EXPERIMENTAL

IMPROVISATION PRACTISE AND

NOTATION.

AN ANNOTATED BIBLIOGRAPHY.

by Carl Bergstrøm-Nielsen.

This is a pdf version. Please note that there is both the "old" department, 1945-1999 – and addenda for since then. Two separate volumes.

The html editions may be slightly more updated. They can be found at http://www.intuitivemusic.dk/iima/cbn.htm

Please note that the hyperlinks in this version may not work because the document is converted from html. You may have to leaf through the pages and to jump back and forth to read the endnotes. You can, however, use your Adobe Reader's facilities for this and also search for any text string.
EXPERIMENTAL IMPROVISATION PRACTICE AND NOTATION.
AN ANNOTATED BIBLIOGRAPHY. ADDENDA 2000-

by Carl Bergstrøm-Nielsen

Last revised: 02/21/2017 16:33:54

This is a continuation of the previous large bibliography with its more than 650 entries which ended with the publishing year of 1999 (apart from some very few exceptions, please see note 1 in that text). This one solely lists works and literature published from 2000 and on, while newly discovered addenda to the other one are included there.

If you are here for the first time or if you are doing a general literature search, be sure to see the really large one here.

See some imagined FAQs here!

In the event that an URL is no longer active, you may try www.archive.com with its "wayback machine" which can in some cases find old material, even after many years.

Even though many entries are detailed, I've taken a more relaxed approach to this addenda list than to the other bibliography. It aims less towards being exhaustive, in the relative meaning of making sure I get all I think may be important to some degree, not that exhaustiveness really could exist in an absolute sense. There is much less systematic search of databases etc.(see the remarks before each category in the "Appendix" section in the large bibliography). Therefore, those who search should even more here not refrain from making their own investigations! It must also be noted that not only are databases better updated now than at the time of completion of the big bibliography, but they might have grown both more, bigger and more comprehensive. This could be an open field for further research, certainly also into materials dating before 2000.

Readers are welcome to suggest new material (here), but I reserve the right to decide about possible inclusion, with views to both quality and the limitations of the scope of this list (for instance, it deals exclusively with music).

Items here appear with their category codes between (parenthesis), distinguishing the new list from the old.

Don't forget to look up the "see also" references at the beginning of thematic sections - one writing may have several virtues :-)

CLASSIFICATION SURVEY

This system has been employed for classifying the subjects (taken over from the 1945-1999 bibliography):

L. EDDIE PREVOST ON ASSOCIATION OF IMPROVISING MUSICIANS

M. A SHORTLIST OF RECOMMENDED WRITINGS

CONCERNING LIBRARIES (abbreviations used and various information)

AEST: Æstetikbiblioteket, Langelandsvej 139, 8000 Århus C, Bygning 582. Open shelves. Contents can be seen from the internet - see J1.1.

AUB: Aalborg Universitetsbibliotek, Langagervej, 9220 Aalborg Øst. Open shelves. Contents can be seen from the internet - see J1.1.

AUM: Institutbiblioteket for Musik og Musikterapi, Kroghstræde 6, Aalborg Universitet. No public loans.

BRITLIBR.: British Library, London. Contents can be seen from the internet - see J.

DKDM: Det Kgl. Danske Musikkonservatorium, København. A substantial part of the collection on open shelves. In the year 2000, an registration was started (CDs first), becoming available in REX (see Kgl. Bibl. under J).

DKDM+D: Same, recording matching the entry exists also.

FRBMB: Frederiksberg Musikbibliotek.
VARIABLE WORKS AND AURAL SCORES

A. EDITIONS OF WORKS AND AURAL SCORES

A2.2. Some Danish and foreign anthologies/series/collections.

(a2.2)/ Lely, John; Saunders, James (ed): Word Events. Perspectives on Verbal Notation. New York (Continuum), 2012. A comprehensive anthology of 40 scores. All accompanied by, as far as has been possible to collect, a recent comment by the author, and by an editor's comment. In total, more than 170 are cited in the book.

First part of the book is a detailed description of the functions of the co-called Systemic Functional Grammar. It aims at being descriptive, not prescriptive and sees a number of contextual, situational and social dimensions as part of the language. These dimensions are illustrated with references to the pieces of the anthology. One point pointing to the relevance of this approach is that suggestions for performance need not be formulated in the imperative.

Collecting a vast material in one publication, the book is indispensable for Fluxus studies. However, in Fluxus focus is often on the overall performance situation, including its theatrical elements, and sound production is often touched upon just as a hint or in indirect ways. This is so even though Fluxus used the music performance situation as its jumping-off board. Moreover, it used the music production habit of the score (rather than a theater manuscript), thus employing a division of labor between author and performer - and extending insight into the ideas of specific pieces beyond the performers.

Those who, like the present author, take a more definitely focused approach to differentiating sound, its structures and processes will still find pieces and composers of interest. But this is not what the book is largely about. There is a good reference list, including sections on anthologies, publishers and internet sites.

(a2.2) Oliveros, Pauline: Four Meditations for Orchestra, Deep Listening Publications 1996. Although written for orchestra in this publication, this selection seems also to be playable by small ensembles - in fact, The Tuning Meditation previously appeared in a collection for meditative work with voices (Deep Listening Pieces, Deep Listening Publications 1990) with a slightly different description. These pieces deal with silence, with pitch exchange, with interdependence (=sending and receiving sounds), and with a central sound to approach and depart from. They describe musical elements and actions, whereas the other collection mentioned as well as Deep Listening Anthology 2009 rather describe meditative work leading to music activity and music sound.

(a2.2)/ Marclay, Christian: Shuffle, 75 photographs to be used ad lib. to play from. Publ. by aperture.org, 2007. Also distributed by Thames and Hudson. http://aperture.org/shop/books/shuffle

At the exhibition 22nd March – 5th April 2014, Library of Birmingham, the following text by Christian Marclay (which is not to be found present at the publishers' site) appeared: "The deck of cards can be used as a musical score / Shuffle the deck and draw your cards. / Create a sequence..."
using as many or as few of the cards as you wish. / Play alone or with others. / Invent your own rules. / Sounds may be generated or simply imagined.

This book was published out of a desire to satisfy the curiosity of some of the authors’ audience members about how how musicians and composers work: "... a more clearly articulated sense of the germinating and progressively emerging time in the music could very well serve to enrich their experience", she says (p. 8-9). Moreover, "the final artistic result - the work of art - is not enough... My research method is based on examining the process that leads forward to a piece of music" (p.10-11). This is because "the artistic working process includes skills, knowledge and experiences that the world should not miss out on" (p.10).

So is this anthology a collection of pieces one could play? Yes and no. On one hand, according to the author “it is possible for the reader with some measure of knowledge about music to perform the musical works herself” (p.8). On the other, as we have seen, a main point is to document creative processes. There are no tables for explanation of symbols. Instead, we are given verbal accounts of the genesis and characteristics of six pieces - and of their subsequent revisions. Each piece undergoes two revisions, thus totalling 18 pieces. Revisions were undertaken both because something did not succeed and proved too difficult to realise - or, inversely, because something went surprisingly well, or simply because new ideas occurred. Still, to be sure, it was the aim to keep pieces sonically recognisable, but many details could change, including some formal characteristics.

The author played along in all cases (sax, clarinet, voice). The last revisions were played with an other ensemble, however having the same additional instruments: piano, bass and drums. So we are not dealing with "ensemble ad libitum" here, rather with a rhythm and a melody section. LPs documenting the two last, revised series are released on ILK Records, White Label Series releases #6 & #7, 2016.

The first versions depict sequences described in a relatively simple way, primarily with words. The latter versions make good use of colours and suggestive shapes and illuminate the descriptive text. They may also be inspiring to look at in their own right.

(a2.2.1) SELECTED PUBLISHED WORKS (new category, not in the pre-2000 list)

(a2.2.1)/ Ames, Anke: Bast Siegel, Dortmund (Musikverlag Manfred Weiss) 2005.
For music and dance. 40 sheets, some of them in colours. Texts in English and German.

(a2.2.1)/ Broetzmann, Peter: Signs. A card game, 2002.
A collection of cards in a box with various fantasy-stimulating suggestions. Made for an exhibition at Ystad Art Museum, Sweden in a number of 120 copies. Contact email: broetz@wtal.de

A2.2. SOME DANISH AND FOREIGN ANTHOLOGIES/SERIES/COLLECTIONS.

(a2.2)/ See also: Bergstroem-Nielsen (2007;G3) - Sauer (2009;(E1))

(a2.2)/ See also Gronemeyr et al (2007; g1.2)

This booklet contains reprints of 6 out of the 17 pieces notated with texts contained in the collection For Times to Come (1970, publ. 1976): Shortening - Awake - Halt - Presentiment - Inside - Waves. Also a short article by Michael von Hintzenstern on the history of this ensemble, the collaboration with Stockhausen over the years and a report of the work preceding these recordings.

A2.2.1 SELECTED PUBLISHED WORKS (new category)

A3. DANISH WORKS.

A4. AURAL SCORES (both danish and foreign; annotated)

(a4)/ Damgaard, Lisbeth: Aural score for Pade, Else Marie: Symphonie Magnetophonique (1958), in: Bruland, Inge: Else Marie Pade og Symphonie Magnetophonique. biografi, interviews, lyttepartitur, partitur, cd, Museum Tusculanum Press (University of Copenhagen)

B WORKS AND AURAL SCORES HAVING BEEN PUBLISHED IN EXTENSO, BUT NOT AS INDEPENDENT EDITIONS

B3. VARIOUS FOREIGN WORKS
(b3)/ See also ringgespräch (2004; (G2.1)).

(b3)/ La Barbara, Joan: "Voice piece: one-note internal resonance investigation" (1975) and "Circular Song". In: MusikTexte 116, p.6-7, February 2008.

Two pieces exploring extended vocal techniques notated with verbal and graphical means.

B4. AURAL SCORES (not publ. as separate editions; both foreign and Danish)

(b4)/ Bremberg, Brita; Kruse, Gro Shetefig; Nielsen, Mette Stig: Listen to Scandinavia, Copenhagen, Edition Wilhelm Hansen 2007.

The electronic music by Bent Lorentzen comes with an aural score by the composer.

C: WORKS AND AURAL SCORES, PARTS OF WHICH HAVE BEEN QUOTED IN PUBLICATIONS

(c2)/ See also ringgespräch (2004; G2.1); Nonnenmann (2010; G2.1); Spahlinger (2015;G2.1)

D. UNPUBLISHED WORKS AND AURAL SCORES

A plan to play from. Wilson was both musician and writer about improvised music.

WRITINGS

E. WRITINGS ON NOTATION

See also: Lely et al (2012; A2.2); Storesund (2015;G3.1).

(e1) / Amelunxen, Hubertus von (ed.); Appelt, Dieter, Weibel, Peter (Hrsg.): Notation. Kalkül und Form in den Künsten. Contributors: Amelunxen, Hubertus von; Appelt, Dieter; Baumgartner, Michael, Beaufays, Yann; Blum, Eberhard; Boulez, Pierre; Fritot, Michael; Greenough, Sarah; Haus, Andreas; Kanach, Sharon; Kitter, Friedrich A.; Kudielka, Robert; Lammert, Angela; Loupe, Laurence; Mannoni, Laurent; Rajchmann, John; Rheinberger, Hans-Jörg; Schmied, Wieland; Schneider, Birgit; Schubert, Howard; Speck, Reiner; Weibel, Peter; Zimmermann, Heidi. Exhibition Catalogue, Berlin (Akademie der Künste)/Karlsruhe (Zentrum für Medientechnologie), s.a. [2008]. 423 pages. ISBN 978-3-88331-123-4.

