NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

ACCESSION NUMBER RANGES

Accession numbers in this issue fall within the following ranges:

IAA (A-10000 Series) A 74-28536—A 74-38030

STAR (N-10000 Series) N 74-21630—N 74-29366

Previous publications announced in this series/subject category include:

Energy: A Special Bibliography NASA SP-7042
(Coverage Jan. 1, 1968 through Dec. 31, 1973)

Energy: A Continuing Bibliography NASA SP-7043(01)
(Coverage Jan. 1, 1974 through Mar. 31, 1974)

Energy: A Continuing Bibliography NASA SP-7043(02)
(Coverage Apr. 1, 1974 through Jun. 30, 1974)

This bibliography was prepared by the NASA Scientific and Technical Information Facility, operated for the National Aeronautics and Space Administration by Informatics Information Systems Company.

ENERGY

A Continuing Bibliography

With Indexes

ISSUE 03

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced from July 1 through September 30, 1974 in:

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

Scientific and Technical Information Office

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

FEBRUARY 1975

Washington, D.C.

This Supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, for \$4.00. For copies mailed to addresses outside the United States, add \$2.50 per copy for handling and postage.

INTRODUCTION

This issue of *Energy: A Continuing Bibliography with Indexes* (NASA SP-7043(03)) lists 322 reports, journal articles, and other documents announced between July 1, 1974 and September 30, 1974 in *Scientific and Technical Aerospace Reports (STAR)*, or in *International Aerospace Abstracts (IAA)*. The first issue of this continuing bibliography was published in May 1974 and succeeding issues are published quarterly.

The coverage includes regional, national and international energy systems; research and development on fuels and other sources of energy; energy conversion, transport, transmission, distribution and storage, with special emphasis on use of hydrogen and of solar energy. Also included are methods of locating or using new energy resources. Of special interest is energy for heating, lighting, for powering aircraft, surface vehicles, or other machinery.

Each entry in the bibliography consists of a standard bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections, *IAA Entries* and *STAR Entries* in that order. The citation, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR* including the original accession numbers from the respective announcement journals. This procedure, which saves time and money accounts for the slight variation in citation appearances.

Five indexes—subject, personal author, corporate source, contract number, and report number are included. The indexes are of the cumulating type throughout the year, with the fourth quarterly publication containing abstracts for the fourth quarter and index references for the four quarterly publications.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A74-10000 series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies are available at \$5.00 per document up to a maximum of 20 pages. The charge for each additional page is 25 cents. Microfiche ⁽¹⁾ are available at the rate of \$1.50 per microfiche for documents identified by the # symbol following the accession number. A number of publications, because of their special characteristics, are available only for reference in the AIAA Technical Information Service Library. Minimum airmail postage to foreign countries is \$1.00. Please refer to the accession number, e.g. A74-10763, when requesting publications.

STAR ENTRIES (N74-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service to U.S. customers at the price shown in the citation following the letters HC (hard, paper, or facsimile copy). Customers outside the U.S. should add \$2.50 per copy for handling and postage charges to the price shown. (Prices shown in earlier *STAR* volumes, 1962-1974, have been superseded but may be calculated from the number of pages shown in the citation. The price schedule by page count was given in the last *STAR* issue of 1974 or may be obtained from NTIS.)

Microfiche¹ is available at a standard price of \$2.25 (plus \$1.50 for non-U.S. customers) regardless of age for those accessions followed by a "#" symbol. Accession numbers followed by a "+" sign are not available as microfiche because of size or reproducibility.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Unit.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the "*" symbol), use the N accession number.

NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number.

Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard \$2.25 price, for those documents identified by a # symbol.)

(1) A microfiche¹ is a transparent sheet of film 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (Not to exceed 28:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: ERDA Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Energy Research and Development Administration reports, usually in microfiche form, are listed in *Nuclear Science Abstracts*. Services available from the ERDA and its depositories are described in a booklet, *Science Information Available from the Energy Research and Development Administration* (TID-4550), which may be obtained without charge from the ERDA Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) at \$10.00 each and microfilm at \$4.00 each regardless of the length of the manuscript. Handling and shipping charges are additional. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction).

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: ZLDI. Sold by the Zentralstelle für Luftfahrtokumentation und -Information, Munich, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent Office. Sold by Commissioner of Patents, U.S. Patent Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

GENERAL AVAILABILITY

All publications abstracted in this bibliography are available to the public through the sources as indicated in the *STAR Entries* and *IAA Entries* sections. It is suggested that the bibliography user contact his own library or other local libraries prior to ordering any publication inasmuch as many of the documents have been widely distributed by the issuing agencies, especially NASA. A listing of public collections of NASA documents is included on the inside back cover.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplement is \$15.00. All questions relating to subscriptions should be referred to the NTIS.

TYPICAL CITATION AND ABSTRACT FROM STAR

TYPICAL CITATION AND ABSTRACT FROM IAA

A Listing of Energy Bibliographies Contained In This Publication:

1. NSF-RANN Energy Abstracts: A Monthly Abstract Journal of Energy Research, Volume 1, No. 11, November 1973
N74-27537 p0114

IAA ENTRIES

A74-28746 Fuel system requirements for small gas turbine engines. R. G. Moore (Bendix Corp., Energy Controls Div., South Bend, Ind.). *Society of Automotive Engineers, Business Aircraft Meeting, Wichita, Kan., Apr. 2-5, 1974, Paper 740381*. 9 p. Members, \$1.25; nonmembers, \$2.00.

Fundamental engine configurations and general fuel control functional requirements for 250-1000 hp engines are discussed. A basic fuel control system and functional options developed to meet specific requirements of several engine models are described. Design details of several example options are presented to illustrate the degree of complexity required to obtain desired functions. (Author)

A74-28747 Fuel system requirements for light aircraft, turbocharged reciprocating engines. J. M. Kirwin and E. A. Hasse (Bendix Corp., Energy Controls Div., South Bend, Ind.). *Society of Automotive Engineers, Business Aircraft Meeting, Wichita, Kan., Apr. 2-5, 1974, Paper 740382*. 12 p. Members, \$1.25; nonmembers, \$2.00.

A74-28943 Stabilization of ionization instability in an MHD generator. S. Hatori and S. Shioda (Tokyo Institute of Technology, Tokyo, Japan). *Physical Society of Japan, Journal*, vol. 36, Mar. 1974, p. 920.

The reduction of ionization instability through full ionization of seed material is considered. In particular, the steady relation between the magnetic field and the spatially averaged electron temperature under actual MHD-generator operating conditions is discussed.

M.V.E.

A74-28957 # Electron nonequilibrium in open-cycle MHD generators. G. S. Argyropoulos, S. T. Demetriades, E. D. Doss (STD Research Corp., Arcadia, Calif.), and D. A. Oliver (MIT, Cambridge, Mass.). *A/AA Journal*, vol. 12, May 1974, p. 669-671. 9 refs. NSF Grant No. C-727; Contract No. F44620-73-C-0001.

Localized regions close to the electrode walls of open-cycle MHD generators have high enough current density so that the free electrons are not in thermal equilibrium with the rest of the gas, even when the working fluid is such an effective absorber of electron energy as CO₂ or coal combustion products. The overall electrical performance of open-cycle MHD generators depends critically on the presence and behavior of such thin nonequilibrium regions adjacent to the electrodes. These effects are demonstrated and analyzed by means of previously developed numerical modeling techniques.

(Author)

A74-29415 # Rapid group analysis of directly distilled petroleum fractions by the method of recorded fluid-adsorption chromatography /FAC/ (Ekspressnyi gruppovoi analiz priamogonykh nef'tianykh fraktsii metodom registratsionnoi zhidkostno-adsorbtsionnoi khromatografii /ZhAzh/). Iu. I. Chumakov, S. K. Lopatenko, and G. I. Shchipachev (Kievskii Institut Inzhenerov Grazhdanskoi Aviatsii, Kiev, Ukrainian SSR). *Khimiia i Tekhnologiiia Topliv i Masel*, no. 4, 1974, p. 51-53. 9 refs. In Russian.

A74-29445 Heat pipes. L. L. Vasil'ev and S. V. Konev. (Translation of Teploperedaiushchie Trubki, Minsk, Izdatel'stvo Nauka i Tekhnika, 1972.) *Heat Transfer - Soviet Research*, vol. 6, Jan.-Feb. 1974, p. 1-V, 1-97. 115 refs.

Discussion of the development of heat pipes and vapor chambers utilizing liquids of small heat conductivity and low boiling temperature as the heat carriers. The process of energy and mass transfer in heat pipes, as treated by a number of heat pipe specialists, is reviewed, distinguishing between high-temperature or 'isothermal' heat pipes and medium- and low-temperature range heat pipes. The influence of the boundary conditions inside the condensation zone on the heat flux, temperature field, and thermal resistance of low-temperature heat pipes and vapor chambers is considered for both one- and two-dimensional models. The determination of the capillary head, permeability, and porosity of capillary-porous bodies by a method based on recording both the concentration field of the liquid and the rate of its absorption into the porous body against the force of gravity is described. The problem of cooling and maintaining constant temperatures of semiconductor devices by means of heat pipes and vapor chambers is discussed. Finally, studies of cryogenic and coaxial heat pipes and of regulated heat pipes and vapor chambers are reviewed.

A.B.K.

A74-29452 # The case for hydrogen-fueled transport aircraft. G. D. Brewer (Lockheed-California Co., Burbank, Calif.). *Astronautics and Aeronautics*, vol. 12, May 1974, p. 40-51. 15 refs.

Hydrogen is shown to offer significant advantages as an energy medium in a society which can no longer depend on the availability of petroleum and natural gas. For the near term requirements, liquid hydrogen can be manufactured from coal and lignite. In the longer term, power from nuclear power plants or solar collectors can generate large quantities of hydrogen by electrolysis or by thermochemical splitting of water. Introduction of hydrogen into the economy via the air-transportation industry offers many advantages: (1) significant improvements in performance for both subsonic and supersonic aircraft; (2) competitiveness, when needed, with the cost of fuel currently used; and (3) deployment by an aerospace industry experienced in handling liquid hydrogen and capable of quickly developing the necessary technologies. From the aviation example, hydrogen technology will more readily make the transition to wider industrial and domestic uses.

M.V.E.

A74-29453 # Future availability of liquid hydrogen. W. J. D. Escher (Escher Technology Associates, St. Johns, Mich.). *Astronautics and Aeronautics*, vol. 12, May 1974, p. 55-59. 7 refs.

U.S. hydrogen production has been based mainly on natural gas and, to a far less extent on hydrocarbon fluids and coal. For fueling future commercial aircraft, LH₂ (liquid hydrogen) will likely be

produced from relatively abundant coal (and water). A cost estimate for liquid hydrogen 'at the airport' in 1985 would be \$2.50 per million Btu (\$0.13/lb). As coal becomes scarcer, and hence more expensive, producing LH₂ from water-splitting processes, using nuclear and solar energy (and possible geothermal) will eventually become cost-competitive. Just when depends on success in extracting, transporting, and processing coal into hydrogen, as well as advancements in energy-conversion systems operating on non-fossil sources (nuclear, solar). F.R.L.

A74-29572 **Future of the light turbine helicopter.** T. R. Stuelpnagel (Hughes Helicopters, Culver City, Calif.). *Vertiflite*, vol. 20, Mar.-Apr. 1974, p. 6-9.

It is predicted that in the 1980s the light-turbine helicopter (LTH) will be capable to compete economically with a half-ton truck. The use of the LTH accounts currently for 65% of all helicopter flight hours. This figure is expected to increase to 80% by the middle of the next decade. Trends towards a lowering of operating costs are discussed, giving attention to fuel consumption, maintenance, insurance, and depreciation. G.R.

A74-29603 **Lasers blast a shortcut to the ultimate energy solution.** L. Lessing. *Fortune*, vol. 89, May 1974, p. 221-223 (4 ff.).

The problems inherent in developing a thermonuclear fusion process suitable for solving mankind's energy crisis by means of the containment method can possibly be avoided by a new approach in which lasers are used to heat tiny pellets of deuterium and tritium to temperatures at which fusion takes place. Techniques are being considered to hit the pellet simultaneously on all sides by laser beams. The vaporization of the pellet's surface would set off an implosion in the interior of the pellet. The resulting compression of the pellet core would make it possible to achieve fusion with 100,000 times less laser energy than that required according to previous estimates. Progress in the further development of this very promising process appears to be impeded by the secrecy in which much of the work on controlled laser fusion is being conducted and by inadequate financing. G.R.

A74-29823 **Reliability of low-cost CdS/Cu₂S solar cells.** M. M. Sayed (Hewlett-Packard Co., Palo Alto, Calif.) and L. D. Partain (Delaware University, Newark, Del.). *Electronics Letters*, vol. 10, May 2, 1974, p. 163, 164. 10 refs. NSF-supported research.

Accelerated life tests show that CdS/Cu₂S solar cell lifetimes increase with lower temperature, cyclic light, and a nitrogen-gas ambience. A normal Arrhenius type of temperature dependence was found. Extrapolated lifetime of cells kept below 50 C in nitrogen gas with earth deployment exceeded twenty years. The probable decay mechanisms are thermal diffusion, formation of recombination centers, and voltage-induced decomposition. (Author)

A74-29949 **Power sources (Les sources de puissance).** W. Palz (Centre National d'Etudes Spatiales, Paris, France). *La Recherche Spatiale*, vol. 13, Mar.-Apr. 1974, p. 13-16. In French.

General descriptions are given for the various solar cell generators developed at CNES for applications satellites. The merits and drawbacks of rigid and foldable arrays are discussed. Both silicon cells and cadmium sulfide cells have been developed. The latter are more supple and economic, but their power output is considerably less. The Soviet satellite SRET-1, launched in 1972, carried 80 CdS thin film cells realized by CNES, each about 4 sq cm, interconnected in integrated fashion. In 240 days of orbit, 20% degradation was noted, but the degradation was restricted to the outside coating and did not affect the semiconductor layers themselves. P.T.H.

A74-30101 * # **Clean fuels from biomass.** Y. Y. Hsu (NASA, Lewis Research Center, Cleveland, Ohio). *Southeastern Seminar on Thermal Science, 10th, New Orleans, La., Apr. 11, 12, 1974, Paper. 22 p. 19 refs.*

The potential of growing crops as a source of fuels is examined, and it is shown that enough arable land is available in the U.S. so

that, even with a modest rate of crop yield, the nation could be supplied by fuel crops. The technologies for fuel conversion are available; however, some R&D efforts are needed for scaling up design. Fuel crop economics are discussed and shown to be nonprohibitive. M.V.E.

A74-30105 * # **Solar energy to meet the nation's energy needs.** F. E. Rom and R. L. Thomas (NASA, Lewis Research Center, Cleveland, Ohio). *National Forum on Energy Facts for Concerned Citizens, Boise, Idaho, Apr. 26, 27, 1973, Paper. 25 p. 14 refs.*

Discussion of the possibilities afforded by solar energy as one of the alternative energy sources capable to take the place of the dwindling oil and gas reserves. Solar energy, being a nondepleting clean source of energy, is shown to be capable of providing energy in all the forms in which it is used today. Steps taken toward providing innovative solutions that are economically competitive with other systems are briefly reviewed. M.V.E.

A74-30335 * **Electrohydrodynamic heat pipe experiments.** T. B. Jones and M. P. Perry (Colorado State University, Fort Collins, Colo.). *Journal of Applied Physics*, vol. 45, May 1974, p. 2129-2132. Grant No. NGR-06-002-127.

Experiments with two electrohydrodynamic heat pipes are reported. Both devices employ an electromechanical flow structure for axial liquid flow and a capillary wicking structure for (1) collection of condensed liquid at the cooled end and (2) distribution of this liquid at the heated end. One device has circumferential grooving for the capillary structure and the other has feltmetal wicking. The experiments successfully demonstrate the electrohydrodynamic heat pipe concept. Compatibility of the two circumferential wick structures with an axial electromechanical flow structure is also demonstrated. A significant mismatch of the capillary groove and electrohydrodynamic pumping capabilities results in severe hydrodynamic burn-cut limiting in the first heat pipe. Both devices have very poor over-all thermal conductances of the order of 1-2 W/deg C, reflecting the generally poor heat-transfer properties of the dielectric working fluids required in electrohydrodynamic heat pipes. (Author)

A74-30529 **Fuel cells with the fuel dissolved in the electrolyte.** I. Onaca, M. Mavrodin-Tarabic, and I. Solacolu (Academia Romana, Centrul de Cercetari de Chimie Fizica, Bucharest, Rumania). (*Studii si Cercetari de Chimie*, vol. 21, no. 7, 1973, p. 761-771.) *International Chemical Engineering*, vol. 14, Apr. 1974, p. 347-353. 48 refs. Translation.

A fuel cell using a fuel dissolved in the electrolyte is a system which achieves the conversion of chemical into electrical energy as a result of the fuel oxidation reaction. These types of fuel cells use, for their cathodes, gas electrodes with a three-phase interface, for their anodes two-phase interface porous electrodes and, as the electrolyte, concentrated solutions of an acid or a base in water. The use of alkaline electrolytes with good electrochemical performance is limited in the case of carbon-containing fuels by the phenomenon of carbonation; this makes it necessary to provide the installation with an electrolyte-decarbonation device. The performance of chemical current sources having their fuel dissolved in the electrolyte depends on the judicious selection of the system: fuel-oxidant-electrolyte-electrodes (structure and catalyst), and operating conditions (pressure and temperature). F.R.L.

A74-31213 **Fusion reactor design problems.** A. H. Spano and A. Belozero (International Atomic Energy Agency, Vienna, Austria). *Nuclear Fusion*, vol. 14, Apr. 1974, p. 281-283.

The reference design studies presented by a number of participants in the International Atomic Energy Agency (IAEA) workshop provided a framework for identifying what was felt to be several of the most crucial reaction problem areas and for setting up panels to look into these questions in greater depth. The studies investigated impurities, first-wall protection, bulk radiation damage, start-up, repair and accessibility, tritium, fusion and the environment, and fission-fusion hybrid systems. F.R.L.

A74-31286 # Theoretical performance of ammonia, hydrogen, and biowaste resistojets. R. E. W. Jansson and I. Edwards (Southampton, University, Southampton, England). (*British Interplanetary Society, Symposium on Rocket Propulsion and Space Transportation, University College, London, England, Apr. 18, 19, 1972*) *British Interplanetary Society, Journal*, vol. 27, June 1974, p. 433-442. 8 refs.

The theoretical performance of H₂, NH₃, CO₂ and CH₄ resistojets, deduced from realistic models of the nozzle flow, are discussed, and the importance of dissociation of the propellant in the heater and vibrational relaxation in the nozzle are shown. Using the theoretical data to generate engineering design parameters, it is demonstrated that the geometry of the nozzle, as well as the stagnation conditions, can be used as a variable to trade off power losses, hence power system mass, against propellant mass for a given mission total impulse. (Author)

A74-31446 Energy self-sufficiency - An economic evaluation. M. A. Adelman, H. D. Jacoby, P. L. Joskow, P. W. MacAvoy, D. C. White, M. B. Zimmerman (MIT, Cambridge, Mass.), and H. P. Meissner. *Technology Review*, vol. 76, May 1974, p. 22-58. Research sponsored by the Massachusetts Institute of Technology.

On the assumption that the U.S. meets all its energy demands from internal sources by 1980, forecasts are made of the prices at which supply and demand will be in equilibrium. The results indicate that prices in the range from \$10.00 to \$12.00 per barrel (oil-equivalent) will be necessary to bring forth enough additional supplies of fossil fuels to satisfy demands in domestic energy markets by that time. The development of special price policies is recommended for the synthetics industry. Security can be provided against import disruption by the introduction of radically new import policies. One important element would be an import storage program. G.R.

A74-31450 * Thermochemical water decomposition processes. R. E. Chao (University of Puerto Rico, Mayaguez, P.R.). *I & EC - Industrial and Engineering Chemistry, Product Research and Development*, vol. 13, June 1974, p. 94-101. 124 refs. NASA-supported research.

Thermochemical processes which lead to the production of hydrogen and oxygen from water without the consumption of any other material have a number of advantages when compared to other processes such as water electrolysis. It is possible to operate a sequence of chemical steps with net work requirements equal to zero at temperatures well below the temperature required for water dissociation in a single step. Various types of procedures are discussed, giving attention to halide processes, reverse Deacon processes, iron oxide and carbon oxide processes, and metal and alkali metal processes. Economical questions are also considered. G.R.

A74-31574 Fusion power by laser implosion. J. L. Emmett, J. Nuckolls, and L. Wood (California, University, Livermore, Calif.). *Scientific American*, vol. 230, June 1974, p. 24-37.

Computer calculations conducted in the early 1960s showed that efficient generation of fusion energy could be achieved if lasers were used to implode thermonuclear fuel to 10,000 times its normal liquid density. A multibeam laser facility, scheduled for completion in 1977, is designed to prove the feasibility of initiating thermonuclear microexplosions by implosion of pellets of hydrogen isotopes to ultrahigh densities. A neodymium-glass laser system, although adequate for feasibility studies, will not serve for a practical fusion reactor. A search for a new laser medium is, therefore, being conducted. Additional technological problems which have to be solved for the operation of a laser-fusion power plant are also considered. G.R.

A74-32600 Study of the effect of dilution on the lubricity of hydrotreated jet engine fuels. R. K. Agnihotri, J. R. Narang, K. C. Metha, and A. N. Nandy (Defence Research Laboratory, Kanpur,

India). *Wear*, vol. 28, June 1974, p. 392-394. 5 refs.

Using the ball and cylinder technique developed by Agnihotri et al. (1971), it is shown that mere blending of hydrotreated jet engine fuel with conventionally refined fuels does not by itself restore the lubricity loss caused by the hydrotreatment process. The degree of hydrotreatment and the type of crude oil the fuel originates from are important and require due consideration. M.V.E.

A74-32607 Innovation and space flight (Innovation und Raumfahrt). H. Göllnitz (Messerschmitt-Bölkow-Blöhm GmbH, Munich, West Germany). *Flug Revue/Flugwelt International*, June 1974, p. 31-34, 43, 44. In German.

The technological challenges of space flight have led to a multitude of new solutions which are now being utilized in other areas. The fields which benefit from new technological developments of space programs include electronics, data processing, process control, medicine, biology, materials science, machine design, and chemical propulsion systems. Specific new developments considered include the use of new metallic and nonmetallic materials, the design of large solar panels, ultrasonic test procedures, and advances in cryogenic technology including its application in surgery. G.R.

A74-32908 Effects of radiation on the violet solar cell. R. A. Arndt (COMSAT Physics Laboratory, Clarksburg, Md.). *COMSAT Technical Review*, vol. 4, Spring 1974, p. 41-52. 6 refs.

The violet solar cell, which generates nearly 5 mW per sq cm more power than solar cells employed in present commercial communications satellites, hereafter referred to as satellite cells, has been irradiated with 1-MeV electrons to a fluence of 10 to the 16th power per sq cm and with 2- and 4-MeV protons to a fluence of 10 to the 13th power per sq cm. An electron fluence of about 10 to the 15th power per sq cm or a proton fluence of 2 times 10 to the 10th power per sq cm is required to reduce the power output of the violet cell to that of the satellite cell at beginning of life. The violet cell produces more power after low neutron fluences than a fully recovered Li-doped cell and only a few percent less power after high neutron fluences. (Author)

A74-33071 Detecting and monitoring oil slicks with aerial photos. K. N. Vity (Eastman Kodak Co., Rochester, N.Y.). *Photogrammetric Engineering*, vol. 40, June 1974, p. 697-708. 44 refs.

Quantitative results of tests conducted to determine the feasibility of using aerial photographic techniques for the detection and monitoring of oil slicks are presented. Three petroleum products were selected as being typical of oil pollution: gasoline, Diesel fuel, and spent automotive lubricating oil. Slicks of these products on water from the Genesee River were then photographed in several spectral regions. Significant detection capability was found in the ultraviolet and blue regions of the spectrum, less in the near-infrared, and almost none in the green and red. P.T.H.

A74-33092 # Investigation of the economic efficiency of surplus tanking of aircraft fuel (Untersuchung über die ökonomische Effektivität der Vorratsbetankung von Flugtreibstoffen). B. Söhler (Gesellschaft für internationalen Flugverkehr mbH, Berlin, East Germany). *Technisch-ökonomische Informationen der zivilen Luftfahrt*, vol. 10, no. 2, 1974, p. 75-80. In German.

The effectiveness of the practice of tanking beyond the required amount in countries where the fuel prices are low is analyzed, using the IL-62 airliner as an example. The takeoff, horizontal flight (at constant altitude), and landing stages are examined separately, assuming normal atmospheric conditions and absence of wind in each stage. It is shown that economic efficiency depends primarily on the fuel price difference at home and abroad, on the distance flown, on the amount of surplus fuel, and on the flight altitude and velocity. The need for studying many other factors (including the problem of maximum landing weight) is demonstrated. V.P.

A74-33096 # Dolphin airship with undulatory-flow propulsion - Dynamic lift (Delphinluftschiff mit Wellantrieb - Dynamischer

Auftrieb. W. Schmidt (Gesellschaft für internationalen Flugwerkeher mbH, Berlin, East Germany). *Technisch-ökonomische Informationen der zivilen Luftfahrt*, vol. 10, no. 2, 1974, p. 104-106. In German.

Queck and Schmidt (1970) have described a novel revolutionary concept of a droplet-shaped helium-filled airship developed on the basis of the dolphin principle. As the dolphin, the airship moves in a self-generated undulatory flow. Safe and comfortable in flight, it combines the maneuverability of a helicopter with the speed of a turboprop aircraft. An aerodynamic study is described, showing that the aerodynamic lift of the airship is roughly equal to that of a wing of the same (droplet) planform, and is 20 times that of a Zeppelin airship of equal volume. The capability of the airship to transport large loads over large distances at low cost is established. The possibility that the dolphin principle may lead to a revival of airship navigation is suggested. V.P.

A74-33108 # Nonlinear stability of magnetohydrodynamic generators. D. A. Oliver (MIT, Cambridge, Mass.) and S. Jardin (Princeton University, Princeton, N.J.). *American Institute of Aeronautics and Astronautics, Fluid and Plasma Dynamics Conference, 7th, Palo Alto, Calif., June 17-19, 1974, Paper 74-507*. 11 p. 10 refs. Members, \$1.50; nonmembers, \$2.00. NSF Grant No. GK-38130.

A nonlinear time domain theory for the stability of magnetohydrodynamic (MHD) generators is proposed. The method is capable of treating MHD generator response with flows in the subsonic, transonic, and supersonic flow regimes and with moving shock waves present in the duct. This theory is compared with linear theory predictions of the growth of convectively unstable finite amplitude fluctuations in MHD generators. It is shown that nonlinear, finite amplitude fluctuations grow much faster than infinitesimal fluctuations, and that generators which are globally stable to small amplitude fluctuations may be unstable if those fluctuations are of finite amplitude. (Author)

A74-33299 An analysis of the national transportation policy. S. D. Browne (MIT, Cambridge, Mass.). (*Annual Air Law Symposium, 8th, Dallas, Tex., Mar. 14, 1974*.) *Journal of Air Law and Commerce*, vol. 40, Winter 1974, p. 75-79.

The present work advocates greater central control of national transportation policy making, and states that Congress must address the problem of an all-mode transportation department with power to allocate resources between the modes. It is also pointed out that recent data concerning the fuel efficiency of various modes of transportation are out of line. It is argued that these data, obtained by dividing total passenger miles by total fuel, reflected badly on air transportation without taking into consideration actual trip distances, infrastructure costs, and time considerations. P.T.H.

A74-33564 Thermal cycle and effectiveness of a maneuverable power assembly with an MHD generator and turbogenerator. V. A. Kirillin, A. E. Sheindlin, E. M. Shelkov, E. V. Shishkov, S. A. Pashkov, and V. M. Latyshev (Akademiia Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR). (*Teplofizika Vysokikh Temperatur*, vol. 11, Sept.-Oct. 1973, p. 1088-1091.) *High Temperature*, vol. 11, no. 5, May 1974, p. 966-969. 8 refs. Translation.

A74-33565 Investigation of heat exchange in an MHD generator channel. V. V. Kirillov and V. D. Semenov (Akademiia Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR). (*Teplofizika Vysokikh Temperatur*, vol. 11, Sept.-Oct. 1973, p. 1092-1100.) *High Temperature*, vol. 11, no. 5, May 1974, p. 970-977. 13 refs. Translation.

A theoretical treatment of heat transfer and frictional drag, applicable to the conditions in the channel of an open-cycle MHDG, is presented. A calculation is made of the drag resistance and heat transfer for the turbulent flow along a flat wall of partially dissociated natural gas combustion products. The calculation is conducted for external Reynolds numbers from 100,000 to 10,000,000, a ratio of wall temperature to external temperature ranging from 0.133 to 1, and an external temperature range of 2,400 to 3,000 K. The degree of dissociation of the combustion products is

fairly high in the temperature range indicated; at external temperature of 3,000 K, the dissociation energy comprises 46% of the enthalpy of the gas. The effect of various factors on the heat exchange under given conditions is shown. The data obtained is compared with the results of calculations by other methods. The results of an experimental study of heat exchange in large open-cycle MHD installations are cited. A comparison of the theoretical data with the experimental results is given. (Author)

A74-33811 # Minimum time and minimum fuel flight path sensitivity. M. A. Nichols (USAF; Arizona State University, Tempe, Ariz.) and J. K. Hedrick (Arizona State University, Tempe, Ariz.). *Journal of Aircraft*, vol. 11, June 1974, p. 320-325. 13 refs.

The sensitivity of minimum-time and minimum-fuel flight paths to variations in aircraft parameters in different atmospheric conditions was investigated using the energy state approximation. Numerical results are presented for a typical supersonic aircraft in Standard-Day, Hot-Day, and Cold-Day atmospheres. This paper shows how flight time and fuel consumption are affected by changes in thrust, weight, drag coefficients, and specific fuel consumption in each of three different atmospheric conditions. For each variation, the effect on performance (flight time or fuel consumption) is determined for the nominal paths. Then for each variation, the flight path is adjusted to be either time optimal or fuel optimal. (Author)

A74-33971 Vertical multijunction solar-cell one-dimensional analysis. A. Gover and P. Stella (Heliotek, Sylmar, Calif.). *IEEE Transactions on Electron Devices*, vol. ED-21, June 1974, p. 351-356. 7 refs. Contract No. F33615-72-C-1310.

The vertical multijunction solar cell is a photovoltaic device which may allow conversion efficiencies higher than conventional planar devices. A one-dimensional model of the device is presented here which allows a simple and straightforward analysis of device performance to be conducted. The analysis covers the derivation of device short-circuit current, saturation current, open-circuit voltage, and maximum power as a function of illumination spectra, device geometry, and device material properties. (Author)

A74-33992 Hydrogen production by reforming processes - The alternatives and economics. W. Hartley (Davy Powergas, Ltd., London, England). In: *Cryotech '73: The production and use of industrial gases; Proceedings of the Conference, Brighton, England, November 13-15, 1973*. Guildford, Surrey, England, IPC Science and Technology Press, Ltd., 1974, p. 54-60.

The paper discusses the alternative process routes available to produce H₂ or H₂/CO mixtures from hydrocarbons using catalytic steam reforming or partial oxidation processes. The advantages, limitations and applications of each scheme are discussed. Typical investment and raw material/utility requirements are included for each process route. The investment data is based on costs for June 1973. (Author)

A74-33993 Process design considerations in cryogenic hydrogen recovery plants. M. Ruhemann and K. Tichar (Petrocarbon Developments, Ltd., Manchester, England). In: *Cryotech '73: The production and use of industrial gases; Proceedings of the Conference, Brighton, England, November 13-15, 1973*.

Guildford, Surrey, England, IPC Science and Technology Press, Ltd., 1974, p. 61-66; Discussion, p. 66.

The paper discusses the characteristic process features of plants which recover hydrogen of moderate purity from gas mixtures available at elevated pressures and in which no mechanical work is performed. The concept of 'efficiency' in this type of plant is explained and it is shown that the efficiency determines the maximum pressure at which tail-gases (i.e., the evaporated condensates) can be extracted. In most cases this pressure is limited, not by considerations of heat balance, but by the mixing entropy of the feed components. The significance is discussed of the injection of hydrogen into the evaporating condensates to lower the temperatures

to which the feed can be cooled and hence to raise the purity of the hydrogen product, and it is shown that the use of refluxing exchangers can improve the efficiency of the recovery process.

(Author)

A74-33994 PSA hydrogen plants - How well have they performed. C. H. Katira and H. A. Stewart (Union Carbide Europe, S.A., Geneva, Switzerland). In: *Cryotech '73: The production and use of industrial gases; Proceedings of the Conference*, Brighton, England, November 13-15, 1973. Surrey, England, IPC Science and Technology Press, Ltd., 1974, p. 78-84; Discussion, p. 84.

Description of the design, operation, and applications of multiple-vessel adsorption systems used for recovery and purification of hydrogen gas by the pressure-swing principle. Performance histories of particular equipment are provided in applications involving purification of hydrogen in gas flows where the initial hydrogen content varies from 35% to 99.5%. Final purity can vary from 99 to 99.9999%, depending on need; and yield is satisfactory with tail gases being recycled, sent to fuel, or flared. Improvements in electrical components used for process control functions are highlighted.

A74-34050 Symposium on Engineering Problems of Fusion Research, 5th, Princeton University, Princeton, N.J., November 5-9, 1973, Proceedings. Symposium sponsored by Princeton University, AEC, IEEE, and ANS. New York, Institute of Electrical and Electronics Engineers, Inc., 1974. 703 p. \$25.

Topics discussed include the effect of helium on fusion reactor materials, fusion reactor heat transfer systems, reactor fuel handling, the power balance in fusion reactors, laser-controlled thermonuclear research, Tokamak reactor design, theta-pinch power plant development, blanket-coupled MHD, lithium-cooled reactor blankets, reactor blankets containing thorium, the injection of neutral beams into thermonuclear reactors, capacitive energy storage for theta-pinch compression, confinement-field coil loading and stresses for a large-torus reactor, toroidal field coils and high-power injection heaters for the Ormak system, and topics concerning energy storage, mechanical design and data handling, magnet design, electron beams and lasers for high-temperature plasma diagnostics and high-voltage technology.

A.B.K.

A74-34093 A preliminary engineering design of a 'Venetian blind' direct energy converter for fusion reactors. W. L. Barr, R. J. Burleigh, W. L. Dexter, R. W. Moir, and R. R. Smith (California, University, Livermore, Calif.). *IEEE Transactions on Plasma Science*, vol. PS-2, June 1974, p. 71-92. 23 refs. AEC-sponsored research.

The considered scheme for the direct energy converter was first described by Moir and Barr (1973). According to this approach the beam from the reactor is expanded two-dimensionally in a conical magnetic expander. Energy selection is accomplished through the angular dependence of ion transmission through a system of ribbon grids resembling a Venetian blind. Some of the practical aspects of this concept are examined, giving attention to some of the problems involved and some possible solutions. A cost estimate for the energy converter is also presented.

A74-34095 # Testing of photoelectric generators in the conditions of Apsheron Peninsula, Azerbaidzhan SSR (Ispytanie fotoelektricheskikh generatorov v usloviakh Apsheronskogo polostrova Az SSR). M. Ia. Bakirov, E. K. Guseinov, and N. P. Aliev (Akademiia Nauk Azerbaidzhanskoi SSR, Institut Fiziki, Baku, Azerbaidzhan SSR). *Geliotekhnika*, no. 2, 1974, p. 3-6. 8 refs. In Russian.

The diurnal output of a solar array was monitored during the months of August through December, 1972, on the Apsheron Peninsula. The array consisted of silicon solar cells, and was rated to

produce 5 to 6 watts of power under conditions of 800 watts per sq m of solar radiation. The diurnal variation in output was studied on the basis of a classification of days into clear, partly clear, or overcast days.

Gavrilova (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istochnikov Toka, Kishinev, Moldavian SSR). *Geliotekhnika*, no. 2, 1974, p. 43-50. 7 refs. In Russian.

