

New LearnWeb tool v.0.3 evaluation outcomes

Building the European Network
For Lifelong Competence Development

TENCompetence IST-2005-027087

Project Report

ID5.17: New LearnWeb tool v.0.3 evaluation outcomes

Workpackage	WP5		
Task	5.4		
Date of delivery	Contractual: 30-05-2009	Actual: 10-06-2009	
Code name	ID5.17	Version: 1.0	Draft <input type="checkbox"/> Final <input checked="" type="checkbox"/>
Type of deliverable	Report		
Security (distribution level)	Public		
Contributors			
Authors (Partner)	Alessandro Mazzetti (Giunti Labs), Mar Perez (UPF)		
Contact Person	Alessandro Mazzetti (Giunti Labs).		
WP/Task responsible	Giunti Labs		
EC Project Officer	Martin Májek		
Abstract (for dissemination)	<p>This document describes the evaluation of the new version of LearnWeb2.0, called: LearnWeb v.0.3 and KRService v.0.3. After a brief introduction, the evaluation methodology is described, both in terms of functionality tests and of quality tests. Then the loadability tests are described along with the usability aspects. A summary of the functionality follows, with the final recommendations for future versions.</p>		
Keywords List	WP5, internal deliverable, evaluation, LearnWeb2.0, KRService, LearnWeb v.0.3, KRService v.0.3

4 Introduction (**Giunti**)

This document describes the evaluation of the new version of LearnWeb2.0, here on called for convenience:

- LearnWeb v.0.3
- KRService v.0.3

This document refers to the following:

- ID5.13 (new requirements), delivered on 28-11-2008, <http://hdl.handle.net/1820/1607>
- Outcome of Sofia and Düsseldorf meetings, document of 15-12-2008 http://docs.google.com/View?docid=ddhtqns_663c8h7vtf
- DIP-4 objectives and tasks, document of 19-12-2008 http://docs.google.com/Doc?id=ddsnp3t6_28hcxmxphf
- ID5.19.2 (Localized LearnWeb) delivered on 27-03-2009 <http://dspace.ou.nl/handle/1820/1889>
- ID5.15 (New Core specifications v2) delivered on 10-04-2009 <http://dspace.ou.nl/handle/1820/1905>
- ID5.16 (New version of LearnWeb tool v.0.3) delivered on 27-05-2009 <http://hdl.handle.net/1820/1943>

5 Evaluation methodology (**UPF**)

In order to provide a complete analysis of all the system functionalities we have developed a Unit and Integration tests. The Unit testing searches for defects in, and verifies the functioning of software that is separately stable. It has been run by a software expert different from the developer. The Integration testing consists in verifying if the units work evaluated in the Unit testing are correctly integrated and related among them: interfaces between units, complete processing chain and relation controls within the system including several modules and /or in combination with database. We also performed a test of the functionality requirements established in deliverable ID5.15 and ID5.16. The results of these tests are indicated and explained in the following tables:

- **Table 1:** Unit and Integration Test: Calamities
- **Table 2:** Unit and Integration Test: Functionality
- **Table 3:** Unit and Integration Test: Integration
- **Table 4:** Unit and Integration Test: Storage
- **Table 5:** Functional Requirements Test

We haven't distinguish the aspects that correspond to the Unit test or the Integration test for providing an easy reading, however the distinctions and a more detailed description of each of them are explained in (D 4.1 Evaluation Plan, p. 118 and 119). In the observation column, we marked with **Fail (in red)** those aspects that doesn't work properly and have to be reviewed, with **Ok (in green)** those which work properly and with **Ok (in orange)** those which work fine but have to be reconsidered for different aspects.

5.1 Functionality Tests

Unit and Integration Test: <i>Calamities</i>	
Aspect: Monkey test	Observations
Authentication	
Authentication CAS	Ok. Not possible to test yet since Learnweb is not incorporated into Liferay at this moment. http://phpcake.it.fmi.uni-sofia.bg is a standalone application.
Registration	
Registration process	Ok. No problems with the registration process.
Single sign On	
Manage Resources	
Create a new group	Ok. Recommendation - Message needed for informing the user that has to accept the authorization required by the tool.
Upload a picture	Ok. Error message: "Warning 512" Recommendation - Message needed for informing the user that has to accept the authorization required by the tool. - When uploading a picture, a new window is opened. Once published the resource, all the process is done in this window and a new menu with the <i>home</i> access appear in the upper menu. The user has now two windows opened with the same window. Once uploaded the resource, the user should be redirected again to the main window with the main program page.
Upload an audio file	Fails. The system takes too long for uploading the resource and never finishes. There appears an error message "512". Recommendation - Message needed for informing the user that has to accept the authorization required by the tool.
Upload a video	Ok.
Upload a file	Ok. Explanation text if the field is too extensive.
My Resources	

My Bookmarks	Fails. Cannot connect to Delicious using the correct login credential.s
My LearnWeb Resources	Ok.
My Tags	Fails. Tags included when uploading a resource of any type are not included in my list of tags.
My Comments	Ok. Once introduced the comment it is not deleted from the text space for introducing the comments.
My Rates	Ok
My groups	Fails. Once <i>My groups</i> is opened the user is redirected directly to the GroupMe! Page and lose the context of the tool. Recommendation - Open the <i>My Groups</i> in another navigation page.
Home page and pages flow	
Welcome message	Fails. Welcome message displayed only in English and not in other languages.
Login and registration	Ok
Search	Ok
Help	Fails. Recommendation A help menu with manuals and user guides is missing
Navigation Buttons	Ok. Recommendations - Back button is not needed on front page, and the place and lay-out is not ideal. I would be better if locate in a place where always visible. - Missing forward button.
My profile	Fails. Functionality not available. Recommendation - Include a functionality My Profile in the top upper menu for allowing the user to manage his/her profile
Log files	Fails. Functionality not available.
Toolbars	
Toolbar on the web browser	Ok. Learnweb provides an extension of the tool that can be incorporated in the web browser of the user.
Tag Clouds	
Tag clouds in the home page	Ok. Recommendation - Differentiate the words also by colours.
Downloading	
Download from the search page	Ok. Recommendation - When downloading a video or an image a new image of the profile and <i>My resource</i> menu appear on the left hand.

