**Introduction.** This study clarifies the state of deposition of publications targeted at mature readers in the National Diet Library (NDL) and some other related issues.

**Method.** First, we selected 50 publications by category from Amazon.co.jp, largest online bookstore in Japan, and then, we investigated as to whether the entry of these publications would result in hits on NDL-OPAC, which is the NDL's online catalogue. Next, we conducted a detailed survey on the publications from publishing companies that target mature readers and investigated the number of publications deposited by these companies every year. Finally, we conducted interview surveys targeting the NDL, agent companies, and publishing companies.

**Results.** We found that 80% of the publications for mature readers in the "adult" category at Amazon.co.jp were not deposited in the NDL.

**Conclusion.** We discovered the evidence of a pattern wherein some of the publishing companies that publish publications for mature readers deposit only publications that are not targeted at mature readers, and refrain from depositing publications targeted at mature readers. The NDL should focus on improving the deposition of publications through agents and on developing an exhaustive knowledge of Japanese publications.

### **Introduction**

Japan uses the legal deposit system, and the National Diet Library (NDL) is authorized to comprehensively accumulate and store Japanese publications (NDL, 2007). However, in reality, there is only a very small body of research investigation into the issue of whether this deposition is being conducted thoroughly and exhaustively. Although researches targeting publications and musical materials from within Aomori Prefecture do exist, (Nemoto, 1986; Katou, 1983) research into other publications is almost nonexistent, and there is no research covering publications in every category. Therefore, in this study, we used the publishing information available online at Amazon.co.jp (<http://amazon.co.jp/>) and checked the deposition status for publications in all categories. It was evident that deposition of publications for mature readers is particularly low, or almost nonexistent, in comparison to publications in other categories. Next, we conducted interview surveys targeting related institutions and clarified the causes of the deficiencies in the deposition of publications.

In recent years, publications for mature readers have been frequently used as material in research and surveys in fields such as psychology, sociology, folklore studies, philosophy, history, and law (Thompson, 2007; Uchida, 1996; Yagiri, 1996; Yokoyama et al., 2005). For example, in the field of law, the comic book titled "Misshitsu" is at the center of the obscenity debate (Nagaoka, 2004) in the Shobunkan trial. However, as of September 2008, Misshitsu did not score a hit in an NDL-OPAC search. This is because Misshitsu is not deposited in the NDL, which implies that when current or future researchers attempt to research the Shobunkan trial, they will not be able to refer to the original material on which the entire trial is based.

Moreover, Japanese publications for mature readers are recognized as cultural objects outside Japan (Thompson, 2007; Uchida, 1996). In the past, Japan has lost a great deal of pornographic woodblock prints

of the Edo era known as “shunga” to other nations due to the inability of the Japanese people to view them as art objects. These lost shunga works have now been elevated to a high status as art objects in other countries (Sekiya, 2004). The NDL is not living up to the procuring policy that states “focus on the procuring of precious materials that should not be scattered or lost” (Editorial Committee of Introductory Textbook of the NDL, 1998), and considering this past example of cultural loss, the NDL should procure and preserve publications for mature readers in order to make cultural objects available to future generations.

This report is structured as follows. First, the relevant terminology is defined in Section 2. Next, Sections 3 and 4 explain the survey method, survey results, and observations therein. Lastly, Section 5 summarizes the report.

### **Definitions of terms**

In this chapter, we will outline the current status of legal deposits and pornographic publications in Japan.

#### ***The legal deposit system***

The legal deposit system is defined as a legal requirement wherein a person or group is required to submit copies of their publications to a repository, usually a library. The UNESCO states “Legal deposit may be defined as the requirement, enforceable by law, to deposit with one or more specified agencies copies of publications of all kinds reproduced in any medium by any process for public distribution, lease, or sale” (Lunn, 1981; Lariviere, 2000), or as a system for the publisher to obligate the deposition of publications, etc. to the national library by law (Japan Society of Library and Information Science, 2002). Typically, the national library is one of the repositories of these copies.

