Bulletin of The Natural History Museum

Botany Series

VOLUME 25 NUMBER 2 30 NOVEMBER 1995

The *Bulletin of The Natural History Museum* (formerly: *Bulletin of the British Museum (Natural History)*), instituted in 1949, is issued in four scientific series, Botany, Entomology, Geology (incorporating Mineralogy) and Zoology.

The Botany Series is edited in the Museum's Department of Botany
Keeper of Botany: Dr S. Blackmore
Editor of Bulletin: Ms M.J. Short

Papers in the *Bulletin* are primarily the results of research carried out on the unique and ever-growing collections of the Museum, both by the scientific staff and by specialists from elsewhere who make use of the Museum's resources. Many of the papers are works of reference that will remain indispensable for years to come. All papers submitted for publication are subjected to external peer review for acceptance.

A volume contains about 160 pages, made up by two numbers, published in the Spring and Autumn. Subscriptions may be placed for one or more of the series on an annual basis. Individual numbers and back numbers can be purchased and a *Bulletin* catalogue, by series, is available. Orders and enquiries should be sent to:

Intercept Ltd.
P.O. Box 716
Andover
Hampshire SP10 1YG

Telephone: (01264) 334748
Fax: (01264) 334058

Claims for non-receipt of issues of the *Bulletin* will be met free of charge if received by the Publisher within 6 months for the UK, and 9 months for the rest of the world.

World List abbreviation: *Bull. nat. Hist. Mus. Lond.* (Bot.)

SYNOPSIS. This paper assembles and, so far as is possible without extended field and herbarium studies, examines critically the validity of records of marine and brackish-water Rhodophyta (Florideae) for the western coast of tropical Africa. The mainland coastline from the northern boundary of Western Sahara southwards to the southern boundary of Namibia, the oceanic islands from the Salvage Islands southwards to Ascension and St Helena, and all islands close to the African mainland coast are included in the area covered. Each species entry includes all traced records, the names which have previously been applied to it for the area, and additional comments or evaluation, as necessary.

INTRODUCTION

The area dealt with in this part is identical with that covered in parts published previously (Lawson & Price, 1969; John, Lawson, Price, Prud'homme van Reine & Woelkerling, 1994; Price, John & Lawson, 1978, 1986, 1988, 1992; John, Price, Maggs & Lawson, 1979). Country names employed and their earlier equivalents, and the names of island groups included, are listed in the legend for the map in Fig. 1. Genera with the initial letter P and constituent species are listed in alphabetical order.

Each main species entry consists of:

- (i) **The major bold heading**, representing the currently accepted name and authorities.
- (ii) **Subsidiary italicized headings at intervals within the entry.**

These are in square brackets and essentially subdivide the overall entry. They represent the different ways in which the species has been referred to in literature for the area. Incorrect citations have been maintained in these subsidiary headings so that there shall be no doubt as to which record we attribute to which taxon; only when clarification was required have changes been made in subhead citation, in which case an explanation is given in intermediary or terminal notes.

(iii) **The distributional data**, with countries and island groups arranged in alphabetical order. More generalized statements of distribution follow the specific country list. Complete distribution patterns require a scan of records under all names by which a species is known for this or adjacent areas. Hence, generalized distribution statements are included verbatim since it is not always clear for precisely which countries within the area they establish records. In all these cases,

numbers within parentheses after the names refer to corresponding numbers in the references. A question mark following the number indicates that doubt is attached to the record. In the present reference list, for agreement with previous parts, references have not been renumbered but simply omitted or added and additionally numbered as appropriate for the present part. Reference numbers are therefore only partially interchangeable between different parts of the overall list. Presentation of the references follows that from the previous part in having first a numerical sequence giving only authors and dates, followed by a separate listing of the full references in alphabetical order. 'References' also include manuscript and expeditionary sources, as well as works currently in press.

(iv) **Additional qualifying notes**, were required in many cases. These notes appear below whole entries or individual parts of entries to which they specifically refer. References in the notes are cited by the reference number (see pp. 115–116) when they contain species records, and by authors' name and publication date when they do not.

Species nomenclature has been revised as far as possible and the complete author citation is given for each currently accepted combination. The subsidiary italicized headings and any other discarded combinations that require reference are included as cross-referencing entries to the currently accepted names in the overall list. The necessarily preliminary nature of this treatment has been emphasized for each previously-published part and applies no less here. Critical updating of the overall text is kept firmly in mind for the whole work. We would appreciate notification of any detected errors and omissions from any of the parts.

SPECIES LIST

Pachymenia carnosa (J. Agardh) J. Agardh

Angola (312A).

Namibia (36B;312A;348;523;525).

[As *Pachymenia carnosa* J. Ag.]

Namibia (166;500).

Pachymenia cornea (Kützing) Chiang

Namibia (525).

Palmaria palmata (Linnaeus) O. Kuntze

?Ghana (350;586).

[As *Fucus sobiliferus* fl. dan. cum varietatibus]

Ghana (271?).

Note. It is most unlikely that this nomenclatural equivalence represents the presence of the cold water species *Palmaria palmata* in the Gulf of Guinea. Clarification of the record would require examination of material from the original collection which may be in Copenhagen (C: University Herbarium), but it is possible (see Lawson & John, 1982) that the Isert specimens from 'Danish Guinea' (now Ghana), on which Hornemann's (271) record is based, may have been lost when part of the collection was destroyed by fire in 1807.

Paragoniolithon Adey, Townsend & Boykins

See notes to *Spongites*.

Petrocelis cruenta J. Agardh

See the note under *Mastocarpus stellatus* (Stackhouse) Guiry.

Peyssonnelia armorica (P. & H. Crouan) Weber-van Bosse

Canaries (568).

[As *Cruoriella armorica* P. & H. Crouan]

Canaries (13;108;113;130;227).

[As *Cruoriopsis rosenvingii* Børgesen]

Canaries (70;188;191;375).

Note. See the entry for *Cruoriopsis* sp.

Peyssonnelia capensis Montagne

Angola (98;108;130;352;393;394;424;426;427).

Note. For comments on this species see (431), (434), and (693). Palminha (426) attributes the existence in Angola of this hitherto South African form to its being carried northwards by the Benguela Current. According to Cordeiro-Marino (108), this taxon is well-characterized as to thallus structure and location/form of calcareous glomeruli. It has been compared by many authors to *P. squamaria* (S.G. Gmelin) Decaisne which entirely lacks glomeruli. Womersley (712) states that specimens from tropical-subtropical waters that lack cystoliths are doubtfully attributable to *P. capensis*, and are more similar to *P. squamaria*.

Peyssonnelia coriacea J. Feldmann

'... norte de Africa' (517).

Note. This probably relates only to Mediterranean Africa or Morocco. See also (130).

Peyssonnelia dubyi P. & H. Crouan

Canaries (598;633;667).

Cape Verde Islands (38;38D;145;259;273;598;713).

Salvage Islands (38B;38D;375).

Note. In view of the misidentifications of *Petrocelis cruenta* J. Agardh from Portugal under this name, it is possible that similar confusion existed in the establishment of these records (see 33).

Peyssonnelia harveyana J. Agardh

Canaries (598;664).

[As *P. harveyana* Crouan]

Angola (41;42;500).

Cape Verde Islands (41;42;683).

[As *P. cf. harveyana* Crouan]

Cape Verde Islands (652;713).

Note. See Marcot & Boudouresque (1976) for further information on the type specimen collected by the Crouan brothers.

Peyssonnelia inamoena Pilger

Angola (352).

Cameroun (139;350;454;500;561;586).

Canaries (598;633;634;635;666;667).

Ghana (299;300;350;376;377;586).

Príncipe (350;586).

Sénégal (38D;59).

'Atlantique africain intertropical sous ses forme typique' (130).

'... atlantique tropicale' (59).

'From the Cameroons' (561).

'... Golfo da Guiné' (108).

'in warm temperate and tropical seas' (350;586;642;712).

'Macaronesia' (653).

'Subtropical Africa [Sénégal (N. of Gambia); Mauritania; former W. Sahara]' (598).

'Tropical Africa (N. Gambia – Congo river)' (598).

[As *Peyssonnelia rubra* J. Agardh]

Príncipe (41;42;535).

Note. According to Womersley (712), the type (454: 311) is from Gross-Batanga, Cameroons, West Africa. There is some doubt as to whether *Peyssonnelia inamoena* and *P. rubra* (Greville) J. Agardh are separate entities. Denizot (130) in his monograph on the non-coralline encrusting red algae states: 'La distinction entre cette

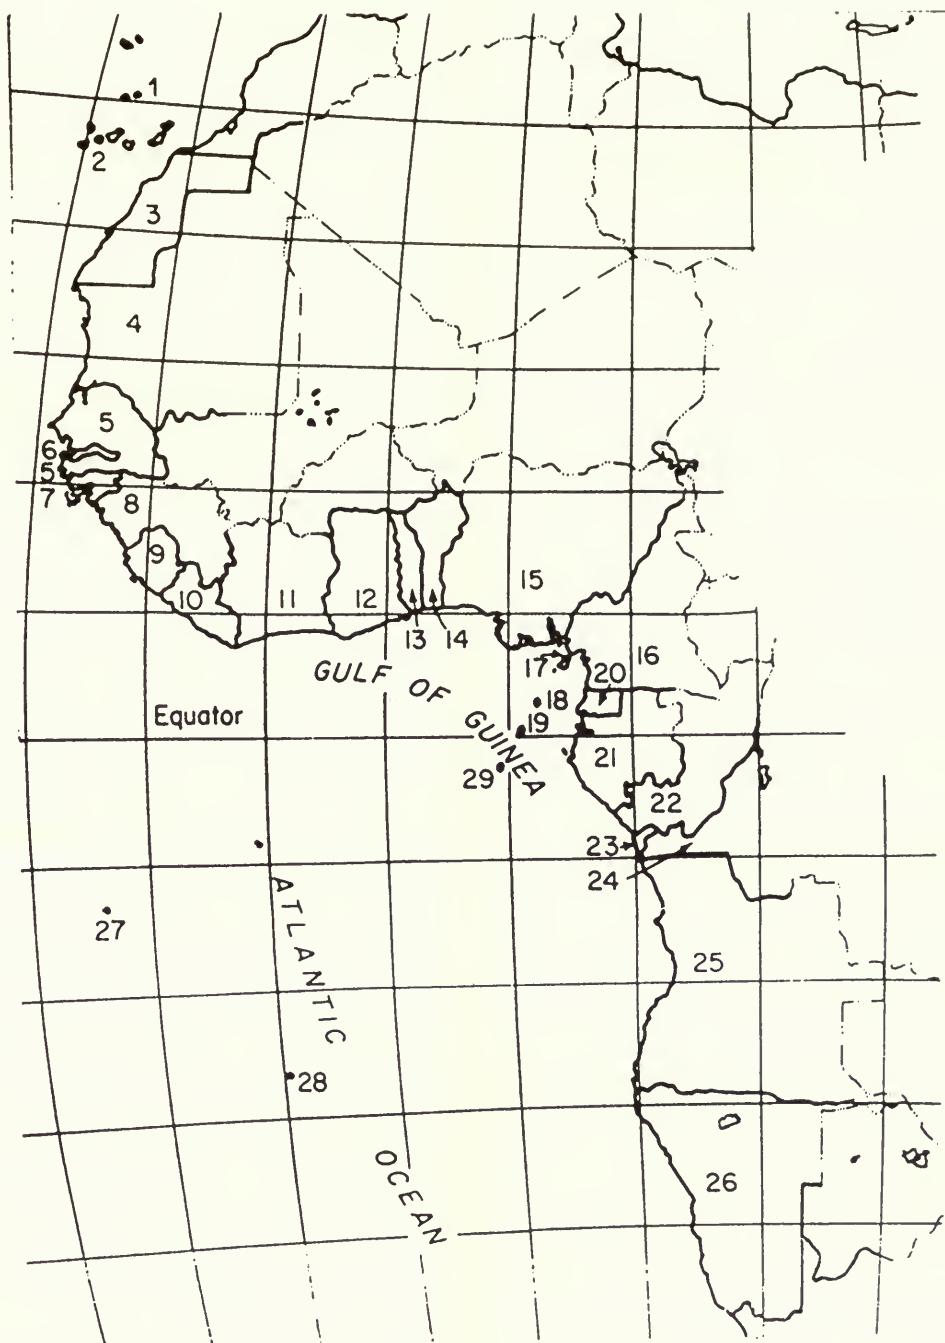

Fig. 1 The coastline of tropical West Africa and the offshore islands.

1, Salvage Islands; 2, Canary Islands; 3, Western Sahara [=former Spanish Sahara, Spanish West Africa] (includes the often quoted Rio de Oro, the southern region of the country, but excludes Ifni); 4, Mauritanie; 5, Sénégal; 6, Gambia; 7, Guinea-Bissau [=Portuguese Guinea]; 8, Guinée; 9, Sierra Leone; 10, Liberia; 11, Côte d'Ivoire; 12, Ghana; 13, Togo; 14, Benin [=Dahomey]; 15, Nigeria; 16, Cameroun; 17,* Bioko [=Macias Nguema Biyogo, Fernando Póo]; 18, Príncipe; 19, São Tomé; 20,* Equatorial Guinea [=Spanish Guinea]; 21, Gabon; 22,** Republic of the Congo; 23, Cabinda; 24, Zaire [=Congo Republic]; 25, Angola; 26, Namibia [=South West Africa]; 27, Ascension Island; 28, Saint Helena; 29, Pagalu [=Annobón]. The Cape Verde Islands, which lie immediately to the west of Dakar (Sénégal), have been omitted from this map but are included in the species list that follows.

* Nos 17 (Bioko) and 20 (Spanish Guinea, = Rio Muni) are now jointly administered as Equatorial Guinea. Bioko is entered separately, where appropriate, in the species list.

** Loango, a name much used by earlier collectors such as Welwitsch, was formerly a coastal region of West Africa. Its application appears to have included much of the coastline of the Republic of the Congo (22), as well as of Cabinda (23) and Zaire (24). Because by far the longest and rockiest part of the Loango coast lies now within the Republic of the Congo we have attributed all marine algal records from Loango to the Congo.

espèce et *P. rubra*, la forme la plus voisine, est à peu près exclusivement fondée sur l'absence de cystolithes'. See also Schneider & Searles (642) for a discussion of these two species in the western Atlantic. A number of collections examined from West Africa have proved to be not *P. rubra* as reported but *P. inamoena* (e.g., Welwitsch Herb. Angolense No. 123 Loanda [Angola] with male organs, No. 233 S. Vincenti, No. 256 Príncipe).

Peyssonnelia magna Ercegovic
Cape Verde Islands (652;713).

Peyssonnelia polymorpha (Zanardini) Schmitz
Canaries (13;70;177;188;191;227;379;584;598;694).
Cape Verde Islands (652;713).
Côte d'Ivoire (350;586).
Sierra Leone (295?;350;586).
'... Atlantique (... Canaries...) (33).
'... in warm temperate and tropical seas, probably widespread' (350;586).
'Tropical Africa (N. Gambia – Congo river)' (598).

Peyssonnelia rosa-marina Boudouresque & Denizot
Cape Verde Islands (652;683;713).

Peyssonnelia rosenvingii Schmitz

?Sierra Leone (30;350;586).

Note. This single record from West Africa is regarded as very doubtful by (350) and (586).

Peyssonnelia rubra (Greville) J. Agardh

Angola (500;535).

Canaries (38D;70;77;191;226;227;390;392;448;535;
584;598;663).

Cape Verde Islands (535;652;683;713).

Príncipe (535).

Sénégal (535?).

'... Atlantic Ocean (European, African and American coasts, Canary Islands...) (177).

'Probably in most warmer seas...' (535).

'... Sans doute répandu dans toutes les mers chaudes' (188).

'... Temperate and subtropical shores of the Atlantic.

Probably in all warmer seas of the world' (375).

[As *Peyssonnelia rubra* J. Agardh]

Angola (41;42).

Canaries (89).

Cape Verde Islands (41;42).

Príncipe (41;42).

[As *Peyssonnelia rubra* Greville]

Canaries (493).

Note. See comments under *Peyssonnelia inamoena* Pilger.

Peyssonnelia squamaria (S.G. Gmelin) Decaisne

'... Atlantic Ocean (European and African coasts, Canary Islands...) (177).

'Nordwestafrika' (499).

'... Wärmere Teile des Atlantischen Ozeans...' (499).

Note. See comments under *Peyssonnelia capensis* Montagne.

Peyssonnelia spp.

Angola (352).

Ascension (37).

Canaries (128A;303;306B).

Gabon (294).

Ghana (299;376;377).

Liberia (129).

Sénégal (529;531).

Note. Two species reported (294) for Gabon: sp. A, a sterile crust of assurgent and dichotomously divided filaments arising from an

ill-defined hypothallus; sp. B, a sterile crust with a two-layered hypothallus of subquadrate cells bearing dichotomously divided rows of cells. Sourie (529) noted that there were perhaps two, neither common, species of *Peyssonnelia* amongst his Sénégal collections, one encrusting, the other foliaceous.

Phlebothamnium ellipticum (Montagne) Kützing
See *Callithamnium ellipticum* Montagne.

Phycophora triangulans (Turner) Kützing
See *Bryothamnion triquetrum* (Gmelin) Howe.

Phyllophora gelidioides P. & H. Crouan ex Karsakoff
Canaries (70;71;139;191;227;490;540;547;598;635;709).
'Endemic for Canaries' (653).

Phyllophora palmettoides var. *nicaeensis* J. Agardh
See *Schottera nicaeensis* (Lamouroux ex Duby) Guiry & Hollenberg.

Phyllophora sp.

Sénégal (282).

Note. See *Cryptonemia seminervis* (C. Agardh) J. Agardh. Jardin (282) stated: 'espèce sans doute nouvelle', and later (283: 205) 'Aux algues que j'ai indiquées dans mes *Herborisations sur la côte occidentale d'Afrique*, pour la Sénégal il faut ajouter le *Cryptonemia luxurians* J. Ag., que j'avais inscrite sans le nom de *Phyllophora* et qui vient d'être déterminée par le savant algologue G. Lespinasse, de Bordeaux'.

Phyllymenia belangeri (Bory) Setchel & Gardner

Namibia (36B;348).

Note. See also (102) and (570) for names under which this alga has been recorded in South Africa.

Phymatolithon Foslie, nom. cons.

The concept of *Phymatolithon* adopted here follows Woelkerling (1988: 197–203). Historical data on the genus are summarized by Woelkerling & Irvine (1986) and Woelkerling (1988). The relationships of *Phymatolithon* and *Leptophytum*, a genus of uncertain status (Woelkerling, 1988: 217–281; Wilks & Woelkerling, 1994: 199–201), require brief comment. Some authors (Chamberlain, 1990; Chamberlain & Irvine, 1994 [701]: 166; Chamberlain & Keats, 1994) maintain two genera even though the type specimen of *Leptophytum* is missing and thus the name lacks the nomenclatural foundation necessary for stability. Several sets of criteria have been used to separate the two genera, but Wilks & Woelkerling (1994: 199–201) concluded that none of the proposed features could be used reliably for delimiting two such genera.

Phymatolithon bisporum (Foslie) Afonso-Carrillo

Canaries (11;18;582;598;633;634;700).

Cape Verde Islands (598).

'... Lacia el sur tienen su límite en el Golfo de Guinea' (582).

'Subtropical Africa [Sénégal (N. of Gambia); Mauritania; former W. Sahara]' (598).

'Macaronesia s.s.' (653).

[As *Leptophytum bisporum* (Foslie) Adey]

Canaries (6;70;139;205;212;227;248;363;366;387;493).

Cape Verde Islands (366).

Mauritania (349;366).

Sénégal (248;366).

[As *Lithophyllum bisporum* Foslie]

Canaries (191).

Note. This species originally was described as *Lithothamnion bisporum* Foslie (205: 18), based on material from Puerto Orotava, Tenerife, Canary Islands. According to Woelkerling (700: 39), only tiny fragments of the holotype remain in TRH. There has been no

detailed study of the holotype in a modern context, and thus the status and disposition of the species are uncertain, as are records from the West African region.

Phymatolithon calcareum (Pallas) Adey & McKibbin

Ascension (474).

Canaries (227;582;584;598).

Mauritanie (349).

[As *Lithothamnium calcareum* (Pallas) Areschoug]

Canaries (188;191;226;359;362;363;365;375).

