piezoelectric actuators. I - Analysis

Actuator placement by degree of controllability including the effect of actuator mass p 67 A91-23739 Disturbance rejection in large space structure control via eigenvalue realization p 67 A91-23741 Computation of frequency domain approximation bounds for large space structures p 68 A91-23746 Control strategies for thermally induced vibrations of space structures p 113 A91-23755 Independent modal space control with positive position edback p 68 A91-23756 Recent developments in the OSU Flexible Structure feedback Control Laboratory p 68 A91-23759 An integrated thermoelastic analysis for periodically loaded space structures p 113 A91-24458 Secant-method adjustment for structural models p 69 A91-24591 A study of the dynamics of annular frame structures on the Progress-40 cargo spacecraft p 69 A91-25235 Robust control for large space structures - Spillover suppression by frequency-shaped optimal regulator p 70 A91-26628 Active stabilization of a large flexible antenna feed p 70 A91-26629 support structure The influence of sampling period in digital control on the spillover in vibration suppression of flexible structures. Approximate theoretical analysis and numerical simulation 1. II - Numerical simulation 2 and experiment p 70 A91-26690 Guidance and control 1990: Proceedings of the Annual Rocky Mountain Guidance and Control Conference, Keystone, CO, Feb. 3-7, 1990 p 162 A91-26801 Calibration and operation of a large space-based optical interferometer [AAS PAPER 90-040] AAS PAPER 90-040] p 176 A91-26816 Structural control sensors for CASES --- Control. Astrophysics and Structures Experiment in Space AAS PAPER 90-0441 p 176 A91-26819 A space-based solar screen against climatic warming p 2 A91-27358 A space parasol as a countermeasure against the eenhouse effect p 2 A91-27359 greenhouse effect An innovative approach for validation of large space structure controls-structures interaction technologies (CSI-SAT) p 70 A91-27418 Application of formex algebra to minimization p 70 A91-27535 Motion control of space structures p 70 A91-27679 Effects of initial conditions on large space structures p 70 A91-27680 Actively controlled optimum structural design p 71 A91-27681 Space construction - A CSI perspective p 71 A91-27683 The truss-beam and space technology p 71 A91-27684 Effect of gravity on dynamic behavior of beams p 52 A91-27687 Large space systems in global change mitigation p 176 A91-27690 Adaptive modal parameters identification for collocated position feedback vibration control p 71 A91-28521 Dynamic analysis of space-related linear and non-linear structures p 71 A91-28612 An optimal estimation approach for enhanced identification of large space structures p 72 A91-28624 On the maneuvering of flexible multi-body systems p 72 A91-28634

Continuation methods in multiobjective optimization for combined structure control design p 72 A91-28632 Experiments in on-orbit identification for control of space p 72 A91-28632

Sensor placement for on-orbit modal identification and correlation of large space structures p 73 A91-29765 Modal identities for multibody elastic spacecraft p 73 A91-29770

Fractional order state equations for the control of p 73 A91-29771 viscoelastically damped structures Experimental results using active control of traveling wave power flow p 73 A91-29776 Adaptive CSL compensation reduced-order-model-based control of a flexible robot p 106 A91-30051 manipulator

Reduced order robust controllers for an experimental p 74 A91-30054 flexible grid Decentralized control experiments on the JPL flexible spacecraft p 74 A91-30056

A control system design methodology for large-scale p 74 A91-30057 interconnected systems

Optimization of linear, controlled structures p 74 A91-30084

Simultaneous control and structure design for large space structures p 75 A91-30085 Model order effects on the transmission zeros of flexible space structures p 75 A91-30087

Failure detection and isolation experiments with the Langley Mini-Mast p 75 A91-30124 Closed loop lab tests of NASA's Mini-Mast p 75 A91-30126 Practical experience with identification of large flexible p 75 A91-30127 structures An averaging approach to optimal adaptive control of large space structures p 76 A91-30138 Energy equivalent expansion --- in designing controllers for flexible space structures p 52 A91-30141 A single-axis testbed for slewing control experiments p 76 A91-30149 Reduced-order model based control of large flexible manipulators - Theory and experiments p 76 A91-30153 Collocated versus non-collocated multivariable control p 76 A91-30164 for flexible structure Power flow, energy balance, and statistical energy analysis for large-scale interconnected systems p 77 A91-30165 Sensor/actuator placement for flexible space p 77 A91-30167 structures Robust modal control of distributed-parameter systems with uncertainty p 77 A91-30173 An iterative algorithm combining model reduction and p 77 A91-30179 control design Integrated identification and robust control tuning for large space structures p 77 A91-30202 Robust nonlinear control of flexible space structures p 77 A91-30203 On control of large space structures p 78 A91-30229 Active disturbance rejection in large flexible space p 78 A91-30230 structures Active and passive joints for damping augmentation of rge space structures p 53 A91-30231 large space structures Approximate circle control design for lightly damped plants p 78 A91-30233 Robustness of a moving-bank multiple model adaptive algorithm for control of a flexible spacestructure p 79 A91-30894 Partial eigenstructure assignment and its application to rge scale systems p 79 A91-31095 Ground-based testing dynamics for prismatic beam in large scale systems p 79 A91-31428 microgravity Particular aspects of the forced response of finite-dimensional modular structures p 79 A91-31761 Minimizing distortion in truss structures - A comparison of simulated annealing and TABU search p 80 A91-31874 [AIAA PAPER 91-1095] A knowledge-based approach to the structural analysis of large space structures [AIAA PAPER 91-1209] p 53 A91-31893 A multiobjective approach to integrated control, structure and optical design [AIAA PAPER 91-1136] A microdynamic version of the tensile test machine [AIAA PAPER 91-1082] p 53 A91-31964 Design considerations of PSR moderate focus-mission structure --- Precision Segmented Reflector [AIAA PAPER 91-1192] p 53 Integrated control of thermally distorted large space antennas [AIAA PAPER 91-0965] p 81 A91-32000 Active damping by a local force feedback with piezoelectric actuators [AIAA PAPER 91-0989] p 81 A91-32020 A recent case study in system identification [AIAA PAPER 91-1190] p 82 A91-32043 Optimal identification using inconsistent modal data p 82 A91-32060 [AIAA PAPER 91-0948] Characterization of damping of materials and structures from nanostrain levels to one thousand microstrain p 82 A91-32065 [AIAA PAPER 91-1125] A nonrecursive 'Order N' preconditioned conjugate gradient/range space formulation of MDOF dynamics (AIAA PAPER 91-1112) p 83 A91-32091 Formulation and solution of inverse spaghetti problem - Application to beam deployment dynamics [AIAA PAPER 91-1113] p 83 p.83 A91-32092 Modelling beam-like space trusses with nonlinear [AIAA PAPER 91-1225] p 83 A91-32103 Testing and application of a viscous passive damper for use in precision truss structures [AIAA PAPER 91-0996] p 54 A91-32108 Joint contact dynamics and controls using passive viscoelastic and active joint actuators [AIAA PAPER 91-0997] p 83 A91-32109 Dynamics of orbiting multibody systems - A formulation with application [AIAA PAPER 91-0998] p 83 A91-32110

