967 111A	Atlas-Agena D 5103 (S)	Nov 5	1436.1	35844	35730	14.2	714.0	Further development of experiments and concepts in useful applications of space technology to communications, meteorology, navigation, and Earth resources management.
Surveyor VI (S) 1967 112A	Atlas-Centaur (AC-14) (S)	Nov 7		LANDED ON MOON NOV 10, 1967			1008.3	Lunar soft landing achieved; pictures and soil analysis data transmitted. Vernier engines restarted, lifting spacecraft 10 feet from the surface and landing 8 feet from the original landing site, performing the first rocket-powered takeoff from the lunar surface.

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Apollo 4 (S) 1967 113A	Saturn V AS-501 (S)	Nov 9		DOWN NOV 9, 1967			45506.0	Launch vehicle/spacecraft development flight. First launch of the Saturn V; carried unmanned Apollo Command/Service Module.
ESSA VI (S) 1967 114A	Delta 54 (S)	Nov 10	114.8	1482	1407	102.2	129.7	Replaced ESSA II and ESSA IV in the TOS system; used in central analysis of global weather. Reimbursable (NOAA). (WSMC)
Pioneer VIII (S) 1967 123A TETR-1 (S) 1967 123B	Delta 55 (S)	Dec 13		HELIOCENTRIC ORBIT			65.8	Third in a series of interplanetary probes to provide data on the solar wind, magnetic fields, and cosmic rays. Carried TETR-1, the first NASA piggyback payload.
							20.0	DOWN APR 28, 1968
<b>1968</b>								
Surveyor VII (S) 1968 01A	Atlas-Centaur (AC-15) (S)	Jan 7		LANDED ON MOON JAN 9, 1968			1040.1	Lunar soft landing achieved; provided pictures of lunar terrain, portions of spacecraft, experiment operations, stars, planets, crescent Earth as it changed phases, and first observation of artificial light from the Earth.
Explorer 36 (S) 1968 02A	Delta 56 (S)	Jan 11	112.2	1572	1079	105.8	212.3	GEOS spacecraft to provide precise information about the size and shape of the Earth and strength of an variations in its gravitational field; part of the National Geodetic Program. (WSMC)
Apollo 5 (S) 1968 07A	Saturn IB AS-204 (S)	Jan 22		DOWN JAN 24, 1968			42,506.0	First flight test of the Lunar Module; verified the ascent and descent stages, propulsion systems, and restart operations.
OGO V (S) 1968 14A	Atlas-Agena D 5602A (S)	Mar 4		CURRENT ELEMENTS NOT MAINTAINED			611.0	Provided measurements of energy characteristics in the Earth's radiation belts, first evidence of electric fields in the bow shock.
Explorer 37 (S) 1968 17A	Scout 60 (S)	Mar 5		DOWN NOV 16, 1990			89.8	Solar Explorer to provided data on selected solar X-ray and ultraviolet emissions. Cooperative with NRL. (WFF)
Apollo 6 (U) 1968 25A	Saturn V AS-502 (U)	Apr 4		DOWN APR 4, 1968			42856.0	Launch vehicle and spacecraft development flight. Launch vehicle engines malfunctioned; spacecraft systems performed normally.
Reentry VI (S)	Scout 61 (S)	Apr 27		SUBORBITAL FLIGHT			272.0	Turbulent heating experiment to obtain heat transfer measurements at 20,000 fps. (WFF)
ESRO IIB (S) 1968 41A	Scout 62 (S)	May 17		DOWN MAY 8, 1971			89.1	Carried seven experiments to study solar and cosmic radiation in the lower Van Allen belt. Cooperative with ESRO. (WSMC)
Nimbus B (U) Secor 10 (U)	Thor-Agena D (U)	May 18		DID NOT ACHIEVE ORBIT			571.5	Experimental meteorological satellite; also carried Secor 10 (DOD) as a secondary payload. Booster malfunctioned; destruct signal sent by Range Safety Officer. (WSMC)
Explorer 38 (S) 1968 55A	Delta 57 (S)	Jul 4	224.2	5869	5825	120.8	275.4	Radio Astronomy Explorer to monitor low-frequency radio signals originating in our own solar system and the Earth's magnetosphere and radiation belts.

1968

MISSION/ Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS  (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Explorer 30 (S) 1968 66A Explorer 40 (S) 1968 66B	Scout 63 (S)	Aug 8		DOWN JUN 22, 1981			9.3	Dual payload (Air Density/Injun Explorers) to continue the detailed scientific study of the density and radiation characteristics of the Earth's upper atmosphere. (WCMC)
ATS IV (U) 1968 68A	Atlas-Centaur (AC-17) (U)	Aug 10		DOWN OCT 17, 1968			390.1	Evaluate gravity-gradient stabilization, simultaneous transmission of voice, TV, telegraph, and digital data. Centaur failed to reignite for second burn, spacecraft remained in parking orbit attached to Centaur.
ESSA VII (S) 1968 69A	Delta 58 (S)	Aug 16	114.9	1471	1428	101.4	147.4	Replaced ESSA V as the primary stored data satellite in the TOS system. Reimbursable (NOAA). (WSMC)
RAM CII (S)	Scout 64 (S)	Aug 22		SUBORBITAL FLIGHT			122.0	Measure electron and ion concentrations during reentry. (WFF)
Intelsat III F-1 (U)	Delta 59 (U)	Sep 18		DID NOT ACHIEVE ORBIT			286.7	Comsat commercial communications satellite. Vehicle failure. Reimbursable (Comsat).
ESRO IA (S) 1968 84A	Scout 65 (S)	Oct 3		DOWN JUN 26, 1970			85.8	Carried eight experiments to measure energies and pitch angles of particles impinging on the polar ionosphere during magnetic storms and quiet periods. Cooperative with ESRO. (WSMC)
Apollo 7 (S) 1968 89A	Saturn IB AS-205 (S)	Oct 11		LANDED OCT 22, 1968			51,655.0	First manned flight of the Apollo spacecraft with Walter M. Schirra, Jr., Donn F. Eisele, and Walter Cunningham. Performed Earth orbit operations. Mission Duration 280 hours 9 minutes 3 seconds.
Pioneer IX (S) 1968 100A TETR 2 (S) 1968 100B	Delta 60 (S)	Nov 8		HELIOCENTRIC ORBIT			66.7	Deep space probe to collect scientific data on the electromagnetic and plasma properties of interplanetary space. Carried TETR 2 as a secondary payload.
HEOS A (S) 1968 109A	Delta 61 (S)	Dec 5		DOWN OCT 28, 1975			108.8	Study interplanetary magnetic fields and solar cosmic ray particles. Reimbursable (ESA).
OAO II (S) 1968 110A	Atlas-Centaur (AC-16) (S)	Dec 7	99.9	759	750	35.0	2016.7	Perform astronomy investigations of celestial objects in the ultraviolet region of the electromagnetic spectrum.
ESSA VIII (S) 1968 114A	Delta 62 (S)	Dec 15	114.6	1481	1411	101.8	136.1	Meteorological satellite for ESSA. Reimbursable (NOAA). (WFF)
Intelsat III F-2 (S) 1968 116A	Delta 63 (S)	Dec 18		CURRENT ELEMENTS NOT MAINTAINED			286.7	Initial increment of first global commercial communications satellite system for Comsat. Reimbursable (Comsat).
Apollo 8 (S) 1968 118A	Saturn V AS-504 (S)	Dec 21		LANDED DEC 27, 1968			51655.0	First manned Saturn V flight with Frank Borman, James A. Lovell, Jr., and William A. Anders. First manned lunar orbit mission; provided a close-up look at the Moon during 10 lunar orbits. Mission Duration 147 hours 0 minutes 42 seconds.

<b>1969</b>								
OSO V (S) 1969 06A	Delta 64 (S)	Jan 22		DOWN APR 2, 1984			288.5	Continuation of OSO program to study Sun's X-rays, gamma rays, and radio emissions.
ISIS-A (S) 1969 09A	Delta 65 (S)	Jan 30	127.7	3471	574	88.4	235.9	Satellite built by Canada; carried 10 experiments to study the ionosphere. Cooperative with Canada. (WSMC)
Intelsat III F-3 (S) 1969 11A	Delta 66 (S)	Feb 5		CURRENT ELEMENTS NOT MAINTAINED			286.7	Second increment of Comsat's operational commercial communication satellite system. Reimbursable (Comsat).
Mariner VI (S) 1969 14A	Atlas-Centaur (AC-20) (S)	Feb 25		HELIOCENTRIC ORBIT			411.8	Mars flyby; provided high resolution photographs of the Martian surface. Closest approach was 2,120 miles on July 31, 1969.
ESSA IX (S) 1969 16A	Delta 67 (S)	Feb 26	115.2	1503	1422	101.4	157.4	Ninth and last in the TOS series of meteorological satellites. Reimbursable (NOAA).
Apollo 9 (S) 1969 18A	Saturn V SA-504 (S)	Mar 3		LANDED MAR 13, 1969			51655.0	Earth orbital flight with James A. McDivitt, David R. Scott, and Russell Schweickart. First flight of the lunar module. Performed rendezvous, docking, and EVA. Mission Duration 241 hours 0 minute 54 seconds.
Mariner VII (S) 1969 30A	Atlas-Centaur (AC-19) (S)	Mar 27		HELIOCENTRIC ORBIT			411.8	Mars flyby; provided high resolution photographs of the Martian surface. Closest approach was 2,190 miles on August 5, 1969.
Nimbus III (S) 1969 37A	Thor-Agena (S)	Apr 14	107.2	1128	1069	100.0	575.6	Provided night and day global meteorological measurements from space. Secor (DOD) provided geodetic position determination measurements. (WSMC)
Secor 13 (S) 1969 37B			107.2	1127	1067	100.0	20.4	
Apollo 10 (S) 1969 43A	Saturn V SA-505 (S)	May 18		LANDED MAY 26, 1969			51655.0	Manned lunar orbital flight with Thomas P. Stafford, John W. Young, and Eugene A. Cernan to test all aspects of an actual manned lunar landing except the landing. Mission Duration 192 hrs 3 mins 23 secs.
Intelsat III F-4 (S) 1969 45A	Delta 68 (S)	May 21		CURRENT ELEMENTS NOT MAINTAINED			143.8	Third increment of Comsat's operational commercial communication satellite system. Reimbursable (Comsat).
OGO VI (S) 1969 51A	Thor-Agena (S)	Jun 5		DOWN OCT 12, 1979			631.8	Last in the OGO series to provide measurements of the energy characteristics in the Earth's radiation belts; provided the first evidence of electric fields in the bow shock. (WSMC)
Explorer 41 (S) 1969 53A	Delta 69 (S)	Jun 21		DOWN DEC 23, 1972			78.7	Seventh Interplanetary Monitoring Platform to continue study of the environment within and beyond Earth's magnetosphere. (WSMC)
Biosatellite III (U) 1969 56A	Delta 70 (S)	Jun 28		DOWN JUL 7, 1969			696.3	Conduct intensive experiments to evaluate effects of weightlessness with a pigtail monkey onboard. Spacecraft deorbited after 9 days because the monkey's metabolic condition was deteriorating rapidly. Monkey expired 8 hours after recovery, presumably from a massive heart attack brought on by dehydration.

