

Impact of prophylactic fundoplication on survival without growth disorders in left congenital diaphragmatic hernia requiring a patch repair

Submitted by Emmanuel Lemoine on Fri, 07/18/2014 - 09:40

Titre	Impact of prophylactic fundoplication on survival without growth disorders in left congenital diaphragmatic hernia requiring a patch repair
Type de publication	Article de revue
Auteur	Dariel, Anne [1], Rozé, Jean-Christophe [2], Piloquet, Hugues [3], Podevin, Guillaume [4], French CDH Study Group, [5]
Type	Article scientifique dans une revue à comité de lecture
Année	2010
Langue	Anglais
Date	2010/10
Numéro	4
Pagination	688 - 690
Volume	157
Titre de la revue	The Journal of Pediatrics
Résumé en anglais	Growth impairment is frequent in surviving newborns with congenital diaphragmatic hernia requiring a patch repair. This multicenter retrospective study included 57 newborns and showed a significant relationship between prophylactic fundoplication performed during initial diaphragmatic repair and survival without disordered growth, after adjustment for propensity score (adjusted OR 4.7 [1.2-18.5]; P = .03).