LASER ANNEALING SUBJECT INDEX

Free and forced response of nearly periodic multi-span	Active vibration control techniques for flexible space	A Personnel Launch System for safe and efficient
beams and multi-bay trusses	structures	manned operations
[AIAA PAPER 91-0999] p 84 A91-32111 Strain rate sensing for vibration control of flexible	[NASA-CR-185643] p 93 N91-18184 The 5th Annual NASA Spacecraft Control Laboratory	[IAF PAPER 90-161] p 15 A91-13840 The Personnel Launch System p 17 A91-16048
structures	Experiment (SCOLE) Workshop, part 1	United States microgravity programs
[AIAA PAPER 91-1118] p 54 A91-32116	[NASA-CP-10057-PT-1] p 93 N91-18186	p 174 A91-18727
Wave mode control of large truss structures	Integration of mechanism and control for large-angle	Application of statistical distribution theory to
[AIAA PAPER 91-1120] p 84 A91-32118 Active vibration absorber for the CSI evolutionary model	slew maneuvers of flexible structures	launch-on-time for space construction logistic support p 18 A91-27721
Design and experimental results Controls Structures	[NASA-CR-187876] p 93 N91-18188	The Vehicle Control Systems Branch at the Marshall
Interaction	Large space structures and systems in the space station era: A bibliography with indexes	Space Flight Center
[AIAA PAPER 91-1123] p 85 A91-32120	[NASA-SP-7085(01)] p 4 N91-18199	[TABES PAPER 90-1805] p 19 A91-30668
Effect of model error on sensor placement for on-orbit model identification of Large Space Structures	Feasibility study of a synthesis procedure for array feeds	Integrated launch and emergency vehicle system [NASA-CASE-LAR-13780-1] p 149 N91-13481
[AIAA PAPER 91-1180] p 85 A91-32121	to improve radiation performance of large distorted	[NASA-CASE-LAR-13780-1] p 149 N91-13481 Design and fabrication of the NASA HL-20 full scale
On-orbit damage detection and health monitoring of	reflector antennas	research model
large space trusses - Status and critical issues	[NASA-CR-187954] p 135 N91-18329	[NASA-CR-187801] p 153 N91-16008
[AIAA PAPER 91-1181] p 85 A91-32122	Control of second-order information for linear systems p 93 N91-18448	LAUNCH WINDOWS
Mode reduction of flexible appendages via transfer	The Langley Research Center CSI phase-0 evolutionary	Application of statistical distribution theory to
functions and correction vectors [AIAA PAPER 91-1182] p 85 A91-32123	model testbed-design and experimental results	launch-on-time for space construction logistic support p 18 A91-27721
Modal identification experiment design for large space	[NASA-TM-102762] p 24 N91-18455	LAUNCHING SITES
structures	System identification and controller design using	Review and analysis of the register of space objects
[AIAA PAPER 91-1183] p 85 A91-32124	experimental frequency response data	p 33 A91-27569
Sensor placement for on-orbit modal testing	p 94 N91-18989	Integrated launch and emergency vehicle system
[AIAA PAPER 91-1184] p 85 A91-32125 Combined design of structures and controllers for	The 5th Annual NASA Spacecraft Control Laboratory	[NASA-CASE-LAR-13780-1] p 149 N91-13481 LC CIRCUITS
optimal maneuverability p 86 N91-10314	Experiment (SCOLE) Workshop, part 2 [NASA-CP-10057-PT-2] p 94 N91-19122	Simulation and dynamic performance of a 20-kHz
Non-linear vibration of large, imperfect space	Control and mechanism interaction for ground-based	spacecraft power system p 120 A91-30892
structures p 86 N91-10930	testing of space structures p 94 N91-19125	LEAKAGE
Non-linear vibration of large, imperfect space	Hypervelocity impact physics	Residual gas analysis and leak rate measurements
structures	[NASA-CR-4343] p 39 N91-19164	during thermal vacuum tests p 36 N91-15271
[MBB-UO-0080-90-PUB] p 87 N91-11788 Control of complex multibody spacecraft	Modal identification of a deployable space truss [NASA-TM-102720] p 95 N91-19474	An assessment of the Space Station Freedom program's leakage current requirement
[AD-A224707] p 87 N91-11791	[NASA-TM-102720] p 95 N91-19474 A theoretical approach to analysis and design of efficient	[NASA-CR-187077] p 157 N91-20630
Minimizing distortion in truss structures via Tabu	reduced control for space structures	LEGAL LIABILITY
search p 88 N91-13325	[AD-A230223] p 95 N91-20188	The legal hazards of transatlantic cooperation in
Reduced-order filtering for flexible space structures	Moving-bank multiple model adaptive estimation and	space p 8 A91-16896
p 88 N91-13342 Analytical and photogrammetric characterization of a	control applied to a large flexible space structure	LEGUMINOUS PLANTS  Productivity and photosynthesis of selected crop plants
planar tetrahedral truss	[AD-A230515] p 95 N91-20192 Multidisciplinary modeling and design of a space	under orbital light conditions: An approach to solar powered
[NASA-TM-4231] p 56 N91-13473	structure	CELSS p 156 N91-19662
Multivariable methods for the design, identification, and	[AD-A230626] p 95 N91-20198	LEVITATION
control of large space structures. Volume 1: Estimator	Status of DSMT research program	Superconducting six-axis accelerometer
Eigenvalue placement in positive real design [AD-A226525] p 88 N91-13477	[NASA-TM-102764] p 96 N91-20505	p 180 N91-12416 LIBRATIONAL MOTION
Multivariable methods for the design, identification, and	Assessing damping uncertainty in space structures with fuzzy sets p 96 N91-20696	Effects of initial conditions on large space structures
control of large space structures. Volume 3: A study of	Magnetoplasma sheath waves on a conducting tether	p 70 A91-27680
the integrated control/structure design optimization	in the ionosphere with applications to EMI propagation	LIFE (DURABILITY)
problem for large flexible structures	on large space structures p 40 N91-20723	A study of System Interface Sets (SIS) for the host,
[AD-A226526] p 89 N91-13478 Computational methods and software systems for	LASER ANNEALING	target and integration environments of the Space Station Program (SSP)
dynamics and control of large space structures	Laser annealing of amorphous/poly: Silicon solar cell material flight experiment	[NASA-CR-187399] p 134 N91-13096
[NASA-CR-187669] p 89 N91-13480	[NASA-CR-187370] p 46 N91-12151	LIFE CYCLE COSTS
Multivariable methods for the design, identification, and	LASER APPLICATIONS	EVA/ORU model architecture using RAMCOST
control of large space structures. Volume 2: Optimal and	Laser technology for space tasks	p 97 A91-10910
sub-optimal estimation applied to large flexible structures [AD-A226699] p 89 N91-14375	[DLR-MITT-90-10] p 121 N91-12080	MESSOC capabilities and results Model for Estimating Space Station Opertions Costs p 13 A91-10911
Adaptive control of large space structures	Development of a versatile laser light scattering instrument	Prioritizing the standardization opportunities available to
[AD-A227304] p 89 N91-14377	[NASA-CR-182474] p 182 N91-16350	large space systems p 14 A91-10940
Methods for evaluating the predictive accuracy of

