

Extracellular vesicles: New players in cardiovascular diseases

Submitted by claire.leroy on Wed, 04/29/2015 - 13:40

Titre	Extracellular vesicles: New players in cardiovascular diseases
Type de publication	Article de revue
Auteur	Gaceb, Abderahim [1], Martinez, Maria Carmen [2], Andriantsitohaina, Ramaroson [3]
Editeur	Elsevier
Type	Article scientifique dans une revue à comité de lecture
Année	2014
Langue	Anglais
Date	Mai 2014
Pagination	24-28
Volume	50
Titre de la revue	The International Journal of Biochemistry & Cell Biology
ISSN	1357-2725
Mots-clés	Cardiovascular Diseases [4], Extracellular vesicles [5], Myocardium [6], vascular cells [7]
Résumé en anglais	Extracellular vesicles, particles released by all cell types, represent a new way to convey information between cells such as proteins, second messengers, and genetic information to modify the phenotype and function of the target cells. Recent data suggest that extracellular vesicles play a crucial role in both physiology and pathology, including coagulation, angiogenesis, cell survival, modulation of the immune response, and inflammation. Thus extracellular vesicles participate in the processes of cardiovascular diseases from atherosclerosis, myocardial infarction to heart failure. Consequently, extracellular vesicles can potentially be exploited for therapy, prognosis, and biomarkers for health and disease. This review focuses on the role of extracellular vesicles in the development of cardiovascular diseases, as well as the deleterious and beneficial effects that they may provide in vascular cells and myocardium.