# NASA Major Launch Record

1969

MISSION/ Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS  (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Apollo 11 (S) 1969 59A	Saturn V SA-506 (S)	Jul 16		LANDED JUL 24, 1969			51655.0	First manned lunar landing and return to Earth with Neil A. Armstrong, Michael Collins, and Edwin A. Aldrin. Landed in the Sea of Tranquility on July 20, 1969; deployed TV camera and EASEP experiments, performed lunar surface EVA, returned lunar soil samples. Mission Duration 195 hours 18 minutes 35 seconds.
Intelsat III F-5 (U) 1969 64A	Delta 71 (S)	Jul 26		DOWN OCT 14, 1988			146.1	Fourth increment of Comsat's operational commercial communication satellite system. Third-stage malfunctioned; satellite did not achieve desired orbit. Reimbursable (Comsat).
OSO VI (S) 1969 68A PAC (S) 1969 68B	Delta 72 (S)	Aug 9		DOWN MAR 7, 1981			173.7	Continuing study of Sun's X-rays, gamma rays, and radio emissions. Carried PAC experiment to stabilize spent Delta stage.
ATS V (U) 1969 69A	Atlas-Centaur (AC-18) (S)	Aug 12	1447.5	36031	35986	13.9	432.7	Evaluate gravity-gradient stabilization for geosynchronous satellites. Anomaly after apogee motor firing resulted in counterclockwise spin; gravity-gradient booms could not be deployed. Nine of 13 experiments returned useful data.
Pioneer E (U) (TETR C) (U)	Delta 73 (U)	Aug 27		DID NOT ACHIEVE ORBIT			67.1	Deep space probe to study magnetic disturbances in interplanetary space. Vehicle malfunctioned; destroyed 8 minutes 3 seconds into powered flight by Range Safety Officer.
ESRO 1B (S) 1969 83A	Scout 66 (S)	Oct 1		DOWN NOV 23, 1969			85.8	Fourth European-designed and built satellite to study ionospheric and auroral phenomena over the northern polar regions. Reimbursable (ESA).
GRS-A (S) 1969 97A	Scout 67 (S)	Nov 7	110.8	2155	371	102.8	72.1	Study the inner Van Allen belt and auroral zones of the Northern Hemisphere. Cooperative with Germany. (WSMC)
Apollo 12 (S) 1969 99A	Saturn V SA-507 (S)	Nov 14		LANDED NOV 24, 1969			51655.0	Second Manned lunar landing and return with Charles Conrad, Jr., Richard F. Gordon, and Alan F. Bean. Landed in the Ocean of Storms on November 19, 1969; deployed TV camera and ALSEP experiments; two EVA's performed; collected core sample and lunar materials; photographed and retrieved parts from Surveyor III spacecraft. Mission duration 244 hours 36 minutes 24 seconds.
Skyenet A (S) 1969 101A	Delta 74 (S)	Nov 21		ELEMENTS NOT AVAILABLE			242.7	Communication satellite for the United Kingdom. Reimbursable (UK).

<b>1970</b>								
Intelsat III F-6 (S) 1970 03A	Delta 75 (S)	Jan 14		CURRENT ELEMENTS NOT MAINTAINED			155.1	Part of Comsat's operational commercial communication satellite system. Reimbursable (Comsat).
ITOS I (S) 1970 08A	Delta 76 (S)	Jan 23	115.0	1477	1431	101.3	306.2	Second generation meteorological satellite to provide daytime and nighttime cloud cover observations in both direct and stored modes.
Oscar 5 (S) 1970 08B			115.0	1475	1431	101.3	9.1	Oscar (Australia), carried as a piggyback, was used by radio amateurs throughout the world. (WSMC)
SERT II (U) 1970 09A	Thor-Agena (S)	Feb 3	106.0	1044	1038	99.2	503.5	Ion engine test. Fell short of mission duration objective by less than 1 month. (WSMC)
NATOSAT I (S) 1970 21A	Delta 77 (S)	Mar 20	1436.2	35798	35779	12.9	242.7	Communications satellite for NATO. Reimbursable (NATO).
Nimbus D (S) 1970 25A	Thor-Agena (S)	Apr 8	107.1	1096	1086	99.9	619.6	Stabilized, Earth-oriented platform to test advanced systems for collecting meteorological and geological data. TOPO, carried as a piggyback, performed triangulation exercises. (WSMC)
TOPO 1 (S) 1970 25B			106.9	1084	1082	99.8	21.8	
Apollo 13 (U) 1970 29A	Saturn V SA-508 (S)	Apr 11		LANDED APR 17, 1970			51655.0	Third manned lunar landing attempt with James A. Lovell, Jr., John L. Swigert, Jr., and Fred W. Haise, Jr. Pressure lost in SM oxygen system; mission aborted; LM used for life support. Mission Duration 142 hours 54 minutes 41 seconds.
Intelsat III F-7 (S) 1970 32A	Delta 78 (S)	Apr 22		CURRENT ELEMENTS NOT MAINTAINED			290.3	Part of Comsat's operational commercial communication satellite system. Reimbursable (Comsat).
Intelsat III F-8 (U) 1970 55A	Delta 79 (S)	Jul 23	1408.2	36634	33842	13.9	290.3	Part of Comsat's operational commercial communication satellite system. Malfunction during apogee motor firing; failed to achieve desired orbit. Reimbursable (Comsat).
Skynet 2 (U) 1970 62A	Delta 80 (S)	Aug 19		CURRENT ELEMENTS NOT MAINTAINED			242.7	Communication satellite for the United Kingdom. Telemetry terminated following apogee motor failure. Reimbursable (UK).
RAM CIII (S) 1970 94A	Scout 69 (S) Scout 70 (S)	Sep 30 Nov 9		SUBORBITAL FLIGHT			134.0	Reentry test of radio blackout.
OFO I (S) 1970 94B				DOWN MAY 9, 1971			132.9	Orbiting Frog Otolith (OFO) in which frogs were used to study the effects of weightlessness on the inner ear, which controls balance.
RMS (S) 1970 94B				DOWN FEB 7, 1971			21.0	Radiation Meteoroid Spacecraft (RMS) provided data on radiation belts. (WFF)
OAO B (U)	Atlas-Centaur (AC-21) (U)	Nov 30		DID NOT ACHIEVE ORBIT			2122.8	Perform stellar observations in the UV region. Centaur nose fairing failed to separate; orbit not achieved.

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS  (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
ERTS-A (S) 1972 58A	Delta 89 (S)	Jul 23	103.0	908	896	99.3	941.0	Demonstrate remote sensing technology of the Earth's surface on a global scale and on a repetitive basis. (WSMC)
Explorer 46 (S) 1972 61A	Scout 79 (S)	Aug 13					206.4	DOWN NOV 2, 1979 Meteoroid Technology Satellite to measure meteoroid penetration rates and velocity. (WFF)
OAO 3 (S) 1972 65A	Atlas-Centaur (AC-22) (S)	Aug 21	99.2	725	713	35.0	2200.0	Study interstellar absorption of common elements in the interstellar gas, and investigate ultraviolet radiation emitted from young hot stars. (WSMC)
Transit (S) 1972 69A	Scout 80 (S)	Sep 2	99.9	796	707	90.0	94.0	Navigation Satellite for the U.S. Navy. Reimbursable (DOD). (WSMC)
Explorer 47 (S) 1972 73A	Delta 90 (S)	Sep 22					375.9	CURRENT ELEMENTS NOT MAINTAINED Interplanetary Monitoring Platform; an automated space physics lab to study interplanetary radiation, solar wind, and energetic particles. (WSMC)
ITOS D (S) 1972 82A	Delta 91 (S)	Oct 15	114.9	1453	1446	102.0	34.5	To augment NOAA's satellite world-wide weather observation capabilities. Oscar, an amateur radio satellite, was carried as a piggyback. Reimbursable (ITOS/NOAA; Oscar/AMSAT). (WSMC)
Oscar (S) 1972 82B		Oct 15	114.9	1452	1446	102.0	15.9	
Telesat A (ANIK) (S) 1972 90A	Delta 92 (S)	Nov 9	1457.1	36258	36136		10.8	544.3 First of a series of domestic communications satellites for Canada. Reimbursable (Canada). (WSMC)
Explorer 48 (S) 1972 91A	Scout 81 (S)	Nov 15					186.0	DOWN AUG 20, 1980 Small Astronomy Satellite; carried a gamma ray telescope in a bulbous dome to study gamma rays. Launched by an Italian crew from San Marco. (SM)
ESRO IV (S) 1972 92A	Scout 82 (S)	Nov 21					114.0	DOWN APR 15, 1974 Carried five experiments to investigate the ionosphere, the near magnetosphere, auroral, and solar particles. Reimbursable (ESA). (WSMC)
Apollo 17 (S) (AS-512/CSM-114/LM-12) 1972 96A	Saturn V SA-512 (S)	Dec 7					51655.0	LANDED DEC 19, 1972 Sixth and last manned lunar landing mission in the Apollo series with Eugene A. Cernan, Ronald E. Evans, and Harrison H. (Jack) Schmitt. Landed at Taurus-Littrow on Dec 11., 1972. Deployed camera and experiments; performed EVA with lunar roving vehicle. Returned lunar samples. Mission duration 301 hours 51 minutes 59 seconds. (WSMC)
Nimbus E (S) 1972 97A	Delta 93 (S)	Dec 11	107.1	1099	1086	99.8	716.8	Stabilized, Earth-oriented platform to test advanced systems for collecting meteorological and geological data. (WSMC)
AEROS (S) 1972 100A	Scout 83 (S)	Dec 16					125.7	DOWN AUG 22, 1973 Study the state and behavior of the upper atmosphere and ionosphere. Cooperative with Germany. (WSMC)
Pioneer G (S) 1973 19A	Atlas-Centaur (AC-30) (S)	Apr 5					259.0	SOLAR SYSTEM ESCAPE TRAJECTORY Investigate the interplanetary medium beyond the orbit of Mars, the Asteroid Belt, and the near-Jupiter environment. (WSMC)