A74-34191 Developments in laser technology-II; Annual Technical Meeting, 17th, Seminar-in-Depth, San Diego, Calif., August 27-29, 1973, Proceedings. Seminar sponsored by the Society of Photo-optical Instrumentation Engineers. Edited by R. F. Wuerker (TRW Systems Group, Redondo Beach, Calif.). Redondo Beach, Calif., Society of Photo-optical Instrumentation Engineers (SPIE Proceedings. Volume 41), 1974. 205 p. Members, \$18.; nonmembers, \$28.

Recently developed laser systems and theoretical analysis of laser operation are described for a wide variety of laser types and applications. Some of the topics covered include: theory and experiment in laser driven fusion, scaling relations pertaining to a double discharge CO₂ TEA laser, laser internal aerodynamics and beam quality, experiments with nuclear-pumped gas lasers, biomedical applications of a holographic system for automatic surface mapping, computer holograms, holographic techniques in the study of marine plankton, integrated optics, and the use of He-Ne lasers in construction and building industry.

A74-34182 Theory and experiment in laser driven fusion. K. A. Brueckner (KMS Fusion, Inc.). In: *Developments in laser technology-II; Annual Technical Meeting, 17th, Seminar-in-Depth, San Diego, Calif., August 27-29, 1973, Proceedings*. Redondo Beach, Calif., Society of Photo-optical Instrumentation Engineers, 1974, p. 5-12.

Configuration and physics requirements are discussed for fusion energy to be equal to laser energy in controlled fusion systems using a laser beam to initiate the fusion of a highly compressed deuterium-tritium (DT) pellet. Results of two-dimensional computer simulation of the stability of the pellet implosion are presented. A neodymium-glass laser system is described which has been used in tests measuring target reflectivity and electron temperature when pulses up to 300 joules with 3 nanosecond duration are delivered on plane CD₂ and CH₂ targets. Results of these preliminary experiments are discussed.

A74-34367 Photovoltaic Specialists Conference, 10th, Stanford University, Palo Alto, Calif., November 13-15, 1973, Conference Record. Conference sponsored by the Institute of Electrical and Electronics Engineers. New York, Institute of Electrical and Electronics Engineers, Inc., 1974. 424 p. Members, \$18.75; nonmembers, \$25.

Various types of photovoltaic solar cells are discussed, and the functioning of their individual elements, including the advantages of different junction and semiconductor features, is examined. Methods of measuring the efficiency and testing the reliability of solar cell

arrays are presented along with suggestions for improving the performance of such cells by incorporating new principles of design and fabrication. The terrestrial applications of solar cells are considered in connection with ongoing developments in space technology, and the effects of radiation and environment are investigated.

A74-34368 Principles of photovoltaic solar energy conversion. J. J. Loferski (Brown University, Providence, R.I.). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record. New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 1-4.

The present work sets forth the main principles of operation of semiconductor photovoltaic cells. Four basic photovoltaic effect parameters discussed are the short circuit current; the open circuit voltage; the current for matched load, i.e. current under maximum power transfer conditions and the corresponding voltage. Maximum efficiency attainable in a photovoltaic cell is discussed. The efficiency is a strong function of temperature; it decreases as temperature increases. This must always be taken into account, especially if the cells are to be used with concentrators. P.T.H.

A74-34369 Potential improvements in efficiency and cost of solar cells. M. Wolf (Pennsylvania, University, Philadelphia, Pa.). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record. New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 5-14. 16 refs.

Several areas for potential improvement in silicon solar cells are identified. An improvement of 17% in collection efficiency is available through elimination of the high surface recombination velocity in combination with a reduction of the thickness of the diffused layer. While at present, silicon of a base resistivity of 2 to 10 ohm-cm is commonly used, yielding open circuit voltages in the range 0.55 to 0.59 V, use of a base resistivity of 0.01 ohm-cm could potentially yield an open circuit voltage of 0.79 V. Present costs of silicon solar arrays are compared with cost goals for large-scale terrestrial applications. Proof of commercial feasibility may be achievable within 5 years with a copper sulfide/cadmium sulfide system, but should require, with expenditures of significant efforts, approximately 10 years for the silicon system. P.T.H.

A74-34370 * Solar and laser energy conversion with Schottky barrier solar cells. R. J. Stirn and Y.-C. M. Yeh (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record.

New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 15-24. 24 refs. Contract No. NAS7-100.

Photovoltaic devices have been fabricated for solar and short-wavelength laser energy conversion using the thin metal film-semiconductor (Schottky barrier) approach. Studies of the metal film optical characteristics and the voltage outputs were emphasized. Air mass zero efficiencies of 8 to 9% in GaAs and laser conversion efficiencies of 25% at 4880 Å in GaAs(0.6)P(0.4) are presently measured, with projected efficiencies of 15 and 45%, respectively. The techniques, if applied successfully to semiconductor thin films, could have an impact in solar energy terrestrial application. (Author)

A74-34373 The effect of depletion region recombination currents on the efficiencies of Si and GaAs solar cells. H. J. Hovel (IBM Research Laboratory, San Jose, Calif.). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record.

New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 34-39. 6 refs.

The Sah-Noyce-Shockley theory of depletion region recombination-generation currents is described along with the modification

by Choo for asymmetrical junctions. Computer calculations show that these currents do not seriously affect the efficiency of Si solar cells for reasonably high lifetimes, but lower the efficiency of GaAs devices by 1 to 1.5% even in the best of cases. Reasons for discrepancies between theory and experiment are discussed. (Author)

A74-34376 Comparison of vertical multi-junction and conventional solar cell performance. T. B. S. Chadda and M. Wolf (Pennsylvania, University, Philadelphia, Pa.). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record. New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 52-57.

A theoretical study has been carried out to compare the potentially achievable performance of vertical multijunction solar cells with that of the conventional solar cell for the case of the silicon n/p junction structure of 10-ohm-cm base resistivity under air mass zero conditions. The results confirm the prior suspicions, that the performance of the vertical junction cell in unconcentrated sunlight at beginning of life is only marginally superior to that of the conventional solar cell, but that it can withstand, if properly designed, a two to three times greater fluence of nuclear particle radiation (1-MeV electrons) before reaching equal end-of-life power output. (Author)

A74-34383 GaAs solar cells with AlAs windows. D. Huber and K. Bogus (Telefunken AG, Heilbronn, West Germany). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record.

New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 100-102. 5 refs. Research supported by the Gesellschaft für Weltraumforschung.

The conversion efficiency of GaAs solar cells is increased by using appropriate window materials. In an attempt to make the window material as transparent as possible, pure AlAs layers have been grown on GaAs by liquid phase epitaxy. AlAs has its indirect gap at 2.15 eV and its direct gap at 2.9 eV, which gives a reduction of absorption losses in the window by more than 20% compared to Ga(1-x)Al(x)As windows. An evaluation of quantum efficiency and solar cell I-V characteristic measurements leads to a conversion efficiency of 13.5% under air mass zero conditions. (Author)

A74-34387 * High voltage solar cell power generating system. E. Levy, Jr., R. W. Opjorden (Hughes Aircraft Co., El Segundo, Calif.), and A. C. Hoffman (NASA, Lewis Research Center, Cleveland, Ohio). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record.

New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 123-131. Contract No. NAS3-15826.

A laboratory solar power system regulated by on-panel switches has been delivered for operating high power (3 kW), high voltage (15,000 volt) loads (communication tubes, ion thrusters). The modular system consists of 26 solar arrays, each with an integral light source and cooling system. A typical array contains 2,560 series-connected cells. Each light source consists of twenty 500-watt tungsten iodide lamps providing plus or minus 5 percent uniformity at one solar constant. An array temperature of less than 40 C is achieved using an infrared filter, a water-cooled plate, a vacuum hold-down system, and air flushing. (Author)

A74-34390 Qualification testing of laboratory produced violet solar cells. D. J. Curtin and R. W. Cool (COMSAT Laboratories, Clarksburg, Md.). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record.

New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 139-152. 7 refs. Research supported by the Communications Satellite Corp.

Tests run on bare violet solar cells fabricated early in the program showed a 4.1% degradation in maximum power after 1000 hours of humidity as well as tape peel, thermal shock, and thermal soak tests. Normal solderless solar cells showed degradations from

13.6 to 22.1%, while cells with titanium-palladium-silver contacts showed degradations of 1.0% or less under humidity testing only. Covered violet solar cells showed no degradation. After a fluence of 3 times 10 to the 14th power 1-MeV-electrons/sq cm, covered violet solar cells fabricated early in the program produced over 20% more power than conventional, Intelsat IV type cells. Temperature coefficients were also measured. Covered violet solar cells can be welded by parallel gap resistance welding without electrical degradation. A violet solar cell module fabricated in this way has survived 200 thermal shock cycles to -196 C without electrical degradation.

A74-34394 * Optimum design of antireflection coating for silicon solar cells. E. Y. Wang, F. T. S. Yu, V. L. Simms (Wayne State University, Detroit, Mich.), H. W. Brandhorst, Jr., and J. D. Broder (NASA, Lewis Research Center, Cleveland, Ohio). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record. New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 168-173. 15 refs.

Based on classical electromagnetic theory, reflectivity calculations for various single and double optical coating systems for silicon solar cells are presented. From calculations and considerations of solar spectral response of the solar cells, the number and thickness of coating materials needed to obtain efficient solar cells can be predicted. Some experimental results on single layer coated cells are also presented for comparison with calculations, and agreement is good. By means of microwave transmission line analogy, the design of the multilayer coating can be simplified by using Tchebycheff polynomials.

A74-34396 Vitreous oxide antireflection films in high-efficiency solar cells. A. G. Revesz (COMSAT Laboratories, Clarksburg, Md.). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record.

New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 180, 181. 7 refs. Research sponsored by the Communications Research Corp.

New antireflection Ta₂O₅ and Nb₂O₅ films have been developed for the violet solar cells. These films are prepared in such a manner that the oxide is in the vitreous state, i.e., it is noncrystalline but has a high degree of short range order. As a result, these films do not absorb in the blue and violet range of the spectrum and the junction properties do not deteriorate (i.e., the fill factor is high).

A74-34398 * The multiple junction edge illuminated solar cell. B. L. Sater, H. W. Brandhorst, Jr., T. J. Riley, and R. E. Hart, Jr. (NASA, Lewis Research Center, Cleveland, Ohio). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record. New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 188-193. 9 refs.

The multiple junction edge illuminated solar cell (M-J Cell) was devised for high voltage, low current applications. Devices to be flight-tested in early 1974 with 96 series-connected PNN+ junctions in a 2 cm x 2.3 cm size deliver 36 volts at 1 milliampere. Test data of M-J Cells fabricated with resistivities of 10, 50, 100, 200, 450, and 1000 ohm-cm silicon are presented and problem areas are discussed. An additional potential application of the M-J Cell lies in utilization of its high-intensity performance that has been demonstrated at levels in excess of 100 AMO suns.

(Author)

A74-34401 Improved performance from thin silicon solar cells. P. A. Iles and D. K. Zemirich (Globe-Union, Inc., El Monte, Calif.). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record.

New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 200-206. 17 refs.

Several methods used to increase solar cell output have been applied successfully to thin cells. The experimental results show that

for AMO illumination, maximum power values exceeding 70 mW can be obtained for 4-sq cm cells down to thicknesses approaching 2 mils. The specific power obtained has exceeded 0.5 kW/lb. The methods described should be applicable to thin cells made from different forms of silicon available in the future.

A74-34404 The NSF/RANN Photovoltaic Energy Conversion Program. H. R. Blieden (National Science Foundation, Div. of Advanced Energy Research and Technology, Washington, D.C.) and F. H. Morse. In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record.

New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 219-226.

The general and specific objectives of the NSF/RANN Photovoltaic Energy Conversion Program are presented within the framework of the NSF/RANN Solar Energy Program. The program plan to achieve these objectives is described and the major milestones are identified. A brief summary of those photovoltaic projects currently under NSF/RANN support is included.

A74-34405 * Terrestrial applications of solar cell powered systems. W. C. Moore, J. W. Ravin (Textron Electronics, Inc., Heliotek Div., Sylmar, Calif.), R. M. Masters, and A. F. Forestieri (NASA, Lewis Research Center, Cleveland, Ohio). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record. New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 227-233.

A study was initiated to search out, list, and evaluate terrestrial applications of solar cells and design systems for those applications that show the most promise for becoming practical and accepted by users within the next five years. From a list of over 65 potential applications, ten were selected for further study. The study culminated in detailed engineering designs of systems for the two most attractive applications.

A74-34406 * The NASA-Lewis terrestrial photovoltaics program. D. T. Bernatowicz (NASA, Lewis Research Center, Cleveland, Ohio). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record.

New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 234-238. 5 refs.

Those parts of the present NASA-Lewis research and technology effort on solar cells and arrays having relevance to terrestrial uses are outlined. These include raising cell efficiency, developing the FEP-covered module concept, and exploring low-cost cell concepts. Solar cell-battery power systems for remote weather stations have been built to demonstrate the capabilities of solar cells for terrestrial applications.

A74-34412 Layout and technology of the CTS solar array blanket. R. Buhs (Telefunken AG, Hamburg, West Germany). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record.

New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 296-306.

Description of a flexible solar cell blanket for the Canadian Communication Technology Satellite. The main components of the blanket are 200-micron-thick solar cells, 100-micron-thick cover slides, silver mesh interconnectors, substrate of 65-micron-thick reinforced Kevlar, and flexible wires for power transfer. The most significant processes are automatic welding, bonding in vacuum, and a special technique for interconnecting subunits of the solar cell blanket.

A74-34416 Evaluation of ohmic losses in solar cells and array. J. Roger (Société Anonyme des Télécommunications, Paris, France). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record.

New York, Institute of Electrical and Electronics

Engineers, Inc., 1974, p. 345-352.

Methods for measuring the resistance of intercell and inter-module couplings, for optimizing solar cell gridlines and for evaluating wiring losses in a solar cell array are discussed. Curves are plotted to show the efficiency of an ideal solar cell as a function of open circuit voltage and short circuit current density. Plots are also included for various performance characteristics and specifications of solar cells and arrays. V.Z.

A74-34421* The drift field model applied to the lithium-containing silicon solar cell. M. P. Godlewski, C. R. Baraona, and H. W. Brandhorst, Jr. (NASA, Lewis Research Center, Cleveland, Ohio). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record. New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 378-383. 14 refs.

The drift field model used by Wolf (1963) to calculate the short-circuit current was extended to permit calculations of the open-circuit voltage and the maximum power under conditions of illumination of either tungsten (2800 C) source or air mass zero sunlight. Voltages were calculated using an expression for the drift field diode saturation current. The model, applied to the oxygen-rich (C-13 group) lithium solar cells, was used to calculate the pre- and post-electron bombardment trends of the open-circuit voltage, maximum power, and short-circuit current for lithium gradients in the range from 10 to the 18th power to 10 to the 19th power Li/cm to the 4th power. Diffusion length degradation and carrier removal effects were sufficient to predict the cell performance up to 3×10 to the 14th electrons per sq cm. Beyond this fluence it was necessary to include drift field removal effects. (Author)

A74-34620 Nuclear fission as a general source of energy. L. R. Shepherd (Organization for Economic Cooperation and Development, Winfrith, Dorset, England). *Nature*, vol. 249, June 21, 1974, p. 717-720.

Attention is given to ways through which the heat generated by nuclear fission in reactors could be more fully utilized to meet overall energy requirements rather than merely producing electricity for distribution through utility grids. Procedures and technical requirements are discussed for (1) the direct use of waste heat in the thermodynamic cycles involved in generating electricity (low-temperature processes), (2) the direct utilization of the heat output of reactors in chemical industrial processes supplemented by electricity production (high-temperature processes), and (3) direct or indirect application of nuclear heat supply to produce synthetic liquid or gaseous fuels (high-temperature processes or methods involving intermediate electrical power generation). T.M.

A74-34621 Prospects for hydrogen as an energy resource. J. K. Dawson (Atomic Energy Research Establishment, Harwell, Berks., England). *Nature*, vol. 249, June 21, 1974, p. 724-726.

Large-scale production of hydrogen from water is evaluated as a future source of fuel for transport and the reduction of iron ore. Potential markets for hydrogen fuel are estimated on the basis of expected fuel production costs and demands at the end of the century. Cost and feasibility analyses are included for two processes whereby nuclear energy is used in decomposition of water either through direct thermochemical decomposition or by electrolysis involving intermediate conversion to electric power. T.M.

A74-34771 Solid state batteries. C. C. Liang (P. R. Mallory and Co., Inc., Burlington, Mass.). In: Applied solid state science: Advances in materials and device research. Volume 4. New York, Academic Press, Inc., 1974, p. 95-135. 111 refs.

A number of limitations present in batteries with aqueous solution electrolytes are not found in solid state battery systems in which both electrodes and electrolytes are in the solid state. In

recent years considerable progress has been made in the development of practical solid state batteries as energy sources. The general aspects of the conduction mechanisms of solid crystalline compounds are discussed, taking into account the ionic transport mechanisms of various highly conductive solid electrolytes. G.R.

A74-34844 # Energy management display. D. C. Sederstrom, R. C. McLane (Honeywell, Inc., Minneapolis, Minn.), and W. M. Branch (U.S. Navy, Naval Air Test Center, Patuxent River, Md.). In: Flight testing today - 1973; Proceedings of the Fourth National Symposium, Las Vegas, Nev., August 21-23, 1973. California, Md., Society of Flight Test Engineers, 1973. 5 p. Contract No. N00014-72-C-0194.

A research program in the field of energy management (efficient use of an aircraft's energy resources), aimed at developing a display suitable for exploring the areas of performance calibration, energy maneuverability, throttle-setting aids, efficient establishment of steady-state flight conditions, and similar flight research areas is described. The program led to the development of an energy/energy rate meter, whose theory of operations and applications is described. The results of flight tests conducted to evaluate the accuracy and utility of this relatively simple display concept are examined. V.P.

A74-34978 Flight/propulsion control integration aspects of energy management. M. J. Wendl, G. G. Grose, J. L. Porter, and V. R. Pruitt (McDonnell Aircraft Co., St. Louis, Mo.). *Society of Automotive Engineers, Air Transportation Meeting, Dallas, Tex., Apr. 30-May 2, 1974, Paper 740480*. 17 p. Members, \$1.40; nonmembers, \$2.25. Contracts No. F33615-71-C-1144; No. F33615-73-C-3130; No. F33615-72-C-1163.

Analytical studies indicate substantial aircraft performance benefits can result from proper application of energy management principles, and that conceptual approaches involving close coupling of aerodynamic, propulsion, and control technical elements are required to achieve these benefits. Analytic tools used in these studies include a modified Rutowski technique for simultaneously optimizing throttle position and flight path. Pilot-in-the-loop simulation results are presented and the use of advanced pilot displays utilizing energy management techniques are described. (Author)

A74-34985 Application of hydrogen to commercial transports. D. L. Kelly (Lockheed-California Co., Burbank, Calif.). *Society of Automotive Engineers, Air Transportation Meeting, Dallas, Tex., Apr. 30-May 2, 1974, Paper 740451*. 9 p. Members, \$1.40; nonmembers, \$2.25.

A design analysis of the conversion of an in-production wide-bodied transport to hydrogen fuel is presented. Comparisons are drawn between storage of hydrogen in the fuselage and storage in wing-external tanks. Required structural modifications are defined and costed, and a preferred configuration is selected on the basis of direct operating cost. It is shown that a conversion of a jet fueled wide-bodied transport to hydrogen fuel is technically and economically feasible, provided that it is preceded by a long-life tankage and insulation development. The preferred configuration has the hydrogen stored in pylon-mounted tanks above the wings. Flyaway cost of the hydrogen fueled conversion is 8 percent greater than that of the baseline jet fueled transport. M.V.E.

A74-34989 Performance versus cost tradeoffs - Initial look at alternatives. G. P. Sallee (American Airlines, Inc., New York, N.Y.). *Society of Automotive Engineers, Air Transportation Meeting, Dallas, Tex., Apr. 30-May 2, 1974, Paper 740494*. 6 p. Members, \$1.40; nonmembers, \$2.25.

Review of some of the engine alternatives suggested to reduce the impact of rising fuel prices. It is concluded, based on an analysis which considered the depreciation of investment, the cost of capital, insurance and maintenance expenses, as well as fuel savings, that in order of priority, it is necessary to investigate the optimum way to improve current in-service engine performance at minimum increase in maintenance cost and to investigate the possibility of improving

current engines by means of modification within current dimensions to improve components. Only after these are investigated and fuel prices have substantially increased, will retrofit of new engines on old aircraft be worthy of consideration. (Author)

A74-34980 An approach to aeroengine tradeoff factors. T. D. Sills (Rolls-Royce /1971/, Ltd., Derby, England). *Society of Automotive Engineers, Air Transportation Meeting, Dallas, Tex., Apr. 30-May 2, 1974, Paper 740493*. 7 p. Members, \$1.40; nonmembers, \$2.25.

Engine tradeoff factors are discussed in a general manner. Some of the problems of their interpretation and their limitations in use, particularly when presented by the aircraft constructor or operator to the aeroengine manufacturer, are shown. The discussion is restricted to the performance and economic aspects of civil transport aircraft. Illustrative examples are given. (Author)

A74-34993 Amphibian STOL and its facilities. R. G. Smethers, Jr. (Lockheed-Georgia Co., Marietta, Ga.). *Society of Automotive Engineers, Air Transportation Meeting, Dallas, Tex., Apr. 30-May 2, 1974, Paper 740488*. 15 p. 15 refs. Members, \$1.40; nonmembers, \$2.25.

The short-haul transportation problem, worldwide, is characterized by congestion both on the ground and in the air. Solutions in the form of ground transportation are expensive in terms of land utilization, high development costs, their adverse effect on the environment and ecology, and are 20-30 years in the future. STOL offers a solution, but the high cost of land for downtown STOLports has precluded implementation. The STOL amphibian provides a solution which uses existing waterways situated downtown in every major city. It will relieve ground congestion and alleviate saturated airports. Studies show that such a system meets the ten basic requirements established by the National Environmental Policy Act of 1969 and that it contributes significantly to a reduction in the energy consumed in travel to and from the airports. (Author)

A74-35000 U.S. government airport capacity planning. C. L. Blake (FAA, Washington, D.C.). *Society of Automotive Engineers, Air Transportation Meeting, Dallas, Tex., Apr. 30-May 2, 1974, Paper 740474*. 8 p. Members, \$1.40; nonmembers, \$2.25.

In order to formulate policy for the orderly development and use of the nation's navigable air space, federal agencies such as the FAA and the Department of Transportation have launched several programs to determine aviation requirements for the next 10 years. This paper outlines their conclusions concerning airborne activities such as flow control, approach and departure control, wake vortex problems, and operating procedures as well as airport capacity and ground operations. The impact of the FAA's Research and Development Program and the implications of the current fuel shortage and economic situation are also discussed. (Author)

A74-35001 Disposal of waste oils at military air bases. M. Lieberman, A. Beerbower (Esso Research and Engineering Co., Linden, N.J.), and R. H. Kroop (USAF, Washington, D.C.). *Society of Automotive Engineers, Air Transportation Meeting, Dallas, Tex., Apr. 30-May 2, 1974, Paper 740472*. 7 p. Members, \$1.40; nonmembers, \$2.25.

The disposal of waste lubricants and fuels at U.S. Air Force and Navy facilities is discussed. The waste products covered include: synthetic turbine oil, aviation piston engine oil, hydraulic fluids, and contaminated JP-4 and JP-5. Technical feasibility and the economics of various disposal alternatives, including use as a fuel, re-refining, and recycling, as well as entrepreneurial outlets are presented. Waste lubricants and fuels handling, classification, and storage are also discussed in connection with the disposal problem. (Author)

A74-35008 Advanced controls for commercial transport aircraft. H. A. Shomber (Boeing Commercial Airplane Co., Renton, Wash.) and R. B. Hollaway (Boeing Co., Wichita, Kan.). *Society of*

Automotive Engineers, Air Transportation Meeting, Dallas, Tex., Apr. 30-May 2, 1974, Paper 740453. 14 p. 27 refs. Members, \$1.40; nonmembers, \$2.25.

Advanced control concepts, e.g., CCV and ACT, hold considerable promise of more efficient operation for commercial transports. These potential improvements, greatest for new designs that include the control concepts from their outset, yield reductions in airplane weight and/or drag with associated impact on fuel requirements, operating costs, etc. Limited improvement is also available for existing airplanes that meet certain control system requirements. This paper discusses the potential impact of advanced controls on commercial transports as performance improvements or fuel savings, and the improvement sensitivity to the design mission and configuration. The commercial application of these advanced concepts must follow flight demonstration of the flight-critical aspects, and careful determination of the reliability (safety and dispatch), certification, and economic aspects. Finally, research and demonstration activities necessary for the commercial application of these advanced control concepts are recommended. (Author)

A74-35276 Effect of plasma injection on cold wall type MHD generator. T. Kajikawa, T. Kashiwara, and O. Nomura (Ministry of International Trade and Industries, Electrotechnical Laboratory, Tokyo, Japan). *Japanese Journal of Applied Physics*, vol. 13, May 1974, p. 870-874. 16 refs.

Difficulties concerning large electrode losses have to be overcome in connection with the development of a cold wall type MHD generator for practical applications. An investigation regarding the use of a plasma injection method was conducted to explore possibilities concerning the improvement of the MHD generating characteristics. The experimental results obtained show that an employment of the plasma injection method is feasible in the case of the small-scale cold wall type MHD generator considered. G.R.

A74-35287 International Cryogenic Engineering Conference, 5th, Kyoto, Japan, May 7-10, 1974, Preprints. Volumes 1 & 2. Conference sponsored by the Cryogenic Association of Japan. Tokyo, H. Nagano, University of Tokyo, 1974. Vol. 1, 216 p.; vol. 2, 358 p.

Recent theoretical and experimental studies of superconductivity, its technology and applications, are presented in a number of papers. Some of the topics covered include superconducting levitated transport systems, superconducting power transmission, macroscopic derivation of maximum Josephson tunneling current density, ac losses of a superconducting wire in a longitudinal magnetic field, a high speed superconducting generator, superconducting magnet and fusion reactor, development of high voltage cryoresistive cable, a millikelvin dilution refrigerator with plastic exchangers, and indications for the future of superconducting technology. P.T.H.

A74-35288 # The use of superconductivity in the USA transportation program. R. H. Borcherts (Ford Motor Co., Dearborn, Mich.). In: *International Cryogenic Engineering Conference, 5th, Kyoto, Japan, May 7-10, 1974, Preprints. Volume 1*.

Tokyo, H. Nagano, University of Tokyo, 1974, p. B1-1 to B1-7. 18 refs. Research supported by the U.S. Department of Transportation.

The present paper summarizes the results of programs investigating the feasibility of high-speed ground transportation based on the concept of utilizing superconducting magnets to support a moving vehicle above a roadbed of discrete passive loops or coils. These studies have provided detailed mathematical formulation and experimental verification of the forces on a rectangular coil operated at an arbitrary height and velocity above a continuous conducting sheet as well as over an L-shaped guide-way. Important conclusions and recommendations reached are described. No serious problem has yet arisen which would eliminate either one of the magnetic suspension schemes (attraction or repulsion) from consideration. P.T.H.

A74-35289 # Superconducting magnetic energy storage. H. L. Laquer (California, University, Los Alamos, N. Mex.). In: International Cryogenic Engineering Conference, 5th, Kyoto, Japan, May 7-10, 1974, Preprints. Volume 1. Tokyo, H. Nagano, University of Tokyo, 1974, p. C6-1 to C6-5. 7 refs. AEC-sponsored research.

The present work reviews the two forms (potential or kinetic) of secondary energy storage, and then discusses in general terms the elements of an inductive magnetic energy storage system. Four regions of application of superconductive magnetic storage are indicated: (1) microsecond power delivery into resistive loads such as flash lamps and lasers; (2) millisecond power delivery into inductive loads such as plasma compression coils for theta-pinch controlled thermonuclear reactors; (3) second delivery to limit short term energy drain from a utility system; and (4) kilosecond delivery into an electric utility system with the objective of load levelling or peakshaving. The problem of losses in superconducting coils is briefly discussed. P.T.H.

A74-35496 Fuel state - Expensive. P. Maserfeld. *Flight International*, vol. 105, June 27, 1974, p. 835-838.

There are real possibilities in the use of liquid hydrogen, although many problems remain, not least those of ground handling. Moreover, production of liquid hydrogen at present requires fossil fuels as the energy source. The whole purpose of using liquid hydrogen can be served only by the development of manufacturing cycles based on the use of nuclear, geothermal, tidal, solar, or hydroelectric power. To convert a petroleum-operated air-transport economy to a liquid-hydrogen operated air-transport economy would be vastly expensive. One other attractive nonfossil fuel would appear to be ethanol, which can be produced by solar energy from fermented cereal grain. It is not anticipated that oil supplies will run short in this century, and coal is even more plentiful. F.R.L.

A74-35953 # Theoretical and experimental investigation of two-component heat pipes. H. J. Brommer (Stuttgart, Universität, Stuttgart, West Germany). *American Institute of Aeronautics and Astronautics and American Society of Mechanical Engineers, Thermophysics and Heat Transfer Conference, Boston, Mass., July 15-17, 1974, AIAA Paper 74-720.* 9 p. 12 refs. Members, \$1.50; nonmembers, \$2.00.

The temperature and concentration distributions within two-component heat pipes and the extent of separation of components were theoretically investigated. Experiments carried out with water/methanol heat pipes of the six-artery type confirmed the theoretical results that only a partial separation of the components will occur.

Performance measurements also demonstrated that water/methanol heat pipes can be operated at high power levels (over 300 watts could be obtained with heat pipes 500 mm long and 13.5 mm in diameter). Two-component heat pipes have a superior cold start up behavior as compared to respective one-component heat pipes, but their axial temperature drop during nominal operation conditions is considerably higher. (Author)

A74-35954 # Performance tests of gravity-assist heat pipes with screen-wick structures. J. E. Kemme, J. E. Deverall, E. S. Keddy, J. R. Phillips, and W. A. Ranken (California, University, Los Alamos, N. Mex.). *American Institute of Aeronautics and Astronautics and American Society of Mechanical Engineers, Thermophysics and Heat Transfer Conference, Boston, Mass., July 15-17, 1974, AIAA Paper 74-723.* 6 p. Members, \$1.50; nonmembers, \$2.00. AEC-sponsored research.

A series of performance-limit tests were made at several operating temperatures with sodium heat pipes containing simple wicks comprised of layers of woven-wire screen. After each pipe was tested horizontally, vertical tests were conducted in a gravity-assist

mode with the evaporator down. Higher heat-transfer limits were achieved in the vertical tests, but good agreement between measured and calculated limits was not always obtained. Wick imperfections, in the form of spaces between screen layers and other large openings, were beneficial during horizontal operation because they provided low-impedance flow paths for liquid return. During vertical operation, however, the openings filled with vapor and sometimes produced superheat limitations which seriously reduced heat transfer. (Author)

A74-36049 Superconductivity - Large-scale applications. R. A. Hein (U.S. Navy, Naval Research Laboratory, Washington, D.C.). *Science*, vol. 185, July 19, 1974, p. 211-222. 49 refs.

As a result of a number of advances including the commercial development of high-current, high-field superconducting materials, superconductivity offers a solution to some of the pressing technological needs of our society. The development of superconducting solenoids is discussed along with applications of superconducting magnets in high-energy physics, the use of superconductivity in electric power transmission, and advances in the field of rotating electrical machinery due to the employment of superconducting components. Other applications of superconductivity considered are related to energy storage and transfer or involve the use of superconducting magnets in very fast trains. G.R.

A74-36137 # Operational and accidental petroleum product losses and their control and prevention /2nd revised and enlarged edition/ (Ekspluatatsionnye i avariynye poteri nefteproduktov i bor'ba s nimi /2nd revised and enlarged edition/). N. D. Ivanov. Leningrad, Izdatel'stvo Nedra, 1973. 160 p. 41 refs. In Russian.

This book discusses petroleum product losses during storage, transportation, delivery and handling as such losses take place according to experience in concerned Soviet industries. Vaporization, leakage, spillage, oxidation, and accidental losses are covered, pointing out their significant level in the Soviet Union. Indicated as measures for control and prevention of losses are the reduction of the gas-filled space in storage tanks, the use of tanks with floating covers, the reduction of storage temperature fluctuation, the use of high pressure containers, and improved pumping system designs. V.Z.

A74-36226 * Utilization of space technology for terrestrial solar power applications. R. K. Yasui (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.) and R. E. Patterson (TRW Systems Group, Redondo Beach, Calif.). In: Photovoltaic Specialists Conference, 10th, Palo Alto, Calif., November 13-15, 1973, Conference Record. Conference sponsored by the Institute of Electrical and Electronics Engineers. New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 239-253. 10 refs. Contract No. NAS7-100.

A description is given of the evolution of photovoltaic power systems designed and built for terrestrial applications, giving attention to problem areas which are currently impeding the further development of such systems. The rooftop testing of surplus solar panels is considered along with solar powered seismic observatories, solar powered portable radio sets, and design considerations identified from past experience. Present activities discussed are related to a solar powered on-shore beacon flasher system, a solar powered buoy, and a solar powered beacon flasher buoy. G.R.

A74-36232 Thermal control range associated with heat pipe cycling. H. B. McKee (McDonnell Douglas Astronautics Co., Huntington Beach, Calif.). In: Heat Transfer and Fluid Mechanics Institute, 24th, Corvallis, Ore., June 12-14, 1974, Proceedings. Stanford, Calif., Stanford University Press, 1974, p. 57-72. 5 refs.

The effect of dynamic cycling on variable conductance heat pipes temperature control is examined. Cycling of the heat pipe condenser environment or heat pipe evaporator heat input levels can

lead to concentration changes in the gas reservoir with a consequent change in the thermal control range. An analytical model is formulated and results of calculations presented which show the extent of these effects and their implication on gas reservoir charging. Calculations are also compared with experimental data obtained for gas controlled ammonia heat pipes under a simulated space environment. Test data was generated with the heat pipe operating with xenon and with helium control gases. (Author)

A74-36264 # A new solar selective surface. C. M. Horwitz (Sydney, University, Sydney, Australia). *Optics Communications*, vol. 11, June 1974, p. 210-212. 8 refs.

A new waveguide method of providing a selective surface for solar energy applications is described. Some measurements of a vacuum-deposited mesh are given, and elementary theory indicates that ratios of solar absorptance to thermal emittance of 30:1 should be possible at temperatures of about 200 C. (Author)

A74-36316 A review of precious resources and their effect on air transport; Proceedings of the Spring Convention, London, England, May 15, 16, 1974. Convention sponsored by the Royal Aeronautical Society. London, Royal Aeronautical Society, 1974. 262 p. \$14.35.

Papers on air transport resources are given, covering nuclear contribution to future energy supplies, alternative energy sources, metallic and other material resources, noise reduction goals, effects of fuel and materials shortages on aircraft development and operation, future propulsion technology for ground transport, and economic resources utilization in aviation. The pricing policies of oil producing nations, hydrogen energy systems, man as a precious resource, and the quality of life vs aeronautics are also dealt with.

V.Z.

A74-36319 # The development of aircraft as influenced by the shortage of materials and fuel. H. A. Goldsmith (British Aircraft Corp., Ltd., Filton, Bristol, England). In: A review of precious resources and their effect on air transport; Proceedings of the Spring Convention, London, England, May 15, 16, 1974. London, Royal Aeronautical Society, 1974. 17 p.

The broad implications of possible shortages and high prices of basic materials in the aviation industry are discussed, covering aluminum, titanium, iron, nickel, composites, and fuel. High prices of any of these materials are viewed as possible but the real near term shortage of any significance is believed to be only that of fuel. Some alternative fuels are considered, with hydrogen produced from water using energy derived from non-fossil power sources as an obvious candidate.

V.Z.