	It should be deleted because the user can access always to this resources from the upper menu, always visible.
Supporting UoL	
Supporting a UoL as a zip file	Ok. The tool already accepts the UoL as a simple zip file. Waiting for the integration of the UoLs as a learning object in the Fedora repository.
Category Management	
Select a category for the search	Fails. The system doesn't seem to do anything when searching by categories.
Sharing	
Sharing resources with other users registered.	Fails. Not mail received when sharing a resource with another user using the e-mail address.
Integration with PDP	
Not provided yet	-
Integration with PCM	
Not provided yet	-
Integration with TenTube	
Integration when uploading a video	Ok.
Functionalities over resources	Functionalities related with the resources uploaded to the tool.
Comment Rating	Ok.
Managing Abuses	Ok.
Stimulating Users	<i>Not applicable here. This functionality will be analyzed when testing the tool with real users.</i>

Table 1 Unit and integration test: *Calamities*

Unit and Integration Test: <i>Functionality</i>	
Aspect	Observations
Field type	Which values are accepted or refused and which length is supported
Login field	Ok. All values and any length except spaces.
Pass field	Ok. All values and any length.
URL field	Ok. It only support strings with an URL format.
Other metadata fields	Ok. All values and any length.
Validity test date fields	
Date in the Upload a file option	Ok. The date the current day is automatically included in the description.
Checking the overview screens	Checking if all the overview screens are present.
Home overview	Ok. Welcome message not available when changing language.
My HomePage	Ok

Table 2 Unit and Integration test:*Functionalities*

Search	<p>Ok. Only available in the home page.</p> <p>Recommendation Make the search bar available always from any of the overview pages.</p>
My Profile	<p>Fails. Page not available in the upper menu.</p> <p>Recommendation Include <i>My Profile</i> functionality in the upper menu at the same level of <i>My Home Page</i>.</p>
Paging up and paging down on overview screens	
Home overview	Ok. Welcome message not available when changing language.
My HomePage	Ok
Search	<p>Ok. Only available in the home page.</p> <p>Recommendation Make the search bar available always from any of the overview pages.</p>
My Profile	<p>Fails. Page not available in the upper menu.</p> <p>Recommendation Include <i>My Profile</i> functionality in the upper menu at the same level of <i>My Home Page</i>.</p>
Completeness	Checking if all the buttons or fields are present
Athorizing	Fails. An error occurs when authorizing the accounts unless the accounts are authorized.
Change photo in the profile	Fails. Functionality not included.
Accessing to a resource from <i>My profile</i> page	<p>Ok. When accessing to these resources they are opened in the same page and the user loses the context of the tool.</p> <p>Recommendation - Open the resources in another tab.</p>
Upload modified version (in the Recourse overview)	Ok. Attention!!!!. Some sentences in German ...
Position on screen	Check if all the objects are on the right position on the screen
Searching bar	It should be located in the upper menu always.

Unit and Integration Test: <i>Integration</i>	
Aspect	Observations
Integration between different subsystems of the application	Ok.
Testing Broadcasts (internal messages) sent from one system to other systems	Ok. The users can search and visualize the public KR's uploaded by other users .

Table 3 Unit and Integration test: *Integration*

Unit and Integration Test: <i>Storage</i>	
Aspect	Observations
Deleting records	Ok. Users can delete a record in their personal page.
Deletion of multiple records at the same time	Fails. The system does not provide the option to delete a set of records at the same time.
Deletion of all records in one action	Fails. The system does not provide the option to delete a set of records in one action (with a unique button).
Check if the fields are stored correctly when storing a new record.	Ok. The system checks if the fields introduced are correct. The user can see this fields when press over the record.
Concurrent usage	Ok. The tool can be used for concurrent users.
Time out	Ok.

Table 4 Unit and Integration Test: *Storage*

Functional Requirements Test	
Aspect	Observations
Create a Knowledge Resource	Ok. Users can delete a resource in their personal page.
Deletion of multiple records at the same time	Fails. The system does not provide the option to delete a set of resources at the same time.
Deletion of all records in one action	Fails. The system does not provide the option to delete a set of resources in one action (with a unique button).
Check if the fields are stored correctly when storing a new record.	Ok. The system checks if the fields introduced are correct. The user can see this fields when press over the record.
Concurrent usage	See Loadability tests provided in sec. 6 and in the annex.
Time out	Ok.

5.2 Quality Tests

Quality test: Reliability <i>Maintain a specified level of performance when use under specified conditions</i>	
Aspect	Observations
Maturity	- Ok . The tool doesn't fall down when an error is produced.
Fault tolerance	- Ok . The tool maintain a level of performance in cases of software faults.
Recoverability	- Fails . The tool doesn't maintain the information and the data introduced by the user when
Reliability	- Ok

Quality test: Usability <i>Be understood, learner, used and attractive to the user, when used under specified conditions</i>	
Aspect	Observations
Understandability	The tool is easy to understand but some aspects have to improve: Fails . <ul style="list-style-type: none"> - In the option: Upload a file, the first option "type of file" is not enough visible. - The tree of the categories resource has to be clarified. - When a user search a file in the main page, press over a KR and it is a file (pdf, word, ...) the icon of the file is not enough clear to understand that the user can press over it to visualize the resource.
Learnability	The users have problems to know where they are or to return to previous steps: Fails . <ul style="list-style-type: none"> - Add an option in each page to come back to the previous page. - Add an option to know in which option (My favourites, My resources...) the user is in each moment.
Operability	Fails <ul style="list-style-type: none"> - If the user presses over "My favourites" an error occurs. - If the user presses over "My groups" the groupme.org webpage is opened in the same window, then if the user closes this window the user can not return to the learn webpage. (Open all the webpages in a new

	window) - In the main page, the user can visualize three white spaces and the first one only contains this sentence: “welcome_home_msg”
Attractiveness	- Ok

6 Summary of the Loadability tests (UPF)

This section presents the summary of the main results of the loadability tests. The aim of this evaluation is to analyze if the system is prepared to support a concurrent access of different users and its robustness when this occurs. The points here presented have been extracted from a document provided by Cornelia from the Sofia University and involved in TF15 here included as an appendix.

