FORWARD

This edition of the Microgravity Science and Applications (MSA) Bibliography is a comprehensive compilation of government reports, contractor reports, conference and symposia proceedings, and journal articles dealing with flight experiments utilizing a low-gravity environment to elucidate and control various processes, and with ground-based activities that provide supporting research. It encompasses literature published but not cited in the 1990 Revision, literature published during 1991, and literature either submitted for publication or in press.

Some papers are on file and copies can be made available to scientists in the field on request to the bibliographer.

Any omissions that might have occurred are sincerely regretted. Investigators are encouraged to submit to the bibliographer, information on any work that was inadvertently omitted, or any new work, for inclusion in next year's edition of the Bibliography. All correspondence concerning corrections, additions, or deletions to the Microgravity Science and Applications Bibliography should be directed to: Ms. Elizabeth Pentecost, USRA, Suite 330, 409 Third Street, SW, Washington, DC 20024.

The Microgravity Science and Applications Division wishes to thank the Universities Space Research Association (USRA) and in particular Ms. Elizabeth Pentecost, for her efforts in the compilation and publication of this report.

MICROGRAVITY SCIENCE AND APPLICATIONS PROGRAM

A. U.S. PROGRAM

Electronic Materials

- Alexander, J.I.D., Amiroudine, S., Ouazzani, J. and Rosenberger, F., "Analysis of the Low-Gravity Tolerance of Bridgman-Stockbarger Crystal Growth. II. Transient and Periodic Accelerations," J. Crystal Growth **113**, 21 (1991).

13. ABSTRACT (Maximum 200 words) This edition of the Microgravity Science and Applications (MSA) Bibliography is a compilation of government reports, contractor reports, conference proceedings, and journal articles dealing with flight experiments utilizing a low-gravity environment to elucidate and control various processes, or with ground-based activities that provide supporting research. It encompasses literature published but not cited in the <u>1990 Revision</u> and that literature which has been published in the past year. Subdivisions of the Bibliography include: Electronic Materials; Metals, Alloys, and Composites; Fluids, Interfaces and Transport; Glasses and Ceramics; Biotechnology; Combustion Science; and Experimental Technology, Instrumentation and Facilities. Also included are a limited number of publications from the European, Soviet and Japanese programs.				
14. SUBJECT TERMS electronic materials protein crystal growth microgravity science and applications			15. NUMBER OF PAGES 80	
			16. PRICE CODE A05	
17. SECURITY CLASSIFICATION OF REPORT Unclassified		18. SECURITY CLASSIFICATION OF THIS PAGE Unclassified	19. SECURITY CLASSIFICATION OF ABSTRACT Unclassified	20. LIMITATION OF ABSTRACT Unlimited