A74-36320 # Future propulsion techniques for ground transport. A. H. Wickens (British Railways, London, England). In: A review of precious resources and their effect on air transport; Proceedings of the Spring Convention, London, England, May 15, 16, 1974. London, Royal Aeronautical Society, 1974. 21 p.

Energy-related technical aspects of ground transport such as bus, car, electric train, Advanced Passenger Trains and aircraft are considered with attention to propulsion techniques of the future in the context of rising energy costs. Power requirement minimization, efficiency comparisons, aerodynamic, wheel and suspension drag, non-contacting suspensions, and operation in evacuated tubes are the subjects of the discussion. System design features relevant to energy consumption, heat engine characteristics, hybrid power systems, alternative fuels, electrification, energy storage technology, and flywheels are also covered. The need for firm but flexible long range policies in electrification, light-weight battery development and fuel

alternation is stressed, with combinations of innovation and conservation, and nuclear power as a long-range objective. V.Z.

A74-36321 # The economic utilisation of resources through aviation. I. Chichester-Miles (Hawker Siddeley Aviation, Ltd., Hatfield, Herts., England). In: A review of precious resources and their effect on air transport; Proceedings of the Spring Convention, London, England, May 15, 16, 1974. London, Royal Aeronautical Society, 1974. 74 p.

Civil aviation is assessed as a social utility producing a desirable and useful service with a minimum demand on resources such as manpower, time, land and fuel. It is indicated that a progressive improvement of aircraft technology, with the present level of airline administration and operations efficiency and present constraints on airport access and locations, can only partially benefit the productivity of the air transport system as a whole. Even so, technical improvements in conventional subsonic aircraft should consolidate the position of aviation as the most efficient user of manpower over distances down to 600 km or even less. It is also anticipated that the attraction of aviation in terms of efficient land utilization will steadily increase with the growing volume of air traffic. V.Z.

A74-36322 # Precious resources and air transport - An airline view. R. H. Whitby (British Airways Board, London, England). In: A review of precious resources and their effect on air transport; Proceedings of the Spring Convention, London, England, May 15, 16, 1974. London, Royal Aeronautical Society, 1974. 11 p.

Recent fuel price increases and possible further increases are discussed in the context of their effects on airline operation planning at present and in immediate and more remote future. The fuel position of air transport vs other transport competitors is analyzed with the conclusion that aviation is not a major user of existing oil fuels and that there will be hardly a short supply of kerosene type products at practical prices for aviation within the next 60 years.

V.Z.

A74-36327 # Air transport in Europe - Commercial trends and prospects. J. J. Scarlett (British Airways, European Div., Ruislip, Middx., England). In: Symposium on Air Transport in Europe, London, England, January 16, 1974, Proceedings. London, Royal Aeronautical Society, 1974. 12 p.

The present work indicates in general terms some of the main factors which would have to be taken into consideration in order to obtain a picture of the air travel industry in Europe over the next decade or so. It is pointed out that because of the increase in fuel prices, the fuel content of the operating costs of a charter airline might rise from 20/25% to one-third or more of the total cost of operation, which could dramatically change the trend over the past decade towards very low-fare travel within Europe. Other topics discussed include traffic growth and financial prospects. P.T.H.

A74-36331 * The energy crisis and energy from the sun; Proceedings of the Symposium on Solar Energy Utilization, Washington, D.C., April 30, 1974. Symposium sponsored by the Institute of Environmental Sciences and NASA. Edited by M. P. Thekaekara (NASA, Goddard Space Flight Center, Greenbelt, Md.). Mount Prospect, Ill., Institute of Environmental Sciences, 1974. 104 p.

Papers on the state of the art and future prospects of solar energy utilization in the United States are included. Research and technologies for heating and cooling of buildings, solar thermal energy conversion, photovoltaic conversion, biomass production and conversion, wind energy conversion and ocean thermal energy conversion are covered. The increasing funding of the National Solar Energy Program is noted.

V.Z.

A74-36332 * # Solar energy research and utilization. W. R. Cherry (NASA, Goddard Space Flight Center, Greenbelt, Md.). In: The energy crisis and energy from the sun; Proceedings of the Symposium on Solar Energy Utilization, Washington, D.C., April 30, 1974. Mount Prospect, Ill., Institute of Environmental Sciences, 1974, p. 1-20. 23 refs.

The role of solar energy is visualized in the heating and cooling of buildings, in the production of renewable gaseous, liquid and solid fuels, and in the production of electric power over the next 45 years. Potential impacts of solar energy on various energy markets, and estimated costs of such solar energy systems are discussed. Some typical solar energy utilization processes are described in detail. It is expected that at least 20% of the U.S. total energy requirements by 2020 will be delivered from solar energy. V.Z.

A74-36333 * # Data on incident solar energy. M. P. Thekæ-kara (NASA, Goddard Space Flight Center, Greenbelt, Md.). In: The energy crisis and energy from the sun; Proceedings of the Symposium on Solar Energy Utilization, Washington, D.C., April 30, 1974. Mount Prospect, Ill., Institute of Environmental Sciences, 1974, p. 21-49. 44 refs.

Instrumentation for solar irradiance monitoring, and radiation scales are discussed in a survey of incident solar energy data. The absolute accuracy and intrinsic reliability of the values of the solar constant and zero air mass solar spectrum proposed by the Institute of Environmental Sciences as an ASTM standard are evaluated. Extraterrestrial observations are used for deriving solar irradiance data at ground level for widely varying atmospheric parameters, with special reference to air pollution. The effects of diffuse sky radiance and those of varying slopes of the solar energy collecting surface are examined. Average values of solar energy available at different locations in the United States are included. V.Z.

A74-36334 # The solar power options. P. E. Glaser (Arthur D. Little, Inc., Cambridge, Mass.). In: The energy crisis and energy from the sun; Proceedings of the Symposium on Solar Energy Utilization, Washington, D.C., April 30, 1974. Mount Prospect, Ill., Institute of Environmental Sciences, 1974, p. 75-87. 5 refs.

Solar power potential is discussed vs future needs, with particular attention to large-scale solar energy conversion to power by using wind, ocean thermal gradients, solar-powered heat engines, and photovoltaic energy conversion on earth and in space. The past development and the state of the art of this technology are reviewed with a projection into the future. Cost projections are given on the basis of available data. The prospects of solar energy applications are believed to be bright but slow, with significant advances over the next few decades. V.Z.

A74-36335 # Growing federal support for solar energy applications. L. O. Herwig (National Science Foundation, Washington, D.C.). In: The energy crisis and energy from the sun; Proceedings of the Symposium on Solar Energy Utilization, Washington, D.C., April 30, 1974. Mount Prospect, Ill., Institute of Environmental Sciences, 1974, p. 93-103.

The general objectives of the Federal Solar Energy Program are described as ones intended to provide the research and technology for economic terrestrial solar energy applications with the implementation of practical systems for commercial uses within the framework of national energy planning. The Program covers the following specific solar energy applications and technologies: heating and cooling of buildings, solar thermal energy conversion, photovoltaic conversion, biomass production and conversion, wind energy conversion, and ocean thermal energy conversion. It is believed that solar

energy applications such as heating and cooling of buildings, wind energy conversion and biomass production and conversion will have impact on U.S. energy requirements by the early 1980's. V.Z.

A74-36411 Thermochemical hydrogen generation. R. H. Wentorf, Jr. and R. E. Hanneman (GE Research and Development Center, Schenectady, N.Y.). *Science*, vol. 185, July 26, 1974, p. 311-319. 20 refs.

Cost estimates for hydrogen production indicate that electrolysis will probably not be generally competitive in this century with the better projected thermochemical approaches for large-scale uses. Continuing changes in fossil fuel prices will tend to make open-cycle processes less competitive than closed-cycle thermochemical processes in the long term. Particular attention is given to some tested, new closed-cycle thermochemical processes for hydrogen generation. Criteria for process selection are discussed and operational details for three processes are considered. G.R.

A74-36606 The impact of advanced turboshaft engine technology on T700-powered helicopter systems. L. B. Veno (General Electric Co., Aircraft Engine Group, Lynn, Mass.). *American Helicopter Society, Annual National V/STOL Forum, 30th, Washington, D.C., May 7-9, 1974, Preprint 871*. 8 p. 5 refs. Members, \$1.50; nonmembers, \$2.00.

The General Electric T700-GE-700 turboshaft engine currently under development by the U.S. Army for UTTAS (Utility Tactical Transport Aircraft System) and AAH (Advanced Attack Helicopter) represents a new generation of advanced technology engines in the 1500 horsepower class. How such an engine will provide notable improvements in performance, operation, and economy for this new generation of VTOL vehicles is described. A combination of the UTTAS and AAH helicopters illustrates these improvements. The T700 is a simple engine when compared to preceding turboshaft engines which manufacturers have produced in this horsepower class. Only five axial compressor stages and one centrifugal stage are necessary to achieve a pressure ratio higher than today's generation of engines. F.R.L.

A74-36941 The good and bad usages of air transport (Des bons et des mauvais usages du transport aérien). M. Wolkowitsch (Aix-Marseille, Université, Marseille, France). *Revue Générale de l'Air et de l'Espace*, vol. 37, no. 1, 1974, p. 7-17. In French.

The present work advocates that, especially in view of the fuel crisis and rising prices in air transport, plans for expanding air services to remoter regions and for short-haul purposes be reconsidered. Rather, it would be best to continue improving the quality of air service for those routes where its advantages over other means of transport are undeniable, and to restrain the proliferation of air service where its existence is not absolutely necessary and where the development or improvement of rail transportation, for example, would be more sane and economical. P.T.H.

A74-37604 Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, University of Tennessee Space Institute, Tullahoma, Tenn., April 8-10, 1974. Symposium sponsored by the University of Tennessee Space Institute. Edited by Y. C. L. Wu (University of Tennessee Space Institute, Tullahoma, Tenn.). University, J. Fox, University of Mississippi, 1974. 363 p. \$15.

The sessions dealt with combustion gas generators, systems and optimization, plasma flows, properties, and diagnostics, liquid metal generators, and nonequilibrium generators and MHD lasers. Among the subjects discussed are performance and Hall field limitation studies in the Stanford M-8 MHD generator, a two-dimensional dynamic programming method for the optimization of DCW MHD

generators, electron vibrational energy transfer under MHD combustion generator conditions, the time-dependent magnetohydrodynamic generator, and laser Doppler velocimetry in MHD boundary layers. A study was made of a bi-phase DC MHD generator using a new motion system, and the effects of the development of boundary layers in a Faraday MHD generator were examined. Closed cycle MHD power generation experiments in the NASA Lewis facility are described.

F.R.L.

A74-37605 # Performance and Hall field limitation studies in the Stanford M-8 MHD generator. J. K. Koester and W. Unkel (Stanford University, Stanford, Calif.). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. 1.6.1-1.6.6. 7 refs. Contract No. F33615-72-C-1088.

Experiments using a supersonic, hot-wall, variable-configuration generator are being performed to determine its flow and electrical characteristics. Effects at large Hall voltages (greater than 40 volts per pair) over various insulator gaps, are studied by impulsively loading the electrode circuits and recording, with fast instrumentation, the time response of the electrical parameters. A simple analysis of a filament breakdown indicates a strong dependence of breakdown voltage on the insulator gap. Experimental Hall voltages of 120 volts per pair, with a breakdown power of 1500 watts have been maintained over an insulator gap of 0.9 cm, with no signs of breakdown or abnormal behavior. (Author)

A74-37606 # Design and modeling of the gas flow system for a compact 10 MW MHD generator system. O. K. Sonju, J. Teno, R. Kessler, and D. Meader (Avco Everett Research Laboratory, Inc., Everett, Mass.). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. 1.7.1-1.7.6. USAF-ARPA-sponsored research.

The Viking II design program for a proposed 10 MW compact lightweight MHD generator is described. The program aims to demonstrate the feasibility of creating a burst-power transportable power supply suitable for military and industrial uses. Some of the unique features of the blower, channel, and diffuser are pointed out and the design of the gas flow train is described. The complete unit will have an overall weight of four to five thousand pounds, and the preliminary studies of prototype models indicate that this figure is well within reach. J.K.K.

A74-37607 # A two-dimensional dynamic programming method for the optimization of diagonal conducting wall magnetohydrodynamic generators. K. Y. Chang, W. C. Jackson, and Y. C. L. Wu (University of Tennessee Space Institute, Tullahoma, Tenn.). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. III.1.1-III.1.7. 9 refs. Contract No. F44620-69-C-0031. Project THEMIS.

The method of dynamic programming is used to optimize both of the generator cross-sectional areas and magnetic field distribution that will yield maximum enthalpy extraction. There is no restriction on the form of penalty function to be optimized, nor the forms of the constraints. An example is given to optimize a 45 degree diagonal conducting wall generator. (Author)

A74-37608 # Two-dimensional electric fields in MHD generator channels - Optimum loading circuits. V. A. Bitiurin, B. M. Burakhanov, S. A. Medin, and V. M. Ponomarev (Akademiia Nauk USSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR). In: Engineering aspects of magnetohydrodynamics;

Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. III.2.1-III.2.6. 5 refs.

The stationary two-dimensional distribution of the electric field and the current density in a MHD channel is calculated. It is assumed that the distributions of the hydrodynamic parameters, the conductivity, and the Hall parameter are determined by a quasi-one-dimensional flow calculation that includes boundary layers on the walls of the channel. The effect of load commutation on the generator parameters and the field and current distributions is studied for the simple case of a generator with two Faraday electrodes and two Hall electrodes. The analysis shows that maximum power is delivered when longitudinal currents are blocked by the application of a considerable Hall potential and sufficient asymmetrical Faraday potentials to the electrodes. J.K.K.

A74-37609 # The effect of magnetic field upon the output performance of segmented-open type MHD generator. Y. Ozawa and N. Kayukawa (Hokkaido University, Sapporo, Japan). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. III.3.1-III.3.5. 8 refs.

Variational calculations are demonstrated for maximizing the conversion efficiency of a segmented-electrode open-type MHD generator. The optimal equation solutions presented show the ideal MHD generator performance under real operating conditions. M.V.E.

A74-37610 # Optimization of open cycle power plant MHD generator. A. E. Sheindlin, B. Ia. Shumiatskii, V. I. Kovbasiuk, P. P. Ivanov, and G. M. Koriagina (Akademiia Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. III.4.1-III.4.5.

Mathematical models of an MHD power plant and of an MHD generator are discussed using a quasi-one-dimensional approach. The use of this approach is shown to make possible the choice of flow control parameters leading to optimal MHD power plant and generator cost efficiency. M.V.E.

A74-37611 * # NASA Lewis H2-O2 MHD program. J. M. Smith, L. D. Nichols, and G. R. Seikel (NASA, Lewis Research Center, Cleveland, Ohio). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. III.7.1-III.7.5. 5 refs.

Performance and power costs of H2-O2 combustion powered steam-MHD central power systems are estimated. Hydrogen gas is assumed to be transmitted by pipe from a remote coal gasifier into the city and converted to electricity in a steam MHD plant having an integral gaseous oxygen plant. These steam MHD systems appear to offer an attractive alternative to both in-city clean fueled conventional steam power plants and to remote coal fired power plants with underground electric transmission into the city. Status and plans are outlined for an experimental evaluation of H2-O2 combustion-driven MHD power generators at NASA Lewis Research Center. (Author)

A74-37612 # Electron vibrational energy transfer under MHD combustion generator conditions. C. D. Hawley and M. Mitchner (Stanford University, Stanford, Calif.). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. V.1.1-V.1.5. 13 refs. Contract No. F44620-73-C-0045.

Analysis of the energy transfer rate between an electron gas and the vibrational modes of diatomic gases. Detailed numerical predic-

tions obtained for molecular nitrogen and carbon dioxide are presented. These results indicate that the energy transfer rate is strongly dependent upon the electron velocity distribution function. M.V.E.

A74-37613 # MHD effects on viscous and thermal wakes and their influence on the performance of MHD generators. S. J. Schneider and J. F. Louis (MIT, Cambridge, Mass.). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. V.2.1-V.2.10. 5 refs. U.S. Department of the Interior Contract No. 14-32-0001-1209.

Separate analytical studies of the development of velocity and thermal wakes induced by inlet vanes are described, and the influence of these wakes on the performance of MHD generators is evaluated. The results indicate that: (1) a velocity defect, when passing through an MHD generator, will be greater than its value for non-MHD flow due to the retarding Lorentz forces and will increase as the interaction parameter or the Lorentz forces increase; and (2) a thermal defect, when passing through an MHD generator, causes large changes in the conductivity of the fluid, but the defect decreases as the interaction parameter increases. No attempt has been made to combine the viscous and thermal wake solutions. M.V.E.

A74-37615 # The time dependent magnetohydrodynamic generator. D. A. Oliver (MIT, Cambridge, Mass.). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. V.5.1-V.5.9. 11 refs. Research supported by the U.S. Department of the Interior; NSF Grant No. GK-38130.

A general theory of unsteady magnetohydrodynamic channel flows is presented. A computational approach for solving the nonlinear fluid and Maxwell equations is developed. Illustrations of the theory and calculational techniques are given for generator load change transients and for the behavior of the generator with finite amplitude magnetoacoustic fluctuations. (Author)

A74-37616 # Wall roughness and area variation effects in high subsonic MHD generator channels. E. D. Doss and G. S. Argyropoulos (STD Research Corp., Arcadia, Calif.). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. V.6.1-V.6.4. 9 refs. U.S. Department of the Interior Contract No. 14-32-0001-1211; NSF Grant No. C-727; Contract No. F44620-73-C-0001.

Using computer simulation techniques, the influence of wall roughness perturbation effects and of area variation on the performance of high subsonic MHD generator channels is analyzed. Previous methods of accounting for these effects in the design of MHD channels are reviewed in the light of the results obtained. M.V.E.

A74-37618 # Study of a bi-phase D.C. M.H.D. generator using a new motion system. A. Charon, R. Lagoutte, and J. Robert (Paris, Laboratoire de Génie Electrique, Fontenay-aux-Roses, Hauts-de-Seine, France). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. VI.1.1-VI.1.5.

This paper reports the description and the calculation of a bi-phase D.C. M.H.D. generator. The author's purpose was to imagine a system in which thermic exchanges do not affect the efficiency. The study is limited to a small power unit (30 KW). The thermodynamic cycle, the flow process and the conversion in the nozzle have been taken into account to evaluate the output power and the efficiency. The calculation assumptions lead to a bit optimistic results. (Author)

A74-37619 # The effects of geometry and loss mechanisms on the performance of two-phase liquid-metal MHD generators. W. E. Amend, R. L. Cole, and J. C. Cutting (Argonne National Laboratory, Argonne, Ill.). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. VI.2.1-VI.2.7. 6 refs. AEC-sponsored research.

Experiments were performed and supporting analytical effort was continued on a constant area, two-phase liquid-metal and inert gas MHD generator. Experiments were carried out under conditions similar to those utilized in the previous tests on a diverging channel generator so that detailed comparisons could be made. Generator efficiency data obtained in the constant area channel are similar to measurements made with diverging channel. Results indicate a maximum generator efficiency of 50% at high magnetic fields and low mixture quality and a decreasing efficiency with increasing quality. The open-circuit load factor varied from 0.95 at zero quality to 0.80 at a mixture quality of 0.01. Comparison of the straight channel data with data obtained in the diverging channel generator indicated significant differences in the current, and hence pressure distribution patterns in the generator. (Author)

A74-37620 # Boundary layer control in two-phase liquid-metal MHD generators. J. C. Cutting, R. L. Cole, W. E. Amend, and M. Petrick (Argonne National Laboratory, Argonne, Ill.). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. VI.3.1-VI.3.4. AEC-sponsored research.

Measured boundary-layer control results on a two-phase liquid-metal MHD generator with sidewall gas injection show that gas injection is effective in displacing the liquid boundary layer from the insulated wall. Removal or displacement of the conducting boundary layer results in as much as a 70% increase in generator performance. Excellent agreement between theory and experiment is observed. Measured open-circuit voltages increased by as much as 25% over previous results obtained without gas injection. M.V.E.

A74-37621 # Effects of the development of boundary layers on a Faraday MHD generator. S. Shioda, H. Yamamoto (Tokyo Institute of Technology, Tokyo, Japan), and I. Yamashita (Mechanical Engineering Laboratory, Tokyo, Japan). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. VII.2.1-VII.2.5.

Analysis of the results of an experimental investigation of flow-condition effects on the operation of a shock-tube driven MHD generator. The current flows from the upstream edge of the anode to the downstream edge of the cathode. The anode voltage drop is larger than the cathode voltage drop. This asymmetry is caused by the finite rate of ionization, and the entailed nonuniformities in conjunction with the ionization instability reduce the power output significantly. M.V.E.

A74-37622 # Ionisation, recombination and voltage drop measurements in a closed cycle MPD generator. I. R. McNab (International Research and Development Co., Ltd., Newcastle-upon-Tyne, England), J. S. Dolby, and M. G. Haines (Imperial College of Science and Technology, London, England). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. VII.3.1-VII.3.6. 10 refs.

Review of the results of ionization, recombination, and voltage drop measurements made in a section of a closed loop MPD generator facility. The measurements were performed in a segmented electrode alumina duct at gas temperatures up to 1700 K, 1 ata pressure, and with a 600 m/sec flow of cesium seeded helium. Measurements made with applied magnetic fields alone showed that the generator performance was less than ideal, probably because of

end loop shorting and electrode voltage drops. Yet, in spite of these and some other disappointing features in the performance of the closed loop facility, a useful amount of information was obtained on the behavior of nonequilibrium plasmas in small test sections. M.V.E.

A74-37623 # Results of the Eindhoven MHD shocktunnel experiment. J. W. M. A. Houben, A. Veeffkind, L. H. T. Rietjens (Eindhoven, Technische Hogeschool, Eindhoven, Netherlands), and J. H. Blom. In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974. University, J. Fox, University of Mississippi, 1974, p. VII.4.1-VII.4.7. 10 refs.

Results of the Eindhoven shocktunnel experiment are presented. The experiments are performed with an enthalpy input of 3.8 Mw and a magnetic induction up to 3 T. In comparison with earlier experiments the MHD channel was recently changed by extracting the potential probes. Loss mechanisms as inlet relaxation phenomena, voltage drops and short circuiting between adjacent electrodes are analyzed in detail. At a magnetic induction of 2.57 T a power of 100 kw has been extracted from a channel volume of 3 litres. Comparison of experimental results and results obtained from computational integration of the conservation equations shows a good agreement. (Author)

A74-37624 # Electrode studies and recent results of non-equilibrium MHD generator experiments. B. Zauderer, E. Tate, and C. H. Marston (General Electric Co., King of Prussia, Pa.). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974.

University, J. Fox, University of Mississippi, 1974, p. VII.5.1-VII.5.4. 6 refs. Navy-supported research.

Experimental studies of comparative performance of 3 basic low temperature electrode designs were done in a Mach 5 MHD flow. Protruding wire electrodes parallel to the B field direction were distinctly superior to flush electrodes and to wires protruding in the E-field direction. The high Mach number channel is especially suited to the study of strong electromagnetic interaction in nonequilibrium generators. Preliminary results are reported. (Author)

A74-37625 * # Closed cycle MHD power generation experiments in the NASA Lewis facility. R. J. Sovie and L. D. Nichols (NASA, Lewis Research Center, Cleveland, Ohio). In: Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, Tullahoma, Tenn., April 8-10, 1974.

University, J. Fox, University of Mississippi, 1974, p. VII.6.1-VII.6.6. 10 refs.

Discussion of the performance improvements achieved through some modifications made in the closed cycle MHD facility. These modifications include a redesign of the MHD duct interior, addition of mixing bars, increased electrical isolation, and experimentation with various cesium seed vaporization and injection techniques. Uniform Faraday and Hall voltage profiles were obtained, and the Faraday open circuit voltage varied from 90 to 100% of the ideal uBh. M.V.E.

A74-37791 # A two-temperature, gas-particle suspension in MHD power generation. D. J. Helfritsch and W. A. Gustafson (Purdue University, West Lafayette, Ind.). (*American Society of Mechanical Engineers, Paper 73-Pwr-C*, 1973.) *ASME, Transactions, Series A Journal of Engineering for Power*, vol. 96, July 1974, p. 267-273. 24 refs. NSF-supported research.

A feasibility study has been made of the use of a two-temperature, gas-particle suspension as the conducting medium in MHD generators. Large gas-particle temperature differences following nozzle expansions have been calculated, and the power generated by the use of these suspensions in MHD generator ducts has been

investigated. Although relatively low gas temperatures have been considered, high electrical conductivities can be achieved by means of thermionic emission of electrons from high-temperature particles. It is shown that total output power increases as gas temperature is decreased by means of continued nozzle expansion. Output power is also increased through the use of relatively large particles. (Author)

A74-37821 * # Jet transport energy management for minimum fuel consumption and noise impact in the terminal area. J. S. Bull and J. D. Foster (NASA, Ames Research Center, Moffett Field, Calif.). *American Institute of Aeronautics and Astronautics, Mechanics and Control of Flight Conference, Anaheim, Calif., Aug. 5-9, 1974, Paper 74-811*. 11 p. 6 refs. Members, \$1.50; nonmembers, \$2.00.

Significant reductions in both noise and fuel consumption can be gained through careful tailoring of approach flightpath and airspeed profile, and the point at which the landing gear and flaps are lowered. For example, the noise problem has been successfully attacked in recent years with development of the 'two-segment' approach, which brings the aircraft in at a steeper angle initially, thereby achieving noise reduction through lower thrust settings and higher altitudes. A further reduction in noise and a significant reduction in fuel consumption can be achieved with the 'decelerating approach' concept. In this case, the approach is initiated at high airspeed and in a drag configuration that allows for low thrust. The landing flaps are then lowered at the appropriate time so that the airspeed slowly decelerates to V sub r at touchdown. The decelerating approach concept can be applied to constant glideslope flightpaths or segmented flightpaths such as the two-segment approach. F.R.L.

A74-37822 # Sensitivity of suboptimal fixed-range flight paths. J. K. Hedrick (Arizona State University, Tempe, Ariz.) and M. A. Nichols (Arizona State University, Tempe, Ariz.; USAF, Weapons Laboratory, Kirtland AFB, N. Mex.). *American Institute of Aeronautics and Astronautics, Mechanics and Control of Flight Conference, Anaheim, Calif., Aug. 5-9, 1974, Paper 74-813*. 8 p. 11 refs. Members, \$1.50; nonmembers, \$2.00.

The sensitivity of fuel consumption to variations in aircraft and atmospheric parameters is investigated using aerodynamic data for a F-4 type aircraft and atmospheric data as specified by MIL-STD-210A. The flight paths considered contain a full throttle 'Rutowski' energy climb arc, a classical minimum fuel cruise arc, and a maximum range glide arc. Aircraft parameters considered were maximum available thrust, induced and zero-lift drag coefficients, aircraft weight, and specific fuel consumption; atmospheric parameters considered were temperature and density variations. The results show that fuel consumption is sensitive to variations in the drag coefficients, aircraft weight, and specific fuel consumption. However, compensating by flying trajectories adjusted to be fuel optimal for each variation does not appreciably improve the fuel penalty. (Author)

F-14 OPTIMUM FLIGHT MODES, VOLUME 1 Final Report, 1 Jul. 1972 - 30 Sep. 1973

D. C. Sederstrom and K. L. Curtner Oct. 1973 121 p refs (Contract N00014-72-C-0405; NR Proj. 213-098) (AD-775246) Avail: NTIS CSCL 01/3

An F-14 optimum flight modes study is described. The overall objective of the project was to define an energy management demonstration system which could use the F-14A with its existing computer systems as a flight test vehicle. The work included development of a computer program to determine performance and generate trajectories for various energy management modes. An energy management demonstration system is presented, the computational algorithm is described, and potential performance benefits resulting from the use of an energy management system are discussed. PROJECT SAGE PHASE 1 REPORT: SOLAR ASSISTED GAS ENERGY WATER HEATING FEASIBILITY FOR APPLICATION IN NEW APARTMENTS

Edgar S. Davis Jun. 1973 47 p refs Sponsored in part by Southern Calif. Gas Co. (Grant NSF GI-29726)

(EQL-Memo-11) Copyright. Avail: Issuing Activity

The feasibility of developing a commercial product for solar water heating in apartment buildings in Southern California is investigated. A definition of a baseline system is given, specifying plumbing configuration, materials, components, and collector design concept. An estimation of system cost and performance is also included along with the identification of component design, enabling solar water heating to become commercially viable.

An investigation into the use of wind-power stations, which are planned for the second 5-Year Plan is discussed. The size of stations planned is 5000 kW, and they are to be built in areas of the country where there is a sufficient annual wind speed to justify economic use. The Balaklava experimental station was investigated and results show that it was economical, but new research must be done to improve overall performance. Author

Different types of electrical generators are reviewed that can be used with wind energy. A set is described that is comprised of a generator supplied by a suitable type of excitation and a mercury-vapor inverter capable of incorporation in a three-phase network with constant voltage and frequency, provided with reservoirs, by a fixed-pitch air motor without a speed regulator. Experimental results obtained with such a set are reported. Author

N74-21680*# Kanner (Leo) Associates, Redwood City, Calif. **REPORT ON RESULTS ACHIEVED WITH SEAS EXPERIMENTAL MILL**

J. Juul Washington NASA Apr. 1974 15 p Transl. into ENGLISH from Elektroteknikeren (Copenhagen) p 5-12 (Contract NASw-2481)

(NASA-TT-F-15515) Avail: NTIS HC \$4.00 CSCL 10A

The SEAS experimental windmill was built in order to attempt operation of a three-phase alternating current generator with a wind turbine as drive power in conjunction with existing ac installations. Testing in natural wind was carried out on the wing shapes that have proved in windtunnel tests to be the most feasible. Investigations were made on how much power can be achieved per unit area within the periphery of the wingtips (= wingspread area). Annual production that can be achieved per unit of wingspread area was determined. The following requirements were worked out experimentally: (1) the most favorable wingtip velocity; regulation arrangement of the wing; (3) the necessary automatic apparatus. Finally, the maximum effect of the wind turbine's axle in the wind direction was measured. Author

N74-21681*# Kanner (Leo) Associates, Redwood City, Calif. **THIS IS HOW YOU CAN HEAT YOUR HOME WITH A LITTLE WINDMILL**

Washington NASA Apr. 1974 13 p refs Transl. into ENGLISH from Nv Teknik (Sweden), no. 3, Jan. 1974 p 8-9

(Contract NASw-2481)

(NASA-TT-F-15518) Avail: NTIS HC \$4.00 CSCL 10A

For many years, small windmills with generators and storage batteries have been available for supplying electricity to remote locations; but storage batteries are so expensive, that this type of electrical supply is normally unrealistic. A better way of utilizing wind power in a smaller installation is to let the electrical current take care of home heating via a heat accumulator, which has low maintenance cost and simple electrical equipment. One

such installation is described in this article, and figures on its economic feasibility are provided. Author

WIND ELECTRIC POWER STATION
Hermann Honnef Washington NASA Apr. 1974 14 p Transl. into ENGLISH from German Patent no. 871580(23 Mar. 1953) (Contract NASw-2481)
(NASA-TT-F-15522) Avail: NTIS HC \$4.00 CSCL 10A

A wind power station is described in which the structure on which the rotors are mounted may tilt as wind speed changes so that the rotors leave the vertical plane to anticipate increased wind speeds. The power station may have pulse generators located in front of the turbine rotors on extensions of the turbine shaft or on separated booms under the turbine; winches to tilt the turbine platform, normally locked by means of a brake, which is released when a predetermined wind thrust is reached; flexible tension members to transmit the thrust of the wind to the nontilting portion of the structure; provisions to change the direction of the winches as wind speed changes; an auxiliary vane to control an electrically driven propeller to rotate the power plant into the wind; and auxiliary generators to be used when wind speeds are too low for normal synchronous operation. STUDY TERRESTRIAL APPLICATIONS OF SOLAR CELL POWERED SYSTEMS Final Report
Jerry W. Ravin Sep. 1973 134 p
(Contract NAS3-16828)
(NASA-CR-134512) Avail: NTIS HC \$9.75 CSCL 10A

Terrestrial applications of solar cells and design systems are considered for those applications that show the most promise for becoming practical and accepted by users within the next five years. The study includes the definition, categorization, evaluation and screening of the most attractive potential terrestrial applications for solar cells. Potential markets are initially grouped and categorized in a general sense and are weighted in priority by their business volume, present and future. From a categorized list including marine, transportation, security, communication, meteorological and others, 66 potential solar cell applications have been cataloged. A methodology was formulated to include the criteria for evaluation and screening. The evaluation process covers all parts and components of the complete system required for each application and gives consideration to all factors, such as engineering, economic, production, marketing and other factors that may have an influence on the acceptance of the system. ELECTRICITY GROWTH: ECONOMIC INCENTIVES AND ENVIRONMENTAL QUALITY
Charles J. Cicchetti Jan. 1973 47 p refs
Avail: NTIS HC \$5.50

The consumption of electricity continues to double in the United States at intervals equal to about 10 years. Some of the institutional reasons why these exponential rates continue are examined with special emphasis on economic incentives and the regulatory climate under which privately owned electric utilities operate. The public utility pricing question is considered from the economists' point of view. The findings of various econometric analysis of the demand for electricity are reviewed and the question of rate of return and utility growth is considered. Some environmental policy options and important new research directions are also discussed. Author

GEOTHERMAL ENERGY
M. C. Smith 1973 9 p
(Contract W-7405-eng-36)
(LA-UR-73-1316) Avail: NTIS HC \$3.00

Dry hot rock in the earth's crust represents the largest and most broadly distributed reservoir of usable energy accessible to man. The engineering equipment and methods required to extract and use this energy appear to exist and are now being investigated actively as LASL. At least for deep systems in relatively impermeable rock, not close to active faults, the extraction of energy from dry geothermal reservoirs should involve no significant environmental hazards. The principal environmental effects of such energy systems will be those associated with the surface facilities that use the geothermal heat; these will be visual, in land use, and in the thermal-pollution potential of low-temperature power plants. The energy extraction system itself should be clean, safe, unobtrusive, and economical. Author (NSA)

POTENTIAL FOR THE PRODUCTION OF POWER FROM GEOTHERMAL RESOURCES

M. C. Smith 1973 18 p
(Contract W-7405-eng-36)
(LA-UR-73-926) Avail: NTIS HC \$3.00

The nature and magnitude of the hot, dry rock geothermal energy resource are such that within the next 10 to 15 years it could begin to contribute significantly to the solution of some of our nation's most urgent energy, pollution, and balance-of-payments problems. A program to investigate and develop this resource was undertaken by the Atomic Energy Commission at Los Alamos Scientific Laboratory, and initial results from that program are described. It appears that the equipment and techniques required to make this vast energy reservoir useful already exist, and that a convincing demonstration of its usefulness is possible within less than five years. Author (NSA)

N74-21691# Los Alamos Scientific Lab., N.Mex.
POTENTIAL FOR HOT-DRY-ROCK GEOTHERMAL ENERGY IN THE WESTERN UNITED STATES
D. W. Brown 25 Jul. 1973 22 p refs
(Contract W-7405-eng-36)
(LA-UR-73-1075) Avail: NTIS HC \$3.25

The U.S. Geological Survey has identified 1.8 million acres (2800 square miles) of western lands as having a significant potential for geothermal development. The LASL for the past 2 years has been actively investigating the potential for and problems associated with extracting geothermal energy from the much more numerous regions of the western United States containing hot, but essentially dry, rock at moderate depths. A recent survey reveals that about 7% of the 13-state area comprising the Western Heat Flow Province--about 95,000 square miles--is underlain, at a depth of 5 km (16,400 ft), by hot rock at temperature levels above 290 C. In the Los Alamos drilling, a man-made geothermal reservoir would be formed by first drilling into suitably hot rock, and then creating a very large surface area for heat transfer using conventional hydraulic fracturing techniques developed by the oil industry. HIGH VOLTAGE FUEL CELL ASSEMBLY Final Report, May 1972 - Jun. 1973

Ralph N. Camp and Bernard S. Baker Jan. 1974 44 p
(Contract DAAK02-72-C-0458; DA Proj. 1T6-62705-A-012)
(AD-774820; ERC-1455F) Avail: NTIS CSCL 10/2

The concept of a high voltage, planar fuel cell element was investigated. Experimental units composed of 2, 4 and 20 single, series connected cells were built and tested for periods of greater than 100 hrs. at temperatures of 130C. Phosphoric acid contained in organic fibre matrices was the electrolyte. A design based on the performance of these units is contained in the report. Twenty-cell units were able to produce 70mA/sq cm at 12 volts. Author (GRA)

IMPACTS OF NEW ENERGY TECHNOLOGY, USING GENERALIZED INPUT-OUTPUT ANALYSIS Final Report

James E. Just Feb. 1973 302 p refs
(Grant NSF GI-32874)
(PB-226139/4GA; MIT-EL-73-1) Avail: NTIS HC \$7.00 CSCL 21D

Comparative economic and environmental impacts of high and low BTU coal gasification and the gas turbine topping cycle during the 1980-85 time period were forecast. The forecast used a projected 1980 input-output table that was augmented by detailed air pollution coefficients and water, steel, and energy usage coefficients. Direct and indirect impacts of both investment in and operation of the new technologies were examined. Data was obtained from basic engineering studies of these processes and converted to input-output technical and capital coefficients. Alternative high, medium, and low energy growth futures for 1985 were projected both with and without the new technologies. Results indicate the high sensitivity of total capital investment and certain capital goods industries to the rate of energy use growth. Aggravation of the situation may result from the introduction of high BTU coal gasification. Several economic mechanisms that will help to hold total capital investment within its historical boundaries as a percentage of GNP are also examined. Possible applications, refinements, and extensions are included. GRA

CONTROL OF GASOLINE VAPOR LOSSES FROM STATION AND VEHICLE FILLING

Kenneth Heitner May 1973 15 p refs
(Grant NSF GI-29726)

(EQL-Memo-5) Avail: NTIS HC \$4.00

Control technologies and hardware are being developed for gasoline vapor losses. Several alternative methods have been evolved to solve the problem. The cost of these control systems is considerably less than new vehicle controls already required by law and can be absorbed with a very slight increase in the price of gasoline. In air basins where additional reductions of hydrocarbon emissions are required to achieve state and Federal ambient air quality standards for oxidant, gasoline (and other organic) vapor losses can be controlled through regulations similar to the San Diego Rule 63. AUTOMATED STRIP-MINE AND RECLAMATION MAPPING FROM ERTS Special Report

Robert H. Rogers, Principal Investigator, Larry E. Heed (Ohio State Univ.), and Wayne A. Pettyjohn Apr. 1974 15 p Original contains imagery. Original photography may be purchased from the EROS DATA Center, 10th and Dakota Avenue, Sioux Falls, S. D. 57198 ERTS

(Contract NAS5-21762)

(E74-10490; NASA-CR-136891) Avail: NTIS HC \$4.00 CSCL 08I

The author has identified the following significant results. Computer processing techniques were applied to ERTS-1 computer-compatible tape (CCT) data acquired in August 1972 on the Ohio Power Company's coal mining operation in Muskingum County, Ohio. Processing results succeeded in automatically classifying, with an accuracy greater than 90%: (1) stripped earth and major sources of erosion; (2) partially reclaimed areas and minor sources of erosion; (3) water with sedimentation; (4) water without sedimentation; and (5) vegetation. Computer-generated tables listing the area in acres and square kilometers were produced for each target category. Processing results also included geometrically corrected map overlays, one for each target category, drawn on a transparent material by a pen under computer control. Each target category is assigned a distinctive color on the overlay to facilitate interpretation. The overlays, drawn at a scale of 1:250,000 when placed over an AMS map of the same area,

immediately provided map locations for each target. These mapping products were generated at a tenth of the cost of conventional mapping techniques.