Mauritanie (70;188;356;359;360;361;363)

[As *Lithothamnion crassum* Phillippi]

Canaries (547).

[As *Lithothamnium calcareum* f. *crassa* (Philippi) Lemoine]

Canaries (363).

[As *Lythophyllum calcareum* (Pallas) Areschoug]

Canaries (229).

Note. *Phymatolithon calcareum* is the type species of *Phymatolithon*. Woelkerling & Irvine (1986) neotyped the species with material from Falmouth Harbour, England and provided a detailed account of the collection; the neotype is in BM. Chamberlain & Irvine (701: 212) present further information on the species in Europe, and they list the distribution as Norway to N. Spain, W. Baltic and the Mediterranean but not the West African region. Consequently, all specimens on which published records from the West African region are based need to be checked to determine whether they are conspecific with *P. calcareum*. *Lithothamnion calcareum* f. *crassa* (Philippi) Lemoine is based on *Lithothamnion crassum* Phillippi, the type of which (see 206: 180–184) belongs to *Lithophyllum*, and John et al. (1994: 61) have noted that *Lithophyllum duckeri* Woelkerling is a nom. nov. for *L. crassum* Phillippi. The specimens upon which Lemoine's (362) report is based need to be re-examined to determine the taxon to which they belong.

Phymatolithon lenormandii (Areschoug) Adey

Canaries (227;582;598;633;634;649;701).

Cape Verde Islands (713).

[As *Lithothamnion lenormandii* (Areschoug) Foslie]

Canaries (6;70;188;191;202;353;356;359;362;363;493;499).

[As *Lithothamnion lenormandi* (Areschoug) Foslie f. *squamulosa* (Foslie) Foslie]

Canaries (499).

[As *Lithothamnion lenormandi* (Areschoug) Foslie f. *sublaevis* Foslie]

Canaries (70;363).

[As *Lithothamnion lenormandi* Foslie]

Canaries (109).

Note. This species, originally described as *Melobesia lenormandii* Areschoug (1852: 514), is based on material from Arromanches, France, and was lectotypified by Woelkerling (1988: 219). Chamberlain & Irvine (701: 224–230), who have seen the lectotype (in LD), provide a detailed account of the species in the British Isles, noting that it is highly variable. The species is recorded from a number of parts of the world (701: 227), but most records, including those from the West African region, need to be verified. Data on the types of *Lithothamnion lenormandi* f. *squamulosa* (Foslie) Foslie [basionym: *Lithothamnion squamulosum* Foslie (1895: 183)] and *Lithothamnion lenormandi* f. *sublaevis* Foslie (1895: 179) are provided by Woelkerling (700: 206, 211); neither has been examined in a modern context, and thus the status and disposition of both and their relationships to *Phymatolithon lenormandii* f. *lenormandii* are uncertain.

Phymatolithon polymorphum (Linnaeus) Foslie

See *Phymatolithon purpureum* (P. & H. Crouan) Woelkerling & Irvine.

Phymatolithon polymorphum f. *sublaevis* Foslie

Angola (541).

Note. According to Woelkerling (700: 211), *Phymatolithon polymorphum* f. *sublaevis* is a superfluous name for *P. polymorphum* f. *papillata* Foslie (1895: 115). The lectotype of *P. polymorphum* f. *papillata*, designated by Woelkerling (700: 168) and housed in TRH, has not been examined in detail in a modern context. Thus the status and disposition of the taxon is uncertain, as is the record from Angola.

Phymatolithon purpureum (P. & H. Crouan) Woelkerling & Irvine

[As *Phymatolithon polymorphum* (Linnaeus) Foslie]

Cape Verde Islands (541;598).

[As *Lithothamnion polymorphum* (Linnaeus) Areschoug]

Cape Verde Islands (366).

[As *Lithothamnion polymorphum* Areschoug]

Cape Verde Islands (38).

[As *Lithothamnion polymorphum* Linnaeus]

Cape Verde Islands (145).

Note. This species was originally described as *Lithothamnion purpureum* P. & H. Crouan (1867: 150), based on material from Brest, France, and was lectotypified by Woelkerling & Irvine (1986: 71). The lectotype is housed in CO. Chamberlain & Irvine (701: 230–234) provide a detailed account of the species in the British Isles and indicate that it occurs from Arctic Russia to Morocco, Iceland, the Faroes and the western Baltic; no mention is made of tropical West Africa. Misapplication of the specific epithet *polymorphum* for material referable to *purpureum* is discussed by Woelkerling & Irvine (1986: 68–69). All specimens on which published records from the West African region are based need to be checked to determine whether they are conspecific with *Phymatolithon purpureum*. According to Lemoine (366), the specimens that Dickie identified from Moseley's São Vicente (Cape Verde Islands) collections are *Lithophyllum africanum* (= *Spongites africanum* (Foslie) Afonso-Carrillo).

Phymatolithon tenuissimum (Foslie) Adey

Canaries (227;582;598).

São Tomé (350;586).

'Gulf of Guinea' (582).

'... in warm temperate and tropical parts of the eastern Atlantic Ocean' (350;586).

'... Morocco, West Africa, Canary Islands' (642).

'... Tropical Africa (N. Gambia – Congo river)' (598).

[As *Lithothamnion tenuissimum* Foslie]

Canaries (70;188;191;362;363;535;650).

Mauritanie (359).

São Tomé (6;134;188;198;212;359;362;535;650;700).

'Golfe de Guinée: São Tomé' (70).

Note. This species was originally described as *Lithothamnion tenuissimum* Foslie (198: 20), based on material from São Tomé. The holotype in TRH (see 700: 222; 535: 130) has not been examined in detail in a modern context, and thus the status and disposition of the species are uncertain, as are all records from the West African region. Foslie (696: 5) questioned whether *Lithothamnion californicum* Foslie was specifically distinct from *Phymatolithon tenuissimum*, but without a comparative study of the relevant types, the question cannot be resolved.

Phymatolithon sp.

Canaries (478).

Platoma bairdii (Farlow) Kuckuck

Canaries (18;598).

Note. According to Afonso-Carrillo et al. (18), their material agreed with the description of Dixon & Irvine (1977): '... La presencia de *P. bairdii* en las Islas Canarias incrementa considerablemente el área de distribución de esta especie'.

Platoma cyclocolpum (Montagne) Schmitz

Canaries (708).

[As *Platoma cyclocolpa* (Montagne) Schmitz]

Canaries (17;30;34;70;128A;134;226;227;232B;315;329;375;379;390;584;598;633;634;635).

Sierra Leone (30?;350,586).

[As *Platoma cyclocolpa* Schmitz]

Canaries (191;375;489;556).

Salvage Islands (38B;556).

'... im wämeren atlantischen Ocean' (511).

[As *Halymenia cyclocolpa* Montagne]

Canaries (44;318;401;402;403;407).

[As *Nemastoma (Platoma) multifida* (J. Agardh) J. Agardh]

Canaries (24).

[As *Nemastoma multifida* J. Agardh]

'Tropical Atlantic' (410).

Note. Lawson & John (350, 586) commented that Aleem's (30) drift record from Sierra Leone is doubtful for a plant not previously recorded from the mainland coast of West Africa.

Platoma marginiferum (J. Agardh) Batters

Canaries (635).

Note. According to Masuda & Guiry (1995), the correct name for this taxon is *Itonoa marginifera* (J. Agardh) Masuda & Guiry.

Platysiphonia Børgesen

For comparative comments on the genus see Ballantine & Wynne (159A).

Platysiphonia caribaea Ballantine & Wynne

Canaries (646).

Platysiphonia delicatula (Clemente) Cremades

Canaries (634;635).

Cape Verde Islands (652;713).

[As *Platysiphonia miniata* (C. Agardh) Børgesen]

Canaries (38C;598;646).

Cape Verde Islands (598;639;683).

Pleonosporium caribaeum (Børgesen) R. Norris[As *Mesothamnion caribaeum* Børgesen]

Canaries (13;227;598;633;634).

Pleonosporium harveyanum (J. Agardh) De Toni

Namibia (348).

Pleonosporium sp.

Angola (352).

Note. Tentative determination based on vegetative material only.

Plocamium Lamouroux

Considerable pertinent information on the genus in South Africa is presented by Simons (519). Not all the South African species treated are relevant here but there is a substantial floristic overlap and the individual species entries include some records for Namibia.

Plocamium beckeri Simons

Angola (298;352;487;524;707).

Plocamium biserratum DickieSee *Plocamium concinnum* Areschoug.**Plocamium cartilagineum** (Linnaeus) Dixon

Canaries (13;38B;38D;227;253;306B;392;583;584;598;633;634;635;648;662;663;710).

Cape Verde Islands (38B;38D).

[As *Plocamium coccineum* Lyngbye]

Canaries (44;439;547).

Cape Verde Islands (41;42).

Sénégal (38).

'... Des îles Feroë au Sénégal. . .' (89).

[As *Plocamium coccineum* (Hudson) Areschoug]

Canaries (141A).

[As *Plocamium vulgare* Lamouroux]

Namibia (348).

Sénégal (99).

Plocamium coccineum auct.See *Plocamium cartilagineum* (Linnaeus) Dixon.

Plocamium concinnum Areschoug

Cape Verde Islands (38;132;141A;191;408;500;597;598;713).
 [As *Plocamium biserratum* Dickie]

Cape Verde Islands (27;43;145;652).

Note. Askenasy (38) commented 'Connu seulement des îles du Cap Vert. . . Les descriptions de Dickie et d'Areschoug concordent parfaitement l'une avec l'autre. Le nom de Dickie est très caractéristique pour cette algue'.

Plocamium condensatum Kützing

See note under *Plocamium rigidum* Bory.

Plocamium corallorrhiza (Turner) Harvey

Cape Verde Islands (191;405;598).
 Namibia (348).

[As *Plocamium corallorrhiza* Harvey]

Cape Verde Islands (38).

' . . . communes aux îles du Cap Vert et à l'Afrique méridionale. . .' (38).

Plocamium cornutum (Turner) Harvey

Namibia (36B;348;523).

[As *Plocamium cornutum* Harvey]

Namibia (167;453).

Note. Simons (519) commented that *P. cornutum* is comparatively easy to recognize because of its crowded pinnae which appear to arise on all sides of the somewhat terete axis which is sparingly branched. He goes on to say 'Occasionally forms approach the habit of *P. rigidum* but generally the latter can be distinguished by their terminal arrangement of pinnae in secund groups of three'.

Plocamium froelichianum Kützing

'Senegambia' (25;132;296;318;324).

'aus dem tropischen Atlantischen Ocean' (316).

Note. J. Agardh (25) placed this species in 'Species inquirendae' and De Toni (132) in 'Species incertae'.

Plocamium glomeratum J. Agardh

Namibia (36B;348;519).

Plocamium nobile J. Agardh

See comments under *Plocamium suhrii* Kützing and *P. telfairiae* (Harvey) Harvey ex Kützing.

Plocamium raphelisianum P. Dangeard

Mauritanie (192;349).

Sénégal (192;349).

Western Sahara (192;349).

'Subtropical Africa [Sénégal (N. of Gambia); Mauritania; former W. Sahara]' (598).

Note. According to Lawson & John (349) Cap Vert (Sénégal) represents the southernmost limit of the species.

Plocamium rigidum Bory

Namibia (36B;348;519;523).

Note. Simons (519) commented: 'This species is very variable and its limits are difficult to establish. Generally, the thallus is fairly rigid. In its more typical form it resembles *P. cornutum*, but, whereas in the latter species all the pinnae alternate in pairs and are more or less awl-shaped, in *P. rigidum* the pinnae are somewhat more triangular and in the upper parts occur in threes. There are some rather more delicate forms which seem otherwise to be indistinguishable from the type. It is possible such forms were referred by Grunow (242) to *P. rigidum* var. *tenuior*. There is too a rather more membranous form with somewhat more triangular pinnae but attempts to find any distinguishing character from *P. rigidum* have not succeeded'. According to Delf & Michell (128), South African material named *Plocamium condensatum* Kützing is a tetrasporic form of (the cystocarpic) *P. rigidum*.

Plocamium suhrii Kützing

Angola (298;352;487).

Namibia (167;348;500).

[As *Plocamium nobile* J. Agardh]

Namibia (500).

Note. For a discussion of problems concerning this entity see Simons (519).

Plocamium telfairiae (Harvey) Harvey ex Kützing

Ghana (290;350;376;491;590).

'Tropical Africa (N. Gambia – Congo river)' (598).

'Widespread in many temperate and tropical seas' (350;586).

[As *Plocamium telfairiae* Harvey ex Kützing]

Ghana (299;377).

Note. Simons (519: 192) commented that Yendo (1915) suggested this species is synonymous with *P. nobile* J. Ag. See also note under *P. suhrii* Kützing.

Plocamium vulgare Lamouroux

See *Plocamium cartilagineum* (Linnaeus) Dixon.

Plocamium spp.

Angola (298;352).

Canaries (5).

Sénégal (529;531).

Plumaria bipinnata (Collins & Hervey) De Toni

[As *Plumaria bipinnatum* (Collins & Hervey) De Toni]

Canaries (71).

Note. According to Gil-Rodríguez & Afonso-Carrillo (227) this is a synonym of *Gymnothamnion elegans* (Schousboe ex C. Agardh) J. Agardh.

Plumaria schousboei (Bornet) Schmitz

See *Gymnothamnion elegans* (Schousboe ex C. Agardh) J. Agardh.

Plumaria sp.

Canaries (71).

Salvage Islands (38B;231).

Pneophyllum Kützing

The concept of *Pneophyllum* adopted here follows Penrose & Woelkerling (1991) and Penrose & Chamberlain (1993: 303). Chamberlain (702: 131) provides an up-to-date generic description and other data, and Chamberlain (94: 352–355) and Woelkerling (1988: 145–150) provide additional background information on the genus.

Pneophyllum amplexifrons (Harvey) Y. Chamberlain & R.E. Norris

Cape Verde Islands (598).

[As *Melobesia amplexifrons* Harvey]

Cape Verde Islands (38,408).

[As *Lithophyllum amplexiformis*]

Cape Verde Islands (598).

Note. This species was originally described as *Melobesia amplexifrons* Harvey (1849: 110), based on material from Port Natal, South Africa. The lectotype, in TCD, was designated by Woelkerling & Campbell (1992: 98). A detailed account of the species has been presented by Chamberlain & Norris (1994) who confirmed its occurrence in South Africa, Mozambique and Madagascar, and discussed reports from India, Japan, southern Australia, New Zealand, Indonesia, New Guinea, Guadeloupe and California. Foslie (206: 28) suggested that *Lithophyllum zostericum* Foslie (199: 5) may be conspecific with *Pneophyllum amplexifrons*, but this has not been confirmed by a comparative examination of relevant type collections. The type of *Lithophyllum zostericum* is in TRH (see 700: 239 for further information). All specimens on which West African records

of this species are based need to be checked to determine whether they are conspecific with *Pneophyllum amplexifrons*.

Pneophyllum confervicola (Kützing) Y. Chamberlain

Canaries (598;663).

Salvage Islands (598).

[As *Pneophyllum confervicolum* (Kützing) Y. Chamberlain f. *minuta* (Foslie) Chamberlain]

Mauritania (624).

[As *Fosliella minutula* (Foslie) Ganeson]

Canaries (38B).

[As *Melobesia minutula* Foslie]

Salvage Islands (231;375;556).

[As *Hapalidium phyllactidium* (Kützing) Kützing]

Canaries (439).

Note. This species was originally described as *Phyllactidium confervicola* Kützing (316: 295), based on material from near Trieste, Italy. The holotype is in L; Woelkerling & Verheij (1995) provide further details. Based on a comparative study of the types and other specimens, Chamberlain (94) concluded that *Melobesia minutula* Foslie was a heterotypic synonym of *Pneophyllum confervicola*. Chamberlain (702: 138) reports the species to occur from Norway to the Mediterranean and in Madeira, the southern USSR, India, Pacific Mexico and the central Pacific, but not from tropical West Africa. Consequently, all specimens on which published records from the West African region are based need to be checked to determine whether they are conspecific with *Pneophyllum confervicola*.

Pneophyllum fragile Kützing

Canaries (649;702).

[As *Fosliella lejolisii* (Rosanoff) Howe]

Canaries (14;226;227;582;584).

Ghana (350;377).

'Gulf of Guinea' (582).

'... widespread in boreal-antiboreal to tropical seas' (350).

[As *Melobesia lejolisii* Rosenv. (sic!)]

Canaries (696).

[As *Pneophyllum lejolisii* (Rosanoff) Y. Chamberlain]

Canaries (94;634).

Ghana (586).

Mauritania (624).

'... widespread in boreal-antiboreal to tropical seas' (586).

Note. *Pneophyllum fragile*, the type species of *Pneophyllum*, is based on material from an unspecified locality in the Mediterranean. The holotype is in L (see Woelkerling & Verheij, 1995) and detailed accounts of it have been provided by Chamberlain (94) and Penrose & Woelkerling (1991). Based on a comparative study of the types, Penrose & Woelkerling (1991: 496) concluded that *Melobesia lejolisii* Rosanoff (1866: 62) was a heterotypic synonym of *Pneophyllum fragile*, a conclusion followed by Chamberlain (702: 143). With the exception of Chamberlain (702), all West African records involve the specific epithet *lejolisii*, and specimens involved need to be checked to determine whether they are conspecific with *P. fragile*.

Pneophyllum lejolisii (Rosanoff) Y. Chamberlain

See *Pneophyllum fragile* Kützing.

Polycavernosa dentata (J. Agardh) G. Lawson & D. John

See note under *Gracilaria dentata* J. Agardh.

Polyneura denticulata J. Feldmann

Sénégal (55;59;290).

'... ouest africaines...' (59).

'Subtropical Africa [Sénégal (N. of Gambia); Mauritania; former W. Sahara]' (598;654).

Note. It is not clear if this species has been validly published as it is cited by Bodard (55) as 'Polyneura denticulata Feldm. (nomen)' and by Bodard & Mollion (59) as '... J. Feldmann mscr.'.

Polyneura venosa (Harvey) Papenfuss

See *Hymenema venosa* (Linnaeus) Kylin.

Polyneura sp.

Sénégal (531).

Note. Most probably the same taxon as that reported under the (ms?) name of *Polyneura denticulata* J. Feldmann (q.v.).

Polyopes constrictus (Turner) J. Agardh

Namibia (348).

Polysiphonia abscissa Hooker f. & Harvey

See the notes to *Polysiphonia subtilissima* Montagne.

Polysiphonia acanthotrichia Kützing

See *Polysiphonia flexella* (C. Agardh) J. Agardh.

Polysiphonia atlantica Kapraun & J. Norris

Canaries (598;633;634;635).

Salvage Islands (598).

'Subtropical Africa [Sénégal (N. of Gambia); Mauritania; former W. Sahara]' (598).

'... temperate eastern Atlantic...' (308).

'... West Africa, ...' (642).

[As *Polysiphonia macrocarpa* Harvey]

Canaries (2;13;16;38B;38C;71;128A;191;221;225;229;235;237;238;253;307;375;379;392;489;547;555;556;610).

Mauritania (38C;349;555;556).

Salvage Islands (38B;38C;227;231;375;555;556).

Western Sahara (38C;349;555;556).

'... South of England to the Canary Islands...' (71).

'... Atlántico (Inglaterra – Mauritania...)...' (253).

'desde Inglaterra a les illes Canarias...' (238).

[As *Polysiphonia cf. macrocarpa*]

Canaries (38D).

Mauritania (38D).

Salvage Islands (38D).

Western Sahara (38D).

[As *Polysiphonia pulvinata* Harvey]

Salvage Islands (231).

Note. Not the same plant as *Polysiphonia pulvinata* (Roth) Sprengel. Børgesen (71) and Womersley (560) firmly placed *P. pulvinata* Harvey in synonymy with *P. macrocarpa* Harvey (now *P. atlantica* Kapraun & Norris). According to Feldmann (193), *P. pulvinata* Harvey is not the same as *P. pulvinata* (C. Agardh) Bornet which latter is a synonym of *Polysiphonia hemisphaerica* Areschoug.

[As *Polysiphonia pulvinata* Sprengel]

Canaries (401).