B-112

# NASA Major Launch Record

1973

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Telesat B (ANIK-2) (S) 1973 23A	Delta 94 (S)	Apr 20	1443.0	35970	35873	9.4	544.3	Second domestic communications satellite for Canada. Reimbursable (Canada).
Skylab Workshop (S) 1973 27A	Saturn V SA-513 (S)	May 14		DOWN JUL 11, 1979			71500.0	Unmanned launch of the first U.S. Space Station. Workshop incurred damage during launch. Repaired during follow-on manned missions.
Skylab 2 206/CSM-116 (S) 1973 32A	Saturn IB SA-206 (S)	May 25		LANDED JUN 22, 1973			29750.0	First manned visit to Skylab workshop with Charles (Pete) Conrad, Jr., Joseph P. Kerwin, and Paul J. Weitz. Deployed parasol-like thermal blanket to protect the hull and reduce temperatures within the workshop; freed solar wing that was jammed with debris. Mission duration 672 hours 49 minutes 49 seconds.
Explorer 49 (S) 1973 39A	Delta 95 (S)	Jun 10		SELENOCENTRIC ORBIT			328.0	Radio Astronomy Explorer to measure low frequency radio noise from galactic and extragalactic sources and from the Sun, Earth and Jupiter.
ITOS E (U)	Delta 96 (U)	Jul 16		DID NOT ACHIEVE ORBIT			333.8	Augment NOAA's satellite world-wide weather observation capabilities. Vehicle second stage malfunctioned. Reimbursable (NOAA). (WSMC)
Skylab 3 207/CSM-117 (S) 1973 50A	Saturn IB SA-207 (S)	Jul 28		LANDED SEP 25, 1973			29750.0	Second manned visit to Skylab Workshop with Alan L. Bean, Owen K. Garriott, and Jack R. Lousma. Performed systems and operational tests, conducted experiments, deployed thermal shield. Mission Duration 1416 hours 11 minutes 9 seconds.
Intelsat IV F-7 (S) 1973 58A	Atlas-Centaur (AC-31) (S)	Aug 23	1452.4	36138	36072	9.7	1387.1	Fourth generation satellite to provide increased capacity for Comsat's global commercial communications network. Reimbursable (Comsat).
Explorer 50 (S) 1973 78A	Delta 97 (S)	Oct 25		ELEMENTS NOT AVAILABLE			397.2	Last Interplanetary Monitoring Platform to investigate the Earth's radiation environment.
Transit (S) 1973 81A	Scout 84 (S)	Oct 30	105.2	1123	885	89.9	95.0	Navigation satellite for the U.S. Navy. Reimbursable (DOD). (WSMC)
Mariner 10 (Mariner/Venus/ Mercury) (S) 1973 85A	Atlas-Centaur (AC-34) (S)	Nov 3		HELIOCENTRIC ORBIT			504.0	Venus and Mercury flyby mission; first dual-planet mission. Photographed the Earth and the Moon on its flight to Venus. Venus encounter (at 5,800 km) on February 5, 1973; Mercury encounter (at 704 km) on March 29, 1974; second Mercury encounter (at 48,069 km) on September 21, 1974; third Mercury encounter (at 327 km) on March 16, 1975. Engineering tests conducted before attitude control gas was depleted and transmitter commanded off on March 24, 1975.
ITOS F (S) 1973 86A	Delta 98 (S)	Nov 6	116.1	1508	1499	116.1	345.0	To augment NOAA's satellite world-wide weather observation capabilities. Reimbursable (NOAA). (WSMC)
Skylab 4 (S) 1973 90A	Saturn IB SA-208 (S)	Nov 16		LANDED FEB 8, 1974			29,750.0	Third manned visit to Skylab Workshop with Gerald P. Carr, Edward G. Gibson, and William R. Pogue. Performed inflight experiments; obtained medical data on crew; performed four EVA's. Mission duration: 2016 hours 1 minute 16 seconds.

# NASA Major Launch Record

1973

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS  (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Explorer 51 (S) 1973 101A	Delta 99 (S)	Dec 16		DOWN DEC 12, 1978			863.0	Atmosphere Explorer, carried 14 instruments to study energy transfer, atomic and molecular processes, and chemical reactions in the atmosphere. (W:SMC)
<b>1974</b>								
Skynet II-A (U) 1974 02A	Delta 100 (U)	Jan 18		DOWN JAN 25, 1974			435.5	Communication satellite for the United Kingdom. Short circuit in electronics package caused vehicle failure. Reimbursable (UK).
Centaur Proof Flight (U)	Titan III E Centaur (78) (U)	Feb 11		DID NOT ACHIEVE ORBIT				Launch vehicle development test of the Titan III E/Centaur (TC-1); carried simulated Viking spacecraft and Sphinx. Liquid oxygen boost pump failed to operate during Centaur starts. Destruct command sent 748 seconds after liftoff.
San Marco C-2 (S) 1974 09A	Scout 85 (S)	Feb 18		DOWN MAY 4, 1976			170.0	Measure variations of equatorial neutral atmosphere density, composition, and temperature. Cooperative with Italy. (San Marco)
UK-X4 (S) 1974 13A	Scout 86 (S)	Mar 8	100.3	867	677	97.9	91.6	Three-axis stabilized spacecraft to demonstrate the technology involved in the design and manufacture of this type platform for use on small spacecraft. Reimbursable (UK). (W:SMC)
Westar A (S) 1974 13A	Delta 101 (S)	Apr 13	1441.6	35907	35907	9.1	571.5	Domestic communications satellite for Western Union. Reimbursable (WU).
SMS A (S) 1974 33A	Delta 102 (S)	May 17		ELEMENTS NOT AVAILABLE			628.0	Geostationary environmental satellite to provide Earth imaging in visible and IR spectrum. First weather observer to operate in a fixed geosynchronous orbit about the Equator. Cooperative with NOAA.
ATS F (S) 1974 39A	Titan III C Centaur 79 (S)	May 30	1412.1	35440	35190	12.5	1403.0	Applications Technology Satellite capable of providing good quality TV signals to small, inexpensive ground receivers. Carried over 20 technology and science experiments.
Explorer 52 (S) 1974 40A	Scout 87 (S)	Jun 3		DOWN APR 28, 1978			26.6	"Hawkeye" spacecraft to investigate the interaction of the solar wind with the Earth's magnetic field. (W:SMC)
AEROS B (S) 1974 55A	Scout 88 (S)	Jul 16		DOWN SEP 25, 1975			125.7	German-built satellite to study the state and behavior of the upper atmosphere and ionosphere. Reimbursable (Germany). (W:SMC)
ANS A (S) 1974 70A	Scout 89 (S)	Aug 30		DOWN JUN 14, 1977			129.8	Study the sky in ultraviolet and X-ray from above the atmosphere. Cooperative with the Netherlands. (W:SMC)
Westar B (S) 1974 75A	Delta 103 (S)	Oct 10	1442.2	35928	35883	8.9	571.5	Domestic communications satellite for Western Union. Reimbursable (WU).
UK-5 (S) 1974 77A	Scout 90 (S)	Oct 15		DOWN MAR 14, 1980			130.3	Measure the spectrum, polarization and pulsar features of non-solar X-ray sources. Cooperative with UK. (San Marco)

STS-26 (S) 1988 91A TDRS-3 (S) 1988 91B	Shuttle (S) (Discovery)	Sep 29		LANDED AT EAFB OCT 3, 1988				Sixth Discovery flight with Frederick H. Hauck, Richard O. Covey, John M. Lounge, David C. Hilmers, and George D. Nelson. Deployed TDRS-3. Performed experiment activities for commercial and scientific middeck experiments. Mission Duration 97 hours 0 minutes 11 seconds.
STS-27 (S) 1988 106A DOD (S) 1988 106B	Shuttle (S) (Atlantis)	Sep 29	1436.2	35804	35772	0.1	2224.9	Third Atlantis flight with Robert L. Gibson, Guy S. Gardner, Richard M. Mullane, Jerry L. Ross and William M. Shepherd. DOD Mission. Mission Duration 105 hours 05 minutes 37 seconds.
<b>1989</b>								
STS-29 (S) 1989 21A TDRS-D (S) 1989 21B	Shuttle (S) (Discovery)	Mar 13		LANDED AT EAFB MAR 18, 1989				Eighth Discovery flight with Michael L. Coats, John E. Blahe, James Baglan, James F. Buchli, Robert Springer. Deployed a new Tracking and Data Relay Satellite. Performed commercial and scientific experiments. Mission Duration 119 hours 38 minutes 52 seconds.
STS-30 (S) 1989 33A Magellan (S) 1989 33B	Shuttle (S) (Atlantis)	May 4		LANDED AT EAFB MAY 8, 1989				Fourth Atlantis flight with David M. Walker, Ronald J. Grabe, Mary L. Cleave, Mark C. Lee, Norman E. Thagard. Deployed the Magellan spacecraft on a mission toward Venus. Performed commercial and scientific middeck experiments. Mission Duration: 96 hours 56 minutes 28 seconds.
STS-28 (S) 1989 61A	Shuttle (S) (Columbia)	Aug 8		LANDED AT EAFB AUG 13, 1989				Ninth Columbia flight with Brewster H. Shaw, Richard N. Richards, David C. Leetsma, James C. Adamson, and Mark N. Brown. DOD Mission. Mission Duration: 121 hours 0 minutes 08 seconds.
Fleetcom (S) 1989 77A	Atlas-Centaur (AC-68) (S)	Sep 25	1436.1	35701	35774	2.9	1863	Navy Communications satellite to provide communications between aircraft, ships and ground stations for DOD. Reimbursable (DOD).
STS-34 (S) 1989 84A Galileo (S) 1989 84B	Shuttle (S) (Atlantis)	Oct 18		LANDED AT EAFB OCT 23, 1989				Fifth Atlantis flight with Donald E. Williams, Michael J. McCulley, Ellen Baker, Shannon N. Lucid, and Franklin Chang-Diaz. Deployed the Galileo spacecraft on a mission toward Jupiter. Performed experiment activities for commercial and scientific middeck experiments. Mission Duration: 119 hours 39 minutes 22 seconds.
COBE (S) 1989 89A	Delta 2 (S)	Nov 18	102.6	885	873	99.0	2206	Cosmic Background Explorer spacecraft to provide the most comprehensive observations to date of radiative content of the universe.
STS-33 (S) 1989 90A DOD (S) 1989 90B	Shuttle (S) (Discovery)	Nov 23		LANDED AT EAFB NOV 28, 1989				Ninth Discovery flight with Frederick Gregory, John E. Blaha, Manly L. Carter, Franklin S. Musgrave and Kathryn C. Thornton. DOD Mission. Mission Duration: 120 hours 6 minutes 46 seconds.