ULTRA-DEEP DRILLING FOR GEOTHERMALS Final Report

Samuel O. Patterson, Bruno E. Sables, and Anthony Kooharian
 Dec. 1973 144 p refs
 (Contract N0d-9925; ARPA Order 2419)
 (AD-774108; TETRAT-A-74-339-005) Avail: NTIS CSCL 08/9

Geothermal energy offers significant promise as a source of clean, widely available power. The first stage of its availability involves near surface sources; the second, abnormal thermal gradients; and the third stage, deep wells. This report assesses the potential and limitations of rotary drilling for deep geothermal systems. The assessment found that hot, dry rock geothermal energy produced from wells in the 35-40,000-ft range offers good potential to provide clean energy, a self-contained or independent energy source, no resupply for special problem maintenance systems, and the promise of economic competitiveness up to 100 Mw.

REVIEW OF THE RESULTS FROM THE EASTERN ATLANTIC CONTINENTAL MARGIN PROGRAM OF THE INTERNATIONAL DECADE OF OCEAN EXPLORATION

K. O. Emery Oct. 1973 34 p refs
 (Grant NSF GX-28193)
 (PB-226580/9GA; WHOI-Ref-73-75; WHOI-Contrib-3218)
 Avail: NTIS HC \$3.00 CSCL 08C

A large geophysical and geological study of the Eastern Atlantic Continental Margin is reported. Excellent results were obtained aboard ship with a computerized system of gravity, magnetics, and seismic reflection and refraction. Although not designed primarily for economic exploration, the cruises did map large sediment-filled basins and belts of salt diapiric structures, some of which were previously unreported and none of which were completely mapped. In addition, small pagoda structures discovered on the deep ocean floor may have some promise as sources for gas. Lastly, areas of coastal upwelling, large river discharge, and open-ocean divergence were outlined as areas being exploited for fish, and they include at least one that appears to be little exploited at present. OPTIMAL CONTROL OF SULFUR DIOXIDE EMISSIONS AT POWER STATIONS: MODELS AND A CASE STUDY

Nitin R. Patel Sep. 1973 128 p refs
 (Contract DAHCO4-73-C-0032)
 (AD-775392; AROD-9239-10-M; TR-82) Avail: NTIS CSCL 04/2

The principal concern of this thesis is to analyze emission control strategies which depend upon meteorological conditions. A meteorological model is developed to relate source emissions with average concentration of a pollutant in a region under different meteorological conditions. The problem of determining optimal dynamic controls for SO₂ emissions at fossil-fueled power stations is treated by constructing a linear programming model. This model is extended to encompass seasonal control of sources which are not amenable to more frequent controls. Another extension is constructed to analyze the effects of errors in meteorological forecasts. The various models are applied to the Metropolitan Boston Air Pollution Control District. The impact of dynamic emission controls on new site selection for fossil-fueled power stations is examined. A stochastic linear programming formulation is developed and an algorithm is designed to solve the stochastic linear programming problem. (Modified author abstract) GRA

STUDIES OF HEAT RESISTANT MATERIALS FOR HIGH-TEMPERATURE GAS REACTOR

Shozo Sekino Washington NASA May 1974 30 p Transl. into ENGLISH of "Koon Gasu Ro Yo Tainetsu Zaiyo No Kento", Nippon Steel Corp., Tech. Res. Inst., Yawata, Japan, report, 18 Oct. 1973 21 p
 (Contract NASw-2481)

(NASA-TT-F-15576) Avail: NTIS HC \$4.50 CSCL 18J

As one of the countermeasures against the energy crisis, hope is entertained for the development of nuclear energy. MHD power generation may be of assistance from the standpoint of improved energy efficiency; high-temperature gas reactors are noted for their high efficiency. The GGA Company has developed a large-scale commercial high-temperature gas reactor whose prospects for the future are good. A preliminary requirement for using high-temperature gas economically and safely is the development of heat-resistant materials. Data are summarized concerning the suitability for this purpose of the existing alloys, including the alloys which are currently being mentioned as candidates. Data on corrosion resistance, creep resistance, thermal fatigue resistance, structural stability, weldability and machinability are reported.

FEASIBILITY OF SPACE DISPOSAL OF RADIOACTIVE NUCLEAR WASTE. 2: TECHNICAL SUMMARY

Washington May 1974 130 p refs
 (NASA-TM-X-2912; E-7676) Avail: NTIS HC \$4.75 CSCL 22A

The feasibility of transporting radioactive waste produced in the process of generating electricity in nuclear powerplants into space for ultimate disposal was investigated at the request of the AEC as a NASA in-house effort. The investigation is part of a broad AEC study of methods for long-term storage or disposal of radioactive waste. The results of the study indicate that transporting specific radioactive wastes, particularly the actinides with very long half-lives, into space using the space shuttle/tug as the launch system, appears feasible from the engineering and safety viewpoints. The space transportation costs for ejecting the actinides out of the solar system would represent less than a 5-percent increase in the average consumer's electric bill.

COMPARATIVE EVALUATION OF SOLAR, FISSION, FUSION, AND FOSSIL ENERGY RESOURCES, PART 3 Final Report

J. D. Clement and W. A. Reupke 20 Mar. 1974 61 p refs
(Grant NGR-11-002-166)

(NASA-CR-138117) Avail: NTIS HC \$6.25 CSCL 10B

The role of nuclear fission reactors in becoming an important power source in the world is discussed. The supply of fissile nuclear fuel will be severely depleted by the year 2000. With breeder reactors the world supply of uranium could last thousands of years. However, breeder reactors have problems of a large radioactive inventory and an accident potential which could present an unacceptable hazard. Although breeder reactors afford a possible solution to the energy shortage, their ultimate role will depend on demonstrated safety and acceptable risks and environmental effects. Fusion power would also be a long range, essentially permanent, solution to the world's energy problem. Fusion appears to compare favorably with breeders in safety and environmental effects. Research comparing a controlled fusion reactor with the breeder reactor in solving our long range energy needs is discussed. Author

TRENDS OF ENERGY USE IN CALIFORNIA AND THE SOUTH COAST AIR BASIN

Paul K. Mazaika May 1973 58 p refs

(Grant NSF GI-29726)

(EQL-Memo-6) Avail: NTIS HC \$6.00

A time history is presented of the major sources of energy described for 1969 in List's report, 'Energy Use in California'. As the data are compiled differently in these two reports, a comparison and interpretation is shown for 1969. The major difference is that his data are only for fuel used to provide energy within the state boundaries, while this report includes consumption for uses other than energy (LPG for chemical feedstock), and fuel used outside the state that was sold in the state (oil for ocean vessels). Natural gas delivered, gasoline, and LPG burned show good agreement. California's total electricity production agrees well. For the South Coast air basin, natural gas use agrees well between the two reports, while both gasoline use and electricity use are about 7% greater in the present work. Author

COMPARATIVE EVALUATION OF SOLAR, FISSION, FUSION, AND FOSSIL ENERGY RESOURCES. PART 4: ENERGY FROM FOSSIL FUELS Final Report

J. R. Williams [1974] 51 p refs

(Grant NGR-11-002-166)

(NASA-CR-138188) Avail: NTIS HC \$5.75

The conversion of fossil-fired power plants now burning oil or gas to burn coal is discussed along with the relaxation of air quality standards and the development of coal gasification processes to insure a continued supply of gas from coal. The location of oil fields, refining areas, natural gas fields, and pipelines in the U.S. is shown. The technologies of modern fossil-fired boilers and gas turbines are defined along with the new technologies of fluid-bed boilers and MHD generators. K.M.M.

N74-22604* Georgia Inst. of Tech., Atlanta. Schools of Mechanical and Nuclear Engineering.

COMPARATIVE EVALUATION OF SOLAR, FISSION, FUSION, AND FOSSIL ENERGY RESOURCES. PART 5: CONCLUSIONS AND RECOMMENDATIONS Final Report

J. R. Williams [1974] 9 p refs

(Grant NGM-11-002-166)

(NASA-CR-138183) Avail: NTIS HC \$4.00 CSCL 10B

Air pollution resulting from the use of fossil fuels is discussed. Phenomena relating to the emission of CO₂ such as the greenhouse effect and multiplier effect are explored. Particulate release is also discussed. The following recommendations are made for the elimination of fossil fuel combustion products in the United States: development of nuclear breeder reactors, use of solar energy systems, exploration of energy alternatives such as geothermal and fusion, and the substitution of coal for gas and oil use. S.K.W.

UNITED STATES ENERGY FACT SHEETS, 1971

Feb. 1973 144 p

Avail: NTIS HC \$10.25

Basic aspects of the nation's fuel-energy situation are outlined. Information for the individual states as well as regions is presented. Data from many different publications are consolidated with emphasis on basic facts and patterns about our fuel-energy picture from state and regional viewpoints. Energy Fact Sheet is a series of tables for the individual states. The tables summarizing the data for the various regions and the nation provide broad-scale comparisons. Several illustrations are included to portray some salient facts. The location of fuel reserves are shown on several maps. Author

PROJECT POL (PETROLEUM, OIL, AND LUBRICANTS): OPTIMIZING PROCUREMENT OF AVIATION FUELS OR DEFENSE SUPPLY AGENCY Final Report

Larry M. Austin and William W. Hogan Jan. 1974 93 p refs (AD-775053; USAFA-TR-74-2) Avail: NTIS CSCL 15/5

Defense Department requirements for aviation fuels are met with purchases made in the usual competitive bidding environment. This large-scale contract bidding and selection problem is modeled as a mixed integer linear program with a special structure. The solution of this large optimization problem is approached via an algorithm employing decomposition and implicit enumeration techniques which exploit the special structure of the underlying formulation. Computational results are discussed, and a FORTRAN computer program which implements the basic algorithm (POLKA) is exhibited. Author (GRA)

GEOLOGIC INFORMATION FROM SATELLITE IMAGES

Keenan Lee, Daniel H. Knepper, Principal Investigators, and Don L. Sawatzky 27 Mar. 1974 39 p refs Presented at the 3d

Ann. Remote Sensing of Earth Resources Conf., Tullahoma, Tenn., 26 Mar. 1974 Original contains imagery. Original photography may be purchased from the EROS Data Center, 10th and Dakota Avenue, Sioux Falls, S. D. 57198 ERTS and EREP (Contracts NAS9-13394; NAS5-21778; Grant NGL-06-001-015) (E74-10507; NASA-CR-138230; Rept-74-3) Avail: NTIS HC \$5.00 CSCL 08G

The author has identified the following significant results. Extracting geologic information from ERTS and Skylab/EREP images is best done by a geologist trained in photointerpretation. The information is at a regional scale, and three basic types are available: rock and soil, geologic structures, and landforms. Discrimination between alluvium and sedimentary or crystalline bedrock, and between units in thick sedimentary sequences is best, primarily because of topographic expression and vegetation differences. Discrimination between crystalline rock types is poor. Folds and fractures are the best displayed geologic features. They are recognizable by topographic expression, drainage patterns, and rock or vegetation tonal patterns. Landforms are easily discriminated by their familiar shapes and patterns. It is possible to optimize the scale, format, spectral bands, conditions of acquisition, and sensor systems for best geologic interpretation. Several examples demonstrate the applicability of satellite images to tectonic analysis and petroleum and mineral exploration.

OXYGENATES IN AUTOMOTIVE EXHAUSTS. EFFECT OF AN OXIDATION CATALYST

D. E. Seizinger and B. Dimitriadis Dec. 1973 26 p refs

(PB-2270971/3; BM-RI-7837) Avail: NTIS HC \$3.25 CSCL 13B

Analytical methods for oxygenates in exhaust gases were studied, and emission of these compounds from automotive engines were measured. It was shown that an estimate of the oxygenate yield from gasoline used in a noncatalytic system can be synthesized from data obtained with simple fuels. Such

synthesized data were used for comparison of noncatalytic with catalytic systems. It is concluded that the compositional character and class distribution of oxygenates in exhaust from catalytic systems may differ significantly from the composition and distribution for oxygenates not subjected to catalytic conversion. APPLICATION OF PHASE TRANSITIONS TO THE ELECTRO-MECHANICAL ENERGY CONVERSION [APPLICATION DES TRANSITIONS DE PHASE A LA CONVERSION MECANO-ELECTRIQUE DE L'ENERGIE]

F. Bauer and Y. Fetiiveau (Lab. de Ferroelectricite, Lyon) 28 Sep. 1973 9 p refs In FRENCH

(ISL-CO-2/73) Avail: NTIS HC \$4.00

The adiabatic depolarization of ferroelectric ceramics is discussed for direct energy release. The basic principles of the method are reviewed and theoretical calculations show that charge release should be performed in an extremely short time. Metastable materials are best adapted in view of the transition F/AF high mobility. A low electric conductivity at high pressure (25 kbar) and high remanent polarization are shown to be essential. Applications as high impulse current generators for electric detonators are outlined.

COST AND PERFORMANCE OF AUTOMOTIVE EMISSION CONTROL TECHNOLOGIES

Glen R. Cass Dec. 1973 32 p refs (Grant NSF GI-29726)

(EQL-Memo-7) Copyright. Avail: Issuing Activity

The near-term commercial feasibility of a wide range of automotive emission control technologies was investigated. Manufacturability and costs associated with each emission control technology are considered. Principle control techniques are listed along with fuel economy, price, maintenance cost, and emissions data for subcompact vehicles identified by the model year in which they were marketed. These engine-vehicle combinations are then compared on the basis of estimated annual cost to the consumer above a 1970 baseline figure. Data indicate that cost alone will not govern the adoption of one emission control technology over another, either by consumers or manufacturers. Additional incentives are discussed. A.A.D.

N74-26255# Avco-Everett Research Lab., Everett, Mass. **DISK GEOMETRY MHD GENERATOR FOR HIGH VOLTAGE HIGH POWER AIRCRAFT REQUIREMENTS Final Technical Report, Jul. 1971 - Dec. 1973**

James E. Klepeis and Jean F. Louis Feb. 1974 111 p refs (Contract F33615-71-C-1905; AF Proj. 3145) (AD-775749; AFAPL-TR-74-6) Avail: NTIS CSCL 21/3

The disk represents a magnetohydrodynamic (MHD) channel geometry in which either a simple outward radial flow occurs, or there is a combination of radial flow with swirl. Distinguishing features and major advantages of the disk are electrodeless walls, and the simplicity of channel and magnet design. For airborne applications of the MHD generator, the goal is to achieve high power density and high power per unit weight. For certain electrical loads, a high voltage output is also desirable. The disk is uniquely suited to airborne applications because the radial symmetry peculiar to the geometry, and its capability to operate at very high electric fields, makes the disk a compact, high-voltage power supply. Described in the report is an experimental program concerned with the investigation and demonstration of the high-interaction performance of a large-scale disk generator driven by a large diameter (61.0 cm) shock tube. **NASA AUTHORIZATION FOR FISCAL YEAR 1975,
PART 3**

Washington GPO 1974 338 p Hearings on S. 2955 before Comm. on Aeron. and Space Sci., 93d Congr., 2d Sess., 2 and 4 Apr. 1974

(GPO-31-919) Avail: Comm. on Aeron. and Space Sci.

A congressional hearing to authorize appropriations for NASA programs was conducted. Comprehensive testimony was provided on the space sciences program with additional statements on Skylab solar physics, the Large Space Telescope, and Spacelab payloads. Statements on tracking and data acquisition and energy research and development were also heard. A special report by representatives of the aircraft industry cited NASA's role in aeronautical research and technology and the importance of continuing studies, particularly in noise reduction. Finally, an analysis of FY 1975 NASA budget figures is presented with attention to future programs and costs.

THE ENERGY COMPLEX: TARGET FOR TODAY'S TECHNOLOGY**

Richard W. Roberts Sep. 1973 12 p refs Presented at 3d Urban Technol. Conf., Boston, 26 Sep. 1973

Avail: NTIS HC \$4.00

Per capita energy consumption, national energy expenditure, and future energy demands are cited as preface to a summary of national energy research and development efforts. National energy habits are discussed along with pertinent conservation measures. Energy source research is outlined and the building design technologies reported which make more efficient use of energy presently available.

THE ADMINISTRATION'S PROPOSAL FOR RELAXATION
OF AIR POLLUTION STANDARDS**

Washington GPO 1973 132 p refs Hearing before Comm. on Public Works, 93d Congr., 1st Sess., 18 Sep. 1973

(GPO-22-629) Avail: Subcomm. on Air and Water Pollution.

A Congressional hearing was conducted to assess the possible impact of relaxing air pollution standards in order to assist in reducing the severity of the energy crisis. Principal emphasis was placed on the adverse effects of permitting sulfur oxide emission standards to be lowered. A forecast of the availability of energy resources was made to show the need for importing energy supplies against the availability of energy sources from foreign countries. Various processes for reducing the sulfur content of fuels are explained. The types of alternate fuel sources which may be available are analyzed.

THE IMPACT OF AUTO EMISSION STANDARDS Report
of the Staff of the Subcommittee on Air and Water Pollution**

Washington GPO Oct. 1973 155 p refs Presented to the Comm. on Public Works, 93d Congr., 1st Sess., Oct. 1973

(GPO-21-548) Avail: Subcomm. on Air and Water Pollution

Progress is reported in a Congressional hearing on compliance with the Clean Air Act of 1970. Automobile emission control levels and test procedures are reviewed and the following issues are discussed: (1) quality assurance; (2) emission control and energy conservation; (3) the emission control technologies of catalyst systems and alternative engine designs; (4) leadtime; (5) the nitrogen oxide measurement problem; and (6) fuel additives. The role of the automotive industry in implementation of standards is emphasized.

PRELIMINARY PERFORMANCE APPRAISAL OF NAVY
V/STOL TRANSPORT AND SEARCH-TYPE AIRPLANES**

USING HYDROGEN FUEL

W. C. Strack May 1974 33 p refs

(NASA-TM-X-71550; E-7962) Avail: NTIS HC \$3.25 CSCL 01C

First-cut estimates are given of the performance advantages of liquid-hydrogen-fueled, ejector wing, V/STOL aircraft designed for shipboard delivery and search-type missions. Results indicate that the use of LH₂ could reduce gross weights 30 percent, empty weights 15 percent, and energy consumption 10 percent for a fixed payload and mission. If gross weight is fixed, the delivery range could be increased about 60 percent or the hover time during a search mission doubled. No analysis or discussion of the economic and operational disadvantages is presented.

CALCULATION AND COMPARISON OF THE ECONOMY OF
ELECTROCHEMICAL FUEL CELLS**

Franz A. Pohl, Harald Bohm et al May 1973 21 p refs Transl. into ENGLISH from Wiss. Ber. AEG-Telefunken (West Germany), v. 45, 1972 p 141-146

(NTC-74-11868; Rept-73-145) Avail: NTIS HC \$4.25; National Translation Center, John Crerar Library, Chicago, Ill. 60616

The characteristics and operating principles of electrochemical fuel cells are discussed. The economy of typical fuel cells is calculated and the economy of different low temperature fuel cells is compared. It was determined that the tungsten carbide/carbon fuel cell is more economical than the other low temperature fuel cells investigated. Mathematical models are developed to show the manner in which the comparisons were conducted.

RESEARCH APPLIED TO SOLAR-THERMAL POWER
SYSTEMS Semiannual Progress Report, 1 Jan. - 30 Jun. 1973**

B. O. Seraphin 10 Apr. 1973 57 p refs

(Grant NSF GI-36731X)

Avail: NTIS HC \$6.00

Research on a new approach to a selective solar energy converter that can be used to transform solar radiation into high temperature heat was conducted. This heat can be transferred and applied in a steam turbine-generator unit to produce electricity. The selective solar energy converter is basically a two-layered construction in which the top layer is a semiconductor material, such as silicon, having high absorption for solar radiation and high transparency for black body radiation from the heated unit. The bottom layer is a metal film having high reflectance.

ENERGY FROM GEOTHERMAL RESOURCES

Washington GPO May 1974 96 p refs Presented to Comm. on Sci. and Astronaut., 93d Congr., 2d Sess., 10 May 1974 Prepared by Library of Congr.

(GPO-32-309) Avail: Subcomm. on Energy

The technology for utilizing dry steam deposits for electric power is reasonably well advanced, but these deposits are uncommon in nature. Exploitation of these deposits will provide valuable additions to local power supplies. The unit power cost

of dry steam is well under that of fossil and nuclear fuels and dry steam has less adverse environmental impact. Using the steam will likewise conserve conventional fuels, which may then be used elsewhere or for other purposes. Wet steam and hot water electric power plants are more expensive than the dry steam plants, but such deposits are much more common. The technology is, again, reasonably, but not totally, developed; corrosion remains a major problem. As with the case of dry steam deposits, in areas containing wet steam and hot water resources, conventional fuels can be saved and the environment protected by the construction of geothermal power plants and by using the remaining hot water for such secondary purposes as space heating, the extraction of minerals, and as a source of potable water. (Grant NSF GI-39114)

(PB-228068/3; NSF-RANN/SE/GI-3911/PR-74-2;

NSF-RA/N-74-003) Avail: NTIS HC \$4.50 CSCL 10B

A conceptual design is developed which in no way depends upon ocean currents, and in which all physical processes are well understood. Contamination of the input water to the boiler by the output water is avoided by taking advantage of the naturally occurring density stratification, at least for plants which do not exceed 700,000 kilowatts. High density power generation without moisture, and the consequent power expenditure in its removal, is obtained by falling film evaporation on vertical tubes. Appreciable pressure drop in the large banks of vertical tubes in the evaporator and condenser is avoided by proper manifolding. The optimization scheme is shown to be capable of handling 30 variables and 20 constraints within a compilation and running computer time less than a minute. GRA

(Grant NSF GI-39114)

(PB-228069/1; NSF-RA/N-73-063;

NSF-Rann/SE/GI-39114/PR-73-1; QPR-1) Avail: NTIS HC \$4.75 CSCL 10B

The first quarterly report analyzes the physical principles involved in the most critical components of a Solar Sea Power Plant. These critical components are considered to be the boiler, condenser, turbine, cold water pipe (approximately 2,000 ft long, approximately 60 ft diameter). The following conclusions have been obtained. Boiler: Because of the slow rise of bubbles in fluids, and because of the low power available for separating moisture from vapor, film evaporation is preferred to pool boiling. Condenser: The heat transfer in condensers may be greatly improved by an optimally designed, contoured surface. Turbine: The available temperature drop of 10C for the heat engine is sufficient to drive a single stage turbine with 50% reaction in stator and in rotor, and with maximum gas velocities of 740 ft/sec. Cold Water Pipe: Elastic instability, the mode of failure most difficult to guard against, may be controlled by two concentric 1/8 in. pipes spaced 2 in. apart, with an appropriate filler. GRA

EFFECT OF SHADING ON CdS/Cu(x)S SOLAR CELLS AND OPTIMAL SOLAR ARRAY DESIGN

Mohamed Sayed and Larry Partain 13 Jun. 1973 55 p refs (Grant NSF GI-34872)

(PB-227900/8; NSF-RANN/SE/GI-34872-73-4) Avail: NTIS HC \$3.75 CSCL 10B

The effects of shading on solar arrays in general has been analyzed using the specific I-V characteristics of a CdS/Cu(x)S solar cell. The major differences in the amount of power lost with various array configurations subjected to identical shading conditions has been determined. The conditions under which localized heating or 'hot spots' occur has been treated and the criteria for their avoidance has been precisely defined. The effects of protective diodes in reducing power loss and in preventing hot spots has been included. General design rules to assist in obtaining optimal solar structures have been formulated and presented. Author (GRA)

THE PRICE ELASTICITY OF RESIDENTIAL ENERGY USE

Kent P. Anderson Feb. 1974 21 p refs
(P-5180) Avail: NTIS HC \$4.25

The long-run price elasticity estimates obtained in several recent studies of residential gas and electricity demands are discussed. The nature of responses to price and, in particular, to the role of inter-fuel substitution compared with the role of alterations in usage rates or the size, efficiency, and features of new and renovated equipment are examined. The own- and cross-price elasticities obtained in these studies imply that large equal percentage increases in the prices of all types of energy sources would eventually lead either to marked increases in energy conservation or to a shift from utility gas and electricity to other sources of energy. Latter interpretation is intuitively implausible for price increases that would apply to all types of energy. But the alternative interpretation -- that there is a quantitatively significant link between energy price and the degree of energy conservation -- is not well supported by casual observation.

NUCLEAR STIMULATION OF NATURAL GAS

Washington GPO 1973 894 p refs Hearing before Comm. on Interior and Insular Affairs, 93d Congr., 1st Sess., 11 May 1973
(GPO-96-678) Avail: Subcomm. on Public Lands

A Congressional hearing was conducted on Project Rio Blanco, Colorado, to determine the uses versus the hazards of stimulating the production of natural gas from tight-rock formations by the use of nuclear devices. Fission product activity whereby the detonation of a 30-kiloton nuclear bomb triggers the transformation of chimney gas deposits into usable energy is explained. The effects to the environment of the resulting radioactivity is discussed along with the following matters: (1) the purposes of the test; (2) the costs of the test, both economic and environmental; (3) reasonable alternatives to nuclear stimulation; (4) whether Project Rio Blanco should proceed; (5) consumer acceptance; and (6) the future of the technology.

COAL POLICY ISSUES. PART 2: APPENDIX 3: ADDITIONAL STATEMENTS RECEIVED FOR THE RECORD

Washington GPO 1973 569 p refs Hearings before Comm. on Interior and Insular Affairs, 93d Congr., 1st Sess., 1973 (GPO-20-768) Avail: Comm. on Interior and Insular Affairs

The reliability and adequacy of bulk power supplies in the U.S. was discussed in a Congressional hearing to determine present and future energy needs towards the formulation of a national energy policy. The coal industry is discussed in terms of: (1) extraction, including mine safety; (2) transportation, including reestablishment and reequipping of the railroads; (3) combustion, including new technologies and reequipping of the railroads; (4) conversion of coal to low-sulphur gases, liquids, or solids; and (5) ecological considerations, including mine drainage and refuse treatment, power plant particulate emission from coal combustion, and strip mine reclamation. Present coal-fired generating capacity is reported according to figures presented by utility companies from different sections of the country, and general trends in energy consumption and coal utilization are observed for nine regions of the National Electric Reliability Council.

DRAFT OF PROPOSED LEGISLATION TO PROMOTE MORE EFFECTIVE MANAGEMENT OF CERTAIN RELATED FUNCTIONS OF THE EXECUTIVE BRANCH Communication from the President of the United States

Washington GPO 1973 83 p refs Presented to Comm. on Govt. Operations, 93d Congr., 1st Sess., 29 Jun. 1973 (H-Doc-93-119; GPO-83-011) Avail: US Capitol, House Document Room

Congressional action to draft a proposed legislation to promote more effective management of certain related functions of the Executive Branch was conducted. The proposal involves reorganizing and consolidating those functions in a new department of energy and natural resources. Also considered in a new energy research and development administration. The interrelated operations of the energy administration with other governmental functions are examined.

ENERGY EMERGENCY ACT From Committee of Conference

Harley O. Staggers Washington GPO 7 Feb. 1974 103 p refs Report to accompany S. 2589 presented by Comm. on Public Works at the 93d Congr., 2d Sess., 7 Feb. 1974 (H-Rept-93-793) Avail: US Capitol, House Document Room

Congressional action with respect to an Energy Emergency Act is presented. The establishment and functions of the Federal Energy Emergency Administration are defined. Energy conservation plans which can be implemented in a short time are proposed. Some of the provisions of the bill include the following: (1) coal conversion and allocation, (2) Federal actions to increase available domestic petroleum supplies, (3) prohibition on inequitable prices, (4) protection of franchised dealers, (5) antitrust procedures, and (6) administrative procedure and judicial review.

A KENTUCKY COAL UTILIZATION RESEARCH PROGRAM. PROJECT 3: LOW BTU GAS AND SOLID DESULFURIZED FUEL Annual Report, 1 Jul. 1972 - 30 Jun. 1973

Nov. 1973 132 p refs

Avail: NTIS HC \$9.75

Processes to produce a solid desulfurized fuel at the lowest cost per Btu and per KWhr were evaluated. It became apparent that the price of energy from the so-called environmentally clean

fuels will continue to rise and that most processes will become economical before the technology has been fully demonstrated in a so-called commercial or demonstration plant. Evaluation of producer gas processes showed that the fixed bed atmosphere gas producer has the lowest fuel cost of presently available processes. A computer program has been developed to assist us in the analysis of a fixed bed gasifier and prediction of its performance. The available data on the sulfur content in Kentucky coals and their associated reserves have been assembled. A short evaluation of the various coal cleaning procedures was completed and a more extensive program on coal washing, coal blending and evaluation of a sulfur leaching process was initiated. Author

A KENTUCKY COAL UTILIZATION RESEARCH PROGRAM. PROJECT 4: MEASUREMENT OF INHIBITION ISOTHERMS FOR KENTUCKY COAL Annual Report, 1 Jul. 1972 - 30 Jun. 1973

Oct. 1973 41 p refs

Avail: NTIS HC \$5.25

Brushed and sieved coal was fluidized in 10 gram batches in a 22 mm ID quartz reactor up to a temperature of 870 C. The release of H₂S during heatup under nitrogen and at the run temperature under the same gas (pyrolysis), hydrogen, or hydrogen-hydrogen sulfide mixtures was followed by gas chromatography. The residue or char was analyzed for pyritic, organic, sulfide, sulfate, and total sulfur. Inhibition isotherms, equilibria between sulfur in the char and gaseous hydrogen sulfide, were measured at 600 and 870 C. At the lower temperature the isotherm was found to be independent of the hydrogen sulfide concentration in the gas stream and the char sulfur content remained constant at 2.6%. In addition to the inhibition isotherms, sulfur-form transformation diagrams were constructed for coal treated with nitrogen, hydrogen, and hydrogen-hydrogen sulfide mixtures. Pyritic sulfur, which comprised 40% of the sulfur in the original coal, was completely converted to ferrous sulfide at 600 C in hydrogen and 740 C in nitrogen. At 870 C the sulfur content of the char produced under hydrogen was 1.1%. Author

POLLUTION-FREE ELECTROCHEMICAL POWER GENERATION FROM LOW GRADE COAL

D. F. McMillen, R. D. Weaver, and M. Anbar Aug. 1973 50 p refs

(Grant NSF GI-34027)

(PB-228006/3; NSF-RA/N-73-0108) Avail: NTIS HC \$3.25 CSCL 07D

Results are described of a study, exploring the feasibility of a nonpolluting, combined chemical-electrochemical system for generating electrical power. The process entails the use of coal to reduce lead oxide to a lead in a molten carbonate medium. The lead contained in the molten carbonate is then used in a metal air electrochemical cell to generate electrical power. To date it has been demonstrated that: Reduction of lead oxide by solid petroleum coke in a molten sodium-lithium-potassium carbonate eutectic is a two-step process whose overall rate is generally limited by the rate of reaction of solid carbon with CO₂. The rate of this latter reaction, in turn, is directly proportional to the external surface area of the coke. (Modified author abstract) GRA

RETORTING INDEXES FOR OIL-SHALE PYROLYSES FROM ETHYLENE-ETHANE RATIOS OF PRODUCT GASES

I. A. Jacobson, Jr., A. W. Decora, and G. L. Cook 1974 25 p refs Sponsored in part by Wyo. Univ.
 (BM-RI-7921) Avail: NTIS HC \$4.25 CSCL 10A

In a closely controlled laboratory retorting system for oil shale, a relationship was developed between the temperature in the retort and the weight ratio of ethylene to ethane in the gases produced. Reciprocal temperature was shown to be directly proportional to the log (ethylene/ethane). From this relationship, a number, called retorting index, was developed. The retorting index has the dimension of temperature, but its magnitude depends on both temperature and residence time for the reactants in the heated zone in the oil shale retort. The slopes of the lines relating reciprocal temperature and the logarithm of the ethylene-ethane ratios are nearly constant for each of the retorting processes for which data were presented. The retorting index should be a valuable tool to control the operation of oil shale retorts, either aboveground or in situ. If an optimum operating condition can be established, the maintenance of the optimum or the departure from it should be easily monitored by use of the index. Author

(PB-228668/0; SRIC-72EPA-650/2-73-042) Avail: NTIS HC \$12.25 CSCL 07A

Kinetic reaction data are described, produced in a nonisothermal kinetics laboratory while gasifying selected types of coal under oxidative, reductive, and pyrolytic conditions. Types of coal cover the range, including lignite and anthracite. Evolution of thermal decomposition products under study conditions were investigated at different fuel heating rates and gasification pressures. Gaseous product evolution rates, as the function of temperature, were graphed for different coals, exposed to indicated gasification regimes. The evolution of such gaseous species as H₂O, CO, CO₂, O₂, SO₂, NO, H₂, CH₄, H₂S, and C₂H₂ was followed up in conjunction with 13 different coal gasification reactions. GRA

A PROGRESS REPORT ON COAL MINE HEALTH AND SAFETY

Henry P. Wheeler, Jr. *In* its Technol. and Use of Lignite 1972 p 12-14

Progress in implementation of the Federal Coal Mine Health and Safety Act of 1969 is presented. Three major approaches are being followed: inspection and enforcement; research and development; and education and training. In the first year in excess of 3,000 coal mine inspections were conducted and over 52,000 notices of violation of standards and 2,800 withdrawal orders were issued. To fully implement the 40,000 inspections that will be required each year, sufficient personnel have been hired but their training will not be completed for a few months. Although physical conditions in underground mines have been improved, the fatality rate has not. Lack of improvement may be caused by new inexperienced workers, opening of new mines, less adequate supervision, and loss of experienced foremen who are traiging as mine inspectors. Author

N74-28022 Peabody Coal Co., St. Louis, Mo.

