SUMMARY

Electrothermal propulsion concepts are briefly discussed as an introduction to a bibliography and author index for resistojets, thermal arcjets, pulsed electrothermal thrusters, microwave heated devices, solar thermal thrusters, and laser thermal thrusters.

INTRODUCTION

Electrothermal propulsion systems have characteristics that are attractive for geosynchronous satellite stationkeeping, altitude maintenance for low Earth orbiting spacecraft, maneuvering, and orbit raising. Electrothermal thrusters comprise resistojets, thermal arcjets, pulsed electrothermal thrusters, microwave heated devices, solar thermal thrusters, and laser thermal thrusters (figs. 1 to 6).

Resistojets (fig. 1) use resistive elements to heat the propellant and, thus, increase exhaust velocity. Potential propellants for resistojets include nitrogen, ammonia, hydrogen, carbon dioxide, steam, and mixtures of carbon dioxide or methane and hydrazine. Resistojet propulsion is the most mature technology of those discussed herein. Approximately 26 flight experiments and operational propulsion systems using resistojets were developed from 1965 to 1984. In 1984, 40 hydrazine resistojets are performing north/south stationkeeping on 8 Intelsat V and 3 RCA spacecraft (refs. 01:225:1981 and 01:234:1983). NASA is now pursuing the development of a permanent facility in low Earth orbit. This facility will comprise a manned space station core, co-orbiting platforms, and free-flying spacecraft which require propulsion systems for orbit maintenance, maneuvering, and possibly attitude control. The resistojet system is a candidate to satisfy these auxiliary propulsion requirements, which are more demanding and variable than those of present space systems.

The thermal arcjet (fig. 2) converts electrical energy to thermal energy by using an arc discharge. The thermal energy is further changed to directed kinetic energy by expanding the propellant through a nozzle. Thermal arcjets for space propulsion were the object of significant technology efforts from about 1959 to 1965. Today, a renewed interest in the arcjet rests on its potential for high-performance stationkeeping systems, for satellite propulsion, and for high-power orbit raising applications.

Exploratory studies and some experimental evaluations have been made for pulsed electrothermal (ref. 06:003:1984), microwave (ref. 07:012:1984), solar thermal (ref. 08:003:1983), and laser thermal (ref. 09:019:1982) devices. Technology work deals primarily with concept feasibility and performance potential.

This report is a bibliography of the work related to the six types of electrothermal thrusters as well as to power processing and propellant management. An author index of all citations is also included.

DESCRIPTION OF THE BIBLIOGRAPHY

This bibliography is designed to give the technologist and systems engineer an extensive list of reports relating primarily to resistojet and thermal arcjet technology. A significant number of citations deal with propellant management, power systems, and other electrothermal propulsion concepts.

There are nine separate categories under which the reports are listed: resistojets, thermal arcjets, related topics, propellant management, power and control, pulsed electrothermal thrusters, RF and microwave devices, solar thermal thrusters, and laser thermal thrusters. The entries are listed in an order such that the chronological order of the year of publication supersedes the alphabetical order of the author's last name. Each entry has a three-number code. The first number of the code is the category number. For example, resistojets are category one, and laser thermal thrusters are category nine. The category number is followed by the number of that particular entry within the category. The third number of the code is the year in which the report was published. This code permits easy location of each author's publication through the author index found at the end of the bibliography.

CONCLUDING REMARKS

The bibliography contains nearly 700 citations relating primarily to low-thrust (<1 N), electrothermal propulsion system technology. Included in the bibliography are three survey papers on electric propulsion (01:230:1982), 01:235:1983, 01:239:1984), three survey papers relating primarily to resistojets and arcjets (02:106:1965, 01:181:1973, 01:231:1982), and one survey paper on laser research and applications (09:022:1983). Other papers summarize the performance, design criteria, and technology status for electrothermal thrusters, power processors, and propellant system components. Many papers deal with mission analysis, system studies, propulsion system design, thruster materials, propellant properties, diagnostic methods, flow field effects, and nozzle performance. The bibliography has been designed to facilitate updating.