SUBJECT INDEX LUNAR BASES

SUBJECTINDEX		LUNAN BASES
German CELSS research with emphasis on the	Sensor/actuator placement for flexible space	The effect of the low Earth orbit environment on space
C.E.B.A.Sproject Closed Equilibrated Biological	structures p 77 A91-30167	solar cells
Aquatic System p 144 A91-23459 An introduction to pressurized volumes in space	Partial eigenstructure assignment and its application to large scale systems p 79 A91-31095	[NASA-TM-103735] p 39 N91-19185 LONG DURATION SPACE FLIGHT
p 145 A91-27686	Control of second-order information for linear systems	Space Station Freedom: Launch pad to the planets -
Space Station Freedom Environmental Control and Life	p 93 N91-18448 LINEAR VIBRATION	A look at on-orbit processing
Support System (ECLSS) phase 3 simplified integrated test trace contaminant control subsystem performance	A velocity command stepper motor for CSI application	[AIAA PAPER 90-3876] p 188 A91-10087 Long duration mission support operations concepts
[NASA-TM-4202] p 146 N91-10103	[NASA-TM-102765] p 57 N91-18456	[AIAA PAPER 90-3682] p 188 A91-10091
Business and life in space p 150 N91-13854	LINKAGES  Position requirements for space station personnel and	ECLSS development for future space missions
Automation of closed environments in space for human comfort and safety p 154 N91-18137	linkages to portable microcomputer performance	(AIAA PAPER 90-3728) p 138 A91-10118
Project Exodus p 191 N91-18138	assessment	Strategies for crew selection for long duration missions
Project EGRESS: The design of an assured crew return vehicle for the space station p 154 N91-18142	[NASA-CR-185606] p 150 N91-14719 LIQUID FLOW	[AIAA PAPER 90-3762] p 138 A91-10132
Project WISH: The Emerald City p 4 N91-18146	One-dimensional analysis of a radial source flow of water	Psychosocial support for long-duration space crews
Spacesuit guidebook	particles into a vacuum [AD-A230729] p 40 N91-20431	[AIAA PAPER 90-3763] p 139 A91-10133 Research of materials and coating of spacecraft external
[NASA-PED-117] p 102 N91-18603 Bioregenerative life support p 155 N91-19014	LIQUID HELIUM	surfaces using recoverable cassettes aboard the
Method for optimal configuration of an ECLSS on the	Superfluid Helium On-Orbit Transfer (SHOOT)	'Salyut-Mir'-type stations [IAF PAPER 90-280] p 42 A91-13925
Space Station Freedom [NASA-TM-104040] p 157 N91-20631	operations p 167 A91-28528 LIQUID MELIUM 2	First results of PO2 examinations in the capillary blood
Intelligent monitoring and diagnosis systems for the	Fluid acquisition system for superfluid helium	of cosmonauts during a long-term space flight in the Space
Space Station Freedom ECLSS p 158 N91-20683	p 167 A91-28533 ASTROMAG coil cooling study	Station 'MiR' (experiment 'Oxitest') [IAF PAPER 90-518] p 140 A91-14164
Fuzzy logic in autonomous orbital operations p 184 N91-20815	[NASA-CR-187768] p 182 N91-16813	Temporary results of the examination of the audition
LIFEBOATS	LIQUID METAL COOLED REACTORS	of cosmonauts during a long-term flight in the space station
Assured crew return capability Crew Emergency Return	SP-100 power system development status p 117 A91-13450	'Mir' with the audiometer 'Elbe-2' (Experiment 'Audio-2')
Vehicle (CERV) avionics p 153 N91-17025 LIFTING REENTRY VEHICLES	SP-100 from ground demonstration to flight validation	[IAF PAPER 90-519] p 141 A91-14165 Psychological, psychiatric, and interpersonal aspects of
Lifting entry rescue vehicle configuration	[DE91-001869] p 121 N91-13986	long-duration space missions p 141 A91-14234
p 145 A91-27807 LIGHT BEAMS	LIQUID SLOSHING Response of gravity level fluctuations on the Gravity	An Antarctic crossing as an analogue for long-term manned spaceflight p 142 A91-22194
Development of a versatile laser light scattering	Probe-B Spacecraft propellant system	Humans in earth orbit and planetary exploration
instrument	[AIAA PAPER 91-0488] p 166 A91-19325	missions; IAA Man in Space Symposium, 6th, Tashkent,
[NASA-CR-182474] p 182 N91-16350 LIGHT GAS GUNS	Slosh wave excitation and stability of spacecraft fluid systems	Uzbek SSR, Sept. 29-Oct. 3, 1990, Selection of Papers p 142 A91-23426
Acceleration of particles in light gas guns for	[TABES PAPER 90-1810] p 78 A91-30672	Preliminary medical results of the Mir year-long
micrometeroid/space debris simulation	Nonlinear modal resonances in low-gravity slosh-spacecraft systems	mission p 142 A91-23427
p 35 N91-15266 LIGHT SCATTERING	[AIAA PAPER 91-1000] p 84 A91-32112	Activity of the sympathoadrenal system in cosmonauts during 25-day space flight on station Mir
A preview of a microgravity laser light scattering	LIQUIDS	p 142 A91-23441
instrument	Tank gauging apparatus and method [NASA-CASE-MSC-21059-2] p 168 N91-15511	Man in space - The use of animal models p 144 A91-23466
[AIAA PAPER 91-0779] p 175 A91-21614  Development of a versatile laser light scattering	LITHIUM FLUORIDES	Psychosocial support for cosmonauts
instrument	Ceramic canisters for lithium fluoride thermal storage	p 146 A91-31449
[NASA-CR-182474] p 182 N91-16350 LINE OF SIGHT	integrated with solar dynamic space power systems [IAF PAPER 90-222] p 118 A91-13882	Workshop on Exercise Prescription for Long-Duration Space Flight
Discrete-time maneuvering of a flexible spacecraft	LOAD TESTS	[NASA-CP-3051] p 146 N91-10574
p 69 A91-23763	Experiences with and prospects for dynamic mechanical testing of spacecraft structures p 21 N91-15258	Considerations for an exercise prescription
Development and verification of key technologies for the success of agile space missions p 75 A91-30086	LOADS (FORCES)	p 148 N91-10585 The importance of manned space stations
LINEAR ARRAYS	Research in Structures, Structural Dynamics and	p 5 N91-18202
Linear laser diode arrays for improvement in optical disk recording	Materials, 1990 [NASA-CP-3064] p 86 N91-10301	Bioregenerative life support p 155 N91-19014  New experimental approach in quality factor and dose
[NASA-CR-182098] p 135 N91-17342	Summary and recommendations for initial exercise	equivalent determination during a long term manned space
LINEAR QUADRATIC GAUSSIAN CONTROL	prescription p 148 N91-10588	mission p 156 N91-19679
LQG and direct rate feedback control with model reduction on a flexible laboratory grid structure	Cost optimisation of load carrying structures p 55 N91-11870	LONG TERM EFFECTS  Method for optimal configuration of an ECLSS on the
p 68 A91-23758	Experiences with and prospects for dynamic mechanical	Space Station Freedom
Simultaneous control and structure design for large	testing of spacecraft structures p 21 N91-15256 Current limiting remote power control module	[NASA-TM-104040] p 157 N91-20631
space structures p 75 A91-30085 The CASES flight experiment - An overview	p 122 N91-18987	LONGITUDINAL WAVES  Control of longitudinal waves in a rod with Voigt
p 178 A91-30088	LOCKING	damping p 59 A91-12623
Shape control of distributed parameter systems - Modeling and performance analysis p 76 A91-30134	System for connecting fluid couplings [NASA-CASE-MFS-26042-1-SB] p 168 N91-14613	LOW COST  Low cost space power generation
Precision tethered satellite attitude control	LOCOMOTION	p 124 N91-19212
p 187 N91-11046	Biomedical perspectives on locomotion in null gravity p 147 N91-10583	LOW GRAVITY MANUFACTURING
Large space manipulators study [AD-A227276] p 108 N91-16381	LOGISTICS	Microgravity science issues for the nineties [AIAA PAPER 91-0143] p 175 A91-21377
LINEAR QUADRATIC REGULATOR	Probable impacts of space operations on Air Force civil	Some aspects of European microgravity utilisation
The optimal LQR digital control of a free-free orbiting platform	engineering p 2 A91-27719 Spaceport aurora: An orbiting transportation node	p 182 N91-15206 LOW TEMPERATURE PHYSICS
[IAF PAPER 90-318] p 60 A91-13982	p 191 N91-18133	Space Cryogenics Workshop, Frascati, Italy, July 18,
Multibody interaction effects on Space Station attitude	Utilization of common pressurized modules on the Space	19, 1988, Proceedings p 166 A91-28526
control and momentum management p 63 A91-19014  Robust control for large space structures - Spillover	Station Freedom [NASA-TM-102779] p 6 N91-20189	LUBRICANT TESTS  Comparison of lubricant performance in an oscillating
suppression by frequency-shaped optimal regulator	Method for optimal configuration of an ECLSS on the	spacecraft mechanism
p 70 A91-26628	Space Station Freedom	[ASME PAPER 90-TRIB-30] p 111 A91-29472
Accommodation of kinematic disturbances during minimum-time maneuvers of flexible spacecraft	[NASA-TM-104040] p 157 N91-20631	Space Station accommodation of the Space Exploration
p 73 A91-29767	LOGISTICS MANAGEMENT Optimal selection of orbital replacement unit spares: A	Initiative
Reduced order robust controllers for an experimental flexible grid p 74 A91-30054	space station system availability model	[AIAA PAPER 90-3758] p 188 A91-10128 Life sciences issues affecting space exploration
Multivariable methods for the design, identification, and	p 101 N91-11787  LONG DURATION EXPOSURE FACILITY	p 141 A91-18735
control of large space structures. Volume 2: Optimal and	The role of the Long Duration Exposure Facility in the	Human planetary exploration strategy featuring highly
sub-optimal estimation applied to large flexible structures [AD-A226699] p 89 N91-14375	design of the Space Station Freedom	decoupled elements and conservative practices [AIAA PAPER 91-0328] p 189 A91-21464
LINEAR SYSTEMS	[IAF PAPER 90-080] p 42 A91-13786 Long Duration Exposure Facility (LDEF) results	An infrastructure for early lunar development
Probe waveforms and the reconstruction of structural dynamic Green's functions p 69 A91-24590	[AIAA PAPER 91-0096] p 43 A91-21367	p 190 A91-27613 MALEO: Modular Assembly in Low Earth Orbit - An
Practical experience with identification of large flexible	Coatings could protect composites from hostile space	alternate strategy for lunar base deployment
structures p 75 A91-30127	environment p 45 A91-32134	p 190 A91-27667
Power flow, energy balance, and statistical energy analysis for large-scale interconnected systems	Preliminary results from the advanced photovoltaic experiment flight test	Discussion paper on environmental hazards on the Moon, in low Earth orbit, and in low Mars orbit
p 77 A91-30165	[NASA-TM-103269] p 45 N91-11058	[DE90-017854] p 34 N91-11646

LUNAR DUST		SUBJECT INDEX

SUBJECT INDEX **NASA PROGRAMS** 

SUBJECT INDEX		NASA PROGRAMS
Integrated logistics support - Suggested approach for	Special class of nonlinear damping models in flexible	MOON
Columbus p 13 A91-10902	space structures p 65 A91-22946	An Odyssey for the turn of the millennia
Optimization of the phasing strategy between Hermes and the Space Station p 159 A91-12327	LQG and direct rate feedback control with model reduction on a flexible laboratory grid structure	[IAF PAPER 90-412] p 189 A91-14016
On-board expert system for manned rendez-vous	p 68 A91-23758	Discussion paper on environmental hazards on the Moon, in low Earth orbit, and in low Mars orbit
operation assistance p 159 A91-12331	Adaptive modal parameters identification for collocated	[DE90-017854] p 34 N91-11646
In-space technology experiments - Prerequisite for	position feedback vibration control p 71 A91-28521 Particular aspects of the forced response of	Spaceport aurora: An orbiting transportation node
missions of the future [IAF PAPER 90-001] p 172 A91-13726	finite-dimensional modular structures p 79 A91-31761	p 191 N91-18133 MORPHOLOGY
Strategic planning for the International Space Station	Optimal identification using inconsistent modal data [AIAA PAPER 91-0948] p 82 A91-32060	Protective functions of skin p 146 N91-10555
[IAF PAPER 90-083] p 7 A91-13788	Minimum time Pulse Response Based Control of flexible	MOSAICS
An innovative approach for distributed and integrated resources planning for the Space Station Freedom	structures	A precision star tracker for the nineties - A system guide to applications
[IAF PAPER 90-084] p 15 A91-13789	[AIAA PAPER 91-1119] p 84 A91-32117 Experiences with and prospects for dynamic mechanical	[AAS PAPER 90-014] p 111 A91-26806
Status of Space Station/JEM utilization preparation in	testing of spacecraft structures p 21 N91-15256	MOTION SIMULATION  Experiences with and proceeds for dynamic machanical
Japan [IAF PAPER 90-089] p 7 A91-13793	Combining base-motion testing with techniques	Experiences with and prospects for dynamic mechanical testing of spacecraft structures p 21 N91-15256
[IAF PAPER 90-089] p 7 A91-13793 Operations influence on Space Station Freedom	developed for point-force excitation for the mode! identification of mechanical structures	MOTION STABILITY
[IAF PAPER 90-091] p 2 A91-13794	p 90 N91-15257	Variable-structure control approach of decentralised model-reference adaptive systems p 59 A91-11592
Assembling a Space Station in orbit	New capabilities in modal testing on large-scale project level p 90 N91-15258	MULTIBEAM ANTENNAS
[IAF PAPER 90-092] p 98 A91-13795 Operations procedure planning tools for Space Station	On-orbit structural dynamic performance of a 15-meter	Radiating payload testing in the large compact payload
robotics task analysis	microwave radiometer antenna	test range at ESTEC p 22 N91-15287 MULTILAYER INSULATION
[IAF PAPER 90-095] p 104 A91-13798	[NASA-TP-3041] p 92 N91-17114 Modal identification of a deployable space truss	Characterization of space station multilayer insulation
Preparation for Japanese Experiment Module operation	[NASA-TM-102720] p 95 N91-19474	damage due to hypervelocity space debris impact
[IAF PAPER 90-096] p 8 A91-13799	MODEL REFERENCE ADAPTIVE CONTROL	p 58 N91-19007 MULTIMISSION MODULAR SPACECRAFT
In orbit technology experiments [IAF PAPER 90-346] p 172 A91-13959	Variable-structure control approach of decentralised model-reference adaptive systems p 59 A91-11592	Flight systems to facilitate deployment and on-orbit
[IAF PAPER 90-346] p 172 A91-13959 Microgravity science and applications overview	MODELS	operations of the upper atmosphere research satellite [AIAA PAPER 91-0802] p 98 A91-21623
Research, facility and instrumentation development, Space	An expanded simulation of Space Station Freedom	MULTISPECTRAL RADAR
Station Freedom operations and utilization planning [IAF PAPER 90-370] p 173 A91-13997	operations [IAF PAPER 90-097] p 15 A91-13800	Tropical rain mapping radar on the Space Station
Lessons learned from the Hubble Space Telescope	A 10,000-hr life test of an engineering model resistojet	p 174 A91-15773
planning and scheduling system implementation and	[NASA-TM-103216] p 167 N91-11802	Work, exercise, and space flight. 3: Exercise devices
operation [AIAA PAPER 90-5039] p 16 A91-14963	MODULARITY Spaceport aurora: An orbiting transportation node	and protocols p 147 N91-10579
United States microgravity programs	p 191 N91-18133	A unique problem of muscle adaptation from weightlessness: The deceleration deficiency
p 174 A91-18727	MODULES  Reliding blocks in appear	p 147 N91-10582
NASA evolution of exploration architectures [AIAA PAPER 91-0325] p 189 A91-21462	Building blocks in space [AD-A224614] p 101 N91-11789	Exercise issues related to the neuromuscular function
Human planetary exploration strategy featuring highly	Development of a versatile laser light scattering	and adaptation to microgravity p 148 N91-10584  Considerations for an exercise prescription
decoupled elements and conservative practices	instrument [NASA-CR-182474] p 182 N91-16350	p 148 N91-10585
[AIAA PAPER 91-0328] p 189 A91-21464 Operating Europe's future in-orbit infrastructure	Spaceport aurora: An orbiting transportation node	MUSCULOSKELETAL SYSTEM
p 9 A91-22191	p 191 N91-18133	The state of human bone tissue during space flight p 143 A91-23444
The Columbus Free-Flying Laboratory - A stepping stone	Implementation strategies for load center automation	Workshop on Exercise Prescription for Long-Duration
towards European autonomy p 185 A91-22192 Inter-operability of Europe's Hermes Spaceplane with	on the space station module/power management and distribution testbed p 123 N91-19019	Space Flight [NASA-CP-3051] p 146 N91-10574
the Columbus Free-Flying Laboratory, and with 'Freedom'	Centrifuge Facility Conceptual System Study. Volume	Space medicine considerations: Skeletal and calcium
and 'MIR'-type space stations p 17 A91-27120 Optimal selection of space transportation fleet to meet	1: Facility overview and habitats	homeostasis p 147 N91-10580
multi-mission space program needs p 17 A91-27640	[NASA-TM-102860-VOL-1] p 183 N91-19566 Utilization of common pressurized modules on the Space	Changes in mineral metabolism with immobilization/space flight p 147 N91-10581
The selection of constructors for space construction	Station Freedom	Biomedical perspectives on locomotion in null gravity
p 100 A91-27724 The ERS-1 spacecraft and its payload	[NASA-TM-102779] p 6 N91-20189	p 147 N91-10583

