INTRODUCTION

Two-electron electrostatic interaction integrals, or *Slater integrals*, are useful in the calculation of the total-atom energy (refs. 1-3). Another important use for these integrals is the calculation of the splitting into individual total-angular-momentum states (J levels). For example, in terms of Slater integrals F^k and G^k the electrostatic energies for the configuration $np_{3/2}n'p_{3/2}$ are found to be (ref. 4)

$$\left. \begin{aligned} J = 3: & \quad F^0 + \frac{1}{25} F^2 - G^0 - \frac{1}{25} G^2 \\ J = 2: & \quad F^0 - \frac{3}{25} F^2 + G^0 - \frac{3}{25} G^2 \\ J = 1: & \quad F^0 + \frac{1}{25} F^2 - G^0 - \frac{1}{25} G^2 \\ J = 0: & \quad F^0 + \frac{1}{5} F^2 + G^0 + \frac{1}{5} G^2 \end{aligned} \right\} \quad (1)$$

For simple configurations, the m scheme (ref. 5) can be used to calculate the coefficients of the Slater integrals. In this scheme, the electrostatic interaction between a pair of electrons is expressed as

$$E(A,B) = \sum_k a^k(j_A^{m_A}; j_B^{m_B}) F^k(A,B) - \sum_q b^q(j_A^{m_A}; j_B^{m_B}) G^q(A,B) \quad (2)$$

The coefficients $a^k(j_A^{m_A}; j_B^{m_B})$ and $b^q(j_A^{m_A}; j_B^{m_B})$ have been tabulated by Cooper (ref. 6) for arguments through $j = 7/2$. A general computer program applicable to complex configurations has been developed by Grant (ref. 7).

Numerical values of nonrelativistic Slater integrals have been tabulated by Mann (ref. 8). Butler *et al.* (ref. 9) computed Slater radial integrals as products of powers of primes for hydrogenic radial eigenfunctions.

*Research supported in part by the U.S. Army Research Office under Grant DAHC04-75-G-0021.

[†]Research Associate, Department of Physics, University of Oregon, Eugene, Oregon 97403.

[‡]Professor of Physics, University of Oregon, Eugene, Oregon 97403.

Approximate relativistic Slater integrals were deduced from nonrelativistic results by Shirley (ref. 10), by applying the relativistic correction factor $(1 + \alpha Z^2)$. The constant α was determined by fitting calculated Auger energies to experimental values. Larkins (ref. 11) has spelled out the relationship between nonrelativistic and relativistic Slater integrals and indicated in detail how the electron-pair interaction energies may be expressed in terms of relativistic Slater integrals.

The only tabulation of relativistic Slater integrals that is presently available, as far as we know, is that by Mann and Waber (ref. 3); this is limited to selected shells of the lanthanide atoms. We therefore considered it useful to prepare a complete set of relativistic Slater integrals for all atoms. These Slater integrals were computed in the framework of extensive calculations of relativistic atomic electron binding energies (ref. 1) and neutral-atom total energies (ref. 2).

THEORY

The Slater exchange potential has an incorrect asymptotic form at large radii, going to zero exponentially rather than as r^{-1} . If the variational process is performed after making the statistical approximation for the exchange term in the total energy, an effective exchange potential equal to 2/3 of the Slater potential is found (refs. 12-14). Results are thus improved, but the wrong asymptotic form remains. The problem can be remedied by applying Latter's tail correction (ref. 15). The reasons why the local approximation fails at large radii have been noted by several authors (refs. 15-17). The local approximation involves the assumption that the electron wavelength is small compared with the distance over which the potential undergoes a substantial fractional change; this requirement is not fulfilled in atoms at large radii. Furthermore, it is assumed in the Hartree-Fock expression for the exchange energy that the antisymmetry of the wave function is more important than electrostatic repulsion in keeping the electrons apart; this is true for high electron densities but not for low densities. In view of these factors, Liberman *et al.* (refs. 17, 18) constructed a modified Kohn-Sham potential, which is essentially a Kohn-Sham potential with a tail correction, but formulated in a more consistent manner. The Liberman *et al.* version (ref. 18) of the Hartree-Fock-Slater method is used in the present computations. We take the nucleus to be a homogeneously charged sphere, with a radius $R = 1.20 \times 10^{-13} a^{1/3}$ cm, where a is the mass number. The nuclear radius of the most abundant isotope of each element is used in the calculations.

