Comparison of Prediction Models for a Dual-Hormone Artificial Pancreas - DTU Orbit (08/11/2017)

Comparison of Prediction Models for a Dual-Hormone Artificial Pancreas

In this paper we compare the performance of five different continuous time transfer function models used in closed-loop model predictive control (MPC). These models describe the glucose-insulin and glucose-glucagon dynamics. They are discretized into a state-space description and used as prediction models in the MPC algorithm. We simulate a scenario including meals and daily variations in the model parameters. The numerical results do not show significant changes in the glucose traces for any of the models, excepted for the first order model. From the present study, we can conclude that the second order model without delay should provide the best trade-off between sensitivity to uncertainties and practical usability for in vivo clinical studies.

General information

State: Published
Organisations: Department of Applied Mathematics and Computer Science , Scientific Computing, Dynamical Systems, Copenhagen Center for Health Technology, Center for Energy Resources Engineering, Slovak University of Technology, Copenhagen University Hospital
Authors: Boiroux, D. (Intern), Bátora, V. (Ekstern), Hagdrup, M. (Intern), Tárnik, M. (Ekstern), Murgaš, J. (Ekstern), Schmidt, S. (Ekstern), Nørgaard, K. (Ekstern), Poulsen, N. K. (Intern), Madsen, H. (Intern), Jørgensen, J. B. (Intern)
Pages: 7-12
Publication date: 2015
Conference: 9th IFAC Symposium on Biological and Medical Systems (BMS 2015), Berlin, Germany, 31/08/2015 - 31/08/2015
Main Research Area: Technical/natural sciences