The load tests have been carried out using the JMeter (<http://jakarta.apache.org/jmeter/>) and over the LearnWeb tool installed in the following address: <http://learnweb.it.fmi.uni-sofia.bg/>. It has been used a ramp test with up to 300 simultaneous users for 10 minutes duration and 10 seconds between clicks. A test is set to continue when a sample error occurs. The tool measures the number of samples, the standard deviation, the throughput, the percentage of detected error, etc. There have been also analyzed the graph, aggregation and the summary results recorded by JMeter listeners: Graph results, Spine Visualizer, Aggregate Results, Summary results, View results in a Table and View Tree Results (see more information in the Annex).

From the analysis with the JMeter there have been extracted two main conclusions:

1. There are no requests with error.
2. Following links have average time more than 8 s and code should be improved:

URL	Response Time (ms)
/	134179
/users/logint?loginform=1	244129
/resources/view/favicon.ico	78171
/lang/eng	61171
/lang/bul	61896
/search	61494
/resources/view/resource:1042	63241

Table 5 Links with an average time of more than 8 seconds that should be improved.

7 Summary of the usability aspects evaluated (UPF)

This section presents a summary of the results extracted from the usability study of the interface according to the ID5.15 user interface chapter 3. We analyze for each of the main aspects documented in ID5.15 if they are correctly integrated in the actual too. We also provide a brief explanation of how they have been implemented in the

LearnWeb_v0.3 and some recommendations for improving their usability and functionality.

7.1 Home page and page flow

The information is organized in three main columns: (a) a welcome message on the left of the screen, (b) a recent uploaded files in the centre and (c) and a tag cloud with the main tags of the tool. All works properly except when the language is changed in the language selection. In this case, the application **fails**, the welcome message on the left hand of the screen disappears.

There is also in the main page a *back* button. When the user enters for the first time in the application, it doesn't make sense to include this button because the user cannot come back to anything. It should be hidden until the user performs an action in the page.

The registration functionalities are located on the right-hand of the upper menu together with the language functionalities.

Once the user is registered, appears in the upper menu the functionality *My Home Page*. It allows the user to access to all the functionalities related with the resource management.

When the user access to one of the functionalities in *My Resources* it appears on the left hand of the screen the profile and again the functionalities related with the resources. This should be deleted from this functionality overview pages and added as a new functionality in the upper menu for managing the profile and the accounts to the integrated tools called *My profile*.

Recommendations

- Solve the problem of the welcome message for the different languages.
- Introduce a title in the central column indicating that this corresponds to the last uploaded files. E.g. "Last resources!"
- Delete the functionality *Back* of the Home page when the user enters the application for the first time.
- Add the functionality *My profile* in the upper menu at the same level of *My home page* only for registered users.
- Delete the functionality of *My profile* in the overview pages of each of the functionalities in *My Resources*.

8 Summary of the functionalities evaluated (UPF)

This section presents a summary of the results extracted from the analysis of the functional evaluation, tables Table 1 and Table 2. We have organized them according with the basic requirements extracted from the description of the functionalities in documents ID5.15 and ID5.16.

8.1 Authentication

The authentication functionality has not been tested because the tool has been analyzed as a standalone application. We will provide the test outcomes when integrating the tool in the whole learning flow process.

8.2 Registration

No problems were detected with the registration process. More tests outcomes will be provided when integrating the tool in a framework such as LifeRay. The registration should be then through this tool and the user should access to the tool directly.

Just some recommendations about the registration to the tools integrated in the LearnWeb_v0.3 tool. Since *My profile* functionality is not included in the main upper menu, the user can only authorize the access to the rest of the tools from the overview pages of the *My Resources* functionality.

8.3 Single Sign On

The single sign on functionality has not been tested because the tool has been analyzed as a standalone application. We will provide the test outcomes when integrating the tool in the whole learning flow process. However, good results has been observed in the previous version of the tool LearnWeb_v0.2 when integrated in a LifeRay framework (Agora Pilot, 2nd cycle).

8.4 Home page and pages flow

See recommendations and comments in section 7.1.

8.5 Toolbars

The functionalities explained in the ID5.15 are correctly implemented. However, there should be a link in the Home Page for downloading this extension of the too.

Recommendations

- Add a link to the toolbar functionality from the Home page.
- Add a help tab in the main menu explaining how it works.

8.6 Tag Clouds

The tag cloud is visualized only in the home page. The user can link to the more used concepts from it. However, the tag cloud doesn't use colours. To add colours will improve the usability and the attractiveness of the tool.

Recommendations

- Add colours to the tag cloud

8.7 Downloading

The downloading functionality work properly. The user has two possibilities by searching a resource using the search bar and by using the extension of the web-browser of the LearnWeb_v03. Both cases work properly. Nevertheless, when using the web-browser bar the upload resource that appears doesn't correspond with the overview page of the upload resources of the tool. The different versions should coherent.

Recommendations

- Solve the incoherent version of the web-browser tool and the search functionality for uploading a resource.

8.8 Supporting UoL

This functionality is partially integrated. The current tool accept to load a zip file and mark it as a UoL, however, the integration with the UoL players still remain unsolved. This aspect should be discussed with the members from WP6.

Recommendation

- Contact the developers from WP6 for integrating the UoL players in the tool.

8.9 Category management

The user can use categories for searching and also for classifying the resources. However, this functionality seems not useful because the results of the search don't vary for the user.

Recommendation

- Add a help icon for explaining how to use the categories in the search for motivating its use.

8.10 Resource groups

The user can manage his/her groups through the GropMe! Web 2.0 tool. The groups are treated as resources and this facilitates the management of them for the user. Only one aspect should be improved in the current implementation: when accessing the functionality *My Groups* this is opened in the same page of the tool and the users loses the context.

Recommendation

- Open the *My Groups* functionality in another tap of the browser or include it as an integrated page in the tool.

8.11 Bookmark

The bookmark process is done using the Delicious tool. There are some problems when accessing the tool. An authorization form appears but, when introducing the login credentials, the tool does not accept it.

Recommendation

- Solve the integration problem with the Delicious tool.