SUBJECT INDEX ORBITAL ASSEMBLY

CODDEOT WIDEX		01.5
Final validation of autonomous spacecraft	Robust control for large space structures - Spillover	ORBIT CALCULATION
p 4 N91-15216 ONBOARD EQUIPMENT	suppression by frequency-shaped optimal regulator p 70 A91-26628	Space dynamics; Proceedings of the International Symposium, Toulouse, France, Nov. 6-10, 1989
Columbus generic element management concept	Control of an orbiting platform supported Tethered	p 1 A91-12276
p 18 A91-27722	Satellite System p 186 A91-26631	Cross-correlation analysis of on-orbit residual
ONE DIMENSIONAL FLOW	Optimal projection control of an experimental truss structure p 73 A91-29764	accelerations in Spacelab [AIAA PAPER 91-0348] p 175 A91-19246
One-dimensional analysis of a radial source flow of water particles into a vacuum	Sensor placement for on-orbit modal identification and	Reduced-dynamic technique for precise orbit
[AD-A230729] p 40 N91-20431	correlation of large space structures p 73 A91-29765	determination of low earth satellites p 161 A91-22939
OPERATING COSTS	Accommodation of kinematic disturbances during minimum-time maneuvers of flexible spacecraft	Experiments in on-orbit identification for control of space
MESSOC capabilities and results Model for Estimating Space Station Opertions Costs p 13 A91-10911	p 73 A91-29767	structures p 72 A91-28633 The determination of the gas-surface interaction from
Cost impacts of supporting a future European space	Design of optimal second-order state estimators	satellite orbit analysis as applied to ANS-1 (1975-70A)
station	p 74 A91-29791  An averaging approach to optimal adaptive control of	p 34 A91-31669
[IAF PAPER 90-602] p 8 A91-14090	large space structures p 76 A91-30138	ORBIT PERTURBATION
OPERATING SYSTEMS (COMPUTERS)  A flexible object oriented spacecraft operating system	Slew maneuvers of large flexible spacecrafts p 77 A91-30168	The influence of aerodynamic forces on low earth orbits p 158 A91-12277
(FOS) p 132 A91-27427	A decentralized linear quadratic control design method	Experimental determination of the coefficients of the
Network, system, and status software enhancements	for flexible structures	equations of the perturbed motion of a spacecraft with
for the autonomously managed electrical power system breadboard. Volume 3: Commands specification	[NASA-CR-187860] p 92 N91-16059 <b>OPTIMIZATION</b>	elastic elements p 62 A91-17030 ORBIT TRANSFER VEHICLES
[NASA-CR-185882] p 120 N91-10620	Geometric programming design of spacecraft protective	Behavior of local inventories at remote sites Space
Ada/POSIX binding: A focused Ada investigation	structures to defeat earth-orbital space debris	Transportaion System Orbiting Vehicles
[NASA-CR-187398] p 134 N91-13095	[AIAA PAPER 90-3662] p 49 A91-10078	p 158 A91-10942
OPERATIONS RESEARCH	How artificial intelligence can improve man-machine interface - Practical example with extravehicular	Unmanned servicing of earth observation systems in sunsynchronous orbits
Fourth Annual Workshop on Space Operations Applications and Research (SOAR 90)	activities	(IAF PAPER 90-045) p 159 A91-13761
[NASA-CP-3103-VOL-1] p 158 N91-20641	[IAF PAPER 90-026] p 97 A91-13748	Ariane transfer vehicle scenario
OPERATOR PERFORMANCE	Space Station building and assembly optimization [IAF PAPER 90-093] p 98 A91-13796	[IAF PAPER 90-166] p 16 A91-13844
Evaluation of telerobotic systems using an instrumented task board p 110 N91-20658	Optimization of a Cassegrainian	Ariane Transfer Vehicle status
OPTICAL COMMUNICATION	collector/receiver-system for solar-dynamic space power	[IAF PAPER 90-167] p 16 A91-13845 MALEO: Modular Assembly in Low Earth Orbit - An
Transceiver for Space Station Freedom	generation	alternate strategy for lunar base deployment
p 132 A91-22816 Free-space optical communications in support of future	[IAF PAPER 90-224] p 118 A91-13884 Computational trends in large scale engineering	p 190 A91-27667
manned space flight p 132 A91-22817	optimization p 51 A91-17609	Three orbital transfer vehicles p 164 N91-18156
OPTICAL COMPUTERS	Secant-method adjustment for structural models	Orbital debris removal and salvage system
Application of optical distributed sensing and	p 69 A91-24591 Optimal selection of space transportation fleet to meet	p 38 N91-18171 Composite flexible insulation for thermal protection of
computation to control of a large flexible spacecraft p 66 A91-23731	multi-mission space program needs p 17 A91-27640	space vehicles
Optical distributed sensing and computation for a	Actively controlled optimum structural design	[NASA-TM-103836] p 115 N91-19304
proposed flexible beam experiment p 67 A91-23733	p 71 A91-27681	ORBITAL ASSEMBLY
OPTICAL DATA STORAGE MATERIALS Spaceflight optical disk recorder development	A prototype model for human/automation trade-offs p 100 A91-27708	Concurrent research on the Space Station transportation node
[AIAA PAPER 90-5031] p 129 A91-14958	Active control of structural vibration using a	[AIAA PAPER 90-3757] p 188 A91-10129
OPTICAL DISKS	multi-frequency spectral optimization strategy - With	Space Station integrated truss structure and assembly
Spaceflight optical disk recorder development [AIAA PAPER 90-5031] p 129 A91-14958	applications to rotating machinery p 72 A91-28613  Continuation methods in multiobjective optimization for	techniques [IAF PAPER 90-066] p 97 A91-13775
Linear laser diode arrays for improvement in optical disk	combined structure control design p 72 A91-28632	Assembling a Space Station in orbit
recording	Optimization of linear, controlled structures	[IAF PAPER 90-092] p 98 A91-13795
[NASA-CR-182098] p 135 N91-17342 OPTICAL EQUIPMENT	p 74 A91-30084 An improved multilevel optimization approach	Space Station building and assembly optimization [IAF PAPER 90-093] p 98 A91-13796
Optical surface refurbishment in space environment	p 53 A91-30414	Automated assembly of large space structures
p 100 A91-29681	Minimizing distortion in truss structures - A comparison	[IAF PAPER 90-272] p 98 A91-13919
A multiobjective approach to integrated control, structure	of simulated annealing and TABU search [AIAA PAPER 91-1095] p 80 A91-31874	Passive attitude damping of alternative assembly configurations of Space Station Freedom
and optical design [AIAA PAPER 91-1136] p 81 A91-31917	Optimum design of intelligent truss structures	p 65 A91-22941
Acceleration effects observed in optical data taken in	[AIAA PAPER 91-1158] p 80 A91-31885	Workspace visualization and time-delay telerobotic
Spacelab 3 FES p 179 N91-12405	Control-structure integrated design - A computational approach	operations [AAS PAPER 90-005] p 106 A91-26835
OPTICAL FIBERS Smart skins and structures overview	[AIAA PAPER 91-1161] p 80 A91-31888	Multiple manipulator control from orbiter for Space
p 51 A91-16786	Topologically-based adaptive mesh generator for shape	Station assembly
OPTICAL MATERIALS	optimal design [AIAA PAPER 91-1212] p 80 A91-31896	[AAS PAPER 90-007] p 99 A91-26837
Influence of simulated space environment on the performance of Optical Solar Reflector (OSR)	Shape optimization using fully-automatic 3-D mesh	Requirements and concept for an on-orbit construction facility for phase 1 Space Station Freedom
p 29 A91-14399	generation	p 99 A91-27653
OPTICAL MEASURING INSTRUMENTS	[AIAA PAPER 91-1132] p 81 A91-31913 A mathematical basis for the design optimization of	An Astronaut Positioning System for Space Station
Active structures for use in precision control of large optical systems p 50 A91-15170	adaptive trusses in precision control	assembly and maintenance support p 100 A91-27654 Telerobotic capabilities for Space Station operations
Smart skins and structures overview	[AIAA PAPER 91-1134] p 81 A91-31915	p 106 A91-27655
p 51 A91-16786	A multiobjective approach to integrated control, structure	Fluid line deployment and repair for Space Station
Application of optical distributed sensing and computation to control of a large flexible spacecraft	and optical design [AIAA PAPER 91-1136] p 81 A91-31917	p 100 A91-27656 Low earth orbit infrastructure to accommodate manned
p 66 A91-23731	Optimal identification using inconsistent modal data	lunar missions p 190 A91-27663
Optical distributed sensing and computation for a	[AIAA PAPER 91-0948] p 82 A91-32060	Space transportation node - The Atrium Facility
proposed flexible beam experiment p 67 A91-23733	Optimization criteria for the design of orbital replacement units	p 190 A91-27664 A robotics testbed for in-space assembly tasks
OPTICAL RADAR  Laser radar beam steering mirrors p 50 A91-15173	[MBB-UO-0092-90-PUB] p 101 N91-10109	p 18 A91-27675
OPTICAL TRACKING	Combined design of structures and controllers for	A prototype model for human/automation trade-offs
Gaze control and spatial memory in weightlessness	optimal maneuverability p 86 N91-10314  Cost optimisation of load carrying structures	p 100 A91-27708
p 157 N91-19692 OPTIMAL CONTROL	p 55 N91-11870	The selection of constructors for space construction p 100 A91-27724
Optimal design and control of a cross-ply laminate for	Multifunctional structures for aerospace applications	A language model for space construction control
maximum frequency and minimum dynamic response	p 46 N91-11875	p 100 A91-27725