STS-32 (S) 1990 2A Syncom IV-5 (S) 1990 2B	Shuttle (S) (Columbia)	Jan 9	1436.2	35815	35759	2.7	6953.4	Tenth Columbia flight with Daniel C. Brandenstein, James D. Wetherbee, Bonnie J. Dunbar, Marsha S. Ivins and G. David Low. Deployed Syncom IV-5 (Reimbursable - DOD), a geostationary communications satellite also known as Leasat, for the U.S. Navy. Also retrieved the Long Duration Exposures Facility (LDEF) deployed on STS-41C on April 6, 1984. Mission Duration: 261 hrs 0 mins 37 secs LANDED AT EAFB JAN 20, 1990
STS-36 (S) 1990 19A DOD (S) 1990 19B	Shuttle (S) (Atlantis)	Feb 28						Sixth Atlantis flight with John D. Creighton, John H. Casper, David C. Hilmers, Richard M. Mullane and Pierre J. Thuot. DOD Mission. Mission Duration: 106 hours 18 minutes 22 seconds. LANDED AT EAFB MAR 4, 1990 ELEMENTS NOT AVAILABLE
Pegasus (S) 1990 28A	Pegasus (S) (Orb Sci)	Apr 5	94.1	539	410	94.1		A 50-foot rocket (Pegasus), dropped from the wing of a B-52 aircraft flying over the Pacific Ocean, launched the Pegasus satellite in the first demonstration flight of the Pegasus launch vehicle. The Pegasus science investigations are part of the Combined Release and Radiation Effects Satellite (CRRES), a joint NASA/DOD program.
STS-31 (S) 1990 37A HST (S) 1990 37B	Shuttle (S) (Discovery)	Apr 24	96.6	598	591	28.5	11355.4	Tenth Discovery flight with Loren J. Shriver, Charles F. Bolden, Bruce McCandless, Steven A. Hawley, and Kathryn D. Sullivan. Deployed the Edwin P. Hubble Space Telescope (HST) astronomical observatory. Designed to operate above the Earth's turbulent and obscuring atmosphere to observe celestial objects at ultraviolet, visible and near-infrared wavelengths. Joint NASA/ESA mission. Mission Duration: 121 hours 16 minutes 6 seconds LANDED AT EAFB APR 29, 1990
MacSAT (S) 1990 43A 1990 43B	Scout 113 (S)	May 9	98.3 98.3	755 752	601 600	89.9 89.9	89.9	Two Multiple Access Communications Satellites (MACSATs) to provide global store-and-forward message relay capability for DOD Users. Reimbursable (DOD). (VAFB)
ROSAT (S) 1990 49A	Delta 2 (S)	Jun 1	95.6	557	542	53.0	2421.1	Röntgen Satellite (ROSAT), an Explorer class scientific satellite configured to accommodate a large X-ray telescope, to study X-ray emissions from non-solar celestial objects. International cooperative program with NASA, Germany, and the UK.
CRRES (S) 1990 65A	Atlas-Centaur (AC-69) (S)	Jul 25	614.4	34781	345		18.0	Combined Release and Radiation Effects Satellite (CRRES) which uses chemical releases to study the Earth's magnetic fields and the plasmas, or ionized gases, that travel through them. Joint NASA/DOD program.

STS-41 (S) 1990 90A Ulysses (S) 1990 90B	Shuttle (S) (Discovery)	Oct 6		LANDED AT EAFB OCT 10, 1990  HELIOCENTRIC ORBIT			20079.5	Eleventh Discovery flight with Richard N. Richards, Robert D. Cabana, Bruce E. Meznick, William M. Shepherd, and Thomas D. Akers. Deployed the Ulysses spacecraft, a joint NASA/ESA mission to study the poles of the Sun and the interplanetary space above and below the poles. Mission Duration: 98 hours 10 minutes 3 seconds.
STS-38 (S) 1990 97A DOD (S) 1990 97B	Shuttle (S) (Atlantis)	Nov 15		LANDED AT KSC NOV 20, 1990  ELEMENTS NOT AVAILABLE				Seventh Atlantis flight with Richard D. Covey, Robert C. Springer, Carl J. Meade, Frank L. Culbertson and Charles D. Gernar. DOD Mission. Mission Duration: 117 hours 54 minutes 27 seconds.
STS-35 (S) 1990 106A	Shuttle (S) (Columbia)	Dec 2		LANDED AT EAFB DEC 11, 1990				Eleventh Columbia flight with Vance D. Brand, John M. Lounge, Jeffrey A. Hoffman, Robert A. Parker, Guy S. Gardner, Ronald A. Parise, and Samuel T. Durrance. Carried Astro-1, a Space Shuttle attached payload to acquire high priority astrophysical data on a variety of celestial objects. Mission Duration: 215 hours 5 minutes 7 seconds.
<b>1991</b>								
STS-37 (S) 1991 27A GRO (S) 1991 27B	Shuttle (S) (Atlantis)	Apr 5		LANDED AT EAFB APR 11, 1991				<b>1991</b> Eighth Atlantis flight with Steven R. Nagel, Kenneth D. Cameron, Linda M. Godwin, Jerome Apt, and Jerry L. Ross. An unplanned EVA took place to help with the deployment of GRO's high gain antenna. Also demonstrated were mobility aids which will be used on Space Station Freedom. Mission Duration: 143 hrs 32 min 45 sec.
STS-39 (S) 1991 31A IBSS (S) 1991 31B	Shuttle (S) (Discovery)	Apr 28	92.0	376	370	28.5	15900.0	Twelfth Discovery flight with Michael L. Coats, Blaine L. Hammond, Jr., Gulon S. Bluford, Gregory J. Harbaugh, Richard J. Hieb, Donald R. McMonagle, and Charles L. Veach. Discovery performed dozens of maneuvers, deploying canisters from the cargo bay, releasing and retrieving a payload with the RMS, allowing the Department of Defense to gather important plume observation data and information for the SDIO. Mission Duration: 199 hrs 26 min 17 sec.
NOAA-12 (S) 1991 32A	Atlas-E (S)	May 14	101.2	824	806	98.7	1418.0	Third-generation operational spacecraft to provide systematic global weather observations. Will replace NOAA-10 as the morning satellite in NOAA's two polar satellite system. Joint NASA/NOAA effort. (WSMC)

STS-40 (S) SpecLab (SLS-1) 1991 40A	Shuttle (S) (Columbia)	Jun 5		LANDED AT EAFB JUN 14, 1991				Twelfth Columbia flight with Bryan D. O'Connor, Sidney M. Gutierrez, M. Rhea Seddon, James P. Baglan, Tamara E. Jerrigan, F. Drew Gaffney, and Millie Hughes-Fulford. The first mission since Skylab to do intensive investigations into the effects of weightlessness on humans. Data learned from this flight will be used in NASA's planning for longer Shuttle missions set for 1992, and in the planning of Space Station Freedom. Mission Duration: 218 hrs 15 mins 14 secs.
REX (S) 1991 45A	Scout (S)	Jun 29	101.3	867	769	89.6	96.7	Radiation Experiment to do further research to overcome and understand the physics of the electron density irregularities that cause disruptive scintillation effects on transionospheric radio signals. Reimbursable - DOD. (VAFB)
STS-43 (S) 1991 54A TDRS-E (S) 1991 54B	Shuttle (S) (Atlantis)	Aug 2		LANDED AT KSC AUG 11, 1991				Ninth Atlantis flight with John E. Blaha, Michael A. Baker, James C. Adamson, G. David Low, and Shannon E. Lucid. A TDRS satellite was deployed, keeping the network which supports Shuttle missions and other spacecraft at full operational capability. Mission Duration: 213 hours 22 minutes 27 seconds.
STS-48 (S) 1991 63A UARS (S) 1991 63B	Shuttle (S) (Discovery)	Sep 12		LANDED AT EAFB SEP 18, 1991				Thirteenth Discovery flight with John O. Creighton, Kenneth S. Reightler, Mark F. Brown, James F. Buchli, and Charles D. Gemar. The Upper Atmosphere Research Satellite (UARS) will study physical processes acting within and upon the stratosphere, mesosphere, and lower thermosphere. Mission Duration: 126 hrs 27 mins 51 secs.
STS-44 (S) 1991 80A DSP (S) 1991 80B	Shuttle (S) (Atlantis)	Nov 24 Nov 25		LANDED AT EAFB DEC 1, 1991 ELEMENTS NOT AVAILABLE				Tenth Atlantis flight with Frederick D. Gregory, Terence T. Henricks, F. Story Musgrave, Mario Runco, Jr., James S. Voss, and Thomas J. Hennen. A dedicated mission for the Department of Defense to gather data for their programs. Deployed Defense Support Program satellite (DSP). The mission was shortened when an inertial measurement unit failed on the sixth day of the mission. Mission Duration: 168 hrs 52 mins 27 secs.
<b>1992</b>								<b>1992</b>
STS-42 (S) 1992 2A	Shuttle (S) (Discovery)	Jan 22		LANDED AT EAFB JAN 30, 1992				Fourteenth Discovery flight with Ronald J. Grabe, Steven S. Oswald, Norman E. Thagard, William F. Readdy, David C. Hilmers, Roberta L. Bondar, and Ulf D. Merbold. The International Microgravity Laboratory (IML-1) studied the effects of microgravity on living organisms and materials processes. Mission duration: 193 hrs 15 mins 43 secs.

