ABSTRACT

A Screwworm Eradication Data System (SEDS) anomaly data base was compiled on magnetic tapes with the Univac 1108 computer, and on dedicated disc storage in the JSC Building 17 Data Analysis Station (DAS). This Technical Memorandum describes the format and organization of the data.

1. INTRODUCTION

It has long been known that many factors besides weather affect screwworm populations. Although weather variables limit the seasonal incursions of screwworms into colder areas, other factors are at least as strong. For example, quantity of animals with wounds, agricultural practices, and the effects of the eradication program are variables known to be powerful controllers of screwworm populations.

For various reasons, the Screwworm Eradication Data System (SEDS) was constrained to work with meteorological data. More specifically, it was to rely on temperatures as measured from satellites, and crop moisture index, calculated from surface data. It became apparent during the evaluation that some of the factors other than weather needed to be subjectively studied to explain anomalies in SEDS growth potentials. A data base was, therefore, compiled of historical weather and screwworm case data as well as certain other factors such as county cattle populations, etc.

The original anomaly data base was compiled on dedicated disc storage in the JSC Building 17 Data Analysis Station (DAS). It had excellent plotting and data listing routines but the DAS had very little statistical analysis capability of the type needed for the SEDS evaluation. For this reason, the data were also archived on tapes prepared by the large 1108 computer to permit standard statistical processing. This technical memorandum describes the format and organization of the data in the data base.

2. THE DATA

2.1 DATA INCLUDED IN THE BASE

The base was designed to be extremely flexible. Certain data were obviously indispensable, such as reports of screwworm cases and weather data, and had to be included. Others, vital to the understanding of outbreaks, do not exist and could not be included; examples are records of dispersion of sterile males, and statistics of wildlife host population.

The base was designed to hold nearly any kind of data that could be reported by county in Texas or by meteorological zone of Texas. Data which might be valuable was encouraged to be included.

As a result, the base includes some data that may well prove to be useless. Certain ancillary data, such as area of counties, were also included.

It should be noted that more data can be added at any time. The system has been designed to be very flexible in accepting such data.

2.2 ORGANIZATION OF THE DATA

A set of data consists of one kind of data for a given period of time; an example is the number of screwworm cases reported for the fifteenth week of 1975.

A set may consist of data for each of ten meteorological zones, or data for each Texas county.

The program automatically assigns values to each county, based on values given for each meteorological zone; or it automatically assigns values to each meteorological zone based on county

values. In either case, it further assigns values to each ecological and invasion zone.

All assignments to zones, including meteorological zones, are averages weighted by area.

All zonal values are averages. This may lead to some confusion, since one might expect total numbers for extensive factors. For example, screwworm cases in a given zone refers to the weighted average of screwworm cases in the counties comprising the zone.

Each data set contains the data shown in table 1. In addition to 87 Texas counties, two counties each in New Mexico and Arizona are included, as are two areas in Mexico; however, by and large, there are few data for these additional areas. Average and total data for Texas are next included, followed by totals for the six non-Texas stations. Mean, median, and mode are also calculated for the Texas stations.

The next block of data includes the ten meteorological zones in Texas as defined by the National Weather Service of the National Oceanic and Atmospheric Agency. The zone line in table 1 shows the location of each county in these zones (zone 2 has none of these counties in it, and zones 1 and 3 each contain only one county). The nine ecological zones that follow, described by Dr. Gerald Arp (ref. 1), are shown in table 2. The six incidence (invasion) zones described by Dr. Alberto Broce (ref. 2), follow these and are listed in table 3. They are also shown in figure 1 (ref. 2).

Remaining data in each set are ancillary and are of most use to the person who programs a usage of these data.