SUBJECT INDEX SCHEDULES

OBOTS	SAFETY	Space information systems in the Space Station era
Teleoperated and automatic operation of two robots in	The influence of material properties on design validity	Proceedings of the AIAA/NASA International Symposium
a space laboratory environment [IAF PAPER 90-016] p 103 A91-13739	and margins p 55 N91-11868 Panel summary of recommendations	on Space Information Systems, Washington, DC and Greenbelt, MD, June 22, 23, 1987 p 133 A91-28475
Manipulation hardware for microgravity research	p 151 N91-15931	Space station p 3 N91-10576
[NASA-TM-103423] p 107 N91-14498	Spacelab D-1 mission p 151 N91-15933	SATELLITE CONTROL
NASA Laboratory telerobotic manipulator control system	Space station pressurized laboratory safety guidelines p 152 N91-15937	The risk areas in on-board space system development
architecture [NASA-CR-187751] p 108 N91-16385	Interdependence of science requirements and safety	p 131 A91-20221 Automatic control in aerospace; IFAC Symposium.
A simple 5-DOF walking robot for space station	limitations on the space station p 152 N91-15938	Tsukuba, Japan, July 17-21, 1989, Selected Papers
application p 109 N91-20653	Postlanding optimum designs for the assured crew return vehicle p 154 N91-18126	p 69 A91-26606
Operations with the special purpose dextrous	Spaceport aurora: An orbiting transportation node	Guidance and control 1990; Proceedings of the Annual
manipulator on Space Station Freedom p 110 N91-20659	p 191 N91-18133	Rocky Mountain Guidance and Control Conference, Keystone, CO, Feb. 3-7, 1990 p 162 A91-26801
A space servicing telerobotics technology	Project EGRESS: The design of an assured crew return vehicle for the space station p 154 N91-18142	On the control of Tethered Satellite Systems
demonstration p 110 N91-20660	SAFETY FACTORS	[AIAA PAPER 91-1002] p 187 A91-32114
Ground controlled robotic assembly operations for	Space debris - Can policy avoid disaster?	Payload accommodations. Satellite servicing support
Space Station Freedom p 102 N91-20665	[AIAA PAPER 90-3774] p 25 A91-10140	p 163 N91-17047
ROBUSTNESS (MATHEMATICS)  Modeling of uncertain dynamics for robust controller	Advanced multimegawatt space nuclear power concepts p 116 A91-12831	SATELLITE DESIGN Cost optimisation of load carrying structures
design in state space p 64 A91-22113	A Personnel Launch System for safe and efficient	p 55 N91-11870
Robust control for large space structures - Spillover	manned operations	SATELLITE GROUND SUPPORT
suppression by frequency-shaped optimal regulator	[IAF PAPER 90-161] p 15 A91-13840 Critical safety assurance factors for manned spacecraft	The Mobile Servicing System (MSS) - Canada's
p 70 A91-26628  A control system design methodology for large-scale	- A fire safety perspective	contribution to Space Station 'Freedom' [AIAA PAPER 90-3625] p 6 A91-10056
interconnected systems p 74 A91-30057	[IAF PAPER 90-555] p 140 A91-14075	An expert system for Hermes in-orbit operations ground
Design and implementation of robust decentralized	Technical aspects of the control of space debris	support p 14 A91-12332
control laws for the ACES structure at Marshall Space	[IAF PAPER 90-645] p 28 A91-14100 Artificial space debris - Effects and prevention: A	SATELLITE GUIDANCE
Flight Center p 76 A91-30129 Robust modal control of distributed-parameter systems	review	Navigation, guidance and control subsystem of Space Flyer Unit p 161 A91-26643
with uncertainty p 77 A91-30173	[IAF PAPER 89-626] p 34 A91-30298	SATELLITE IMAGERY
Integrated identification and robust control tuning for	Session 2 summary and key issues identification p 152 N91-15936	The imaging Fourier transform spectrometer for the
large space structures p 77 A91-30202	Design and development of a space station hazardous	SIMURIS mission p 177 A91-29554
Robust nonlinear control of flexible space structures p 77 A91-30203	materials information system for assessing chemical	SATELLITE NETWORKS
Robust control of an active precision truss structure	compatibility p 153 N91-17120	System concepts for the European Data Relay System p 132 A91-22909
p 78 A91-30207	SAFETY MANAGEMENT Safety risk assessment on the Space Station Freedom	Data transmission networks p 134 N91-14576
Vibration suppression of flexible structures using colocated velocity feedback and nonlocal actuator	[AIAA PAPER 90-3771] p 139 A91-10137	SATELLITE ORIENTATION
control p 87 N91-12108	Design and development of a space station hazardous	The optimal LQR digital control of a free-free orbiting
Robust control of flexible structures: Theory and	materials information system for assessing chemical compatibility p 153 N91-17120	platform [IAF PAPER 90-318] p 60 A91-13982
experiments p 92 N91-17119	SALYUT SPACE STATION	SATELLITE PERTURBATION
Robust control synthesis for uncertain dynamical systems p 93 N91-17393	Future international cooperation on space stations	Orbital analyses of a debris population in a
Control of second-order information for linear systems	[IAF PAPER 90-639] p 8 A91-14124 Librational instability of rigid space station due to	sun-synchronous orbit p 27 A91-12338
p 93 N91-18448	translation of internal mass p 65 A91-22940	Experimental determination of the coefficients of the equations of the perturbed motion of a spacecraft with
A robust momentum management and attitude control system for the space station	Basic architecture of manned space stations	elastic elements p 62 A91-17030
[NASA-CR-188115] p 96 N91-20202	p 5 N91-18204 SAMPLED DATA SYSTEMS	SATELLITE POWER TRANSMISSION
OCKET ENGINES	The influence of sampling period in digital control on	Space power systems Russian book p 119 A91-22099
Integrated launch and emergency vehicle system [NASA-CASE-LAR-13780-1] p 149 N91-13481	the spillover in vibration suppression of flexible structures.	An evolutionary path to satellite solar power systems
OCKET FIRING	Approximate theoretical analysis and numerical     Approximate theoretical analysis and numerical	p 119 A91-26063
Effect of an anomalous thruster input during a simulated	simulation 1. II - Numerical simulation 2 and experiment p 70 A91-26690	SATELLITE ROTATION  Response of gravity level fluctuations on the Gravity
docking maneuver p 162 A91-27811 : tODS	SAMPLING	Probe-B Spacecraft propellant system
Control of longitudinal waves in a rod with Voigt	Spacelab 3 mission p 151 N91-15934	[AIAA PAPER 91-0488] p 166 A91-19325
damping p 59 A91-12623	SATELLITE ANTENNAS Space-communications antennas Russian book	Modeling and stabilization of rotating flexible structures p 78 A91-30205
OTATING BODIES  Active control of structural vibration using a	p 128 A91-12918	SATELLITE SURFACES
multi-frequency spectral optimization strategy - With	Dynamic evaluation for the DRTS user spacecraft's	Effect of the nonuniform density of charge formed on
applications to rotating machinery p 72 A91-28613	antenna pointing system p 70 A91-26609  Design of a Shape Memory Alloy deployment hinge for	a spacecraft surface p 34 A91-32369
Modeling and stabilization of rotating flexible	reflector facets	Contamination effects of satellite material outgassing products on thermal surfaces and solar cells
structures p 78 A91-30205	[AIAA PAPER 91-1162] p 53 A91-31846	[AD-A230199] p 40 N91-20187
Active control of structural vibration using a	Holography: A successful tool for distortion	SATELLITE TRACKING
multi-frequency spectral optimization strategy - With	measurements on antennas under space simulation conditions p 91 N91-15268	Summary of the AIAA/NASA/DOD Orbital Debris Conference - Technical issues and future directions
applications to rotating machinery p 72 A91-28613	SATELLITE ATTITUDE CONTROL	[AIAA PAPER 90-3860] p 25 A91-10203
Determination of the optimal configuration of artificial	Attitude and relative position measurement on board	SATELLITE-BORNE INSTRUMENTS
gravity space habitats based upon Coriolis accelerations	the Columbus MTFF p 158 A91-12306  Multibody interaction effects on Space Station attitude	The GEO platform . [AIAA PAPER 90-3639] p 184 A91-10065
[IAF PAPER ST-90-001] p 140 A91-14135 Numerical estimates of secular effects in the	control and momentum management p 63 A91-19014	Space Station Freedom: Dynamic instrumentation for
translational-rotational motion of an orbital station with	Stochastic attitude control for an orbiting Tethered	a large space structure
'Martian' gravity on board p 161 A91-21985	Platform Subsatellite system during station keeping p 185 A91-23738	[NASA-TM-102711] p 93 N91-17432
OTATING FLUIDS	Disturbance rejection in large space structure control	SATELLITE-BORNE RADAR Tropical rain mapping radar on the Space Station
Slosh wave excitation and stability of spacecraft fluid systems	via eigenvalue realization p 67 A91-23741	p 174 A91-15773
[TABES PAPER 90-1810] p 78 A91-30672	Robust control for large space structures - Spillover	SCALE MODELS
IOTATION	suppression by frequency-shaped optimal regulator p 70 A91-26628	Design and fabrication of the NASA HL-20 full scale research model
Mental rotation of three-dimensional shapes in microgravity p 157 N91-19694	Navigation, guidance and control subsystem of Space	[NASA-CR-187801] p 153 N91-16008
OVING VEHICLES	Flyer Unit p 161 A91-26643	Designs for the ATDRSS tri-band reflector antenna
The NASA Telerobotics Research Program	Attitude determination and control for the multi-mission	[NASA-TM-103754] p 58 N91-20184
p 105 A91-26608 IUN TIME (COMPUTERS)	Space Payload Platform (SPP) p 186 A91-27411	Status of DSMT research program [NASA-TM-102764] p 96 N91-20505
Parallel processing and expert systems	Attitude control of tethered satellites	SCALING LAWS
p 25 N91-20700	p 187 N91-11045 Precision tethered satellite attitude control	Hybrid scaled structural dynamic models and their use
_	p 187 N91-11046	in damping prediction p 63 A91-19018 Amplitude scaling of solar array discharges
S	SATELLITE COMMUNICATION	p 119 A91-23075
ACCADIO EVE HOVELETA	Telescience testbed [IAF PAPER 90-017] p 103 A91-13740	SCHEDULES
ACCADIC EYE MOVEMENTS Gaze control and spatial memory in weightlessness	A European advanced data relay system	An intelligent value-driven scheduling system for Space Station Freedom with special emphasis on the electric