8.12 Sharing

Sharing is defined in ID5_15 as the action that a user does when he/she wants to share a resource with others. Two different processes are distinguished when sharing a resource: a) sharing a resource with someone and b) accepting a resource.

Two possibilities were proposed in the ID5_15 for implementing the *sharing* functionality: recommending interested users and sending an e-mail. The current version of the tool implements the e-mail functionality. However, when including an e-mail address for sharing a particular resource, the system doesn't respond.

Recommendation

- Make the sharing functionalities more visible for the user. Use more attractive colours and typographies.

8.13 Integration with PDP

The current document treats the LearnWeb_v0.3 as a standalone application. This functionality will be tested when integrating the tool in a platform.

8.14 Integration with PC

The current document treats the LearnWeb_v0.3 as a standalone application. This functionality will be tested when integrating the tool in a platform.

8.15 Integration with TenTube

The user can connect directly to his/her account in TenTube by the functionality *Upload a Video*. The integration work properly. However, a manual explaining how to upload a video from TenTube will help in the comprehension of this functionality.

8.16 Comment rating

The user can comment and rate all the resources. This version also includes a vote system that allows the user to vote the comments of the different comments. All this functionalities work properly.

8.17 Managing abuses

The user can abuse separately a tag a comment or a resource. The tool work properly but it has to be tested if the messages has arrived to the administrator of the system.

Recommendation

- Check the data base for analyzing if the abuses are arriving to the administrator e-mail account.

8.18 Stimulating users

For stimulating the user to share resources it has been implemented the functionality of sending a mail to those persons that the user wants to share the resource with. The send mail functionality has to be reviewed because doesn't work properly.

Recommendation

- Solve the functionality system for sending an e-mail for sharing a resource.

9 Summary of quality of release v.0.3 and recommendations for v.0.4 (UPF)

Once analyzed the main functionalities and provided by the LearnWeb_v03 we can conclude that most of the requirements explained in ID5.15 and ID5.16 has been successfully implemented. In this section we summarize the most important aspects that still remain unsolved. All these aspects are classified into functionality, usability and loadability issues. For a more detailed description of the problems here mentioned see Table 1, Table 2, Table 3 and

Unit and Integration Test: Storage	
Aspect	Observations
Deleting records	Ok. Users can delete a record in their personal page.
Deletion of multiple records at the same time	Fails. The system does not provide the option to delete a set of records at the same time.
Deletion of all records in one action	Fails. The system does not provide the option to delete a set of records in one action (with a unique button).
Check if the fields are stored correctly when storing a new record.	Ok. The system checks if the fields introduced are correct. The user can see this fields when press over the record.
Concurrent usage	Ok. The tool can be used for concurrent users.
Time out	Ok.

Table 4 for the main functionalities and Table 5 for the loadability needs.

Functionality recommendations

- Solve the functionality problems detected in: *My Boockmarks, Upload a Video, Rating, Tags and e-mail.*
- Solve the pages work flow: *My Groups and My resources when accessing them from the personal profile overview page.*
- Add the non-existing functionalities: *My profile, and upload a photo in the prefile, Help tab.*
- Add welcome messages for all the languages.

Usability recommendations

- Add manuals and help icons for each of the functionalities.
- Add colours to the tag cloud.
- Add colours and change the typography of the functionalities for enhancing collaboration within users.

Loadability tests

- Solve the links time average access in Table 5.

10 Conclusions (UPF)

This document provides the main outcomes from the test of the LearnWeb_v03 consisting on the results from a complete Functionality test (sec. 5.1), a Quality Test (sec. 5.2) and a loadability test (sec. 6). We have also included a summary of the more relevant results of the test and a set of recommendations for the future versions.

Annex (TF-15)

We tested [LearnWeb v 0.3](http://learnweb.it.fmi.uni-sofia.bg/) (<http://learnweb.it.fmi.uni-sofia.bg/>) with JMeter (<http://jakarta.apache.org/jmeter/>). For this purpose we used ramp test with up to 300 simultaneous users for 10 minutes duration and 10 seconds between clicks. Test is set to continue when a sample error occurs. The tool measures number of samples, standard deviation, throughput, percentage of detected error, etc. We analyzed graph, aggregation, and summary results recorded by JMeter listeners: Graph results, Spine Visualizer, Aggregate Results, Summary results, View results in a Table and View Tree Results.

Test of LearnWeb 2.0

Result from load test of [LearnWeb](#) are presented in next graphics. They represent main characteristics of the web client depending on the time from the beginning of the tests and number of active virtual users. Test represents usual user behavior recorded by integrated in the tool module HTTP Proxy Server.

Fig. 3 Results summarized in table

Requests with are described in the View Results Tree listener with data for load time, latency, sample and error count as well as response code.