PIPELINE TRANSPORT OF LIQUID COAL

Jack J. Ellis and Pete Bacchetti *In* Bur. of Mines Technol. and Use of Lignite 1972 p 15-31

The 273-mile coal pipeline from Black Mesa, Ariz., to the Mohave generating station at Davis Dam, Nev., is described. Five million tons of coal are to be transported each year. Strip mined coal is reduced in size to minus one-eighth in and made into a 50-percent water slurry. Water is obtained from five wells, each over 3,500 ft deep. Four pumping stations are required to move the slurry through the 18-in pipeline. At the generating station, the slurry is dewatered, using centrifuges, to 25-percent moisture and fed to the pulverizers. Effluent from the centrifuges is clarified, the clear water is used in plant operations and the concentrated slurry returned to the centrifuge. No water is discharged as the excess is solar evaporated from holding ponds. Author

LIQUEFACTION OF LIGNITE WITH CARBON MONOXIDE AND WATER

Herbert R. Appell, Irving Wender, and Ronald D. Miller *In* its Technol. and Use of Lignite 1972 p 32-39 refs

Lignite was treated with carbon monoxide and steam with the objective of preparing a low sulfur, heavy fuel oil. At temperatures of 380 to 400 C and pressures of 3,000 to 5,000 psig, conversions of about 90 percent of lignite and oil yields near 75 percent have been obtained. These conversions were obtained using freshly pulverized lignite, a solvent, and pressures above 4,000 psig. Under these conditions, the

liquefaction of lignite required only 15 minutes at 380 to 400 C, exclusive of heating and cooling periods. Alkaline compounds which are present in lignite are good catalysts for the liquefaction reaction. In order to obtain high yields at pressures near 3,000 psig, it was necessary to increase the reaction time to about 2 hr and use larger quantities of a solvent fortified with a heterocyclic nitrogen base. At these conditions, mixtures of hydrogen and carbon monoxide worked almost as well as carbon monoxide.

USE OF WESTERN COAL AND AIR WATER QUALITY CONTROL BY MINNESOTA POWER AND LIGHT COMPANY

E. F. McGuire and W. F. Arndt (Abe W. Mathews Eng. Co., Hibbing, Minn.) *In Bur. of Mines Technol. and Use of Lignite* 1972 p 40-48

Conversion of thermal generating stations to use of subbituminous coal is discussed. The major conversion requirement is for installation of increased pulverizer capacity. In some cases modification of the superheater section, addition of burners, and use of oil for peak load are required. Unloading and handling facilities are described. In order to meet the requirements set by pollution control, it is planned to install wet scrubbers. A spray chamber, low gas velocity scrubber was selected after a preliminary testing program. Indications are such a unit will have a high collection efficiency for particulates and allow control of effluents to meet water quality standards. Required modification to existing thermal units are given.

NITROGEN OXIDES, SULFUR OXIDES, AND PARTICULATE CONTROL TECHNOLOGY FOR FOSSIL FUEL COMBUSTION

R. E. Harrington *In Bur. of Mines Technol. and Use of Lignite* 1972 p 56-69 refs

Five methods for reduction of SO₂ in air are classified as first generation processes and are discussed in some detail. These are: (1) Use of low-sulfur fuel; (2) dry limestone injection; (3) lime/limestone scrubbing; (4) magnesium scrubbing; and (5) catalytic oxidation. Limitation of first generation processes require development of improved second generation processes. Reduction in NO_x emissions is at present limited to methods that lower flame temperatures. Particulate control in the utility industry has generally been by electrostatic precipitation with only moderate success. To achieve sufficiently high removal efficiency, the size and subsequent cost of the precipitator increases rapidly. Fabric filters may prove to be satisfactory substitutes. The application of wet scrubbers for control of both particulate and SO₂ needs additional development.

LOW GAS TEMPERATURE SOLUTION TO HIGH RESISTIVITY ASH PROBLEMS

D. T. Berube *In Bur. of Mines Technol. and Use of Lignite* 1972 p 70-82 ref

Efforts to improve the performance of an installed electrostatic precipitator by lowering the temperature of flue gas are presented. Fly ash from the low sulfur subbituminous coal has a high electrical resistivity and the precipitator efficiency was about 85 percent compared to the design efficiency of 97 percent. Laboratory and in situ measurements of ash resistivity indicated a reduction in resistivity at lower gas temperature. Gas temperature was lowered by air dumping and increasing the area of the economizer. In addition a mixing baffle was installed at the air heater outlet and two transformer rectifier sets were installed on the precipitator.

COLLECTING FLY ASH FROM WESTERN LOW SULFUR COALS

James L. Ma *In Bur. of Mines Technol. and Use of Lignite* 1972 p 83-97 refs

Two types of wet scrubbers were tested on a flue gas stream from a utility boiler. One was a flooded variable throat venturi unit and the other a direct impingement type. Both were effective in removing fly ash with the variable throat unit slightly more efficient. Either can be considered as a practical alternate to the electrostatic precipitator. Efficiency increases with pressure drop through the unit. Both liquid recirculation and bleed-off rates effect efficiency to a lesser extent. A flowsheet of a proposed unit for a full size power plant is presented.

PILOT STUDY OF ELECTROSTATIC PRECIPITATION FOR REMOVING FLY ASH AT BASIN ELECTRIC'S LELAND OLDS STATION

Kent E. Janssen (Basin Elec. Power Coop., Stanton, N. Dak.) and Floyd W. Redman *In Bur. of Mines Technol. and Use of Lignite* 1972 p 98-104 ref

A pilot scale electrostatic precipitator was used to remove fly ash from a side stream of flue gas originating from an operating power plant. The electrical generating station burns low sulfur pulverized lignite. Under test conditions, 99-percent removal of fly ash was achieved, indicating suitability of this method for practical and effective removal of high resistivity lignite fly ash from boiler exit gases. The power input has a significant effect on precipitator performance with a marked decrease in efficiency below 80 percent of maximum power. Within the range tested, face velocity of gases was not a factor. Rappers were operated at high impact intensity and relatively high frequency to obtain adequate cleaning.

FUTURE ENERGY SUPPLY: APPROACHES AND OPTIONS

Wilson M. Laird *In Bur. of Mines Technol. and Use of Lignite* 1972 p 105-111

Domestic gas and oil deliverability should reach a peak about 1974. Use of coal will be severely restricted by air quality standards. At present the only method to fill the energy gap is by increased imports of foreign oil. If no action is taken, the nation will be dependent for a major share of its energy supply upon sources over which there can be little control. If such dependence is the result of a conscious, studied policy decision with full understanding of the consequences, the situation may be acceptable. A national energy policy should be formulated with a clear understanding of all facets including environmental considerations. An organization for formulating and articulating the policy is necessary. A strong team effort of government and industry is important to integrate and activate a national energy policy.

LIGNITE AND THE CYCLONE BURNER IN A NEW 235-mw GENERATING STATION

Lloyd Hillier and B. W. Rudiger (Sanderson and Porter, New York) *In Bur. of Mines Technol. and Use of Lignite* 1972 p 112-126

Major operational systems are described with the most significant departure from the conventional lignite-fired boiler being the use of cyclone burners. The cyclone burners have performed well and only minimal startup difficulties were encountered. No fireside tube fouling has been experienced. Peak power production has reached 274 mw and was limited by the capacity of the boiler feedwater pump. Use of 1/4-in crushed lignite rather than pulverized lignite has eliminated pulverization problems. Some drying of lignite during crushing was necessary to maintain temperature levels in the cyclone sufficiently high to melt the lignite ash. Lignite was mined at an adjacent strip pit, trucked to the station and crushed. A mechanized lignite handling system conveyed the lignite to plant silos or storage. Cooling water was available from a nearby lake.

DETAILED CONSTRUCTION AND EQUIPMENT COSTS FOR THE 235- MW MILTON R. YOUNG GENERATING STATION

Kenneth S. Vig *In* Bur. of Mines Technol. and Use of Lignite 1972 p 127-145

A total of \$38,710,211 was required for equipment and construction of the 235 mw lignite fired, cyclone burner unit. This total included all items such as land, structures, roads, a dam to impound cooling water, mechanical and electrical equipment, lignite handling facilities, transformer and switchboard, engineering, overhead, interest, and inventory as well as the generating unit. Arranged in categories, costs are given in sufficient detail, including the year incurred, so that more accurate estimates can be made in planning new units. Author

DESIGN AND EVALUATION OF EXPERIMENTAL CERAMIC AUTOMOBILE THERMAL REACTORS

Phillip L. Stone and Charles P. Blankenship Washington Jul. 1974 28 p refs
(NASA-TN-D-7706; E-7175) Avail: NTIS HC \$3.25 CSDL 11B

The results obtained in an exploratory evaluation of ceramics for automobile thermal reactors are summarized. Candidate ceramic materials were evaluated in several reactor designs by using both engine-dynamometer and vehicle road tests. Silicon carbide contained in a corrugated-metal support structure exhibited the best performance, lasting 1100 hr in engine-dynamometer tests and more than 38,600 km (24000 miles) in vehicle road tests. Although reactors containing glass-ceramic components did not perform as well as those containing silicon carbide, the glass-ceramics still offer good potential for reactor use with improved reactor designs. NUCLEAR HEAT AND HYDROGEN IN FUTURE ENERGY UTILIZATION

L. A. Booth and J. D. Balcomb Nov. 1973 28 p
(Contract W-7405-eng-36)
(LA-5456-MS) Avail: NTIS HC \$4.00

Future demand for the world's supply of carbon-based fuels will eventually deplete this supply to the point at which their use becomes economically infeasible. Hydrogen, which is virtually inexhaustible in the form of water, could be substituted for natural gas and petroleum-based fuels for industrial and residential heating and for transportation. Nuclear energy, either fusion or fission, would be the primary energy source. Thermal energy from the nuclear heat source would be converted to electric energy in a conventional heat-engine cycle. Hydrogen could be produced from water by a cyclic thermochemical process. Gaseous hydrogen for industrial and residential heat would be transported in a high-pressure pipeline system. Liquid hydrogen or hydrogen stored in metal hydrides could be used for transportation fuels. Author (NSA)

The investigation of the dielectric properties of fluids and solids for use in superconducting systems is reported. The objectives of the project are identified to be the determination of scaling laws applicable to various models of superconducting cables and other cryogenic apparatus. Studies include the investigation of: (1) ac and dc breakdown and prebreakdown phenomena in liquid helium, and in a variety of solids in liquid helium; (2) the influence of electrode surfaces and impurities; (3) the influence of pressure and temperature on the dielectric properties of liquid helium; (4) the behavior at large gaps; (5) breakdown and surface flashover of bulk and laminated solids. Impulse measurements are also planned. Author (NSA)

SURVEY OF LARGE-SCALE APPLICATIONS OF SUPERCONDUCTIVITY Informal Report

J. R. Powell 1973 167 p refs Presented at Conf. on Advan. Study Inst. on Large Scale Appl. of Superconductivity and Magnetism, Entreves, Italy, 5 - 14 Sep. 1973 Sponsored by AEC

(BNL-18376; Conf-730970) Avail: NTIS HC \$10.50

A survey is made of potential future large-scale uses of superconductivity, including fusion, MHD, magnetic energy storage, power transmission, high-speed ground transport, and magnetic separation. The superconducting technological requirements for each application are examined with regard to present and projected capabilities. The requirements of the nonsuperconducting system components in each application are also examined, together with an investigation of how advances in superconducting technology can ease demands on the nonsuperconducting components. Economic and social factors relating to each application are also discussed. An assessment of the likelihood of success for each application is made. (89 references)

ECONOMIC EFFECTS OF PROPULSION SYSTEM TECHNOLOGY ON EXISTING AND FUTURE TRANSPORT AIRCRAFT

G. Philip Sallee Jul. 1974 345 p
(Contract NAS3-17326)

(NASA-CR-134645) Avail: NTIS HC \$7.50 CSDL 21A

The results of an airline study of the economic effects of propulsion system technology on current and future transport aircraft are presented. This report represents the results of a detailed study of propulsion system operating economics. The study has four major parts: (1) a detailed analysis of current propulsion system maintenance with respect to the material and labor costs encountered versus years in service and the design characteristics of the major elements of the propulsion system of the B707, B727, and B747. (2) an analysis of the economic impact of a future representative 1979 propulsion system is presented with emphasis on depreciation of investment, fuel costs and maintenance costs developed on the basis of the analysis of the historical trends observed. (3) recommendations concerning improved methods of forecasting the maintenance cost of future propulsion systems are presented. A detailed method based on the summation of the projected labor and material repair costs for each major engine module and its installation along with a shorter form suitable for quick, less detailed analysis are presented.

and (4) recommendations concerning areas where additional technology is needed to improve the economics of future commercial propulsion systems are presented along with the suggested economic benefits available from such advanced technology efforts. Author

THE WESTERN KENTUCKY COAL INDUSTRY: AN ECONOMIC ANALYSIS

Curtis E. Harvey May 1973 99 p refs Revised (UKY-TR76-73-IMMR1) Avail: NTIS HC \$8.00
 An economic analysis and investigation into the structure of the Western Kentucky coal industry are provided. Employment and the relative size of the coal industry are discussed along with estimated remaining coal reserves in the state. Demand and supply factors, and the regional structure of the markets for coal mined in the eastern interior basin are considered. Mining operations, costs of production, transportation, and the price of coal are reported and the prospects for economic change in the Kentucky coal industry considered. A.A.D.

NAVAL PETROLEUM RESERVE NUMBERED 1, ELK HILLS, CALIFORNIA

Washington GPO 1973 114 p refs Hearing on S.J. Res. 176 before Comm. on Armed Services, 93d Congr., 1st Sess., 10-11 Dec. 1973 (GPO-25-650) Avail: Subcomm. on Natl. Stockpile and Naval Petrol. Reserve

A Congressional hearing was conducted to consider a resolution which would authorize production of petroleum from the Elk Hills Naval Petroleum Reserve for national defense purposes and to provide for further exploration of the reserve. The nature of the petroleum shortage in the U.S. is examined. The capacity of the petroleum reserve to alleviate the situation is evaluated. Restrictions on the exploitation of the reserves are defined. The findings of the committee are based mainly on the testimony of selected witnesses who are knowledgeable of the crude oil situation. P.N.F.

N74-28452# Joint Economic Committee (U. S. Congress).
ECONOMIC IMPACT OF PETROLEUM SHORTAGES

Washington GPO 1974 197 p refs Hearings before Joint Econ. Comm., 93d Congr., 1st Sess., 11-13 Dec. 1973 (GPO-27-213) Avail: SOD HC \$1.50

Both the short run and long run implications of the energy crisis are discussed in a Congressional hearing conducted to gather information towards the formulation of an effective energy policy. The Arab oil embargo is analyzed for its effect on real growth forecasts and rising inflation. A summary of the oil shortages in the U.S. petrochemical industry includes tabulation of production decline in the manufacture of organic chemicals, plastic resins, synthetic fibers and rubber, and related industries. Administration projection of near term petroleum shortfall are reported and proposed remedies include reduction in jet aircraft flights, reduction in residential heating, reduction in business, government, and industry power use, expansion of rail and bus transit systems, conversion of power plants to coal, and a gasoline tax. The impact of the fuel shortage on Canada is presented for comparison. A.A.D.

N74-28453# Committee on Finance (U. S. Senate).
PROFITABILITY OF DOMESTIC ENERGY COMPANY OPERATIONS

Washington GPO 1974 222 p refs Hearings before Comm. on Finance, 93d Congr., 2d Sess., 13-14 Feb. 1974 (GPO-28-572) Avail: Comm. on Finance

A Congressional hearing was conducted to present testimony relating to the problem for excess or windfall profits in the oil industry. Tax legislation proposals are emphasized. Information is presented by private firms and by petroleum trade associations, and the topics include the following: (1) percent of U.S. production by medium and small companies; (2) petroleum exploration and development expenditures; (3) profitability ratios; (4) sources of U.S. sales of petroleum products and foreign investments; (5) imports of crude oil and refined products; (6) gasoline and residual fuel consumption; (7) return on petroleum shareholders equity; and (8) earning growth and return calculations. Recommendations are made for the formulation of tax and price policies as well as effective government/industry roles in the management of the energy market. A.A.D.

Avail: NTIS HC \$4.00

Both gross and marketed production volumes in million cubic feet are presented for all countries engaged in the natural gas industry. World trade volumes in billion cubic feet are also shown by year and importing country. A brief account of natural gas trends in domestic production and international trade is included. A.A.D.

N74-28465# Atomic Energy Commission, Washington, D.C. **NATION'S ENERGY FUTURE Report to the President of the United States**

Dixy Lee Ray 1 Dec. 1973 182 p

(WASH-1281) Avail: NTIS MF \$1.45; SOD HC \$1.95

This report, developed under the general guidance of the Energy Policy Office, is in response to the directive of the President on June 29, 1973, to the Chairman of the Atomic Energy Commission to review Federal and private energy R and D and to recommend an integrated program for the Nation. The report recommends: (1) a national energy R and D program, (2) a five-year, \$10 billion Federal energy R and D program, and (3) the FY 1975 Federal budget for energy R and D. The recommended program, based on what is now known, is both necessary and sufficient to maximize energy R and D's contribution to the Nation's energy goals; even so, 1985 is the earliest date by which self-sufficiency can reasonably be expected. By 1980, the recommended program can reduce oil imports to half those currently projected; other extraordinary measures will be required to displace the other half. NSA

A PLANNING METHODOLOGY FOR THE ANALYSIS AND DESIGN OF WIND-POWER SYSTEMS Ph.D. Thesis

Ismael Gerardo Dambolena 1974 156 p

Avail: Univ. Microfilms Order No. 74-15005

A computer model is developed which evaluates the economics of offshore wind-power systems and simulates the behavior of alternate designs. Wind-powered generators either satisfy consumer demand directly or produce hydrogen by the electrolysis of water. The hydrogen can later be transformed back into electricity by fuel cells. Using the characteristics of the system components as input parameters, the model simulates system performance over time using historical or computer-

generated wind-speed and demand data. Various statistics associated with the energy produced and costs are used to evaluate and compare alternative systems. Dissert. Abstr.

DESIGN, EVALUATION AND RECOMMENDATION EFFORT RELATING TO THE MODIFICATION OF A RESIDENTIAL 3-TON ABSORPTION CYCLE COOLING UNIT FOR OPERATION WITH SOLAR ENERGY

Richard H. Merrick and Philip P. Anderson Nov. 1973 23 p

(Contract NAS8-25996)

(NASA-CR-120277) Avail: NTIS HC \$4.25 CSCL 10A

The possible use of solar energy powered absorption units to provide cooling and heating of residential buildings is studied. Both the ammonia-water and the water-lithium bromide cycles, are considered. It is shown that the air cooled ammonia water unit does not meet the criteria for COP and pump power on the cooling cycle and the heat obtained from it acting as a heat pump is at too low a temperature. If the ammonia machine is water cooled it will meet the design criteria for cooling but can not supply the heating needs. The water cooled lithium bromide unit meets the specified performance for cooling with appreciably lower generator temperatures and without a mechanical solution pump. It is recommended that in the demonstration project a direct expansion lithium bromide unit be used for cooling and an auxiliary duct coil using the solar heated water be employed for heating. Critical experiments are described which are intended to prove the technical feasibility and socio-economic desirability of specific applications or techniques for the widespread utilization of solar energy. These experiments fall within the following areas: heating and cooling of buildings, process heat, solar-thermal-electric, photovoltaic, ocean thermal, wind energy, organic materials, and common applications. The specific concept which the experiment is intended to prove, and a rationale for the experiment are given. Each experiment is described in terms of the system to be constructed, its pacing and high-risk items, the intended users, desired interfaces with other systems and users, and estimated costs for the experiment. Each experiment is described and costs estimated for two levels of funding: a moderate risk, minimum program, and a low-risk accelerated program. Author

STUDY OF HANFORD CAPABILITY FOR SOLAR ENERGY RESEARCH AND DEVELOPMENT

K. Drumheller Nov. 1973 55 p refs
 (Contract AT(45-1)-1830)
 (BNWL-1801) Avail: NTIS HC \$5.45

The Hanford site provides unique capability for solar energy research and development. The basic attributes include large available land areas; consistent sunshine during much of the year (although not comparable to Arizona and the southwest U. S.); extreme temperatures for test purposes (-27 to 115 F); cooling water availability; ecology approximating ecology in some other solar areas; R and D facilities applicable to most solar technology; equipment immediately useful for solar energy programs; technology background in most areas of solar energy; experience with large energy systems, and background in systems analysis. From the solar energy production standpoint, the energy that falls on the 600 square miles at the Hanford site would produce 100,000 megawatts if 33 1/3% efficiency can be achieved. NSA

ECONOMICS OF THERMODYNAMIC SOLAR POWER SYSTEMS. PART 2: THE TURBINE TRADE-OFF

L. F. Wouters 19 Sep. 1973 7 p
 (Contract W-7405-ENG-48)
 (UCID-16386-Pt-2) Avail: NTIS HC \$3.00

It has been indicated that a more expensive, higher efficiency thermodynamic subsystem could result in a less-expensive, more cost-effective solar power system, overall. It is interesting to see how severe a trade-off this really is. A primitive two-component system model consisting of (1) the collector and (2) the turbine was constructed. Of course there are lots of other pieces between and around these items, but these two are the ones to which most cost leverages can be associated, in some way. A given collector design is assumed, having a defined specific efficiency and unit area cost. The turbine efficiency is varied parametrically from a reference value, and an allowable cost trade-off as a ratio to reference turbine price is obtained. No attempt is made to relate a particular cost change to a particular design change. The maximum that can be afforded for any and all changes is established. Author (NSA)

LOW WATTAGE HYDROGEN: AIR FUEL CELLS Final Report, 21 Jun. 1972 - 31 Mar. 1974

O. J. Adlhart 1974 49 p

(Contract DAAK02-72-C-0474)

(AD-778550; USAMERDC-21583) Avail: NTIS CSCL 10/1

Low wattage fuel cells based on the matrix type phosphoric acid cell are discussed. Nominal ratings of 5-watts or less are considered. Bottled hydrogen or metal hydrides are used as fuel. Two approaches are taken. One relying on a conventional bipolar cell design with water removal by the air stream. In an alternate approach, metal hydrides are integrated with the fuel cell into a device resembling a primary battery. Hydrogen is generated by reaction of the hydride fuel with the fuel cell product water. Power sources based on the phosphoric acid cell exhibit favorable life characteristics and power densities comparable to or exceeding low rate primary batteries. Author (GRA)

Chun Hsu and Ho-Tien Shu Mar. 1974 150 p refs

(Contract N00014-73-C-0195; NR Proj. 274-164)

(AD-778757; NTI/T1065A) Avail: NTIS CSCL 10/2

A comprehensive survey of the current development status of all MHD power cycles was made to assess the relative merit of the various cycles for naval applications. Dynamic System model was formulated to analyze the system performance. First, detailed component model was formulated and component designs were performed to determine the geometric configuration of each component. Next, a method based on variational 27 principle and the steady-state system solutions was developed to determine the component node models. A manageable dynamic system model and a simplified linear system model were then formulated. Finally, system stability analysis on the linear node model was performed to examine the local system stability.

THERMAL DEGRADATION OF GREEN RIVER KEROGEN AT 150 TO 350 C

J. J. Cummins, F. G. Doolittle, and W. E. Robinson 1974 21 p refs

(BM-RI-7924) Avail: NTIS HC \$4.25

The Bureau of Mines heated at 150 to 350 C for 0.5 to 360 days Green River oil shale that had been previously extracted by benzene to provide information on in situ processing conditions, to determine the effect of low-temperature heating on the unconverted kerogen, and to determine the composition of benzene-soluble thermal products. In general, it was concluded that significant increases in the degradation of kerogen to oil occurred between the temperature range of 250 to 350 C; that the composition of the soluble products depends upon the temperature at which they are formed; and that the n-alkanes are pyrolytically degraded from the kerogen structure. In particular, the 250 C heating temperature is beneficial to the formation of branched plus cyclic alkanes. Also, the heated and unconverted oil shale kerogen and the soluble thermal products become more aromatic as the temperature increases from 150 to 350 C.

CSCL 07D

A description is given of research performed on materials suitable for thermal energy storage (TES) as applied to solar heating and air conditioning of buildings. Criteria for candidate materials are developed, and the various classes of materials that undergo a phase transformation at the required temperatures are briefly reviewed. Most of the data concentrates on one class of materials: inorganic salt hydrates. An extensive literature survey on phase diagrams and thermodynamic properties of salt hydrates was carried out. The kinetics of nucleation of the solid from the melt are considered from the theoretical point of view. It is found that salt hydrates are half-way between the good glass formers and the non-glass formers as a result, it is suggested that the use of outside agents, such as a small weak supersonic field, may prevent supercooling. THE WORLDWIDE SEARCH FOR PETROLEUM OFFSHORE Status Report, 1947 - 1972

Henry L. Berryhill, Jr. 1974 30 p refs

(USGS-CIRC-694) Avail: NTIS

At the end of 1972, offshore petroleum exploration was in progress on the submerged continental margins of 80 countries. Some 780 oil and gas fields had been discovered. Estimated worldwide volume of oil discovered offshore as of January 1, 1973, is 172.8 billion barrels of oil, or about 26 percent of the world total and 168.4 trillion cu ft of natural gas. Present reserves of oil are 135.5 billion barrels, of which 70 percent is in the Persian Gulf. Some 90 percent of the oil discovered offshore has been found in 60 giant fields having reserves of 500 million or more barrels each. Author

PROPERTIES OF UTAH TAR SANDS: THREEMILE CANYON AREA, P. R. SPRING DEPOSIT

Leland C. Marchant, L. A. Johnson, and C. Q. Cupps 1974 17 p refs

(BM-RI-7923) Avail: NTIS HC \$4.00

Detailed analyses of four cores from the Threemile Canyon area in the P. R. Spring tar sand deposit in Utah are reported. Average properties of the oil zone in the Threemile Canyon area as determined from these cores are as follows: Oil saturation, 67.4 pct of pore volume; porosity, 29.2 pct; permeability before oil extraction, 133 millidarcies; and permeability after oil extraction, 2,855 millidarcies. Average net thickness of the oil zone is 23.8 ft and average depth to the top of the oil zone is 189 ft. Author

GEOLOGIC STRUCTURE ANALYSIS USING RADAR IMAGERY OF THE COAL MINING AREA OF BUCHANAN COUNTY, VA.

C. H. Elder, P. W. Jeran, and D. A. Keck Jan. 1974 35 p refs

(PB-228689/6; BM-RI-7869) Avail: NTIS HC \$3.25 CSCL 08I

An analysis of the geologic structure of an area of Buchanan

County, Va., was made by the Bureau of Mines using imagery from an airborne AN/APO-97 side-looking radar system to evaluate that mapping technique for delineating structural features which may cause mining problems. Side-looking radar (SLAR) was found to be a useful remote sensing tool for geologic structural analysis. Fault and joint systems identified by lineaments and linear patterns in the imagery were verified by surface and in-mine observations. SLAR imagery accurately delineated structural features that are known to affect gas migration and accumulation and that weakened the rock forming the immediate roof to mine workings, causing mining problems. EVALUATION OF ALLOYS AND COATINGS FOR USE IN AUTOMOBILE THERMAL REACTORS

Charles P. Blankenship and Robert E. Oldrieve Washington Jul. 1974 52 p refs

(NASA-TN-D-7699; E-7856) Avail: NTIS HC \$3.75 CSCL 11F

Several candidate alloys and coatings were evaluated for use in automobile thermal reactors. Full-size reactors of the candidate materials were evaluated in cyclic engine dynamometer tests with a peak temperature of 1040 C (1900 F). Two developmental ferritic-iron alloys, GE-1541 and NASA-18T, exhibited the best overall performance by lasting at least 60 percent of the life of test engine. Four of the alloys evaluated warrant consideration for reactor use. They are GE-1541, Armco 18 SR, NASA-18T, and Inconel 601. None of the commercial coating substrate combinations evaluated warrant consideration for reactor use.

A KENTUCKY COAL UTILIZATION RESEARCH PROGRAM. PROJECT 5: CAKING CHARACTERISTICS OF KENTUCKY COAL Annual Report, 1 Jul. 1972 - 30 Jun. 1973

Jul. 1974 53 p refs Reprinted

Avail: NTIS HC \$5.75

The caking characteristics of Kentucky coal were evaluated and suggestions were made for the solution to the problem in gasification processes. Prevailing in process decaking treatment methods penalties in the form of increased coasts, reduced efficiency, or complications in operation. Two decaking methods, simultaneous decaking and transportation of coal from mine to gasification plant via a coal-water slurry pipeline and using a dilute alkaline solution, were evaluated.

FEASIBILITY STUDY AND DEVELOPMENT OF A CONSTANT TEMPERATURE HEAT PIPE SYSTEM. PHASE 2: EXPERIMENTAL DESIGN Final Report

M. Hage Oct. 1973 123 p

(Contract ESTEC-1703/72-SK)

(ESRO-CR(P)-430) Avail: NTIS HC \$9.25

Results of preliminary tests carried out with alternative heat pipe designs, the selection of the prototype design, its analysis, manufacture, and extended theoretical and experimental investigations are presented. According to preliminary tests the modular artery heat pipe concept was chosen for the prototype. Measurements showed that the artery heat pipe suffered a performance degradation by a factor of about 3 when noncondensable gas was present in the heat pipe. Therefore the experimental program was modified and power steps between 20 and 100 watts were applied to the heat pipe instead of power steps between 40 and 200 watts. The agreement between theoretical predictions and experimental results was good for the steady-state as well as the transient behavior. The mechanical analysis of the system indicated that it should be able to withstand launch conditions.

SPACESHIP EARTH: A LOOK AHEAD TO A BETTER LIFE

James C. Fletcher 1973 29 p Statement before Senate Comm. on Aeron. and Space Sci., 6 Mar. 1973

(NASA-TM-X-70139) Avail: NASA Office of Public Affairs, Washington, D. C. 20546 CSCL 03C

The text of a prepared statement given before Congress is presented which describes NASA's long range objectives. Emphasis is on the impact and proposed benefits of various space and aeronautical programs which are slated for operational status within the next 10 to 15 years. The programs discussed include improvements or developments in the following: (1) airport congestion; (2) short-haul aircraft capabilities; (3) air cargo systems; (4) hydrogen-fueled aircraft; (5) space shuttle capabilities; (6) space communications; (7) transportation; (8) preventive medicine, rapid diagnostics, and emergency medical care; (9) water and land resources management; (10) air and water pollution control; (11) global weather and disaster alert networks; and (12) space and lunar exploration.

THE IMPACT OF ENERGY SHORTAGES ON US ENVIRONMENTAL STANDARDS

31 Jan. 1974 54 p refs

(TP-450-USB; Rept-74-78EP) Avail: NTIS HC \$5.75

The desirability of environmental controls regarding the production and use of various fuels is discussed along with the present imbalance in energy supply and demand. Petroleum, natural gas, coal, and nuclear energy are discussed in terms of their availability and consumption rates. The conflict between air quality goals and current emission levels from automobiles and power plants are reviewed, and the environmental trade-offs of nuclear power generation, identified as thermal pollution, air pollution, water pollution, radioactive waste, and the accidental release of radioactive materials, are discussed in terms of their environmental costs. Other topics covered include the problems of power plant siting, and the environmental and economic impacts of development of the Outer Continental Shelf, and surface mining of coal and oil shale in the western United States.

SOME SIMPLE CALCULATIONS TO SUGGEST THE EFFECTS OF SIX NATIONAL POLICIES UPON USE AND SUPPLY OF ENERGY

Warren H. Donnelly 11 Mar. 1974 18 p ref

(TP-360; Rept-74-13-EP) Avail: NTIS HC \$4.00

Policy options for total national energy use and supply from domestic and imported sources are considered. Estimated balances for the years 1970, 1975, 1980, and 1985 for domestic and imported energy supplies are presented to illustrate the use that can be made of single energy models, and to test the major

implications of any policies that may be proposed. Synthetic fuel production is considered in the analysis of a policy based on energy independence. Best and worst energy supply situations are also calculated as an additional aid in policy decision making. A.A.D.

gateways for motor common carriers of property, routes, and services in interstate commerce is presented, along with a paper on family household moving. Proposed amendments to the bill are also considered. For Vol. 1, see N74-16662. A.A.D.

GASOLINE, DIESEL, AND HEATING OIL SHORTAGES
 Washington GPO 1973 797 p refs Hearings before Comm. on Public Works, 93d Congr., 1st Sess., 24-26 and 31 Jul. and 1 Aug. 1973
 (GPO-24-116) Avail: Subcomm. on Energy

Statistical information and predictions of the future needs and availability of gasoline, diesel, and heating oil energy in the U.S. were presented before a Congressional hearing. Energy consumption is discussed according to industrial uses, transportation, electric power, household, and miscellaneous needs, and the percentages of coal, petroleum, and natural gas involved in that consumption are presented. Statistics are shown for expected increases in demand for each form of energy, and refinery and power plant capacities are commented upon. Estimated reserves of fossil fuels in the U.S., and expected future supply in terms of the law of exponential growth are discussed. An FTC report on its investigation of the petroleum industry is also presented. A.A.D.