STS-45 (S) 1992 15A	Shuttle (S) (Atlantis)	Mar 24		LANDED AT KSC APR 2, 1992				Eleventh Atlantis flight with Charles F. Bolden, Brian K. Duffy, Kathryn D. Sullivan, David C. Leetsma, C. Michael Foale, Dirk D. Frimout and Bryon K. Lichtenburg. The Atmospheric Laboratory for Applications and Science (ATLAS 1) studied atmospheric science, solar science, space physics and astronomy. Mission Duration: 214 hrs 10 mins 24 secs.
STS-49 (S) 1992 26A	Shuttle (S) (Endeavour)	May 2		LANDED AT EAFB MAY 16, 1992				First flight of Endeavour with Daniel C. Brandenstein, Kevin P. Chilton, Richard J. Hieb, Bruce E. Melnick, Pierre J. Thout, Kathryn C. Thornton, and Thomas D. Akers. On orbit repair of the Intelsat VI satellite and redeployment with new kick motor. Assembly of Station by Extravehicular Activity Methods (ASEM), while attached to the cargo bay. Mission duration: 213 hrs 17 mins 38 secs.
EUVE (S) 1992 31A	Delta II (S)	Jun 7	95.1	529	514	28.4	3250	The Extreme Ultraviolet Explorer (EUVE), designed to study the extreme ultraviolet (EUV) portion of the electromagnetic spectrum as well as selected EUV targets, in order to create a definitive map and catalog of these sources.
STS-50 (S) 1992 34A	Shuttle (S) (Columbia)	Jun 25		LANDED AT KSC JUL 9, 1992				Twelfth Columbia flight with Richard N. Richards, Kenneth D. Bowersox, Bonnie J. Dunbar, Carl J. Meade, Ellen S. Baker, and Lawrence J. Deluca. The First United States Microgravity Laboratory (USML-1) studied scientific and technical questions in materials science, fluid dynamics, biotechnology and combustion science. Mission duration: 331 hrs 30 mins 4 secs.
SAMPEX (S) 1992 38A	Scout (S)	Jul 3	96.6	679	509	81.7		First of the Small Explorer (SMEX) fleet, carrying four cosmic ray monitoring instruments, to study solar energetic particles, anomalous cosmic rays, galactic cosmic rays, and magnetospheric electrons.
GEOTAIL (S) 1992 44A	Delta II (S)	Jul 24	4750.6	508542	41363	22.4	1009	Joint mission between the United States and Japan to study the geomagnetic tail region of the magnetosphere. Geotail will also measure the physics of the magnetosphere, the plasma sheet, reconnection and neutral line formation to better understand fundamental magnetosphere processes.
STS-46 (S) 1992 49A EURECA 1992 49B	Shuttle (S) (Atlantis)	Jul 31		LANDED AT AUG 8, 1992				Twelfth Atlantis flight with Loren J. Shriver, Andrew M. Allen, Jeffrey A. Hoffman, Franklin R. Chang-Diaz, Claude Nicollier, Marsha S. Ivins, and Franco Malerba. Deployed ESA's European Retrieval Carrier (EURECA), a platform placed in orbit for 6 months offering conventional services to experimenters. Tested Tethered Satellite System (TSS-1), a joint program between the United States and Italy. Mission duration: 191 hrs 16 mins 7 secs.

STS-47 (S) (SpaceLab-J) 1992 61A	Shuttle (S) (Endeavour)	Sep 12		LANDED AT KSC SEP 20, 1992				Second Endeavour flight with Robert L. Gibson, Curtis L. Brown, Mark C. Lee, N. Jan Davis, Mae C. Jemison, Jerome Apt, and Mamoru Mohri. The Spacelab J mission, a joint mission between the U.S. and Japan, performed a series of 43 experiments to explore the effects of producing new materials in the microgravity of space, and the study of living organisms in the microgravity environment. Mission duration: 190 hrs 30 mins 23 secs.
Topex/Poseidon (S) 1992 52A	Ariane 42P (S)	Aug 10	112.4	1342	1330	66.0		U.S. French Satellite to help define the relationship between the Earth's oceans and climate. NASA payload launched on commercial Ariane vehicle. Joint NASA/CNES mission.
Mars Observer (S) 1992 63A	Titan III (S)	Sep 25		TRANS-MARTIAN TRAJECTORY				After an 11-month cruise, the Mars Observer (MO) will arrive at Mars and be inserted into orbit to examine the surface for elemental and mineralogical composition, global surface topography, gravity field and magnetic field determination and climatological conditions. The Mars Balloon Relay (MBR), on the Mars Observer, will relay communications from Mars landers that will be sent by the Russians in 1995.
STS-52 (S) 1992 70A LAGEOS (S) 1992 70B	Shuttle (S) (Columbia)	Oct 22	222.5	5950	5616	52.7		LANDED AT KSC NOV 1, 1992 Thirteenth Columbia flight with James D. Wetherbee, Michael A. Baker, William M. Sheperd, Tamara E. Jernigan, and Charles L. Veach. The Laser Geodynamics Satellite (LAGEOS) is a cooperative mission of the U.S. and Italy to obtain precise measurements of the crustal movement and gravitational field. The U.S. Microgravity Payload-2 (USMP-2), carried in the cargo bay, is one in a series of payloads for scientific experimentation and material processing in a reduced gravity. Mission duration: 236 hrs 56 mins 13 secs.
MSTI-1 (S) 1992 78A	Scout (S)	Nov 21	91.2	378	292	96.7		DOD/SDIO payload.
STS-53 (S) 1992 86A	Shuttle (S) (Discovery)	Dec 2		LANDED AT EAFB DEC 9, 1992				Fifteenth Discovery flight with David M. Walker, Robert Cabana, Guion S. Bluford, James Voss, and M. Richard Clifford. This was a DOD mission. Mission duration: 175 hrs 19 mins 47 secs.
<b>1993</b>								<b>1993</b>
STS-54 (S) 1993 3A TDRS F 1993 3B	Shuttle (S) (Endeavour)	Jan 13	1432.0	35717	35697	0.5		LANDED AT KSC JAN 19, 1993 Third Endeavour flight with John H. Casper, Donald R. McMonagle, Mario Runco, Jr., Gregory Harbaugh, Susan Helms. A TDRS satellite was deployed to continue support of the Shuttle network systems. Mission duration: 143 hrs 38 mins 19 secs.

STS-56(S) 1993 23A SPARTAN-201 1993 23B	Shuttle (S) (Discovery)	Apr 8		LANDED AT KSC APR 17, 1993				Sixteenth Discovery flight with Kenneth Cameron, Steven S. Oswald, C. Michael Foale, Kenneth Cockrell and Eileen Ochoa. A Spartan satellite was deployed to study the solar corona. The ATLAS-2 was used to measure upper atmospheric variations around the Earth. Mission Duration: 222 hs 08 min 24 secs.
STS-55 (S) 1993 27A	Shuttle (S) (Columbia)	Apr 26		LANDED AT KSC MAY 6, 1993				Fourteenth Columbia flight with Steven R. Nagel, Terence T. Henricks, Charles Precourt, Bernard Harris, Jr., Ulrich Walter and Hans Schlegel. The German, Spacelab D-2, was flown to study automation and robotics, material and life sciences, the Earth and its atmosphere and astronomy. Mission Duration: 239 hrs 39 min 59 secs
STS-57(S) 1993 37A	Shuttle (S) (Endeavour)	Jun 21		LANDED AT EAFB Jul 1, 1993				Fourth Endeavour flight with Ronald J. Grabe, Brian J. Duffy, G. David Low, Nancy J. Sherlock, Peter J. K. Wisoff and Janice E. Voss. Retrieved ESA's European Retrievable Carrier (EURECA), a platform placed in orbit on STS-46. SPACEHAB-1 was carried in the cargo bay for experiments sponsored by NASA, the U.S. Commerce and ESA. Mission Duration: 23hrs 44 mins 54 secs.
RADCAL (S) 1993 41A	Scout (S)	Jun 25	101.3	885	750	89.3		Radar Calibration Satellite(RADCAL) will be used to calibrate U.S. radar tracking stations. Expected life of this satellite is 24 months.
NOAA-13(S) 1993-50A	Atlas-G(S)	Aug 9	102.0	861	845	98.9		This weather observation satellite failed to function in orbit and was determined to be a failure.
STS-51 (S) 1993 58A ACTS 1993-58B ORFEUS-SPA 1993-58C	Shuttle (S) (Discovery)	Sep 12		LANDED AT KSC Sep 22, 1993				Seventeenth Discovery flight with Frank Culbertson, William F. Readdy, James H. Newman, Daniel W. Bursch and Carl E. Watz. The Advanced Communications Technology Satellite(ACTS) will be used to pioneer new initiatives in communications technology. The Orbiting and Retrievable Far and Extreme Ultraviolet Spectrometer-Shuttle Pallet System(ORFEUS-SPA), is an astrophysics mission designed to study very hot and cold matter in the universe Mission duration 236 hrs 11 mins 11 secs

<b>1993</b>								
STS-58(S) 1993 65A	Shuttle (S) (Columbia)	Oct 18		LANDED AT EAFB NOV 1, 1993				Fifteenth Columbia flight with John E. Blaha, Richard Searfoss, David A. Wolf, Margaret Rhea Seddon, Shannon W. Lucid, William McArthur, Jr. and Martin J. Fettman. Spacelab Life Sciences-2(SLS-2) was a mission dedicated to the study of cardiovascular, regulatory, neurovestibular and musculoskeletal systems, to gain more knowledge on how the human body adapts to the space environment. Mission Duration: 336 hrs 12 min 32 sec.
STS-61(S) 1993 75A	Shuttle (S) (Endeavour)	Dec 2		LANDED AT KSC Dec 13, 1993				Fifth Endeavour flight with Richard O. Covey, Kenneth D. Bowersox, F. Story Musgrave, Thomas D. Akers, Jeffery A. Hoffman, Kathryn C. Thornton and Claude Nicollier. This flight was the first on-orbit service of the Hubble Space Telescope(HST). The Solar Array(SA's), the Wide Field/Planetary Camera(WFPC-II), and the Corrective Optics Space Telescope Axial Replacement(COSTAR) were some of the major units serviced. Mission duration: 259 hrs 58 mins 35 secs.
<b>1994</b>								
STS-60(S) 1994 6A	Shuttle (S) (Discovery)	Feb 3		LANDED AT KSC FEB 11, 1994				Eighteenth Discovery flight, with Charles Bolden, Ken Reightler, Ronald Sega, Franklin Chang-Diaz, Jan Davis and Sergei Krikalev as flight crew members. This was the first flight with a Russian cosmonaut on board. The Wake Shield Facility was unsuccessful when it failed to deploy its 3 meter shield. SPACEHAB-2 carried 12 payloads for experimentation in materials processing and biotechnology. Mission duration 199 hrs 09 mins 22 secs.
Galaxy 1R	Delta II (S)	Feb 19	713.1	37253	2871	25.6		A geostationary satellite, Galaxy 1R, was put into orbit to replace the aging Galaxy 1. It will operate with 24 C-band transponders.
STS-62(S) 1994 15A	Shuttle (S) (Columbia)	Mar 9		LANDED AT KSC MAR 18, 1994				Sixteenth Columbia flight, with John Gasper, Andrew Allen, Pieree Thuot, Charles Gemar and Marsha Ivins as flight crew members. The United States Microgravity Payload-2 (USMP-2) made its second flight to study microgravity on materials and fundamental science. Mission duration 335 hrs 16 mins 41 secs.