TABLE 2. - ECOLOGICAL ZONES (REF. 1)

<u>Zone</u>	<u>Name</u>	<u>Characteristic vegetation</u>
1	Trans Pecos	Desert microphyll scrub and desert grassland
2	High plains	Short grass prairie
3	Edwards Plateau	Rolling hills covered by scrub oak, juniper, mesquite, and extensive grassy meadows
4	So. Texas plains	Mesquite grassland
5	Gulf prairies and marshes	Extensive tall grass communities with Post Oak incursions and gallery hardwood forests along streams
6	Rolling plains	Tall grass prairie
7	Cross Timbers	Post Oak and extensive grassland (a subset of the Post Oak Savannah)
8	Black Land Prairies	Tall grass prairie with many gallery forests
9	Post Oak Savannah	Post Oak and extensive grassland
10	Pineywoods	Pines and hardwood forest with some crop and pastureland.

3 FORMAT OF INPUT DATA

To accommodate a wide variety of data, eight separate card formats were designed, all specified in appendix 2. These allowed the use of data with or without decimals for counties or meteorological zones, and for the use of free-format data. However, the free-format option has not been tested and may have defects.

Each new set of data, or each change in format, requires a new leadoff card, also described in appendix 2.

2.4 FORMAT OF DATA BASE ON TAPE

In addition to the printed data included as part of this report, the data are available on tapes (Nos. X07770 and X11482) in the NASA tape library. A programmer can best understand the structure of these tapes by examining the program which produced it (appendix 1). However, the following will serve as an introduction.

The tapes mentioned above are 7-track unformatted binary, 800 bpi, 36-bit words written by a FORTRAN IV "Write tape 2, list" statement on the Univac 1108 computer under "Exec. 2." A unit of pages in the data base which contains one set of data (such as all SW4 data) is written on a single record as part of the following list:

RECORD, DASNO, IDENT, DIM 1, DIM 2, DIM 3, SW

In addition, the same data has been recreated in card images on tape for other users. These tapes are described in appendix 5.

RECORD is the serial number of the record, such as 5 for the fifth block of data (fixed point).

DASNO is an identification number used for an array of data (fixed point).

- IDENT is an acronym for the data, such as CM3, (read by an A3 format and considered to be fixed point).
- DIM 1 is the first dimension of the data, always 132 in this program; there are 132 pieces of data in a complete set (fixed point).
- DIM 2 is the second dimension, normally the week number (fixed point).
- DIM 3 is the third dimension (here always 1) included in case other data structures are added later (fixed point).
- SW is the array of 6996 data ($132 \times 53 \times 1$) (floating point).

Appendix 4 presents a simple program to read the data tape and print out some values.

The last unit of data is mixed and the week is not specified. All these data are recorded on a single record.

2.5 AN OVERVIEW OF THE DATA BASE

At present, the data base contains the following data:

<u>Acronym</u>	<u>Description</u>	<u>Source of data (reference)</u>	<u>Serial no. of record on tape</u>
LTD	14-day temperature average, 1975	3	1
LTP	Potential based on above*	3	2
STD	4-day temperature average, 1975	3	3
STP	Potential based on above*	3	4

*Potentials represent the effect of the data on screwworm populations, as used in the Screwworm Eradication Data System.

<u>Acronym</u>	<u>Description</u>	<u>Source of data (reference)</u>	<u>Serial no. of record on tape</u>
DDD	Mean pupation time (coded 'DDD' since it is derived from a degree-day sum)	3	5
DDP	Potential based on above*	3	6
CMD	Crop moisture index data	3	7
CMP	Potential based on above*	3	8
SGP	Total growth potential	3	9
SW5, SW4,, SW7	Screwworm cases 1975-1967	4	10-19
TM5, TM4,, TM7	Mean weekly temperature, °F, 1975-1967	5	20-28
CM5, CM4,, CM7	Crop moisture index, 1975-1967	6	29-37
PP5, PP4,, PP7	Precipitation, inches of rain for a week	7	38-46
AR	Area of county in square miles	8	47
LO	Longitude of county seat		47
LA	Latitude of county seat		47
AL	Altitude of county seat		47
PO	Population of county		47
DI	Distance from Mexican border		47
BF5, -4, etc.	Beef cattle population of county		47
DR4, -3, etc.	Deer population of county		47

*Potentials represent the effect of the data on screwworm populations, as used in the Screwworm Eradication Data System.