Mattick, A.T.; Hertzberg, A.
Acta Astronaut., vol. 9, no. 3, 1982, pp. 165-172.
- 05:027:1983 **Evaluation of the Use of On-Board Spacecraft Energy Storage for Electric Propulsion Missions.**
Poeschel, R.L.
Hughes Research Laboratories. NASA CR-168209, 1983.
- 05:028:1984 **Satellite Reaction Control Subsystem with Augmented Catalytic Thrusters.**
Feconda, R.T.; Weizman, J.I.
AIAA Paper 84-1235, June 1984.
- 05:029:1984 **The Status of Power Supplies for Primary Electric Propulsion in the USA.**
Jones, R.M.; Scott-Monck, J.A.
17th International Electric Propulsion Conference, IEPC Paper 84-83, 1984.

Category 6 - Pulsed Electrothermal Engines

- 06:001:1982 Theory of the Pulsed Electrothermal Thruster.
Burton, R.L.; Goldstein, A.; Tidman, D.A.;
Winsor, N.K.
AIAA Paper 82-1952, Nov. 1982.
- 06:002:1983 Investigation of a Pulsed Electrothermal
Thruster.
Burton, R.L.; Goldstein, S.A.; Hilko, B.K.;
Tidman, D.A.; Winsor, N.K.
GT-Devices, Inc. NASA CR-168266, 1983.
- 06:003:1984 Experimental Investigation of the Pulsed
Electrothermal (PET) Thruster.
Burton, R.L.; Goldstein, S.A.; Hilko, B.K.;
Tidman, D.A.; Winsor, N.K.
AIAA Paper 84-1386, June 1984.
- 06:004:1984 Proposed System Design for a 20 kW Pulsed
Electrothermal Thruster.
Burton, R.L.; Goldstein, S.A.; Hilko, B.K.;
Tidman, D.A.; Winsor, N.K.
AIAA Paper 84-1387, June 1984.

Category 7 - RF and Microwave Devices

- 07:001:1961 The Induction Coupled Plasma Torch.
Reed, T.B.
J. Appl. Phys., vol. 32, no. 5, May 1961.
- 07:002:1969 Parametric Design of High Frequency Propulsion Systems for Tests in Space.
Freisinger, J.; Loeb, H.W.
DGLR-69-022, Giessen Univ., May 1969 (in German).
- 07:003:1971 High-Density Resonantly Sustained Plasma in a Variable-Length Cylindrical Cavity.
Fredericks, R.M.; Asmussen, J.
Appl. Phys. Ltr., vol. 19, 1971, pp. 508-510.
- 07:004:1974 The Design of a Microwave Plasma Cavity.
Asmussen, J.; Mallavarpu, R.; Hamann, J.R.; Park, H.C.
Proc. IEEE, vol. 62, Jan. 1974, pp. 109-117.
- 07:005:1974 The Induction Arc: A State-of-the-Art Review.
Eckert, H.U.
High Temp. Sci., vol. 6, 1974, pp. 99-134.
- 07:006:1978 Behavior of a Microwave Cavity Discharge over a Wide Range of Pressures and Flow Rates.
Mallavarpu, R.; Asmussen, J.; Hawley, M.C.
IEEE Trans. Plasma Sciences, vol. 4, PS-6, Dec. 1978, pp. 341-354.
- 07:007:1981 Free Radical Propulsion Concept.
Hawkins, C.E.; Nakanishi, S.
NASA TM-81770, also AIAA Paper 81-0676, 1981.
- 07:008:1981 Atomic Hydrogen Rocket Engine.
Etters, R.P. and Flurchick, K.
AIAA Paper 81-0677, 1981
- 07:009:1982 Measurements of Energy Distribution and Thrust Energy to Hydrogen for Propulsion.
Morin, T.; Chapman, R.; Filpus, J.; Hawley, M.; Kerber, R.; Asmussen, J.; Nakanishi, S.
AIAA Paper 82-1951, Nov. 1982.
- 07:010:1982 Standing Waves Along a Microwave Generated Surface Wave Plasma.
Rogers, J.; Asmussen, J.
IEEE Trans. Plasma Science, vol. PS-10, Mar. 1982, pp. 11-16.
- 07:011:1984 Measurements of Energy Distribution in Microwave Plasmas of N₂ and He and Comparisons with Results for H₂.
Chapman, R.; Hawley, M.C.
In: 17th International Electric Propulsion Conference, IEPC 84-76, Japan Society for Aeronautical and Space Sciences, Tokyo, 1984.
- 07:012:1984 Prospects for Microwave Heated Propulsion.
Micci, M.M.
AIAA Paper 84-1390, 1984.
- 07:013:1984 Time Dependent Solution of the Fully Coupled Boltzmann and Macroscopic Balance Equations for a Two Component Self-Sustained Microwave Plasma.
Morin, T.J.; Hawley, M.C.
17th International Electric Propulsion Conference, IEPC 84-75, 1984.
- 07:014:1984 Demonstration of a New Electrothermal Thruster Concept.
Whitehair, S.; Asmussen, J.; Nakanishi, S.
Appl. Phys. Ltr., May 1984.
- 07:015:1984 Experiments with a Microwave Electrothermal Thruster Concept.
Whitehair, S.; Asmussen, J.; Nakanishi, S.
17th International Electric Propulsion Conference, IEPC 84-74, 1984.