- AIRSHIPS**
The airship can meet the energy challenge 02 p0034 A74-20166
The Dolphin airship with undulating propulsion system - A new form of the evaluation factor 02 p0035 A74-22272
Onboard energy sources and propulsion systems for balloons [ONERA, TP NO. 1311] 02 p0037 A74-24313
Dolphin airship with undulatory-flow propulsion - Dynamic lift 03 p0085 A74-33096
- ALABAMA**
Investigations using data in Alabama from ERTS-A --- land use, mineral exploration, geology, hydrology, water resources, data processing, data management, marine environments [E74-10124] 01 p0023 A74-13051
- ALASKA**
Surface wind characteristics of some Aleutian Islands --- for selection of windpowered machine sites 02 p0056 A74-16766
ERTS-1 imagery use in reconnaissance prospecting: Evaluation of commercial utility of ERTS-1 imagery in structural reconnaissance for minerals and petroleum [E74-10345] 02 p0082 A74-20948
- ALDEHYDES**
Aldehyde and reactive organic emissions from motor vehicles. Part 1: Advanced automotive control systems vehicles [PB-224251/9GA] 02 p0050 A74-16332
Aldehyde and reactive organic emissions from motor vehicles. Part 2: Characterization of emissions from 1970 through 1973 model vehicles [PB-224252/7GA] 02 p0050 A74-16333
- ALTERNATING CURRENT**
On the theory of alternating-current electrofluiddynamic converters 01 p0007 A74-18988
- ALUMINUM**
A panel for selectively absorbing solar thermal energy and the method for manufacturing the panel [NASA-CASE-MFS-22562-1] 02 p0076 A74-19700
- ALUMINUM COATINGS**
Study of the effect of increased humidity on the mirror coatings of solar energy concentrators 03 p0087 A74-34097
- ANNONIA**
Design, evaluation and recommendation effort relating to the modification of a residential 3-ton absorption cycle cooling unit for operation with solar energy [NASA-CR-120277] 03 p0119 A74-28536
- AMPHIBIOUS AIRCRAFT**
Amphibian STOL and its facilities [SAE PAPER 740488] 03 p0091 A74-34993
- ANALOG SIMULATION**
Solar generator simulation for satellite projects --- analog models of volt-ampere characteristics 02 p0041 A74-26324
- ANTENNAS**
Antenna towers as wind tower generation plants [NASA-TT-F-15304] 02 p0047 A74-15763
- ANTIREFLECTION COATINGS**
Vitreous oxide antireflection films in high-efficiency solar cells 01 p0004 A74-14250
Optical coatings for semiconductor photovoltaic converters and solar energy concentrators 02 p0039 A74-24924
Optimum design of antireflection coating for silicon solar cells 03 p0089 A74-34394
Vitreous oxide antireflection films in high-efficiency solar cells 03 p0089 A74-34396
- ANTISUBMARINE WARFARE**
Helicopter applications at sea 02 p0034 A74-19690
- APPROPRIATIONS**
NASA authorization for fiscal year 1975, part 3 [GPO-31-919] 03 p0107 A74-26405
- APSIDES**
Effect of the sun, the moon and solar radiation pressure on a near-equatorial synchronous satellite 01 p0003 A74-13559

- ARC HEATING**
Heating of a substance by an arc plasma
01 p0001 A74-10463
- ARGON PLASMA**
Characteristics of a nonequilibrium MHD generator
01 p0005 A74-17439
Loss mechanisms in an MHD generator --- Book on argon plasma nonequilibrium Faraday generator efficiency
02 p0033 A74-19455
- ARMED FORCES (UNITED STATES)**
Project POL (Petroleum, Oil, and Lubricants): Optimizing procurement of aviation fuels or defense supply agency
[AD-775053] 03 p0104 N74-22622
- ARTIFICIAL SATELLITES**
A computer program to determine geometric parameters for the APB solar arrays
[NASA-TN-X-70656] 03 p0106 N74-25619
- ASBES**
Low gas temperature solution to high resistivity ash problems --- flue gas temperature effect on efficiency of electrostatic precipitator
03 p0116 N74-28027
Collecting fly ash from western low sulfur coals --- by using scrubbers in flue gas stream
03 p0116 N74-28028
Pilot study of electrostatic precipitation for removing fly ash at Basin Electric's Leland Olds Station
03 p0116 N74-28029
- ATLANTIC OCEAN**
Review of the results from the Eastern Atlantic Continental Margin Program of the International Decade of Ocean Exploration --- geophysical prospecting and fishing areas
[PB-225036/3GA] 02 p0065 N74-18073
Review of the results from the eastern Atlantic continental margin program of the international decade of ocean exploration
[PB-226580/9GA] 03 p0102 N74-22091
Action in the Atlantic: A vital step for our nation's energy and environmental needs
[G-70172-100H8.73-408] 03 p0111 N74-26873
- ATMOSPHERIC DIFFUSION**
A critical review of mathematical diffusion modeling techniques for predicting air quality with relation to motor vehicle transportation
[PB-224656/9GA] 02 p0066 N74-18304
- ATMOSPHERIC MODELS**
A critical review of mathematical diffusion modeling techniques for predicting air quality with relation to motor vehicle transportation
[PB-224656/9GA] 02 p0066 N74-18304
- ATMOSPHERIC TURBULENCE**
Exploitation of wind energy --- windmill feasibility in industrial applications
[NASA-TT-F-15309] 02 p0055 N74-16756
- ATTITUDE CONTROL**
Photosensitive elements for solar sensors
01 p0005 A74-17296
- AUSTRALIA**
Electricity: The conversion industry
[NP-19837] 02 p0072 N74-18730
Energy resources and usage --- production planning in Australia
[ER-2] 03 p0114 N74-27536
- AUTOMOBILE ENGINES**
The association of automotive fuel composition with exhaust reactivity
[PB-222609/0] 01 p0010 N74-10129
Vapor generator feed pump for Rankine cycle automotive propulsion system (Chandler Evans)
[PB-222849/2] 01 p0011 N74-10747
Aldehyde and reactive organic emissions from motor vehicles. Part 1: Advanced automotive control systems vehicles
[PB-224251/9GA] 02 p0050 N74-16332
Aldehyde and reactive organic emissions from motor vehicles. Part 2: Characterization of emissions from 1970 through 1973 model vehicles
[PB-224252/7GA] 02 p0050 N74-16333
NAS report on technological feasibility of 1975-1976 motor vehicle emission standards. A critique of the 1975-1976 Federal automobile emission standards for hydrocarbons and oxides of nitrogen
[PB-224863/1GA] 02 p0065 N74-18287
- NAS report on technological feasibility of 1975-1976 motor vehicle emission standards. Automotive spark ignition engine emission control systems to meet the requirements of the 1970 clean air amendments
[PB-224862/3GA] 02 p0065 N74-18288
NAS report on technological feasibility of 1975-1976 motor vehicle emission standards. A critique of the 1975 Federal automobile emission standard for carbon monoxide, National Academy of Sciences
[PB-224861/5GA] 02 p0065 N74-18289
NAS report on technological feasibility of 1975-1976 motor vehicle emission standards
[PB-224858/1GA] 02 p0066 N74-18291
NAS report on technological feasibilities of 1975-1976 motor vehicle emissions standards. Manufacturability and costs to proposed low-emission automotive engine systems
[PB-224864/9GA] 02 p0066 N74-18292
Characterization of particulates and other non-regulated emissions from mobile sources and the effects of exhaust emissions control devices on these emissions
[PB-224243/6GA] 02 p0066 N74-18294
NAS report on technological feasibility of 1975-1976 motor vehicle emission standards. Feasibility of meeting the 1975-1976 exhaust emission standards in actual use
[PB-224865/6GA] 02 p0066 N74-18303
A critical review of mathematical diffusion modeling techniques for predicting air quality with relation to motor vehicle transportation
[PB-224656/9GA] 02 p0066 N74-18304
NAS report on technological feasibility of 1975-1976 motor vehicle emission standards. An evaluation of alternative power sources for low-emission automobiles, National Academy of Sciences
[PB-224859/9GA] 02 p0067 N74-18406
Low NOx emission combustor development for automobile gas turbine engines
[PB-225133/8GA] 02 p0067 N74-18414
Report by the Committee on Motor Vehicle Emissions
02 p0073 N74-19240
- A study of mandatory engine maintenance for reducing vehicle exhaust emissions. Volume 7: A user's manual and guide to the economic effectiveness computer program
[PB-225161/9GA] 02 p0073 N74-19268
A study of mandatory engine maintenance for reducing vehicle exhaust emissions. Volume 8: Experimental characterization of vehicle emissions and maintenance states
[PB-225026/4GA] 02 p0074 N74-19269
Oxygenates in automotive exhausts. Effect of an oxidation catalyst
[PB-227097/3] 03 p0105 N74-23190
Cost and performance of automotive emission control technologies
[BQI-MEMO-7] 03 p0107 N74-26244
The impact of auto emission standards
[GPO-21-548] 03 p0108 N74-26412
A semi-Delphi exercise on substitute catalysts for platinum in automobile emission control devices and petroleum refining

Bitumen-bearing rocks --- as potential energy
sources
01 p0028 N74-15226
- Technology and use of lignite --- conference on
coal utilization utilization for power plants
[BM-IC-8543] 03 p0115 N74-28020
- BLADES**
Observations on modern wind-electric power plants
--- in Italy during post-war reconstruction
[NASA-TT-F-15357] 02 p0045 N74-15745
- BOILERS**
Energy recovery from waste: Solid waste as
supplementary fuel in power plant boilers
[SW-36D.II] 02 p0076 N74-19699
- BOLIVIA**
Petroleum exploration subprogram: Geological
interpretation of proportional imagery from
ERTS-A satellite
[E74-10213] 01 p0028 N74-15020
- Oil exploration subprogram geological
interpretation of images provided by the ERTS-A
satellite --- Bolivia
[NASA-TT-F-15265] 01 p0028 N74-15070
- BOUNDARY LAYER CONTROL**
On the theory of alternating-current
electrofluiddynamic converters
01 p0007 A74-18988
- Boundary layer control in two-phase liquid-metal
MHD generators
03 p0096 A74-37620
- BOUNDARY LAYER FLOW**
Effects of the development of boundary layers on a
Faraday MHD generator
03 p0096 A74-37621
- Design considerations for the airframe-integrated
scramjet
[NASA-TM-X-2895] 01 p0019 N74-12448
- BOUNDARY LAYERS**
Passage of current through boundary layers --- and
gas dynamic parameters of a magnetohydrodynamic
generator
[AD-775138] 03 p0102 N74-22372
- BOUNDARY LUBRICATION**
Aviation turbine fuel and its lubricating
qualities. II
02 p0035 A74-22271
- BOUNDARY VALUE PROBLEMS**
Optimization of open cycle power plant MHD generator
03 p0095 A74-37610
- BRAYTON CYCLE**
Adaptability of the closed Brayton gas turbine to
utility power plants
[BEPT-73-310448] 03 p0111 N74-27280

BREEDER REACTORS

- Nuclear eclectic power --- selective assessment of plant and reactor types 02 p0041 A74-27320
- Comparative evaluation of solar, fission, fusion, and fossil energy resources, part 3 [NASA-CR-138117] 03 p0103 N74-22590

BECMIDES

- Design, evaluation and recombination effort relating to the modification of a residential 3-ton absorption cycle cooling unit for operation with solar energy [NASA-CR-120277] 03 p0119 N74-28536

BUCKETS

- Bucket rotor wind-driven generator 02 p0057 N74-16776

BUDGETING

- NASA authorization for fiscal year 1975, part 3 [GPO-31-919] 03 p0107 N74-26405

BUILDINGS

- Wind power systems for individual applications --- electric power supplies for homes 02 p0058 N74-16788
- Technical options for energy conservation in buildings [NBS-TM-789] 02 p0071 N74-18724
- Solar Heating and Cooling Demonstration Act [GPO-27-370] 03 p0100 N74-21683
- Solar heated and cooled office building for the Massachusetts Audubon Society: Initial planning and design [C-75457] 03 p0103 N74-22602
- The development of a solar-powered residential heating and cooling system [NASA-TM-X-70089] 03 p0108 N74-26504
- Transcript of talk on solar energy --- for community development [SLA-73-1025] 03 p0109 N74-26515

BUOYS

- A wind plant to power sea signals [NASA-TT-F-15356] 02 p0060 N74-16803

C

CADMIUM SULFIDES

- Results and future prospects on photovoltaic power development in France 02 p0037 A74-24904
- New technology for CdS-Cu₂S solar cells of high reliability 02 p0038 A74-24910
- The present potential of CdS solar cells as a future contender for photovoltaic space and terrestrial power applications 02 p0038 A74-24911
- Partial results concerning CdS solar cells 02 p0038 A74-24914
- Terrestrial utilization of CdS-Cu₂S solar photocells in the south of France 02 p0038 A74-24915
- On inhomogeneities of thin film solar cells 02 p0039 A74-24918
- Current prospects for solar cells 02 p0040 A74-24943
- Photoelectric converters based on various CdS heterojunctions 02 p0042 A74-27752
- Heterogeneous solar converters based on polycrystalline cadmium sulfide and selenide [AD-776551] 03 p0107 N74-25623
- Effect of shading on CdS/Cu(x)S solar cells and optimal solar array design [PB-227900/8] 03 p0110 N74-26522

CALCULUS OF VARIATIONS

- The effect of magnetic field upon the output performance of segmented-open type MHD generator 03 p0095 A74-37609

CALIBRATING

- Current delivered by the solar array of the D2A-Tourneval satellite 02 p0039 A74-24928

CALIFORNIA

- Energy alternatives for California: The current crisis. 1: The impact of Arab oil export policies on the California energy system [P-5146] 02 p0080 N74-20621
- Coping with the fuel shortage: A guide for Los Angeles residents [P-5154] 02 p0080 N74-20622
- Elasticity of demand for gasoline in the south coast air basin [EQL-MEMO-10] 03 p0102 N74-22581
- Trends of energy use in California and the south coast air basin [EQL-MEMO-6] 03 p0103 N74-22592
- Energy alternatives for California: The current crisis. 2: Conservation of energy [P-5156] 03 p0103 N74-22595
- Energy alternatives for California: The current crisis. 3: Allocation of scarce supplies [P-5157] 03 p0103 N74-22596

CANADA

- ERTS-1 imagery use in reconnaissance prospecting: Evaluation of commercial utility of ERTS-1 imagery in structural reconnaissance for minerals and petroleum [E74-10345] 02 p0082 N74-20948
- The energy crisis: Impact of Canadian policies [GPO-27-709] 03 p0118 N74-28440

CAPILLARY FLOW

- Heat pipes --- using low thermoconductive and boiling point working fluids 03 p0083 A74-29445
- Electrohydrodynamic heat pipe experiments 03 p0084 A74-30335

CARBON

- Cost effectiveness of tungsten carbide-carbon fuel cells [NASA-TT-F-15748] 03 p0120 N74-28543

CARBON DIOXIDE

- Physical behaviour of some biowaste gases in an ion engine [ATAA PAPER 73-1113] 01 p0001 A74-10691

CARBON MONOXIDE

- Oxidation of carbon monoxide in diluted combustion products at engine idling conditions 02 p0041 A74-25221
- Hydrogen production by reforming processes - The alternatives and economics 03 p0086 A74-33992
- Catalytic combustion of carbon monoxide in gasoline engine exhaust using manganese catalysts [AD-760395] 01 p0011 N74-10874
- Liquefaction of lignite with carbon monoxide and water --- temperature and pressure effects 03 p0115 N74-28023

CARBONIZATION

- Carbonization and hydrogenation of coal --- application to developing economies [ID/86] 03 p0105 N74-23072

CARGO AIRCRAFT

- The airship can meet the energy challenge 02 p0034 A74-20166

CATALYSIS

- ARPA Workshop on Needs of the Department of Defense for Catalysis, Volume 2 [AD-777734] 03 p0114 N74-27610

CATALYSTS

- Catalytic combustion of carbon monoxide in gasoline engine exhaust using manganese catalysts [AD-760395] 01 p0011 N74-10874
- Substitute catalysts for platinum in automobile emission control devices and petroleum refining [PB-222167/9] 01 p0018 N74-11941
- NAS report on technological feasibility of 1975-1976 motor vehicle emission standards. Evaluation of catalyst as automotive exhaust treatment devices, National Academy of Sciences [PB-224860/76A] 02 p0067 N74-18407
- The 1.5-kW fuel cell powerplant catalyst investigation [AD-774274] 02 p0081 N74-20710

- Oxygenates in automotive exhausts. Effect of an oxidation catalyst
[PB-227097/3] 03 p0105 N74-23190
- A semi-Delphi exercise on substitute catalysts for platinum in automobile emission control devices and petroleum refining
[MMAE-314] 03 p0110 N74-26641
- CATALYTIC ACTIVITY**
The refining of turbine fuels by modern hydrotreating
[AIAA PAPER 74-162] 01 p0006 A74-18798
- Hydrogen production by reforming processes - The alternatives and economics 03 p0086 A74-33992
- CENTRIFUGAL FORCE**
Purification of fuel oils by centrifugal force 02 p0034 A74-20216
- CERAMICS**
Exploratory development of a glass ceramic automobile thermal reactor --- anti-pollution devices
[NASA-CR-134513] 01 p0019 N74-12447
- Application of phase transitions to the electrochemical energy conversion --- in ferroelectric ceramics
[ISI-CO-2/73] 03 p0105 N74-23327
- Design and evaluation of experimental ceramic automobile thermal reactors
[NASA-TN-D-7706] 03 p0117 N74-28035
- CESIUM DIODES**
Thermionic energy conversion. Volume I - Processes and devices --- Book 01 p0004 A74-14327
- CESIUM VAPOR**
Electric power generation system directly from laser power
[NASA-CASE-NPO-13308-1] 02 p0077 N74-19702
- CHANNEL FLOW**
Qualitative analysis of the efficiency of MHD energy conversion 01 p0003 A74-13944
- Investigation of heat exchange in an MHD generator channel 03 p0086 A74-33565
- Two-dimensional electric fields in MHD-generator channels - Optimum loading circuits 03 p0095 A74-37608
- The time dependent magnetohydrodynamic generator 03 p0096 A74-37615
- Wall roughness and area variation effects in high subsonic MHD generator channels 03 p0096 A74-37616
- The effects of geometry and loss mechanisms on the performance of two-phase liquid-metal MHD generators 03 p0096 A74-37619
- CHARGED PARTICLES**
A preliminary engineering design of a 'Venetian blind' direct energy converter for fusion reactors 03 p0087 A74-34093
- CHEMICAL ANALYSIS**
Aviation turbine fuels, 1972 01 p0014 N74-11592
- CHEMICAL PROPERTIES**
Performance of Army engines with leaded and unleaded gasoline. Phase 1: Laboratory testing
[AD-766760] 02 p0061 N74-17523
- CHEMICAL REACTION CONTROL**
PSA hydrogen plants - How well have they performed --- Pressure Swing Adsorption production method 03 p0087 A74-33994
- CHEMICAL REACTIONS**
Effect of finite chemical reaction rates on heat transfer to the walls of combustion-driven supersonic MHD generator channels 02 p0036 A74-23221
- Hydrogen production by reforming processes - The alternatives and economics 03 p0086 A74-33992
- CHROMATOGRAPHY**
Rapid group analysis of directly distilled petroleum fractions by the method of recorded fluid-adsorption chromatography /FAC/ 03 p0083 A74-29415
- CIRCUIT BREAKERS**
Description of the energy source project --- delivering 1 megajoule in 1 microsecond --- noting high efficiency magnetic energy transfer by mutually coupled inductances and fast response electromechanical circuit breakers
[LF-3] 02 p0061 N74-17454
- CISLUNAR SPACE**
Industrial evolution and revolution in the cislunar space, 1980 - 2010

leasing program. Volume 2: Leasing of
geothermal resources in three California areas
02 p0078 N74-19975
- Final environmental statement for the geothermal
leasing program. Volume 3: Proposed geothermal
leasing and operating regulations
02 p0078 N74-19976
- Final environmental statement for the geothermal
leasing program. Volume 4: Comments on draft
impact statement and proposed regulations
02 p0078 N74-19977

- Electricity growth: Economic incentives and environmental quality --- consumption and pricing of electricity in United States of America
03 p0100 N74-21687
- Action in the Atlantic: A vital step for our nation's energy and environmental needs
[G-70172-100MS.73-408] 03 p0111 N74-26873
- The impact of energy shortages on US environmental standards
[TP-450-USB] 03 p0122 N74-29342
- ENVIRONMENT MODELS**
The U.S. energy problem. Volume 2: Appendices, part B --- to include development of alternate power sources to reduce fossil fuel consumption
[PB-207519] 01 p0017 N74-11796
- ENVIRONMENT POLLUTION**
The environment and the gas turbine
02 p0035 A74-21874
- Energy and the environment: Electric power
[PB-223326/OGA] 01 p0028 N74-14791
- ENVIRONMENT PROTECTION**
Report to the president and to the council on environmental quality
01 p0024 N74-14094
- Electric energy requirements for environmental protection
[CONF-730205-4] 01 p0027 N74-14695
- Environmental protection and long run supply of crude oil in the United States
02 p0052 N74-16661
- Impacts of new energy technology, using generalized input-output analysis --- coal gasification
[PB-226139/4GA] 03 p0101 N74-21697
- ENVIRONMENTAL CONTROL**
Aviation needs and public concerns --- civil aviation growth in Europe and environmental control
01 p0027 N74-14749
- An energy ethic --- socioeconomic ethics of energy source development
02 p0069 N74-18593
- Mechanisms for achieving cleaner power, prices, regulations --- energy policy
02 p0069 N74-18596
- Environmental issues, an overview --- of energy source exploitation
02 p0069 N74-18597
- Symposium on Energy, Resources and the Environment. Volume 3: Session on Options for the Future and their Resources, Economic, and Environmental Effects
[N72-69-VOL-3-REV-1] 02 p0069 N74-18598
- Major R&D programs to meet the energy crisis --- solar energy, nuclear fusion, and hydrogen-based power supplies
02 p0069 N74-18602
- Man versus his institutions --- goals of rational energy policy
02 p0070 N74-18603
- Energy options --- technological developments for new energy sources
02 p0070 N74-18604
- Conservation and efficient use of energy, part 3
[GPO-24-682] 03 p0113 N74-27526
- Use of western coal and air water quality control by Minnesota Power and Light Company
03 p0116 N74-28024
- ENVIRONMENTAL ENGINEERING**
New frontiers of civil aeronautics
02 p0041 A74-25352
- Present air pollution situation in Kawasaki city and future countermeasures
[KS-27] 01 p0018 N74-12321
- ENVIRONMENTAL QUALITY**
Interdisciplinary applications and interpretations of BRTS data within the Susquehanna River Basin (resource inventory, land use, and pollution)
[N74-10061] 01 p0013 N74-11182
- The energy situation --- emphasizing various energy sources, costs, and environmental effects
01 p0016 N74-11744
- Research on the application of satellite remote sensing to local, state, regional, and national programs involved with resource management and environmental quality
[NASA-CR-136472] 01 p0024 N74-14093
- Symposium on Energy, Resources and the Environment. Session on Ethics and Environmental Aspects of the Demand for and Use of Energy, volume 2 --- socioeconomic aspects of energy resource development
[N72-69-VOL-2-REV-1] 02 p0068 N74-18591
- Approach to the holistic analysis of the system man-energy-environment
[JUL-982-RG] 02 p0080 N74-20626
- Geothermal energy
[LA-UR-73-1316] 03 p0100 N74-21689
- Energy and environment: System and perspectives
[LA-5447-MS] 03 p0104 N74-22615
- Second Annual Sea Grant Lecture and Symposium
[MITSG-74-7] 03 p0115 N74-27826
- EQUIPMENT SPECIFICATIONS**
Feasibility study and development of a constant temperature heat pipe system. Phase 2: Experimental design
[ESRO-CR(P)-430] 03 p0122 N74-29332
- ETHANE**
Natural gas as an automotive fuel, an experimental study
[BM-RI-7806] 01 p0011 N74-10715
- Retorting indexes for oil-shale pyrolyses from ethylene-ethane ratios of product gases
[BM-RI-7921] 03 p0114 N74-27592
- ETHYLENE**
Retorting indexes for oil-shale pyrolyses from ethylene-ethane ratios of product gases
[BM-RI-7921] 03 p0114 N74-27592
- EUROPE**
Aviation needs and public concerns --- civil aviation growth in Europe and environmental control
01 p0027 N74-14749
- Past developments of large wind generators in Europe
02 p0055 N74-16761
- Problems, resources and necessary progress in Community energy policy 1975 - 1985
03 p0113 N74-27532
- Prospects of primary energy demand in the community (1975 - 1980 - 1985) --- long term trend analysis for Europe
03 p0113 N74-27533
- EUROPEAN SPACE PROGRAMS**
Power sources --- solar arrays for CNES applications satellites
03 p0084 A74-29949
- EVAPORATION**
Control of gasoline vapor losses from station and vehicle filling --- economics of vapor recovery systems
[EQL-MEHO-5] 03 p0101 N74-21771
- EVOLUTION (DEVELOPMENT)**
Industrial evolution and revolution in the cislunar space, 1980 - 2010
[ASTRONAUT-FB-32] 03 p0111 N74-27353
- EXHAUST GASES**
The environment and the gas turbine
02 p0035 A74-21874
- The association of automotive fuel composition with exhaust reactivity
[PB-222609/0] 01 p0010 N74-10129
- Catalytic combustion of carbon monoxide in gasoline engine exhaust using manganese catalysts
[AD-760395] 01 p0011 N74-10874
- Emission calculations for a scramjet powered hypersonic transport
[NASA-TN-X-71464] 01 p0018 N74-12445
- Exploratory development of a glass ceramic automobile thermal reactor --- anti-pollution devices
[NASA-CR-134513] 01 p0019 N74-12447
- Effect of water injection on nitric oxide emissions of a gas turbine combustor burning natural gas fuel
[NASA-TN-X-2959] 01 p0025 N74-14651
- Low energy gas utilization in combustion gas turbine
01 p0029 N74-15447
- Aldehyde and reactive organic emissions from motor vehicles. Part 1: Advanced automotive control systems vehicles
[PB-224251/9GA] 02 p0050 N74-16332
- Aldehyde and reactive organic emissions from motor vehicles. Part 2: Characterization of emissions from 1970 through 1973 model vehicles
[PB-224252/7GA] 02 p0050 N74-16333

- NAS report on technological feasibility of 1975-1976 motor vehicle emission standards. A critique of the 1975-1976 Federal automobile emission standards for hydrocarbons and oxides of nitrogen
[PB-224863/1GA] 02 p0065 N74-18287
- NAS report on technological feasibility of 1975-1976 motor vehicle emission standards. Automotive spark ignition engine emission control systems to meet the requirements of the 1970 clean air amendments
[PB-224862/3GA] 02 p0065 N74-18288
- NAS report on technological feasibility of 1975-1976 motor vehicle emission standards. A critique of the 1975 Federal automobile emission standard for carbon monoxide, National Academy of Sciences
[PB-224861/5GA] 02 p0065 N74-18289
- NAS report on technological feasibility of 1975-1976 motor vehicle emission standards
[PB-224858/1GA] 02 p0066 N74-18291
- NAS report on technological feasibility of 1975-1976 motor vehicle emissions standards. Manufacturability and costs to proposed low-emission automotive engine systems
[PB-224864/9GA] 02 p0066 N74-18292
- Compilation of air pollutant emission factors (second edition)
[PB-223996/0GA] 02 p0066 N74-18300
- NAS report on technological feasibility of 1975-1976 motor vehicle emission standards. An evaluation of alternative power sources for low-emission automobiles, National Academy of Sciences
[PB-224859/9GA] 02 p0067 N74-18406
- NAS report on technological feasibility of 1975-1976 motor vehicle emission standards. Evaluation of catalyst as automotive exhaust treatment devices, National Academy of Sciences
[PB-224860/7GA] 02 p0067 N74-18407
- Report by the Committee on Motor Vehicle Emissions
02 p0073 N74-19240
- A study of mandatory engine maintenance for reducing vehicle exhaust emissions. Volume 7: A user's manual and guide to the economic effectiveness computer program
[PB-225161/9GA] 02 p0073 N74-19268
- A study of mandatory engine maintenance for reducing vehicle exhaust emissions. Volume 8: Experimental characterization of vehicle emissions and maintenance states
[PB-225026/4GA] 02 p0074 N74-19269
- Oxygenates in automotive exhausts. Effect of an oxidation catalyst
[PB-227097/3] 03 p0105 N74-23190
- Cost and performance of automotive emission control technologies
[EQL-HEMO-7] 03 p0107 N74-26244
- Certain peculiarities of combustion of ballasted gases and stabilization of a flame --- burning low calorie industrial by-products
[AD-776731] 03 p0107 N74-26400
- The impact of auto emission standards
[GPC-21-548] 03 p0108 N74-26412
- Air pollution from motor vehicles
[APTIC-41654] 03 p0111 N74-27088
- Air pollution from motor vehicles, appendices
[APTIC-41655-APP] 03 p0111 N74-27089
- Design and evaluation of experimental ceramic automobile thermal reactors
[NASA-TN-D-7706] 03 p0117 N74-28035
- Compliance with Title 2 (auto emission standards) of the Clean Air Act
[GPO-25-424] 03 p0118 N74-28445
- EXHAUST SYSTEMS**
- Collecting fly ash from western low sulfur coals --- by using scrubbers in flue gas stream
03 p0116 N74-28028
- INTERIALLY BLOWN FLAPS**
- Investigation of the relative merits of different power plants for STOL-aircraft with blown flap application --- analysis of design requirements for self-sustained gas supply systems
02 p0078 N74-20406
- F**
- F-4 AIRCRAFT**
- Sensitivity of suboptimal fixed-range flight paths --- aircraft fuel consumption dependence on atmospheric parameters

LIQUID HYDROGEN

The case for hydrogen fueled transport aircraft
[AIAA PAPER 73-1323] 01 p0002 A74-11315

Cryogenic instrumentation at and above liquid hydrogen temperature - Present and future
01 p0003 A74-14057

Hydrogen - Make-sense fuel for an American supersonic transport
[AIAA PAPER 74-163] 02 p0033 A74-19353

The case for hydrogen-fueled transport aircraft
03 p0083 A74-29452

Future availability of liquid hydrogen
03 p0083 A74-29453

Fuel state - Expensive
03 p0092 A74-35496

Use of hydrogen and hydrogen-rich components as a means of storing and transporting energy
02 p0057 N74-16781

The production of liquid hydrogen at the Rocket Propulsion Establishment
[RPE-TR-71/17] 02 p0061 N74-16996

Liquid hydrogen as a fuel for motor vehicles; a comparison with other systems
02 p0074 N74-19391

A problem statement: Ocean based solar-to-hydrogen energy conversion macro system
02 p0076 N74-19694

Prospects for liquid hydrogen fueled commercial aircraft
[PR-37] 02 p0080 N74-20647

Preliminary performance appraisal of Navy V/STOL transport and search-type airplanes using hydrogen fuel
[NASA-TR-X-71550] 03 p0108 N74-26435

LIQUID METAL COOLED REACTORS
Energy options for the future --- nuclear energy, synthetic fuels, and pollution control methods
02 p0069 N74-18599

LIQUID METALS
Study of a bi-phase D.C. M.H.D. generator using a new motion system
03 p0096 A74-37618

The effects of geometry and loss mechanisms on the performance of two-phase liquid-metal MHD generators
03 p0096 A74-37619

Boundary layer control in two-phase liquid-metal MHD generators
03 p0096 A74-37620

Experimental two-phase liquid-metal magnetohydrodynamic generator program
[AD-766588] 01 p0013 N74-10952

Liquid metal magnetohydrodynamics (LMHD) technology transfer feasibility study. Volume 1: Summary
[NASA-CR-136197] 01 p0023 N74-13466

Liquid metal magnetohydrodynamics (LMHD) technology transfer feasibility study. Volume 2: Appendixes
[NASA-CR-136198] 01 p0023 N74-13467

LIQUID OXYGEN
Cryogenic instrumentation at and above liquid hydrogen temperature - Present and future
01 p0003 A74-14057

A problem statement: Ocean based solar-to-hydrogen energy conversion macro system
02 p0076 N74-19694

LIQUID SODIUM
Performance tests of gravity-assist heat pipes with screen-wick structures
[AIAA PAPER 74-723] 03 p0092 A74-35954

LIQUID-GAS MIXTURES
Impinging jet separators for liquid metal magnetohydrodynamic power cycles
[NASA-CR-136552] 01 p0027 N74-14785

LITHIUM
The drift field model applied to the lithium-containing silicon solar cell
03 p0090 A74-34421

Design, evaluation and recommendation effort relating to the modification of a residential 3-ton absorption cycle cooling unit for operation with solar energy
[NASA-CR-120277] 03 p0119 N74-28536

LITHOLOGY
Geologic information from satellite images --- geological interpretation of ERTS-1 and Skylab multispectral photography of Rocky Mountain areas
[E74-10567] 03 p0104 N74-22954

LOGISTICS MANAGEMENT

Substitution of JP-5 aviation fuel for DF-2 diesel under field conditions
[AD-777047] 03 p0107 N74-26243

LOW COST
Individual action for energy conservation
01 p0030 N74-15680

Energy in general --- technology for meeting world energy demand
02 p0068 N74-18587

National energy policies --- for development of low cost energy
02 p0069 N74-18592

LOW TEMPERATURE
Low gas temperature solution to high resistivity ash problems --- flue gas temperature effect on efficiency of electrostatic precipitator
03 p0116 N74-28027

LOW TEMPERATURE PHYSICS
Cryogenic Engineering Conference, University of Colorado, Boulder, Colo., August 9-11, 1972, Proceedings
01 p0003 A74-14043

Superconductivity - Large-scale applications
03 p0092 A74-36049

LOW TEMPERATURE TESTS
Nickel-zinc cells with non-sintered electrodes
02 p0035 A74-20631

LOW THRUST PROPULSION
Theoretical performance of ammonia, hydrogen, and biowaste resistojets
03 p0085 A74-31286

LUBRICANT TESTS
Study of the effect of dilution on the lubricity of hydrotreated jet engine fuels
03 p0085 A74-32600

LUBRICANTS
Aviation fuels and lubricants
01 p0006 A74-18180

LUBRICATING OILS
Influence of fuels and lubricants on turbine engine design and performance, fuel and lubricant analyses
[AD-769309] 02 p0050 N74-16483

Waste lubricating oil research: An investigation of several re-refining methods
[BM-RI-7884] 02 p0078 N74-20069

LUNAR EFFECTS
Effect of the sun, the moon and solar radiation pressure on a near-equatorial synchronous satellite
01 p0003 A74-13559

LUNAR ENVIRONMENT
Industrial evolution and revolution in the cislunar space, 1980 - 2010
[ASTRONAUT-FB-32] 03 p0111 N74-27353

M

MAGNETIC COILS
Superconducting magnetic energy storage
03 p0092 A74-35289

MAGNETIC DIPOLES
Design study of superconducting 5 tesla dipole magnets for MGD generators
[IPP-IV-53] 02 p0067 N74-18328

MAGNETIC EFFECTS
The effect of magnetic field upon the output performance of segmented-open type MHD generator
03 p0095 A74-37609

MAGNETIC FIELDS
State-of-the-art and prospects of magnetoelectric machines for self-contained electrical supply systems and controllable electrical drivers
[AD-773893] 02 p0081 N74-20703

MAGNETIC INDUCTION
Results of the Eindhoven MHD shocktunnel experiment
03 p0097 A74-37623

MAGNETIC PISTONS
The motion of a conducting piston in a channel with variable inductance
02 p0036 A74-22279

MAGNETIC SUSPENSION
The use of superconductivity in the USA transportation program
03 p0091 A74-35288

Magnetic suspension and guidance of high speed vehicles --- feasibility and cost effectiveness
[CTS-2] 02 p0072 N74-18892

MAGNETOELECTRIC MEDIA

State-of-the-art and prospects of magnetoelectric machines for self-contained electrical supply systems and controllable electrical drivers [AD-773893] 02 p0081 N74-20703

MAGNETOHYDRODYNAMIC FLOW

Effect of plasma injection on cold wall type MHD generator 03 p0091 A74-35276

MAGNETOHYDRODYNAMIC GENERATORS

Satellite nuclear power station: An engineering analysis --- Book 01 p0002 A74-13234

Optimization of the power of Faraday MHD generators operating on nonequilibrium plasma 01 p0003 A74-13943

Qualitative analysis of the efficiency of MHD energy conversion 01 p0003 A74-13944

Characteristics of a nonequilibrium MHD generator 01 p0005 A74-17439

Relaxation phenomena in an MHD generator with pre-ionizer --- Book 02 p0033 A74-19450

Loss mechanisms in an MHD generator --- Book on argon plasma nonequilibrium Faraday generator efficiency 02 p0033 A74-19455

The motion of a conducting piston in a channel with variable inductance 02 p0036 A74-22279

Effect of finite chemical reaction rates on heat transfer to the walls of combustion-driven supersonic MHD generator channels 02 p0036 A74-23221

H2-O2 combustion powered steam-MHD central power systems 02 p0042 A74-27775

Stabilization of ionization instability in an MHD generator 03 p0083 A74-28943

Electron nonequilibrium in open-cycle MHD generators 03 p0083 A74-28957

Nonlinear stability of magnetohydrodynamic generators [AIAA PAPER 74-507] 03 p0086 A74-33106