<u>Acronym</u>	<u>Description</u>	<u>Source of data (reference)</u>	<u>Serial no. of record on tape</u>
SH5, -4 etc.	Sheep population of county		47
PG5, -4 etc.	Hog population of county		47
GT5, -4 etc.	Goat population of county		47

*Potentials represent the effect of the data on screwworm opulations, as used in the Screwworm Eradication Data System.

3. THE COMPLETE DATA BASE

The following sheets contain all the data currently archived in the Anomaly Data Base. For convenience, sets are not printed if no data are present, or if all data are zero. For example, data for LTD for week 13 are missing, and therefore these data are not printed. By the same token, data for SWO (Screwworm case reports for 1970) are all zero; that is, there were no cases reported for that week. Although these data are included in the archived data, they are not listed on this printout. If desired, the program illustrated in appendix 1 could be slightly modified to print all zero data as well as all missing data, which are coded as zero data.

The sum line contains the sum of all data in the base for each county and zone. The average contains the sum divided by 52, even though less than 52 weeks of data are included. The meanings of the sum and averages for zonal data are obscure.

CARD FORMATS FOR INPUT DATA

00101	650	C	IDENTIFIER (ID) A3
00101	651	C	FOR EXAMPLE, STD MEANS SHORT TERM TEMPERATURE AVERAGE, AS DATA
00101	652	C	ONE OR TWO CHARACTER IDENTIFIERS MUST BE LEFT JUSTIFIED
00101	653	C	PERIOD OF TIME IDENTIFIER (PI) J11
00101	654	C	READ AS P(HUN, -TEN, -ONE
00101	655	C	JULIAN DAYS FOR MOST DATA (ALL TIME SERIES DATA)
00101	656	C	FOR SINGLE DATA SETS, SUCH AS AREAS, A NUMBER CONSONANT WITH DASNO
00101	657	C	SS
00101	658	C	FORMAT INDICATOR (FI) 11 IN SPACE 7
00101	659	C	1 STANDS FOR FORMAT 1, ETC. 9 SIGNIFIES END OF DATA
00101	660	C	CARD INDICATOR (CI) 11 IN SPACE 8
00101	661	C	CI = 1 FOR FIRST CARD, ETC. THERE ARE FOUR CARDS FOR DATA SETS
00101	662	C	READ IN FORMATS 1 AND 2, EIGHT FOR CARDS READ IN FORMATS 3 AND 4,
00101	663	C	AND ONLY ONE FOR CARDS READ UNDER FORMATS 7 AND 8. FOR FREE FIELD
00101	664	C	FORMATS, 5 AND 6, THE NUMBER OF CARDS IS NOT FIXED. FOR LEADOFF
00101	665	C	CARDS THIS SPACE MUST BE LEFT BLANK.
00101	666	C	REMAINDER OF INPUT CARDS VARY ACCORDING TO FORMAT. FIXED POINT DATA MUST BE
00101	667	C	RIGHT JUSTIFIED. DECIMALS ARE NOT NEEDED IF FLOATING POINT DATA
00101	668	C	REQUIRE ONLY A SINGLE DECIMAL POINT AND ARE RIGHT JUSTIFIED. DECIMALS
00101	669	C	ON CARDS OVERRIDE THE FORMAT SPECIFICATION.
00101	670	C	A LEADOFF CARD NEEDS TO BE PLACED BEFORE EACH DATA SET WITH SAME CARD
00101	671	C	CODE (SUCH AS ALL LTD), AND WITHIN SETS, EVERY TIME A FORMAT IS
00101	672	C	CHANGED. THIS CARD WILL HAVE THE CARD CODE (LIKE DATA CARD), DAS
00101	673	C	NUMBER INSTEAD OF PERIOD IDENTIFIER, & FORMAT IDENTIFIER (LIKE OTHER
00101	674	C	CARDS), AND A BLANK INSTEAD OF CARD INDICATOR. THESE DATA CARDS ARE
00101	675	C	ALSO VALID FOR THE DAS.

