Principal Investigators: Gilbert N. Plass ✓

George W. Kattawar

## Final Report

This is the Final Report for Grant No. 44-001-117. During the course of this Grant a total of 49 publications appeared in scientific journals from 1973 to 1981. There were also 45 scientific reports issued during the course of this Grant.

A number of different topics were investigated. These included the development of a useful Matrix Operator Theory of Radiative Transfer which made possible the exact model calculations of the radiance as a function of height in planetary atmospheres. The Mie Phase Matrix was calculated for various types of particles and was used to calculate the radiance and polarization in planetary atmospheres. The high dispersion spectroscopic observations of Venus made from 1968 were analyzed. Curves of growth for Venus were calculated and discussed.

A theory for calculating radiative transfer in spherical shell atmospheres was developed. The zonal winds on Venus were studied. Rayleigh scattering was reexamined.

The range of topics covered during the period of this contract is so wide that it seems impossible to summarize the results here. A complete list of the reports and publications is attached; all of these have been mailed to the required mailing list. Those interested in particular topics can easily look up the appropriate articles.

Report Issued for Grant No. NGR-44-001-117

1. Matrix Operator Theory of Radiative Transfer. I. Rayleigh Scattering. Gilbert N. Plass, George W. Kattawar, and Frances E. Catchings.
2. Matrix Operator Theory of Radiative Transfer. II. Scattering from Maritime Haze. George W. Kattawar, Gilbert N. Plass, and Frances E. Catchings.
3. Degree and Plane of Polarization of Multiple Scattered Light. I. Homogeneous Cloud Layers. George W. Kattawar and Gilbert N. Plass.
4. Degree and Plane of Polarization of Multiple Scattered Light. II. Earth's Atmosphere with Aerosols. Gilbert N. Plass and George W. Kattawar.
5. Interior Radiances in Optically Deep Absorbing Media: I. Exact Solutions for One-Dimensional Model. George W. Kattawar and Gilbert N. Plass.
6. Interior Radiances in Optically Deep Absorbing Media. II. Rayleigh Scattering. Gilbert N. Plass, George W. Kattawar, and Judith Binstock.
7. The Influence of Ozone and Aerosols on the Brightness and Color of the Twilight Zone. Charles N. Adams, Gilbert N. Plass, and George W. Kattawar.
8. Phase Matrix Induced Symmetries for Multiple Scattering Using the Matrix Operator Method. Stephen J. Hitzfelder and George W. Kattawar.
9. Interior Radiances in Optically Deep Absorbing Media. III. Scattering from Haze L. George W. Kattawar and Gilbert N. Plass.
10. High-Dispersion Spectroscopic Observations of Venus During 1968 and

(Reports - Continued)

1969. II. The Carbon-Dioxide Band at 8689Å. R. A. J. Schorn, A. Woszyzk, and L. D. Gray Young.
11. Is the Four-Day "Rotation" of Venus Illusory? Andrew T. Young.
  12. Comments on "Venus' Spectroscopic Phase Variation: Implications of the Mariner 10 Photographs." Andrew T. Young.
  13. A Three Parameter Analytic Phase Function for Multiple Scattering Calculations. George W. Kattawar.
  14. Forbidden Ca II in the Sun Unmasked by Way of Venus. R. A. Schorn, A. T. Young, and E. S. Barker.
  15. High Dispersion Observations of Venus During 1972: The CO<sub>2</sub> Band at 7820Å. L. D. Gray Young and A. T. Young.
  16. The Clouds of Venus. A. T. Young.
  17. Scintillations During Occultations by Planets. I. An Approximate Theory. A. T. Young.
  18. Multiple Scattered Radiation Emerging from Continental Haze Layers. 1: Radiance, Polarization, and Neutral Points. G. W. Kattawar, G. N. Plass, S. J. Hitzfelder.
  19. Multiple Scattered Radiation Emerging from Continental Haze Layers. 2: Ellipticity and Direction of Polarization. G. N. Plass, G. W. Kattawar, S. J. Hitzfelder.
  20. Planetary Isophotes as a Clue to Aerosol Characteristics. G. W. Kattawar, A. T. Young.
  21. Scattering in the Atmosphere of Venus. I. Curves of Growth for Isotropic Scattering. L. D. G. Young, G. W. Kattawar.
  22. Electromagnetic Scattering from a Spherical Polydispersion of Coated Spheres. G. W. Kattawar, D. Hood.
  23. Scattering in the Atmosphere of Venus. II. Effect of Varying the