This book comprising more than 400 pages in large format is an exhibition catalogue. Apart from a full catalogue of all exhibited works and various additional illustrations, 23 articles deal with "notation" in some broad sense of the word. Thus, from von Amelunxen we can learn that a number of architects from the 1950s and on incorporated flexibility into their plans and drawings. Hans-Jörg Rheinberger examines various forms of notes and schemes made by practitioners of natural science. - Since there is no clear (let alone common) definition of the subject matter among authors, the book appears like a giant, concerted brainstorm. One may find materials to nurture the readers' own thoughts, but I have not come upon any systematic mappings and guidances. There seems to be a need also of writers who commit themselves to such research which could make it possible to approach more of an overview of what has happened in art and science fields outside one's own.

(e1) / Ashwal, Gary; Malsbury, Evan; Chung Soojin; Prajapati, Sheetal; Feldman, David; Welch, Samsurin; Mikyung Kim, Eugene: Pictures of Music [2001]. http://www.blockmuseum.northwestern.edu/picturesofmusic/index2.html

A general web presentation of a number of American and some European composers' graphic works.

P. 102-134, "La notation à partir des années cinquante", is a fairly comprehensive collection of excerpts from works notated in new ways. They are presented in an order of increasing openness. These examples could be a good supplement to the authors' general book on new music Bosser 1993; H1. It is recommended to look at both, since tendencies and purposes of the notations are more explained there - in particular, verbal notation is given a less superficial treatment. Previous chapters deal with older notation. This includes also tendencies to specify more and more - Mälzel's invention of the metronome, as we learn p.87, was a piece of technology influencing this in the beginning of the nineteenth century. It is documented how Beethoven had an amiable attitude to exact tempo indications, both showing his interest and at times stressing their limits or being irritated at them. Composers featured in the new music chapter (some with several examples) are: Kagel, Ferneyhough, Penderecki, Ligeti, Stockhausen, (Mion, transcriptor for Francois Bayle), Earle Brown, Feldman, Cage, Christian Wolff, Cardew, Bussotti, Logothetis, Pousseur and Tom Phillips.
From the author's English summary: "...it has been found that frequently circular notation corresponds to musical structures of cyclic and repetitive nature. Moreover, circular scores allow incorporating elements of openness in interpretation, such as the duration of the work, the choice of reading direction or starting point. Circular scores advantage the analysis of the musical structure of the piece and provide flexibility to interpretation. In addition, they show that spatiality is a condition of music, as well as temporality". Works by Lombardi, Crumb, Takemitsu and Bergstroem-Nielsen are quoted.

A good elementary introduction to the phenomenon of graphic notation. Mention is made of inspirations from visual art to the New School composers, to Haubenstock-Ramati's distinction between graphic notations and musical graphics (the latter are seen as primarily visual works, although they may be translated into music by players). Further, of the new, open performance practice, the importance of indeterminacy and "philosophical and political aspects" - the latter dealing tith the inclusive aspect extending into non-professionals. The author has studied these matters within a visual arts university institute.

quoten are: Feldman, Projection 1; Brown: December 52; Schnebel: Mo-No; Cage: Variations Ill; Cardew: Decemb; Yoko Ono: Voice Piece for soprano. Further, two aural scores: Stockhausen: Study II (Studie II) and Wehinger's aural score of Ligeti: Articulation.

This short article brings to light some important aspects of the role of notation in Western music culture. "...notation is a relatively recent invention in the history of music, as is the distinction between composition and performance" the author states. However, he goes back to the Middle Ages to point out that the role of notation initially was that of a "Mnemonic aid...that became ever more necessary with the introduction of multiple melodic lines". In later history, the market replaced courtly patronage, and written music became the answer to the need of the market for exchangeable commodities (with the invention of printing as an important step. I am tempted to add). Copyright legislation pushed this development further. Staff notation became an international standard but later went into a crisis after mechanical reproducing means were invented. Some composers began to employ new sounds that could not be notated in the old system, and new electronic instruments were invented. During the same period, jazz became a part of Western culture, in which the score was considered "a mere sketch, a springboard for creative improvisation". Some composers with classical background saw experimental notation as a springboard for improvisation; some jazz composers saw it as a means to avoid chaos and competitive behaviour. A number of experimental scores were written from the 1950s and on. From the 1980s and on, the popularization of electronic music production together with video production revived the interest in notational experiments on a cross-artistic basis.

Scores are special for Western culture; globally, oral culture is the norm. In the middle ages notation was employed as a memory aid. With capitalism, the market became the place for sustaining musicians economically instead of wealthy macenas, and the score became an object that could be sold. - In this way, Cox ironically remarks, the score assumed a reputation as the basis of music, in a manner comparable to philosophical assumptions stating that "essences" are more fundamental than "phenomenons". Improvisation in real time became suppressed because of this development. With the advent of electronic reproduction technologies, the role of the score was strongly challenged, and at the same time, many new sounds became possible for musical use, not just tones and their combinations. This being so, and with jazz having become part of Western culture, there was a fruitful climate for the discovery of indeterminacy, experimental music, graph scores and improvisation. Earle Brown employed 'indeterminate notation strategies' in order to revive improvisation among classical musicians. Free jazz composers like Anthony Braxton and Wadada Leo Smith, however, used scores in order to avoid chaos and competitive behaviour - the author sees Zorn's game pieces in this context, too. While these phenomena were typical of the 1950s and 60s, the next historical change came about, according to the author, in the nineties. Cheap and portable computer technologies and the internet made information more sharable, also between art forms. In this new context, the score becomes a means for coordination of events. Instead of the old notion of 'synaesthesia' one could speak of 'metapher' and an interest in combining contrasting sensory experiences.

Since long, non-traditional scores have challenged both the concept of the musical work and that of copyright. Cox sees this as typical of the Grupä collective and describes a number of their works. He also thinks that the idea of "flow", which is typical of the most recent historical phase, has become a theme in the works here.

This book is an updated version of the kind of catalogue books published by Stone (1980;E1), Risatti (1975;E1) and Cope (1976;E1). The author makes his aim explicit: it deals with methods being "1.as exact as possible and 2. as simple as possible. Moreover, they may 3. not be contradictory to traditional notation, but should instead extend and be closely related to it. Finally ... they need to be... compatible with, and distinct from, all other signs of the system" (p.2). This approach means, for the author, that even proportional or optical notation (using space measured in centimeters instead of metrum) is excluded.

So this work is not aiming at a comprehensive review of new notations and understanding of their systems but confines itself to a listing of details that can be added to metric notation. Alas, we are still in need of such a systematic survey. In the meantime, one must still point to the last section of Karkoschka (1966;E1), to Gieseler (1975;H1), Brindle (1975/1986;H1), Maegaard (1964/1971;H1 - for those who read Danish), Sutherland (1994;H1). And, to the recent Sauer (2009;E1) at the time of writing. As well as, of course, to individually published works and various additional writings. PhD students searching for issues, go ahead!

On its 346 pages it covers, however, a wealth of alternative techniques, also vocal, electroacoustic and sound recording. As the author states p.2: "these criteria... remain subjective, and anyone who cannot accept them might not be satisfied with the results of this work. In such a case, other methods may, however, be derived from the presented suggestions and this book be used to study unconventional instrumental playing techniques and the elements of electroacoustic music".

The background for this compilation of articles is an exhibition and a symposium held at Galerie Maerz in Linz, Austria, 2014 (see under category k). Through the large part of the 270 pages of this book, composers present miscellaneous thoughts and glimpses from their works. Historical recapitations are also stated in some cases. The focus on new notations and exactly how the composers use them is not always a very fine one. But in any case, the book provides names and notation examples, and additional related information in some cases, concerning a number of composers that seem to become visible precisely from the Austrian perspective. They are:
This anthology documents how the field of innovative non-traditional notations is strongly alive. Most of the notations quoted have been created.

The viewpoints already stated in Herndler (2011; p.21) appear again here, with a number of aspects made clear with new, concise and thought-provoking formulations. Incidentally: "Analyzing to the way in which the circumference of a circle may be described by means of a formula determining only relations, not the size of the circle, then one can imagine notations which rather determine sounding relations than sounds themselves" (p.243). There is also a pointing out by means of such notations, we have now the opportunity to present the form of the composition much more clearly to the interpreter and others - the notation would speak about the form directly, unclouded by the filling out of details practised in traditional notation. In a certain respect this would also be analogous to the way in which musical forms, for instance the fugue, were commonly known earlier. Such a notation would be analytical, and Herndler coins the word "notational graphics", to be distinguished from "musical graphics", "graphic notation", "graphic scores" and "musical graphics". The works "abgeschritten, der kreis" (2009) and "supermixen" (2003) are here, too, treated in details.

After some reflections on notation as documentation, communication and medium of reflection, the author elaborates on the notion of notation as a production means or tool - one more synonym he uses is "generative environment". This is followed by quoting some of his own graphic works, and discussing the special situation arising when the score does not consist of fixed elements but can change during the performance.

The book might well inspire others to such endeavours (you may, in any case, consult Cox (2008: p.32-43)

The title of this article could be translated as "On the significance of action in music writing. The musicians' experience as the object of composition". Starting-point of the discussion is two prominent historical instances of polemics about notation and performance respectively. The first is Dahlhaus' critique of Earl Brown's notion of 'action writing' which he finds regressive, seeing it as suggesting an escape from dealing with the work as an aesthetic object and with its structure. The other one is Adorno's critique of alleged, superficial "just play" attitudes.

The author to proposing the thesis that a music work exists on three levels at the same time: those of abstract and formal structure, acoustic sound phenomena, and a sequence of physical actions. It is important, he implies, to consider the potentials of them all.

Next follow four analysis of music works. Karlheinz Stockhausen devised an open form for Klavierstück XI (1956) in order to create a new, more lively, kind of instrumental music, on the background of the fixed character of electronic music at that time and of what he called "radio listening", characterised by habitual listening expectations.

Stepping on different points of view. Morton Feldman attempted to introduce an irrational contrast element in the form of unspecified, non-standard intervals in "For John Cage" (1982) by using random-generated inequalities. Klaas K. Hübler, in "Opus breve" (1997), details out playing actions using several systems or "parts". Thus the work structure is very much tied to the actions have been notated as polyphony, although there is a "listener-player-dilemma" in that these cannot be heard in their totality.

There is a discrepancy between listener's and musicians' points of view. Composers, on their side, tend to stick to their interest in the work as an aesthetic object, concentrating their efforts on structure and sound, neglecting the potential of action, including communicative behaviour.

Hübler, in "Opus breve" (1997), details out playing actions using several systems or "parts". Thus the work structure is very much tied to the actions have been notated as polyphony, although there is a "listener-player-dilemma" in that these cannot be heard in their totality.

There is a discrepancy between listener's and musicians' points of view. Composers, on their side, tend to stick to their interest in the work as an aesthetic object, concentrating their efforts on structure and sound, neglecting the potential of action, including communicative behaviour.

Sticking to conventions of notation will not do justice to the manifold imaginable compositional intentions, neither to the expectation that new aesthetic contents and experiences are formulated in new music texts, says the author. To him, the analytical examples demonstrate that musical content and form of notation are intimately bound to each other.

To be sure, the situation to strive for ought to be narrowed down to "communal listening" (as Stockhausen also stated as an ideal), but could be called a "communal aesthetic practise".

This anthology documents how the field of innovative non-traditional notations is strongly alive. Most of the notations quoted have been created after 2000, comes the next ones, followed by the eighty, so there is lack of proof of recent work being made. Cage (1969:A2.2) was the inspiration for this work - contemporary technique allows, however, for colours. Works, some of them entire ones, comments to works, short compositions, are here, too, treated in details.

After some reflections on notation as documentation, communication and medium of reflection, the author elaborates on the notion of notation as a production means or tool - one more synonym he uses is "generative environment". This is followed by quoting some of his own graphic works, and discussing the special situation arising when the score does not consist of fixed elements but can change during the performance.

This is followed by quoting some of his own graphic works, and discussing the special situation arising when the score does not consist of fixed elements but can change during the performance.
The article discusses a variety of general aspects around notation, including relations between written and oral procedures in conveying musical ideas. Both the practical effectiveness of the score (in some cases) and the directness of oral procedures, as well of recordings, video etc. (in some cases) are taken into account. A number of new ways of notation have the purpose of inspiring musicians, leaving decisions to be made independently. But they too depend on the pre-existing idea of notation. - To understand the full perspective involved in musical communication, one has to recognize that both written functionality and an oral one (in the expanded sense) are involved.

E2. NOTATION, SPECIFIC THEMES

See also: Bergstrom-Nielsen (2017:g2.1).

The relation between Cardew's work as an assistant for Stockhausen and his own ideas for Treatise are examined here, on the basis of Cardew's own accounts of this. Treatise was, at least partially, born out of a reaction against the strictness of Stockhausens' Plus-Minus, felt by Cardew and some fellow players. Also receiving detailed examination are the performances of the work during Cardew's lifetime, using Treatise Handbook [see under e2 in the 1945-2000 section] which has a detailed list, but also original material from author's own contacts with involved persons. Various additional info is given - for instance that Treatise Handbook was written in response to a plea from the publishers (although no source for this is referred) - and that the compositions included in Treatise Handbook are realizations of pieces from Treatise. Also receiving detailed attention is the process which lead Cardew to abandon any explanations, away from his original intention to provide a set of symbols with comments.

A simple classification umbrella is unfolded over graphic notations: those with "lifeline" and "Gestalt scores". An additional point is made about symbols and their interpretation as abstractions from the resemblances of well-known shapes. "Lifeline" is derived from the discourse around Cardew's Treatise and is used more or less synonymously with time-line and left-to-right reading - but it does not have to have exact unit indications. "Gestalt scores" are on single pages and allow the eye to wander freely. Scores with images in boxes use a technique known from comic strips: boxes progress in time, but within them, there is independence from detailed sequencing. And thus it may make sense, as featured in one the examples by Mark Applebaum, to have lines acting as lifelines, but bending back also. Members of the choir "Vocal Constructivists", in which the author participates, had a particular enjoyment of this paradoxical feature. Another interesting observation is may make sense, as featured in one the examples by Mark Applebaum, to have lines acting as lifelines, but bending back also. Members of the choir "Vocal Constructivists", in which the author participates, had a particular enjoyment of this paradoxical feature. Another interesting observation is that the shape of boxes may influence the interpretation of their content greatly, even if content is the same.

Along the way examples by Cardew, Mark Applebaum, Anthony Braxton, Redhead and the author himself are presented and discussed. Also discussed are works by Boguslaw Schaeffer and Earle Brown's December 52.

One of the papers from the Notation Congress Berlin December 2005. The author makes the statement that playing from traditional notation presupposes loss of memory. This action sets the musician free to give shape to the music. Also many small free spaces appear, from one note to the next, creating "paradises of freedom". This is contrasted with the situation of improvising and its "sloppy regulations" (p.21). That which is notated is compared to a crash barrier on a motorway, whereas the music consists of all that which is not notated. This is contrasted to the situation of improvisation: "In improvisation there are no such crash barriers. There are only agreements and random happy moments of a musical logic, as well as the randomness of collectively composed cogency", p.21.

This is an interesting contribution to comparatively discussing characteristics of improvisation and composition, because the author sets forth a coherent view of what is the interpreter's co-creating role when playing from traditional notation. At the same time, there is analysis enough of elements of improvisation to yield substance to his discussion. An additional delight is the extraordinarily brilliant rhetorics.

One possible critical question to this article could be concerned with how small the free spaces have to be according to the author in order to be interesting? When do they cease to be "paradises" and instead become "sloppy"? This question seems important because so many experimental notations devise free spaces of many sizes, often bigger than traditional note-to-note ones while still maintaining something seemingly comparable to the "crash barrier" mentioned in the article - you may for instance think of Earle Brown, as well as of many others.

One of the papers from the Notation Congress Berlin December 2005. The author makes the statement that in traditional notation "paradises of freedom" are created, as opposed to "sloppy regulations". An additional delight is the extraordinarily brilliant rhetorics.

One of the papers from the Notation Congress Berlin December 2005. The author makes the statement that in traditional notation "paradises of freedom" are created, as opposed to "sloppy regulations". An additional delight is the extraordinarily brilliant rhetorics.

One of the papers from the Notation Congress Berlin December 2005. The author makes the statement that in traditional notation "paradises of freedom" are created, as opposed to "sloppy regulations". An additional delight is the extraordinarily brilliant rhetorics.
The author reports from a notation congress having a narrow focus centered on traditional notation and analyzes how this perspective might be widened out.

An inspiration for this book was the very classic book Notations, compiled by John Cage (1969). In one of several introductory articles preceding this collection of notation samples, Paul Attivello deplores that new notations of the Darmstadt generations were put aside by more conservative notation trends. Composers like Sylvano Bussotti, Aldo Clementi, Franco Evangelisti, Roman Haubenstock-Ramati, Mauricio Kagel, Anestis Logothetis and Dieter Schnebel deserved more attention according to this author. But despite these statements, this book contains mostly music notated in the standard way, sometimes with sketches being more interesting than final results when seen from a visual aesthetic point of view. Some exceptions, besides realisation scores from electronic music, are instances of innovative notations by Anton Lukoszevieze born 1956 (free graphic notation), Alwynne Pritchard born 1968 (mobile), Yuji Takahashi born 1938 (free graphic notation), as well as use of optical notation by Vyktintas Baltakas born 1972, Aldo Clementi born 1927 and a complete sound poem by Josef Anton Riedl born 1927. There is no accounting for the criteria of selection of composers. As a catalogue of contemporary music quite generally this book could serve as a reference work or as a work for browsing through, with its inclusion of 153 living composers and biographical notes of each one. All editorial texts are in both English and German, and texts accompanying the composition samples are in English. But the reader seeking information about innovative notations is likely to be disappointed. See Sauer (2009;E1)) for a very different collection!

Discusses solo performance experiences as an organist with recent open works by Scott McLaughlin (Music in Two Dimensions No.2, quoted in extenso) as well as by Adam Fergler and Caroline Lucas (excerpts quoted). Philosophically she underlines the "work-as-process" character of open works, referring to Hegel, Ingarden, Bourriaud and Foucault and others. Readers are advised to supplement this part, if desired, with the classic and influential text Eco (1962;G3).

Amidst other analytical matters outside the scope of this bibliography, glimpses are revealed of some notation details p.10ff. They consist simply of a triangle as a symbol of "improvisation" and very short descriptions of theatrical action - and lines between them describing what is supposed to lead to what.

Interview with composer Juliana Hodkinson who makes performance practise an issue of experimentation in her compositions. This may lead to abandoning traditional forms of composers' control, such as conduction or a metrically defined tempo. She states her interest in the playing process in its own right despite seeming "imperfections" compared to the score. She also states a comparison with Japanese writing and spoken language in order to make clear how written/spoken forms do not simply mirror each other.

Please see the bibliography in which this item has been listed as a special exception.

Deals among other things with action painting, giving "inspiration to improvisors Phil Minton and Keith Rowe and with graphc scores, dealing with Cardew: Treatise as a prime example

Deals with several kinds of visual design related to sound, among others CD covers. Music notation is touched upon in one chapter, quoting Paolo Motta and text compositions (with layout) by Stephen Montague (probably previously unpublished pieces in both cases).
The notion of game within improvised music has established itself during recent decades. Also often called "exercises" or maybe "pieces", the genre in question here concerns propositions of ideas/guidelines/rules for getting started, or for advanced explorations of possibilities. This collection was explicitly made for classical musicians, and tempo, meter, scales, motivic development and ABA as well as other classic form schemes are frequently referred to, however along with other dimensions of timbre, dynamics and polyphonic texture, for instance. Improvisation being perhaps more common in experimental than in classical music (except with organisms), this book seems to fill a large gap. And if "classical" musicians became more interested in improvisation, perhaps the gap between "classical" and "experimental" would shrink or become more bridged.

The book is a creative explosion coming from an author who played the French Horn in a symphony orchestra for a quarter century without ever improvising on it. But in his second career as a horn professor at the University of Iowa, he turned to exploring how to use the instrument in improvisation.

The collection is very extensive as the number of games, 500+, mentioned in the subtitle already suggests. And so is the build up of different improvisation.

Explicitly made for classical musicians, and tempo, meter, scales, motivic development and ABA as well as other classic form schemes are frequently in question here concerns propositions of ideas/guidelines/rules for getting started, or for advanced explorations of possibilities. This collection was made deliberately of a small size in order to "fit comfortably into the average musician's instrument case", according to the introduction.

This little book consists partly of a selection of exercises/games from Agrell (f1.1;2008), partly of new ones. Whereas the other one is very comprehensive and has extensive indexing facilities and advice sections, this was made deliberately of a small size in order to "fit comfortably into the average musician's instrument case", according to the introduction.

Here are some samples:

**OOM PAH MARCH**

Two players. One player plays an oom pah rhythm on steps one and five on beats one and three of a measure in cut time. Player Two improvises a march over this accompaniment. Try different kinds of marches: slow, fast, quirky, and/or minor.

Give the oom pah more interesting rhythms, such as the 3 + 3 + 2 clave or other Latin rhythms.

Have the bass descend on scale steps 1 7 6 5 (in C: C B A G).

**DOODLE MUSIC**

Two to four players. Player One makes flamboyant doodles on a piece of paper, then Player Two adds to the drawing. Take one minute or less in total. Next both play the piece, giving it an evocative title such as "The Mysterious Life of a Humpback Whale" or "My New Shoes Are Too Small."

Repeat with three players, using "Revenge of the Bacteria" as the title.

Repeat with four players, using "Cobras, Pythons, and Me" as the title.

Repeat all with new titles.

This is hardly a book one can "read through", rather a pool of ideas to return to for inspiration again and again. A weighty contribution to the field of "improvisation exercise collections" (category F1.1 in this bibliographic system), a tour de force as to systematic mapping of a universe of games, and a must-have for so many libraries at music departments at colleges, universities etc.

**Notes**

This little book consists partly of a selection of exercises/games from Agrell (f1.1;2008), partly of new ones. Whereas the other one is very comprehensive and has extensive indexing facilities and advice sections, this was made deliberately of a small size in order to "fit comfortably into the average musician's instrument case", according to the introduction.

(f1.1/) Agrell, Jeffrey: Improv Duets for Classical Musicians. A Concise Collection of Musical Games for Two Players. Chicago (GIA Publications),
New game categories are Audience Games (or Audience Involvement Games) and Movement Games. The former may employ simple forms or committee’s attitudes may be appropriate. A direct continuation of the previous volume with even more suggestions of playful games, pieces, exercises in improvisation. Please see the text in this bibliography on the first volume Agrell (f1.1; 2008)- on how contents are structured, on what is "classical musicians" and some thoughts on the significance of these endeavours to refresh the understanding of classical music. The scope goes again from how to practise scales and arpeggios in new and challenging ways to working with advanced structural aspects.

A direct continuation of the previous volume with even more suggestions of playful games, pieces, exercises in improvisation. Please see the text in this bibliography on the first volume Agrell (f1.1; 2008)- on how contents are structured, on what is "classical musicians" and some thoughts on the significance of these endeavours to refresh the understanding of classical music. The scope goes again from how to practise scales and arpeggios in new and challenging ways to working with advanced structural aspects.

New in this volume is a short chapter on "marketing" - both concerning students and how to get it into music curriculums. Currently (time of writing is 2016) improvisation is spreading out (also in non-jazz forms) in Western higher music education, which strongly seems to be a background for the significance of these endeavours to refresh the understanding of classical music. The scope goes again from how to practise scales and arpeggios in new and challenging ways to working with advanced structural aspects.

Here is one example of the latter from Movement Games, "Movement Variations" which may make players more conscious of how the common density varies or not: "... Players stand in a big circle with instruments. Taking care to be silent about one-third of the time, players move slowly while playing in towards the center of circle and back out to the periphery at random. As they move inward, they increase the density of notes played as well as volume. The farther out they are, the softer and fewer are the notes they play..." (p.270).

New in this volume is a short chapter on "marketing" - both concerning students and how to get it into music curriculums. Currently (time of writing is 2016) improvisation is spreading out (also in non-jazz forms) in Western higher music education, which strongly seems to be a background for the feasibility of publishing this second volume. On the other hand, we are just at the beginnings, and thoughts on how to meet possible skeptic students' or committee's attitudes may be appropriate.

New game categories are Audience Games (or Audience Involvement Games) and Movement Games. The former may employ simple forms of conducting with gestures or use of pre-made instructive cards to hold up. The latter may explore relations between gestures or other movements and the music. A must-have for libraries which should make sure they have the first volume too with its many introductory texts.

Author's abstract:

This project aims at establishing an improvisational practice for pianists based on the piano music of the Japanese composer Toru Takemitsu. Through musical analysis of Takemitsu's music we seek to point at different compositional practices that can be converted into concrete, pedagogical exercises to be used for teaching in improvisation. Some of the improvisational guidelines are then combined into a complete piece of music, which is subsequently evaluated and used as a basis for a discussion of the further perspectives of the project. The practical experience so far suggests that this method can be used for:

- encouraging an improvisational approach to interpreting music,
- counteracting the fear of improvisation among the performers of classical music,
- strengthening the understanding of contemporary music,
- disseminating the knowledge of traditional Japanese music — and last but not least the project implies the possibilities of creating an artistic musical product in itself.

Some improvisors make soundscapes with many ever changing details, others use pulse and estimates. This collection of 124 exercises wanders between both approaches - roughly every other section makes a shift. Thus, the first one, "Beginning Exercises" starts out with sounds on a pulse and variations of this - a bit later some exercises also abandon the pulse, then we return to building up grooves from individual estimations. But "mirroring" and "ending" exercises which follow apply to any kind of improvisation. Next section features "Duets. The Art of Relationship" which is entirely about the players' free choices of music sounds, focusing awareness in different so as to make choices more conscious. Next section again is "Advanced Groove Exercises", etc. With its slight priority given to the pulse and groove-approach, the book could be compared to Stevens (f1.1; 1985), but is far more comprehensive. However, there are plenty of ideas for the other approach as well throughout. In such a pluralistic encompassing of the two approaches, there is both conflict potential and integrative potential. Perhaps the following statement takes account of this ("Tip", p. 31): "If you want to improvise in any other manner besides stream of consciousness, it is essential to be aware of the choices being made. Without a group awareness of these choices it's difficult to develop them, improvise with them, or refer back to them...".
The author has a strong sense of what musicians' awareness and focusing can do. Thus, for one example, the "Ending" exercises already mentioned work with uncovering "potential endings", the simplest form being to focus on that and stopping at the first one. Additional variants ("steps") involve several "endings" within one piece (must be general pauses...) and more choices. Also, the relationship aspects is the theme of many good proposals (other words for this could be group-dynamic or social aspects). "Duets. The Art of Relationship" were mentioned above. "Groups within the Group" is another essential aspect of free improvisation that deserves attention and certainly gets it in the eight exercises under this heading. They suggest, among other things, that smaller groups or solos simply occur during the improvisation without fixing when it will be.

The view of possible musical material in the book is a broad one taken in a pluralist sense, as suggested earlier when discussing the two different approaches to improvisation. It is good to have mention of such dimensions as "Creating Space - Playing Silence" and "Musical Parameters", but there are short and could invite so many further ideas. Likewise, a chapter of seven pages deals with "Textures", from the point of view of handling and repeating them, not with how actually to invent them. How to imagine and combine individual sounds into textures, how to use instruments in interesting ways, etc. could be a theme of further explorations.

This work is nevertheless the exercise collection coming closest to my own, Bergrstrom-Nielsen (f1.1); 2009ff) in its design and scope till now. It describes probably the differences between us that I would have put his Chapter Twelve, "Tasting Shapes", at the very beginning. This is about stimulating the playing fantasy by, among other, visual and verbal means. Regardless, this book can be very useful to a wide field of improvisers and educational contexts.

To give a more detailed impression of the subject matters, here is a list of the chapters' titles - after some introductory texts aiming at encouraging beginners and at characterising the free playing way - : - Beginning Exercises - Duets: The Art of Relationship - Advanced Groove Exercises - Textures - Creating Space - Playing Silence - Groups Within the Group - Melody and Accompaniment - Musical Parameters - Tasting Shapes - Combining Exercises - Warm-ups - Solo Exercises. An index of exercises can be found at the end.

This article reveals details about George Lewis' pioneering work with introducing improvisation courses in higher education as a professor since 1991 at UCSD (University of California San Diego). Descriptions of this are preceded by a discussion about the use of fixedlicks in jazz contra more process-oriented approaches. Also by accounting for his own background experiences, among other places in AACM. A community-based pedagogical nurturing of beginners was characteristic. So was also "pre-concert meetings" during which the concert programme was discussed and decided upon by the collective.

In line with the founding of a new academic field of study around improvisation, details and names are mentioned. A wide selection of "post-colonial" and "post-modern" areas of interest, including feminist musicology and queer theory. Names of collaborators include Professor Jann Pasler, ethnomusicologist Margaret Dilly, European music historian Jane Stevens (x). Also European authors writing about music were seen as relevant, including Globokar, Prévost, Peter Niklas Wilson, Fr. Rzewski, Wolfram Knauer, Ekkehard Jost. finally, a short list of other institutions that also incorporated experimental improvised music into their programmes is given: California Institute of the Arts (among others Wadada Leo Smith), University of California at Irvine (James Newton), Mills College (Chris Brown, Glenn Spearman). Since the normal atmosphere in music training was one of competition, improvisation demanding personal involvement rather than dealing with comparable skills could feel new and confusing to students.

"Music 133" was a mandatory undergraduate course held 1995-96. Students were to develop their own creative practice, both solo and in ensembles. Listening to recorded examples was important - a large list of both American and European improvisers is stated. Also the study of first-hand accounts in text form by improvisors was considered essential. For a "midterm examination", a tape with a solo, accompanied by a written comment was required. Some students received the distinction of being on a concert programme. The final examination implied playing as a member of two ensembles - and, not least, writing a "process journal" the judging criteria of which was "thoroughness of engagement". Over three pages, the author quotes from such journals and comments on them - topics may concern both methodological / musical issues related to practising and its developmental work as well as to challenges related to appear as a performer and those stemming from negative attitudes on the side of fellow students. This is interesting reading for teachers of free improvisation. He concludes with considering possible basic structural problems in this teaching and by emphasising the importance of musicians reflecting on and documenting their work in text form.

(x) In his keynote lecture at vs. Interpretation Festival Prague, July 17 2014, Dana Reason and one more person was mentioned as those who founded the discipline of Critical Studies, as well as the year 1990.

A report from free improvisation teaching at the Conservatory of Luzern, Switzerland. When writing this text, it is taught as a specialised main study direction (requiring also a main instrument) within the Bachelor of Arts degree programme, and also to other students at shorter courses. According to the authors, free improvisation (not to be confused with other kinds of improvisation teaching also practised) was taught at this conservatory since 1989. However, it developed and grew through intensive collaboration with Internationale Tagung für Improvisation during the nineties. This was a large congress and festival organised by the musicians' organisation Musikerkooperative Schweiz and realised in cooperation with the Conservatory. Presently six teachers are employed as appears from the last appendix - the two first authors of this book are pioneers who were active during the building years, the third a Swiss music journalist. The discipline is group improvisation, and there is no mention of solo.

The book is an investigation of didactic concepts and ideas and can also be used as a practical manual by virtue of the exercise material and the concise descriptions from the six teachers of their design of a first lesson in free improvisation.

A number of general musical notions are relatively briefly reviewed - historic developments within classical avantgarde and jazz, material, form, parameters, the role of practising and more. This serves as a basic springboard for defining formal goals of learning, such as these are to be made explicit in terms of musical abilities and personal competencies for the official curriculum description, and also to make goals clear for students and for the teachers' evaluation. Criteria concerning what is "good enough" and, implicitly, can pass in an examination context, are included in the discussions. Such a pompous notion as "aesthetic maturity" is an example. It is conceded that this theme is "comprehensive", and it is finally circumscribed like this "...the following thesis may be valid: the more experience one has with improvisation and the higher the level of aesthetic maturity with the totality of participants, the higher becomes the common understanding during the interactive musical creation process" (p.32). For another pompous concept, "criteria of musical quality", a long checklist is proposed as an aid in asserting (p.40-41).

This working out of concepts is certainly of interest to all those colleagues at other educational institutions who are about to apply free improvisation as a new discipline.
However, the expertise of the authors seem to be especially manifested in the discussions of didactics. There are observations concerning how students' view of musical material change when they get increasingly used to improvising non-tonally: "The working in free group improvisation steers clearly towards the goal of putting dynamics, articulation and timbre into the foreground. Experience shows that musical communication broadens through this reversal of the hierarchy... contact with each other becomes more immediate" (p.35). And one more: "Often, a beginner's group has problems with finding a common, plausible ending. This is because they will hardly take developmental expectations into account" (p.35). "The larger the amount of noise found in the material played, the lesser meaning is "reflection aspects" (Reflexionsaspekte) discussed p.31ff. The German philosophical tradition seems to benefit an expanded know-how about broadens through this reversal of the hierarchy... contact with each other becomes more immediate" (p.35). A special and important theme is quickly forget what happened and because of the corresponding weak orientation when seeking forward... the end...drags out very long or it becomes fragmented" (p.35). General problems also known outside education...

The second aspect of the book is the materials one can use practically. "Materialzirkel" (p.44f) presents a limited number of essential exercises and other ways of working aiming at heightening consciousness of the material. In the appendix p.63f there is an innovative list, "Ansagen". This word might be translated into "Suggestions" or "Hints". Seemingly belonging in an informal place, they are such little advices like "try to listen as if you were outside the group and have heard the total" or "play according to your impulse and attempt to quickly understand what this impulse might lead to". There are twenty-six in all, divided into these categories: "for becoming conscious", "for listening", "for deciding whether to play or not to play", and "for common form creation". Categories are cutting into essential problems, and isolating this as a didactical genre is a thing of great merit. As known from practise, everything said about the playing before playing again, even if the context is ever so fleeting, will influence the musicians. This list is pure gold dust - it makes great sense to describe such tiny advice in their own right. They do go beyond a simple "Let's play again", they suggest a focus of attention but are yet not to be called "exercises".

A list of exercises also appears. Strangely, after seeing how much care has been given to developing understanding of material and going beyond tonal habits, it weighs heavily the traditional hierarchy of parameters and dimensions. For instance, there are only six ones concerning timbre, and the use of other material than pure tones is not even mentioned. Perhaps this list has been pasted in from a context not dealing with free improvisation.

Instead, enjoy the exercises presented earlier in "Materialzirkel" - and, not least, in the six short accounts of how a first lesson could be done. They articulate very well thoughts and techniques. And generally they emphasise a learning atmosphere in which teachers take ample time to let discussions and music develop on their own account and employ an absolute minimum of directiveness - even if, as we have seen, keen refection lies behind.

(f1.1)/ Schwabe, Matthias: "Einführung in musikalische Improvisation. Spielregeln in Kurzfassung", Ringgespräch über Gruppenimprovisation LXXIV, april 2011, p. 49-54. &nbsp; The author presents a collection of favourite improvisation exercises. They have their origin partly with the author, partly with Lilli Friedemann. Some draw on Schwabe (F1.1:1992), others are also by the author and were not published before. Exercises are grouped into the following categories: conversation games - musical games with sounds and noises - metrical-rhythmic games - melody playing.

F 1.2 LILLI FRIEDEMANN

(f1.2)/ Schwabe, Matthias: "Lilli Friedemanns Wege zur experimentellen Improvisation", Ringgespräch über Gruppenimprovisation LXXIV, april 2011, p. 10-13. &nbsp; Introduces Lilli Friedemann's quite different collections of exercises. Quotes a few selected ones which have proved especially important to the author's long-standing activities as a workshop leader and comments on their usefulness, together with some general remarks.

(t2)/ Adrian, Signe og Jensen, Jesper Juellund: "Spillerregler og musikalsk kreativitet". Musikbladet for gymnasie- og HF-lærere (Gymnasieskolernes Musiklærerforening), December 2012, p. 26-34. ISSN 1604-049x. A short, but comprehensive, systematic presentation of possible categories of "playing rules". This is taken in a broad sense and includes...
traditional formal/compositional devices as well as much more, such as various dimensions of context and the way the rules are given. This could be, for instance, general directions for the process ("kill your darlings") or considering the difference between exact directions and describing of general goals. Strictness or looseness exemplifies further, also reflections on the context of the production process, as well as the (imagined) circumstances of performing.

&nbsp; Informns concisely about improvisation teaching at Hochschule Luzern for all students, curriculum, goals, and discusses questions arising.

The author advocates for the limitless social potentials of improvised music. He accounts for his own experiences with fear of performing music and being regarded as "unnatural". After that he took initiatives to arrange improvisation sessions. Also he started to play (around 2008) in "Felt Beat in Newcastle, a network of improvisors focusing its activity on frequent playing network and releases. The text goes on to discuss and criticise the elitist character of music culture. Most disturbingly, betrayal of the social possibilities of improvisation comes from improvisors' own organisations who promote "top", "renowned", "finest" etc. improvisors - and thus advocate for professional superiority, thereby reducing and the radicality of the music form. [At the time of writing this, various video samples and other documentation were available on the internet. At Vimeo, the organisation characterised its music as "improvised and experimental pop music"]

(t2) Bramley, Charlie: "Too important to be left to the Musicians. Un-musical Activism and Sonic Fictions. in: improfil. Theorie und Praksis improvisierter Musik. Nr. 78, April 2015, p. 8-10 (=2015B). A slightly different version of the 2015A one. This has the benefit of some additional remarks about how the author starts a workshop.

(t2) Christensen, Mogens: "...Sed vitae. Om at så en tanke - i stedet for altid at omplante viden". (Dansk Sang, Folkeskolens Musiklærerforening), 2010.

Theoretical perspectives, advice and suggestions around creative music making with school children. Many thinkers and concepts receive mention - among them Luhrmann, Schärmer, emergence and serendipity in a theoretical introduction. Especially Part 3 and 4 - 5 contain specified examples of where to start musically. These parts also bring forward general basics of composition to consider - such as analysing into parameters, balancing culmination/low points in various parameters and various approaches to development and form. With this gentle throwing into perspective of central musical matters, the book could yield relevant texts for both the disciplines of musical analysis and concerning composition of new music in general.

This book is a pioneering initiative. It builds up a method of where to focus musical attention and how to train it. As a first preparatory step, a comparison is made to bird-watching: it's open to everybody, "Field methods you figure out on your own are equally worthy", and "close attention is richly rewarded" (p.4).

Then, the point of departure is to look at the common expectation of what musical elements are supposed to be, also across stylistic differences. So, concerning rhythm, the author affirms that there need not be a steady pulse and goes on to discuss notions that might adequately describe the situation instead. He suggests to relax, breathe and then begin to observe whether the music is static or changes. He likens different speeds in improvised music with a "tidal pull" (p.27) having ebb and flow. One additional suggestion is to listen to music without a drummer.

Improvised music does not have duration standards either, as songs generally, so one must be prepared to stay for an amount of time. Some ideas follow on how to stay calm, relax and take possession of one's own experience. Observing "who is doing what" is described as a basic observation technique, to become able to focus on individual parts of the soundmaking activities, including those sounding unusual, even if the instrument be-well-known. We have the ability to listen selectively, and this observation focus makes sure it comes to use and those strategic details are perceived.

Next training step concerns individual starts and stops. "Each time an improvisor starts or stops, they have made a choice, a decisive mode..." (p.44). Having observed what happens here, one has the possibility to begin to speculate about which decisions seem having been taken. Now the listener will be prepared to observe the interaction dynamics. Dialogue may be the easiest to recognise, at least in its simple forms, by its conversation-like characteristics. But there are others: "Independent simultaneous action", "imitation", "consensus/dispute", "support/stepping up" "making space vs. being tentative" and "counterpoint".

Now two important issues remain to focus on. The first is transitions - improvisations may lead to relatively stable states which may become broken up again. So close attention should be given to the changes and their details. This leads directly to the next: becoming attentive to the emerging overall structure of an improvisation. The author's metaphor for an initial explanation of this goes: "Think of those butcher shop posters, with an animal mapped out into segments; to understand a particular cut, you've got to have a picture of where it fits on the beast". And he goes on to remark: next "this will be tremendously variable" (p.80). No doubt this is true... however, in order to provide some more concrete hints, he mentions two possible general principles - the first pointing forward most of the time, building towards "a finale, a climax, if you will" (81). The other does not build tension but "features juxtaposition" (p.81).

By now we have been roughly through the fundamentals, as brilliantly laid out by the author with more details than can be mentioned here. There follows additional propositions of a more advanced kind. Occasionally some personal opinions having a more restricted generality occur. Thus, the author recommends going on further discovery by studying individual players - but one might also think more in terms of bands or a music situation instead. He suggests to relax, breathe and then begin to observe whether the music is static or changes. He likens different speeds in improvised music with a "tidal pull" (p.27) having ebb and flow. One additional suggestion is to listen to music without a drummer.

By now we have been roughly through the fundamentals, as brilliantly laid out by the author with more details than can be mentioned here. There follows additional propositions of a more advanced kind. Occasionally some personal opinions having a more restricted generality occur. Thus, the author recommends going on further discovery by studying individual players - but one might also think more in terms of bands or a music background one. Trios are praised as the ideal group size, but not everyone would agree to that. However, these reservations are not important considering the book's great merits.

Theoretical perspectives, advice and suggestions around creative music making with school children. Many thinkers and concepts receive mention - among them Luhrmann, Schärmer, emergence and serendipity in a theoretical introduction. Especially Part 3 and 4 - 5 contain specified examples of where to start musically. These parts also bring forward general basics of composition to consider - such as analysing into parameters, balancing culmination/low points in various parameters and various approaches to development and form. With this gentle throwing into perspective of central musical matters, the book could yield relevant texts for both the disciplines of musical analysis and concerning composition of new music in general.

Author's abstract: There is a growing interest in alternative forms of pedagogy for students in K–12 settings. [K-12 acc. to Wikipedia means primary and secondary school in the USA and some other countries - from kindergarten to twelfth grade, before college.] Free improvisation, a relatively new and unfamiliar genre, offers potential as an ensemble for teachers to provide in order to offer more egalitarian and creative music experiences for their students. The purpose of this multiple case study was to determine common elements of instruction among four university free-improvisation instructors in order to inform K–12 music education. Pauline Oliveros, Fred Frith, Ed Sarah, and David Ballou were interviewed and observed in order to find common elements among their teaching. Data collection included transcripts from interviews and field notes, recordings, course materials, and other documents, such as course syllabi, university catalogues, texts, and press material about the pedagogues. The common themes that emerged among the four pedagogues included an array of unique teaching exercises, facility with nontraditional vocabulary, the establishment of a safe and egalitarian teaching space, lack of evaluation, leader as guide, comfort with spontaneity, and pedagogue as performer/improviser. The conclusion offers ideas for implementing these ideas in K–12 and music teacher education.

This book accounts for a "model project" undertaken by VdM - Association of German Music Schools - having the aim to set up a new in-service training programme.

The course took place during 4 short periods during the span of one and a half year and ended with an examination featuring several kinds of presentations.

During the first period, open works which were graphically and verbally notated and written for variable instrumentation were presented to participants and worked with in practice. At the second, a multitude of projects which participants had carried through at their own schools were presented, taking inspiration from the open works presented, but working out further their own ideas. Then, at the third period, activity turned to a practical study of concert works by new music composers, so as to take inspiration from the variety within experimental music in general.

An important section of the book features presentations by 13 participants - written versions of those given at the course, many of them with excellent ideas and detailed accounts of methodical work. The book contains lists of relevant open works for educational use - recent ones, composed after 1990 - both for specific instruments and for open ensemble. They come with annotations making it possible to judge whether they might fit into specific needs and with contact information about composers and publishers. Various documentation of information material, press articles and short biographies and contact information of contributors make up the last part of the book.

This is an inspiring account of what can be done through training of dedicated professionals, along with being a useful book for practioners by virtue of the good ideas and proposals as well as the bibliographical lists of playing material. For those engaged in improvisation and creative cooperation in performance of music in general, it can be especially delightful to experience a new music context taking this dimension as the real basis and working on it in depth while at the same time also taking inspiration from detailed studies of the important cultural context of new music. It avoids the pitfalls of accepting the dogmas of metric note-writing as the only notation and of the isolated composer - which might entail a bias in one case). It is based on

"Improvisation" is substituted by "inventing music", "construct melodies" etc. and on using clearly defined elements and rules for their use. This is because of the resistance one may encounter with too direct approaches.

An interesting detail to mention could be the long list of characteristics of "new music in its improvised and compositional variety" that came out of common discussions during the second period (p.13). It could be a possible source of inspiration for cultural and educational strategies. The beginning reads:

- associates to basic human experience and makes people sensitive for it. They makes them conscious and structures them into an artistic form; because of this, it can also be perceived as fascinating within everyday life.
- takes up basic body expression with which every human communicates since being born: breathing, voice, gesture, body movement etc... ("...")

Contributors other than the editors were: Geisenberger, Beate; Guntermann, Fred; Grunmer, Ulla; Hinz, Sylvia; Krauss, Hans; Jones, Ivan; Laubenberg, Jutta; Looi, Birgit; Neessing, Lisa; Karsten, Thomas; Schmoeckel, Stefanie; Schreiber, Gudula; Schelski; Uh, Stephane.

Designing and teaching a course on improvisation", Critical Studies in Improvisation / Études critiques en improvisation, Vol 3 (2), www.criticalimprov.com, 2008. A good, detailed improvisation teacher's account of fundamental considerations, contents and outcome for the participants from courses at a contemporary arts' college, Ramona College in New Jersey, over 14 times 3 1/4 hours.

The author proposes a didactic approach to teaching improvisation to young people in schools (an age level of 12 years -sixth class - is mentioned in one case). It is based on indirectness, on invention language and methods approaching improvisation indirectly. For instance, the word "improvisation" is substituted by "inventing music", "construct melodies" etc. and on using clearly defined elements and rules for their use. This is because of the resistance one may encounter with too direct approaches.

The subsection "Experiencing Uncertainty" deals with listening to improvised music. Reference is made to several views stressing the importance of
shared knowledge between performers and audience that the music is created here and now. Other views concern the absence of form references
and to criticism.

These 22 pages seem to be one of the best introductions written so far to this field of music for students and other interested readers. Starting-point
is jazz and how its improvisation aspect has been both restricted and re-activated during history. The author moves on to mentioning developments
of composed music since Schoenberg, extending into Cage’s ‘indeterminacy’ and Stockhausen’s ‘intuitive music’. Summarizing this, the author
states this information-packed sentence: "These and other modern compositional approaches do vary considerably in their details and individual
composers often express extremely different views on the importance and validity of improvisation, but these new approaches did significantly
expand the scope and definition of ‘composition’ as a practise”.

The author next plunges into an extensive discussion of the diverse existing views of improvised music and its culture. One of the many comparisions
made is between Evan Parker and Derek Bailey, bringing up issues which concern how much the music should assert an individual style and the
cultural context with which the improviser identifies himself – and how much an aesthetic exploration in its own terms. Just one reason why I find this
discussion illuminating is because the challenge posed by "afrologists" like George Lewis (please see Lewis (1996; G3) in the 1945-1999
bibliography) is taken a step further for general considerations – not just for or against Lewis’ views but in the direction of possible re-thinking of
cultural identities generally.

The book serves both as documentation of the performances and as a score for possible future performances initiated by readers. Instructions are,
however, often of a sketchy kind, but there is enough flexibility to change them according to own ideas. Also, one can imagine the use of the book as inspiration for the readers’ own projects, whether small or big.

G. WRITINGS ON IMPROVISED MUSIC

G.1.1 GENERAL SURVEYS AND
GENERAL HISTORY

See also: Løthwesen (2012; G1.2); Stewart (2016;g2.1)

(g1.1)/ Bergmark, Johannes: "What is improvisation and why improvise". Downloaded 16. June 2010 from www.bergmark.org/why.html

Considerations around how improvisation is viewed by musicians and about developments within jazz history. The author proposes that both totally
predeterministic and the counterpart, totally indeterminate views are meaningless. The essence of improvisation is not just pure intuition or accept
of chance, nor is it the blind following of a psychic condition. In order to approach a better understanding of improvisation, one must consider the fact
that both conscious decisions and intuitive elements are part of it. Surrealism is an inspiration for Bergmark, and he quotes Davey Williams: "We do not need anybody to tell us what to dream. Why then should we have someone telling us what to play?" (no reference given).

The author also deals with the issue of ideology connected to free improvisation and states, among other things, that "there are people that think
that the term "free improvisation" gives the impression that we proclaim ourselves as liberated... Unfortunately, this is considerably exaggerated...

(g1.1)/ Borgo, David: Sync or Swarm. NY/London (Continuum), 2005. May be purchased with or without a CD.

This book sets out to explore the area within contemporary sciences dealing with "chaos" phenomena, focusing on their possible usefulness for
descrribing improvised music in its complexity.

It also makes a most useful music history summary related to improvised music and, in addition, features various documentation related to Evan
Parker.

Written in what seems to be an informal style of popular science writing, one has to probe a little into the chapters to find out what they are all about,
even if the author is indeed an assistant professor working at the "Critical Studies and Experimental Practises" program at University of California, San
Diego (UCSD) and the discussions in the book also take place in close interaction with literature which is documented carefully in the notes and
in the large bibliography.

Thus, after initial introductions, we find that the second chapter titled with the poetic circumscription "Reverence for Uncertainty" deals with the
history of improvised music and discusses some issues of essential interest: the views of performers, of listeners, and issues related to recording
and to criticism.

This article is a comparative study describing very clearly the different characteristics and ways of working of New Phonic Art, Nuova Consonanza,
Musica Elettronica viva, AMM Music, Music Improvisation Company and the Scratch Orchestra - all well-known improvisation groups of the sixties
and seventies.

(g1.1)/ Beck, Sabine: "Prinzipiell vielseitig. Vinko Globokar, "New Phonic Art" und die Improvisation der sechziger und siebziger Jahre", MusikTexte

This article is a comparative study describing very clearly the different characteristics and ways of working of New Phonic Art, Nuova Consonanza,
Musica Elettronica viva, AMM Music, Music Improvisation Company and the Scratch Orchestra - all well-known improvisation groups of the sixties
and seventies.

San Diego (UCSD) and the discussions in the book also take place in close interaction with literature which is documented carefully in the notes and
in the large bibliography.

Thus, after initial introductions, we find that the second chapter titled with the poetic circumscription "Reverence for Uncertainty" deals with the
history of improvised music and discusses some issues of essential interest: the views of performers, of listeners, and issues related to recording
and to criticism.

These pages seem to be one of the best introductions written so far to this field of music for students and other interested readers. Starting-point
is jazz and how its improvisation aspect has been both restricted and re-activated during history. The author moves on to mentioning developments
of composed music since Schoenberg, extending into Cage’s ‘indeterminacy’ and Stockhausen’s ‘intuitive music’. Summarizing this, the author
states this information-packed sentence: "These and other modern compositional approaches do vary considerably in their details and individual
composers often express extremely different views on the importance and validity of improvisation, but these new approaches did significantly
expand the scope and definition of ‘composition’ as a practise”.

The author next plunges into an extensive discussion of the diverse existing views of improvised music and its culture. One of the many comparisions
made is between Evan Parker and Derek Bailey, bringing up issues which concern how much the music should assert an individual style and the
cultural context with which the improviser identifies himself – and how much an aesthetic exploration in its own terms. Just one reason why I find this
discussion illuminating is because the challenge posed by "afrologists" like George Lewis (please see Lewis (1996; G3) in the 1945-1999
bibliography) is taken a step further for general considerations – not just for or against Lewis’ views but in the direction of possible re-thinking of
cultural identities generally.

The subsection "Experiencing Uncertainty" deals with listening to improvised music. Reference is made to several views stressing the importance of
shared knowledge between performers and audience that the music is created here and now. Other views concern the absence of form references
and the creative role of the listener following from that, the description of different basic kinds of listening, the importance of listening with a non-traditional focus (which could be textures or the changing appearances of figure/ground/field), and discussions around the terminology with which to describe the multi-cultural, pluralist interaction aspect. This last topic is an important one but perhaps better have appeared under general attitudes to improvised music, not being specific to listening.

Next subsection “Documenting Uncertainty” deals with recording practise. The reservations made by many improvisers are mentioned, and contrasted to Martin Davidson’s view (director of English Emanem Records) that improvisation (probably because not being repeatable) deserves and needs it more than composed music. Mention is further made on different attitudes among improvisers on editing and adding recorded material. And of the practical advantages of recording – keeping up a tradition, getting to know each other and making understanding easier because it allows for repeated listening. Improvised music may be seen as a “post-literate”, oral tradition. Missing copyright and royalties recognition is mentioned here as an example of how improvised music is still not recognized by the common cultural norms.

At the end of these 22 pages on improvised music (“Reverence for Uncertainty” with subsections), its general development and some main areas of discussion specific to it, we find a final subsection on written improvised music criticism, “Evaluating Uncertainty”. Ensemble rapport and general formal properties of the music may appear as criteria employed. Mention is also made of Couldry’s concepts of virtuosity specific to improvised music (please see Couldry (1995; G1.1) in the 1945-1999 bibliography) and of extended techniques as something that can be commented by critics.

The chapter “The embodied mind” deals with notions of mind and body as an interrelated entity rather than a “cognitive” view of the mind being in charge and commanding the body to act. Quotations about Evan Parkers’ solo playing by Parker himself and others are taken in to extensively illustrate this point (and there is a short bio of Parker as well).

Chapter “Rivers of consciousness” presents the thesis that improvised music has till now failed to arise academic attention comparable to that of composed music partly because of lack of technological tools, but more importantly, because of its non-linear character. The field of “dynamic systems theory” in mathematics is mentioned and a trio with Sam Rivers is analyzed. In a conclusion, the role of “momentum” (staying where you are) and “inertia” (letting yourself be moved) in playing and their balance is discussed.

Rolf Bader is a German specialist in computer analysis of music. He is not named a co-author of the book, but his contributions form the main basis of chapter 5, “On the Edge of Chaos”. It presents his analysis of improvised performances by Parker, Sam Rivers Trio, Peter Brötzman, and Art Ensemble of Chicago. Measurements took place with intervals of 50 milliseconds, and harmonic overtone components, inharmonic frequencies being part of the sound, along with “any large amplitude modulations” (including those caused by pause occurrences, at end of phrases and elsewhere). The resulting graphic diagrams depict variations in complexity as defined beforehand. This is what the authors label “fractal correlation” although the “fractal” dimension of this is perhaps more to be found in some metaphorical layer than in the actual analysis.

This chapter also has an illuminating quote from an unpublished lecture by George Lewis from 2003, about the underlying sociological and historical reasons for jazz being more centred around individual expression than the European avant-garde and Cage, which might well have been placed in the music history chapter instead. It seems to explain the background of Lewis’ manifesto-like critic (please see reference above) and it goes like this: “After three hundred years of the very real silence of violence and terror, rather than a freely chosen conceptual silence of four minutes or so, one can well imagine the newly freed African-American slaves developing a music in which each person is encouraged to speak, without conflict between individual expression and collective consciousness. In contrast to this notion of improvisation as a human birthright, a simple response to conditions, an embodied practice central to existence and being in the world, Cage's Puritanical description of improvisation contrasted the image of a heroic, mystically ego-driven Romantic improvisor, imprisoned by his own will, with the detached, disengaged, purely ego-transcending artist who simply lets sounds be themselves.” (p.88).

The same chapter also relates an example of chaotic dynamics presenting a challenge even to those accustomed to free improvisation a performance in which singer Sainko Namchylak demonstrated against allegedly not being treated professionally by the organizers of the Guelph Jazz Festival 2003. She expressed that verbally and was then singing with arms folded across her chest, looking from time to time at her watch, and repeating the same melody for half an hour, while the two other musicians developed a duo in the more "normal" way. The organizers interrupted the concert but after a "collective uproar" from the audience, the music was later resumed. An interesting internet discussion afterwards revealed a true multitude of views on this, some of which saw it as musically captivating.

The sixth chapter, “Sync and Swarm”, tells of a “new science of sync” (=synchronization) studied by “biologists, physicists, mathematicians, astronomers, engineers, sociologists and artists”. Swarm behaviour by fireflies, ants and bees reveal differentiated forms of swarm behaviour without a leader. Improvised music follows similar patterns. Sync occurs here at start and ending, as “transient sync” when coming together in conspicuous ways and as persistent sync. Studies of “swarm intelligence” in ants lead to improving telecommunications traffic routing. One list of characteristics of swarm self organization cited (by Bonabeau, Théraulaz and Dorigo at a Santa Fe institute a physicist, a biologist and an engineer) reads as follows: “1) forms of positive feedback, 2) forms of negative feedback, 3) a degree of randomness or error, and finally 4) multiple interactions of multiple entities” (p.143). Computer simulation has been employed as a research method. Statistics and analysis of the World Wide Web also reveal structures of interrelations between its enormous numbers of pages.

The last chapter, “Harnessing Complexity” treats improvisation teaching and possible strategies for empowering students. It also mentions Zorn’s game pieces.

This work comprises 390 pages of biographical and other information related to free jazz and improvised music. There are also introductory overviews and chapters and a bibliography.

The introductory chapter “The Path to Freedom” has a good, detailed account of new jazz developments from the American perspective, extending over views and chapters and a bibliography.

The last chapter, “Harnessing Complexity” treats improvisation teaching and possible strategies for empowering students. It also mentions Zorn’s game pieces.

(g1.1)/ Melvin, Andrew: The Creative Symbiosis of Composer and Performer. [An examination of collaborative practise in partially improvised works]. Brunel University, September 2010. (Contact via CBN) Characterises historical background, elaborating on a Stravinsky quote about the "post-composer period". This was meant as an ironic comment by Stravinsky to openness in compositions which passed decisions on to the performer. For the author, this label could however be seen as
meaningful in a larger perspective. Quoting an author named Handy, he makes a parallel with working life which has now been based on "politics", not "engineering" which built on a sort of mechanical model. The book also describes English composer Wiegold's way of working with symphony orchestras, involving both frequent re-writing and empty spaces in the score; also, it analyses own works.

In music history writing after 1950, two tendencies are usually attributed a paradigmatic role: on one hand, serialism and its counterreaction, and on the other hand aleatoric techniques and other strategies of opening up the work. "On one hand, these tendencies re-thought principal possibilities of the musical work in a radical way and appeared therefore necessary and revolutionary, but they have had no proper succession" (p.34). A view that sees them as the only ones suppresses or marginalizes the fact that they were only a part of the total picture of tendencies away from traditional concepts of music, musician and musical work. Improvisation played an important role here, and there has been a continuous development ever since it was re-invented in the fifties and sixties. For the first generation, improvisation was conceived of in terms of being a new discovery - be it in contrast to composition or as an extension of composition. The second generation views improvisation and composition as different aspects of one and the same music. This may also be named the second improvisation renaissance, of which improvising composers Richard Barrett, Wolfgang Mittlerer, Michael Maierhofer, Karlheinz Essl and Bernhard Lang can be mentioned as representatives.
Various collective-like groupings were formed by composers of the first generation. At the same time, musicians from both new music and jazz genres strove towards re-inventing improvisation. Thus, such re-invention took place simultaneously in two cultures.
In order to understand characteristics of the second renaissance, one should know about the first one too, since the second generation took up ideas, models and strategies from the first one.
The article provides descriptions of the first generations groups Nuova Consonanza, Musica Electronica Viva and New Phonic Art which represented the "new definition" of improvisation in relation to the 'canonic' new music. AMM represents an attempt of such new definition beyond both composed music and jazz. Cornelius Cardew appeared then as a special case, both utilizing improvisation as a composer and acting as an improvisor. In this way he was standing between two worlds and became an immediate forerunner of the second generation. His "Treatise" received special, detailed commenting here. Also Earle Brown, Barry Guy, Alexander von Schlippenbach, Anthony Braxton and Bob Ostertag have sections devoted to them.
There are also additional sections ("Er-improvisierte Komposition" and "Kompositionen/Konzepte für Improvisatoren") which discusses and details some ways in which composition is now accepted among improvisors and how composition and improvisation have been combined.

An evaluation of how free improvisation has been covered in German musicological literature, including also comments on the state of free improvisation teaching in Germany, Austria and Switzerland (Basel, Leipzig, Vienna, Linz, Bern and zürich is mentioned - Luzern could be added). Comments are given within the categories of handbooks and encyclopedias, psychology of music, sociology of music and music analysis, and also the difference between disciplines of musicology and jazz research (German: Jazzforschung) are discussed.

A concluding section sums up - a number of useful studies have been undertaken, although authors did not know about each other in many cases. Some key issues for further qualifying the discussion are proposed: which concepts characterise the specific nature of improvisation? How can one develop value standards? And is the concept of the work of art to be revised, if relevant at all? How are historic processes of change within free improvised music to be described?

(g1.1) Riikonen, Hannu T.: 1960 luku ja uusi tapa improvisoida. Nykymusiikin improvisaatioliiikkeen piirissä vallineista improvisaatiokäsityksistä. [1960's and a new way to improvise Concepts about improvisation among the contemporary music's improvisation movement]. Lisensiaatintutkimus. Turun yliopisto, Taiteiden tutkimuksen laitos, musiikkitiede, huhtikuu 2000. Licentiate dissertation, Turku (Finland), 2000. Turku University Library. Please see the 1945-1999 bibliography in which this item has been listed as a special exception.
The title of this licentiate paper means "1960 and a new way to improvise - Concepts about improvisation among the contemporary music's improvisation movement".

The pre-history of the modern concept of free improvisation is explored here. The pursuit of automatism by André Breton and a number of other authors including Japanese Muroyama Tomoyoshi as well as Tristan Tzara, is onsidered. Further, representatives of glosso$ala (Antonin Artaud) and, attempting to draw a connection to the liberation of sound itself, Partch, Granger, Varèse, Messiaën and Cage, are mentioned. In more recent developments, mention is made of Lennie Tristano and a number of contemporaries working in the fifties, before Sun Ra and other presentatives of free jazz and free improvisation of the sixties appeared on the scene. improvisational music has historically been analyzed within the context of various musical disciplines, what distinguishes the research we aim to provide an academic forum for a developing critical field that accents the social implications of improvisational musical practices. Indeed, while improvisational music has historically been analyzed within the context of various musical disciplines, the idea for Critical Studies in Improvisation comes in large measure out of the research activities associated with the Guelph Jazz Festival colloquium... The editors signing this are associated with the University of Guelph, Canada. Articles appear both in HTML and pdf.

G2.1 DOCUMENTATION, REPORTS AND DISCUSSION CONCERNING SPECIFIC IMPROVISORS, GROUPS, WORKS, EVENTS, TENDENCIES

(g2.1)/ See also: Borgo (2005;G1.1) (Evan Parker); Lukoszevieze (2003;G2.1); Schwabe (2001;G5); Saunders (2009; g5); Melvin (2010; G1.1); Herndler (2014;E1); Scott (2014;G3); Redhead (2016;G2.1); Gottschalk (2016;G3); Morris (2012;G3)

(g2.1)/ Andersson, Magnus: Interview with Christian Wolff, Nutida Musik 2, 2007.

From a public interview at the festival "Open Form A Paradigm of the Arts", Oslo in March 2007. The interview deals with the nature of open form music, Wolff explains that this is about openness in performance, not just the use of chance. Further, it deals with the work Edges by Wolff (see Wolff (1969;A1) in the 1945-1999 bibliography!) according to Wolff one of his most open works and presupposing experience with improvisation. Some more themes brought up by the interviewee are whether open form music is more difficult to listen to than traditional music and whether the experience is a more intellectual one. Wolff's answer to the latter question is negative, for him the physical experience of the sound is the most important aspect of the music.

Additionally, there are both extensive name and subject indexes for the whole book. Also, small CV listings describe the contributors who are: Thomas Ankershith, Harald (Harri) Ansorge, Serge Baghdassarians, Boris Baltschun, Jürg Barilletti, Johannes Bauer, Burkhard Beins, Marta Blatnanovic, Nicholas Bussmann, Lucio Capice, Diego Chamy, Clare Cooper, werner dafeldecker, Rhodri Davies, Bertrand Denzler, Bill Dietz, Axel Dörner, Phil Durrant, Ekkehard Eihlers, Sabine Erolfz, Andrea Emke, Kai Fagaschinski, Fernanda Farah, Kerstin Fuchs, Björn Gottstein, Matthias Haensch, Hanna Hartman, Franz Hautzinger, Robin Hayward, Teresa Iten, Sven-Åke Johannsson, Margrethe Kammerer, Christian Kesten, Annette Krebs, christof kurzmann, Greg Malcolm, Thomas Meadowcroft, Chico Mello, Thomas Breitenstein Millroth, Toshimaru Nakamura, Gisela Nauck, Vered Nethe, Andrea Neumann, Nina Polasschegg, Michael Renkel, Ana Maria Rodriguez, Adeline Rosenstein, Arthur Rother, Olaf Rupp, Ignaz Schick, Ulf Sievers, Stefan Streich, T.Turner, Michael Vorfeld, Antje Wovinckel, David Walker, Steffi Weismann, William Wheeler.

(g2.1)/ Beins, Burkhard; Kesten, Christian, Nauck, Gisela, Neumann, Andrea (ed.): Echtzeitmusik. Selbstbestimmung einer Szene / Self-defining a scene. Hofheim (Wolke), 2011

A bilingual publication in German and English. "Echtzeitmusik" - the main name for it all not having been translated into English - meaning "real time music". It is/was a movement within improvised music originating in East Berlin after 1989, having been performed in squat spaces and spreading to many musicians also internationally. The music, generally, characterised by "reductionism", often piano and with pauses. The book features long interviews and personal statements. There is also a section for critical discussions. Issues discussed are rhaphodic, often changing - even if editorial divisions do exist: "History and stories" - "Discourse" - "Theory and Practice". It is probably not a book to be read from one end to another unless you feel very much part of the scene or know many of the names. But it could be one to consult when it comes to digging up material around some of the many contributors (typical g2.1 material in this bibliography's terminology :). A number of appendixes will support such work. The first one modestly named "artists" is a comprehensive list of artists having performed at the relatively few venues listed, maybe core ones for the movement, September 1996 through May 2011. These venues are "2:13 Club, Labor Sonor, Raumschiff Zitrone, biegungen im ausland and Quiet Cue". The number of names exceed 800. The list is not alphabetically arranged, so maybe chronologically. Instruments played are included. Musicians from the German-speaking area are the majority, but a number of people from UK and other countries.

Additionally, there are also two extensive on and subject indexes for the whole book. Also, small CV listings describe the contributors who are: Thomas Ankershith, Harald (Harri) Ansorge, Serge Baghdassarians, Boris Baltschun, Jürg Barilletti, Johannes Bauer, Burkhard Beins, Marta Blatnanovic, Nicholas Bussmann, Lucio Capice, Diego Chamy, Clare Cooper, werner dafeldecker, Rhodri Davies, Bertrand Denzler, Bill Dietz, Axel Dörner, Phil Durrant, Ekkehard Eihlers, Sabine Erolfz, Andrea Emke, Kai Fagaschinski, Fernanda Farah, Kerstin Fuchs, Björn Gottstein, Matthias Haensch, Hanna Hartman, Franz Hautzinger, Robin Hayward, Teresa Iten, Sven-Åke Johannsson, Margrethe Kammerer, Christian Kesten, Annette Krebs, christof kurzmann, Greg Malcolm, Thomas Meadowcroft, Chico Mello, Thomas Breitenstein Millroth, Toshimaru Nakamura, Gisela Nauck, Vered Nethe, Andrea Neumann, Nina Polasschegg, Michael Renkel, Ana Maria Rodriguez, Adeline Rosenstein, Arthur Rother, Olaf Rupp, Ignaz Schick, Ulf Sievers, Stefan Streich, T.Turner, Michael Vorfeld, Antje Wovinckel, David Walker, Steffi Weismann, William Wheeler.

About the activity in Danish Group for Intuitive Music and other similar groups as well as in the teaching at Aalborg University. Discussion of this composition form.

Documents an initiative of concert activity in Berlin based on improvisation within a framework of "sculpture - swarm - conversation" and some additional programming.

Analyses a number of open works by Swiss composer Max E. Keller from the beginning of the seventies and provides a glimpse of later similar works. Notation and how it contributes to define the form is one of the themes for discussion. See also the collection of works in extenso at www.intuitivemusic.dk/iima/mk.htm

(g2.1)/ Cardew, Cornelius: A Reader. Matching Tye near Harlow, England (Copula), 2006. Essays and writings by Cardew, including (1961:2) and (1971:G3). Also commentaries and responses from Richard Barrett, Christopher Fox, Brian Dennis, Anton Lukoszevieze, Michael Nyman, Eddie Prévost, David Ryan, Howard Skempton, Dave Smith, John Tilbury and Christian Wolff.

(g2.1)/ Collins, Nicolas (ed.): "Not nescassarily English Music", special issue Leonardo Music Journal 11, 2001. In his introduction, the editor describes experimental tendencies of the UK since 1960 and on as a "golden age". There was a lively and independent activity both in free jazz and other kinds of experimental music, and a distinctive feature was its pluralism, which disregarded former distinctions between high and low art, composer and performer, and more. The movement was uncommercial, and it needs to be better documented. Below, selected articles are summarized.

In "The arrival of a new musical aesthetic: Extracts from a half-buried diary", Eddie Prévost, himself an important figure in the development of improvised music, outlines a personal outlook. This touches on influential groupings such as Spontaneous Music Ensemble, Music Improvisation Compan, AMM, Cornelius Cardew and John Tilbury. Tilbury introduced American indeterminate music to English audiences and Cardew's background in conservatory studies and activity himself as a conservatory teacher also contributed to exchange on various levels. Further, The London Musician's Cooperative [not the same as London Musician's Collective but perhaps a forerunner], associated with The Little Theatre Club and the names of Derek Bailey, Even Parker, John Stevens, Trevor Watts, Paul Lytton, Tony Oxley, Howard Riley and Barry Guy - as well as the Scratch Orchestra.

Matthew Sansom, in "Imagining music: abstract expressionism and free improvisation", outlines features common to Abstract Expressionism painting and free improvised music. Both Surrealism and Dada practised the idea of "automatic writing" and transferred it to the process of painting - "action painting" as it became named by Jackson Pollock. Being present in the process and following the material's "own", emerging tendency, to let go of conscious control, became essential. While reference could be made to figurative elements they were, however, regarded as having a secondary importance. So Abstract Expressionism was centered around the material and form of the art. Thus it differed from symbolism and iconography of earlier times. Close parallels to free improvised music exist in their "artistic agendas" dealing with "processual dynamics". Bailey's notion of "non-idiotic" music is in line with this. - A fuller understanding of free improvisation may occur by taking these parallels into account.

Hugh Davies accounts for the history of the live electronic music ensemble Gentle Fire in "Gentle Fire: An early approach to live electronic music". This group played mainly open compositions by a variety of composers. Verbally notated compositions by Stockhausen (and Sterklang) were among them, and there was a special collaboration with this composer, Davies having been his assistant earlier. The importance of this ensemble for the open composition music form is illustrated by the fact that a total of 28 different composers were performed (including ones by ensemble members but excluding collective compositions by the ensemble), and 100 works with 245 performances during the lifetime of the group 1968-1974. This article is a fascinating account of this group's career which includes also many details of the historical context. - A composition being typical of the group spirit, according to the author, by Graham Hearn is stated in extenso.