1-5

```

00101 940 C - THE FIRST INTERNAL STRUCTURE OF DATA
00101 970 C - PAGE PRINTED BY THIS PROGRAM LISTS NAMES OF ALL DATA IN EACH SET
00101 980 C
00101 990 C
00101 1000 C 1 TO 96 ARE DATA FOR COUNTIES 11 TO 87 AND FOR TEXAS)
00101 1010 C 94, 95, AND 96 ARE SUMS AND AN AVERAGE OF THE COUNTY DATA
00101 1020 C 97, 98, AND 99 ARE SOME SIMPLE STATISTICS FOR THE TEXAS DATA
00101 1030 C 101 THROUGH 110 CONTAIN VALUES FOR ECOLOGICAL ZONES AS DEFINED BY NOAA
00101 1040 C 101 THROUGH 110 CONTAIN VALUES FOR ECOLOGICAL ZONES (BY AMP)
00101 1050 C 120 THROUGH 125 CONTAIN INVASION-INFESTATION ZONES (BY SHOR AND BROCE)
00101 1060 C (ZONE DATA ARE USUALLY WEIGHTED AVERAGES OF COUNTY DATA)
00101 1070 C 126 THROUGH 132 ARE ANCILLARY DATA OF MOST USE TO PROGRAMMERS
00101 1080 C
00101 1090 C
00101 1100 C .....VOCABULARY.....
00101 1110 C
00101 1120 C ID, I01, AND I02 ARE THE ACRONYMS AS READ FROM DATA CARDS
00101 1130 C DENI IS THE ACRONYM AS RECONSTRUCTED FROM INTERNAL DATA, FOR PRINTOUT
00101 1140 C P1, P11, AND P12 ARE PERIOD INDICATORS, READ IN SINGLE DIGITS AS P1ZHUN,
00101 1150 C P1ZTEN, P1ZONE, ETC. THESE ARE CONVERTED TO JULIAN DAY, WEEK, OR
00101 1160 C IN THE CASE OF P1ZONE, TO YEAR OR INDEX. ON LEADOFF CARDS, THESE
00101 1170 C ARE CONVERTED TO DATES.
00101 1180 C F1, F11, AND F12 ARE FORMAT NUMBERS.
00101 1190 C C1, C11, AND C12 ARE CANO INDICATORS, BLANK FOR LEADOFF CARDS.
00101 1200 C I FOR FIRST DATA CANO, ETC. THERE MAY BE AS MANY AS 8 CARDS TO A
00101 1210 C DATA SET. A CANO INDICATOR OF 9 INDICATES THAT NO MORE DATA ARE TO
00101 1220 C BE READ INTO THE MEMORY OF THE PROGRAM.
00101 1230 C ALL CARDS CONTAINING DATA ARE INITIALLY READ INTO DATA. LATER THEY ARE
00101 1240 C TRANSFERRED TO APPROPRIATE STORAGE ARRAYS, WHICH MAY BE SECS,
00101 1250 C ARRAYS, NCF, FN, TK5, SM, FU, TH, CH, OR PP.
00101 1260 C ALL DATA ARE STORED BY COUNTY. NAME CONTAINS THE LIST OF NAMES OF THE
00101 1270 C COUNTIES. I0NU LISTS THE STANDARD NUMBER FOR EACH COUNTY. ZONENO
00101 1280 C LISTS THE CLIMATOLOGICAL ZONE TO WHICH EACH COUNTY BELONGS.
00101 1290 C ZONE LISTS THE SERIAL NUMBERS (NOT I0NU BUT THE COUNTER FOR I0NU) FOR
00101 1300 C COUNTIES IN EACH CLIMATOLOGICAL, ECOLOGICAL, AND INVASION ZONE,
00101 1310 C IN ORDER.
00101 1320 C THE J'S (J1, J2, J3, ETC.) ARE USED AS TEMPORARY COUNTERS. THEY
00101 1330 C NEVER CARRY VALUES FAR, SUCH AS BEYOND RESTRICTED 999999.
00101 1340 C N IS ALSO A TEMPORARY COUNTER.
00101 1350 C NOCARD IS THE COUNTER FOR ALL INPUT CARDS.