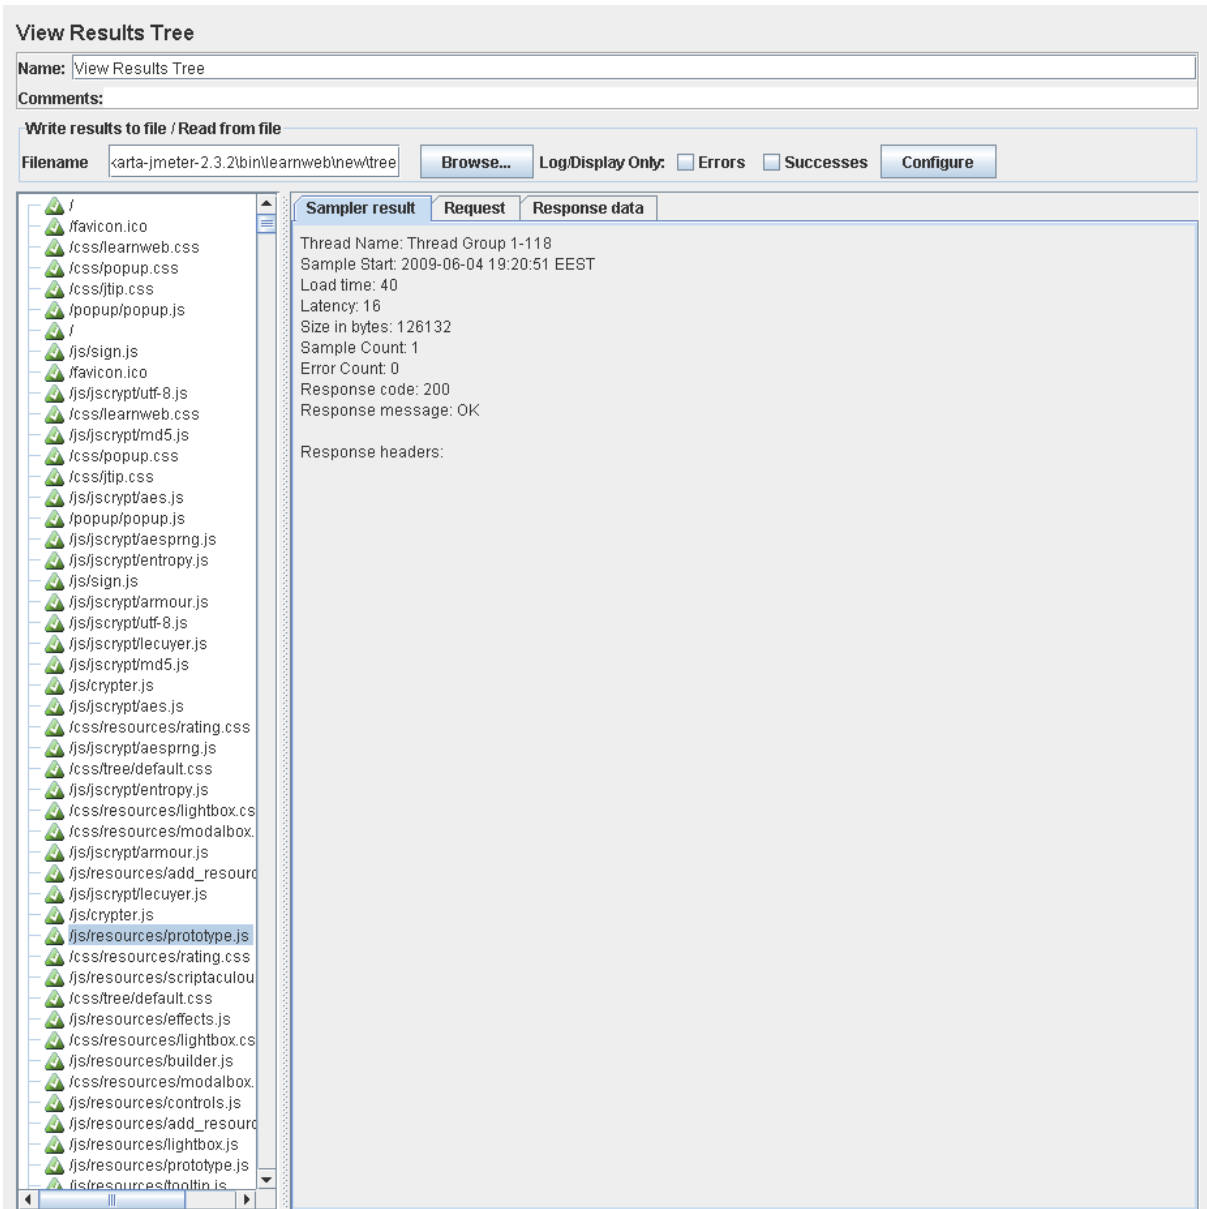

Fig. 4 Results summarized as tree

JMeter reported no requests with error.

Aggregate report summarizes information about number of sample for each URL, average time, minimum and maximum time for samples for a given URL, median (the time in the middle of a set of results, 50% of the samples took no more than this time; the remaining samples took at least as long) and 90 % line (90% of the samples took no more than this time, the remaining samples at least as long as this) information, level of detected errors, throughput measured in requests per second/minute/hour and in Kilobytes per second. Times are measured in milliseconds.

Include group name in label?