Category 8 - Solar Thermal Thrusters

08:001:1979 Solar Rocket System Concept Analysis.
Etheridge, F.G.
AFRPL-TR-79-79, Nov. 1979.

08:002:1979 A New Solar Thermal Receiver Utilizing a
Small Practice Heat Exchanger.
Hunt, A.J.
14th Intersociety Energy Conversion
Engineering Conference, Aug. 1979.

08:003:1983 Performance Potential of Advanced Solar
Thermal Propulsion.
Shoji, J.M.
AIAA Paper 83-1307, June 1983.

Category 9 - Laser Thermal Propulsion

- 09:001:1972 Propulsion to Orbit by Ground Based Lasers.
Kantrowitz, A.
Astronaut. and Aeronaut., vol. 10, no. 5, May 1972, p. 74.
- 09:002:1972 Laser Propulsion.
Pirri, A.N.; Weiss, R.F.
AIAA Paper 72-719, June 1972.
- 09:003:1972 Laser Propulsion.
Rom, R.E.; Putre, H.A.
NASA TM X-2510, 1972.
- 09:004:1974 Propulsion by Absorption of Laser Radiation.
Pirri, A.N.; Monsler, M.J.; Nebolsine, P.E.
AIAA J., vol. 12, no. 9, Sept. 1974,
pp. 1254-1261.
- 09:005:1975 Radiant Energy Absorption Studies for Laser Propulsion.
Caledonia, G.E.; Wu, P.K.S.; Pirri, A.N.
NASA CR-134809, 1975.
- 09:006:1976 Laser Jet Engine.
Barchukov, A.I.; Bunkin, F.V.; Konov, V.I.;
Prokhorov, A.M.
JETP Ltr., vol. 23, no. 5, Mar. 1976,
pp. 213-215.
- 09:007:1976 Uses of a Laser Energy Source in Producing a Reactive Thrust.
Bunkin, F.V.; Prokhorov, A.M.
Soviet Physics - Uspekhi, vol. 19, no. 7, July 1976, pp. 561-573.
- 09:008:1976 Investigation of Beamed Energy Concepts for Propulsion. Volume 1.
Huberman, M.; et al.
AFRPL-TR-76-66, Oct. 1976.
- 09:009:1976 Laser Heated Rocket Studies.
Kemp, N.H.; Root, R.G.; Wu, P.K.S.;
Caledonia, G.E.; Pirri, A.N.
NASA CR-135127, 1976.
- 09:010:1977 The Fluid Mechanics of Pulsed Laser Propulsion.
Simons, G.A.; Pirri, A.N.
AIAA J., vol. 15, no. 6, June 1977,
pp. 835-840.
- 09:011:1978 CW Laser Propulsion.
Legner, H.H.; Douglas-Hamilton, D.H.
J. Energy, vol. 2, Mar.-Apr. 1978, pp. 85-94.
- 09:012:1980 Laser Propulsion - 1980.
Jones, L.W.
AIAA Paper 80-1264, 1980.
- 09:013:1980 Laser Heated Thruster - Interim Report.
Kemp, N.H.; Lewis, P.G.
NASA CR-161665, 1980.
- 09:014:1980 Laser Heated Thruster.
Kemp, N.H.; Krech, R.H.
NASA CR-161666, 1980.
- 09:015:1981 Measured Molecular Absorptivities for a Laser Thruster.
Fowler, M.C.
AIAA J., vol. 19, no. 8, Aug. 1981,
pp. 1009-1014.
- 09:016:1981 Simplified Models of CW Laser-Heated Thrusters.
Kemp, N.H.
AIAA Paper 81-1249, June 1981.
- 09:017:1981 Pulsed Laser Propulsion.
Nebolsine, P.E.; Pirri, A.N.; Goela, J.S.;
Simons, G.A.
AIAA J., vol. 19, no. 1, Jan. 1981,
pp. 127-128.
- 09:018:1982 Study of Laser Heated Propulsion Devices, Part I.
Hofer, O.C.; Thoenes, J.
LMSC-HREC-TR-0784744, Apr. 1982.
- 09:019:1982 NASA's Laser-Propulsion Project.
Jones, L.W.; Keefer, D.R.
Astronaut. Aeronaut., vol. 20, no. 9, Sept. 1982, pp. 66-73.
- 09:020:1982 A Two-Dimensional Model of the Hydrogen Plasma for a Laser Powered Rocket.
Keefer, D.R.; Crowder, H.; Elkins, R.
AIAA Paper 82-0404, Jan. 1982.
- 09:021:1983 Orbit Raising and Maneuvering Propulsion - Research Status and Needs.
Caveny, L.H., ed.
Progr. Astronaut. Aeronaut., vol. 89, 1983.