00101 1360 C NOSETS COUNTS THE NUMBER OF LEADOFF CARDS FOUND, WHICH IS NEARLY THE
00101 1370 C SAME AS THE NUMBER OF LARGE GROUPINGS OF DATA.
00101 1380 C PCARD LISTS THE NUMBER OF DATA CONTAINED ON A CARD (EXCEPT FOR FREE
00101 1390 C FILLU CARDS (FKHATS 2 AND 3).
00101 1400 C CARDS IS THE NUMBER OF CARDS IN A DATA SET (FOUR FOR FORMATS 1 AND 2,
00101 1410 C EIGHT FOR FKHATS 3 AND 4, AND ONE FOR FORMATS 7 AND 8).
00101 1420 C ITEST, IPHINT, IPUNCH, ISKIP, ISTRIP, ISTMP, AND IDIAW ARE QUANTITIES
00101 1430 C WHICH ALLOW CONTROL OF A LARGE VARIETY OF FUNCTIONS. EACH IS
00101 1440 C EXPLAINED WHEN IT FIRST APPEARS. NEAR THE FIRST EXECUTABLE
00101 1450 C UNIT DEFINES THE READIN UNIT (5 FOR CARDS, 9 FOR TAPES). HOWEVER, TAPE
00101 1460 C READIN HAS NOT BEEN SUCCESSFULLY USED.
00101 1470 C DIM1, DIM2, AND DIM3 ARE THE DIMENSIONS OF EACH LARGE GROUPING OF DATA.
00101 1480 C MOST DATA ARE 132 X 43 BUT THE CAPABILITY IS NOMINALLY MAINTAINED
00101 1490 C TO HANDLE THREE-DIMENSIONAL DATA. ONLY TWO-DIMENSIONAL DATA ARE
00101 1500 C PRESENTLY INCLUDED IN THE DATA BASE. THESE DIMENSION NUMBERS
00101 1510 C ARE INCLUDED IN ALL RECORDS WRITTEN ONTO TAPE BY THIS PROGRAM.
00101 1520 C
00101 1530 C

FORMATS OF DATA TO BE ENTERED

INTERDEPARTMENTAL COMMUNICATION

DATE: October 9, 1975
Ref. 622-513

TO F. C. Forsberg DEPT./
ORGN. 621-20 BLDG./
ZONE J17 PLANT/
FAC. LEC/ASD

FROM L. E. Giddings DEPT./
ORGN. 621-20 BLDG./
ZONE J17 PLANT/
FAC. LEC/ASD EXT. 5523

SUBJECT: CARD FORMATS FOR ANOMALY INVESTIGATION

Data for the anomaly investigation can be prepared in eight different formats. These formats allow for most contingencies we have anticipated. These formats are:

- 1 and 2: 3 digit data (96 data points)
 - 3 and 4: 6 digit data (96 data points)
 - 5 and 6: Free field (96 data points, separated by commas)
 - 7 and 8: 6 digit data (ten data points for climatological zones)
- Odd formats are for integer data and even are for floating point data.

Formats 1 and 2 contain identification plus 24 data points, requiring four cards for reading a data set for all 96 counties. Formats 3 and 4 contain identification plus 12 data points, requiring eight cards for reading a 96-data set. Formats 5 and 6 are identical free format forms which allow data to be input, separated by commas, as convenient. Formats 7 and 8 are single card six-digit eleven-data formats allowing climatological data to be read by zones instead of recopied by counties; they are identical to 1 and 2 except that only one card is ever used for a complete set of data.