Note. Kapraun et al. (310) commented on the suggested *Polysiphonia atlantica*-*P. subtilissima* relationship as follows: '... Womersley (1979)[560] suggested that *Polysiphonia atlantica* (as *P. macrocarpa*) and *P. subtilissima* are closely related. Studies of these taxa in the western Atlantic, however, have shown them to have distinct developmental patterns. Whereas *Polysiphonia subtilissima* has radial development of branches in prostrate axes, *P. atlantica* gives rise to unilateral filaments from prostrate axes, producing a dorsiventral habit (Kapraun, 1977[307], 1979)'.

Polysiphonia atrorubescens (Dillwyn) Greville

See *Polysiphonia nigra* (Hudson) Batters.

Polysiphonia breviarticulata (C. Agardh) Zanardini

Canaries (71;191;227;235;634;642).

Polysiphonia brodiaei (Dillwyn) Sprengel

Salvage Islands (38B).

[As *Polysiphonia brodiaei* (Dillwyn) Greville]

Canaries (662).

Salvage Islands (231;375;598).

[As *Polysiphonia brodiaei* Dillwyn]

Salvage Islands (215;216).

Polysiphonia camerunensis Pilger

Cameroun (139;350;454;586).

'... so far known only from the tropical parts of the eastern Atlantic Ocean...' (350;586).

'Tropical Africa (N. Gambia – Congo river)' (598).

Polysiphonia caretta Hollenberg

Canaries (698).

Polysiphonia ceramiaeformis P. & H. Crouan

Canaries (698).

Salvage Islands (38B?;556?).

Note. Weisscher (556) indicated that the plant from Selvagem Pequena agreed with the description by Lauret (1970), who keyed out characteristic differences between *Polysiphonia ceramiaeformis* and *P. furcellata* (C. Agardh) Harvey, though earlier authors such as De Toni (139) considered them synonymous. Absence of fructification from the Salvage Island plant prevented certainty of identification.

Polysiphonia coarctata Kützing

See *Polysiphonia furcellata* (C. Agardh) Harvey.

Polysiphonia collabens (C. Agardh) Kützing

See *Streblocladia collabens* (C. Agardh) Falkenberg.

Note. See note under *Polysiphonia fucoides* (Hudson) Greville. Maggs & Hommersand (711) placed *P. fruticulosa* (Wulfen) Harvey under *Boergesenella fruticulosa* (Wulfen) Kylin and reported it from 'British Isles to Morocco and Canaries'. In the view of the impossibility of transferring these records to an earlier part (Price et al., 1988), they are included here for completeness.
- Polysiphonia fucoides** (Hudson) Greville
 [As *Polysiphonia nigrescens* (Greville) Harvey]
 ' . . . De Norvège aux Canaries (Montagne). . .' (89).
 [As *Polysiphonia nigrescens* Harvey]
 ?Canaries (44;227;401).
 [As *Polysiphonia nigrescens* (Dillwyn) Greville]
 Canaries (133).
 [As *Polysiphonia nigrescens* (Dillwyn) Greville]
 Canaries (239).

Note. According to Børgesen (71), the Montagne/Benitez record (44;401) could not be *Polysiphonia nigrescens* (now *P. fucoides*) but possibly relates to *P. fruticulosa* (Wulfen) Sprengel (now *Boergesenella fruticulosa* (Wulfen) Kylin). Gil-Rodrígues & Afonso-Carrillo (227) also considered that the material reported by Montagne was actually *P. fruticulosa*.
 [As *Polysiphonia violacea* (Roth) Greville]
 Canaries (2?;38D;191;237;392;598).
 [As *Polysiphonia violacea* (Roth) Greville ex Rosenvinge]
 Canaries (71).
 [As *Polysiphonia violacea* (Roth) Greville var. *subulata* (Ducluzeau) Hauck]
 Canaries (38D).
 Salvage Islands (38D).
 [As *Polysiphonia violacea* (Roth) Sprengel]
 Canaries (8;226;227;238;375).
 [As *Polysiphonia myriococca* Montagne]
 Canaries (439;598).
 'Macaronesia s.s.' (653).
Note. See comments under *Polysiphonia myriococca* Montagne.
 [As *Polysiphonia subulata* (Ducluzeau) J. Agardh]
 Canaries (38B;38C;662).
 Salvage Islands (38B;598).
Note. We follow Maggs & Hommersand (711) in assigning records of *Polysiphonia violacea* auct., non Harvey to synonymy under this species. For discussion on the complexity of the situation, see Maggs & Hommersand (711: 336) and Kapraun & Rueness (309).

Polysiphonia funebris De Notaris
 Canaries (698?).

Polysiphonia furcellata (C. Agardh) Harvey
 Canaries (38B;38C;38D;128A;133;227;305;306B;318;375;401;584;684).
 Salvage Islands (38B;38D;598;684).
 ' . . . Atlantique (de l'Angleterre aux Canaries). . .' (33).
 ' . . . Atlantique nord, de l'Angleterre aux Canaries' (190).
 'British Isles to Canaries. . .' (711).
 [As *Polysiphonia furcellata* Harvey]
 Canaries (44;191;254).
 ' . . . De l'Angleterre aux Canaries. . .' (89).
Note. Kützing's (318) species *Polysiphonia laevigata* and *P. coarcata* were placed by Børgesen (71) in the synonymy of this species. See also 663, and the note under *P. ceramiaeformis* P. & H. Crouan.

Polysiphonia gonatophora Kützing
 Canaries (439;663).

Note. According to Børgesen (71), this record possibly relates to *Polysiphonia erythraea* (Schousboe) J. Agardh. He had not seen the specimen collected by Liebetruth from Tenerife. Since Kützing described two different forms under this name at different times, one with four pericentrals (316) and another with six (318) (J. Agardh (26) thought the 4-pericentralled one was close to *P. erythraea*), Børgesen could not confirm the identification without seeing Liebetruth's specimen. According to Prud'homme van Reine et al. (663), Liebetruth's material is neither in the Erbario Patavinum (PAD) nor in the Naturhistorisches Museum Wein (W) and thus is most probably lost.

Polysiphonia gorgoniae Harvey
 ?Cape Verde Islands (38;150;598).
 Mauritanie (624).

Polysiphonia harveyi Bailey
 ?Canaries (698;699).

***Polysiphonia pulvinata* (Roth) Sprengel**[As *Polysiphonia pulvinata* (Roth) C. Agardh]

Canaries (318).

[As *Polysiphonia pulvinata* Sprengel]

Canaries (44;254;401).

Note. Sprengel's *Polysiphonia pulvinata* is not the taxon described under the same name by Harvey (see 560). The application of *P. pulvinata* (Roth) Sprengel to forms with six (as in Roth's taxon) or four (some subsequent authors) pericentrals has been discussed by Kapraun & Rueness (309). Areschoug had earlier (1850) used the name *P. pulvinata* Roth for Scandinavian material, but later (1876) applied the new name *P. hemisphaerica* Areschoug to that material. Kapraun & Rueness (309) were unable to locate a Roth type and therefore could not decide on conspecificities. See also *P. sertularioides* (Grateloup) J. Agardh and comments on *P. pulvinata* Harvey under *P. atlantica* Kapraun & J. Norris.

Polysiphonia pulvinata* Harvey**See *Polysiphonia atlantica* Kapraun & J. Norris.Polysiphonia purpurea* J. Agardh**See *Polysiphonia nutans* Montagne.***Polysiphonia reptabunda* Suhr**See *Lophosiphonia reptabunda* (Suhr) Kylin.***Polysiphonia rigens* Schousboe ex C. Agardh**See *Dipterosiphonia rigens* (Schousboe ex C. Agardh) Falkenberg.***Polysiphonia sanguinea* (C. Agardh) Zanardini**See *Polysiphonia nutans* Montagne.***Polysiphonia scopulorum* Harvey**[As *Lophosiphonia scopulorum* (Harvey) Womersley]

Canaries (38D;556;598;633;639;648).

Salvage Islands (38B;38D;231;375;556;598).

***Polysiphonia scopulorum* var. *villum* (J. Agardh) Hollenberg**

'... widely recorded from subtropical and temperate countries...' (560).

[As *Polysiphonia villum* J. Agardh]

Cape Verde Islands (38?;145?;598).

Note. Dickie (145) was not certain of the correct identification.***Polysiphonia secunda* auct.**See *Herposiphonia secunda* f. *secunda* (C. Agardh) Wynne.***Polysiphonia sertularioides* (Grateloup) J. Agardh**

Canaries (226;227;584;598;665).

'... Im Atlantischen Ozean von englischen Küsten an südwärts...' (499).

'Nordwestafrika' (499).

'... probably a widely distributed species...' (560).

[As *Polysiphonia sertularioides* auct.?]

Angola (261;263;264).

[As *Polysiphonia pulvinata* Kützing]

'et atlantico usque ad ins Canarias' (318).

Note. Papenfuss (434) discusses the status of records of this species from South Africa and concludes, so far as can be ascertained, that it does not occur in that country since all the material concerned is attributable to *Polysiphonia incompta*. If the Angola record cited above is correct then it represents the southernmost limit of the species along the West African coast. Gil-Rodríguez and Afonso-Carrillo (226) state: 'Especie distribuida por las costos mediterráneas, citada por primera vez para las Islas Canarias'. This species and *Polysiphonia flaccidissima* Hollenberg, the latter well-known from the New World, may be conspecific (see 308, 560).

Polysiphonia simpliciuscula* P. & H. Crouan**See *Ophiocladus simpliciusculus* (P. & H. Crouan) Falkenberg.Polysiphonia souriei*, J. Feldmann, nomen nudum**

Sénégal (529).

'Subtropical Africa [Sénégal (N. of Gambia); Mauritania; former W. Sahara]' (598).

Note. Sourie (529) commented: '... espèce nommée, mais non encore décrite par J. Feldmann'.***Polysiphonia sphaerocarpa* Børgesen**

Canaries (38B;128A;556;598;698).

Salvage Islands (38B;556;598;650).

Sénégal (38B).

'... apparently a member of the pan-tropical flora' (307;308).

'Macaronesia s.s.' (653).

'... widespread in tropical Atlantic...' (308).

'... widespread in tropical seas' (642).

Note. For a discussion on *P. sphaerocarpa*, see Verlaque (650).***Polysiphonia stricta* (Dillwyn) Greville**

Canaries (227;401)

[As *Polysiphonia stricta* Greville]

Canaries (44;71).

[As *Polysiphonia urceolata* (Lightfoot in Dillwyn) Greville]

Canaries (307;598;633;634;635;666;667).

Cape Verde Islands (598).

Note. This species forms an ill-defined complex (see 307) with Kapraun & Rueness (309) commenting that it includes (as *P. urceolata*) numerous morphological forms throughout the North Atlantic range which has led to different taxonomic treatments by authors and it is 'not known if the physiologically and morphologically distinguishable populations... represent ecotypes, genetically related sibling species, or some combination of these'. Gil-Rodríguez & Afonso-Carrillo (227) comment: 'Montagne (1840) menciona esta especie para Canarias; sin embargo, Boergesen (1930) considera dudosa esta determinación'. See also notes under *Polysiphonia subtilissima* Montagne.

***Polysiphonia subcontinua* (C. Agardh) J. Agardh**

Canaries (598).

'... Atlantischer Ozean... südwärts bis zu den Kanaren...' (498;499).

'... eadem ad insulas Canariensis?' (133).

[As *Polysiphonia flocculosa* (C. Agardh) Kützing]

Canaries (26;71;128A;190;191;226;227;584;634?;635;662).

[As *Polysiphonia flocculosa* Kützing]

Canaries (89).

***Polysiphonia subtilissima* Montagne**

Angola (352).

Annobon (456;457).

Ascension (475).

Bioko (346;350;586).

Cameroun (139;350;454;586).

Cape Verde Islands (652;713).

Côte d'Ivoire (350;586).

Gambia (296;350;586).

Ghana (350;376;377;491;586).

Liberia (129;350;586).

St. Helena (644).

Sierra Leone (295;350;586).

[As *Polysiphonia* sp.]

Côte d'Ivoire (288).

Liberia (288).

- [As *Callithamnion pluma* (Dillwyn) C. Agardh var. *micropterum* Montagne]
Canaries (109;171;401).
[As *Ptilothamnion micropterum* Bornet (*Callithamnion*) Montagne]
Canaries (492).

Note. Boudouresque et al. (1984) synonymize *P. micropterum* with *P. pluma*, but Schiffner (1931) regarded the former as a good species strongly differentiated from *P. pluma*. See also comments under *Ptilothamnion pluma* (Dillwyn) Thuret.

Ptilothamnion pluma (Dillwyn) Thuret

Canaries (38B;71;190;191;226;227;303;584;598;698;711).
Salvage Islands (38B;598).

'... Atlantique (de l'Angleterre aux Canaries)...' (33;196).
'... North Sea southwards to the Canary Islands' (71).

[As *Callithamnion pluma* C. Agardh]

Canaries (44;401).

Note. In a discussion of the genus *Ptilothamnion*, Dixon (171) pointed out that Feldmann & Feldmann (188) and Feldmann (190) question the status of *P. micropterum* (Montagne) Bornet. A figure in Feldmann (190) shows a prostrate axis of several fronds, some with entirely simple, others with a proportion of bifid laterals. As this was the previous basis for distinction between the two species, the

implication would be that *P. micropterum* could be regarded as a synonym of *P. pluma*. Further examination of the type materials revealed fronds of various types on both species, even though Kützing's illustration (320: pl. 1) of Montagne's original *Callithamnion micropterum* showed no second order laterals. Bifid laterals are probably more frequent in specimens from the Mediterranean and Canaries than from the British Isles but the wide variation found in all localities does not justify taxonomic discrimination on this basis. Dixon (171) concluded that *P. pluma*, *P. micropterum*, and possibly *P. lucifugum* should be regarded as a single species under the name *Ptilothamnion pluma* (Dillwyn) Thuret.

Pycnothamnion crustaceum P. Dangeard

Sénégal (122).

'Subtropical Africa [Sénégal (N. of Gambia); Mauritania; former W. Sahara]' (598).

ACKNOWLEDGEMENTS. We acknowledge with thanks assistance from (i) Department of Botany, The Natural History Museum, London, for provision of the necessary research facilities to continue the series of papers of which the present is part; (ii) a grant (for GWL) towards this work from the Systematics Association.

SYNOPSIS. A new species of *Odontorrhynchos*, *O. monstrosis* Szlach., is described from Bolivia.

INTRODUCTION

The genus *Odontorrhynchos* includes five species found mainly in the subtropical zone of South America and the Andes. It was described by Correa (1953), based on *Stenorhynchos castillonii* Haum. Garay (1982) added a further four species to the genus.

Odontorrhynchos is closely related to *Brachystele* Schltr., from which it differs primarily in the structure of the rostellum and viscidium. The rostellum in *Odontorrhynchos* is ligulate, rounded at the apex, with a large, oval viscidium on its inner surface which, after slipping from the rostellum, leaves three teeth of different size. The central tooth is large and slightly receding in relation to the lateral ones. In *Brachystele*, the rostellum is small and frequently wedged between the robust lateral stigma lobes. A small viscidium arises on the external surface of the rostellum which is greatly lingually introverted outwards and so appears to arise on the internal surface. The rostellum remnant is notched or reduced to a thin, rapidly drying, membranaceous fovea. Apart from this, *Brachystele* usually boasts a well formed column foot and oblique bases of the lateral sepals, whereas in *Odontorrhynchos*, the column foot is reduced and the bases of the lateral sepals are straight.

So far, only *O. chlorops* (Rchb.f.) Garay has been recorded from Bolivia. A new, previously undescribed Bolivian species was found among herbarium material of this genus deposited at The Natural History Museum.

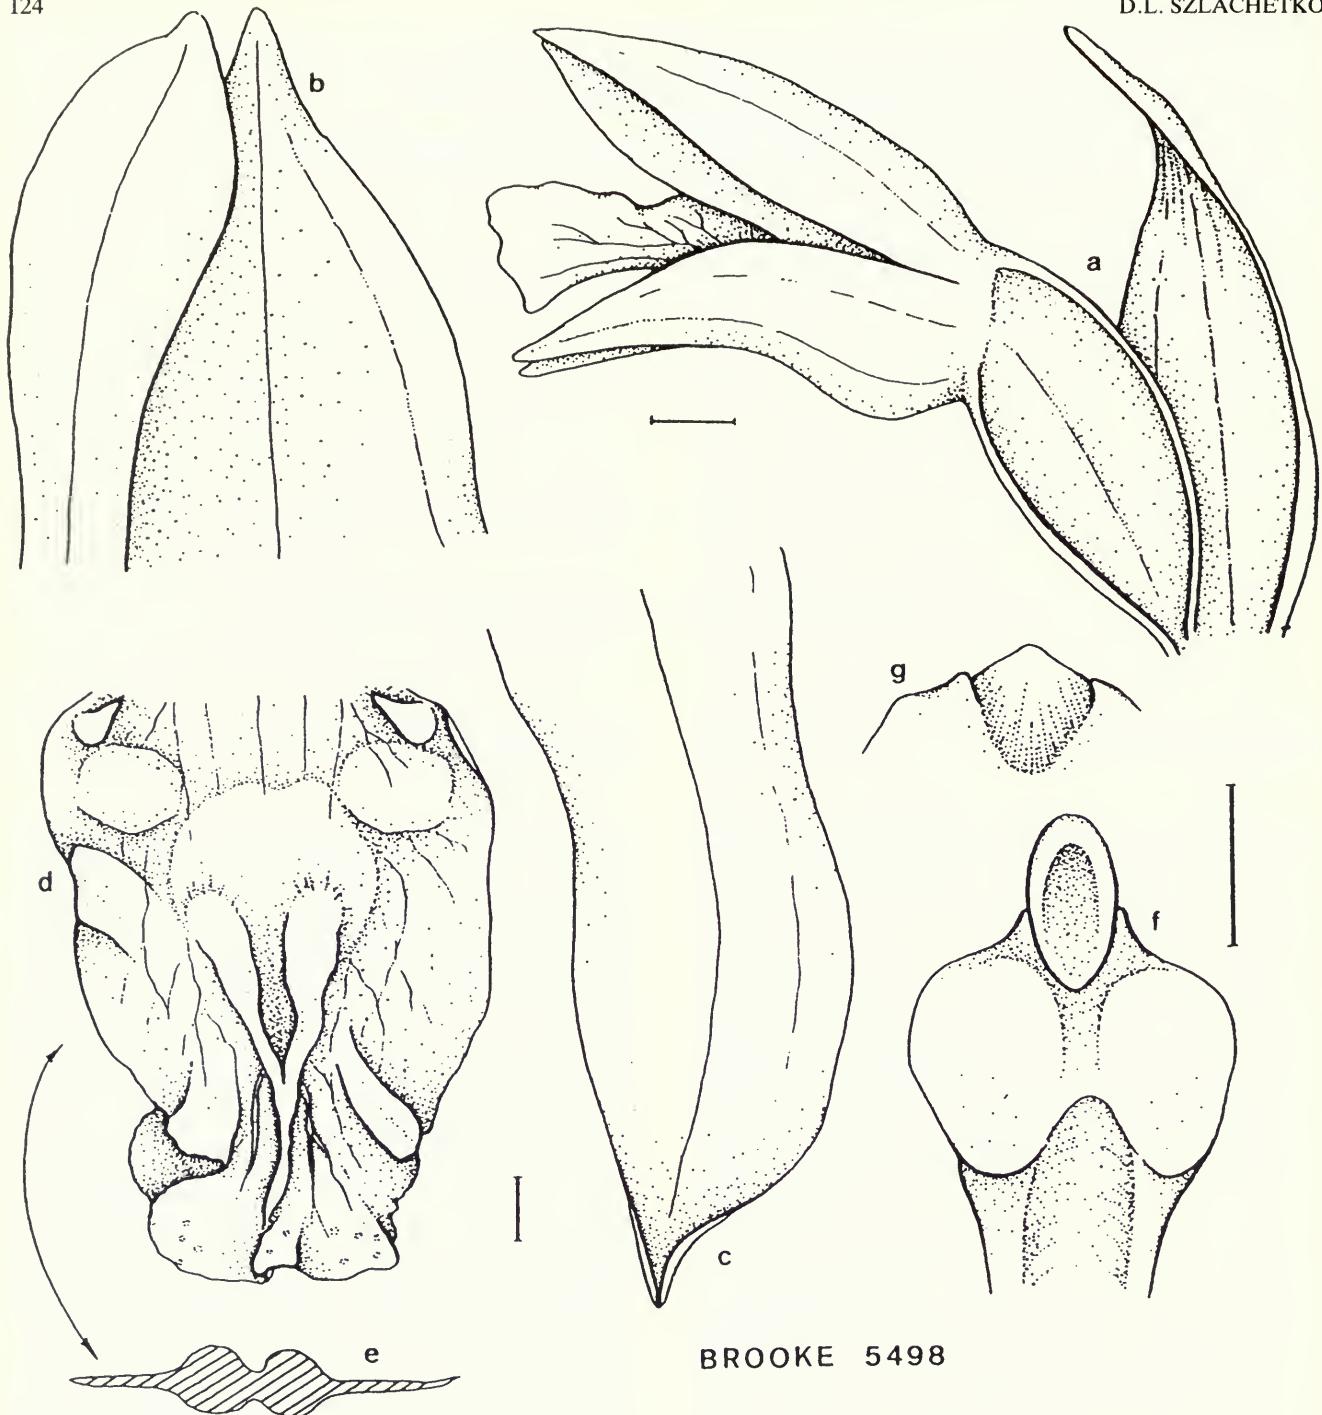

ODONTORRHYNCHOS MONSTROSISS SZLACH.