Fig. 5 Aggregate report –part 1

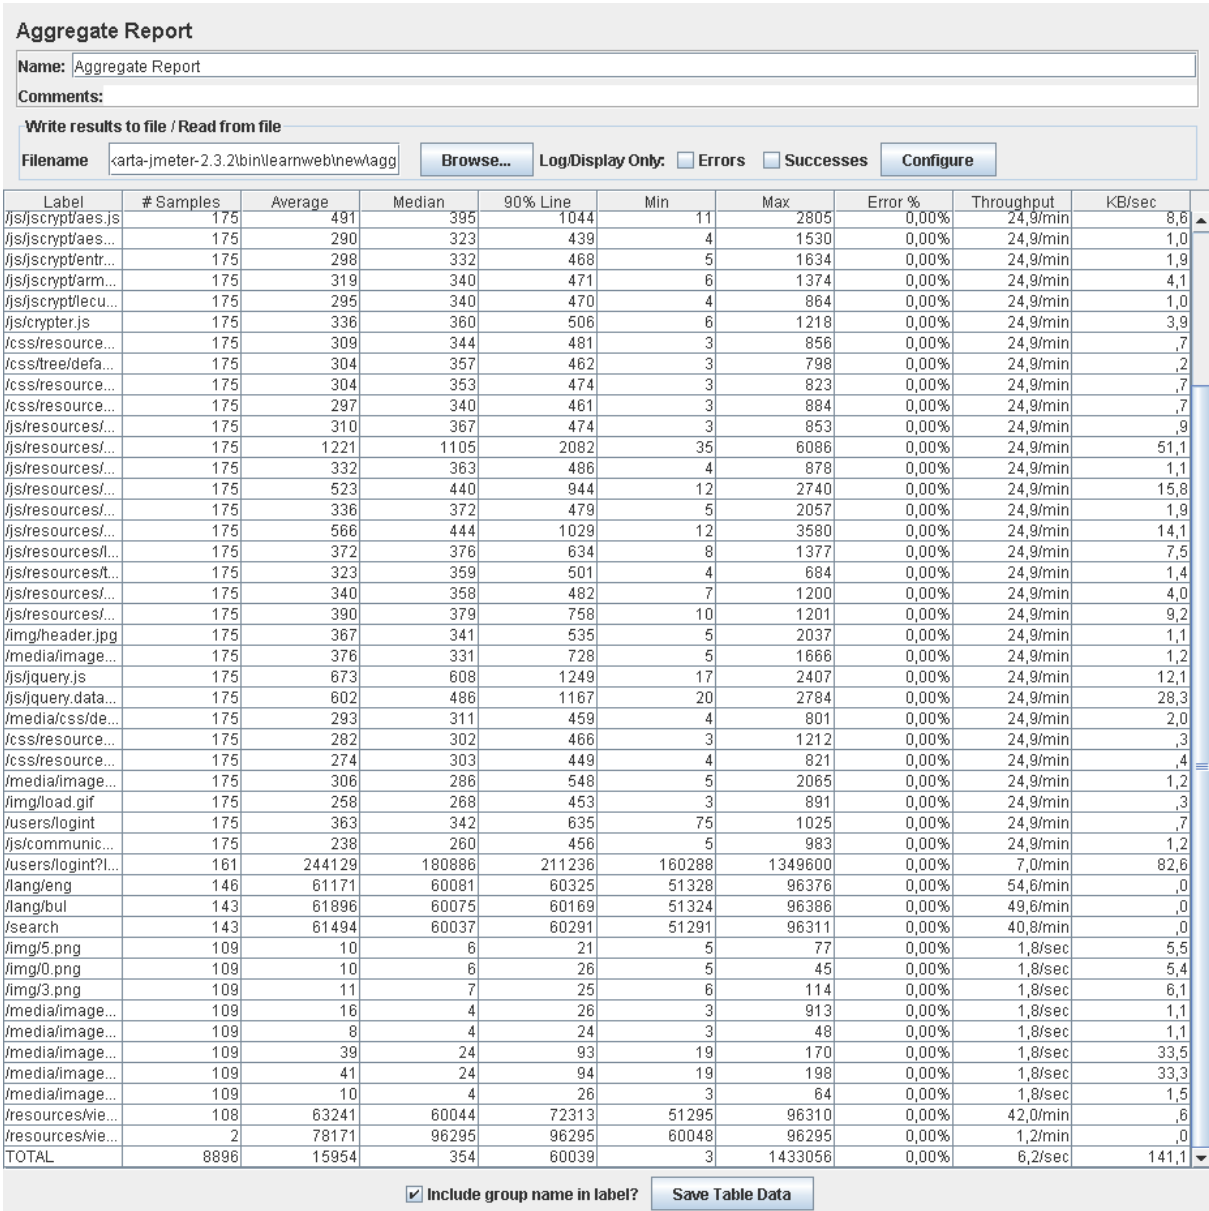

Fig. 6 Aggregate report –part 2

Average elapsed time is from 8 ms up to 244129 ms. Total percents of requests with errors is 0.0 %.

Fig. 7 Aggregate graph – Average Response Time

Fig. 8 Aggregate graph – Minimum Response Time

Fig. 9 Aggregate graph – Maximum Response Time

Fig. 10 Aggregate graph – Median Response Time

Fig. 11 Aggregate graph – 90 % Line Response Time

The Graph Results listener generates a simple graph that plots all sample times with information about current sample, average of all samples, standard deviation, and throughput rate.

Fig. 12 Graph results –part 1

Average Response time graph (blue line) represents slight growth which means that increase of load on the server leads to slight growth of response time.