In general, all data by counties can be entered in any of the first six formats. However, data by the climatological zones must be entered in formats 7 or 8 to ensure that appropriate values will be distributed to each county in the zone.

All data cards except for field cards (formats 5 and 6) require identification in the first eight spaces as follows:

- Spaces 1-3 Acronym identifying data set
- Spaces 4-6 Julian day of data, or Julian day of the middle day of the week for weekly data. For on-time data (data not involving time series) these spaces should be left blank.
- Space 7 Format Indicator, as listed above.
- Space 8 Card Indicator: 1 for first card, 2 for second card, etc. A zero indicates a leadoff card, and 9 indicates an end-of-data card, as specified below.

A leadoff card shows the format and IIS number of cards that follow it. Any change in data type (signalled by change in county, or change in format card) is indicated by a leadoff card.

October 9, 1975
Ref. 622-913
Page 2

Leadoff cards may contain data only in the first eight spaces, as follows:

Spaces 1-3	Exact acronym of data to follow it
Spaces 4-6	DAS number corresponding to these data (see internal program comments or my memo of September 25, 1975) (Factors in Anomaly Study)
Space 7	Format of data to follow
Space 8	Zero or blank - rest of card should be left blank

Note that leadoff cards following free-field data must be written in free-field format (discussed below).

Data in all but free-field formats are placed in three- or six-column fields. In formats 1 and 2, data for the first county are coded in columns 11-13, for the second county in 14-16, etc., with twenty four data to a card. In formats 3, 4, 7, and 8, data for the first county are coded in columns 11-16, for the second county, in columns 17-22, etc., with twelve data to a card. All data should be right justified. If one decimal point is required, none need be entered on cards; but decimals on the cards override the format specification.

Use of formats 5 or 6, the free field formats, requires care. All identifiers should be used as DAS numbers, instead of the alphanumeric acronyms. Since the Julian day is handled as three separate digits in the program, each digit must be separated by a comma. Free-field sample cards must follow this format:

3 digits, comma = DAS number