Planta habitu ad *O. chloropsem* vergens, sed labello indiviso in formam huic *Spiranthidi* simili, valde incrassato, in centro e plicis carnosis duobus jam dignoscenda. Type: Bolivia, far

below Quime, near bridge in gorge, 18 April 1949, Brooke 5498 (BM-holotype). Fig. 1.

Stem 54.0 cm high, 7.0 mm in diameter at base, 3.5 mm in diameter below inflorescence, erect, stout, glandular above one-fifth, densely along inflorescence, covered by caudine bracts. *Leaves* 4, forming a basal rosette, separated from the flowering stems, petiolate; petiole up to 10.0 cm long, narrow; blade up to 15.0 cm long and 4.5 cm wide, oblong- to elliptic-lanceolate, acute. *Cauline bracts* 10, herbaceous, with hyaline margins, tubular, acute, lower and middle longer than, upper as long as internodes, middle and upper minutely and densely glandular at margins. *Inflorescence* 18.0 cm long, many-flowered, multi-lateral, dense, cylindric. *Floral bracts* 14.0 mm long, ovate-lanceolate, acuminate, 3-nerved, herbaceous, densely glandular along margins, glabrous in the centre, lower longer than, upper shorter than flowers. *Flowers* medium-sized, subsessile, tubular, densely glandular outside, green. *Pedicel* 1.0 mm long, twisted. *Ovary* 9 mm long. *Dorsal sepal* 8.2 mm long, 5.2 mm wide, triangular-ovate, cuspidate, 3-veined, fleshy, concave in the centre. *Lateral sepals* 9.0 mm long, 3.5 mm wide, oblong-falcate, cuspidate, 3-veined, fleshy. *Petals* 8.0 mm long, 2.0 mm wide, spatulate, acute, single-veined, free from dorsal sepal, fleshy, sparsely glandular along the outside margins. *Lip* 9.0 mm long, 5.5–6.0 mm wide, sessile, elliptic-oval in general outline, with no constriction, fleshy, thinner at apex, concave at the base, and with two horn-like appendages near the basal lobules, pleated and crenated in apical part, with two fleshy crests in the centre, completely free from one another or fused together at their apices; lip surface papillate outside and in the centre inside. *Column* 3.0 mm long, erect, massive; column foot 3.0 mm long, short, massive, oblique, adnate to the ovary. *Anther* 2.6 mm long, ovate. *Rostellum* 1.2 mm long, triangular, rounded at apex, 3-dentate after removal of viscidium, the middle tooth the longest, lateral teeth short, reduced. *Viscidium* 1.5 mm long, oval, massive.

ETYMOLOGY. *monstrosus* (Lat.) – monster; in reference to

BROOKE 5498

Fig. 1 *Odontorrhynchos monstrosis* Szlach. a: flower and floral bract; b: dorsal sepal and petal; c: lateral sepal; d: lip, flattened; e: cross section of lip; f: column, bottom view; g: rostellum remnant. Each scale indicates 1 mm. (Drawn from the holotype, The Natural History Museum).

the lip shape, which is reminiscent of the head of a monster.

Odontorrhynchos monstrosis is known so far only from the type collection, which was found 1828 m above sea-level, among rocks by a river in a warm gorge. It differs from all other known species in the genus by its lip shape, which is unstricted, elliptic-oval in general outline, pleated in the apical part, with two fleshy ridges in the centre, which may merge at the apex or remain free. At the base of the lip are

two, small, fleshy processes leaning towards the main vein. *O. monstrosis* appears to be most closely related to *O. chlorops* (Rchb.f.) Garay, sharing a very similar habit.

ACKNOWLEDGEMENTS. I wish to express my appreciation to the Curator of the General Herbarium at The Natural History Museum for the hospitality during my personal visit. As usual, special thanks are given to Prof. Dr hab. Ryszard Ochyra for the Latin translation.

SYNOPSIS. Prospero Alpino's *De plantis exoticis*, first published in 1627, describes 135 plants, of which 84 are said to originate from the south Aegean island of Crete. This paper examines the treatment of Alpino's plants by Carolus Linnaeus, and the determinations later offered by Sprengel and later still by Baldacci and Saccardo. As far as is possible, the present author offers determinations based on current knowledge of the Cretan flora for the 84 Cretan plants. Of the 35 Linnaean binomials which include in their protoglosses a reference to one of Alpino's Cretan plants, 17 are lectotypified here, while 16 have already been typified and the relevant specimen or figure is cited. In addition, *Acer sempervirens* L. is neotypified here, and *Dianthus arboreus* L. is lectotypified, as are two names first published by Antonio Turra (*Bunias spinosa* and *Thymus tragoriganum*), which have been wrongly attributed to Linnaeus. It is argued that the names *Acer orientale* L., *Acer creticum* L., and *Cenchrus frutescens* L. should be proposed for rejection, and that the same should be considered for the name *Statice echinus* L. A summary of the names typified in this paper is provided.

INTRODUCTION

De plantis exoticis was published in Venice in 1627, ten years after the death of its author, Prospero Alpino, by his son Alpino Alpino, who held a position at the botanic garden at Padua from 1631 to 1637. The work describes 135 plants, of which 84 are said to have come from the south Aegean island of Crete. The book is divided into two sections: *Liber primus* and *Liber secundus*, the former incorporating the great majority of the Cretan species.

Carolus Linnaeus includes many of Alpino's names in the synonymy of his own species. An Alpino figure can be an original element for a Linnaean binomial only if it is cited in the protogloss of that name (cf. Greuter et al., 1994: 11, Art. 9.9 footnote). Some of Alpino's figures are included by Linnaeus in the synonymy of pre-starting point (pre-1753) polynomials, especially in *Hortus cliffortianus* (Linnaeus, 1738), but do not appear in the protoglosses of binomials in *Species plantarum* (Linnaeus, 1753) or later works, although the pre-starting point polynomial may be cited in the synonymy of a later binomial. The Alpino figure cannot be an original element for such a binomial. Occasionally, Linnaeus adds to the elements included within his concept of a species. For example, a binomial in the second edition of *Species plantarum* (Linnaeus, 1762, 1763) may have an Alpino ele-

ment included in synonymy which does not appear in the protogloss of the same name in the first edition in 1753. Once again, the Alpino figure cannot be an original element for such a name.

Another, more indirect way in which Linnaeus's opinion as to the identity of Alpino's plants can be interpreted is by examining his annotations in his own copy of the 1656 reprint of *De plantis exoticis*, now lodged at the Linnean Society of London. On many of the plates he has written polynomials from Bauhin's *Pinax theatri botanici* (Bauhin, 1623) and Tournefort's *Institutiones rei herbariae* and *Corollarium institutionum rei herbariae* (Tournefort, 1700, 1703). These same polynomials may be cited by Linnaeus in the synonymy of his names, often together with the corresponding Alpino elements. Linnaeus's annotations from *De plantis exoticis* are quoted in the present paper.

After Linnaeus's time, other authors have commented on the identity of Alpino's plants, principally Sprengel (1807: 384–386) and Baldacci & Saccardo (1900). The latter deal only with those 84 plants which are mentioned by Alpino as originating in Crete. The determinations given by these authors are cited.

Every effort has been made here to offer determinations for the 84 Cretan plants among Alpino's figures. Taxonomy and nomenclature follow Turland, Chilton & Press (1993).

For those Linnaean binomials for which an Alpino figure is

cited in the protologue and is, therefore, an original element, the type specimen or figure is indicated. If the type has previously been designated, then full details are given; if not, the type is designated here. In cases where a chosen lectotype figure is stylized or simplified to the extent that its taxonomic position is unclear, an epitype specimen is designated to enable precise application of the name (cf. Greuter et al., 1994: 11, Art. 9.7). For all names typified in this paper, the relevant Linnaean protogues are reproduced, and the chosen lectotypes, epitypes and neotypes are illustrated.

Before designating a type for a previously untypified name, the author has carried out a careful examination of all the extant original visual elements for the name in question. Particular care is necessary when considering, for example, specimens in the Linnaean Herbarium at the Linnean Society of London (LNN). Some of these are often wrongly considered to be original elements for Linnaean names merely because Linnaeus annotated them with the relevant '*nomen triviale*' (specific epithet), when in fact they may not have been in his possession until after the publication of that name. Such specimens are not cited here.

The numbered sequence of *capita* in the original 1627 imprint of Alpino's book (1–78 in *Liber primus*, 1–58 in *Liber secundus*) has been followed in this paper, with all page numbers and figure captions quoted exactly as they are printed. A currently accepted name is always given in brackets following any cited name which is no longer in current use.

The following abbreviations are used, in order to minimize excessive repetition:

L.: = Linnaeus's annotations from his own copy of *De plantis exoticis*. The symbol 'v' is used to indicate where Linnaeus begins a separate line in an annotation.

S.: = Determinations given by Sprengel (1807).

B. & S.: = Determinations given by Baldacci & Saccardo (1900). Of the 84 Cretan plants, 14 are listed in an appendix with no determination offered, and are marked 'indet.' here.

LIBER PRIMUS

1. 'Lauro Sylvestri Cretica', p. 1, fig. facing p. 1.

L.: 'Thymelaea cretica, oleae folio subtus villosa. Tournef. cor. 41.'

B. & S.: *Daphne sericea* Vahl

Comments: Neither the Alpino element nor the Tournefort polynomial in Linnaeus's annotation appears to be mentioned in any of Linnaeus's works. It is not possible to identify the figure with certainty, and Baldacci and Saccardo's determination seems unlikely.

2. 'Cerasus Idea', p. 3, fig. p. 2.

S.: 'Pyrus cretica' (see below).

B. & S.: *Sorbus graeca* (Spach) Kotschy (currently *Sorbus aria* subsp. *cretica* (Lindl.) Holmboe).

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works. The plant depicted is either *Sorbus aria* subsp. *cretica* or *S. umbellata* (Desf.) Fritsch. Sprengel may have intended to determine the following Alpino element (No. 3) as 'Pyrus cretica', instead of the

present plant, since *P. cretica* Willd. is the basionym of *Amelanchier ovalis* subsp. *cretica* (Willd.) Maire & Petitm. and there does not appear to be any extant name in *Pyrus*, at the rank of species, for *Sorbus aria* subsp. *cretica*.

3. 'Chamecerasus Idea', p. 5, fig. p. 4.

L.: 'Mespilus cretica, folio circinato & quasi cordiformi. T. cor. 43.' B. & S.: *Amelanchier cretica* (Willd.) DC. (currently *Amelanchier ovalis* subsp. *cretica* (Willd.) Maire & Petitm.)

Comments: Neither the Alpino element nor the Tournefort polynomial in Linnaeus's annotation appears to be mentioned in any of Linnaeus's works. The figure obviously depicts *Amelanchier ovalis* subsp. *cretica*.

4. 'Adrachni, seu Portulaca Theophrastii', p. 7, fig. p. 6.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works. It is not possible to identify the plant figured.

5. 'Acer Cretica', p. 9, fig. p. 8.

L.: 'Acer cretica. Tournef. cor. 43'.

B. & S.: *Acer creticum* L. (see below).

Comments: Linnaeus includes the Alpino element in the protologue of *Acer monspessulanum* in *Species plantarum* (1753: 1056), under the unnamed var. β , but in the second edition he transfers it to *A. creticum* (1763: 1497), which is an illegitimate renaming of *A. orientale* L., which he first published in *Systema naturae* 10th ed. (1759a: 1310). The Tournefort polynomial in Linnaeus's annotation is not cited in either edition of *Species plantarum*; another Tournefort name, *Acer orientalis, hederae folio*, is cited instead. The lectotype of *A. monspessulanum* is a specimen in Herb. Linn. No. 1225.15 (LNN), designated as such by Murray (1979: 13, as '1225.1'). Alpino's figure appears to be a greatly stylized depiction of the shrub or tree currently called *Acer sempervirens* L., first published in *Mantissa plantarum* (1767a: 128) and simultaneously in *Systema naturae* 12th ed. (1767b: 674). His figure is correct in that the species has three-lobed leaves and sometimes pubescent twigs and petioles, but wrong in that the leaves should be opposite, not alternate.

orientale. A. A. fol. trilobis integerrimis pubescentibus. Mill. did.

9. ACER foliis trilobis integerrimis pubescentibus. Mill. creticum, diff. 10.

Acer orientalis, hederae folio. Tournef. cor. 43. Portlock orient. 191. t. 85.

Acer cretica. Alp. exot. 9. t. 8. Dubam. arb. 1. p. 28. t. 10, f. 9.

Habitat in Oriente. h.

The typification of *Acer orientale* is more problematic, since there appear to be no extant original visual elements, the name evidently based on *Acer foliis trilobis integerrimis subvillosis* Mill., *The gardeners dictionary* 7th ed.: *Acer* No. 10 (1759), said by Miller to grow in 'the Levant'. From this and the synonyms added by Linnaeus to the illegitimate *A. creticum* in 1763, it would seem that *A. orientale* is a species with pubescent leaves and petioles. Yaltirik (1967: 519) was unable to trace any original material for *A. orientale* and felt the name could not be applied to the eastern Mediterranean

species which earlier authors had consistently referred to as either *A. orientale* or *A. creticum*, on account of that plant always having glabrous leaf-blades, and instead adopted the name *A. sempervirens*. This treatment has been followed in later works, notably *Flora Europaea* (Tutin et al., 1968: 239) and the *Med-Checklist* (Greuter, Burdet & Long, 1984: 42).

sempervirens. 11. ACER foliis ovatis integerrimis sempervirentibus.
Mill. dict. †
Habitat in Oriente. 5.

The name *Acer sempervirens* appears also to lack any extant original elements, and is based on another Miller name, *Acer follis ovatis integerrimis sempervirentibus* Mill., *The gardeners dictionary* 7th ed.: Acer No. 11 (1759), said by its author to have originated as seeds from the Levant. The plant which is currently called *A. sempervirens* is an eastern Mediterranean species similar and closely related to *A. monspessulanum*, with leaves sometimes ovate and more or less evergreen if the plants are heavily grazed, but tri-lobed and deciduous where out of reach of grazing animals. In the absence of any original material, it is necessary to choose a neotype for the name. The following specimen is here designated as such, since it exhibits not only ovate, entire leaves, thus agreeing with Linnaeus's concept of the species, but the tri-lobed leaves of ungrazed plants: Crete, '*Acer creticum* L.', Omalos, 10 June 1938, Ogilvie-Grant 25 (K) (Fig. 1).

The typification of *Acer orientale* still remains unresolved. Murray (1970a: 145, b: 36; 1977: 7; 1979: 27) accepts the name and designates an element in Herb. Tournefort (P) as the type, but fails to indicate which specimen he has in mind. Several sheets of *Acer* exist in that herbarium in addition to the single element which appears to agree with *A. sempervirens* as currently understood (sheet No. 6083, IDC microfiche!). If Murray had explicitly cited No. 6083, his statements could have been accepted as effective designation of a neotype (cf. Greuter et al., 1994: 11, Art. 9.8). (It could not be a lectotype since not only is there no reference to Tournefort in the protologue, but the specimens in Tournefort's herbarium are not known to have been studied by Linnaeus and are not, therefore, original elements for Linnaean names.) Nevertheless, the fact remains that there is insufficient evidence to allow a reasonably confident correlation between *A. orientale* and a currently recognized taxon, and the name should be considered a 'nomen ambiguum'. *A. orientale* could have been based on an example of *A. sempervirens* with pubescent twigs and petioles: indeed Linnaeus's (1763) inclusion of the Alpino element in the synonymy of the illegitimate *A. creticum* lends credence to this hypothesis. It is also possible, though unlikely, that the name was based on one of the eastern Mediterranean, pubescent-leaved subspecies of *A. monspessulanum*. If *A. orientale* were to be neotyped on a specimen belonging to *A. sempervirens*, then the former would be the correct name for the species and the nomenclatural stability of nearly thirty years would be disrupted. A neotype belonging to *A. monspessulanum* subsp. *assyriacum* (Pojark.) Rech. f. or subsp. *oksalianum* Yalt. could be chosen without causing any disruption, but there seems insufficient justification for considering either of these names to be taxonomically synonymous with *A. orientale*. It therefore seems that there exist sufficient grounds to propose that the names *A. orientale* and *A. creticum* be rejected. A formal proposal has been submitted to *Taxon*.

6. 'Acacia secunda', p. 11, fig. p. 10.

B. & S.: *Cytisus creticus* Boiss. & Heldr. (currently *Chamaecytisus creticus* (Boiss. & Heldr.) Rothm.)

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works. The plant depicted is a good likeness of *Calicotome villosa* (Poir.) Link, but alternatively could be *Chamaecytisus creticus* or one of the other spiny leguminous shrubs which occur in Crete.

7. 'Aspalathus secundus', p. 13, fig. p. 12.

B. & S.: *Calicotome villosa* (Poir.) Link

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works. The plant depicted is scarcely distinguishable from that on page 10 and likewise could be either *Calicotome* or one of the other spiny leguminous shrubs in Crete.

8. 'Echinopoda', p. 15, fig. p. 14.

L.: 'Genista Spartium Spinosum alterum aphyllon, tribus aculeis semper juncitis, floribus luteis. C.B. 394 T.C. 44.'

S.: *Genista lusitanica* L., nom. confus. (currently *Stauracanthus genistoides* (Brot.) Samp.) or *Spartium horridum* Vahl (currently *Echinospartum horridum* (Vahl) Rothm.)

B. & S.: *Genista acanthoclada* DC.

Comments: Neither the Alpino element nor the Tournefort polynomial in Linnaeus's annotation appears to be mentioned in any of Linnaeus's works. The figure is greatly stylized, but seems to depict a spiny leguminous shrub, possibly *Genista acanthoclada*. Neither *Echinospartum horridum* nor *Stauracanthus genistoides* are known to occur in Crete.

9. 'Colutea Scorpioide odorata', p. 17, fig. p. 16.

S.: *Coronilla argentea* L. (currently *C. valentina* L.)

B. & S.: *Coronilla argentea* L.

4. CORONILLA fruticosa, foliolis undenis: extino ma- *argentea*, jore.

Colutea scorpioides odorata. Alp. exot. 17.
Habitat in Creta. 5.

Comments: Linnaeus includes the Alpino element in the protologue of *Coronilla argentea* in *Species plantarum* (1753: 743). The only extant original element for this name appears to be the Alpino figure which, although somewhat stylized, is a good likeness of *C. valentina*, in the synonymy of which *C. argentea* is currently included. The figure is, therefore, here designated as the lectotype of *C. argentea* (Fig. 2).

10. 'Linum Arboreum', p. 19, fig. p. 18.

S.: *Linum arboreum* L.

B. & S.: *Linum arboreum* L.

12. LINUM foliis cuneiformibus, caulibus arborescenti- *arboreum*.

Linum arboreum. Alp. exot. 19, t. 13.
Habitat in Crete. 5.

Comments: Linnaeus includes the Alpino element in the protologue of *Linum arboreum* in *Species plantarum* (1753: 279–280). The only extant original element for this name

appears to be the Alpino figure, which is stylized, but because of its Cretan provenance is unlikely to be a depiction of anything other than *L. arboreum*. Therefore, the figure is here designated as the lectotype (Fig. 3) and in view of its lack of useful diagnostic features, the following specimen as the epitype: Iter Aegaeum VI [Crete], *Linum arboreum* L., 22 April 1942, Rechinger 12202 (BM) (Fig. 4).