09:022:1983 A NASA High-Power Space-Based Laser Research
and Applications Program.
DeYoung, R.J.; Walberg, G.D.; Conway, E.J.;
Jones, L.W.
NASA SP-464, 1983.

09:023:1984 A Two-Dimensional Analysis of Laser Heat
Addition in Converging Nozzles.
AIAA Paper 84-0529, 1984.

09:024:1984 Laser Propulsion.
Kemp, N.H.; Rosen, D.I.
AIAA Paper 84-1445, June 1984.

09:025:1984 Computer Simulation of the Non-Steady Flow
of a Real Gas with Laser Energy Absorption.
Kemp, N.H.
AIAA Paper 84-1569, 1984.

1. Report No. NASA TM-86998	2. Government Accession No.	3. Recipient's Catalog No.	
4. Title and Subtitle A Bibliography of Electrothermal Thruster Technology, 1984		5. Report Date March 1986	
		6. Performing Organization Code 506-55-24	
7. Author(s) James S. Sovey, Terry L. Hardy, and Matthew Englehart		8. Performing Organization Report No. E-2536	
		10. Work Unit No.	
9. Performing Organization Name and Address National Aeronautics and Space Administration Lewis Research Center Cleveland, Ohio 44135		11. Contract or Grant No.	
		13. Type of Report and Period Covered Technical Memorandum	
12. Sponsoring Agency Name and Address National Aeronautics and Space Administration Washington, D.C. 20546		14. Sponsoring Agency Code	
		15. Supplementary Notes James S. Sovey and Terry L. Hardy, NASA Lewis Research Center; Matthew Englehart, Paper Basics, Brookpark, Ohio.	
16. Abstract Electrothermal propulsion concepts are briefly discussed as an introduction to a bibliography and author index for resistojets, thermal arcjets, pulsed electrothermal thrusters, microwave heated devices, solar thermal thrusters, and laser thermal thrusters.			
17. Key Words (Suggested by Author(s)) Electrothermal thrusters; Arc jet; Resistojet; Auxiliary propulsion; Electric propulsion		18. Distribution Statement Unclassified - unlimited STAR Category 20	
19. Security Classif. (of this report) Unclassified	20. Security Classif. (of this page) Unclassified	21. No. of pages 48	22. Price A03
