It is essential that children be aware of the importance of proper oral hygiene care. Many children denied the opportunity to learn about good maintenance of the teeth and gums. This project was created to educate 3rd grade children about measures of preventive dentistry, proper techniques for oral care, and the consequences of poor oral hygiene. Before the presentation was created, observation of a 3rd grade classroom was done in order to find out more about the level of learning at this age. We used what we learned about the children to apply our information in a manner that was appropriate for them. The content was designed not only to educate, but also to motivate the children. This presentation is very beneficial to the promotion of oral health among children in order to prevent problems in their future.