- Scale Height of the Scattering Particles. G. W. Kattawar, L. D. G. Young.
24. Radiance, Polarization, and Ellipticity of the Radiation in the Earth's Atmosphere. S. J. Hitzfelder, G. N. Plass, G. W. Kattawar.
  25. Scattering in the Atmosphere of Venus. III. Line Profiles and Phase Curves for Rayleigh Scattering. L. D. G. Young, G. W. Kattawar.
  26. An Improved Venus Cloud Model. A. T. Young.
  27. Comments on: "Stellar Refraction: A Tool to Monitor the Height of the Tropopause from Space". A. T. Young.
  28. High Dispersion Spectroscopic Observations of Venus near Superior Conjunction. I. The Carbon Dioxide Band at 7820Å. L. D. G. Young, R. A. J. Schorn, A. T. Young.
  29. High Dispersion Spectroscopic Observations of Venus near Superior Conjunction. II. The Carbon Dioxide Band at 7883Å. A. T. Young, L. D. G. Young, R. A. J. Schorn.
  30. Line Shifts Due to Blending. A. T. Young.
  31. Interpretation of High-Resolution Spectra of Mars. IV. New Calculations of the CO Abundance. L. D. G. Young and A. T. Young.
  32. Planetary Isophotes as a Clue to Aerosol Characteristics. II. Observations of Venus from Spacecraft. A. T. Young and G. W. Kattawar.
  33. Radiative Transfer in Spherical Shell Atmospheres. I. Rayleigh Scattering. C. N. Adams and G. W. Kattawar.
  34. Clouds and Their Effects on Spectroscopic Observations. L. D. G. Young and A. T. Young.
  35. Radiative Transfer in Spherical Shell Atmospheres. II. Asymmetric Phase Function. G. W. Kattawar and C. N. Adams.

(Reports - Continued)

36. High-Dispersion Spectroscopic Observations of Venus Near Superior Conjunction. III. The Carbon Dioxide Band at 8689Å. R. A. J. Schorn, A. T. Young, L. D. G. Young.
37. Radiative Transfer in Spherical Shell Atmospheres. III. Application to Venus. G. W. Kattawar.
38. Phase Matrix and Cross Section Calculations for Electromagnetic Scattering from Two Identical Particles. G. W. Kattawar and T. J. Humphreys.
39. High Dispersion Spectroscopic Observations of Venus near Superior Conjunction: IV. Results for the Carbon Dioxide Bands in the IV-N Photographic Region. L. D. G. Young, R. A. J. Schorn, and A. T. Young.
40. Errors Incurred in a Plane Wave Type Expansion of a Gaussian Beam. G. W. Kattawar.
41. Electromagnetic Scattering from Two Identical Pseudospheres. G. W. Kattawar and T. J. Humphreys.
42. Comment on "New Determination of Rayleigh Scattering in the Terrestrial Atmosphere. A. T. Young.
43. Inelastic Scattering in Planetary Atmospheres. I. The Ring Effect, Without Aerosols. G. W. Kattawar, A. T. Young, and T. J. Humphreys.
44. On the Rayleigh-Scattering Optical Depth of the Atmosphere. A. T. Young.
45. Rayleigh Scattering. A. T. Young.

Publications Issued under Grant No. NGR-44-001-117

1. Matrix Operator Theory of Radiative Transfer. I. Rayleigh Scattering. Gilbert N. Plass, George W. Kattawar, and Frances E. Catchings, Applied Optics 12, 314-329 (1973).
2. Matrix Operator Theory of Radiative Transfer. II. Scattering from Maritime Haze. George W. Kattawar, Gilbert N. Plass, and Frances E. Catchings, Applied Optics 12, 1071-1084 (1973).
