P-1**MULTI-MISSION Ni-H₂ BATTERY
CELL FOR THE 1990's**

Lee Miller, Jack Brill, and Gary Dodson
Eagle-Picher Industries, Inc.
Joplin, Missouri

A sufficient production, test and operational database is now available to permit design technology optimization for the next decade. The evolved battery cell design features standardized technology intended to support multiple type missions (e.g., both GEO and LEO). Design analyses and validation test cells demonstrate improved performance plus attractive specific-energy characteristics will be achieved.