## SOLAR POWER SATELLITES

SOLAR POWER SATELLITES		CODDECT INDEX
SOLAR POWER SATELLITES	NASCAP/LEO calculations of current collection	Summary of the AIAA/NASA/DOD Orbital Debris
Investigation of high efficient solar energy concentrators	p 38 N91-17733	Conference - Technical issues and future directions
with the help of the Soviet automatic universal orbital	SPACE COLONIES	[AIAA PAPER 90-3860] p 25 A91-10203 The government's response to the interagency report
station (AUQS-SM) [IAF PAPER 90-217] p 117 A91-13877	An introduction to pressurized volumes in space p 145 A91-27686	on orbital debris
Commercialization strategies for space power	Automation of closed environments in space for human	[AIAA PAPER 90-3861] p 25 A91-10204
technology	comfort and safety p 154 N91-18137	Defining orbital debris environmental conditions for
[IAF PAPER 90-617] p 170 A91-14118 Space power systems Russian book	SPACE COMMERCIALIZATION	spacecraft vulnerability assessment [AIAA PAPER 90-3862] p 25 A91-10205
p 119 A91-22099	Space Station Freedom commercial infrastructure [AIAA PAPER 90-3760] p 169 A91-10131	Orbital debris environment
SOLAR RADIATION	[AIAA PAPER 90-3760] p 169 A91-10131 Space Station Freedom growth power requirements	[AIAA PAPER 90-3863] p 26 A91-10206
Solar F10.7 radiation - A short term model for Space	p 116 A91-13445	A high severity space hazard - Orbital debris
Station applications [AIAA PAPER 91-0116] p 160 A91-19144	Economic consequences of commercial space	[AIAA PAPER 90-3865] p 26 A91-10207 Radar observations of orbital debris at NASA Johnson
Photochemical spacecraft self-contamination:	operations	Space Center
Laboratory results and systems impacts	[IAF PAPER 90-609] p 169 A91-14113	[AIAA PAPER 90-3868] p 26 A91-10208
[AD-A226488] p 35 N91-12739 SOLAR REFLECTORS	An analysis on space commercialization in Japan [IAF PAPER 90-614] p 170 A91-14115	Verification and validation of algorithms for obtaining debris data using high frequency radars
Influence of simulated space environment on the	Commercialization strategies for space power	[AIAA PAPER 90-3869] p 26 A91-10209
performance of Optical Solar Reflector (OSR)	technology	CCD observations of orbital debris
p 29 A91-14399 SOLAR SAILS	[IAF PAPER 90-617] p 170 A91-14118	[AIAA PAPER 90-3870] p 26 A91-10210
Solar sail on the track	Commercial space activities versus outer space as the province of all mankind? - An assessment of the influence	A space-based concept for a collision warning sensor [AIAA PAPER 90-3871] p 26 A91-10211
[IAF PAPER 90-496] p 166 A91-14158	of Article I Para. 1 of the Outer Space Treaty on commercial	Track two diplomacy - An international framework for
Attitude and orbital modelling of solar-sail spacecraft	space activities	controlling orbital debris
p 162 A91-27123 SOLAR SIMULATION	[IAF PAPER ST-90-007] p 170 A91-14140 The next 40 years in space - 40th International	[AIAA PAPER 90-3896] p 26 A91-10222 Historical growth of quantities affecting on-orbit collision
Thirteen meter diameter space simulation test facility	Astronautical Congress of the IAF, Torremolinos, Spain,	hazard
p 20 N91-15228	Oct. 7-13, 1989, Report p 2 A91-14375	[AIAA PAPER 90-3902] p 27 A91-10224
An RF anechoic load assembly for use during spacecraft	United States microgravity programs	Debris clouds in eccentric orbits [AIAA PAPER 90-3903] p 27 A91-10225
solar simulation testing p 22 N91-15286 SOLAR SIMULATORS	p 174 A91-18727 Changing patterns of international cooperation in space	An analytic description of debris cloud evolution starting
Solar simulated fluxes spectral analysis automation	Book p 9 A91-26183	from the equations of motion
p 36 N91-15272	TABES 90 - Annual Technical and Business Exhibition	[AIAA PAPER 90-3904] p 27 A91-10226
SOLAR SPECTRA  Preliminary results from the advanced photovoltaic	and Symposium, 6th, Huntsville, AL, May 15, 16, 1990, Submitted Papers p 3 A91-30656	Space debris and micrometeorite events experienced by WL Experiment 701 in prolonged low earth orbit
experiment flight test	Space station p.3 N91-10576	[AIAA PAPER 90-3905] p 27 A91-10227
[NASA-TM-103269] p 45 N91-11058	Measurement and Characterization of the Acceleration	An evaluation of the mass and number of satellites in
SOLAR SPECTROMETERS  The imaging Fourier transform spectrometer for the	Environment on Board the Space Station [NASA-CP-3088] p 178 N91-12401	low earth orbit p 27 A91-12336 Collision risk in space - Detailed analysis and basic
SIMURIS mission p 177 A91-29554	[NASA-CP-3088] p 178 N91-12401 Implications of acceleration environments on scaling	consequences for design and operation of larger
SOLAR SYSTEM	materials processing in space to production	structures p 27 A91-12337
An Odyssey for the turn of the millennia	p 170 N91-12404	Orbital analyses of a debris population in a sun-synchronous orbit p 27 A91-12338
[IAF PAPER 90-412] p 189 A91-14016 Biospheres and solar system exploration	New accelerometers under development p 180 N91-12415	Analysis of orbital manoeuvres of a large space structure
p 149 N91-13843	Industrial and scientific application of space travel	to avoid collisions with space debris p 59 A91-12339
SOLAR THERMAL ELECTRIC POWER PLANTS	p 170 N91-12731	The junkyard in the sky p 28 A91-13400
Ceramic materials for Space Station's heat of fusion thermal energy storage	Space and biotechnology: An industry profile (NASA-CR-187034) p 171 N91-13051	Spacecraft shielding against orbital debris - A review of the technological work undertaken in Europe
[IAF PAPER 90-221] p 118 A91-13881	Biological Life Support Technologies: Commercial	[IAF PAPER 90-277] p 42 A91-13922
SOLAR WIND	Opportunities	Dispersion of debris clouds from on-orbit fragmentation
Solar cycle effects on the near-Earth space systems [AD-A228037] p 37 N91-15972	(NASA-CP-3094) p 149 N91-13842 Great Britain in space p 10 N91-15194	events [IAF PAPER 90-565] p 28 A91-14080
SOLID STATE DEVICES	Perspectives of European activities in space	An assessment of active removal as an option for
A precision star tracker for the nineties - A system guide	p 10 N91-15198	mitigating the space debris environment
to applications [AAS PAPER 90-014] p 111 A91-26806	Key issues in space nuclear power	[IAF PAPER 90-568] p 28 A91-14081 Orbital debris removal by laser radiation
GaAs FET amp launches 16 W for Space Station	[NASA-TM-103656] p 123 N91-19179 The transition of ground-based space environmental	[IAF PAPER 90-569] p 28 A91-14082
p 132 A91-27572	effects testing to the space environment	The space debris issue - Problems and
SOLID SURFACES	p 48 N91-20738	recommendations [IAF PAPER 90-570] p 28 A91-14083
Surface discharge on e-irradiated polymers [ONERA, TP NO. 1990-185] p 44 A91-26088	SPACE COMMUNICATION Soace-communications antennas Russian book	Technical aspects of the control of space debris
SOUND FIELDS	p 128 A91-12918	[IAF PAPER 90-645] p 28 A91-14100
Sixteen hundred cubic meter acoustic test facility	Transceiver for Space Station Freedom	United States studies in orbital debris - Prevention and
p 21 N91-15229 Performance and operational capabilities of the Large	p 132 A91-22816 Free-space optical communications in support of future	mitigation [IAF PAPER 90-646] p 28 A91-14101
European Acoustic Facility (LEAF) p 21 N91-15245	manned space flight p 132 A91-22817	U.S. studies in orbital debris
SOUND WAVES	GaAs FET amp launches 16 W for Space Station	[IAF PAPER 90-564] p 29 A91-14102
Performance and operational capabilities of the Large European Acoustic Facility (LEAF) p 21 N91-15245	p 132 A91-27572 Space information systems in the Space Station era;	Strategy for the economic removal of numerous larger debris objects from earth orbits
SOUNDING ROCKETS	Proceedings of the AIAA/NASA International Symposium	[IAF PAPER 90-567] p 29 A91-14103
Microgravity and Japan p 174 A91-16849	on Space Information Systems, Washington, DC and	Classification of debris orbits with regard to collision
SOYUZ SPACECRAFT	Greenbelt, MD, June 22, 23, 1987 p 133 A91-28475	hazard in geostationary region [IAF PAPER 90-571] p 29 A91-14104
Mir mission report: New crew launched to Mir - Japanese reporter in space p 9 A91-28978	A framework for building real-time expert systems p 125 N91-20688	The ESA and US reports on space debris - Platform
SPACE ADAPTATION SYNDROME	SPACE DEBRIS	for future policy initiatives p 30 A91-16897
Activity of the sympathoadrenal system in cosmonauts	Geometric programming design of spacecraft protective	3-D geometrical analysis tool for meteoroids/debris
during 25-day space flight on station Mir p 142 A91-23441	structures to defeat earth-orbital space debris [AIAA PAPER 90-3862] p 49 A91-10078	impact risk assessment
SPACE BASED RADAR	Spacecraft wall design for increased protection against	[AIAA PAPER 91-0117] p 30 A91-19145 Practical considerations of impact of orbital debris on
Rendezvous radar for the orbital maneuvering vehicle	penetration by space debris impacts	space operations
p 99 A91-25408 SPACE CHARGE	[AIAA PAPER 90-3663] p 49 A91-10079	[AIAA PAPER 91-0300] p 30 A91-19224
Effects of a surface discharge on the space charge	Freedom Station wall design using hydrodynamic modelling — for meteroroid and space debris impacts	Orbital debris damage estimates using coupled pre- and
distributions in e-irradiated teflon and Kapton films	[AIAA PAPER 90-3664] p 49 A91-10080	post-impact calculations [AIAA PAPER 91-0302] p 31 A91-21448
(ONERA, TP NO. 1990-170) p 42 A91-16747	Augmentation of orbital debris shielding for Space	Examples of technology transfer from the SDIO kinetic
Currents between tethered electrodes in a magnetized laboratory plasma	Station Freedom [AIAA PAPER 90-3665] p 49 A91-10081	energy weapon lethality program to orbital debris
[NASA-CR-186128] p 35 N91-12344	Space debris - Can policy avoid disaster?	modeling
Current Collection from Space Plasmas	[AIAA PAPER 90-3774] p 25 A91-10140	[AIAA PAPER 91-0304] p 31 A91-21450 Design of a shuttle-based space debris telescope
[NASA-CP-3089] p 37 N91-17713 Theory of plasma contactors in ground-based	Space Station meteoroid and debris design requirements	p 32 A91-23223
experiments and low Earth orbit p 37 N91-17721	[AIAA PAPER 90-3776] p 41 A91-10141	Hypervelocity impact testing of non-metallic materials
Effects of neutral gas releases on electron beam	Legal implementation of orbital debris mitigation	p 43 A91-24427
injection from electrically tethered spacecraft	practices - A survey of options and approaches	Space debris and the world community
p 37 N91-17731	[AIAA PAPER 90-3778] p 25 A91-10142	p 32 A91-27584