11. 'Lycium Creticum', p. 21, fig. p. 20.

L.: 'Berberis cretica, buxi folio. Tournef. cor. 45.' [error for '42'] / 'Rhamnus creticus, buxi folio minori. T. cor. 41 ?' / 'Berberis alpina cretica. CB 454'.

Berberis alpina cretica. Bauh. pin. 454.
Lycium creticum. Alp. exot. 21. t. 20.
Lycium e Candia. Pona. ital. 137.
Habitat in Creta. b

Comments: Linnaeus includes the Alpino element in the protologue of *Berberis cretica* in *Species plantarum* (1753: 331), together with the first Tournefort and Bauhin polynomials in his annotation. The only extant original elements for *B. cretica* appear to be Alpino's plant and the figure captioned 'Licio I. di Candia ouero Berberi alpina del Belli' in Pona, *Monte Baldo descritto*: 137 (1617)! Both illustrations obviously depict a species of *Berberis* in fruit and, since the provenance is Crete, this must be *B. cretica*, which is the only species known to occur there. The Alpino figure, being the more detailed, is here designated as the lectotype (Fig. 5) and since there are insufficient diagnostic characters shown to distinguish it from other species of *Berberis*, the following specimen is designated as the epitype: Iter Aegaeum VI [Crete], *Berberis cretica* L., 7 July 1942, Rechinger 14293 (BM) (Fig. 6), isoepitype at K.

12. 'Spartium Creticum', p. 24, fig. p. 23.

B. & S.: *Cytisus creticus* Boiss. & Heldr. (currently *Chamaecytisus creticus* (Boiss. & Heldr.) Rothm.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works. Baldacci and Saccardo's determination may well be correct, but the plant depicted could be one of the other leguminous shrubs which occur in Crete.

13. 'Spartium Spinosum', p. 27, fig. p. 26.

L.: 'Barba jovis cretica, linariae folio, fl. luteo parvo. T.C. 44.'

S.: *Anthyllis hermanniae* L.

B. & S.: *Anthyllis hermanniae* L.

Comments: The Alpino element and the Tournefort polynomial in Linnaeus's annotation are included in the synonymy of *Anthyllis hermanniae* in *Species plantarum* 2nd ed. (1763: 1014), but are absent from the protologue in the first edition (1753: 720). Linnaeus also includes the Tournefort name with some doubt, indicated by a question mark, in the protologue of *Cytisus graecus* L. (currently *Anthyllis hermanniae*) in *Species plantarum* (1753: 740), as well as in the second edition (1763: 1043). The plant depicted by Alpino is obviously *A. hermanniae*.

14. 'Spartium Spinosum alterum', p. 29, fig. p. 28.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

15. 'Cyanus Arborescens Longifolia', p. 31, fig. p. 30.

L.: 'Jacea frutescens, plantaginis folio, fl. albo. T. cor. 32'.
B. & S.: *Staelhelina fruticosa* (L.) L.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works. However, the Tournefort polynomial in Linnaeus's annotation is included in the synonymy of *Centaurea fruticosa* L. in *Species plantarum* 2nd ed. (1763: 1286), but not in the protologue of that name in *Systema naturae* 10th ed. (1759a: 1229). The species was transferred to the genus *Staelhelina* in *Systema naturae* 12th ed. (1767b: 538). The plant depicted by Alpino is a moderately good likeness of *S. fruticosa*, except that the leaves are too narrow.

16. 'Cyanus Arborescens altera, Styracisfolio', p. 33, fig. p. 32.

L.: 'Staelhelina'.

S.: *Staelhelina arborescens* L., nom. illegit. superfl. (currently *Staelhelina petiolata* (L.) Hilliard & Burtt).

B. & S.: *Staelhelina arborescens* L.

Comments: Linnaeus includes the Alpino element in the protologue of *Staelhelina arborescens* in *Mantissa plantarum* (1767a: 111). This is an illegitimate superfluous name because a Schreber element cited in the synonymy by Linnaeus is in fact an earlier, validly published binomial with priority over *S. arborescens* L., namely *Staelhelina arborea* Schreb., *Icones et descriptiones plantarum minus cognitarum*: 1 (1766). The basionym of the currently accepted name is *Gnaphalium petiolatum* L., first published by Linnaeus in *Species plantarum* (1753: 854). This was transferred to the genus *Staelhelina* by Hilliard & Burtt (1973: 384), as a taxonomic synonym of both *S. arborescens* and *S. arborea*, over which its epithet has priority at the rank of species. The lectotype of *G. petiolatum* is a specimen in Herb. Clifford: 402, *Gnaphalium* No. 16 (BM), designated as such by Hilliard & Burtt (loc. cit.). The plant depicted by Alpino is obviously *S. petiolata*.

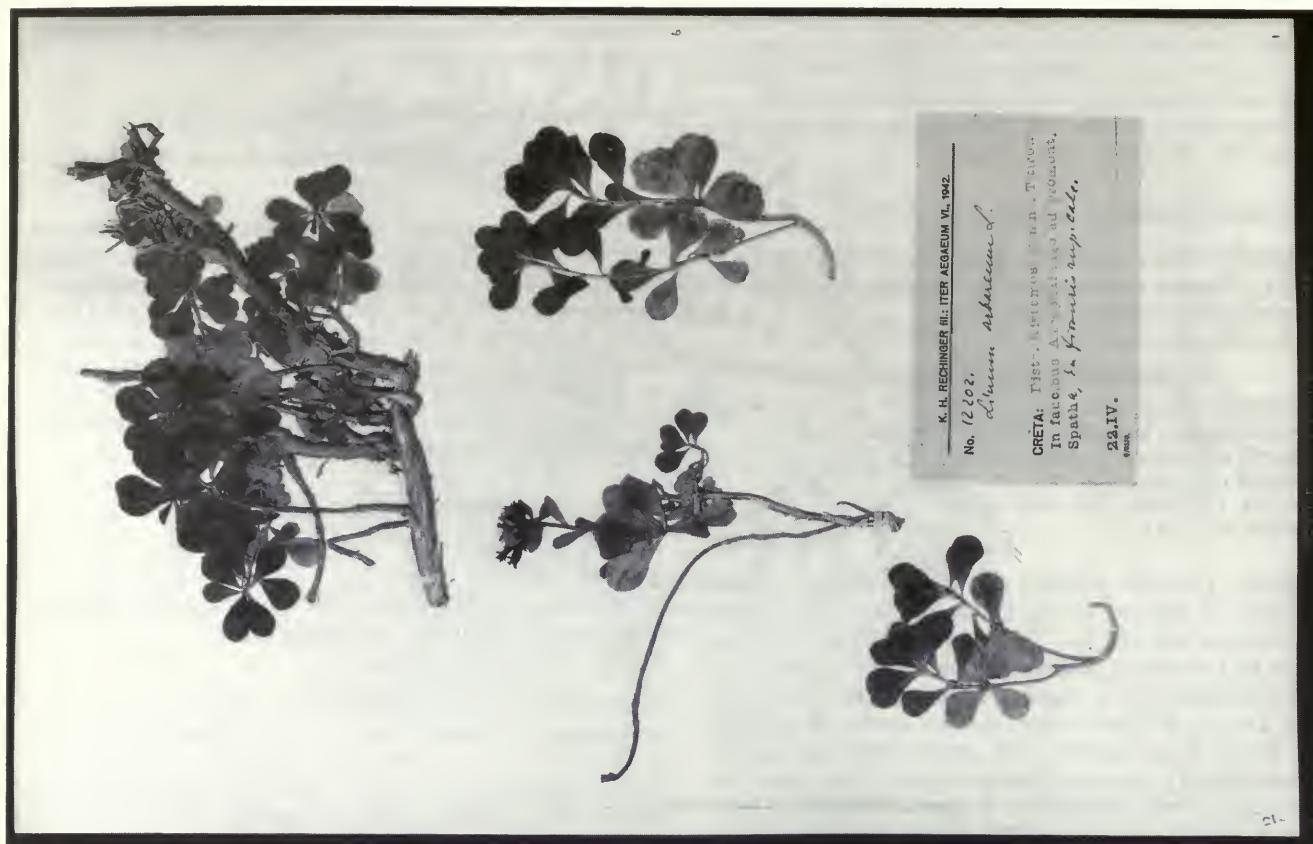

17. 'Scabiosa arborea', p. 35, fig. p. 34.

L.: 'Scabiosa cretica frutescens, auriculae ursi folio. T. cor. 34.'

S.: *Scabiosa limonifolia* Vahl (currently *Pseudoscabiosa limonifolia* (Vahl) Devesa).

B. & S.: *Scabiosa cretica* L. (currently *Lomelosia cretica* (L.) Greuter & Burdet).

Comments: Linnaeus includes the Alpino element in the synonymy of *Scabiosa corollulis quinquefidis, foliis lanceolatis fere integerrimis* in *Hortus cliffortianus* (1738: 31–32), but does not appear to cite it explicitly in any of his other works, although he includes the *Hortus cliffortianus* name in the protologue of *Scabiosa cretica* in *Species plantarum* (1753: 100). In the same protologue, the Tournefort polynomial in Linnaeus's annotation is included under the unnamed var. β. The plant depicted by Alpino is obviously *Lomelosia minoana* (P.H. Davis) Greuter & Burdet, endemic to Crete and a close relative of *L. cretica* which is, in the current strict sense, endemic to the western Mediterranean region. The oblanceolate-spathulate leaves rule out the only similar spe-

S.: *Pteris longifolia* L. (currently *P. vittata* L.)

B. & S.: *Pteris longifolia* L.

Comments: Linnaeus includes the Alpino element in the protologue of *Pteris cretica* L. in *Mantissa plantarum* (1767a: 130). However, this species has never been recorded with certainty from Crete and the illustration almost certainly depicts *P. vittata*, of which it is a good likeness, this being the only *Pteris* known to occur on the island. The lectotype of *P. cretica* is *Arduino* s.n., a specimen in Herb. Linn. No. 1246.7 (LINN), designated as such by Tryon (1964: 192).

32. ‘*Anchusa Arborea*’, p. 69, fig. p. 68.

β. *Anchusa arborea. Alp. exot. 67. t. 68.*

Buglossum samium frutescens, foliis rosmarini obscure virentibus lucidis & hirsutis. Tournef. cor. 6.

Habitat in Gallia, Samo & Europa australi. 3

Comments: Linnaeus includes the Alpino element in the protologue of *Lithospermum fruticosum* in *Species plantarum* (1753: 133), under the unnamed var. β, together with the Tournefort polynomial in his annotation. The Alpino figure is stylized, but cannot be interpreted as depicting any species in Crete other than *Lithodora hispida*. In choosing a lectotype for *Lithospermum fruticosum*, the Alpino figure should be avoided, since it clearly disagrees with the current usage of the name (*Lithodora fruticosa* is endemic to the western Mediterranean region and is not known to occur in Crete). The other three extant original elements appear to be specimens in Herb. Linn. No. 181.9 (LINN!), Herb. Linn. No. 68.1 (S-photocopy!) and Herb. Burser XIV(2): 17 (UPS-microfiche!), all of which clearly agree with *L. fruticosa* as currently understood. The most complete specimen is that at LINN, and it is here designated as the lectotype of *Lithospermum fruticosum* (Fig. 11).

33. ‘*Solanum somniferum Antiquorum*’, p. 71, fig. p. 70.

B. & S.: *Physalis somnifera* L. (currently *Withania somnifera* (L.) Dunal).

Comments: Linnaeus includes the Alpino element in the synonymy of *Physalis caule fruticoso tereti, foliis ovatis integrerimis, floribus confertis* in *Hortus cliffortianus* (1738: 62), but does not appear to cite it explicitly in any of his other works, although he includes the *Hortus cliffortianus* name in the protologue of *Physalis somnifera* in *Species plantarum* (1753: 182). The plant depicted by Alpino is obviously *Withania somnifera*.

34. ‘*Dorycnium*’, p. 74, fig. p. 73.

L.: ‘*Convolvulus arg. angustif. umbellatus. T. coroll. 1.*’

B. & S.: *Convolvulus oleifolius* Desr.

Comments: Linnaeus includes the Alpino element in the protologue of *Convolvulus cneorum* L. in *Species plantarum* (1753: 157–158), under the unnamed var. γ, although the Tournefort polynomial in his annotation appears not to be mentioned in any of his works. The plant depicted is almost certainly *Convolvulus oleifolius* Desr. (*C. cneorum* is a central Mediterranean species not known to occur in Crete). The lectotype of *C. cneorum* is the figure captioned ‘*Convolvulus Creticus rectus s. Dorycnium quorundam, Ponae*’ in Morison, *Plantarum historiae universalis oxoniensis* 2: s. 1, t. 3, f. 1 (1680), designated as such by Sa’ad (1967: 126).

35. ‘*Chamaepeuce*’, p. 77, fig. p. 76.

L.: ‘*Jacea cretica frutescens, elichrysi folio, fl. magno purpurascente. T. cor. 32.*’

B. & S.: *Chamaepeuce mutica* DC. (currently *Pilosemon chamaepeuce* (L.) Less.)

Comments: Linnaeus includes the Alpino element in the protologue of *Serratula chamaepeuce* L. in *Species plantarum* (1753: 819). The Tournefort polynomial in Linnaeus’s annotation is included in the synonymy of *Centaurea calycibus inermibus: squamis lanceolatis, foliis linearibus confertis integrerimis* in *Hortus cliffortianus* (1738: 420–421), but does not appear to be cited explicitly in any of Linnaeus’s other works, although the *Hortus cliffortianus* name is included in the protologue of *Serratula chamaepeuce*. Linnaeus transferred the species to the genus *Staelolina* in *Systema naturae* 12th ed. (1767b: 538). The Alpino figure is a good likeness of *Pilosemon chamaepeuce* and was designated as the lectotype by Greuter (1975: 417).

36. ‘*Tragoriganum*’, p. 79, fig. p. 78.

B. & S.: *Satureja thymbra* L.

Comments: Linnaeus includes the Alpino element in the synonymy of *Thymus tragoriganum* Turra (currently *Satureja thymbra*) in *Mantissa plantarum* (1767a: 84). Various authors have wrongly attributed this binomial to Linnaeus. Its first valid publication is by Turra in *Farsetia plantae genus*: 11 (1765), and not Linnaeus in *Mantissa plantarum*, where explicit reference to Turra is given.

2. *Thymus (Tragoriganum) caule suffruticoso erecto, floribus verticillatis, foliis hispidis acuminatis.*

*Tragoriganum creticum. Baub. pin. 223. Raj. hijf. 1. p. 523. **

*Tragoriganum magnum. Alp. exot. 79. t. 78. **

Tragoriganum II. altera species. Clus. hijf. 1. p. 355.

Habitat in Creta. 1

Planta suaveolens. Caules pedales, ramosi, hirsuti. Folia opposita petiolata, utrinque acuminata, hispida, rigidiuscula. Flores verticillati carulefacti.

Ulus Thymi vulgaris Lin.

There appear to be two extant original elements for *Thymus tragoriganum*: the Alpino figure and the figure captioned ‘*Tragoriganum II. altera species*’ in Clusius, *Rariorum plantarum historiae* 1: 355 (1601)! Both figures are moderately good likenesses of *Satureja thymbra*, albeit somewhat stylized. Alpino’s figure, being the less stylized of the two, is here designated as the lectotype of *T. tragoriganum* (Fig. 12).

37. ‘*Thymbra*’, p. 81, fig. p. 80.

PROSPERI ALPINI

78

Tragoriganum.

Tragori.

Fig. 11 The lectotype of *Lithospermum fruticosum* L.: Herb. Linn. No. 181.9 (LINN).Fig. 12 The lectotype of *Thymus tragoriganum* Turra: Alpino, *Pl. exot.*: 78 (1627).

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

38. 'Stratiotes millefolia Cretica', p. 84, fig. p. 83.

S.: *Achillea cretica* L.

B. & S.: *Achillea cretica* L.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works. The figure is greatly stylized, but most probably does indeed depict *Achillea cretica*.

39. 'Gaidaro thymum', p. 87, fig. p. 86.

L.: 'Stachys spinosa cretica. C.B. 236. T. cor. 11.'

B. & S.: *Stachys spinosa* L.

Comments: The Alpino element does not appear to be mentioned in any of Linnaeus's works, although the Bauhin polynomial in Linnaeus's annotation is included in the protologue of *Stachys spinosa* in *Species plantarum* (1753: 581–582). Both the Bauhin and Tournefort polynomials in Linnaeus's annotation are included in the synonymy of *Stachys ramulis spina terminatis* in *Hortus cliffortianus* (1738: 310), but do not appear to be cited explicitly in any of Linnaeus's other works, although the *Hortus cliffortianus* name is included in the protologue of *Stachys spinosa*. The figure is slightly stylized but obviously depicts *S. spinosa*.

40. 'Ladanum Creticum', p. 89, fig. p. 88.

L.: 'Cistus ladanifera cretica, flore purpureo. T. cor. 19'.

S.: *Cistus creticus* L.

B. & S.: *Cistus creticus* L.

Comments: Linnaeus includes the Alpino element in the synonymy of *Cistus ladanifera cretica, flore purpureo*, which is ascribed to Tournefort, in *Materia medica* (1749: 92). He also cites it in the synonymy of *Cistus creticus* in *Species plantarum* 2nd ed. (1762: 738), together with the Tournefort polynomial from his annotation, but neither name is included in the protologue of that species in *Systema naturae* 10th ed. (1759a: 1077). The figure almost certainly depicts one of the Cretan species of *Cistus*, but it is impossible to be certain which one.

41. 'Chamecistus', p. 93, fig. p. 92.

B. & S.: *Cistus parviflorus* Lam.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works. Baldacci and Saccardo may indeed be correct in their determination, but it is not possible to be certain whether the figure depicts a species of *Cistus*, *Fumana* or *Helianthemum*.

42. 'Pseudo cistus ledum', p. 95, fig. p. 94.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

43. 'Pseudo cistus ledum alter', p. 97, fig. p. 96.

B. & S.: indet.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works. The figure does not seem to depict any known Cretan plant.

44. 'Hyoscyamus Aureus', p. 99, fig. p. 98.

L.: 'Hyoscyamus creticus luteus major. C.B. 169. prod. 92. Tournef. cor. 5.'

B. & S.: *Hyoscyamus aureus* L.

aureus.

3. HYOSCYAMUS foliis petiolatis, floribus pedunculatis. *Hort. cliff. 56. Roy. Ingdb. 422.*

Hyoscyamus creticus luteus major. Baub. pin. 169. prodr. 92.

β. Hyoscyamus creticus luteus minor. Baub. pin. 169.

Hyoscyamus aureus. Alp. exot. 99. t. 98.

Habitat in Creta. ☽

Comments: Both the Alpino element and the Bauhin polynomial in Linnaeus's annotation are included in the protologue of *Hyoscyamus aureus* in *Species plantarum* (1753: 180), the former under the unnamed variety β . In choosing a lectotype for *H. aureus*, Alpino's figure should be avoided since it is a stylized and inaccurate depiction of the species. The other five extant original elements for the name appear to be specimens in Herb. Linn. No. 244.4 (LINN!), Herb. Clifford: 56, *Hyoscyamus* No. 3 (2 sheets: fol. A and fol. B) and No. 3 β (BM!), and the figure captioned 'Hyoscyamus Creticus luteus maior' in Bauhin, *Prodromus theatri botanici*: 92 (1620)! The Bauhin figure does not accurately depict the inflorescence of *H. aureus*, while the specimen in the Linnaean Herbarium and No. 3 β in the Clifford Herbarium both belong to *H. albus* L. Of the remaining two specimens in the Clifford Herbarium, one (No. 3, fol. B) is sterile and cannot be identified with absolute confidence, whereas the other (No. 3, fol. A) is fertile, clearly belongs to *H. aureus* as currently understood, and is here designated as the lectotype (Fig. 13). Schönbeck-Temesy (1972: 70) designated a specimen in Herb. Linn. No. 244.3 (LINN) which indeed represents *H. aureus*. However, Linnaeus's annotation of this specimen does not include a species number from *Species plantarum*, which almost certainly means that it was not received by Linnaeus until after 1753 and is not, therefore, relevant original material for *H. aureus*. For this reason, Schönbeck-Temesy's typification is ineffective.