STS-59 1994 20A	Shuttle (S) Endeavour	Apr 9		LANDED AT KSC APRIL 20, 1994				Sixth Endeavour flight, with Sidney M. Gutierrez, Kevin P. Chilton, M.R. Clifford, Linda M. Godwin, Jay Apt and Thomas D. Jones as flight crew members. The Space Radar Laboratory-1(SRL-1) payload in the cargo bay gave scientist detailed information on human-induced environmental changes from the natural forms of global change. The Measurement of Air Pollution From Satellite(MAPS) was also in the cargo bay. It measured carbon monoxide in the troposphere and lower atmosphere. Mission duration: 269 hrs 49 mins 30 secs
GOES-8 1994-22A	Atlas 1	Apr 13	192.4	42687	191	27.4		The GOES-8 meteorological geostationary spacecraft has instruments on board for high resolution visible and UV imagers and "sounders" for temperature and moisture profiles
STS-65 1994 39A	Shuttle Columbia	Jul 8		LANDED AT KSC JULY 23, 1994				Seventeenth Columbia flight, with Robert D. Cabana, James D. Haisell, Richard J. Hieb, Carl E. Watz, Leroy Chiao, Donald A. Thomas and Chiaki Naito-Mukai as crew members. The International Microgravity Laboratory-2(IML-2) will use furnaces and other facilities to produce a variety of material structures, from crystals to metal alloys. Over 80 investigations will be studied as prepared by over 200 scientist from six space agencies. Mission duration: 353 hrs 55 mins 00 secs
STS 64 1994 59A SPARTAN 1 1994 59B	Shuttle Discovery	Sep 9		LANDED AT EDW SEPTEMBER 20, 1994				Nineteenth Discovery flight, with Richard N. Richards, Susan J. Helms, L. Blaine Hammond, Jerry M. Linenger, Carl J. Meade and Mark C. Lee as crew members. The Lidar in Space Technology Experiment(LITE) will be used to better explain our climate. LITE will help us understand the human impact on the atmosphere and enable us to improve our measurements of the clouds, particles in the atmosphere and the Earth. SPARTAN will be deployed from the Shuttle to study the acceleration and velocity of the solar wind and it will also measure the Sun's corona. Mission duration: 262 hrs 49 mins 57 secs
				DOWN SEPTEMBER 20, 1994

STS-68(S) 1994 62A	Shuttle (S) (Endeavour)	Sep 30		LANDED AT EDW OCT 11, 1994				Seventh Endeavour flight with, Michael A. Baker, Terence W. Wilcutt, Steven L. Smith, Daniel W. Bursch, Peter J.K. Wisoff and Thomas D. Jones as flight crew members. The Space Radar Laboratory-2 is comprised of the Spaceborne Imaging Radar-C/X Band Synthetic Aperture Radar (SIR-C/X-SAR), and the Measurement of Air Pollution from Satellite (MAPS). Mission Duration 269 hrs 46 mins 06 secs
WIND(S) 1994 71A	Delta II	Nov 1		VARIABLE ORBITAL PARAMETERS			1250.0	Measure the solar wind plasma and magnetic field besides several instruments to measure very energetic particles and gamma rays.
STS-66 (S) 1994 73A CRISTA-SPAS 1994 73B	Shuttle (S) (Discovery)	Nov 3		LANDED AT EDW NOV 14, 1994  DOWN NOV 14, 1994				Nineteenth Discovery flight with, Donald R. McMonagle, Ellen Ochoa, Curtis L. Brown, Joseph R. Tanner, Jean-Francois Clervoy and Scott Parazyński as flight crew members. The Atmospheric Laboratory for Applications and Science Spacelab(ATLAS) studied the middle atmosphere's chemical makeup. Seven experiments made up this science experiment. CRISTA-SPAS operated independently of the Shuttle after its release from the Remote Manipulator System. This experiment studied the trace gases in the middle atmosphere and measured winds, wave interaction, turbulence and other processes. Mission Duration: 262 hrs 32 mins 20 secs
NOAA-14 (S) 1994-89 A	Atlas-E	Dec 30		472	468		1030.0	The primary objective is to acquire daily global information for short and long term forecasting. The satellite will be part of the operational polar satellite system.

				Apogee (km)	Perigee (km)	Incl (deg)		
INTELSAT 704 1995-001A	Atlas-2AS	Jan 10						Geostationary communications spacecraft launched from Cape Canaveral. It is parked over the Indian Ocean to provide radio and TV coverage to the Middle East, Africa and parts of Europe.
STS-63 1995-004A	Shuttle(S) (Discovery)	Feb 3					LANDED AS KSC FEB 11, 1995	Twentieth Discovery flight, with James D. Wetherbee, Eileen M. Collen, Bernard A. Harris, Jr., Michael C. Foale, Janice Voss, and Vladimir Georgievich Titovas as flight crew members. The cargo bay deployable payloads were Shuttle-Mir Rendezvous and fly around, SPARTAN 204 Science, and EVA activities. In-cabin payloads were SPACEHAB-3 and AMOS. Mission Duration: 196 hrs 29 mins 36 secs
STS-67 1995-007A	Shuttle(S) (Endeavour)	Mar 2					LANDED AT EDW MAR 18, 1995	Eighth Endeavour flight, with Steven S. Oswald, William G Gregory, John M. Grunsfeld, Wendy B. Lawrence, Tamare E. Jerrigan, Samuel T. Durrance, and Ronald Parise as flight crew members. Cargo Bay Payloads consisted of ASTRO-2 Spacelab with three UV telescopes. Crew cabin Payloads consisted of Commercial MDA ITA (CMIX), Protein Crystal Growth Experiments, Middeck Active Control Experiment (MACE), and Shuttle Amateur Radio Experiment (SAREX). Mission Duration: 399 hrs 09 mins 47 secs
GOES-J 1995-025A	Atlas-1	May 23						Named GOES-9 after launch, this geostationary meteorological spacecraft will first cover the central United States. Later the spacecraft will be moved to cover either the east or west coast. The instruments onboard will provide cloud cover images and monitor atmospheric temperatures and moisture at many altitudes.

STS-71 1995-30A	Shuttle (Atlantis)	June 27		LANDED AT KSC JUL 7, 1995				Fourteenth Atlantis flight, with Robert L. "Hoot" Gibson, Charles J. Precourt, Ellen S. Baker, Gregory J. Harbaugh, Bonnie Dunbar, Anatoly Y. Solovyev(MIR-19-Ascent Only), Gennady Strekalovas (MIR-18-Entry Only), Norm Thagard(MIR-18-Entry Only) crew members. Cargo Bay Payloads consisted of Shuttle-MIR rendezvous and docking, Orbit Docking system, and Shuttle-MIR Science. Cargo Bay Activities consisted of U.S./Russian Space Cooperation and STS-71/MIR Protocol Activities. In-Cabin Payloads consisted of IMAR and Shuttle Amateur Radio Experiment-II(SAREX-II). Mission Duration: 235 hrs 23 mins 09 secs
STS-70 1995-35A	Shuttle (Discovery)	July 13		LANDED AT KSC JUL 22, 1995				Twenty-First Discovery flight, with Terrence T. "Tom" Hendricks, Kevin R. Kregel, Donald A. Thomas, Nancy J. Curkie and Mary E. Weber crew members. Cargo Bay Payloads consisted of Tracking and Data Relay Satellite and Inertial Upper Stage. Middeck Payloads consisted of Biological Research in Canisters(BRIC), Bioreactor Development System(BDS), CPCG, NIH R-2, STL-B and MSX. Mission Duration: 214 hrs 21 mins 09 secs
TDRS-7 1995-35B	STS-70	July 13						An American Geostationary Tracking and Relay Satellite launched from STS-70. It relays data between spacecraft and between spacecraft and ground stations in F and Ku bands. TDRS is parked on 150 W longitude for testing. After tests are completed TDRS will be moved to another latitude.
STS-69 1995-48A	Shuttle (Endeavour)	Sept 7		LANDED AT KSC SEP 18, 1995				Ninth Endeavour flight with David M. Walker, Kenneth D. Cockrell, James S. Voas, James H. Newman and Michael L. Gernhardt as flight crew members. Cargo Bay payloads consisted of the second flight of the Wake Shield Facility, the deployment and recapture of the Spartan 201 and the International Extreme Hitchhiker. Other payloads on the flight were the Capillary Pumped Loop-2 Gas Bridge Assembly, Electrolysis Performance Improvement Concept Study, National Institutes of Health-Cell-4 and the Thermal Energy Storage Experiment. Mission Duration: 260hrs 28 min 56 secs