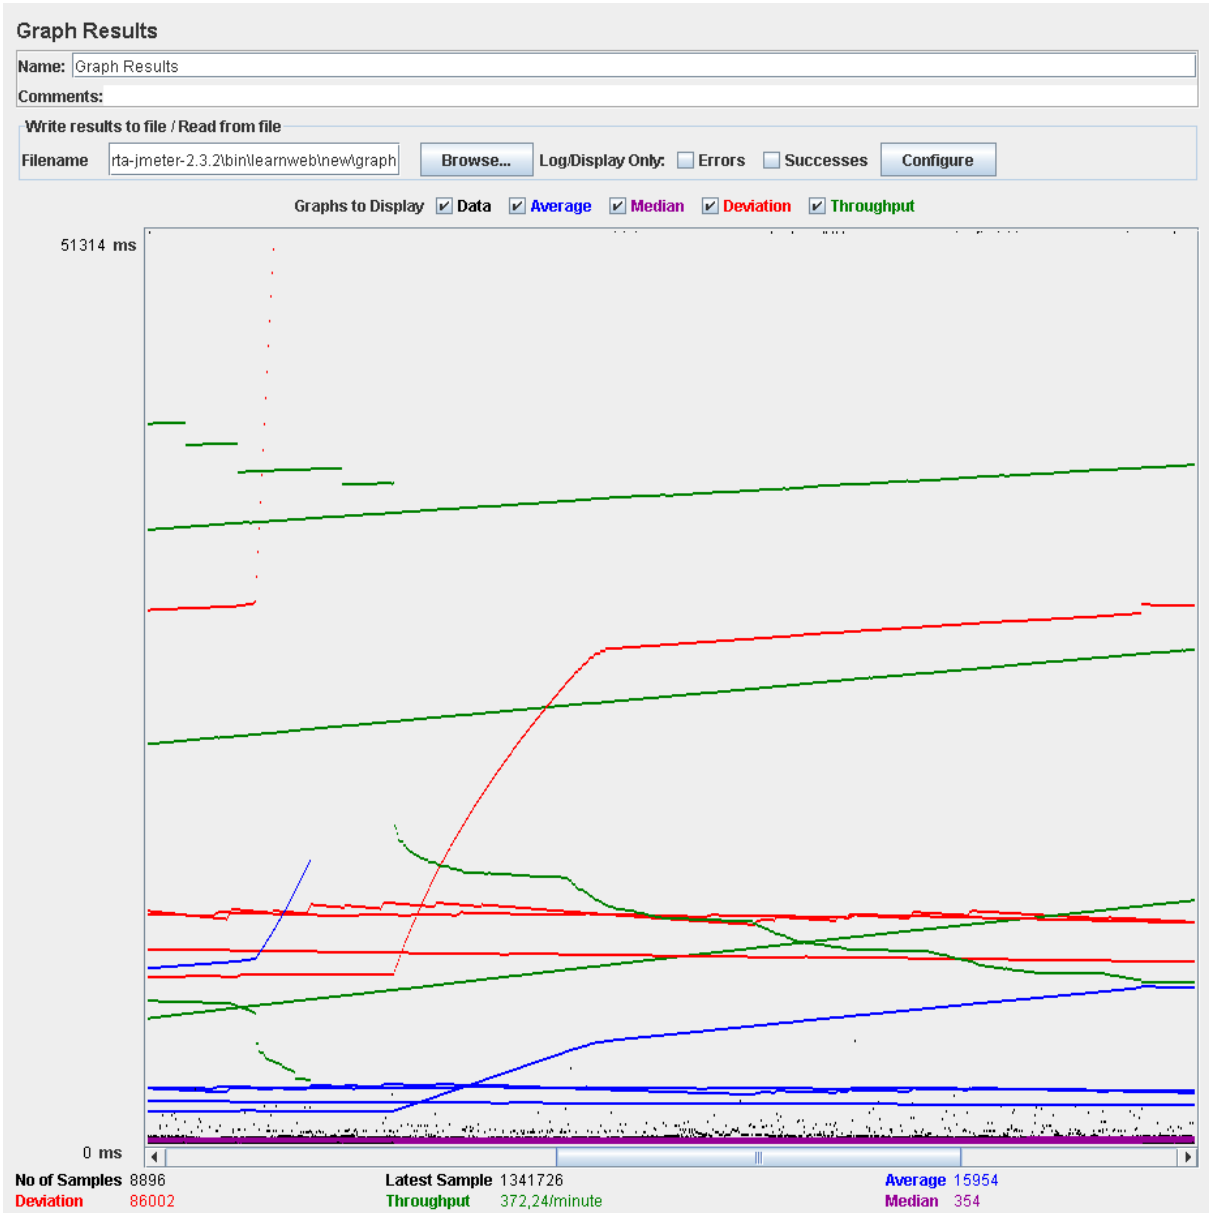

Fig. 13 Graph results –part 2

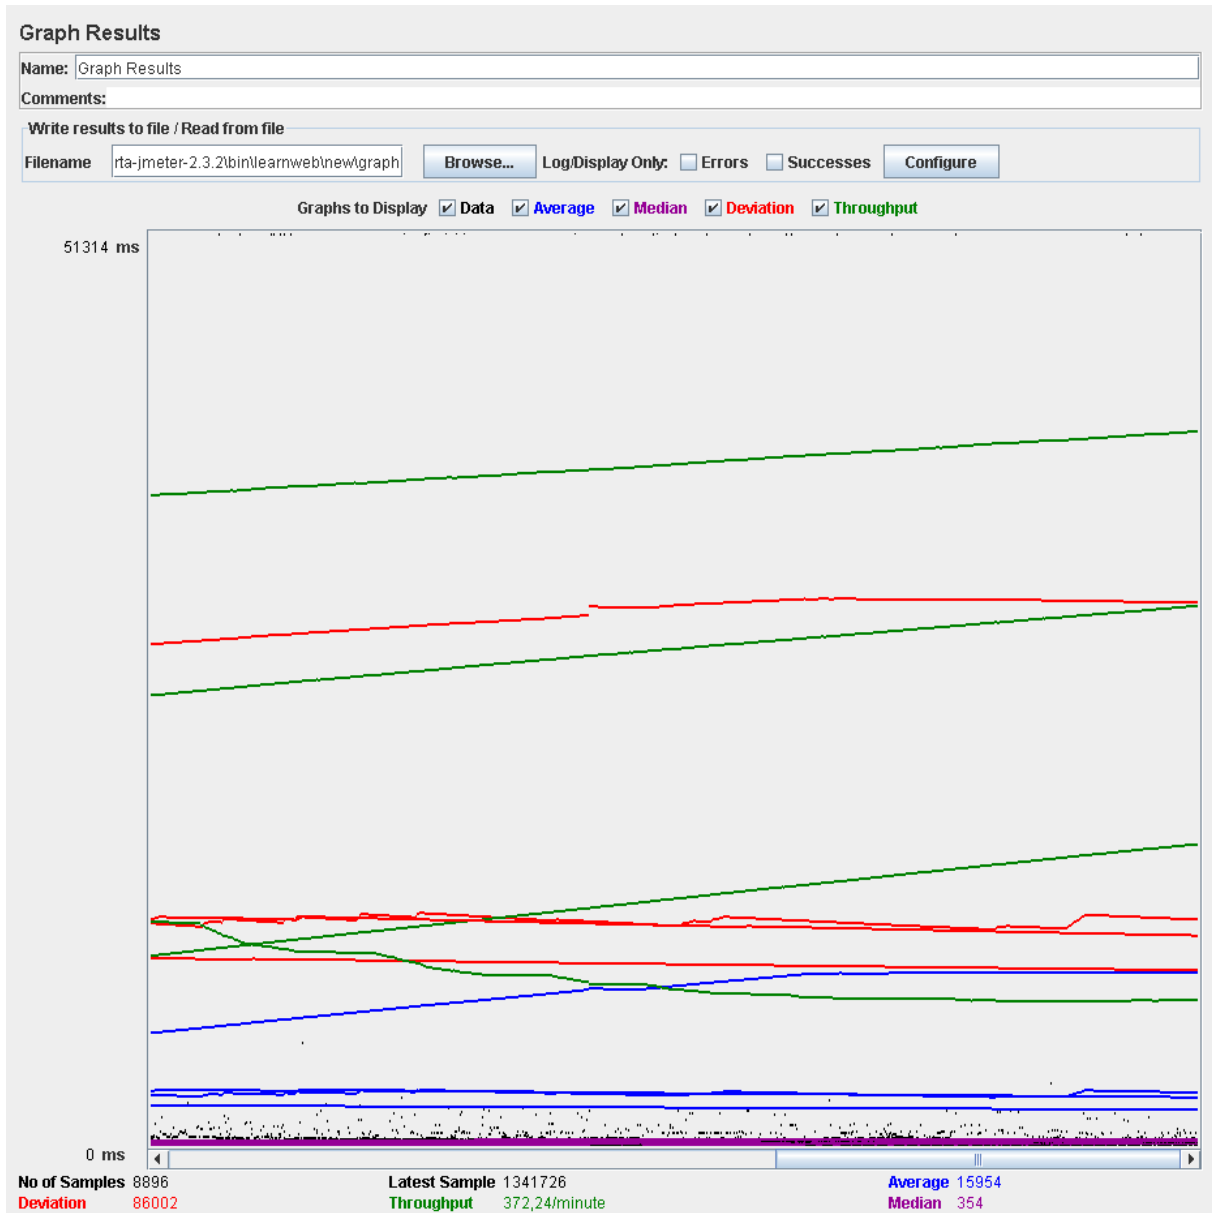

Fig. 14 Graph results –part 3

The Spline Visualizer provides a view of all sample times from the start of the test till the end, regardless of how many samples have been taken. The spline has 10 points, each representing 10% of the samples, and connected using spline logic to show a single continuous line.