The national library is defined by the Recommendation concerning the International Standardization of Library Statistics 1970. The UNESCO describes national libraries as “libraries which, irrespective of their title, are responsible for acquiring and conserving copies of all significant publications published in the country and functioning as a ‘deposit’ library, either by law or under other arrangements” (UNESCO, 2007).

The legal deposit system has become the main goal of the national library along with ensuring the bibliographic control of all books. In Japan, the authority for the inspection of publications was transferred from the Ministry of Education to the Ministry of Interior by the publication ordinance in 1875. The legal deposit system was achieved by the mechanism of delivering the publications submitted to the Ministry of Interior because of the inspection of Tokyo Syojakukan.

In prewar Japan, there were a few laws and regulations related to legal deposit, including the Publishing Law and the Newspaper Law. The main purpose of these laws was to clamp down on publishing for the purpose of controlling public order and morals. Under these laws, publishers were obligated to deposit two copies of their publications with the Interior Ministry, one of which was sent to the Imperial Library (one of the predecessors of the NDL).

The legal deposit system for the collection and preservation of a domestic cultural asset was set up in accordance with the National Diet Library Law (Law No. 5, February 9, 1948) in 1948 after the inspection system had been abolished (Editorial Committee of Introductory Textbook of the NDL, 1998; Japan Society of Library and Information Science, 2002).

#### ***Outline of the legal deposit system in Japan***

The legal deposit system in present day Japan is provided with two clauses each from Articles 24 and 25 of the National Diet Library Law (Law No.5, February 9, 1948) (NDL, 2007). The purpose of the legal deposit system in Japan is to collect publications, arrange them, preserve them permanently, and ensure the bibliographic control of all books. The publishers must send a complete copy of the best editions of their publications to the NDL within 30 days of publication to enable their collection and use as cultural goods. The law is applicable to publications including books, pamphlets, serial publications, musical scores, maps, and phonographic records.

Japanese state authorities should send at least 30 copies of their publications to the NDL. Independent administrative institutions and prefectural and city governments should send five copies of their publications. Among all Japanese cities, government-decreed cities should send five copies of their publications, other cities and boroughs should send three copies, towns and villages should send two copies, and private sectors bodies should send one copy each. If a publisher fails to send a publication, he/she shall be punished with a fine equivalent up to five times the retail price of the publication. However, this rule has not been applied since 1948 when the National Diet Library Law was established.

Article 24-2 applies to publications issued by or for local government agencies such as metropolitan and prefectural governments. A prescribed number of copies of the publications of any local government agency and government-related corporations must be sent immediately to the NDL for its official use and for its use in international exchange. For example, prefectural and municipal agencies must deposit up to five copies, and town and villages, up to two copies.

The NDL should pay for the publications that have been sent from publishers via the legal deposit system. The NDL pays a fine equivalent up to five out of ten the retail price of the publication for books in principle. However, the NDL asks publishers to donate their publications if possible (NDL, 2007).

#### *Operation of the legal deposit system in Japan*

The government and other public offices send their publications through the administrative department branch and the judicial branch of the NDL. The branches in charge gather ministry publications as required and deposit them at the NDL. Independent administrative institutions and local municipal entities send their publications by mail.

Wholesale booksellers began sending publications for sale in a lump sum to the NDL since 1951. If each publisher entrusts selling his/her publications to Nippon Shuppan Hanbai, Inc. or Tohan, they also entrust the task of sending publications to the NDL. The publication that the major wholesale booksellers turn over will be sent to the NDL without omission by introducing this mechanism (NDL, 2006, 2007).

#### **Zoning**

Zoning is a system or institution that restricts young adults' access to pornographic materials in shops. Pornographic books with zoning marks put by publishers should be placed in isolation from other materials in book stores. They cannot be sold to children and young adults. In particular, bookstores are required to mark the boundary between general publications and pornographic books on their sales floor.

#### **Pornographic publications**

Pornographic publications are defined as books, video, and DVD whose sales are limited by self-imposed restraining methods such as the zoning method mentioned in this paper. They are synonymous with dirty book, erotic literature, and so on. Most of these contain graphic and realistic scenes of sex. Incidentally, throughout this paper, "general books" are referred to as publications without zoning.