Thermal cycle and effectiveness of a maneuverable power assembly with an MHD generator and turbogenerator 03 p0086 A74-33564

Investigation of heat exchange in an MHD generator channel 03 p0086 A74-33565

Effect of plasma injection on cold wall type MHD generator 03 p0091 A74-35276

Engineering aspects of magnetohydrodynamics; Proceedings of the Fourteenth Symposium, University of Tennessee Space Institute, Tullahoma, Tenn., April 8-10, 1974 03 p0094 A74-37604

Performance and Hall field limitation studies in the Stanford M-8 MHD generator 03 p0095 A74-37605

Design and modeling of the gas flow system for a compact 10 MW MHD generator system 03 p0095 A74-37606

A two-dimensional dynamic programming method for the optimization of diagonal conducting wall magnetohydrodynamic generators 03 p0095 A74-37607

Two-dimensional electric fields in MHD-generator channels - Optimum loading circuits 03 p0095 A74-37608

OIL EXPLORATION

ERTS-1 imagery use in reconnaissance prospecting:
 Evaluation of the commercial utility of ERTS-1
 imagery in structural reconnaissance for
 minerals and petroleum --- interpretation of
 Colorado region
 [E74-10007] 01 p0013 N74-11148

An evaluation of the suitability of ERTS data for
 the purposes of petroleum exploration ---
 geological structures of Oklahoma
 [E74-10029] 01 p0018 N74-12119

Petroleum exploration subprogram: Geological
 interpretation of proportional imagery from
 ERTS-A satellite
 [E74-10213] 01 p0028 N74-15020

Oil exploration subprogram geological
 interpretation of images provided by the ERTS-A
 satellite --- Bolivia
 [NASA-TT-F-15265] 01 p0028 N74-15070

The US energy crisis, the multinational oil
 corporations and their relationship to US
 foreign policy in the Middle East
 [AD-760868] 02 p0055 N74-16697

Evaluation of the suitability of Skylab data for
 the purpose of petroleum exploration
 [E74-10331] 02 p0065 N74-18007

Review of the results from the Eastern Atlantic
 Continental Margin Program of the International
 Decade of Ocean Exploration --- geophysical
 prospecting and fishing areas
 [PB-225036/3GA] 02 p0065 N74-18073

ERTS-1 imagery use in reconnaissance prospecting:
 Evaluation of commercial utility of ERTS-1
 imagery in structural reconnaissance for
 minerals and petroleum
 [E74-10345] 02 p0082 N74-20948

Action in the Atlantic: A vital step for our
 nation's energy and environmental needs
 [G-70172-100H8.73-408] 03 p0111 N74-26873

Reduction of diesel engine exhaust noise in the
 petroleum mining industry --- by resonator type
 diffuser
 03 p0118 N74-28388

The worldwide search for petroleum offshore
 [USGS-CIRC-694] 03 p0121 N74-28897

Properties of Utah tar sands: Threemile Canyon
 area, P. R. Spring deposit
 [BM-RI-7923] 03 p0121 N74-28911

OIL RECOVERY

Disposal of waste oils at military air bases
 [SAE PAPER 740472] 03 p0091 A74-35001

Thermal degradation of Green River kerogen at 150
 to 350 c
 [BM-RI-7924] 03 p0121 N74-28652

OIL SLICKS

Detecting and monitoring oil slicks with aerial
 photos
 03 p0085 A74-33071

OKLAHOMA

An evaluation of the suitability of ERTS data for
 the purposes of petroleum exploration ---
 geological structures of Oklahoma
 [E74-10029] 01 p0018 N74-12119

ONE DIMENSIONAL FLOW

The effect of magnetic field upon the output
 performance of segmented-open type MHD generator
 03 p0095 A74-37609

OPERATING TEMPERATURE

Analysis and improvement of silicon solar cells
 02 p0037 A74-24905

OPERATIONAL HAZARDS

Operational and accidental petroleum product
 losses and their control and prevention /2nd
 revised and enlarged edition/ --- Russian book
 03 p0092 A74-36137

OPERATIONAL PROBLEMS

Fusion reactor design problems
 03 p0084 A74-31213

Problems in the electrical equipment of wind power
 plants
 [NASA-TT-F-15312] 02 p0046 N74-15749

Final environmental statement for the geothermal
 leasing program. Volume 3: Proposed geothermal
 leasing and operating regulations
 02 p0078 N74-19976

OPERATIONS RESEARCH

F-14 optimum flight modes, volume 1
 [AD-775246] 03 p0099 N74-21665

OPERATORS (PERSONNEL)

A progress report on coal mine health and safety
 03 p0115 N74-28021

OPTICAL PROPERTIES

Optical properties of thin gold films applied to
 Schottky barrier solar cells
 [NASA-CR-137981] 02 p0076 N74-19698

OPTIMAL CONTROL

Aircraft symmetric flight optimization ---
 gradient techniques for supersonic aircraft
 control
 02 p0036 A74-23091

Determination of optimal air pollution control
 strategies
 02 p0073 N74-19229

Optimal control of sulfur dioxide emissions at
 power stations: Models and a case study
 [AD-775392] 03 p0102 N74-22292

OPTIMIZATION

A model of convex programming for turbojet main
 parameter selection optimization
 [ASME PAPER 74-GT-79] 02 p0042 A74-27466

Optimum design of antireflection coating for
 silicon solar cells
 03 p0089 A74-34394

Design and modeling of the gas flow system for a
 compact 10 MW MHD generator system
 03 p0095 A74-37606

A two-dimensional dynamic programming method for
 the optimization of diagonal conducting wall
 magnetohydrodynamic generators
 03 p0095 A74-37607

Dependence of efficiency and specific
 characteristics of fuel cells on discharge
 conditions
 [AD-773264] 02 p0081 N74-20704

ORBITAL SPACE STATIONS

Use of Shuttle in establishing large space
 installations
 01 p0004 A74-14121

ORGANIC MATERIALS

Fuel from organic matter: Possibilities for the
 state of California
 [P-5107] 02 p0054 N74-16674

ORGANIC WASTES (FUEL CONVERSION)

Energy potential from organic wastes: A review of
 the quantities and sources
 [BM-IC-8549] 02 p0072 N74-18815

OSCILLATION DAMPERS

The direct driving of synchronous generators by
 large scale wind electrical power generating
 plants in parallel operation with a
 synchronizing network, part 1
 [NASA-TT-F-15301] 02 p0047 N74-15757

OSCILLATION DAMPERS

The direct driving of synchronous generators by
 large scale wind electrical power generating
 plants in parallel operation with a
 synchronizing network, part 1
 [NASA-TT-F-15301] 02 p0047 N74-15757

OXIDATION

Oxidation of carbon monoxide in diluted combustion
 products at engine idling conditions
 02 p0041 A74-25221

Oxygenates in automotive exhausts. Effect of an
 oxidation catalyst
 [PB-227097/3] 03 p0105 N74-23190

Gasification of fossil fuels under oxidative,
 reductive, and pyrolytic conditions
 [PB-228668/0] 03 p0114 N74-27611

OXIDATION RESISTANCE

Thermal-oxidative stability of automotive diesel
 fuels
 [AD-758146] 02 p0049 N74-15817

OXIDE FILMS

Vitreous oxide antireflection films in
 high-efficiency solar cells
 03 p0089 A74-34396

OXYGEN

H2-O2 combustion powered steam-MHD central power
 systems
 [NASA-TM-X-71512] 02 p0060 N74-16800

NASA Lewis H2-O2 MHD program
 [NASA-TM-X-71520] 02 p0076 N74-19697

P

P-N JUNCTIONS

Vertical multijunction solar-cell one-dimensional
 analysis
 03 p0086 A74-33971

- The effect of depletion region recombination currents on the efficiencies of Si and GaAs solar cells 03 p0088 A74-34373
- Comparison of vertical multi-junction and conventional solar cell performance 03 p0088 A74-34376
- PADDLES**
Current European developments in solar paddle drives 01 p0014 N74-11672
- PANELS**
A panel for selectively absorbing solar thermal energy and the method for manufacturing the panel [NASA-CASE-MPS-22562-1] 02 p0076 N74-19700
- PAPERS**
The use of paper honeycomb for prototype blade construction for small to medium-sized wind driven generators 02 p0056 N74-16770
- PARABOLIC REFLECTORS**
Theoretical performance of cylindrical parabolic solar concentrators 01 p0001 A74-10026
- PARTICLE EMISSION**
Characterization of particulates and other non-regulated emissions from mobile sources and the effects of exhaust emissions control devices on these emissions [PB-224243/6GA] 02 p0066 N74-18294
The impact of auto emission standards [GPO-21-548] 03 p0108 N74-26412
Compliance with Title 2 (auto emission standards) of the Clean Air Act [GPO-25-424] 03 p0118 N74-28445
- PARTICULATE SAMPLING**
Characterization of particulates and other non-regulated emissions from mobile sources and the effects of exhaust emissions control devices on these emissions [PB-224243/6GA] 02 p0066 N74-18294
- PASSENGER AIRCRAFT**
Air transport in Europe - Commercial trends and prospects 03 p0093 A74-36327
Fuel for supersonic passenger aircraft [AD-778801] 03 p0122 N74-29207
- PATENT POLICY**
Trends in the mechanization of the coal industry and guarantee of patent-ability of designs that are competitive on the world technological level --- computerized data retrieval system for development of hydraulic equipment 01 p0016 N74-11759
- PENNSYLVANIA**
Interdisciplinary applications and interpretations of ERTS data within the Susquehanna River Basin (resource inventory, land use, and pollution) [E74-10061] 01 p0013 N74-11182
Applicability of Skylab remote sensing for detection and monitoring of surface mining activities --- Ohio, West Virginia, and Pennsylvania [E74-10160] 01 p0024 N74-14028
Applicability of Skylab remote sensing for detection and monitoring of surface mining activities --- Ohio, West Virginia, and Pennsylvania [E74-10572] 03 p0121 N74-28816
- PERFORMANCE PREDICTION**
Qualitative analysis of the efficiency of MHD energy conversion 01 p0003 A74-13944
Calculations on a solar energy system --- for electric power and heat generation in buildings [LBL-1773] 01 p0023 N74-13538
- PERFORMANCE TESTS**
Nickel-zinc cells with non-sintered electrodes 02 p0035 A74-20631
Testing of photoelectric generators in the conditions of Apsheron Peninsula, Azerbaidzhan SSR 03 p0087 A74-34095
Qualification testing of laboratory produced violet solar cells 03 p0088 A74-34390
The multiple junction edge illuminated solar cell 03 p0089 A74-34398
Performance tests of gravity-assist heat pipes with screen-wick structures [AIAA PAPER 74-723] 03 p0092 A74-35954
- Design and modeling of the gas flow system for a compact 10 MW MHD generator system 03 p0095 A74-37606
Results of the Eindhoven MHD shocktunnel experiment 03 p0097 A74-37623
Development of design criteria, cost estimates, and schedules for an MHD high performance demonstration experiment [AD-766232] 01 p0017 N74-11852
French wind generator systems --- as auxiliary power sources for electrical networks 02 p0059 N74-16793
Construction of 850 and 4,000 ampere-hour silver-zinc cells using inorganic separator [AD-771397] 02 p0064 N74-17798
Supplement to the report on the results achieved with SEAS' experimental mill [NASA-TT-P-15516] 02 p0081 N74-20700
The 1.5-kW fuel cell powerplant catalyst investigation [AD-774274] 02 p0081 N74-20710
High voltage fuel cell assembly --- performance tests of experimental units [AD-774820] 03 p0101 N74-21696
Cost and performance of automotive emission control technologies [EQL-MEMO-7] 03 p0107 N74-26244
Calculation and comparison of the economy of electrochemical fuel cells [NFC-74-11868] 03 p0108 N74-26496
- PHOSPHORIC ACID**
Matrices for H3PO4 fuel cells [AD-766312] 01 p0010 N74-10086
- PHOTOELECTRIC CELLS**
The optimization of silicon photocell operated in conjunction with solar radiation concentrators 02 p0037 A74-24906
Effect of series resistance on the illuminating efficiency and optimal thickness of the alloyed layer of silicon photocells 03 p0087 A74-34099
Inversion layer solar cell fabrication and evaluation --- measurement of response of inversion layer solar cell to light of different wavelengths [NASA-CR-136932] 02 p0060 N74-16807
- PHOTOELECTRIC EFFECT**
Possibilities of the thin solar battery applications for the terrestrial use units 02 p0038 A74-24912
Partial results concerning CdS solar cells 02 p0038 A74-24914
- PHOTOELECTRIC GENERATORS**
Photo-electric generators --- solar converters for spacecraft and terrestrial power supplies 02 p0036 A74-23842
Photoelectric power engineering --- applications to solar batteries and converters 02 p0039 A74-24936
Photoelectric converters based on various CdS heterojunctions 02 p0042 A74-27752
Testing of photoelectric generators in the conditions of Apsheron Peninsula, Azerbaidzhan SSR 03 p0087 A74-34095
- PHOTOGEOLOGY**
ERTS-1 imagery use in reconnaissance prospecting: Evaluation of the commercial utility of ERTS-1 imagery in structural reconnaissance for minerals and petroleum --- interpretation of Colorado region [E74-10007] 01 p0013 N74-11148
Petroleum exploration subprogram: Geological interpretation of proportional imagery from ERTS-A satellite [E74-10213] 01 p0028 N74-15020
Oil exploration subprogram geological interpretation of images provided by the ERTS-A satellite --- Bolivia [NASA-TT-P-15265] 01 p0028 N74-15070
Geologic information from satellite images --- geological interpretation of ERTS-1 and Skylab multispectral photography of Rocky Mountain areas [E74-10507] 03 p0104 N74-22954
Applicability of remote sensor data to geologic analysis of the Bonanza test site Colorado --- hydrogeology and uranium exploration from ERTS-1 MSS photography [E74-10508] 03 p0105 N74-22955

PHOTOINTERPRETATION

Petroleum exploration subprogram: Geological interpretation of proportional imagery from ERTS-A satellite [E74-10213] 01 p0028 A74-15020

Oil exploration subprogram geological interpretation of images provided by the ERTS-A satellite --- Bolivia [NASA-TT-P-15265] 01 p0028 A74-15070

PHOTOLUMINESCENCE
Quantification of the luminescence intensity of natural materials 01 p0005 A74-14892

PHOTOMETERS
Investigation of silicon photoelectric cells as precision photodetectors --- electro-optical properties of silicon solar cells [NRC-TT-1686] 01 p0010 A74-10199

PHOTOSENSITIVITY
Photosensitive elements for solar sensors 01 p0005 A74-17296

Inversion layer solar cell fabrication and evaluation --- measurement of response of inversion layer solar cell to light of different wavelengths [NASA-CR-136932] 02 p0060 A74-16807

PHOTOSYNTHESIS
Solar energy by photosynthesis --- technological conversion systems modeled on photosynthesis 02 p0042 A74-27322

PHOTOVOLTAGES
The optimization of silicon photocell operated in conjunction with solar radiation concentrators 02 p0037 A74-24906

PHOTOVOLTAIC CELLS
Photovoltaic power and its applications in space and on earth; International Congress on the Sun in the Service of Man, Paris, France, July 2-6, 1973, Proceedings 02 p0037 A74-24901

Results and future prospects on photovoltaic power development in France 02 p0037 A74-24904

Low-cost silicon solar cells for terrestrial applications 02 p0038 A74-24909

The present potential of CdS solar cells as a future contender for photovoltaic space and terrestrial power applications 02 p0038 A74-24911

Optical coatings for semiconductor photovoltaic converters and solar energy concentrators 02 p0039 A74-24924

Investigation of photovoltaic applications --- for solar energy conversion 02 p0040 A74-24939

Trapping of solar energy at Bamako with the aid of a silicon solar cell panel 02 p0041 A74-25481

Vertical multijunction solar-cell one-dimensional analysis 03 p0086 A74-33971

Photovoltaic Specialists Conference, 10th, Stanford University, Palo Alto, Calif., November 13-15, 1973, Conference Record 03 p0087 A74-34367

Principles of photovoltaic solar energy conversion 03 p0088 A74-34368

The NSF/RANN Photovoltaic Energy Conversion Program 03 p0089 A74-34404

The NASA-Lewis terrestrial photovoltaics program 03 p0089 A74-34406

The drift field model applied to the lithium-containing silicon solar cell 03 p0090 A74-34421

Workshop proceedings: Photovoltaic conversion of solar energy for terrestrial applications. Volume 1: Working group and panel reports [NASA-CR-138209] 03 p0104 A74-22704

Workshop proceedings: Photovoltaic conversion of solar energy for terrestrial applications. Volume 2: Invited papers [NASA-CR-138193] 03 p0104 A74-22705

PHOTOVOLTAIC CONVERSION
Prospects of energy conversion and storage derived from space systems technology 02 p0033 A74-19485

The ESTEC technology programme in solar energy conversion 02 p0037 A74-24902

Terrestrial utilization of CdS-Cu₂S solar photocells in the south of France 02 p0038 A74-24915

Photoelectric power engineering --- applications to solar batteries and converters 02 p0039 A74-24936

Space solar power --- satellite-borne generators for earth consumption 02 p0040 A74-24942

Potential improvements in efficiency and cost of solar cells 03 p0088 A74-34369

Solar and laser energy conversion with Schottky barrier solar cells 03 p0088 A74-34370

Proposed program and budget for photovoltaic systems [NTE-6613] 03 p0119 A74-28538

PIPELINES
Transmission and storage of hydrogen 01 p0015 A74-11732

Pipeline transport of liquid coal 03 p0115 A74-28022

PIPES (TUBES)
Performance characteristics of a pneumatic tube transportation system --- for interurban mass transit 02 p0072 A74-18888

PISTON ENGINES
Fuel system requirements for light aircraft turbocharged reciprocating engines [SAE PAPER 740382] 03 p0083 A74-28747

A simplified life-cycle cost comparison of various engines for small helicopter use [NASA-TM-X-71517] 02 p0074 A74-19405

PLANTS (BOTANY)
Peat 01 p0029 A74-15261

Clean fuels from biomass --- feasibility of converting plant systems to fuels [NASA-TM-X-71538] 02 p0077 A74-19706

PLASMA CONTROL
Fusion reactor design problems 03 p0084 A74-31213

PLASMA DIAGNOSTICS
Ionisation, recombination and voltage drop measurements in a closed cycle MHD generator 03 p0096 A74-37622

PLASMA ELECTRODES
Electrode studies and recent results of nonequilibrium MHD generator experiments 03 p0097 A74-37624

PLASMA GENERATORS
Stabilization of ionization instability in an MHD generator 03 p0083 A74-28943

PLASMA HEATING
Heating of a substance by an arc plasma 01 p0001 A74-10463

PLASMA LOSS
Loss mechanisms in an MHD generator --- Book on argon plasma nonequilibrium Faraday generator efficiency 02 p0033 A74-19455

PLASMA PHYSICS
Relaxation phenomena in an MHD generator with pre-ionizer --- Book 02 p0033 A74-19454

Significant research results for 1971, High Temperature Institute, USSR Academy of Sciences --- plasma physics and gas dynamics [AD-765753] 01 p0012 A74-10898

PLASMA TEMPERATURE
Characteristics of a nonequilibrium MHD generator 01 p0005 A74-17439

PLASMA TURBULENCE
Optimization of the power of Faraday MHD generators operating on nonequilibrium plasma 01 p0003 A74-13943

PLASMA-ELECTROMAGNETIC INTERACTION
High voltage solar array experiments [NASA-CR-121280] 02 p0063 A74-17788

PLATINUM
Substitute catalysts for platinum in automobile emission control devices and petroleum refining [PB-222167/9] 01 p0018 A74-11941

- A semi-Delphi exercise on substitute catalysts for platinum in automobile emission control devices and petroleum refining [NMAE-314] 03 p0110 N74-26641
- PNEUMATIC EQUIPMENT**
Turbo-actuators turn flow into mechanical output --- power conversion for missile control or pneumatic systems 02 p0041 A74-27136
- Performance characteristics of a pneumatic tube transportation system --- for interurban mass transit 02 p0072 N74-18888
- POLARIZATION (CHARGE SEPARATION)**
Application of phase transitions to the electromechanical energy conversion --- in ferroelectric ceramics [ISL-CO-2/73] 03 p0105 N74-23327
- POLICERS**
Compendium of university forums of the National Commission on Materials Policy, May - June 1972. A background document. NCMF forum on Technological Innovation in the Production and Utilization of Materials at Pennsylvania State University, on 19-21 June 1972 [PB-223679/2GA] 01 p0025 N74-14251
- The evolution and dynamics of national goals in the United States 02 p0053 N74-16666
- POLITICS**
Petroleum: A prediction made in 1950 [P-5135] 02 p0065 N74-18194
- POLLUTION**
Interdisciplinary applications and interpretations of BRTS data within the Susquehanna River Basin (resource inventory, land use, and pollution) [E74-10061] 01 p0013 N74-11182
- POLLUTION CONTROL**
Transportation controls under the Clean Air Act --- Congressional investigation of effects of clean air policy on transportation [GPO-20-345] 02 p0082 N74-21625
- Cost and performance of automotive emission control technologies [EQL-MEMO-7] 03 p0107 N74-26244
- A semi-Delphi exercise on substitute catalysts for platinum in automobile emission control devices and petroleum refining [NMAE-314] 03 p0110 N74-26641
- Nitrogen oxides, sulfur oxides, and particulate control technology for fossil fuel combustion 03 p0116 N74-28026
- Collecting fly ash from western low sulfur coals --- by using scrubbers in flue gas stream 03 p0116 N74-28028
- Pilot study of electrostatic precipitation for removing fly ash at Basin Electric's Leland Olds Station 03 p0116 N74-28029
- Future energy supply: Approaches and options --- aspects of domestic energy policy 03 p0116 N74-28030
- Compliance with Title 2 (auto emission standards) of the Clean Air Act [GPO-25-424] 03 p0118 N74-28445
- POLLUTION MONITORING**
Detecting and monitoring oil slicks with aerial photos 03 p0085 A74-33071
- POLYCRYSTALS**
Heterogeneous solar converters based on polycrystalline cadmium sulfide and selenide [AD-776551] 03 p0107 N74-25623

Flight/propulsion control integration aspects of
energy management
[SAE PAPER 740480] 03 p0090 A74-34978

Performance versus cost tradeoffs - Initial look
at alternatives --- for aircraft engine fuel
cost minimization
[SAE PAPER 740494] 03 p0090 A74-34989

The impact of advanced turboshaft engine
technology on T700-powered helicopter systems
[AHS PREPRINT 871] 03 p0094 A74-36606

Investigation in energy transfer and energy
conversion for advanced power and propulsion
systems
[AD-771581] 02 p0067 N74-18417

A simplified life-cycle cost comparison of various
engines for small helicopter use
[NASA-TM-X-71517] 02 p0074 N74-19405

Research on ground propulsion systems
03 p0103 N74-22600

Economic effects of propulsion system technology
on existing and future transport aircraft
[NASA-CR-134645] 03 p0117 N74-28230

PROPULSIVE EFFICIENCY

Performance and noise aspects of supersonic
transport 01 p0003 A74-13798

Energy problems in air transportation --- options
for demand reduction, efficiency increase and
fuel alternatives 02 p0033 A74-19479

The Dolphin airship with undulating propulsion
system - A new form of the evaluation factor
02 p0035 A74-22272

Complete mechanical energy utilization in
aeronautical propulsion systems 02 p0042 A74-27611

Dolphin airship with undulatory-flow propulsion -
Dynamic lift 03 p0085 A74-33096

An analysis of the national transportation policy
03 p0086 A74-33299

PROTECTIVE COATINGS

Present state of the art in conductive coating
technology 01 p0006 A74-17654

Optical coatings for semiconductor photovoltaic
converters and solar energy concentrators
02 p0039 A74-24924

PURIFICATION

Purification of fuel oils by centrifugal force
02 p0034 A74-20216

PSA hydrogen plants - How well have they performed
--- Pressure Swing Adsorption production method
03 p0087 A74-33994

PYROLYSIS

Gasification of fossil fuels under oxidative,
reductive, and pyrolytic conditions
[PB-228668/0] 03 p0114 N74-27611

Thermal degradation of Green River kerogen at 150
to 350 C
[BM-RI-7924] 03 p0121 N74-28652

Q

QUALITATIVE ANALYSIS

Qualitative analysis of the efficiency of MHD
energy conversion 01 p0003 A74-13944

QUALITY CONTROL

Clean, bright, and dry --- jet engine fuel
contamination control 02 p0034 A74-20213

QUANTITATIVE ANALYSIS

Rapid group analysis of directly distilled
petroleum fractions by the method of recorded
fluid-adsorption chromatography /FAC/
03 p0083 A74-29415

R

- RADAR IMAGERY**
Geologic structure analysis using radar imagery of the coal mining area of Buchanan County, Va. [PB-228689/6] 03 p0121 N74-28919
- RADIANT FLUX DENSITY**
Theoretical performance of cylindrical parabolic solar concentrators 01 p0001 A74-10026
- RADIANT HEATING**
Solar heat utilization in residential heating systems 01 p0019 N74-12664
- RADIATION EFFECTS**
Effects of radiation on the violet solar cell 03 p0085 A74-32908
- RADIATION PRESSURE**
Effect of the sun, the moon and solar radiation pressure on a near-equatorial synchronous satellite 01 p0003 A74-13559
- RADIATION TOLERANCE**
Comparison of vertical multi-junction and conventional solar cell performance 03 p0088 A74-34376
- RADIO ASTRONOMY EXPLORER SATELLITE**
The RAE lightweight solar array --- design and development for Radio Astronomy Explorer satellite 02 p0039 A74-24921
- RADIO BEACONS**
Wind-power supply for the decimeter range directional radio site at Schoeneberg (Eifel) and the experience gained [NASA-TT-F-15337] 02 p0048 N74-15768
- RADIO RELAY SYSTEMS**
Regional and global energy transfer via passive power relay satellites 01 p0005 A74-16116
- RADIOACTIVE ISOTOPES**
Isotope kilowatt program [ORNL-TM-4243] 01 p0025 N74-14377
A power conditioning system for radioisotope thermoelectric generator energy sources [NASA-TM-X-70678] 03 p0117 N74-28106
- RADIOACTIVE WASTES**
Summary of the study of disposal of nuclear waste into space 01 p0005 A74-16123
Feasibility of space disposal of radioactive nuclear waste. 1: Executive summary [NASA-TM-X-2911] 01 p0025 N74-14533
Energy demand in Japan, 1975 to 1985 02 p0069 N74-18600
Feasibility of space disposal of radioactive nuclear waste. 2: Technical summary [NASA-TM-X-2912] 03 p0102 N74-22504
- RADIOGRAPHY**
High energy radiography - A new technique in the development of efficiency and integrity in aero gas-turbine engines 02 p0035 A74-21316
- RADIOISOTOPE BATTERIES**
Solar vs. nuclear power - Is there a choice --- for earth satellite power systems [AIAA PAPER 74-489] 02 p0043 A74-27833
- RAIL TRANSPORTATION**
The use of superconductivity in the USA transportation program 03 p0091 A74-35288
Future propulsion techniques for ground transport 03 p0093 A74-36320
Energy trends and their future effects upon transportation --- applied to rail, truck, and air cargo operations and private energy uses [P-5046] 01 p0017 N74-11791
- RAMJET ENGINES**
Complete mechanical energy utilization in aeronautical propulsion systems 02 p0042 A74-27611
- RANKINE CYCLE**
Vapor generator feed pump for Rankine cycle automotive propulsion system (Chandler Evans) [PB-222849/2] 01 p0011 N74-10747
- RAPID TRANSIT SYSTEMS**
Reduction of TACV power requirements by multiple-stage air cushions 02 p0043 A74-27842
- EPA pollution regulations and fuel shortage: The impact on mass transit 01 p0027 N74-14690
- Performance characteristics of a pneumatic tube transportation system --- for interurban mass transit 02 p0072 N74-18888
- Magnetic suspension and guidance of high speed vehicles --- feasibility and cost effectiveness [CTS-2] 02 p0072 N74-18892
- RARE GASES**
The effects of geometry and loss mechanisms on the performance of two-phase liquid-metal MHD generators 03 p0096 A74-37619
- REACTION KINETICS**
Effect of finite chemical reaction rates on heat transfer to the walls of combustion-driven supersonic MHD generator channels 02 p0036 A74-23221
- REACTOR CORES**
Development concept for a small, split-core, heat-pipe-cooled nuclear reactor [NASA-TM-X-2996] 02 p0078 N74-20238
- REACTOR DESIGN**
Fusion reactor design problems 03 p0084 A74-31213
Fusion power by laser implosion 03 p0085 A74-31574
Development concept for a small, split-core, heat-pipe-cooled nuclear reactor [NASA-TM-X-2996] 02 p0078 N74-20238
Comparative evaluation of solar, fission, fusion, and fossil energy resources. Part 2: Power from nuclear fission [NASA-CR-138397] 03 p0105 N74-23481
- REACTOR TECHNOLOGY**
Assessment of lightweight mobile nuclear power systems 01 p0006 A74-17813
Nuclear Science Symposium, 20th, and Nuclear Power Systems Symposium, 5th, San Francisco, Calif., November 14-16, 1973, Proceedings 02 p0041 A74-25901
Symposium on Engineering Problems of Fusion Research, 5th, Princeton University, Princeton, N.J., November 5-9, 1973, Proceedings 03 p0087 A74-34050
- RECLAMATION**
Applicability of Skylab remote sensing for detection and monitoring of surface mining activities --- Ohio, West Virginia, and Pennsylvania [E74-10160] 01 p0024 N74-14028
Waste lubricating oil research: An investigation of several re-refining methods [BM-RI-7884] 02 p0078 N74-20069
Automated strip-mine and reclamation mapping from ERTS [E74-10490] 03 p0101 N74-22014
- REFINING**
The refining of turbine fuels by modern hydrotreating [AIAA PAPER 74-162] 01 p0006 A74-18798
Supersonic fuels from medium oils produced by the thermal cracking of crude oil residues [DPVLR-SONDOR-301] 01 p0006 A74-18925
Atmospheric emissions from the petroleum refining industry [PB-225040/5GA] 02 p0066 N74-18305
Air pollution aspects of emission sources: Petroleum refineries; a bibliography with abstracts [AP-110] 02 p0073 N74-19228
Waste lubricating oil research: An investigation of several re-refining methods [BM-RI-7884] 02 p0078 N74-20069
A semi-Delphi exercise on substitute catalysts for platinum in automobile emission control devices and petroleum refining [NAB-314] 03 p0110 N74-26641
- REFRIGERATORS**
Application and durability of solar absorber coatings --- thermal power source for spaceborne cryogenic refrigerators [AD-769449] 02 p0049 N74-16264

REFUELING

Investigation of the economic efficiency of surplus tanking of aircraft fuel 03 p0085 A74-33092

REGULATIONS

National energy policy 01 p0021 N74-12681
Final environmental statement for the geothermal leasing program. Volume 4: Comments on draft impact statement and proposed regulations 02 p0078 N74-19977

RELAXATION TIME

Relaxation phenomena in an MHD generator with pre-ionizer --- Book 02 p0033 A74-19454

RELIABILITY ENGINEERING

Power conditioning system for FAA Air Route Traffic Control Centers 01 p0004 A74-14133
New technology for CdS-Cu2S solar cells of high reliability 02 p0038 A74-24910
Reliability of low-cost CdS/Cu2S solar cells 03 p0084 A74-29823
Power source quality --- consequence and cures of source deficiencies in quality of ac electric power service 01 p0019 N74-12635

REMOTE REGIONS

Wind utilization in remote regions: An economic study --- for comparison with diesel engines 02 p0058 N74-16790

REMOTE SENSORS

Quantification of the luminescence intensity of natural materials 01 p0005 A74-14892
The use of the pressurized balloon for detecting energy resources 02 p0033 A74-19473
Applicability of Skylab remote sensing for detection and monitoring of surface mining activities --- Ohio, West Virginia, and Pennsylvania [E74-10160] 01 p0024 N74-14028
Research on the application of satellite remote sensing to local, state, regional, and national programs involved with resource management and environmental quality [NASA-CR-136472] 01 p0024 N74-14093

RESCUE OPERATIONS

Helicopter applications at sea 02 p0034 A74-19690

RESEARCH AND DEVELOPMENT

Evolution of studies in the field of gas lasers 01 p0005 A74-16909
Does research in the field of aeronautics have a future --- emphasis on aircraft design refinements and cost reduction 02 p0041 A74-25723
Symposium on Engineering Problems of Fusion Research, 5th, Princeton University, Princeton, N.J., November 5-9, 1973, Proceedings 03 p0087 A74-34050
Energy R and D inventory data base. Bibliography, 1973 01 p0017 N74-11849
The Federal Government and energy: R and D historical background 01 p0021 N74-12687

- SEMICONDUCTING FILMS**
 Present state of the art in conductive coating technology 01 p0006 A74-17654
 Description and interpretation of the results observed concerning the technological solar cell satellite 02 p0039 A74-24929
- SEMICONDUCTOR DEVICES**
 Optical coatings for semiconductor photovoltaic converters and solar energy concentrators 02 p0039 A74-24924
- SEMICONDUCTOR JUNCTIONS**
 Schottky-barrier solar-cell calculations 02 p0035 A74-21028
 Photoelectric converters based on various CdS heterojunctions 02 p0042 A74-27752
 Principles of photovoltaic solar energy conversion 03 p0088 A74-34368
 A novel method of cooling semiconductor devices for power electronics [BHFT-FBT-02] 01 p0015 N74-11739
- SEMICONDUCTORS (MATERIALS)**
 Photo-electric generators --- solar converters for spacecraft and terrestrial power supplies 02 p0036 A74-23842
- SEPARATORS**
 Impinging jet separators for liquid metal magnetohydrodynamic power cycles [NASA-CR-136552] 01 p0027 N74-14785
 Construction of 850 and 4,000 ampere-hour silver-zinc cells using inorganic separator [AD-771397] 02 p0064 N74-17798
- SERVICE LIFE**
 Sealed, rechargeable nickel-zinc cells 02 p0035 A74-20630
 Reliability of low-cost CdS/Cu₂S solar cells 03 p0084 A74-29823
 The NSF/RANN Photovoltaic Energy Conversion Program 03 p0089 A74-34404
- SERVOCONTROL**
 Effect of dry friction on the response to a symmetric harmonic signal of an energy converter producing mechanical energy 02 p0034 A74-20067
- SHALE OIL**
 Fracture of coal and oil shale for in situ processing or remote removal: A proposal support document [SLA-73-946] 02 p0073 N74-19047
 Energy program, 1972 [BR-IC-8612] 02 p0080 N74-20619
 Oil shale: A clean energy source --- and its environmental effects 03 p0099 N74-21676
 Retorting indexes for oil-shale pyrolyses from ethylene-ethane ratios of product gases [BR-RI-7921] 03 p0114 N74-27592
- SHALES**
 Oil shale 01 p0029 N74-15260
- SHIPS**
 A problem statement: Ocean based solar-to-hydrogen energy conversion macro system 02 p0076 N74-19694

- SHOCK RESISTANCE**
Characteristics and applications of the solar furnaces of the Central Laboratory of Armament
02 p0034 A74-19559
- SHOCK TUBES**
Effects of the development of boundary layers on a Faraday MHD generator
03 p0096 A74-37621
- SHOCK TUNNELS**
Results of the Eindhoven MHD shocktunnel experiment
03 p0097 A74-37623
- SHOCK WAVES**
Investigation of a non-equilibrium MHD generator
[AD-766493] 01 p0013 N74-10950
- SHORT CIRCUITS**
Vertical multijunction solar-cell one-dimensional analysis
03 p0086 A74-33971
- SHORT HAUL AIRCRAFT**
Amphibian STOL and its facilities
[SAE PAPER 740488] 03 p0091 A74-34993
- SHORT TAKEOFF AIRCRAFT**
Amphibian STOL and its facilities
[SAE PAPER 740488] 03 p0091 A74-34993
Investigation of the relative merits of different power plants for STOL-aircraft with blown flap application --- analysis of design requirements for self-sustained gas supply systems
02 p0078 N74-20406
Engine cycle selection for commercial STOL aircraft --- effect of aircraft requirements and operational characteristics on engine parameters
02 p0079 N74-20408
- SHROUDED TURBINES**
Advantages of the diffuser-augmented wind turbine
02 p0057 N74-16775
- SIDE-LOOKING RADAR**
Geologic structure analysis using radar imagery of the coal mining area of Buchanan County, Va.
[PB-228689/6] 03 p0121 N74-28919
- SILENCERS**
Reduction of diesel engine exhaust noise in the petroleum mining industry --- by resonator type diffuser
03 p0118 N74-28388
- SILICON**
Improved performance from thin silicon solar cells
03 p0089 A74-34401
Si-Au Schottky barrier nuclear battery --- for medical applications
[TID-26342] 01 p0017 N74-11851
Workshop proceedings: Photovoltaic conversion of solar energy for terrestrial applications.