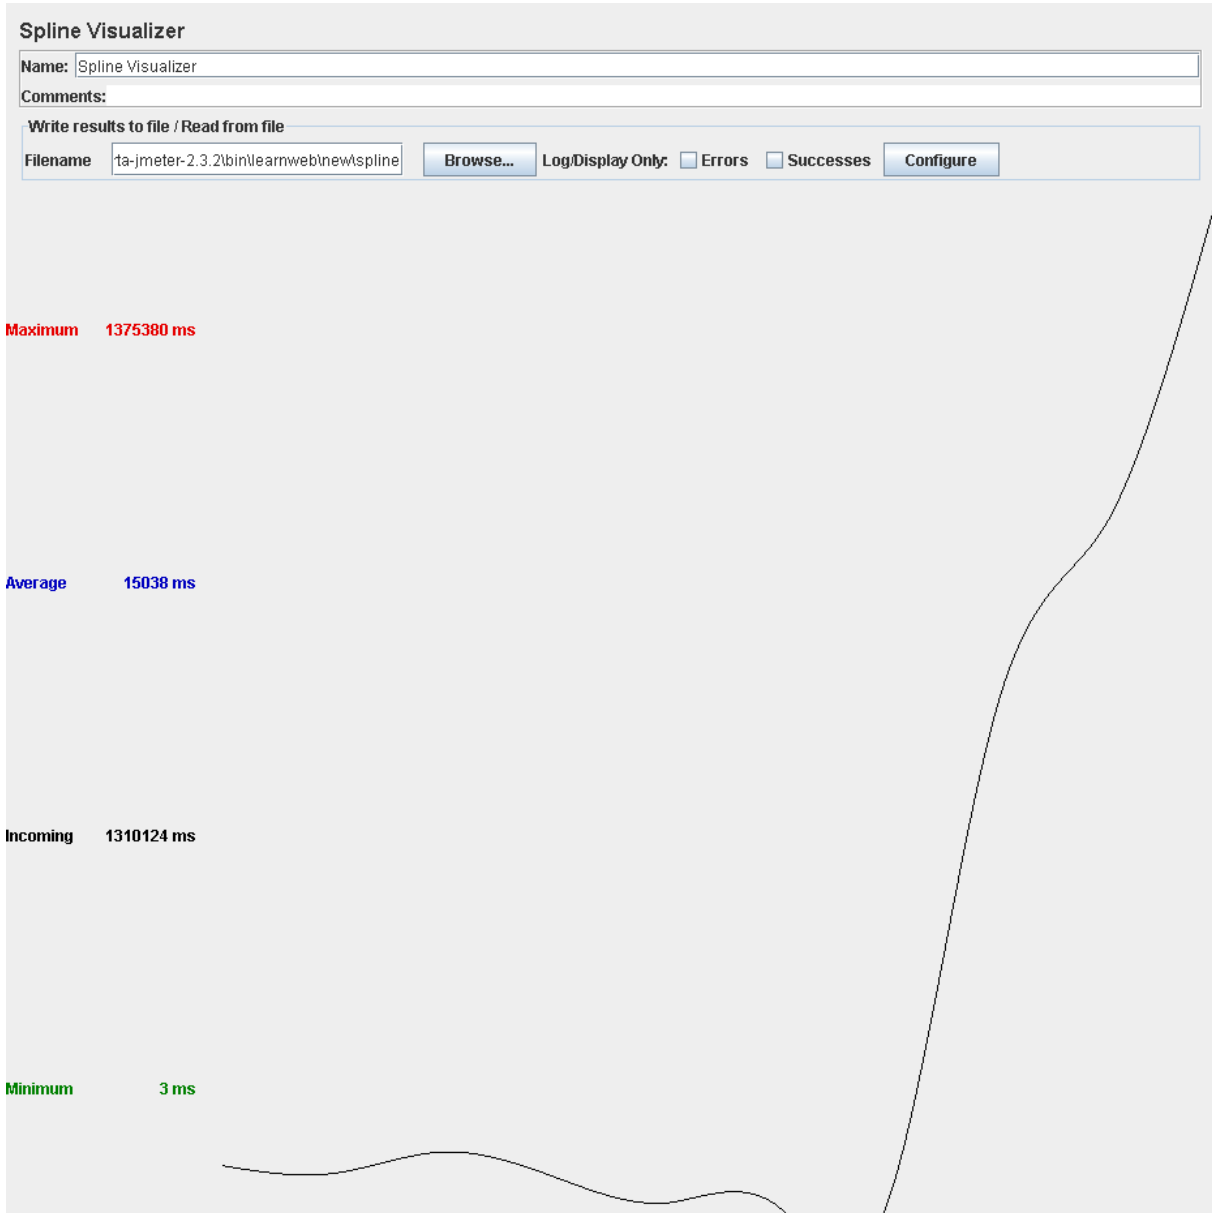

Fig. 15 Spline vizualizer

Conclusion

JMeter reported no requests with error. Conclusion from load tests is that tested web client LearnWeb 2.0 suits basic of the load tests requirements with following recommendations:

Following links have average time more than 8 s and code should be improved:

URL	Response Time (ms)
/	134179