				Apogee (km)	Perigee (km)	Incl (deg)		
STS-73 1995-56A	Shuttle Columbia	Oct 20		LANDED AT KSC NOV 5, 1995				Eighteenth Columbia flight with Kenneth D. Bowersox, Kent Rominger, Kathryn Thornton, Catherine Coleman, Michael Lopez-Alegria, Albert Sacco and Fred Leslie as crew members. The United States Microgravity Laboratory -2 (USML-2) was the prime payload on this flight. Experiments on gravity in combustion flame spreading, semiconductor crystals and theoretical models of fluid physics were tested. The Orbital Acceleration Measurement System (SAMS), High-Packed Digital Television Demonstration and Three Dimensional Microgravity Accelerometer (3DMA) were on this flight. Mission Duration: 381 hrs 52 mins 21 secs
STS-74 1995-61A	Shuttle Atlantis	Nov 12		LANDED AT KSC NOV 20, 1995				Fifteenth Atlantis flight with Kenneth Cameron, James Haisell, Jerry Ross, William McArthur and Chris Hadfield as crew members. This was the second mission to link up with the MIR space station. The Russian built Docking Module was attached to the Kristall module of the MIR. This Docking module will be used in future docking between the Shuttle and MIR Space Station. The cargo bay also carried the Photogrammetric Appendage Structural Dynamics Experiment (PASDE) Mission Duration 196 hrs 30 mins 54 secs
SOHO 1995-65A	Atlas-2AS	Dec 2				1,850 kg	An ESA-NASA spacecraft was launched from Cape Canaveral Air Station. It carried three American and nine European instruments to observe the sun and its corona. It was maneuvered to orbit around the first Lagrangian point (L-1) at 1,500,000 km in the sunward direction. The instruments will measure the intensity and polarization of light scattered by the coronal electrons, and the composition of cold and hot plasma ejected by the Sun.	
GALAXY 3R 1995-69A	Atlas-2A	Dec 15					A Geostationary communications spacecraft launched from Cape Canaveral Air Station. After parking at 95 degrees W longitude the spacecraft provided 140 television channels to Mexico, the Caribbean, and Central American countries through its 24 C-band and 324 Ku-band transponders.

STS-72 1996-01A	Shuttle (Endeavour)	Jan 11		LANDED AT KSC JAN 20, 1996				Tenth Endeavour flight with Brian Duffy, Brent Jett, Winston Scott Daniel Barry and Kiochi Wakata as flight crew members. The Japanese Space Flyer Unit (SFU) was captured after being launched on March 17, 1995. The deployment and retrieval of the OAST-Flyer with four experiments on board. Also carried on the flight was the Shuttle Solar Backscatter Ultraviolet Experiment, Shuttle Laser Altimeter Payload, Space Tissue Loss Experiment and three Getaway Specials. Mission Duration: 218hrs 00mins 41secs
NEAR 1996-008A	Delta 2	Feb 17					818kg	NEAR (Near Earth Astroid Rendezvous) will orbit around the Eros asteroid. This satellite will first pass by the asteroid 253-Mathid and return by Earth for a gravity boosted speed increase to make the final voyage to Eros. Once in orbit it will provide infrared images, x-ray, gamma-ray spectrometer and magnetometer data. Also on board is a laser range finder and a radioscience instrument.
STS-75 1996-012A	Shuttle (Columbia)	Feb 22		LANDED AT KSC MAR 7, 1996				Nineteenth Columbia flight with Andrew Allen, Scott Horowitz, Jeff Hoffman, Maurizio Cheli, Claude Nicollier, Franklin Chang-Diaz and Umberto Guidoni as the crew members. The deployment of the Tether Satellite System (TSS) ended when the tether broke. The satellite was lost when it reentered the atmosphere. As part of the USMP-3 cargo bay experiments were the Advanced Automated Directional Solidification Furnace (AASDF), Critical Fluid Light Scattering Experiment (Zeno) and the IDGE, OARE, MEPHISTO experiments. There were also three Middeck Glovebox Facility Combustion Investigations (MGBX). Mission Duration: 328 hrs 14 mins 00 secs
Polar 1996-013A	Delta 2	Feb 24	938.1	50,551	5,100	85.9	1,300 kg	Last element of the International Solar-Terrestrial Program (ISTP/GGS). The satellite is in a polar orbit with eleven instruments to measure magnetospheric hot plasma, plasma waves, electric/magnetic fields, x-rays, energetic particles and visible light and UV cameras to map auroral displays.

STS-76 1996-018A	Shuttle (Atlantis)	March 22		LANDED AT KSC MAR 30, 1996				Sixteenth Atlantis flight with Kevin Chilton, Rick Searfoss, Ron Sega, Rich Clifford and Linda Godwin as crew members while Shannon Lucid, Yuri Onufrienco and Yuri Usachev were being taken to the Space Station MIR. The third docking with MIR included over 1,900 lbs of supplies. The mission would include the SPACEHAB module, middeck experiments and a Get Away Special. Mission Duration: 221 hrs 15 mins 53 secs
STS-77 1996-032A	Shuttle (Endeavour)	May 19		LANDED AT KSC MAY 29, 1996				Eleventh Endeavour flight with John H Casper, Curtis Brown, Daniel Bursch, Mario Runco, Marc Garneau and Andrew Thomas as crew members. A Spartan 207 platform was released from the shuttle, with the Inflatable Antenna Experiment (IAE). The PAMS-STU spacecraft was also released from the Shuttle to test attitude stabilization then re-enter the atmosphere. Mission Duration: 240 hrs 40 mins 10 secs
STS-78 1996-036A	Shuttle (Columbia)	June 20		LANDED AT KSC JUL 7, 1996				Twentieth Columbia flight with Terence Henricks, Kevin Kregel, Susan Helms, Richard Linneham, Charles Brady, Jean-Jacques Faver and Robert Thirk as crew members. This flight carried the Life and Microgravity Spacelab (LMS-1) in its cargo bay. There were 22 experiments conducted in the LMS involving fish embryos, rats, Bonzai plants, fluid dynamics, metallurgy and protein crystal growth. Thirteen of the life science experiments were devoted to the study of microgravity and its effects on the the human physiology. Mission Duration: 405 hrs 47 mins 30 secs

STS-79 1996-57A	Shuttle (Atlantis)	Sept 19		LANDED AT KSC SEPT 26, 1996				Seventeenth Atlantis flight with William Readdy, Terrence Wilcutt, Thomas Akers, John Blaha, Jay Apt and Carl Walz as flight crew members. This flight will be the fourth to rendezvous and dock with the MIR space station. This was the first exchange of astronaut when John Blaha replaced Shannon Lucid, who had been on the MIR since late March. This was the first Shuttle to carry a double SPACEHAB module. The forward portion of this module was used to conduct experiments while on orbit, while the aft portion was used to house food, clothing, experimental supplies and spare equipment to be transferred to the MIR. Mission Duration: 243 hrs 18 mins 26 secs
MGS 1997-62A	Delta 2	Nov 7		DUE TO ARRIVE AT MARS SEP, 1997				The Mars Global Surveyor (MGS) is being sent to Mars to remote-sense the atmosphere and soil composition. After completing 180 days of high apogee sensing, an "aerobraking orbit" will descend the MGS to a low circular "mapping orbit". The surface of Mars will be mapped by a thermal emission spectrometer, a laser altimeter and three linescan cameras at visual wavelengths.
STS-80 1996-65A	Shuttle (Columbia)	Nov 19		LANDED AT KSC DEC 7, 1996				Twenty first Columbia flight with Kenneth Cockrell, Kent Rominger, Tamara Jernigan, Thomas Jones and F. Story Musgrave as the flight crew members. Two satellites, the Wake Shield Facility (WSF) and the Retrievable Far & Extreme Ultraviolet Spectrograph-Shuttle Pallet Satellite II (ORFEUS-SPAS II) were both deployed and retrieved on this flight. The WSF was flown to test the growth of thin semiconductor films for advanced electronics. The ORFEUS-SPAS II will observe the evolution of stars, structure of galaxies and the nature of interstellar mediums. The astronauts will test a variety of tools and instruments for future station operations. Mission Duration: 426 hrs 53 mins 18 secs
Mars Pathfinder 1996-68A	Delta 2	Dec 4		DUE TO ARRIVE ON MARS JUL 4, 1997				The Pathfinder will land on Mars cushioned by inflatable airbags. The Sojourner, Pathfinder microver, with Alpha, Proton, X-ray Spectrometer and color cameras will transmit data to the Pathfinder Lander. The solar powered Lander will then transmit its research data and Sojourner data from Mars.

B-147

**Section C**

**Aeronautics & Space  
Transportation Technology**

# Office of Aeronautics & Space Transportation Technology (OASTT)

The OASTT directs the agency's aeronautics research and development programs, including the High-Speed Research Program which is creating and refining the technology and addressing the environmental challenges supporting the development of a future U.S. high speed civil transport aircraft.

The Transportation Technology efforts focus on NASA's Reusable Launch Vehicle (RLV) Program, a government/industry partnership aimed at demonstrating single-stage -to-orbit technology required for reducing the cost of access to space. Through DC-XA, X-34 and X-33 demonstration flights, along with additional demonstration programs in flight- and ground-based, results will allow the country to proceed with full-scale commercial programs that will create new opportunities for space access while significantly improving U.S. economic competitiveness in the world-wide marketplace.

The office also researches advanced technology for subsonic aircraft, manages NASA's weather-related flight safety research, works to improve inspection methods for aging aircraft, propulsion research and development of advanced piloting and air traffic control aids. In addition, it directs numerous flight research programs using high-performance aircraft such as the SR-71, F/A-18, and F-16XL. It also manages fundamental aeronautics research in aerodynamics, fluid dynamics, structural mechanic, hypersonics and human factor issues such as the interaction of pilots with highly-automated cockpits.

The (OASTT) has institutional management responsibility for Ames Research Center, Mountain View, CA; Dryden Flight Research Center, Edwards, CA; Langley Research Center, Hampton, VA; and Lewis Research Center, Cleveland, OH.

## Airplane Program

The research Airplane Program, an effort by NASA and the Space Administration and the military services, was conceived near the end of World War II to perform flight studies with a series of specially-constructed research aircraft in the then unexplored transonic-low-supersonic characteristics of full-scale aircraft in flight.

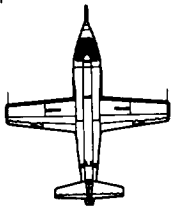

Although supersonic flight was first achieved in 1947, further research in the program resulted in increases in knowledge about the dynamics of manned flight in winged aircraft at speeds up to and in excess of 4500 mph and at altitudes up to and greater than 350,000 feet. Two general categories of aircraft were obtained for the research airplane program: (1) those obtained to explore new areas of performance such as the X-1, D-558 I, X-2 AND X-15; and (2) those obtained to investigate the effects of different configurations, such as the X-3, X-4, X-5, XB-70 and the lifting bodies.