45. 'Rosmarinum stecadis facie', p. 103, fig. p. 102.

L.: 'Teucrium frutescens, stoechadis arabicae folio & facie. T. cor. 14.'

S.: *Teucrium creticum* L.

B. & S.: indet.

Comments: Linnaeus includes the Alpino element in the protologue of *Teucrium creticum* in *Species plantarum* (1753: 563). The Tournefort polynomial in Linnaeus's annotation is included in the synonymy of *Teucrium foliis lanceolato-linearibus integerrimis sessilibus, floribus solitariis pedunculatis* in *Hortus cliffortianus* (1738: 302), but does not appear to be cited explicitly in any of Linnaeus's other works, although the *Hortus cliffortianus* name is included in the protologue of *Teucrium creticum*. The plant depicted by Alpino is somewhat stylized, but is obviously a species of *Teucrium*, although almost certainly not *T. creticum*, since that species has never reliably been recorded from Crete. Instead, it may be the eastern Mediterranean *T. brevifolium* Schreb. The lectotype of *T. creticum* is a specimen in Herb. Linn. No. 722.11 (LINN), designated as such by Ekim (1982: 56).

46. 'Arundo Graminea aculeata', p. 105, fig. p. 104.

L.: 'Cenchrus'.

S.: *Cenchrus frutescens* L. (see below).

B. & S.: indet.

frutescens. 5. CENCHRUS capitulis lateralibus sessilibus, foliis mucronatis, caule fruticoso.

Arundo graminea aculeata. *Alp. exot.* 105. t. 104.

Gramen orientale spicatum fruticosum spinosum, spicis echinatis in capitulum congestis. *Tournef. cor.* 39.

Habitat in America. b

Comments: Linnaeus includes the Alpino element in the protologue of *Cenchrus frutescens* in *Species plantarum* (1753: 1050). The only extant original element appears to be the Alpino figure, and the only other synonym given by Linnaeus is the unillustrated *Gramen orientale spicatum fruticosum spinosum, spicis echinatis in capitulum congestis* (Tournefort, 1703: 39). Linnaeus's habitat statement 'America' seems to be at odds with both the Cretan provenance of Alpino's plant and the 'orientale' in Tournefort's name. This is altered to 'Armenia' in *Species plantarum* 2nd ed. (1763: 1489).

The name *Cenchrus frutescens* is no longer in use, and its taxonomic application is unclear. Sibthorp & Smith (1806–1809: 76) consider it a very obscure species, but nevertheless give it from coastal sands in Crete, as well as southern Greece and the Greek islands. Raulin (1869: 572) also considers it a very doubtful species, gives it from maritime sands in Crete, and cites a note by Sieber (1822) claiming its identity with *Arundo donax* L. Rechinger (1943: 771) includes the name, with some doubt, in the synonymy of *Arundo plinii* Turra.

Neither *Arundo donax* nor *A. plinii* is recognizable in Alpino's plate. Instead, the plant depicted strongly resembles a growth form of *Phragmites australis* (Cav.) Trin. ex Steud. that occurs in Crete in places which are only seasonally wet, including maritime sands adjoining streams and marshes. Such plants have sprawling, branching stems, short internodes and leaves, sharply pointed leaf-apices, and appear never to flower. *Cenchrus frutescens* could be considered a taxonomic synonym of *P. australis*, if the Alpino plate were designated as the lectotype and a suitable Cretan specimen exhibiting the sterile growth form were designated as the epitype. However, under these circumstances, a change of name would be necessary for *P. australis*, which is based on *Arundo australis* Cav. in *Anales de historia natural*, Madrid 1: 100 (1799), since the earliest available epithet at the rank of species would be *frutescens* (1753). (*Arundo phragmites* L., Sp. pl. 1: 81 (1753) is also a taxonomic synonym of *P. australis*, but its epithet cannot, of course, be used within the genus *Phragmites* without forming a tautonym.) In order not to destabilize the nomenclature of *P. australis*, which is a widespread and well known species, the rejection of the name *C. frutescens* seems appropriate. A formal proposal has been submitted to *Taxon*.

47. 'Thlaspi clipeatum arborescens creticum', p. 107, fig. p. 106.

B. & S.: *Iberis sempervirens* L.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works. The figure seems to depict a plant belonging to the Brassicaceae, but is so stylized that it is not possible to identify it even to the rank of genus.

48. 'Verbasculum saluifolium', p. 109, fig. p. 108.

L.: 'Phlomis cretica fruticosa, folio subrotundo, flore luteo. T.C. 10.'

B. & S.: *Phlomis lanata* Willd.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works, although the Tournefort polynomial in Linnaeus's annotation is included in the protologue of *Phlomis fruticosa* L. in *Species plantarum* (1753: 584–585), under the unnamed var. β. The figure is a good likeness of *P. lanata*.

49. 'Rubea arborescens', p. 111, fig. p. 110.

L.: 'Rubia cretica frutescens tenuifolia. Tournef. cor. 4.'

B. & S.: *Crucianella maritima* L.

Comments: Neither the Alpino element nor the Tournefort polynomial in Linnaeus's annotation appears to be mentioned in any of Linnaeus's works. The figure exhibits the whorled leaves and spike-like, terminal inflorescences found in *Crucianella*, but is not an accurate depiction of *C. maritima* because it has leaves in whorls of five, not four, and lacks the imbricate, ovate bracts characteristic of that species. *C. maritima* is a western Mediterranean species and is not known to occur in Crete.

50. 'Horminum Creticum', p. 113, fig. p. 112.

B. & S.: *Salvia horminum* L. (currently *S. viridis* L.)

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works. The plant depicted by Alpino is somewhat stylized, but is obviously *Salvia viridis*.

51. 'Leontopodium', p. 115 ['113'], fig. p. 114 [?106].

L.: 'Plantago cretica minima tomentosa, caule adunco. Tournef. cor. 5.' / 'Holosteum s. Leontopodium creticum. C.B. 190'.

B. & S.: indet.

Comments: Linnaeus includes the Alpino element in the synonymy of *Plantago foliis linearibus, scapo brevissimo, spica subrotunda nutante*, in *Hortus cliffortianus* (1738: 36–37), but does not appear to cite it explicitly in any of his other works, although he includes the *Hortus cliffortianus* name in the protologue of *Plantago cretica* L. in *Species plantarum* (1753: 114). The Bauhin polynomial in Linnaeus's annotation is included in the same protologue, but not that of Tournefort, which is included in the synonymy of the aforementioned *Hortus cliffortianus* name as well as under *Plantago cretica* in *Species plantarum* 2nd ed. (1762: 165). The plant depicted by Alpino is stylized, but could be interpreted as being *P. cretica*.

52. 'Argentea', p. 117, fig. p. 116.

L.: 'Jacea cretica laciniata argentea, fl. parvo flavescente. T.C. 32'.

B. & S.: *Centaurea argentea* L.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works, although the Tournefort polynomial in Linnaeus's annotation is included in the protologue of *Centaurea argentea* in *Species plantarum* (1753: 912–913). The

Hort. cliff. 422. *
Jacea cretica aculeata incana. *Tournef. inst. 445.*
Stoebe spinosa cretica. *Morif. bifl. 3. p. 136.*
Cyanus spinosus. *Alp. exot. 163. t. 162.*
Habitat in Creta

is a good likeness of *C. spinosa*. The three other extant original elements for this name appear to be specimens in Herb. Linn. No. 1030.20 (LINN!), Herb. Clifford: 422, *Centaurea* No. 15 (BM!) and the figure captioned ‘Stoebe spinosa Cretica, Park. Cyanus peren: spinosus Creticus. Ponae’ in Morison, *Plantarum historiae universalis oxoniensis* 3: s. 7, t. 25, f. 2 (1699)! Both of the specimens obviously belong to *C. spinosa* and show more of the diagnostic characters than either of the two figures. The specimen in the Clifford Herbarium is here designated as the lectotype of *C. spinosa* (Fig. 17) because, unlike that in the Linnaean Herbarium, it bears numerous capitula, with clearly visible involucral bracts, which are so important in the taxonomy of *Centaurea*.

73. ‘*Melanthium odoratum*’, p. 165, fig. p. 164.

B. & S.: indet.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus’s works. The plant depicted by Alpino is greatly stylized and does not appear to represent any known Cretan plant.

74. ‘*Gallium Montanum Creticum*’, p. 167, fig. p. 166.

L.: ‘*Aparine cretica* [error for ‘*graeca*’] *saxatilis incana tenuifolia.* *Tournef. cor. 4.*’ / [deleted:] ‘*Cruciata cretica, fruticosa, flore albo.* *Tournef. cor. 4.*’

S.: *Galium graecum* L.

B. & S.: *Galium graecum* L.

Comments: Linnaeus includes the Alpino element in the protologue of *Galium graecum* in *Mantissa plantarum* (1767a: 38), together with the first, undeleted Tournefort polynomial in his annotation. The plant depicted by Alpino’s is obviously a member of the Rubiaceae and a moderately good likeness of *G. graecum*, but it is impossible to be sure if it is indeed that species. The lectotype is a specimen in Herb. Linn. No. 129.32 (LINN), designated as such by Ehrendorfer & Schönbeck-Temesy (1982: 826).

75. ‘*Spica Trifolia*’, p. 169, fig. p. 168.

L.: ‘*Melilotus cretica humillima humifusa, fl. albo magno.*
T.C. 28.’

S.: *Trifolium uniflorum* L.

B. & S.: *Trifolium uniflorum* L.

Comments: Linnaeus includes the Alpino element in the protologue of *Trifolium uniflorum* in *Species plantarum* (1753: 771), together with the Tournefort polynomial in his annotation. The plant depicted by Alpino is stylized, but a moderately good likeness of *T. uniflorum*. The lectotype is a specimen in Herb. Linn. No. 930.50 (LINN), designated as such by Jafri (1980: 227).

76. ‘*Spicae trifoliae altera figura*’, p. 171, fig. p. 170.

B. & S.: indet.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus’s works. The figure appears to depict a member of the Fabaceae, but it is impossible to identify it more fully.

77. ‘*Asciroides*’, p. 173, fig. p. 172.

L.: ‘*Hypericum creticum amplissimo folio nitido.* T. cor. 18.’
 B. & S.: *Hypericum hircinum* L.

Comments: Linnaeus includes the Alpino element in the synonymy of *Hypericum flore pentagyno, foliis ovato-oblongis glabris integerimis* in *Hortus cliffortianus* (1738: 380), but does not appear to cite it explicitly in any of his other works, although he includes the *Hortus cliffortianus* name in the protologue of *Hypericum ascyron* L. in *Species plantarum* (1753: 783–784). The Tournefort polynomial in Linnaeus’s annotation appears not to be mentioned in any of Linnaeus’s works. The plant depicted by Alpino does not resemble a *Hypericum* or indeed any other known Cretan plant.

78. ‘*Cnicus singularis*’, p. 175, fig. p. 174.

B. & S.: *Carduncellus caeruleus* (L.) C. Presl

Comments: The Alpino element appears not to be mentioned in any of Linnaeus’s works. Baldacci and Saccardo may well be correct in their determination: the plant depicted is a very good likeness of *Carduncellus caeruleus*.

LIBER SECUNDUS

1. No. 1 does not illustrate a plant.

2. ‘*Ligustrum nigrum*’, p. 179, fig. p. 178.

S.: *Syringa persica* var. *laciniata* L.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus’s works.

3. ‘*Datura Contarena*’, p. 182, fig. p. 181 [‘167’].

Comments: The Alpino element appears not to be mentioned in any of Linnaeus’s works.

4. ‘*Convolvulus Arabicus*’, p. 186, fig. p. 185.

S.: *Convolvulus paniculatus* L. (currently *Ipomoea mauritanica* Jacq.)

Comments: The Alpino element appears not to be mentioned in any of Linnaeus’s works.

5. ‘*Rhaponticum*’, p. 188, fig. p. 187.

Comments: Linnaeus includes an Alpino element with the same polynomial but from a different work (Alpino, 1719) in the protologue of *Rheum rhabonticum* L. in *Species plantarum* (1753: 371–372).

6. ‘*Hyoscyamus albus Aegyptius*’, p. 193, fig. p. 192.

Comments: Linnaeus includes the Alpino element in the protologue of *Hyoscyamus muticus* L. in *Mantissa plantarum* (1767a: 45), but with some doubt, since he cites the reference

muticus. 6. **HYOSCYAMUS** folii petiolatis ovatis acutangulis, calycibus muticis, bracteis individuis.
Hyoscyamus albus *egyptius*. *Alp. exot.* 193. t. 192?
Habitat in Aegypto, Arabia. ♂.
Caulis pedalis, craqstis digitis, erectus, teretiusculus, subpubescens: Rami axillaris, brevioribus. Folia alterna, petiolata, ovata, obtuse fimbriata, acutius untrinque biangulata, acuta, lavis, integerrima, pubescentia: Petiolis pubescentibus. Floralia folia subpetiolata, ovata s. ovato-oblonga, integra, alternis floribus bina, alternis solitaria. Racemus secundas apice incurvato. Calyx campanulato-infundibuliformis, quinquefidus: laciniis latissimis, minimeque spinosis. Corolla calyce paulo longior, non. vero latior, subcampanulata, quinquefidus: laciniis 3 superioreibus latioribus; inferioribus 2 minoribus, profunde separatis; color corolla primum extus viridis, demum albidos; intus astropurpureus, laciniis infimis 2 albidos; ultime corolla tota alba immaculata evadit. Stamina 5 declinata, purpurea, corolla paulo longiora. Pistillum longius, declinatum. H. U.

with a question mark. The only extant original element for this name appears to be Alpino's figure, which is indeed recognizable as a species of *Hyoscyamus*, but is stylized if intended to depict *H. muticus*. (The calyx is too short in relation to the corolla-tube and the spikes are insufficiently dense.) The figure is here designated as the lectotype of *H. muticus* (Fig. 18), and the following specimen as the epitype: Plantae Sinaiticae, ex Herb. Postian. apud Colleg. Syriens. Protest., *Hyoscyamus muticus* L., Suez to Wadi Sudr, 28 February 1883, No. 106 (BM) (Fig. 19).

7. ‘Cassabel Darrizà’, p. 195, fig. p. 194.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

8. ‘Mosch, idest, Bamia Muschata’, p. 197, fig. p. 196.

S.: *Hibiscus abelmoschus* L. (currently *Abelmoschus moschatus* Medik.)

Comments: Linnaeus includes the Alpino element in the synonymy of *Hibiscus foliis peltato-cordatis septemangularibus serratis hispidis* in *Flora zeylanica* (1747: 119) and *Hortus upsalensis* (1748: 206), but appears not to cite it explicitly in any of his other works, although he includes both the *Flora zeylanica* and *Hortus upsalensis* names in the protologue of *Hibiscus abelmoschus* in *Species plantarum* (1753: 696).

9. ‘Hypomaratum spherocephalum’, p. 199, fig. p. 198.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

10. ‘Brassica Spinosa’, p. 201, fig. p. 200.

S.: *Bunias spinosa* Turra (currently *Zilla spinosa* (Turra) Prantl).

Comments: Linnaeus includes the Alpino element in the synonymy of *Bunias spinosa* in *Mantissa plantarum* (1767a: 96). Various authors have wrongly attributed this binomial to Linnaeus. Its first valid publication is by Turra in *Farsetia plantae genus*: 11 (1765), and not Linnaeus in *Mantissa plantarum*, where explicit reference to Turra is given.

There appear to be three extant original elements for *Bunias spinosa*: the Alpino figure and figures captioned ‘*Brassica spinosa*’ in Bauhin, *Prodromus theatri botanici*: 54

3. *Bunias (Spinosa) siliculis ovato-acutis, ramis spinosis floriferis. Brassica spinosa. Bakh. pin. 111. prod. 54. t. 54.* Bauh. hifl. 2. p. 835.**
*Raf. hifl. 1. p. 797. Alp. exot. 201. t. 200.**
Habitat in Aegypto, in Ethiopia, in Syria & in Judea.
Celeb. Donati semina ex Aegypto in Italiam misit anno 1761.
Planta cubitalis, ramosa, glabra. Folia petiolata, lanceolata, subdentata, alterna, glauca. Rami subnudi spinis decompositis terminati. Flores sparsi, rari, solitarii, subrubri. Fructus ovato-acuminati.
Folia comeduntur in Aegypto uti Brassica oleracea.

(1620)! and Bauhin, Cherler & Chabrey, *Historia plantarum universalis* 2: 835 (1651)! The Bauhin figures are identical, though one is reversed, and depict a sterile plant which cannot with any certainty be referred to *Zilla spinosa*. The Alpino figure is a much better likeness, and is here designated as the lectotype of *Bunias spinosa* (Fig. 20), with the following specimen as the epitype since the detail shown in the flowers is poor: Egypt, *Zilla spinosa* (Turra) Prantl, Suez, Wadi Iseili, tributary c. 24 km E. of Katamiya observatory, 13 June 1964, Osborn s.n. [ex Chicago Natural History Museum] (BM) (Fig. 21).

11. ‘Sideritis Sambuci folia’, p. 203, fig. p. 202.

S.: *Scrophularia sambucifolia* L.

Comments: Linnaeus includes the Alpino element in the synonymy of *Scrophularia sambucifolia* L. in *Species plantarum* 2nd ed. (1763: 865), but not in the protologue of that name in the first edition (1753: 620–621).

12. ‘Scabiosa Centauroides’, p. 205, fig. p. 204.

Comments: Linnaeus includes the Alpino element in the synonymy of *Scabiosa corollulis quadrifidis, foliis pinnatis, pinnis lanceolatis serratis* in *Hortus cliffortianus* (1738: 30), but appears not to cite it explicitly in any of his other works, although he includes the *Hortus cliffortianus* name in the protologue of *Scabiosa alpina* L. (currently *Cephalaria alpina* (L.) Roem. & Schult.) in *Species plantarum* (1753: 98).

13. ‘Linaria semper virens’, p. 207, fig. p. 206.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

14. ‘Borago echiooides’, p. 209, fig. p. 208.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

15. ‘Laserpitium’, p. 211, fig. p. 210.

S.: *Ferula assa-foetida* L.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

16. ‘Lotus Aegyptia’, p. 214, fig. p. 213; ‘*Loti Aegyptiae, quatuor prima folia, florem totum claudentia*’, fig. p. 216; ‘*Flos Loti Aegyptiae medijs foliolis arcuum modo inflexis*’, fig. p. 218; ‘*Flos Loti Aegyptiae folijs expansis ad naturalem fere magnitudinem*’, fig. p. 220; ‘*Loti Aegyptiae caput, in quo semina continentur*’, fig. p. 222; ‘*Loti Aegyptiae folium integrum*’, fig. p. 224; ‘*Loti Aegyptiae Radix*’, fig. p. 226.

S.: *Nymphaea lotus* L.

192 PROSPERI ALPINI

Hyoscyamus albus Aegyptius.

Duis

Fig. 17 The lectotype of *Centaurea spinosa* L.: Herb. Clifford: 422, *Centaurea* No. 15 (BM).

