N90-10085**CONSOLE: A CAD TANDEM FOR OPTIMIZATION-BASED DESIGN INTERACTING WITH USER-SUPPLIED SIMULATORS**

By

Michael K. H. Fan, Li-Sheng Wang, Jan Koninckx and Andre L. Tits  
University of Maryland  
College Park, Maryland

**ABSTRACT**

The most challenging task when designing a complex engineering system is that of coming up with an appropriate system "structure." This task calls extensively upon the engineer's ingenuity, creativity, intuition and experience. After a structure has been (maybe temporarily) selected, it remains to determine the "best" value of a number of "design parameters." The engineer's input is still essential here, as multiple tradeoffs are bound to appear. However, except in the simplest cases, achieving anything close to optimal would be impossible without the support of numerical optimization. Providing such support while emphasizing tradeoff exploration through man-machine interaction is the purpose of interactive optimization-based design packages such as CONSOLE (Proceedings of American Control Conference 1988). A requirement for CONSOLE is that the parameters to be optimally adjusted vary over a continuous (as opposed to discrete) set of values.

CONSOLE employs a recently developed design methodology (International Journal of Control 43:1693-1721) which provides the designer with a congenial environment to express his problem as a multiple objective constrained optimization problem and allows him to refine his characterization of optimality when a suboptimal design is approached. To this end, in CONSOLE, the designer formulates the design problem using a high-level language and performs design task and explores tradeoff through a few short and clearly defined commands.

The range of problems that can be solved efficiently using a CAD tools depends very much on the ability of this tool to be interfaced with user-supplied simulators. For instance, when designing a control system one makes use of the characteristics of the plant, and therefore, a model of the plant under study has to be made available to the CAD tool. CONSOLE allows for an easy interfacing of almost any simulator the user has available.

To date CONSOLE has already been used successfully in many applications, including the design of controllers for a flexible arm and for a robotic manipulator and the solution of a parameter selection problem for a neural network (all under P. S. Krishnaprasad at the University of Maryland at College Park), the design of an RC controller for a radar antenna (under F. Emad at the University of Maryland at College Park), and the design of power filters (at the Westinghouse Defense and Electronics Center). In the case of the neural network application, CONSOLE was coupled to the nonlinear system simulator SIMNON.

### HISTORY

DELIGHT (Nye, Polak, Sangiovanni-Vincentelli, Tits) 1980 -  
general purpose interactive package  
+ optimization algorithms

DELIGHT.MaryLin (Fan, Nye, Tits) 1985 -  
interactive optimization-based design package  
for linear time-invariant systems

**CONSOLE** (Fan, Wang, Koninckx, Tits) 1987 -  
interactive optimization-based design package  
for engineering systems (with user-supplied  
simulators)

CONSOLE

## PARAMETRIC OPTIMIZATION IN DESIGN

Assume *structure* already chosen

Examples :

Circuit → Topology

Control System → Controller Structure

Earthquake Proof Building → Number and Position  
of Beams

Remain to choose *best* value of finitely many parameters

Examples :

Circuit → R, C, W, A, ...

Control System → Controller Gains,  
LQR/LQG Weighting Matrices,  
Q-parameterization, ...

Earthquake Proof Building → Beam Thickness,  
Amount of Steel, ...

CONSOLE

COMPONENTS FOR PARAMETERIC OPTIMIZATION

1. Design Methodology (Nye, Tits)

Problem Formulation  
Optimal in what Sense ?  
Optimization Algorithm  
User-Machine Interaction } → CONSOLE

2. Model and Simulation Tool → Simulators

CONSOLE

## PROBLEM FORMULATION

### Types of Specifications

Objectives - The smaller (larger) the better.

Soft Constraints - Aim for a *target* value. If unachievable,  
the smaller (larger) the better.

Hard Constraints - Specified value *must* be achieved.

CONSOLE

OPTIMAL IN WHAT SENSE ?

Degree of Satisfaction

Degree of Satisfaction

$$f'_i = \frac{f_i - G_i}{B_i - G_i}$$

$$\min_x \max_i f'_i(x)$$

CONSOLE

OPTIMIZATION ALGORITHM

**Three Phase Feasible Direction Algorithm**

Phase 1 (until all hard constraints are satisfied)

attempt to satisfy hard constraints (HC)

*minimax* on HC

Phase 2 (until all good values are achieved)

improve objectives (O) and soft constraints (SC)