The outstanding contributions of this research program include providing important information on previously unexplored aircraft characteristics; validating the transonic-supersonic characteristics predicted by wind-tunnel tests and analytical techniques; and the intangible benefit of providing confidence in the achievement of safe, controllable transonic-supersonic flight.

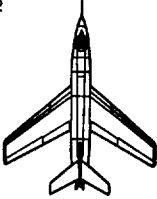

## NACA/NASA X-PLANES

The "X" designation, originally "XS" for experimental Supersonic, applied to a family of experimental aircraft not intended for production beyond a limited number built solely for flight research. The D-558-1 and -2 did not bear the "X" label but were clearly intended for the same purpose. This was also true of the non-X-designated lifting bodies, whereas the XB-70 was originally intended to be a production bomber, and the XF-92A was expected to be a production fighter. Neither of the two latter aircraft actually went into production, and both models became significant research aircraft, hence their inclusion here.

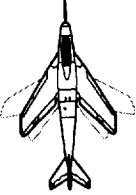

# Summary of "X" Experimental Aircraft

AIRCRAFT	FLIGHT DATES	NUMBER OF FLIGHTS	REMARKS
X-1 	1946-1958	214	Joint program among the NACA, the Air Force, and Bell Aircraft. The bullet-shaped, rocket-powered aircraft became the first airplane to break the sound barrier on Oct. 14, 1947. Flight research by the NACA continued through such advanced models as the X-1B and X-1E, providing a wealth of aerodynamic information for use in correlating wind-tunnel data with actual flight data and for designing later high-performance aircraft.
D-558-1 Manufacturer and # of Airframes: Douglas, three	1947-1953	225	Joint program among the NACA, the Navy-Marine Corps., and Douglas Aircraft. The straight-winged, turbojet-powered "Skystreak" collected data in the transonic region and stability, control, loads buffeting, and handling qualities.
D-558-2 Manufacturer and # of Airframes: Douglas, three	1948-1956	312	Joint program among the NACA, the Navy-Marine Corps., and Douglas Aircraft. The swept-wing aircraft flown with both turbojet and rocket power set an altitude record of 83,235 ft. on Aug. 21, 1953, and a speed record on Nov. 20, 1953, when it became the first aircraft to reach Mach 2. The "Skyrocket" collected data about handling qualities, wing loads, and stability and control, especially pitch-up.

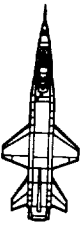

# Summary of "X" Experimental Aircraft

AIRCRAFT	MANUFACTURER	AIRFRAMES	FLIGHT DATES	FLIGHTS	REMARKS
XF-92A	Convair	1	1948-1953 NACA fits.; others by Convair and the Air Force	25	Joint program among the NACA, the Air Force, and Convair to test the country's first delta-wing aircraft. Stability and control, pitch-up, and lift-over drag measurements obtained from this program contributed to the technology used to develop the F-102, F-106, XF2Y-1 Sea Dart, and B-58 aircraft.
X-2 	Bell	2	1954-1956	17	Joint program with the Air Force, although the NACA never flew the swept-wing, rocket-powered aircraft designed to fly Mach 3. The NACA supported the Air Force with advice and data analysis. The X-2 did become the first aircraft to reach Mach 3, recording a Mach 3.2 speed on its last flight, which destroyed the aircraft and killed the Air Force pilot because of inertial coupling. It collected data on aerodynamic heating, stability and control effectiveness at high speeds and altitudes. The X-2 was also the first aircraft to fly higher than 100,000 feet on Sept. 7, 1956, when it reached 126,200 feet 20 days before the aircraft reached Mach 3.2.
X-3 	Douglas	1	1952-1955	26	This slender, jet-powered aircraft tested such new materials as titanium and collected data on stability and control, pressure, distribution, and flight loads. The X-3 failed to achieve the high speeds for which it was designed but pioneered in the use of titanium and contributed to the development of aircraft tire technology.

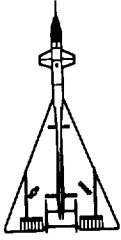

# Summary of "X" Experimental Aircraft

AIRCRAFT	MANUFACTURER	AIRFRAMES	FLIGHT DATES	FLIGHTS	REMARKS
X-4 	Northrop	2	1948-1953	90	In a joint program with the Air Force and Northrop, the NACA conducted most of the flights in this semi-tailless aircraft (which had no horizontal stabilizer). Powered by two turbojet engines and featuring swept wings, the X-4 helped demonstrate that tail surfaces are important for proper control effectiveness but that a properly configured semi-tailless airplane was a viable platform for research on dynamic stability and also provided data (from tufts) on airflow anomalies.
X-5 	Bell	2	1951-1953 Air Force-NACA flights plus a few others by Bell and the Air Force	133	The X-5 completed all of the research goals originally set for the first aircraft capable of variably sweeping its wings in flight. Demonstrating wing sweep from 20 to 60 degrees, the aircraft verified NACA wind-tunnel predictions of reduced drag and improved performance resulting from increased wing sweep as it approached Mach 1. Even the vicious spinning characteristics of the X-5 yielded a wealth of data for determining poor aircrafts spin disign.

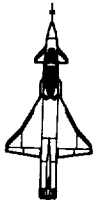

# Summary of "X" Experimental Aircraft

AIRCRAFT	MANUFACTURER	AIRFRAMES	FLIGHT DATES	FLIGHTS	REMARKS
X-15 	North American Aviation	3	1959-1968	199	This joint program by NASA, the Air Force, and the Navy operated the most remarkable of all the rocket research aircraft. Composed of an internal structure of titanium and a skin surface of a chrome-nickel alloy known as Inconel X, the X-15 first set speed records in the Mach 4-6 range with Mach 4.43 on Mar 7, 1961; Mach 5.27 on June 23, 1961; Mach 6.04 on Nov. 9, 1961; and Mach 6.7 on Oct 3, 1967. The airplane set an altitude record of 354,200 feet (67 miles) on Aug. 22, 1963, and provided an enormous wealth of data on hypersonic air flow, aerodynamic heating, control and stability at hypersonic speeds, reaction controls for flight above the atmosphere, piloting techniques for reentry, human factors, and flight instrumentation of relevance not only to aeronautics but to spaceflight.
<b>Lifting bodies</b>					
M2-F1 M2-F1 M2-F3 HL-10 X-24A & 24B	DFRC Northrop Northrop Northrop Martin	1 of each	1963-1975	223  Does not include nearly 400 car tows of the M2-F1	This joint program between the Air Force and NASA demonstrated the ability of pilots to maneuver and safely land a wingless vehicle designed to fly back to Earth from space and be landed like an aircraft at a pre-determined site. The information generated by the lifting body program contributed to the data base led to the development of today's shuttle program, especially its approach and landing techniques. The rocket-powered lifting bodies (all but the unpowered M2-F1) have also contributed to the upcoming X-33 space technology demonstrator and the X-38.

# Summary of "X" Experimental Aircraft

AIRCRAFT	MANUFACTURER	AIRFRAMES	FLIGHT DATES	FLIGHTS	REMARKS
XB-70 	North American	2	1964-1969	129	The joint program among North American Rockwell, the Air Force, and NASA featured the world's largest experimental aircraft with a delta wing and hinged wing tips that could be folded down to a 65° angle to improve stability at the aircraft's supersonic speeds of up to Mach 3, a speed at which the Valkyrie was designed to ride its own shock wave. The program used the Valkyrie to conduct fundamental flight research at high speeds for use in designing future supersonic aircraft, both military and civilian. The aircraft produced a significant quantity of information on supersonic flight at up to Mach 3 speeds in areas such as noise (including sonic booms), potential flight corridors, validation of wind-tunnel data, flight control, operational problems, and clear-air turbulence.
X-29 	Grumman	2	1984-1992	437	In a joint program involving the Defense Advanced Research Projects Agency, the Air Force, NASA, Grumman, and the other contractors, this single-engine jet-powered aircraft investigated the use of advanced composite materials, a forward-swept wing with a thin supercritical airfoil, a variable-incidence canard, a computerized fly-by-wire flight control system to overcome the aircraft's inherent instability, behavior at high angles of attack, and a vortex flow-control system (among other technologies). On Dec. 13, 1985, the X-29 became the first forward-swept-wing airplane in the world to exceed Mach 1 in level flight, and flight results showed that a highly unstable aircraft with forward-swept wings could be flown safely with good control response up to about a 40° angle of attack. The flight instructor also added to engineers' understanding of advanced composites, used increasingly in aircraft construction, and digital flight control systems.

# Summary of "X" Experimental Aircraft

AIRCRAFT	MANUFACTURER	AIRFRAMES	FLIGHT DATES	FLIGHTS	REMARKS
X-30			1986-1994		<p>This joint effort by NASA, the Department of Defense, and five major contractors explored development of technologies for a new generation of aerospace vehicles for hypersonic cruise in the atmosphere or single-stage-to-orbit using airbreathing primary propulsion and horizontal takeoff and landing. Although a full-scale aircraft was never built because Congress ended funding in 1994, the program had expected such a vehicle to fly at Mach 25. The program developed significant advances in high-temperature, carbon-carbon materials, lightweight titanium and beryllium alloys, and high strength, corrosion-resistant titanium-alloy composites. These technologies and the program's work with supersonic-combustion ramjet propulsion will all be useful to subsequent U.S. aerospace efforts in the hypersonic area.</p>
X-31 	Rockwell Aerospace North American Aircraft Deutsche Aerospace	2	1990-1995	555	<p>In a joint program with the Defense Advanced Research Projects Agency, the U.S. Navy, the German Federal Ministry of Defense, Deutsche Aerospace, Rockwell International, the U.S. Air Force, and NASA, the Enhanced Fighter Maneuverability demonstrator showed the value of using thrust vectoring (by means of carbon-carbon paddles) coupled with advanced flight control systems to provide high maneuverability and controlled flight at high angles of attack. Featuring a delta-shaped, composite, twisted camber wing and strakes on the rear fuselage, the X-31 achieved stabilized flight at 70° angle of attack. With nose strakes added to increase stability, the aircraft exhibited remarkable "post-stall" maneuverability, such as a 180° turn at an extremely high angle of attack, known as the "Herbst maneuver."</p>