Overview of the JEM program [IAF PAPER 90-062] p 7 A91-13772	Simulation and dynamic performance of a 20-kHz spacecraft power system p 120 A91-30892
Development of Japanese Experiment Module (JEM)	Analysis and design of a high power, digitally-controlled
[IAF PAPER 90-068] p 7 A91-13777	spacecraft power system
The Columbus free flying laboratory	[NASA-CR-186546] p 120 N91-11053
[IAF PAPER 90-070] p 184 A91-13779 Preparation for Japanese Experiment Module	. Space station common module network topology and hardware development
operation	[NASA-CR-184034] p 126 N91-14373
[IAF PAPER 90-096] p 8 A91-13799	Preliminary survey of 21st century civil mission
Particular aspects of the forced response of	applications of space nuclear power
finite-dimensional modular structures p 79 A91-31761  Space station common module network topology and	[NASA-TM-101249] p 121 N91-14817 Solar dynamic heat receiver technology
hardware development	[NASA-CR-187040] p 122 N91-15297
[NASA-CR-184034] p 126 N91-14373	Subsystems component definitions summary program
Project EGRESS: The design of an assured crew return	[NASA-TM-4247] p 23 N91-15714
vehicle for the space station p 154 N91-18142	Advanced Stirling receiver development program, phase
Winged cargo return vehicle conceptual design p 23 N91-18144	[NASA-CR-185281] p 122 N91-17452
Development, functions of Kvant-2 supplementary	The environment power system analysis tool
equipment module p 11 N91-20155	development program p 122 N91-17734
Augmentation of the space station module power	Ground-based testing of space nuclear power plants
management and distribution breadboard p 125 N91-20685	[DE91-006179] p 24 N91-18798
SPACECRAFT MOTION	Key issues in space nuclear power [NASA-TM-103656] p 123 N91-19179
A particular case of the motion of a dynamically	Space Photovoltaic Research and Technology, 1989
symmetrical viscoelastic body in a central Newtonian	[NASA-CP-3107] p 123 N91-19182
gravitational field p 62 A91-17026	The OAST space power program p 123 N91-19183
Experimental determination of the coefficients of the equations of the perturbed motion of a spacecraft with	Review of thin film solar cell technology and applications for ultra-light spacecraft solar arrays
elastic elements p 62 A91-17030	p 124 N91-19198
A numerical and experimental approach for the analysis	GaP betavoltaic cells as a power source
of the dynamic accuracy of the stabilization of flexible	p 124 N91-19211
spacecraft under the effect of internal disturbances p 62 A91-17033	Low cost space power generation p 124 N91-19212
Numerical estimates of secular effects in the	Spaceflight performance of several types of silicon solar
translational-rotational motion of an orbital station with	cells on the LIPS 3 satellite p 124 N91-19213
'Martian' gravity on board p 161 A91-21985	The Advanced Photovoltaic Solar Array (APSA)
Motion control of space structures p 70 A91-27679	technology status and performance p 125 N91-19217
Collision detection for spacecraft proximity operations p 162 A91-29761	Conceptual study of on orbit production of cryogenic propellants by water electrolysis
Nonlinear dynamical model of relative motion for the	[NASA-TM-103730] p 168 N91-19317
orbiting debris problem p 34 A91-29790	ETARA PC version 3.3 user's guide: Reliability,
Currents between tethered electrodes in a magnetized	availability, maintainability simulation model
laboratory plasma [NASA-CR-188128] p 35 N91-12344	[NASA-TM-103751] p 125 N91-19462
[NASA-CR-186128] p 35 N91-12344 SPACECRAFT ORBITS	Models for multimegawatt space power systems [DE91-008008] p 125 N91-20561
Dispersion of debris clouds from on-orbit fragmentation	An intelligent value-driven scheduling system for Space
events	Station Freedom with special emphasis on the electric
[IAF PAPER 90-565] p 28 A91-14080 A particular case of the motion of a dynamically	power system p 125 N91-20678
symmetrical viscoelastic body in a central Newtonian	A framework for building real-time expert systems p 125 N91-20688
gravitational field p 62 A91-17026	Autonomous power expert system advanced

p 162 A91-27123

# PERSONAL AUTHOR INDEX

LARGE SPACE STRUCTURES AND SYSTEMS IN THE SPACE STATION ERA / A Bibliography (Supplement 03) **DECEMBER 1991** 

#### Typical Personal Author Index Listing

Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence.