*minimax* on O and SC

subject to satisfying HC

Phase 3

improve objectives

*minimax* on O

subject to satisfying HC and SC

CONSOLE

$$\min_x \max_i f_i(x)$$

subject to

$$g_k(x) \leq 0, \quad \forall k$$

where

$$f_i(x) = \max_{\omega} \varphi_i(x, \omega)$$

$$g_k(x) = \max_{\omega} \psi_k(x, \omega)$$

CONSOLE

## USER-MACHINE INTERACTION

### **Purpose**

Progressively refine problem definition

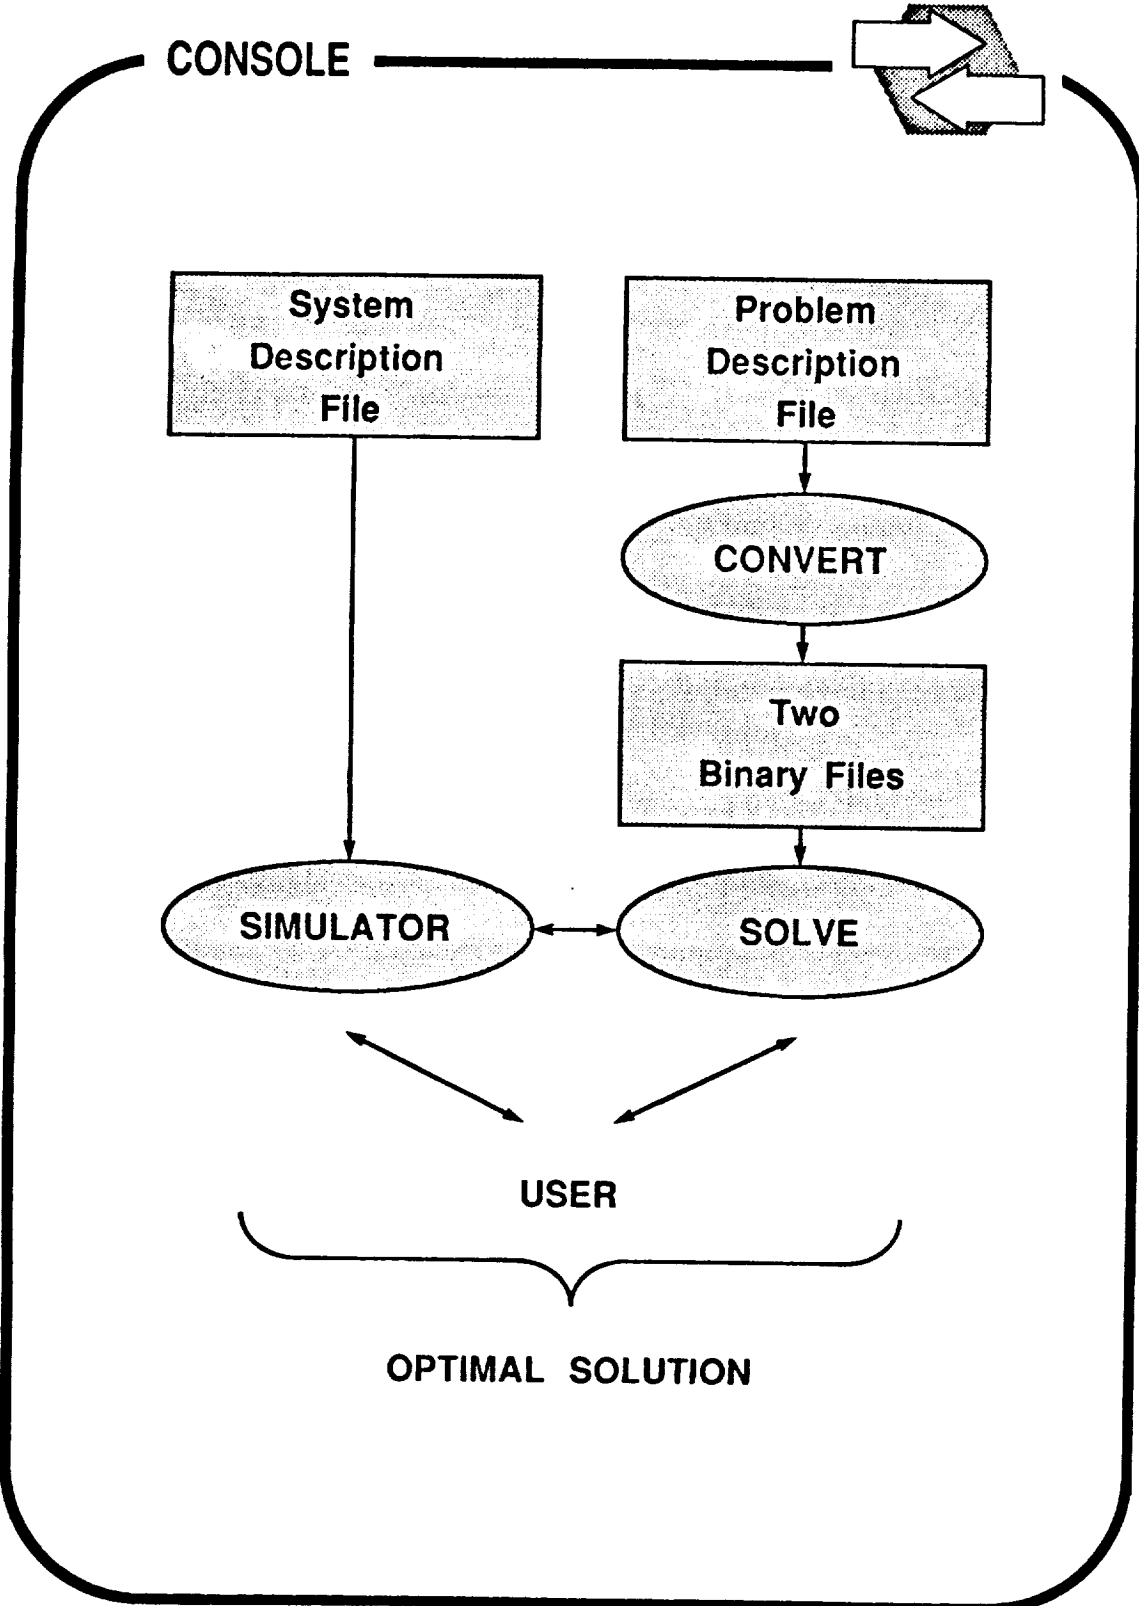

### **Means**

- Information on status of design conveyed graphically to user (Pcomb, Ecomb).
- User steers design to *his* optimal solution by adjusting good/bad values/curves.

CONSOLE

**CONSOLE =**  
**CONvert + SOLvE**

CONSOLE

A SIMPLE DESIGN EXAMPLE

CONTROL SYSTEM

$$C(s) = K_p + \frac{K_I}{s}$$

$$P(s) = \frac{s+1}{s^2}$$

DESIGN SPECIFICATION

CONSOLE

SYSTEM DESCRIPTION FILE FOR THE EXAMPLE  
(SIMNON\*)

```
CONTINUOUS SYSTEM servo
STATE x1 x2 x3
DER dx1 dx2 dx3
x1:0
x2:0
x3:0
dx1 = x2
dx2 = if (e > 0.4) then 0.4
      else if (e < -0.4) then -0.4
      else e
dx3 = r - y
e = (r - y)*Kp + x3*Ki
y = x1+x2
r:1
Kp:0
Ki:0
END
```

\*SIMNON was developed at the Lund Institute of Technology, Lund, Sweden

CONSOLE

PROBLEM DESCRIPTION FILE FOR THE EXAMPLE

```
design_parameter Kp init=1 variation=5
design_parameter Ki
```

```
functional_objective "overshoot"
for t from 0 to 20 by 0.1
minimize {
  double simnon_time_response();
  return simnon_time_response(Kp,Ki,"y",t);
}
good_curve={
  if (t <= 4) return 1.05;
  else      return 1.01;
}
bad_curve ={
  if (t <= 4) return 1.1;
  else      return 1.02;
}
```

```
functional_objective "settling time"
for t from 2 to 20 by .1
maximize {
  ...
```

CONSOLE

### MAIN FEATURES OF CONSOLE

Problem formulation is closely related to the character of a design problem.

Problem formulation syntax is strict, but easy to use.

Efficient iteration between **CONVERT** and user for debugging the PDF.

**SOLVE** is interactive, with short and clearly defined commands providing efficient communication between the program and the user.

Interactive graphics provide the user with easy-to-interpret information on the current design (Pcomb, Ecomb).

User-supplied simulators can easily be linked with **SOLVE**.

CONSOLE

GLANCE AT APPLICATIONS

Design of a copolymerization reactor controller  
(Butala, Choi, Fan)

Design of controllers for a flexible arm  
(Wang, Krishnaprasad)

Design of a controller for a robotic manipulator  
(Chen, Krishnaprasad)

H-infinity Design of a Sampled-Data Control System  
(Yang, Levine)

Solution of a parameter selection problem  
for a neural network  
(Pati, Krishnaprasad *et al.*)

Design of an RC controller for a radar antenna  
(Emad)

Design of power filters  
(Glover, Walrath at Westinghouse Defense  
and Electronics Center)

... and soon

Design of earthquake proof buildings  
(Austin)

Design of controllers for X29 aircraft  
(Reilly, Levine)

Design of circuits  
(Westinghouse)

CONSOLE

DESIGN OF A COPOLYMERIZATION  
REACTOR CONTROLLER

(CONSOLE + Copoly) (Butala, Choi, Fan)

Objectives and Constraints

Molecular Weight  
Composition  
Final Volume  
Temperature  
Feed Flowrate

Manipulated Variables

Temperature =  $a_1 + a_2t + a_3t^2 + a_4t^3$   
Feed Flowrate =  $b_1 + b_2t + b_3t^2 + b_4t^3$

Design Parameters =  $a_i$ 's and  $b_i$ 's

Results

Pcomb (Iter= 22) (Phase 2) (MAX\_COST\_SDFT= 0.0766327)