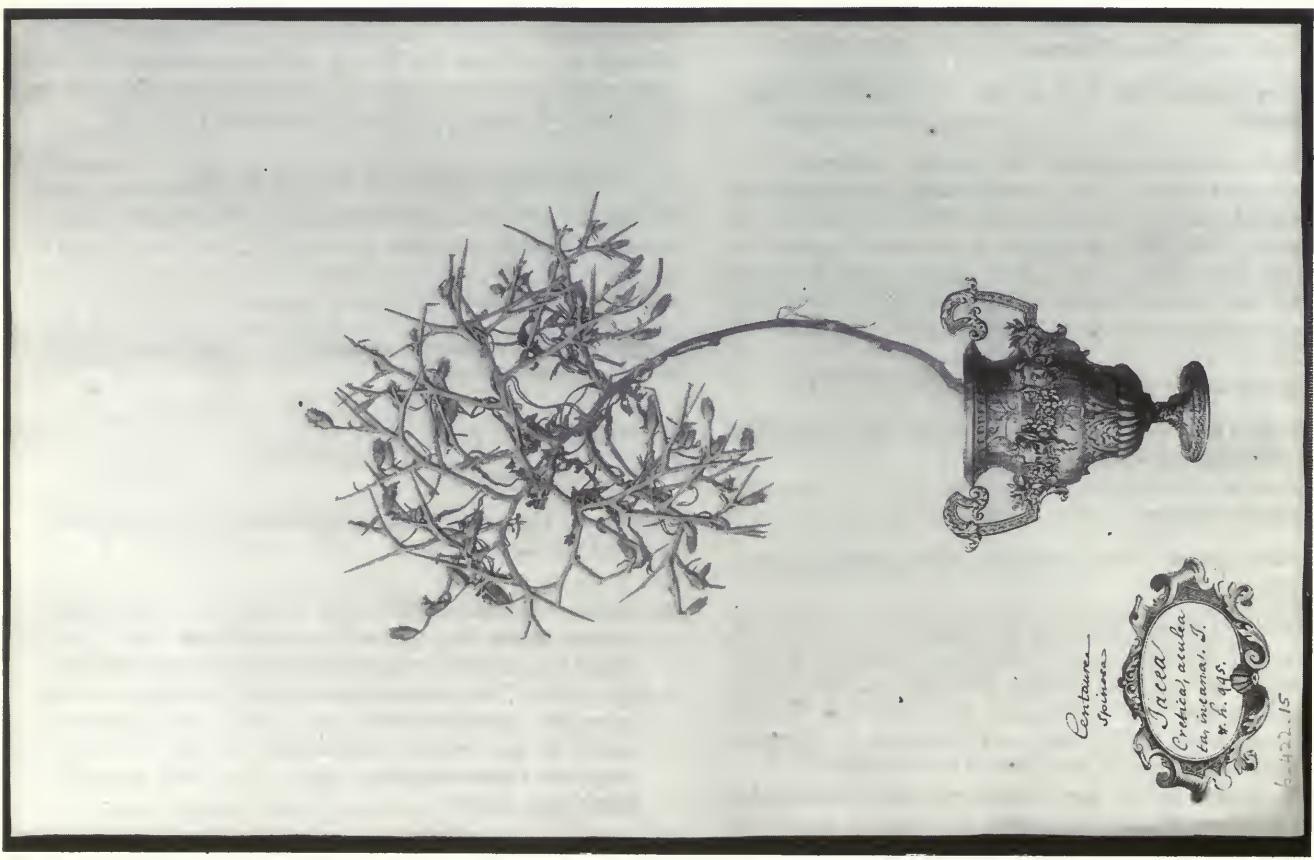

Fig. 18 The lectotype of *Hyoscyamus muticus* L.: Alpino, *Pl. exot.*: 192 (1627).

PROSPERI ALPINI

200

Brassica Spinosa.

Alias

Fig. 19 The epitype of *Hyoscyamus muticus* L.: Plantae Sinaitae, ex Herb. Postian. apud Collieg. Syriens. Protest, No. 106 (BM).

Fig. 20 The lectotype of *Bunias spinosa* Turra: Alpino, Pl. exot.: 200 (1627).

Comments: Linnaeus includes all the Alpino elements except the figure captioned 'Loti Aegyptiae folium integrum' (page 224) in the protologue of *Nymphaea lotus* L. in *Species plantarum* (1753: 511). The lectotype of *N. lotus* is the figure captioned 'Lotus Aegyptia' on page 213 of Alpino, designated as such by Verdcourt (1989: 179).

17. 'Colocassia macroriza, idest longae Radicis', p. 231, fig. p. 230.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

18. 'Colocassia Strogyloriza, idest rotundae radicis', p. 237, fig. p. 236.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

19. 'Sinapi Marinum Aegyptium', p. 251, fig. p. 250.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

20. 'Marum Aegyptiorum', p. 253, fig. p. 252.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

21. 'Cardus minima', p. 255, fig. p. 254.

S.: *Acarna cancellata* (L.) All. (currently *Atractylis cancellata* L.)

B. & S.: *Atractylis cancellata* L.

cancellata. 4. *TRACTYLIS* involucris cancellatis ventricosis linearibus dentatis, calycibus ovatis, floribus flosculos. *Atractylis* foliis linearibus dentatis, calycibus conniventibus. *Hort. cliff.* 395. *Roy. lugdb.* 137. *Acarna* capitulis globol. *Baub. pis.* 379. *Eryngium* parvum palmare, foliis serratis. *Morif. bist.* 3. p. 166. f. 7. t. 36. f. 16. *Carduus* parvus. *Baub. bist.* 3. p. 93. *Raj. bist.* 316. *Carduus* minimus. *Alp. exot.* 254. *Habitat* in Hispania, Sicilia, Cretæ agris. ◎ Receptaculum testum paleis coalitis. Pappus plumosus, basi quasi monophyllos sub florescentia, corollulis longior. *Laf. fling.*

Comments: Linnaeus includes the Alpino element in the protologue of *Atractylis cancellata* in *Species plantarum* (1753: 830). The plant depicted is stylized, but may indeed be *A. cancellata*. The other six extant original elements for the name appear to be specimens in Herb. Linn. No. 971.5 (LINN), Herb. Linn. No. 333.5 (S), Herb. Clifford: 395, *Atractylis* No. 1 (BM) and Herb. van Royen, Leiden No. 900,143–160 (L), and the figures captioned 'Carduus parvus' in Bauhin, Cherler & Chabrey, *Historia plantarum universalis* 3: 93 (1651) and 'Eryngium parvum foliis serratis, Nobis. Carduus parvus, I.B.' in Morison, *Plantarum historiae universalis oxoniensis* 3: s. 7, t. 36, f. 16 (1699). The specimen in the Clifford Herbarium agrees with the current usage of *A. cancellata*, is of good quality, with several capitula, and is here designated as the lectotype (Fig. 22) by Dr D.P. Petit (Université de Limoges). Alavi (1983: 212) designated a specimen in Herb. Linn. No. 971.4 (LINN). However, this specimen was received by Linnaeus from Allioni in 1757, and

cannot, therefore, have any relevance as an original element for a name published in 1753. For this reason, Alavi's typification is ineffective.

22. 'Hypsopus Graecorum tempore hyemali', p. 257, fig. p. 256; 'Hyssopus Graecorum, tempore hyemali', fig. p. 258.

L.: 'Clinopodium creticum fruticosum, foliis lanceolatis. T. cor. 12' [on p. 256].

Comments: Neither the Alpino element nor the Tournefort polynomial in Linnaeus's annotation appears to be mentioned in any of Linnaeus's works.

23. 'Nigella alba, flore simplici', p. 261, fig. p. 260.

B. & S.: *Nigella sativa* L.

Comments: Linnaeus includes the Alpino element in the synonymy of *Nigella petalis subtricuspidatis foliis subpilosis* in *Hortus upsaliensis* (1748: 154), but does not appear to cite it explicitly in any of his other works, although he includes the *Hortus upsaliensis* name in the protologue of *Nigella sativa* in *Species plantarum* (1753: 534). The plant depicted by Alpino certainly appears to a species of *Nigella*, but there are insufficient diagnostic features shown to enable full identification.

24. 'Ranunculus creticus, echinatus latifolius', p. 263. fig. p. 262.

S.: *Ranunculus muricatus* L.

B. & S.: *Ranunculus muricatus* L.

Comments: Linnaeus includes the Alpino element in the synonymy of *Ranunculus seminibus aculeatis, foliis simplicibus palmatis incisis* in *Hortus upsaliensis* (1748: 157), under the unnamed var. β, and in the synonymy of *Ranunculus muricatus* L. in *Species plantarum* 2nd ed. (1762: 780), but not in the protologue of that name in the first edition (1753: 555), although the *Hortus upsaliensis* name is cited there. The plant depicted by Alpino is somewhat stylized, but the only known Cretan species of *Ranunculus* it can possibly be is *R. muricatus*.

25. 'Chinopodium Creticum', p. 265, fig. p. 264.

S.: *Satureja graeca* L.

B. & S.: *Microseris graeca* (L.) Benth. ex Rchb. (currently *Satureja graeca*).

Comments: Linnaeus includes the Alpino element in the protologue of *Satureja graeca* in *Species plantarum* (1753: 568). The plant depicted by Alpino may indeed be a species of *Satureja*, but it shows insufficient diagnostic characters to establish its identity with a particular species, and *S. graeca* is anyway only doubtfully present in Crete. The lectotype is a specimen in Herb. Linn. No. 723.4 (LINN), designated as such by Morales Valverde (1991: 143). The Linnaean annotation of this specimen is confusing and the relevance of the material as an original element for *S. graeca* is not immediately apparent. Linnaeus has written 'Satureja' at the top of the sheet, '10 montana' at the bottom and, on the reverse, 'Clinopodium creticum. Alp. exot. 265' and 'Calamintha cretica, angusto folio oblongo. T. 194'. The number '10' ought to refer to a species of *Satureja* in *Species plantarum*,

Fig. 22 The lectotype of *Atractylis cancellata* L.: Herb. Clifford: 395, *Atractylis* No. 1 (BM).

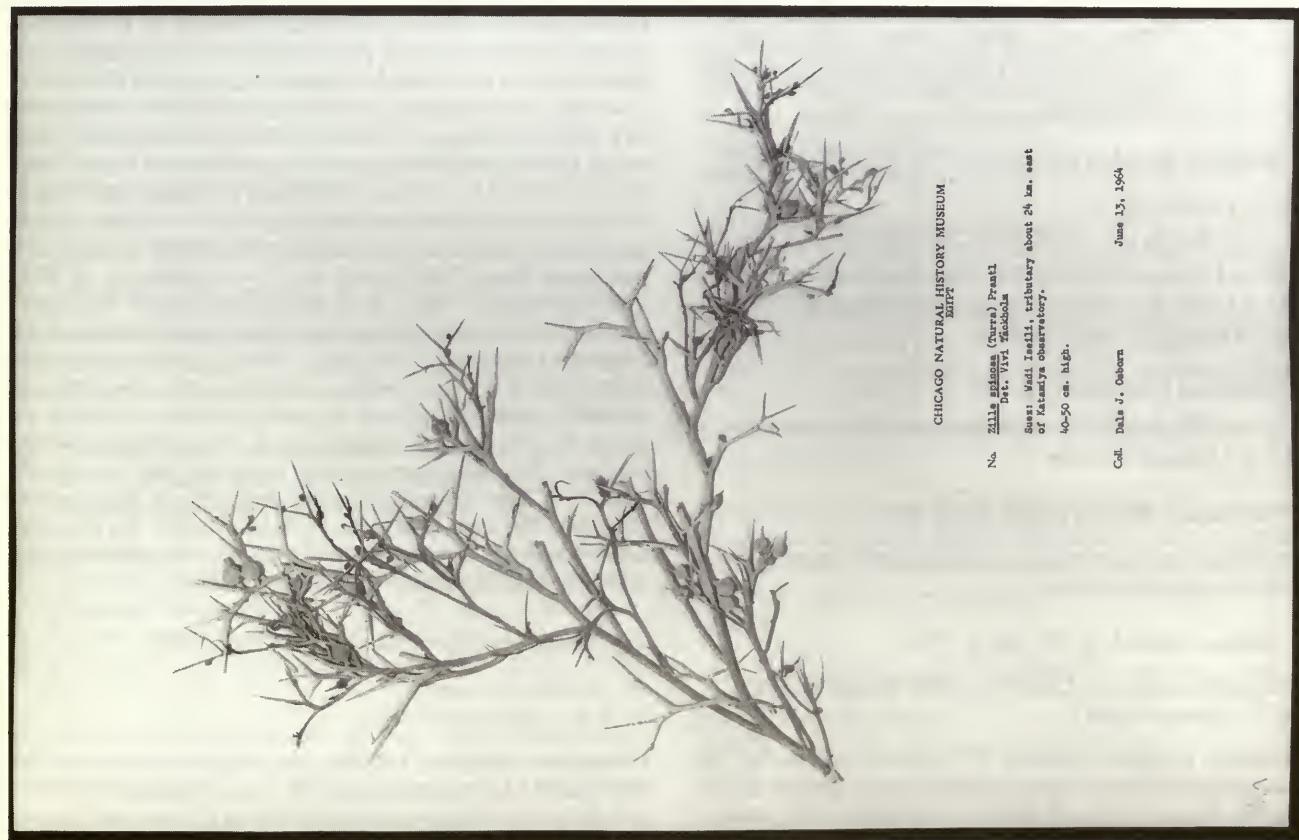

Fig. 21 The epitype of *Bunias spinosa* Turra: Osborn s.n. (BM)

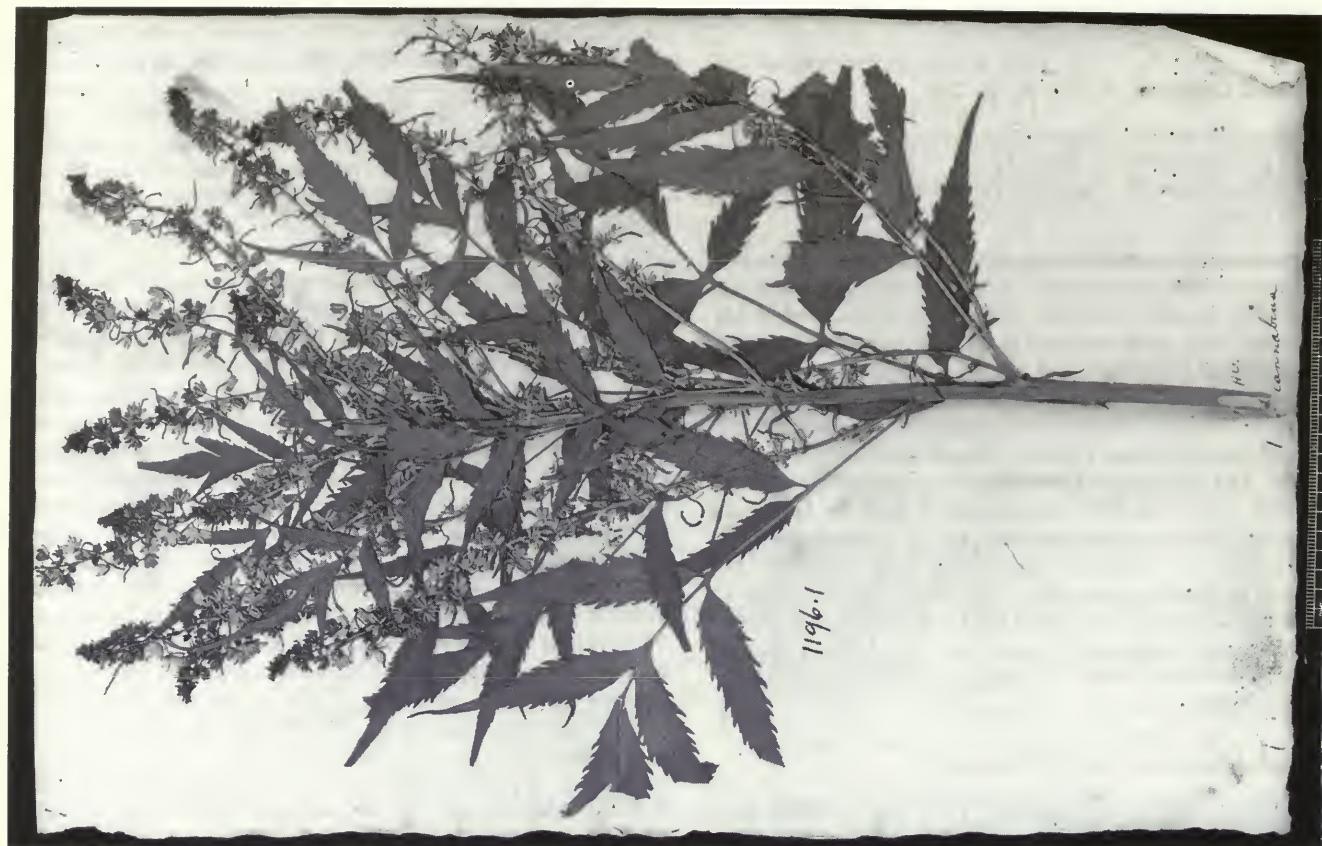

Fig. 24 The lectotype of *Datisca cannabina* L.: Herb. Linn. No. 1196.1 (LINN).

Fig. 23 The lectotype of *Nepeta scordifolia* L.: Herb. Linn. No. 726.23 (LINN).

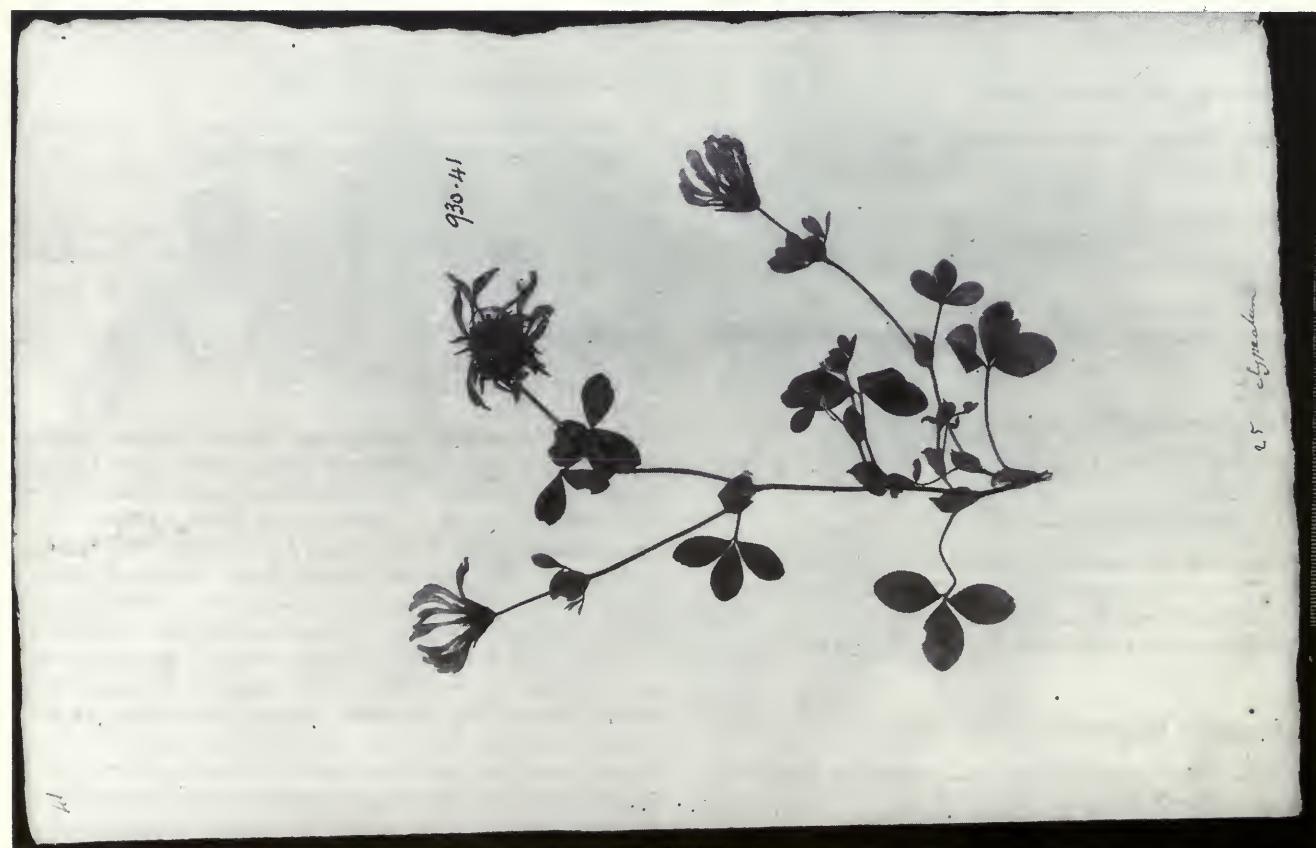

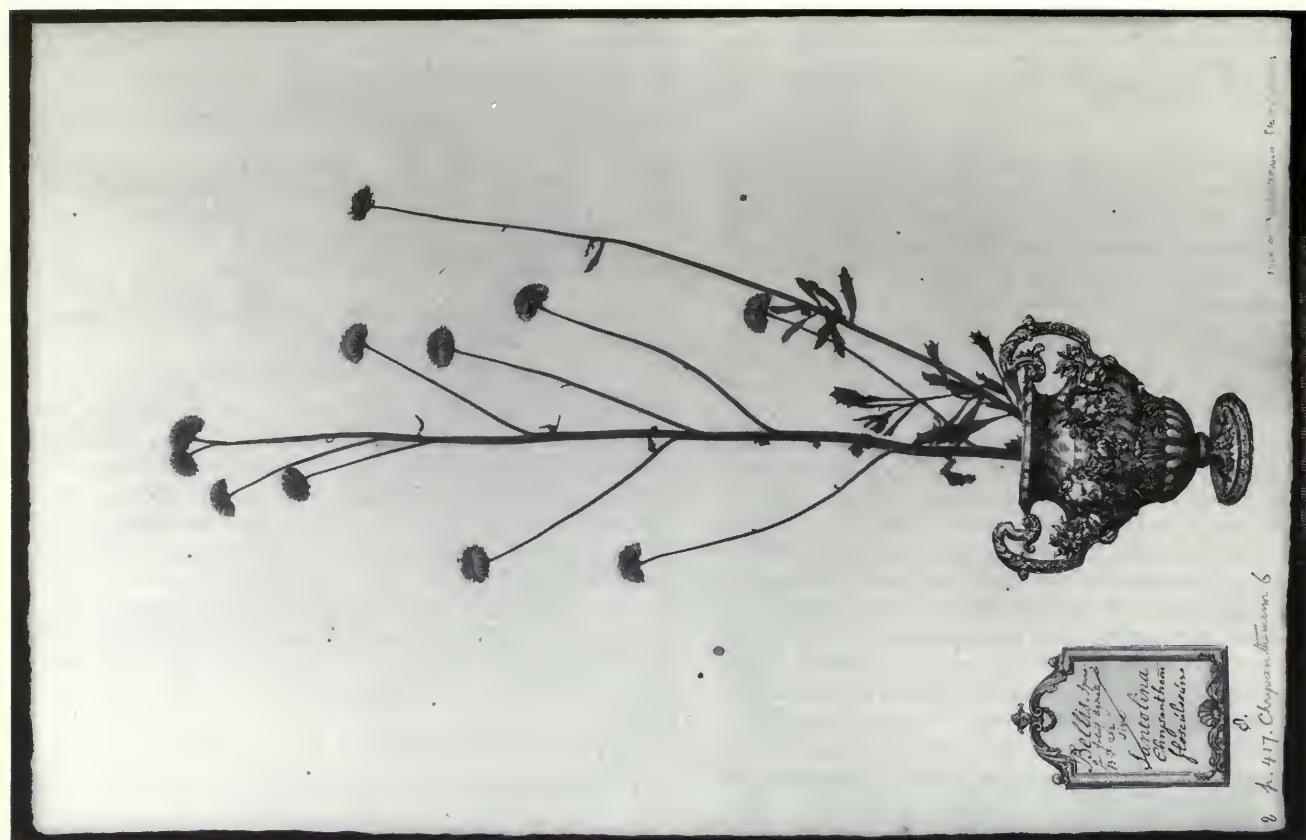

Fig. 25 The lectotype of *Trifolium clypeatum* L.: Herb. Linn. No. 930.41 (LINN).