Total Hamiltonian and Zeroth-Order Wave Function

Using Dirac single-electron theory, the total zeroth-order Hamiltonian for a many-electron atom can be written

$$\bar{H} = \sum_{i=1}^N \left[c \vec{\alpha}_i \cdot \vec{p}_i + \beta_i c^2 + V_n(r_i) \right] + \sum_{i<j}^N \frac{1}{r_{ij}} \quad (3)$$

in atomic units. In the Hartree-Fock-Slater formalism, the total wave function is taken to be a single Slater determinant of orbital functions. These orbital functions satisfy a set of Dirac equations with a local spherically symmetric potential $U(r)$:

$$\left[c\vec{\alpha} \cdot \vec{p} + \beta c^2 + U(r) \right] \psi_{n\kappa m}(r) = E_{n\kappa} \psi_{n\kappa m}(r) \quad (4)$$

We take $U(r)$ to be the potential of a finite nucleus, consisting of a uniformly charged sphere, and the electron Coulomb potential with modified Kohn-Sham exchange (refs. 12, 17, 18). The orbital wave functions have the form

$$\psi_{n\kappa m}(r) = \frac{1}{r} \begin{cases} P_{n\kappa}(r) \chi_{\kappa m} \\ iQ_{n\kappa}(r) \chi_{-\kappa m} \end{cases} \quad (5)$$

where the $\chi_{\kappa m}$ are normalized two-component spinors.

Two-Electron Electrostatic Interaction Integrals

The electric Slater integrals, describing the electrostatic interaction between pairs of electrons, are defined as follows (ref. 19):

$$F^k(A,B) = \int_0^\infty \int_0^\infty [P_A^2(1) + Q_A^2(1)] [P_B^2(2) + Q_B^2(2)] \frac{r_<^k}{r_>^{k+1}} dr_1 dr_2 \quad (6)$$

$$G^k(A,B) = \int_0^\infty \int_0^\infty [P_A(1)P_B(1) + Q_A(1)Q_B(1)] [P_A(2)P_B(2) + Q_A(2)Q_B(2)] \frac{r_<^k}{r_>^{k+1}} dr_1 dr_2 \quad (7)$$

The F^k and G^k defined in equations (6) and (7) are equivalent to F_k^E and G_k^E in reference 19. These integrals have been evaluated with the zeroth-order wave functions described in the preceding section.

EXPLANATION OF TABLE

The electrostatic Slater integrals are listed in table I by elements. Each group of values is headed by the name of the element, for example, "HELIUM," followed by the principal and orbital-angular-momentum quantum numbers and occupation number of the outermost or open shell, for example, "1S2" indicates that the outermost shell is 1s ($n = 1$, $\ell = 0$) and contains 2 electrons. The atomic number is also given, for example, $Z = 2$.

The first column in each group of entries identifies the states of the two electrons to which the Slater integrals in a line pertain. Here, "+" indicates $j = \ell + 1/2$ and "-" indicates $j = \ell - 1/2$. The values of the Slater integrals are identified by "Fk" or "Gk" (cf. eqs. (6) and (7)). Thus,

"(2P-,2P+) FO 7.3417586E-01 G2 3.2053702E-01"

means

$$F^0(2p_{1/2}, 2p_{3/2}) = 7.3417586 \times 10^{-1}$$

$$G^2(2p_{1/2}, 2p_{3/2}) = 3.2053702 \times 10^{-1}$$

The values of the Slater integrals are given in atomic units of energy, or hartrees, 1 a.u. = 27.2116 eV.

"The aeronautical and space activities of the United States shall be conducted so as to contribute . . . to the expansion of human knowledge of phenomena in the atmosphere and space. The Administration shall provide for the widest practicable and appropriate dissemination of information concerning its activities and the results thereof."

—NATIONAL AERONAUTICS AND SPACE ACT OF 1958

NASA SCIENTIFIC AND TECHNICAL PUBLICATIONS

TECHNICAL REPORTS: Scientific and technical information considered important, complete, and a lasting contribution to existing knowledge.

TECHNICAL NOTES: Information less broad in scope but nevertheless of importance as a contribution to existing knowledge.

TECHNICAL MEMORANDUMS: Information receiving limited distribution because of preliminary data, security classification, or other reasons. Also includes conference proceedings with either limited or unlimited distribution.

CONTRACTOR REPORTS: Scientific and technical information generated under a NASA contract or grant and considered an important contribution to existing knowledge.

TECHNICAL TRANSLATIONS: Information published in a foreign language considered to merit NASA distribution in English.

SPECIAL PUBLICATIONS: Information derived from or of value to NASA activities. Publications include final reports of major projects, monographs, data compilations, handbooks, sourcebooks, and special bibliographies.

TECHNOLOGY UTILIZATION PUBLICATIONS: Information on technology used by NASA that may be of particular interest in commercial and other non-aerospace applications. Publications include Tech Briefs, Technology Utilization Reports and Technology Surveys.

Details on the availability of these publications may be obtained from:
