

Cancer cachexia: Measured and predicted resting energy expenditures for nutritional needs evaluation

Submitted by Emmanuel Lemoine on Wed, 12/11/2013 - 17:08

Titre	Cancer cachexia: Measured and predicted resting energy expenditures for nutritional needs evaluation
Type de publication	Article de revue
Auteur	Johnson, Gyasi [1], Sallé, Agnès [2], Lorimier, Gérard [3], Laccourreye, Laurent [4], Enon, Bernard [5], Blin, Vincent [6], Jousset, Yann [7], Arnaud, Jean-Pierre [8], Malthièry, Yves [9], Simard, Gilles [10], Ritz, Patrick [11]
Editeur	Elsevier
Type	Article scientifique dans une revue à comité de lecture
Année	2008
Date	2008/05
Numéro	5
Pagination	443 - 450
Volume	24
Titre de la revue	Nutrition
ISSN	0899-9007
Mots-clés	Cancer [12], Energy [13], Inflammatory [14], Predictive [15], Weight [16] ObjectiveCancer cachexia is associated with weight loss, poor nutritional status, and systemic inflammation. Accurate nutritional support for patients is calculated on resting energy expenditure (REE) measurement or prediction. The present study evaluated the agreement between measured and predicted REE (mREE and pREE, respectively) and the influence of acute phase response (APR) on REE. Methods Thirty-six patients with cancer were divided into weight-stable (WS; weight loss <2%) and weight-losing (WL; weight loss >5%) patients. Measured REE was measured by indirect calorimetry and adjusted for fat-free mass (FFM). The Bland-Altman approach was used to assess the agreement between mREE and pREE from the Harris-Benedict equations (HBE). Blood levels of C-reactive protein were assessed. Results There was no difference in mREE between groups (WS 1677 ± 273 , WL 1521 ± 305) even when mREE was adjusted for FFM (WS 1609 ± 53 , WL 1589 ± 53). In WL patients, FFM-adjusted REE correlated with blood C-reactive protein levels ($r = 0.471$, $P = 0.048$). HBEs tend to underestimate REE in both groups. Conclusion WL and WS patients with cancer had similar REEs but were different in terms of APR. APR could contribute to weight loss through enhancing REE. In a clinical context, HBE was in poor agreement with mREE in both groups.