seems, on balance, to exhibit better the diagnostic characters of the species. This specimen is, therefore, here designated as the lectotype of *C. flosculosum* (Fig. 26).

53. 'Meum Alexiterium', p. 329, fig. p. 328.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

54. 'Sium minimum', p. 332, fig. p. 331.

L.: 'Cardamine'.

S.: *Cardamine impatiens* L.

Comments: Linnaeus includes the Alpino element in the synonymy of *Cardamine foliis pinnatis, pinnis laciniatis* in *Flora suecica* (1745: 203), but appears not to cite it explicitly in any of his other works, although he includes the *Flora suecica* name in the protologue of *Cardamine impatiens* in *Species plantarum* (1753: 655).

55. 'Arum Montanum', p. 335, fig. p. 334.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

56. 'Glaux', p. 338, fig. p. 337.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

57. 'Campanula Pyramidalis minor', p. 341, fig. p. 340.

S.: *Campanula alpini* L. (currently *Adenophora liliifolia* (L.) A. DC.)

9, 10. CAMPANULA foliis lanceolatis ferratis levibus, floribus racemosis secundis nutantibus, calycibus ferratis.

Campanula pyramidalis minor. Alp. exot. 340.
Habitat in Summano aliisque Italico Alpibus, Arduini. 24.

Folia serraturis distansibus, valde acuminatis. Pistillum corolla longius. Calycis foliola serraturis sapa duabus strinque, acuminatis.

Comments: Linnaeus includes the Alpino element in the protologue of *Campanula alpini* in *Species plantarum* 2nd ed. (1763: 1669). The plant depicted is slightly stylized, but is a moderately good likeness of *Adenophora liliifolia*. The only other extant original element for *C. alpini* appears to be a specimen in Herb. Linn. No. 221.19 (LINN!), which also agrees with the current usage of the name and exhibits more of the diagnostic features than Alpino's figure. Therefore, the specimen is here designated as the lectotype (Fig. 27).

58. 'Rapunculus Petreus', p. 344, fig. p. 343.

L.: 'Phyteuma'.

Comments: The Alpino element appears not to be mentioned in any of Linnaeus's works.

Fig. 27 The lectotype of *Campanula alpini* L.: Herb. Linn. No. 221.19 (LINN).

NEOTYPE. Crete, 'Acer creticum L.', Omalos, 10 June 1938, Ogilvie-Grant 25 (K) (Fig. 1).

Alyssum creticum L., Sp. pl. 2: 651 (1753).

LECTOTYPE. 'Leucoium luteum vtriculato semine', Alpino, Pl. exot.: 119 ['117'], fig. p. 118 ['110'] (1627) (Fig. 14).

BOOK REVIEW

Y. Kimura & V.P. Leonov (Eds) 1994. C.P. Thunberg's Drawings of Japanese Plants. Maruzen Co., Ltd., Tokyo. Pp vii + 594. Price outside Japan US\$333.

This very substantial book (all 4.8 kg of it) was inspired by a set of 355 paintings based on herbarium collections made by Carl Peter Thunberg in Japan. These were acquired for the Herbarium in St. Petersburg by Carl Johann Maximowicz, another key figure in eastern Asian botany, and have all been reproduced in monochrome. Three hundred and five of the plates had never been published before. The illustrations are supplemented with some extensive notes made by Maximowicz (both as photographs of the originals and a detailed transcription by N. Zabinkova), background essays on Thunberg, Maximowicz and the history of the illustrations by Y. Kimura, V.I. Grubov and M.E. Kirpicznikov, W.T. Stearn, and T.A. Tchernaja, and two commentaries on the individual illustrations by B. Nordenstam and H. Ohba.

Thunberg was probably the most successful student of Linnaeus, responsible for making some of the first major collections and writing the first major Floras in two areas of particular biological interest: South Africa – *Flora Capensis* published between 1807 and 1823, and Japan – *Flora Japonica* published in 1784. Because of their pioneering nature, both of these are of interest to plant taxonomists working in areas quite far removed from the area immediately covered. Thus any work adding to our knowledge of the work of this pioneer is of considerable interest. The very existence of a work such as this compendium and the amount of scholarship that it reflects is a clear confirmation of this importance.

The quality of reproduction of the paintings is well up to the standard that has become expected of Japanese publishers. The painting were prepared from herbarium specimens

and Bertil Nordenstam has written a detailed commentary correlating painting and specimen and indicating any discrepancies between the two. Photographs of some of the specimens demonstrate the similarity of plate and specimen very clearly. Thus at least sometimes the plates can be used in place of a visit to Uppsala to see the herbarium itself which in itself can be used to help justify the acquisition of this work by botanical institutes working on the flora of the Far East. This is complemented by a detailed account by Hideaki Ohba of the current nomenclature of each taxon represented. On top of this core information source, there are also the accompanying essays which provide background information that is essential for understanding Thunberg's work in Japan and thus the exact origins of so many important type collections. These also provide valuable information on Maximowicz, the great Russian plant taxonomist, who also collected extensively in Japan and the Far East and published a vast number of new taxa. There is overlap in the content matter of the various essays, adequate to confirm the high level of scholarship of the writers – their facts agree nicely – but at the same time providing an interesting insight into national styles of writing. There seems to be a greater need for explicit praise in some cultures than others; not everyone goes in for the scholarly English understatement of William Stearn who provides yet another of his wonderful biographies of major figures in the history of plant taxonomy.

Botany Series

Earlier Botany *Bulletins* are still in print. The following can be ordered from Intercept (address on inside front cover). Where the complete backlist is not shown, this may also be obtained from the same address.

Volume 1

- No. 1 Contributions to our knowledge of Old World
Araliaceae. W.R. Philipson. 1951. Pp. 3–20.
An undescribed species of *Masticodendron*
(Sapotaceae) from Barbados and Antigua. H.E. Box &
W.R. Philipson. 1951. Pp. 21–24, 1 plate. £2.80

No. 2 Out of print.

No. 3 Notes on Podostemaceae for the revision of the *Flora of
West Tropical Africa*. G. Taylor. 1953. Pp. 51–79, 14
figs. £2.15

No. 4 Notulae criticae and floram hispaniae pertinentes, 1.
V.H. Heywood. 1954. Pp. 81–122. £2.95

Nos 5–8 Out of print.

Volume 2

- No. 1 Out of print.
- No. 2 Out of print.
- No. 3 Novitates Himalaicae—1. F. Ludlow & W.T. Stearn.
1956. Pp. 65–81, 8 plates, 11 figs. £2.15
- No. 4 *Saxifraga* of the Himalaya 1. Section *Kabschia*. H. Smith.
1958. Pp. 83–129, 14 figs. £4.50
- Nos 5–12 Out of print.

Volume 3

- Nos 1–3 Out of print.
- No. 4 A revision of the genus *Petrorhagia*. P.W. Ball & V.H.
Heywood. 1964. Pp. 119–172, 3 plates, 22 figs. £1.95
- No. 5 Marine algae of Gough Island. Y.M. Chamberlain. 1965.
Pp. 173–232, 4 plates, 80 figs. £6.00
- No. 6 Out of print.

Volume 4

- Nos 1–3 Out of print.
- No. 4 A synopsis of Jamaican Myrsinaceae. W.T. Stearn. 1969.
Pp. 143–178, 8 plates, 25 figs. £3.65
- No. 5 The Jamaican species of *Columnea* and *Alloplectus*
(Gesneriaceae). W.T. Stearn. 1969. Pp. 179–236, 8 plates,
29 figs. £5.15
- No. 6 New or little known Himalayan species of *Swertia* and
Veratrilla (Gentianaceae). H. Smith. 1970. Pp. 237–258,
16 plates, 7 figs. £3.75
- No. 7 A survey of the tropical genera *Oplonia* and *Psilanthele*
(Acanthaceae). W.T. Stearn. 1971. Pp. 259–323, 10
plates, 18 figs. £5.95
- No. 8 Angiosperms of the islands of the Gulf of Guinea
(Fernando Po, Príncipe, S. Tomé, and Annobon). A.W.
Exell. 1973. Pp. 325–411. £6.00

Volume 5

- No. 1 The dryopteroid ferns of Ceylon. W.A. Sledge. 1973. Pp.
1–43, 4 figs. £3.00
- No. 2 New Himalayan and Tibetan species of *Corydalis*
(Papaveraceae). F. Ludlow & W.T. Stearn. 1975. Pp.
45–69, 15 plates, 14 figs. £3.85

- No. 3 The marine algae of Trinidad, West Indies. W.D.
Richardson. 1975. Pp. 71–143, 12 plates, 2 figs. £6.80
- No. 4 A revision of the Macaronesian genus *Argyranthemum*
Webb ex Schultz Bip. (Compositae-Anthemideae). C.J.
Humphries. 1976. Pp. 145–240, 2 plates, 26 figs. £7.25
- No. 5 Frank Ludlow (1885–1972) and the Ludlow-Sherriff
expeditions to Bhutan and south-eastern Tibet of
1933–1950. W.T. Stearn. 1976. Pp. 243–268, 1 fig.
Reliquiae botanicae himalaicae. F. Ludlow. 1976. Pp.
269–289, 7 plates, 8 figs. £5.25
- No. 6 Studies in the genus *Hypericum* L. (Guttiferae). 1.
Infrageneric classification. N.K.B. Robson. 1977. Pp.
291–355, 9 figs. £7.25
- No. 7 Sphagnales of tropical Asia. A. Eddy. 1977. Pp. 357–445,
4 plates, 17 maps, 25 figs. £9.25

Volume 6

- No. 1 The handwriting of Joseph Banks, his scientific staff and
amanuenses. J.B. Marshall. 1978. Pp. 1–85, 62 figs. £9.50
- No. 2 Seaweeds of the western coast of tropical Africa and
adjacent islands: a critical assessment. II. Phaeophyta.
J.H. Price, D.M. John & G.W. Lawson. 1978. Pp.
87–182, 1 fig. £15.00
- No. 3 The lichenicolous Hyphomycetes. D.L. Hawksworth.
1979. Pp. 183–300, 47 figs. £15.00
- No. 4 The species of *Chisocheton* (Meliaceae). D.J. Mabberley.
1979. Pp. 301–386, 3 plates, 10 figs. £15.00

Volume 7

- No. 1 The distribution of *Padina pavonica* (L.) Lamour.
(Phaeophyta: Dictyotales) on British and adjacent
European shores. J.H. Price, I. Tittley & W.D.
Richardson. 1979. Pp. 1–67, 3 plates, 2 figs. £9.00
- No. 2 Seaweeds of the western coast of tropical Africa and
adjacent islands: a critical assessment. III. Rhodophyta
(Bangiophyceae). D.M. John, J.H. Price, C.A. Maggs,
G.W. Lawson. 1979. Pp. 69–82, 1 fig. £2.20
- No. 3 A revision of the genus *Anacyclus* L. (Compositae:
Anthemideae). C.J. Humphries. 1979. Pp. 83–142, 27
figs. £8.00

Volume 8

- No. 1 The Thelypteridaceae of Ceylon. W.A. Sledge. Pp. 1–54,
5 figs. 1981. £7.75
- No. 2 Studies in the genus *Hypericum* L. (Guttiferae). 2.
Characters of the genus. N.K.B. Robson. 1981. Pp.
55–226, 73 figs. £23.50
- No. 3 A revision of the lichen family Thelotremaeaceae in Sri
Lanka. M.E. Hale, Jr. 1981. Pp. 227–332, 20 figs. £14.50
- No. 4 Vascular plant collections from the Tristan da Cunha
group of islands. E.W. Groves. Pp. 333–420, 33
figs. £12.50

Volume 9

- No. 1 The lichenicolous Coelomycetes. D.L. Hawksworth.
1981. Pp. 1–98, 36 figs. £13.25

Review of characters and taxonomy of *Piper* section *Macrostachys*. M.C. Tebbs. 1989. Pp. 117–158, 41 figs. £48.00

Volume 20

No. 1 Studies in the genus *Hypericum* L. (Guttiferae) 8. Sections 29. *Brathys* (part 2) and 30. *Trigynobrathys*. N.K.B. Robson. 1990. Pp. 1–151, 22 figs, 46 maps. £45.00

No. 2 The marine algal flora of Namibia: its distributions and affinities. G.W. Lawson, R.H. Simons and W.E. Isaac. 1990. Pp. 153–168, 1 fig, 7 plates. The infrageneric classification of *Gentiana* (Gentianaceae). T.-N. Ho and S.-W. Liu. 1990. Pp. 169–192, 13 figs. Revision of *Piper* (Piperaceae) in the New World. 2. The taxonomy of *Piper* section *Churumayu*. M.C. Tebbs. 1990. Pp. 193–236, 49 figs. £25.00

Volume 21

No. 1 Historical and taxonomic studies in the genus *Titanoderma* (Rhodophyta, Corallinales) in the British Isles. Y.M. Chamberlain. 1991. Pp. 1–80, 247 figs.

No. 2 Early collections of the Holy Thorn (*Crataegus monogyna* cv. *Biflora*). A.R. Vickery. 1991. Pp. 81–83, 1 fig. A taxonomic study of the species referred to the ascomycete genus *Leptorhaphis*. B. Aguirre-Hudson. 1991. Pp. 85–192, 76 figs. The typification and identification of *Calymperes crassilimbatum* Renaud & Cardot (Muscidae: Calymperaceae). L.T. Ellis. 1991. Pp. 193–194, 1 fig.

Volume 22

No. 1 An account of southern Australian species of *Lithophyllum* (Corallinaceae, Rhodophyta). Wm. J. Woelkerling and S.J. Campbell. 1992. Pp. 1–107, 63 figs. £37.00

No. 2 Palynological evidence for the generic delimitation of *Sechium* (Cucurbitaceae) and its allies. J.L. Alvarado, R. Lira-Saade & J. Caballero. 1992. Pp. 109–121. Seaweeds of the western coast of tropical Africa and adjacent islands: a critical assessment. IV. Rhodophyta (Florideae) 3. Genera H-K. J.H. Price, D.M. John & G.W. Lawson. 1992. pp. 123–146. Two new species of *Solanum* section *Geminata* (Solanaceae) from Cerro del Torrá in western Colombia. S. Knapp. 1992. Pp. 147–152. *Fissidens ceylonensis* Dozy & Molkenb. (Muscidae: Fissidentaceae) and some allied taxa from southern India. L.T. Ellis. 1992. Pp. 153–156, 2 figs. New species of *Piper* (Piperaceae) from Central America. M. Tebbs. 1992. Pp. 157–158. Studies on the Cretan flora 1. Floristic notes. N.J. Turland. 1992. Pp. 159–164. Studies on the Cretan flora 2. The *Dianthus juniperinus*

complex (Caryophyllaceae). N.J. Turland. 1992. Pp. 165–169.

£37.50

Volume 23

No. 1 Revision of *Piper* (Piperaceae) in the New World 3. The taxonomy of *Piper* sections *Lepianthes* and *Radula*. M.C. Tebbs. 1993. Pp. 1–50, 18 figs. Mounting techniques for the preservation and analysis of diatoms. S.J. Russell. 1993. Pp. 51–54. 1 fig.

£37.50

No. 2 New taxa of *Gentiana* (Gentianaceae) from Western China and the Himalayan region. T.-N. Ho and S.-W. Liu. 1993. Pp. 55–60. 2 figs. New combinations, names and taxonomic notes on *Gentianella* (Gentianaceae) from South America and New Zealand. T.-N. Ho and S.-W. Liu. 1993. Pp. 61–66. Studies in *Hypericum*: validation of new names. N.K.B. Robson. 1993. Pp. 67–70. Generic monograph of the Asteraceae–Anthemideae. K. Bremer and C.J. Humphries. 1993. Pp. 71–177. 12 figs.

£37.50

Volume 24

No. 1 Pre-Linnaean references for the Macaronesian flora found in Leonard Plukenet's works and collections. J. Francisco-Ortega, A. Santos-Guerra and C.E. Jarvis. Pp. 1–34.

Studies on the lichen genus *Sticta* (Schreber) Ach.: II. Typification of taxa from Swartz's Prodromus of 1788. D.J. Galloway. Pp. 35–48.

Seaweeds of the western coast of tropical Africa and adjacent islands: a critical assessment. IV. Rhodophyta (Florideae) 4. Genera L-O. D.M. John, G.W. Lawson, J.H. Price, W.F. Prud'homme van Reine and W.J. Woelkerling. Pp. 49–90.

Studies on the Cretan flora 3. Additions to the flora of Karpathos. N.J. Turland and L. Chilton. Pp. 91–100.

No. 2 Observations on the benthic marine algal flora of South Georgia: a floristic and ecological analysis. D.M. John, P.J.A. Pugh and I. Tittley. Pp. 101–114.

Studies in *Pseudocyphellaria* (Lichens) IV. Palaeotropical species (excluding Australia). D.J. Galloway. Pp. 115–160.

Morphology and ecology of seedlings, fruits and seeds of Panama: Bixaceae and Cochlospermaceae. N.C. Garwood. Pp. 161–172.

A study of *Bixa* (Bixaceae), with particular reference to the leaf undersurface indumentum as a diagnostic character. R.E. Dempsey and N.C. Garwood. Pp. 173–180.

Volume 25

No. 1 A revision of *Rutilaria* Greville (Bacillariophyta). R. Ross. Pp. 1–94. William Roxburgh's St Helena plants. Q.C.B. Cronk. Pp. 95–98.