#### **Search procedure**

In this study, we conducted the following three surveys: (1) an overall survey investigating the extent to which publications listed on Amazon.co.jp are deposited in the NDL, (2) a survey on the detailed depositing state for each publisher of publications for mature readers, and (3) an interview survey with the NDL, agent companies, and publishing companies.

#### **Investigation 1: Research concerning the general situation of delivering books**

The goal of the first survey is to clarify the overall state of deposition of publications in Japan. This survey will indicate the current situation pertaining to the particular deficiency in the deposition of publications for

mature readers.

*Acquisition of complete bibliographic list*

In order to clarify the overall state of deposition of publications in Japan, first, it was necessary to obtain an exhaustive list of publications. However, it is difficult to obtain such a list. A preliminary survey revealed that there were quite a few deficiencies even in the “Nihon-Shoseki-Somokuroku” and that it cannot be used as an exhaustive list (more on this later). Therefore, we decided to use the publication list at Amazon.co.jp for this study. This decision was based on our judgment that the publication list at Amazon.co.jp, which is the largest online bookstore in Japan, is the most thorough publication list currently available in Japan (the preliminary survey led us to feel that the publication list at Amazon.co.jp was at least more thorough than the Nihon-Shoseki-Somokuroku). Next, we conducted a survey investigating the extent to which the publications listed on Amazon.co.jp were deposited in the NDL. It must be noted that the publication list at Amazon.co.jp is not completely exhaustive. However, most of the publications listed on the website are publications that should have been deposited in the NDL. Thus, if we find publications from within that list that are not deposited in the NDL, it will be sufficient for the purpose of this study, which is to merely bring attention to the fact that there are problems in the thoroughness of deposition of publications in the NDL. We would like to defer the issue of determining the position of publications listed by Amazon.co.jp among the entire range of Japanese publications.

*Research on the holding situation according to category*

Amazon.co.jp divides Japanese books into 27 categories. In its “100 top sellers” list for each category, we investigated whether each title scored a hit when searched for in NDL-OPAC. We used 25 categories for the survey; the “calendar” and “poster” categories were not included.

We used the November 26, 2006 version of the 100 top sellers, and our NDL-OPAC search survey was conducted half a year later in June 2007. The reason why we included a time lag was because we assumed that it will take some time for publications to score hits on NDL-OPAC after they have been picked up by Amazon.co.jp. Moreover, one of the reasons why we did not select publications through random sampling, but instead selected the top sellers, was that their extraction was easy; further, the main reason was that we felt that the best sellers have high priority as publications that should be deposited in the NDL. A publication that is selling well indicates its profound connection with modern society, which in turn should relegate its status as a highly valued cultural object.

Furthermore, to compare the state of the deposition at the NDL with the national libraries of countries other than Japan, we investigated if the top 25 publications from the top sellers list at the French version of Amazon, Amazon.fr (<http://www.amazon.fr>) scored hits in the OPAC of Bibliotheque Nationale de France (The National Library of France), called Catalogue Bn-Opale Plus (<http://catalogue.bnf.fr/>). In the case of France, we used the February 21, 2007 top seller list and conducted the search survey for the Catalogue Bn-Opale Plus in June 2007. The categories we used for the survey were 29 “livres” (books) categories, excluding “Calendriers et Agendas” (calendars).

***Investigation 2: Research on the pattern of delivery of books by publishers***

In the second survey, we investigated the patterns in the state of deposition for each of the five publishers who published publications for mature readers. The five publishers we targeted for the survey were Core Magazine Co., Ltd., France Shoin Inc., Akaneshinsha, Kill Time Communication, and Shobunkan Corporation. The four publishers apart from Shobunkan are the most frequently listed publishers in the 100 top sellers list of the adult category at Amazon.co.jp. We included Shobunkan because in 2002, they were accused of including obscene content in their publications. The patterns we uncovered in the deposition of publications by publishing companies that publish material for mature readers are combinations of A and B as given below:

About publications for mature readers:

- (A1) Deposits are made for almost all publications for mature readers.
- (A2) Deposits are only made for some publications for mature readers, and some publications are not deposited:
  - 1) A diachronic (time gradient) imbalance is evident wherein deposits were once made in the past, but are not made at present
  - 2) A synchronic imbalance is evident wherein though two publications were published at the same time, one was deposited and the other was not.
  - 3) The two abovementioned imbalances are mixed.
- (A3) Publications for mature readers are not deposited at all.

With regard to publications other than publications for mature readers:

- (B1) This company also publishes general publications, and most of them are deposited.
- (B2) This company also publishes general publications; deposits are made only for some of these publications, while some of them not deposited.
- (B3) This company also publishes general publications, but these are not deposited at all.
- (B4) This company does not publish general publications.

### ***Investigation 3: Interview surveys with related organizations***

In the third survey, through an interview survey, we clarified the cause for publications not being deposited. The survey targets were Library Group 1 in the Library Sales Division of the Tohan Co., Ltd. and the Acquisition Planning Department in the Acquisition Division of the NDL. We also interviewed the concerned publishers.

### **Results and Consideration**

This section will detail the results of the three surveys conducted by us and provide commentary on the results.

#### ***Investigation 1***

Table 1 shows the percentage of the books that are listed in 50 top seller books in each Amazon category and are not found in NDL-OPAC (henceforth such percentage is referred to as “ratio of non-deposition”). We can see in Table 1 that the ratio of non-deposition with regard to pornographic books runs up to 80% while that of others remains at about 10%. Table 1 also presents data on the percentage of books that are listed in the 50 top selling books in each Amazon category and are not found in Books.or.jp (<http://books.or.jp>). Books.or.jp is an online version of Nihon-Shoseki-Somokuroku (Japanese “Books in Print”). We can see in Table 1 that Books.or.jp is not comprehensive in that it does not contain many of the books listed by Amazon.

#### ***Are pornographic books deposited at Bibliotheque nationale de France?***

We conducted a similar investigation on French publications. We checked the percentage of books that are listed in the 25 top selling books in Amazon.fr (French Amazon) and are not found in Catalogue Bn-Opale Plus (OPAC of Bibliotheque nationale de France). We can see that the ratio of non-deposition concerning the category Erotisme is 12% (3 books out of 25). The ratio does not differ significantly from that of other categories (in fact, 12% is relatively lower than the others). Since the books of Erotisme in Amazon.fr and

Pornography in Amazon.co.jp are different in nature, we cannot claim that pornographic books are more adequately deposited in France. However, there appears to be a difference between France and Japan concerning the deposition of pornographic books at their respective national libraries.

### ***Investigation 2***

The deposition patterns for each publisher of publications for mature readers are outlined below:

#### *Core Magazine*

The major publishing areas of Core Magazine are comic books for mature readers, magazines for mature readers, and computer game magazines. This company was issued a subpoena for documents in October 2006 for suspicion of violation of the “Act on Punishment of Activities Relating to Child Prostitution and Child Pornography, and the Protection of Children (Act No. 52 of 1999).”

The deposition pattern was as per (A2-1) (B1) indicated in the previous section. Although the deposition was conducted fairly exhaustively across all categories until April 2006, it was almost completely discontinued from May 2006 onward. Core Magazine deposited its publications only when it was urged to do so by NDL. We will discuss this point later in the paper.

#### *France Shoin*

The major publishing areas of France Shoin are comic books for mature readers and books known as “erotic novels”(novels that are not targeted by zoning but which contain a high amount of erotic depictions). They also publish e-books. They are a 100% subsidiary of Mikasa Shobo Co., Ltd., which is a publisher of general interest books.

The depositing pattern was as per (A2-2) (B1) indicated in the previous section. Although the deposition was conducted at almost 100% for publications not targeted by zoning, only 79% of the publications for mature readers were deposited. Looking at the breakdown for publications for mature readers, it is evident that although publications for mature readers other than comic books were almost all deposited, almost no comics for mature readers were deposited. In fact, 80% of 50 comic books for mature readers were not deposited. It is interesting that only comics are singled out for non-deposition.

#### *Shobunkan*

The publishing areas of Shobunkan comprise comics and magazines for mature readers and comic books with erotic depictions for teen readers. As mentioned above, Shobunkan was charged with the distribution of obscene material in violation of Article 175 of the Japanese Penal Code due to the publication of the comic book *Misshitsu* in 2002. Shobunkan’s president, chief editor, and contracted cartoonist were arrested.

The deposition pattern was as per (A3) (B2) indicated in the previous section. Publications for mature readers were not deposited at all, and general interest publications were rarely deposited. Moreover, although, prior to 2002, the deposition was conducted lightly, it was almost completely discontinued from 2003 onward.

#### *Akaneshinsha*

The major publishing areas of Akaneshinsha are comics and magazines for mature readers and novels and comics featuring male-on-male erotic depictions (a genre known as “boy’s love”).

The depositing pattern was as per (A3) (B2) indicated in the previous section. Although almost all publications not targeted by zoning were deposited, as many as 110 out of 111 in the category of publications for mature readers were not deposited. Moreover, the overall deposit rate has been slowly decreasing from 2003 onward, with almost no deposition from 2005 onward.

#### *Kill Time Communication*

The major publishing areas of Kill Time Communications are, in addition to comics and novels for mature readers, publications related to computers and the Internet. The deposition pattern was as per (A1) (B1)

indicated in the previous section. All of their publications were deposited.

### ***Investigation 3***

Regarding publishers of publications for mature readers, we targeted a group of 13 companies. This group comprised the five companies targeted in the second survey and eight other companies. We contacted these companies through e-mail, letters, and telephone, and asked for their participation in an interview survey. However, most of the companies ignored or turned down our requests. We did receive a comment in an e-mail reply from Shobunkan, which will be discussed later. In any case, the problematic issues in the depositing system uncovered through the interview survey targeting Tohan and the NDL are presented below.

#### *Issues related to the legal deposit system*

The following two points can be stated as problematic issues in the current deposition system: (1) not all publications are deposited through agents, and (2) publications not handled by agents are not assessed. First we will explain point (1).

As stated above, it is acceptable for publishers to commission only the sales of their publications to an agent and not their deposition. Because of this, some publishers forget or neglect to complete the deposition commissioning procedures. In some of these cases, by the time the NDL urges the publisher to deposit a non-deposited publication, the publication is already out of print and cannot be deposited. In particular, in the case of publications for mature readers with low print runs, this is a common problem. In our interview survey, the NDL stated that, "among the publications received through agents, approximately 12% are not deposited." Moreover, most of these publications are not deposited due to this reason.

Next, we will explain point (2). As stated above, the materials that the NDL uses to check on depositing deficiencies are only the new publications lists obtained through agents. The publications not handled by agents are not assessable. However, distribution channels not going through agents are comparatively developed for publications for mature readers. For example, some of the sales formats are sales through on-line bookstores such as Amazon.co.jp, mail order sales conducted through publisher websites and postcards, wholesale transactions conducted directly with specialist shops, and vending machine sales. In the case of publications distributed through these methods, sometimes, the NDL does not even realize whether the publications are being published at all. Depositing deficiencies in France Shoin's comics for mature readers and Akaneshinsha's publications for mature readers are most likely due to this reason. In order to aim for more exhaustive deposition, the NDL must obtain a sales list through means other than agents (for example, from Amazon.co.jp), obtain publishing records from each publisher, and verify that information. Due to the expansion of the Internet, the number of publications distributed through means other than agents is on the rise. In this environment, it is necessary to use a variety of types of information sources.

Another problematic issue with the current depositing system is with regard to administrative fines. The NDL has the power to levy administrative fines on publishers who do not deposit their publications. However, since the NDL only uses publication lists from agents to check for depositing deficiencies, there is a problem in the fairness of imposing administrative fines. Because publications that are not handled by agents are not being assessed by the NDL, it is impossible to penalize publishers that sell publications without using agents even if they do not deposit their publications. If only publishers who use agents are penalized, publishers may choose to avoid using agents. Moreover, this could possibly cause agents to stop cooperating with the NDL.

#### *Non-deposition due to intensification of restrictions on child pornography*

The "Ordinance to protect children from being harmed by crime" was established on June 2005 in Nara Prefecture in Japan. It was publicly announced on July 1 in the same year. This ordinance was designed to prohibit simple possession (possession regardless of intent to distribute) of "child pornography," defined as material that contains pornographic photographs of children under 13. Inclusion of regulations punishing simple possession is being demanded for the "Act on Punishment of Activities Relating to Child Prostitution

and Child Pornography, and the Protection of Children” as well. In this environment of harder stances on child pornography regulations, in April 2006, viewing was disallowed for 120 NDL-stored publications that were deemed as child pornography. Further, it became difficult to actively urge publishers to deposit publications that bordered around the definition of child pornography. As mentioned above, Core Magazine had only deposited its publications when it was urged to do so by the NDL. Thus, the aforementioned fluctuation in depositing along a time gradient is believed to originate in the fact that they published many publications that bordered around child pornography.

#### *Impression of comstockery*

Although their number is small, there are some publishers who avoid depositing their publications because they feel that the NDL is an “institution that practices censorship.” Shobunkan is one such publisher. A part of the response we received from Shobunkan when we asked them to participate in the interview survey is quoted below.

“We were fighting for the constitutional right of freedom of expression, so it is very unfortunate that the result came out the way it did. We plan to continue fighting alongside like-minded publishers to protect the freedom of expression and to not allow unjust intervention by governmental forces. Throughout history, the national library collection has been generally limited to tame items deemed to hold no threat to the preservation of the establishment. In fact, it can be said that the books not collected in the national library have the most value.”

This type of a response is most likely based on the following background. Depositing publications with the Ministry of Interior, mainly for the purpose of censorship, was obligatory in prewar Japan. Publications that were submitted and deemed not problematic were deposited in the Imperial Library (or its predecessor, the Tokyo Library). However, over half of these publications were deemed “blatantly obscene material” (NDL, 1974) and general usage was not permitted. With this historical backdrop, Shobunkan has an image of the NDL as a censorship institution, and this is the most likely reason why they do not deposit their publications. Such a problem is believed to exist because publications for mature readers have been targeted for restrictions by both the national government and society throughout history.

#### **Conclusion**

In this study, we surveyed the state of deposition of publications for mature readers in the NDL, conducted interviews at related institutions, and clarified the problematic issues in Japanese legal deposit system.

Japanese legal deposit system came to operate in 1951 in a format that is reliant upon agents, as seen in the current system. Sixty years later, the publishing distribution framework has changed significantly. The time is ripe for redesigning this legal deposit system in several areas.

In order to ensure exhaustive deposition, the NDL must be able to better assess the status of publications not handled by agents. To achieve this, in addition to relying on the new publication lists that have been used till date, other lists should be used from sources such as Amazon.co.jp. Moreover, with regard to publications for which only sales and not deposition is commissioned, the NDL should work together with agents to uncover such cases quickly and promote their deposition. These types of measures would be effective in minimizing the problem of non-deposition. Furthermore, it will most likely be necessary to initiate a wide range of activities to raise awareness that the purpose of the legal deposit system is to collect and preserve Japanese cultural objects and not to conduct censorship.

On the subject of publishers, there were no publishers who did not deposit even one publication to the NDL among the publishers targeted for this survey. This indicates the fact that all publishers appear to have at least some sort of knowledge of the legal deposit system. Publishers should be aware that Japanese publications for mature readers are considered to be Japanese cultural objects in other countries, and therefore, they should actively deposit even publications that are not sold through agents.

Lastly, although we investigated the deposition patterns of publishers in this study, in the future, we wish

to conduct surveys measuring the state of deposition categorized by format (comic books, novels, photograph collections, magazines, etc.), by subject matter (SM, moe (anime and manga idols), homosexuality, etc.), by sales route (real bookstores, online bookstores, specialist stores, convenience stores, etc.), or level of extremity in depictions. Moreover, we want to conduct a more detailed analysis into the situation in France and make international comparisons with other countries as well.