[NASA-CR-138193] 03 p0104 N74-22705
- SILICON ALLOYS**
State of developments and research problem on the switching of silicon germanium alloy thermoelectric elements
[AD-765845] 01 p0009 N74-10080
- SILICON JUNCTIONS**
The optimization of silicon photocell operated in conjunction with solar radiation concentrators
02 p0037 A74-24906
Investigation of photovoltaic applications --- for solar energy conversion
02 p0040 A74-24939
Current prospects for solar cells
02 p0040 A74-24943
Solar energy conversion for spacecraft --- using single crystal silicon solar cells
02 p0041 A74-26817
Effect of series resistance on the illuminating efficiency and optimal thickness of the alloyed layer of silicon photocells
03 p0087 A74-34099
Optimum design of antireflection coating for silicon solar cells
03 p0089 A74-34394
The multiple junction edge illuminated solar cell
03 p0089 A74-34398
Investigation of silicon photoelectric cells as precision photodetectors --- electro-optical properties of silicon solar cells
[NRC-TT-1686] 01 p0010 N74-10199
- SILICON TRANSISTORS**
Photosensitive elements for solar sensors
01 p0005 A74-17296
- SILVER ZINC BATTERIES**
Construction of 850 and 4,000 ampere-hour silver-zinc cells using inorganic separator
[AD-771397] 02 p0064 N74-17798
- SINGLE CRYSTALS**
Solar energy conversion for spacecraft --- using single crystal silicon solar cells
02 p0041 A74-26817
Workshop proceedings: Photovoltaic conversion of solar energy for terrestrial applications.
Volume 2: Invited papers
[NASA-CR-138193] 03 p0104 N74-22705
- SITES**
Wind power research at Oregon State University --- for selecting windpowered machinery sites
02 p0056 N74-16767
Wind data for wind driven plant --- site selection for optimal performance
02 p0056 N74-16768
Analysis of the winds of site 300 as a source of power
[UCRL-51469] 03 p0109 N74-26514
- SOCIAL FACTORS**
Aviation needs and public concerns --- civil aviation growth in Europe and environmental control
01 p0027 N74-14749
Computer simulation of world dynamics and implications for policy decisions --- social issues in energy policies
02 p0068 N74-18585
Economic basis for energy and resource use --- energy policy considering social impact
02 p0068 N74-18586
Symposium on Energy, Resources and the Environment. Session on Ethics and Environmental Aspects of the Demand for and Use of Energy, volume 2 --- socioeconomic aspects of energy resource development
[N72-69-VOL-2-REV-1] 02 p0068 N74-18591
National energy policies --- for development of low cost energy
02 p0069 N74-18592
An energy ethic --- socioeconomic ethics of energy source development
02 p0069 N74-18593
Issues involved in developing an environmental ethic --- socioeconomic factors in energy supply and demand
02 p0069 N74-18594
Mechanisms for achieving cleaner power, prices, regulations --- energy policy
02 p0069 N74-18596
- SOCIOLOGY**
The evolution and dynamics of national goals in the United States
02 p0053 N74-16666
- SOLAR ARRAYS**
High voltage solar cell power generating system for regulated solar array development
[AIAA PAPER 73-1105] 01 p0002 A74-12242
The use of the Space Shuttle to support large space power generation systems
01 p0003 A74-14112
Technological problems with large-area solar cell arrays
[DGLR PAPER 73-107] 01 p0005 A74-17204
Present state of the art in conductive coating technology

Investigation of energy conversion in rapidly cycling fuel cells, 1. A system for studying the surface diffusion of hydrogen on metals, 2 02 p0071 N74-18720
- SURFACE ROUGHNESS EFFECTS**
Wall roughness and area variation effects in high subsonic MHD generator channels 03 p0096 A74-37616

SURFACE VEHICLES

The use of superconductivity in the USA transportation program 03 p0091 A74-35288

Future propulsion techniques for ground transport 03 p0093 A74-36320

Wind machines --- aerodynamics of sailing vehicles 02 p0059 N74-16797

SUSQUEHANNA RIVER BASIN (MD-NY-PA)
Interdisciplinary applications and interpretations of ERTS data within the Susquehanna River Basin (resource inventory, land use, and pollution) [B74-10061] 01 p0013 N74-11182

SWEDEN
Analysis of the possible use of wind power in Sweden. Part 1: Wind power resources, theory of wind-power machines, preliminary model 1 and 10 MW wind generators [NASA-TT-F-15441] 02 p0077 N74-19708

Air pollution from motor vehicles [APTIC-41654] 03 p0111 N74-27088

Air pollution from motor vehicles, appendices [APTIC-41655-APP] 03 p0111 N74-27089

SYMPHONIE SATELLITES
The solar generator of the telecommunication satellite Symphonie 02 p0039 A74-24933

SYNCHRONOUS MOTORS
The synchronous EPD device 01 p0024 N74-13759

Using large wind power plants to directly drive synchronous generators in parallel operation with a governing network [NASA-TT-F-15343] 02 p0048 N74-15765

Motion picture history of the erection and operation of the Smith-Putnam wind generator 02 p0055 N74-16759

SYNCHRONOUS SATELLITES
Satellite nuclear power station: An engineering analysis --- Book 01 p0002 A74-13234

Effect of the sun, the moon and solar radiation pressure on a near-equatorial synchronous satellite 01 p0003 A74-13559

Use of Shuttle in establishing large space installations 01 p0004 A74-14121

Space solar power --- satellite-borne generators for earth consumption 02 p0040 A74-24942

Comparison and evaluation of power plant options for geosynchronous power stations. Part 1: Synchronous solar power [NASA-CR-138493] 03 p0106 N74-25615

SYNTHETIC FUELS
Clean fuels from biomass --- feasibility of converting plant systems to fuels [NASA-TN-X-71538] 02 p0077 N74-19706

SYSTEM EFFECTIVENESS
Airline airplanes for the eighties - A response --- emphasizing system efficiency and fuel savings 02 p0036 A74-23464

NASA Lewis H2-O2 MHD program 03 p0095 A74-37611

SYSTEM FAILURES
Power source quality --- consequence and cures of source deficiencies in quality of ac electric power service 01 p0019 N74-12635

SYSTEMS ANALYSIS
Characteristic lines (yearly permanent level lines) and characteristic wind variables for wind energy production --- design methods for electrical generators [NASA-TT-F-15354] 02 p0046 N74-15747

Air power plants in Russia and the United States (from Dimitry Stein, Elektrizitaetswirtsch., volume 40, no. 16, 1941) [NASA-TT-F-15338] 02 p0047 N74-15761

SYSTEMS ENGINEERING
MHD for power generation: The view of a chosen few [AD-760342] 01 p0025 N74-14408

Design options and tradeoffs in superconducting magnetic energy storage with irreversible switching [LA-UR-73-910] 02 p0074 N74-19375

T

TABLES (DATA)

Energy: Compiled bibliography and tables of world resources, consumption, and wastes [LRP-63/73] 01 p0010 N74-10391

TANKER AIRCRAFT

Experimental reel response system for high performance simplified aerial refueling store --- operational test of hose reel assembly and control system [AD-771389] 02 p0064 N74-17799

TANKER SHIPS

The international aspects of importing natural gas --- economics of shipping liquefied natural gas 02 p0068 N74-18588

TAR SANDS

Properties of Utah tar sands: Threemile Canyon area, P. R. Spring deposit [BM-BI-7923] 03 p0121 N74-28911

TECHNOLOGICAL FORECASTING

Evolution of studies in the field of gas lasers 01 p0005 A74-16909

Airports evolution and qualification 02 p0033 A74-19481

Airline airplanes for the eighties - A response --- emphasizing system efficiency and fuel savings 02 p0036 A74-23464

The present potential of CdS solar cells as a future contender for photovoltaic space and terrestrial power applications 02 p0038 A74-24911

Conclusions and recommendations of the United States Solar Energy Panel 02 p0040 A74-24941

Does research in the field of aeronautics have a future --- emphasis on aircraft design refinements and cost reduction 02 p0041 A74-25723

Future of the light turbine helicopter 03 p0084 A74-29572

Energy self-sufficiency - An economic evaluation 03 p0085 A74-31446

U.S. government airport capacity planning [SAE PAPER 740474] 03 p0091 A74-35000

Solar energy research and utilization 03 p0094 A74-36332

Thermochemical hydrogen generation --- closed cycle processes selection 03 p0094 A74-36411

Forecasting of technological progress for long-range planning of mining operations at coal mines --- prediction analysis technique for operational development 01 p0016 N74-11765

TECHNOLOGIES

Nitrogen oxides, sulfur oxides, and particulate control technology for fossil fuel combustion 03 p0116 N74-28026

TECHNOLOGY ASSESSMENT

The technology and economics of commercial airplane design. I 01 p0001 A74-10144

Gas generators - A perspective --- alternative energy sources comparison [AIAA PAPER 73-1168] 01 p0001 A74-11219

Thermoelectric generators --- radio relay station power supply application 01 p0002 A74-13448

Assessment of lightweight mobile nuclear power systems 01 p0006 A74-17813

The refining of turbine fuels by modern hydrotreating [AIAA PAPER 74-162] 01 p0006 A74-18798

Prospects of energy conversion and storage derived from space systems technology 02 p0033 A74-19485

Photo-electric generators --- solar converters for spacecraft and terrestrial power supplies 02 p0036 A74-23842

Solar cell development in the Federal Republic of Germany 02 p0037 A74-24903

Technology and performance characteristics of integral diode solar cells 02 p0038 A74-24908

- TEMPERATURE PROFILES**
- Theoretical and experimental investigation of two-component heat pipes [AIAA PAPER 74-720] 03 p0092 A74-35953
- TENNESSEE VALLEY (AL-KY-TN)**
- Concentration by competing raw fuel industries in the energy market and its impact on small business. Volume 2: Tennessee Valley area [E-REPT-92-1313] 02 p0075 N74-19605
- TEST FACILITIES**
- Closed cycle MHD power generation experiments in the NASA Lewis facility 03 p0097 A74-37625
- Installation of turbine-fuels research combustor laboratory --- test facility for analyzing fuel problems in turbine engines [AD-772945] 02 p0073 N74-18897
- TEXAS**
- Development of geothermal reservoirs from over-pressured areas beneath the Gulf coastal plain of Texas. A feasibility study of power production from overpressured reservoirs [AD-766855] 01 p0018 N74-12183

ERTS-1 imagery use in reconnaissance prospecting:
 Evaluation of commercial utility of ERTS-1
 imagery in structural reconnaissance for
 minerals and petroleum
 [E74-10345] 02 p0082 N74-20948

TF-34 ENGINE
 Lockheed S-3A Viking - With low fuel consumption
 over a wide power range the TF34-GE2 has high
 thrust to weight
 02 p0036 A74-23839

THERMAL CYCLING TESTS
 Testing for thermal fatigue failures in solar arrays
 --- space environment simulation in temperature
 cycling vacuum chamber
 01 p0010 N74-10240

THERMAL DEGRADATION
 Thermal degradation of Green River kerogen at 150
 to 350 C
 [BN-RI-7924] 03 p0121 N74-28652

THERMAL ENERGY
 Heating of a substance by an arc plasma
 01 p0001 A74-10463
 Translations on Eastern Europe Scientific Affairs,
 no. 383 --- Romanian research on fuel
 conservation with thermoenergetic equipment and
 digital processing and transmission of information
 [JPRS-61101] 02 p0062 N74-17661
 Role of thermoenergetic research in saving fuel
 02 p0062 N74-17663

THERMAL REACTORS
 Exploratory development of a glass ceramic
 automobile thermal reactor --- anti-pollution
 devices
 [NASA-CR-134513] 01 p0019 N74-12447
 Design and evaluation of experimental ceramic
 automobile thermal reactors
 [NASA-TN-D-7706] 03 p0117 N74-28035
 Evaluation of alloys and coatings for use in
 automobile thermal reactors
 [NASA-TN-D-7699] 03 p0122 N74-28990

THERMAL RESISTANCE
 Design of high-temperature solid-electrolyte
 fuel-cell batteries for maximum power output per
 unit volume
 02 p0036 A74-22355

THERMAL SHOCK
 Characteristics and applications of the solar
 furnaces of the Central Laboratory of Armasent
 02 p0034 A74-19559

THERMAL STABILITY
 Thermal-oxidative stability of automotive diesel
 fuels
 [AD-758146] 02 p0049 N74-15817

THERMIONIC CONVERTERS
 Thermionic energy conversion. Volume I. - Processes
 and devices --- Book
 01 p0004 A74-14327
 Recent developments in the field of thermionic
 power conversion and its possible effects on
 power supply systems in space and on earth
 [DGLR PAPER 73-092] 01 p0005 A74-17195
 Gas-heated 'heat pipe' vacuum furnace --- using
 thermionic energy conversion
 01 02
 p0034 A74-19724

Self-contained low power atomic plants --- for
 converting nuclear energy into electrical power
 [AD-766969] 01 p0014 N74-11519
 Electric power generation system directly from
 laser power
 [NASA-CASE-NPO-13308-1] 02 p0077 N74-19702

THERMIONIC POWER GENERATION
 Recent developments in the field of thermionic
 power conversion and its possible effects on
 power supply systems in space and on earth
 [DGLR PAPER 73-092] 01 p0005 A74-17195
 Direct energy conversion methods
 [AD-770000] 02 p0061 N74-16816

THERMOCHEMICAL PROPERTIES
 Thermochemistry of salt hydrates
 [PB-227966/9] 03 p0121 N74-28664

THERMOCHEMISTRY
 Thermochemical water decomposition processes
 03 p0085 A74-31450
 Thermochemical hydrogen generation --- closed
 cycle processes selection
 03 p0094 A74-36411

THERMOCOUPLES
 Possibility of commutating thermoelectric
 batteries with the aid of mercury amalgam
 [AD-756068] 01 p0010 N74-10084

THERMODYNAMIC CYCLES
 Thermal cycle and effectiveness of a maneuverable
 power assembly with an HHD generator and
 turbogenerator
 03 p0086 A74-33564
 Thermal control range associated with heat pipe
 cycling
 03 p0092 A74-36232

THERMODYNAMIC PROPERTIES
 Heat pipes --- using low thermoconductive and
 boiling point working fluids
 03 p0083 A74-29445
 Aviation turbine fuels, 1972
 01 p0014 N74-11592
 Computer program for thermodynamic analysis of
 open cycle multishaft power system with multiple
 reheat and intercool
 [NASA-TN-D-7589] 02 p0071 N74-18727
 Heat pipe design handbook, part 1
 [NASA-CR-134264] 03 p0102 N74-22569

THERMODYNAMICS
 Problem of the application of turbofan engines in
 air transport. Methods of increase in
 efficiency of turbofan engine with high bypass
 ratios
 [AD-773292] 02 p0079 N74-20453
 Economics of thermodynamic solar power systems.
 Part 2: The turbine trade-off
 [UCID-16386-PT-2] 03 p0120 N74-28547

THERMOELECTRIC GENERATORS
 Thermoelectric generators --- radio relay station
 power supply application
 01 p0002 A74-13448
 State of developments and research problem on the
 switching of silicon germanium alloy
 thermoelectric elements
 [AD-765845] 01 p0009 N74-10080
 Possibility of commutating thermoelectric
 batteries with the aid of mercury amalgam
 [AD-756068] 01 p0010 N74-10084
 Thermal cycle and efficiency of a versatile power
 unit with a magnetohydrodynamic generator and
 thermoelectric generator
 [JPRS-61359] 02 p0071 N74-18723
 A power conditioning system for radioisotope
 thermoelectric generator energy sources
 [NASA-TN-X-70678] 03 p0117 N74-28106

THERMOELECTRIC MATERIALS
 Thermoelectric generators --- radio relay station
 power supply application
 01 p0002 A74-13448

THERMOELECTRIC POWER GENERATION
 Thermoelectric generators --- radio relay station
 power supply application
 01 p0002 A74-13448

THERMONUCLEAR EXPLOSIONS
 Fusion power by laser implosion
 03 p0085 A74-31574

THERMONUCLEAR POWER GENERATION
 Lasers blast a shortcut to the ultimate energy
 solution --- through thermonuclear fusion
 03 p0084 A74-29603
 A preliminary engineering design of a 'Venetian
 blind' direct energy converter for fusion reactors
 03 p0087 A74-34093
 Energy consumption: Past, present, future
 01 p0020 N74-12675

THICKNESS
 Improved performance from thin silicon solar cells
 03 p0089 A74-34401

THIN FILMS
 Possibilities of the thin solar battery
 applications for the terrestrial use units
 02 p0038 A74-24912
 Partial results concerning CdS solar cells
 02 p0038 A74-24914
 On inhomogeneities of thin film solar cells
 02 p0039 A74-24918
 Description and interpretation of the results
 observed concerning the technological solar cell
 satellite
 02 p0039 A74-24929

SUBJECT INDEX

TURBOCOMPRESSORS

- Application and durability of solar absorber coatings --- thermal power source for spaceborne cryogenic refrigerators [AD-769449] 02 p0049 N74-16264
- THEORIUM**
Nuclear fuels: Thorium 01 p0029 N74-15258
- THRUST MEASUREMENT**
Lockheed S-3A Viking - With low fuel consumption over a wide power range the TP34-GE2 has high thrust to weight 02 p0036 A74-23839
- THRUST VECTOR CONTROL**
Turbo-actuators turn flow into mechanical output --- power conversion for missile control or pneumatic systems 02 p0041 A74-27136
- THYRISTORS**
A novel method of cooling semiconductor devices for power electronics [BNFT-FET-02] 01 p0015 N74-11739
- TIME DEPENDENCE**
The time dependent magnetohydrodynamic generator 03 p0096 A74-37615
- TIME SERIES ANALYSIS**
Energy statistics: A supplement to the summary of national transportation statistics --- time series analysis of transported crude oils [PB-225331/8GA] 02 p0070 N74-18633
- TOWERS**
A comment on towers for windmills --- structural and economic criteria 02 p0059 N74-16795
Some extemporaneous comments on our experiences with towers for wind generators 02 p0059 N74-16796
- TRADEOFFS**
An approach to aeroengine tradeoff factors [SAE PAPER 740493] 03 p0091 A74-34990
- TRAJECTORY OPTIMIZATION**
Aircraft symmetric flight optimization --- gradient techniques for supersonic aircraft control 02 p0036 A74-23091
- TRANSIENT RESPONSE**
The time dependent magnetohydrodynamic generator 03 p0096 A74-37615
- TRANSMISSION LINES**
Advanced electrical power generation and distribution concepts for military facilities [AD-765476] 02 p0061 N74-16819
- TRANSPORT AIRCRAFT**
The case for hydrogen-fueled transport aircraft 03 p0083 A74-29452
An approach to aeroengine tradeoff factors [SAE PAPER 740493] 03 p0091 A74-34990
Advanced controls for commercial transport aircraft --- USAF Control Configured Vehicles and NASA Active Control Technology programs [SAE PAPER 740453] 03 p0091 A74-35008
Jet transport energy management for minimum fuel consumption and noise impact in the terminal area [AIAA PAPER 74-811] 03 p0097 A74-37821
Emission calculations for a scramjet powered hypersonic transport [NASA-TN-X-71464] 01 p0018 N74-12445
Economics of air transport --- direct and indirect costs [NASA-TT-F-15249] 01 p0026 N74-14682
Aeronautical fuel conservation possibilities for advanced subsonic transports --- application of aeronautical technology for drag and weight reduction [NASA-TN-X-71927] 02 p0080 N74-20654
- TRANSPORT VEHICLES**
Reduction of TACV power requirements by multiple-stage air cushions 02 p0043 A74-27842
Magnetic suspension and guidance of high speed vehicles --- feasibility and cost effectiveness [CTS-2] 02 p0072 N74-18892
- TRANSPORTATION**
An analysis of the national transportation policy 03 p0086 A74-33299
- Quarterly bulletin of the Division of Mechanical Engineering and the National Aeronautical Establishment, 1 July - 30 September 1973 --- reports on Reynolds number effects, energy in transportation, and wave buoy accelerometer [DME/NAE-1973(3)] 01 p0023 N74-13673
Energy in transportation --- energy costs of passenger and cargo transportation 01 p0023 N74-13675
Transportation controls under the Clean Air Act --- Congressional investigation of effects of clean air policy on transportation [GPO-20-345] 02 p0082 N74-21625
To conserve energy on the national system of interstate and defense highways --- Congressional legislation for controlling maximum speed limit on highways [GPO-25-702] 03 p0123 N74-29346
- TRANSPORTATION ENERGY**
Future propulsion techniques for ground transport 03 p0093 A74-36320
Sodium: Clean-energy storage medium for vehicular power [LA-5406-NS] 02 p0065 N74-17871
Transportation energy use in the United States: A statistical history, 1955 - 1971 [R-1391-NSF] 02 p0070 N74-18607
US transportation: Some energy and environmental considerations [M72-164] 02 p0075 N74-19624
Transportation and energy conservation in the Pacific Northwest 03 p0119 N74-28539
- TRENDS**
Where are we headed in air transport? --- trends for future aircraft design 01 p0020 N74-12669
- TRUCKS**
Energy trends and their future effects upon transportation --- applied to rail, truck, and air cargo operations and private energy uses [P-5046] 01 p0017 N74-11791
- TUNGSTEN CARBIDES**
Cost efficiency of tungsten carbide-carbon fuel cells 02 p0036 A74-24054
Cost effectiveness of tungsten carbide-carbon fuel cells [NASA-TT-F-15748] 03 p0120 N74-28543
- TURBINE BLADES**
Utilization of wind power [NASA-TT-F-15300] 02 p0046 N74-15756
Smith-Putnam wind turbine experiment 02 p0055 N74-16758
Introduction to Voigt's wind power plant --- energy conversion efficiency 02 p0055 N74-16762
Voigt variable speed drive --- for windpowered generator 02 p0057 N74-16779
Wind electric power station [NASA-TT-F-15522] 03 p0100 N74-21682
- TURBINE ENGINES**
Future of the light turbine helicopter 03 p0084 A74-29572
Installation of turbine-fuels research combustor laboratory --- test facility for analyzing fuel problems in turbine engines [AD-772945] 02 p0073 N74-18897
- TURBINE WHEELS**
The Oregon State University wind studies --- economic feasibility of windpowered generators 02 p0059 N74-16792
- TURBINES**
Parallel operation of a synchronous generator and an infinitely high-powered network when driven by a Bonnet-Gross wind turbine [NASA-TT-F-15302] 02 p0047 N74-15762
- TURBOCOMPRESSORS**
Fuel system requirements for light aircraft turbocharged reciprocating engines [SAE PAPER 740382] 03 p0083 A74-28747
Vertical axis wind rotors: Status and potential --- energy conversion efficiency and aerodynamic characteristics 02 p0057 N74-16774
Advantages of the diffuser-augmented wind turbine 02 p0057 N74-16775

- Computer program for thermodynamic analysis of open cycle multishaft power system with multiple reheat and intercool
[NASA-TN-D-7589] 02 p0071 N74-18727
- The influence of individual components and of their mechanical arrangement on the stationary operating behaviour of dual cycle propulsion engines 02 p0079 N74-20444
- TURBOFAN ENGINES**
- Lockheed S-3A Viking - With low fuel consumption over a wide power range the TF34-GE2 has high thrust to weight 02 p0036 A74-23839
- Astafan - A new concept from Turbomeca --- constant speed ducted turbofan engine 02 p0037 A74-24697
- Problem of the application of turbofan engines in air transport. Methods of increase in efficiency of turbofan engine with high bypass ratios [AD-773292] 02 p0079 N74-20453
- TURBOGENERATORS**
- Thermal cycle and effectiveness of a maneuverable power assembly with an MHD generator and turbogenerator 03 p0086 A74-33564
- Investigation of chemical APU application for small ground power sources [AD-765724] 01 p0009 N74-10082
- Energy storage using high pressure electrolysis and methods for reconversion --- in automobile fuel synthesis 02 p0057 N74-16780
- Solar sea power --- conceptual design [PB-228068/3] 03 p0110 N74-26519
- Solar sea power --- boiler components including boiler, condenser, turbine, cold water pipe [PB-228069/1] 03 p0110 N74-26520
- TURBOJET ENGINES**
- A model of convex programming for turbojet main parameter selection optimization [ASME PAPER 74-GT-79] 02 p0042 A74-27466
- Complete mechanical energy utilization in aeronautical propulsion systems 02 p0042 A74-27611
- Effect of water injection on nitric oxide emissions of a gas turbine combustor burning natural gas fuel [NASA-TN-X-2959] 01 p0025 N74-14651
- Section 4: Propulsion and energy 01 p0026 N74-14671
- The influence of individual components and of their mechanical arrangement on the stationary operating behaviour of dual cycle propulsion engines 02 p0079 N74-20444
- TURBOMACHINE BLADES**
- Bucket rotor wind-driven generator 02 p0057 N74-16776
- TURBOMACHINERY**
- Turbo-actuators turn flow into mechanical output --- power conversion for missile control or pneumatic systems 02 p0041 A74-27136
- High wind power plants --- design and performance evaluation [NASA-TT-F-15444] 02 p0077 N74-19709
- TURBOPROP ENGINES**
- Complete mechanical energy utilization in aeronautical propulsion systems 02 p0042 A74-27611
- TURBORANJET ENGINES**
- Influence of fuels and lubricants on turbine engine design and performance, fuel and lubricant analyses [AD-769309] 02 p0050 N74-16483
- TURBOSHAFTS**
- The impact of advanced turboshaft engine technology on T700-powered helicopter systems [AHS PREPRINT 871] 03 p0094 A74-36606
- TURBULENT HEAT TRANSFER**
- Investigation of heat exchange in an MHD generator channel 03 p0086 A74-33565
- TURBULENT WAKES**
- MHD effects on viscous and thermal wakes and their influence on the performance of MHD generators 03 p0096 A74-37613
- TWO PHASE FLOW**
- Theoretical and experimental investigation of two-component heat pipes [ATAA PAPER 74-720] 03 p0092 A74-35953
- The effects of geometry and loss mechanisms on the performance of two-phase liquid-metal MHD generators 03 p0096 A74-37619
- Boundary layer control in two-phase liquid-metal MHD generators 03 p0096 A74-37620
- A two-temperature, gas-particle suspension in MHD power generation [ASME PAPER 73-PWR-C] 03 p0097 A74-37791

- The assessment of an air-supported and propelled urban transport system [CRANFIELD-CTS-1] 02 p0070 N74-18610

- UTAH**
Properties of Utah tar sands: Threesmile Canyon area, P. R. Spring deposit [BH-RI-7923] 03 p0121 N74-28911
- UTILITIES**
Adaptability of the closed Brayton gas turbine to utility power plants [REPT-73-310448] 03 p0111 N74-27280
- UTILIZATION**
Study terrestrial applications of solar cell powered systems [NASA-CR-134512] 03 p0100 N74-21685
- V**
- VACUUM APPARATUS**
Thermionic energy conversion. Volume I-- Processes and devices --- Book 01 p0004 A74-14327
- VACUUM CHAMBERS**
Testing for thermal fatigue failures in solar arrays --- space environment simulation in temperature cycling vacuum chamber 01 p0010 N74-10240
- VACUUM FURNACES**
Gas-heated 'heat pipe' vacuum furnace --- using thermionic energy conversion 01 02 p0034 A74-19724
- VAPOR DEPOSITION**
Chemical Vapor deposition research for fabrication of solar energy converters [NSF-RANN/SE/GI-36731X/PR/73/3] 03 p0106 N74-25616
- VAPOR PHASES**
Heating of a substance by an arc plasma 01 p0001 A74-10463
Heat pipes --- using low thermoconductive and boiling point working fluids 03 p0083 A74-29445
- VAPORIZERS**
Vapor generator feed pump for Rankine cycle automotive propulsion system (Chandler Evans) [PB-222849/2] 01 p0011 N74-10747
- VAPORIZING**
Directional properties of coal and their utilization in underground gasification experiments [BH-TPR-73] 01 p0018 N74-12159
- VARIABLE PITCH PROPELLERS**
Astafan - A new concept from Turbomeca --- constant speed ducted turbofan engine 02 p0037 A74-24697
Dynamic model wind tunnel tests of a variable-diameter, telescoping-blade rotor system (TRAC rotor) [AD-771037] 02 p0061 N74-17764
- VARIATIONAL PRINCIPLES**
A two-dimensional dynamic programming method for the optimization of diagonal conducting wall magnetohydrodynamic generators 03 p0095 A74-37607
- VEGETATION**
Peat 01 p0029 N74-15261
- VEHICULAR TRACKS**
Reduction of TACV power requirements by multiple-stage air cushions 02 p0043 A74-27842
- VELOCITY DISTRIBUTION**
MHD effects on viscous and thermal wakes and their influence on the performance of MHD generators 03 p0096 A74-37613
- VERTICAL TAKEOFF AIRCRAFT**
Preliminary performance appraisal of Navy V/STOL transport and search-type airplanes using hydrogen fuel [NASA-TN-X-71550] 03 p0108 N74-26435
- VISCOUS FLOW**
MHD effects on viscous and thermal wakes and their influence on the performance of MHD generators 03 p0096 A74-37613
- VISCOUS FLUIDS**
Aircraft fuel system tests with gelled fuel-flowmeter calibration, fuel boost pump and jettison tests [FAA-NA-73-43] 01 p0017 N74-11828
- VITREOUS MATERIALS**
Vitreous oxide antireflection films in high-efficiency solar cells 01 p0004 A74-14250
Vitreous oxide antireflection films in high-efficiency solar cells 03 p0089 A74-34396
- VOLT-AMPERE CHARACTERISTICS**
Analysis and improvement of silicon solar cells 02 p0037 A74-24905
Technology and performance characteristics of integral diode solar cells 02 p0038 A74-24908
Partial results concerning CdS solar cells 02 p0038 A74-24-114
Current delivered by the solar array of the D2A-Tourneval satellite 02 p0039 A74-24928
Solar generator simulation for satellite projects --- analog models of volt-ampere characteristics 02 p0041 A74-26324
Effects of radiation on the violet solar cell 03 p0085 A74-32908
Vertical multijunction solar-cell one-dimensional analysis 03 p0086 A74-33971
Principles of photovoltaic solar energy conversion 03 p0088 A74-34368
The effect of depletion region recombination currents on the efficiencies of Si and GaAs solar cells 03 p0088 A74-34373
The multiple junction edge illuminated solar cell 03 p0089 A74-34398
Evaluation of ohmic losses in solar cells and array 03 p0089 A74-34416
The drift field model applied to the lithium-containing silicon solar cell 03 p0090 A74-34421
Performance and Hall field limitation studies in the Stanford M-8 MHD generator 03 p0095 A74-37605
- VOLTAGE CONVERTERS (AC TO AC)**
On the theory of alternating-current electrofluiddynamic converters 01 p0007 A74-18988
- VOLTAGE GENERATORS**
DC generator for Kolkhoz wind powered generators [NASA-TT-F-15347] 02 p0063 N74-17786
- VOLTAGE REGULATORS**
DC generator for Kolkhoz wind powered generators [NASA-TT-F-15347] 02 p0063 N74-17786
- W**
- WALL TEMPERATURE**
Effect of plasma injection on cold wall type MHD generator 03 p0091 A74-35276
- WASTE DISPOSAL**
Summary of the study of disposal of nuclear waste into space 01 p0005 A74-16123
Disposal of waste oils at military air bases [SAE PAPER 740472] 03 p0091 A74-35001
Feasibility of space disposal of radioactive nuclear waste. 1: Executive summary [NASA-TN-X-2911] 01 p0025 N74-14533
Recycling solid waste for utility fuel and recovery of other resources --- identification of mechanical problems in materials handling 02 p0071 N74-18725
Combustion and heat recovery of Air Force waste petroleum oils and lubricants [AD-774563] 02 p0082 N74-21391
Feasibility of space disposal of radioactive nuclear waste. 2: Technical summary [NASA-TN-X-2912] 03 p0102 N74-22504
- WASTE ENERGY UTILIZATION**
Certain peculiarities of combustion of ballasted gases and stabilization of a flame --- burning low calorie industrial by-products [AD-776731] 03 p0107 N74-26400
- WASTE UTILIZATION**
Physical behaviour of some biowaste gases in an ion engine [AIAA PAPER 73-1113] 01 p0001 A74-10691

Typical Personal Author Index Listing

Listings in this index are arranged alphabetically by personal author. The title or the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The issue, page and accession numbers are located beneath and to the right of the title, e.g., p0015 N74-11743. Under any one author's name the accession numbers are arranged in sequence with the IAA accession numbers appearing first.

CORPORATE SOURCE INDEX

ENERGY / A Continuing Bibliography (Issue 03)

FEBRUARY 1975

Typical Corporate Source Index Listing

The title of the document is used to provide a brief description of the subject matter. The issue, page number and NASA or IAA accession number are included in each entry to assist the user in locating the abstract in the abstract section of an individual supplement of Energy. If applicable, a report number is also included as an aid in identifying the document.

A

CONTRACT NUMBER INDEX

FEBRUARY 1975

ENERGY / A Continuing Bibliography (Issue 03)

Typical Contract Number Index Listing

Listings in this index are arranged alphanumerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the IAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in either the IAA or STAR section. Preceding the accession number are the issue and page number in the particular supplement in which the citation may be found.

REPORT/ACCESSION NUMBER INDEX

ENERGY / A Continuing Bibliography (Issue 03)

FEBRUARY 1975

Typical Report/Accession Number Index Listing

Listings in this index are arranged alphanumerically by report number. The issue and page number indicate the actual Supplement and page where the citation may be located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche. A plus sign (+) indicates a document that cannot be microfiched but for which one-to-one facsimile is available.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to ten special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA

University of California, Berkeley

COLORADO

University of Colorado, Boulder

DISTRICT OF COLUMBIA

Library of Congress

GEORGIA

Georgia Institute of Technology, Atlanta

ILLINOIS

The John Crerar Library, Chicago

MASSACHUSETTS

Massachusetts Institute of Technology, Cambridge

MISSOURI

Linda Hall Library, Kansas City

NEW YORK

Columbia University, New York

PENNSYLVANIA

Carnegie Library of Pittsburgh

WASHINGTON

University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA

Los Angeles Public Library

San Diego Public Library

COLORADO

Denver Public Library

CONNECTICUT

Hartford Public Library

MARYLAND

Enoch Pratt Free Library, Baltimore

MASSACHUSETTS

Boston Public Library

MICHIGAN

Detroit Public Library

MINNESOTA

Dayton Public Library

Toledo Public Library

OKLAHOMA

Oklahoma County Libraries, Oklahoma City

TENNESSEE

Memphis Public Library

TEXAS

Dallas Public Library

Fort Worth Public Library

WASHINGTON

Seattle Public Library

WISCONSIN

Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 750 Third Avenue, New York, New York, 10017.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESRO/ELDO Space Documentation Service, European Space Research Organization, 114, av. Charles de Gaulle, 92-Neuilly-sur-Seine, France.