#### AARON, JOHN

Space Station Freedom pressurized element interior

[IAF PAPER 90-071]

p 139 A91-13780

ABADIR, JEANNETTE

Software reuse - The challenge of the 90's in software development

[AIAA PAPER 90-5080]

p 130 A91-14993

## ABDULAZIZ, S.

Annealing characteristics of irradiated hydrogenated amorphous silicon solar cells p 124 N91-19214

## ABE. MITSURU

Space experiments of Deployable Boom and Umbrella Test Satellite (DEBUT) [IAF PAPER 90-008]

ABED, EYAD

p 50 A91-13733

Control of complex multibody spacecraft [AD-A224707] p 87 N91-11791

ABED, EYAD H.

Stabilization of tethered satellites during station p 185 A91-17924

#### ABELE, H.

Evaluation of airborne and settled particulate contamination in a controlled environment for spacecraft testing and molecular contamination measurements during p 23 N91-15289 spacecraft thermal vacuum tests

#### ABRAMOV, I. P.

Autonomous EVA support complex designed for usage during Space Station assembly and maintenance -Methods to increase the complex effectiveness p 98 A91-13783 (IAF PAPER 90-075)

## ABU-SABA, ELIAS G.

The truss-beam and space technology

p 71 A91-27684

#### ACCOLA, ANNE L.

Operations influence on Space Station Freedom p 2 A91-13794 [IAF PAPER 90-091]

#### ACTON. L.

A solar interferometric mission for ultrahigh resolution imaging and spectroscopy - SIMURIS p 177 A91-29553

Optimal design and control of a cross-ply laminate for maximum frequency and minimum dynamic response

ADAM, SUSAN

Microgravity cursor control device evaluation for Space Station Freedom workstations p 184 N91-20717

#### ADAMS, MAURICE L.

Active control of structural vibration using a multi-frequency spectral optimization strategy - With p 72 A91-28613 applications to rotating machinery

#### ADAMS, RICHARD R.

Analytical and photogrammetric characterization of a planar tetrahedral truss p 56 N91-13473

[NASA-TM-4231]

ADKISSON, R. W.

An Astronaut Positioning System for Space Station assembly and maintenance support p 100 A91-27654 AGAFONOV, M. S.

Experimental researches on fluid physics aboard manned orbital stations - Outcomes and prospects p 165 A91-13968 [IAF PAPER 90-369]

#### AHERN, JAMES P.

The government's response to the interagency report on orbital debris

[AIAA PAPER 90-3861]

p 25 A91-10204

AHLF, P. R.

Space Station Freedom growth power requirements p 116 A91-13445

The role of Space Station Freedom in the Human Exploration Initiative

p 190 A91-30663 [TABES PAPER 90-1306]

# CORPORATE SOURCE INDEX

LARGE SPACE STRUCTURES AND SYSTEMS IN THE SPACE STATION ERA / A Bibliography (Supplement 03) **DECEMBER 1991** 

#### Typical Corporate Source Index Listing

Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

Academia Sinica, Beijing (China). Environmental testing for Chinese communications p 20 N91-15226 Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France). Space Vehicle Flight Mechanics [AGARD-AR-294] p 11 N91-19124 Aeritalia S.p.A., Turin (Italy). # FOREIGN TECHNOLOGY INDEX

LARGE SPACE STRUCTURES AND SYSTEMS IN THE SPACE STATION ERA / A Bibliography (Supplement 03)

**DECEMBER 1991** 

#### Typical Foreign Technology Index Listing

Listings in this index are arranged alphabetically by country of intellectual origin. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the citation in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

#### AUSTRALIA

Orbital debris damage estimates using coupled pre- and post-impact calculations [AIAA PAPER 91-0302] p 31 A91-21448

Adaptive modal parameters identification for collocated p 71 A91-28521 position feedback vibration control **AUSTRIA** 

The development of advanced centrifuges for space biology experiments

[IAF PAPER 90-550] p 173 A91-14073 Coordination of eye, head and arm movements in weightlessness p 155 N91-19588

Is physiological tremor (microvibration) influenced by microgravity p 155 N91-19595

Productivity and photosynthesis of selected crop plants under orbital light conditions: An approach to solar powered p 156 N91-19662 CELSS

### В

### BELGIUM

A new facility for fluid sciences - The liquid structure facility

[IAF PAPER 90-373] p 166 A91-13969 p 131 A91-20222 Dapres, the archiving challenge

Active damping by a local force feedback with piezoelectric actuators p 81 A91-32020 [AIAA PAPER 91-0989]

IAL space facilities for thermal vacuum testing

p 21 N91-15234 ISO optical cryogenic tests in the IAL space FOCAL-5 p 21 N91-15235

The space simulation facilities at IAL SPACE p 24 N91-19151

#### BRAZIL

Experimental determination of satellite bolted joints thermal resistance p 58 N91-19157

#### BULGARIA

Result from scientific program 'Shipka' outboard 'Mir' etation [IAF PAPER 90-082]

p 139 A91-13787

#### CANADA

The Mobile Servicing System (MSS) - Canada's contribution to Space Station 'Freedom'

p 6 A91-10056 [AIAA PAPER 90-3625] Automation and robotics technologies for the Mobile Servicing System
[AIAA PAPER 90-3703]

p 102 A91-10102 Space station's Mobile Servicing System

A91-13773 [IAF PAPER 90-063] Configuration and design of the Mobile Servicing System

[IAF PAPER 90-067] p 7 A91-13776 Operations procedure planning tools for Space Station

p 104 A91-13798 (IAF PAPER 90-095) An approach to system modes and dynamics of the

evolving Space Station Freedom [IAF PAPER 90-319] p 61 A91-13988

The ESA and US reports on space debris - Platform for future policy initiatives p 30 A91-16897 Dynamics during slewing and translational maneuvers

of the Space Station based MRMS p 63 A91-19517 Modeling of uncertain dynamics for robust controller design in state space p 64 A91-22113

Design of a shuttle-based space debris telescope p 32 A91-23223

Experimental demonstration of offset control with an application to the tethered payload p 185 A91-23740 A formulation for studying dynamics of an orbiting flexible mobile manipulator p 68 A91-23752

Control of an orbiting platform supported Tethered Satellite System p 186 A91-26631 Approximate solutions for vibrations of deploying

p 73 A91-29769 appendages Dynamics of orbiting multibody systems - A formulation

with application p 83 A91-32110

[AIAA PAPER 91-0998] On the control of Tethered Satellite Systems p 187 A91-32114 IAIAA PAPER 91-10021

Performance and operational capabilities of the Large European Acoustic Facility (LEAF) p 21 N91-15245

Non-linear generation of acoustic noise in the IAR p 24 N91-19143 spacecraft Operations with the special purpose dextrous manipulator on Space Station Freedom

p 110 N91-20659 Magnetoplasma sheath waves on a conducting tether

in the ionosphere with applications to EMI propagation on large space structures p 40 N91-20723 CHINA, PEOPLE'S REPUBLIC OF

Variable-structure control approach of decentralised model-reference adaptive systems p 59 A91-11592 Dynamic analysis of flexible spacecraft

[IAF PAPER 90-321] p 61 A91-13983 Hybrid adaptive control of Space Station

[IAF PAPER 90-333] p 61 A91-13989 Influence of simulated space environment on the performance of Optical Solar Reflector (OSR)

p 29 A91-14399 Stochastic attitude control for an orbiting Tethered Platform Subsatellite system during station keeping

p 185 A91-23738 An improved multilevel optimization approach

p 53 A91-30414 Environmental testing for Chinese communications p 20 N91-15226

#### CZECHOSLOVAKIA

Technical aspects of the control of space debris [IAF PAPER 90-645] p 28 A91-14100 Activity of the sympathoadrenal system in cosmonauts during 25-day space flight on station Min

p 142 A91-23441

Our experience in the evaluation of the thermal comfort during the space flight and in the simulated space p 143 A91-23452 Space debris and the world community

p 32 A91-27564

# Typical Contract Number Index Listing

Listings in this index are arranged alphanumerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under the contract are shown. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

# LARGE SPACE STRUCTURES AND SYSTEMS

# IN THE SPACE STATION ERA / A Bibliography (Supplement 03)

# Typical Report Number Index Listing

Listings in this index are arranged alphanumerically by report number. The page number indicates the page on which the citation is located. The accession number denotes the number by which the citation is identified. An asterisk (\*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

## LARGE SPACE STRUCTURES AND SYSTEMS IN THE SPACE STATION ERA / A Bibliography (Supplement 03)

#### **Typical Accession Number Index Listing**

Listings in this index are arranged alphanumerically by accession number. The page number listed to the right indicates the page on which the citation is located. An asterisk (\*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

## AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A91-10000 Series)

Publications announced in *IAA* are available from the AIAA Technical Information Service as follows: Paper copies of accessions are available at \$10.00 per document (up to 50 pages), additional pages \$0.25 each. Standing order microfiche are available at the rate of \$1.45 per microfiche for *IAA* source documents and \$1.75 per microfiche for AIAA meeting papers.

Minimum air-mail postage to foreign countries is \$2.50. All foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to: Technical Information Service, American Institute of Aeronautics and Astronautics, 555 West 57th Street, New York, NY 10019. Please refer to the accession number when requesting publications.

#### STAR ENTRIES (N91-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the STAR citation. Current values for the price codes are given in the tables on NTIS PRICE SCHEDULES.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, VA 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the \* symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report number* shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

- Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)
- Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.
- Avail: ESDU. Pricing information on specific data, computer programs, and details on Engineering Sciences Data Unit (ESDU) topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on the page titled ADDRESSES OF ORGANIZATIONS.
- Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).
- Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, CA. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.
- Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, DC 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.
- Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.
- Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of \$1.50 each, postage free.
- Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.
- Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.
- Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

#### FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 52 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 52 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

#### **PUBLIC COLLECTION OF NASA DOCUMENTS**

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and ' from ESA – Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.