1 digit, comma = hundreds of Julian days
1 digit, comma = tens of Julian days
1 digit, comma = units of Julian days
1 digit, comma = format indicator (5 or 6)
1 digit, comma = card indicator (always 1) (for first card)
95 data points of any size, followed by commas, and the 96th data point.

Only the first card of a 96-county data set contains identifiers; the rest only contain data. See attachments for a sample data set. Note that free-field data cards must have 101 commas in a set of data.

A leadoff card following free-field data is read in free-field format. Therefore, it must be coded in free-field format in two cards as shown in the attachments. However, leadoff cards preceding free-field data should be coded in any of the other formats.

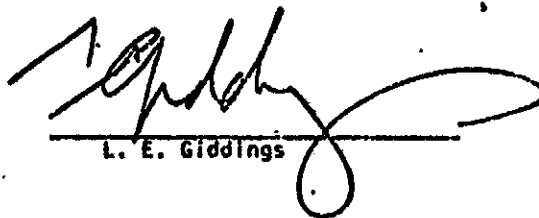

End-of-data cards (only one per complete deck of data cards) contain a 9 in column 1 but are blank elsewhere.

APPENDIX 4

READOUT OF DATA IN ASC II SYMBOLS

READOUT OF DATA IN ASC II SYMBOLS

By Raúl Mejía

The Univac 1108 produces tapes which are not immediately readable by other computer systems. For this reason, the entire data base was prepared in a format that was more easily readable by other computers.

This appendix presents the relevant information concerning the preparation of these tapes.

It appears that the most uniformly recognizable representation of the data is the ASC II character set, which is uniformly recognized in the United States. The decision was therefore made to prepare an ASC II character-per-frame tape. The logic used for the conversion is presented in figure 4-1.

The actual program used to make the conversion is presented as figure 4-2.

The program is in FORTRAN-V, but also included are three subroutines in Univac assembly language.

One tape was prepared, containing all of the data in the base. The tape is numbered X05815 and is available for copying from NASA's Health Applications Office, DE63, NASA-JSC, Houston, Texas, 77058.

The data on these tapes are logically divided into groups of 108 records (800 bpi density). Each record consists of 801 ASC II characters. The first 72 characters of the first record

in each of these logical groups consist of six integer values
of 12 digits each. The rest of the data in each of these
logical groups consist of real values formatted as F12.2 each,
except for no. 132 of each data set, which is formatted as
A3, 9X.

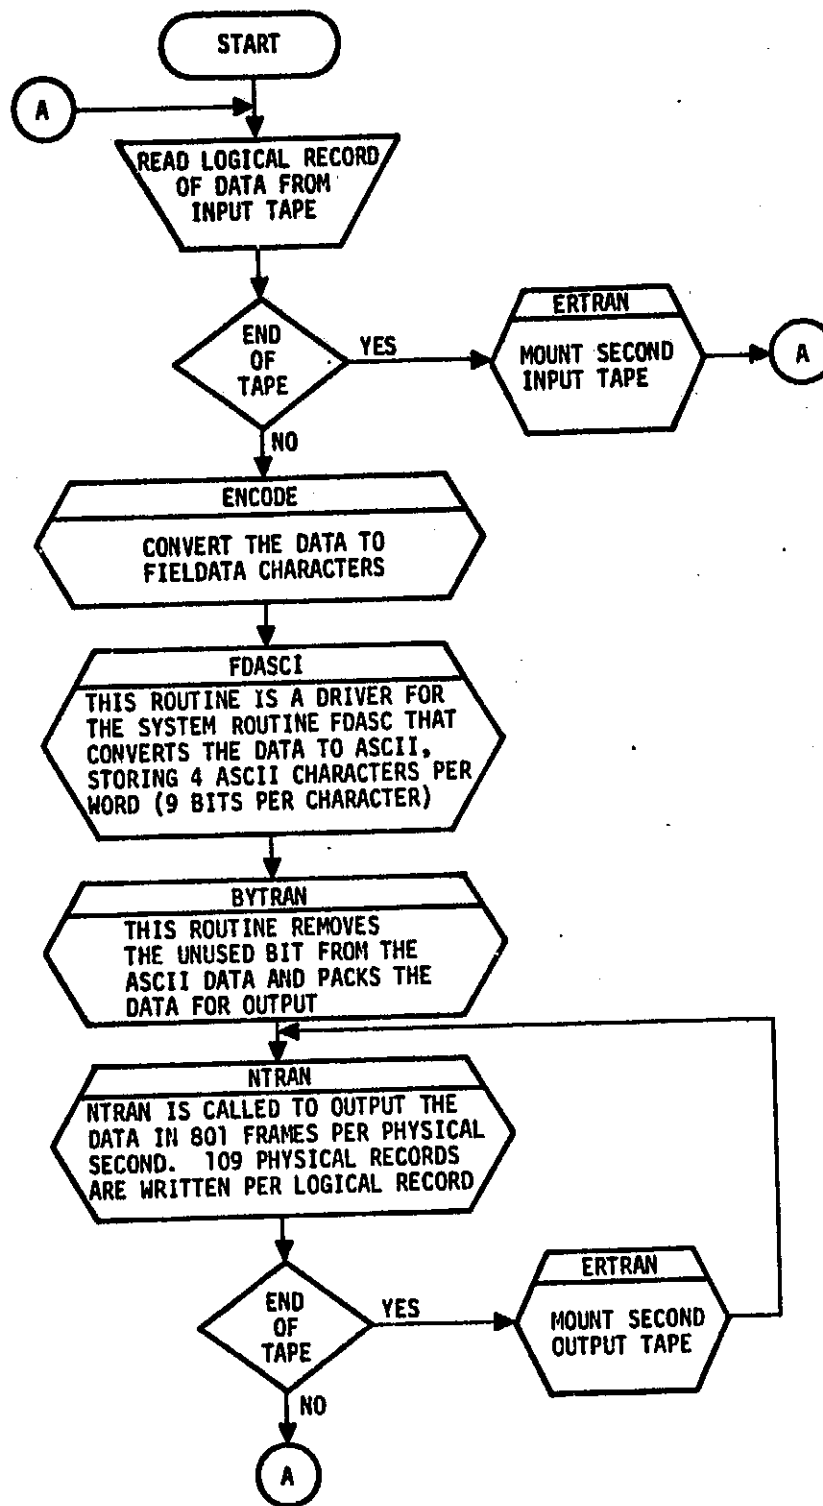

Figure 4-1.