Stuart Jones, in "Making it up as you go along", reflects on his musical career in the ensembles Gentle Fire, British Summer Time Ends and Kajondo Style. This includes also reflections on the nature of pluralism, the mixing of styles: in Gentle Fire, as coming out of a love of "surreal conjuctions and juxtapositions" that might be akin to British stand-up comedy; later, as from simply following their liking for the popular music they had also played (cf. the editor's remarks on pluralism cited above!).

David Toop introduces the enclosed two CDs with personal memories, "Not necessarily captured, except as a fleeting glance". The variety of experimental music from 1960 and on is also reflected on - the spirit of postwar times he characterizes as "a kind of cultural and political anarchey", on the background of the war that had ended, but within the security of a stable society. That led to "collapsing boundaries" between the various experimental tendencies, and between high art and pop. The Portsmouth Sinfonia lead by Gavin Bryars who was a lecturer at the Portsmouth Art College then, is mentioned. The orchestra often appeared "hilarious" with its seemingly wretched renditions of popular classic excerpts, yet its basis was a serious playing to the best of each one's ability - a pluralist phenomenon.

Finally, there is a section (of seven) pages which, almost slightly encyclopedia-like, provides detailed information on the musicians and the music. Examples of such detailed small articles include the one on The People Band, and the one describing a group composition by Gentle Fire.

Other than by the authors mentioned above, there are also articles by: Dorín Casserley; Alvin Lucier; Scanner; Janek Schaeffer and Joe Banks.

(g2.1)/ Corbett, John: Booklet article, Sounds 99, 3 CD-set Blue Tower Records BTCD 09/10/11, 2000. Interesting remarks about nations and clichés. "according to this set of cliches, Germans were the power blowers, the Dutch the theatrical ironics, the British some sort of anal-compulsive abstract sound manipulators... there's been plenty of flux, with the Brit Steve Beresford adopting "Dutch" cgharacteristics, and Germans like Wolfgang Fuchs utilizing more "British" aesthetics, and so on" (p.16).

(g2.1)/ Curran, Alvin: "...todesverachtend, lebensbejahend, exsassesuchend...". Special issue Improvisation, MusikTexte 86/87 November, 2000. Historical notes about an important Italian music phenomenon of the seventies and on, Musica elettronica Viva.
Includes analysis of Mobile by Henri Pousseur and other works - there are mutual reactions, listening pauses, modifying what you play next according to what you have heard.

Describes the free-improvising group Lemur's way of working. Rehearsals are for working with exercises designed by the group. These exercises train abilities such as dealing with timbre: "A performer makes a "core" sound and the rest of the ensemble join in, one by one ... A key objective is to contribute and expand the core sound, but never lose auditory touch with the original. Copying the sound would then be failing the task" (p.131). It is further remarked that "This is a creative challenge, to both identify and extend your perception of a given sound's essence" (p.131). In further work "The task of defining the core is circulated around the ensemble. - Going still further, "The exercise can also be adapted to work as a tool to explore different instrument registers, instrumental techniques, or a pitch space. Thus one can work with "the isolation of sounds in all different registers on all instruments. Questions like "How can the flute best color or complement a deep bass sound?" or "How must the horn play in order to blend equally with a flute whistle tone" can for instance be posed and solved." (p.131).

Performances, however, were free, avoiding any pre-arranging. Lemur can be heard from the USB key which is part of the publication.

"The task of defining the core is circulated around the ensemble. - Going still further, "The exercise can also be adapted to work as a tool to explore different instrument registers, instrumental techniques, or a pitch space. Thus one can work with "the isolation of sounds in all different registers on all instruments. Questions like "How can the flute best color or complement a deep bass sound?" or "How must the horn play in order to blend equally with a flute whistle tone" can for instance be posed and solved." (p.131,32)
About Rzewski and Cardew (Rzewski advised Cardew not to do the Treatise project) and Sound Pool Events.

Quoting sketches of compositions by Johansson, which seem to be mainly for the composers' own memorising. In the same issue there is also one more article about Johansson by Peter Abling and a list of works.

Further "Creating out of nothing" (p.154). And there is a whole section in the book with documentation around Musica Elettronica viva (MEV). A peculiar documentation text is to be found around "Zuppa". This was an improvisation event held several times. Although only the title and no further explicit agreements existed before playing, it nevertheless became a notion of a certain kind of music-making, similar to some of the prose pieces. In addition to Rzewski's description, Alvin Curran also has provided a list of instruments available, which makes it more clear what could make it tempting to the audience to take part. So this is a rare description of a "greyzone composition" between composition and improvisation, performance has now become a necessity according to this, an area which was formerly left to performers and technicians.

The reader is strongly advised to search both the present addenda section and the previous one of the bibliography for literature and pieces by and about Rzewski. Both since he has in recent years written some articles of a larger scale than most of those compiled in this book, and because the various materials supplement each other well.

The composer comments on Bird Gong Game, Witch Gong Game, Un Coup de Dés and Ceremony. The typical way of working seems to include providing of both pitches and others kinds of material, presented in visually separate sections (maybe in some cases to be chosen from by conductor or soloist?). Visual design often reflect the perceived background and atmosphere of the composition. Compositions are also tailored to the individual occasions. Even so, at least Bird Gong Game was performed later with many different soloists. The article is a short one - many instruction details are not explained, and the colour illustrations are in low resolution (although prints exist for sale). It is, however, much to be welcomed because of the importance of documenting these works that integrate visual design on a very high level with composition.

There are precise demands made on the musician, however. Supermixen for a string instrument has signs for bow pressure, position of the bow and for finger pressure. Abgeschnitten, der Kreis... has been presented in a version with independent, simultaneous versions taking place in music and through the camera. Streifend der blick... also may involve moving in space. The author remarks that the freedom involved here is not "tabula rasa" but comparable to a "freeclimber" climbing a sheer cliff. There is spontaneity, but one cannot go in all directions.

More generally it is stated at the end that notation served ends of reproduction. With todays' advanced reproduction technology, this is not necessary any more in order to recall a performance, although huge quantities of music are still "preserved" in this way. The author strives instead to pass on the ideas of musical processes in a less subjective form.

See also Neuner (G2.1;2011)
Mainstream jazz is criticized for having a reproductive attitude and thus having alienated itself from the former creative spirit of jazz. As positive developments the author sees the use of computers in freely improvised music and interest in improvisation from classical avantgarde composers. Reference is made to Adorno, Berendt, Noglik, Lewis and Wilson.

Comments and quotations by musicians who share the view that the computer is becoming just another instrument in improvised ensemble playing.

Examinations and analyses selected work dealing with improvisation in various ways, among others Quadrivium for piano (1972), Mimesis I for wind quintet (1974), Postcard-Music (1976), pieces from "improvisationskalender" (1996) and Frameworks (2000). Includes lists of selected works, of recordings and of selected writings on music (especially in Danish).

The author aims at "encouraging the production of new histories of experimentalism in music" and asserts that the developments described is an example. Jazz was long known to white audiences, but bebop departed from prevalent entertainment expectations and became controversial. The Association for the Advancement of Creative Musicians, AACM, founded in 1965, was a collective endeavour of both promotional and educational self-organisation. It grew in Chicago and spread to New York too. Members also appeared in Europe with success. AACM's members were black, but they operated within an increasingly mixed American city culture. Many of the musicians had migrated to Chicago from the South, finding themselves in a new urban environment. Significantly, many AACM initiatives were reviewed by the Down Beat Magazine, even if critics were often negative. Also testifying to the mixedness and interpenetration of cultural elements is the influence of the Russian art theoretician Joseph Schillinger on Muhal Richard Abrams and others. His ideas dealt with systematic structures in a way comparable to those of Messiaen and the serialists. Quoting Henry Threadgill (p.500), there was indeed a "crossing over" to white avantgarde music. Acculturation, pluralism seems relevant keywords for this long development, which (the present author speculates) seemed to have begun already with the slaves adopting elements from white march music. Seen from the white side (present author continued), jazz pushed the white avantgarde in improvisational directions, both indirectly to aleatoric and indeterminate procedures (according to Braxton quoted in Cox (2004; H1) p.164) and directly (see summary of Noglik (1990;G1.1)).

Even so, Lewis quotes a number of black musicians for statements about personal and emotional attachment to their music, contrasting to the cultivation of the impersonal with Cage and other indeterminists (p.41). This provides some more background substance for the claims stated in Lewis (1996; G3) and in the article by Lewis included in Fischlin and Heble (2004; G3). Yet, how far do generalisations go - do not overlappings exist here too? The author aims at "encouraging the production of new histories of experimentalism in music" and asserts that the developments described generally influenced "the relationship of improvisation to composition" (preface, xiii). Yet, the compositional methods, in particular the notations, remain unfortunately outside the focus. We are solely given three score excerpts by Anthony Braxton, Roscoe Mitchell and Wadada Leo Smith (illustrations between p.216 and 217) with no explanations. White experimental music was influenced by the surrounding written culture and benefited from publishing. But now, as jazz is receiving extensive study also on the academic level, this large white field on the map could indeed be filled. PhD writers, go ahead!

The book provides details leading to the conclusions summarised in Lothwesen (2012; G1.2). Other than that, two remarks can be made: 1) in the introduction there are interesting statements about the phenomenon of anachronism when elements from art music are taken over in a jazz context as well as vice versa (p.9-11). No examples are stated, beyond bebop being of no interest to art music composers - and Third Stream as well as Free Jazz being exceptions to the rule. The reader may think for him/herself...

2) There is detailed analysis of the music of Georg Gräwe, Alexander von Schlippenbach and Barry Guy on the phenomenological basis of the author commenting his perception of recordings. This is unfortunately not very enlightening of one seeks information about precisely how these composers worked to integrate composition and improvisation - even with this being explicitly stated as a main interest with the two latter ones. We are left with very sparse suggestions: Gräwe utilises written structures as jumping-off boards for improvisation. And we are told that the integration of composition and improvisation was very important to von Schlippenbach and that this also lies behind the name "Globe Unity Orchestra". In one
case the author even suggests that the reader may hear for himself: "Die klanglichen Auswirkungen planerischer Vorarbeit...können gut anhand von Höreindrücken erfasst und verfolgt werden" (the sounding results of previous planning work...may be perceived and followed well from hearing) (p.142). Even with this being so, there is an acute need to describe what the composers actually did while one can still ask them or collaborators who knows.

Investigates works by jazz composers Gräwe, Barry Guy, and Schlippenbach as influenced by contemporary music (Webern, Ligeti, Xenakis) as well as contemporary music composer Bernd Alois Zimmermann who collaborated with Schoof, Zimmermann and others. A statistical analysis of verbal statements documents the difference between the way critics and musicians describe the music. A theoretical model accounts for the differing but ultimately related rhetorical characteristics: legitimation of "European Free Jazz" regarding the critics and "Initial for inspiration and striving for social prestige" for the musicians. It is concluded that "Whereas emancipation appears to be a historical phenomenon, assimilation continues to be a challenge for improvising musicians, giving rise to fascinating listening experiences'. Nevertheless, the author stresses that motifs for approaching those tendencies are individual. - This article summarises the author's book Klang – Struktur – Konzept. Die Bedeutung der Neuen Musik für Free Jazz und Improvisationsmusik. Bielefeld (transcript), 2009.

Discusses the way to play in a large improvisors' orchestra. Mentions a number of other orchestras, among others: ICP Orchestra, Multiple Choice Orchestra (Cologne), Ensemble X (Cologne, founded by Carl Ludwig Hübsch), ÖNÇZekviszt (Austria/Norway/Chech), Action Sound Painting Orchestra, CHeitanham Improvisors Orchestra, Erstes improvisierendes Streitchorchester, Feral Choir, Glasgow Improvisors orchestra, Insub Meta Orchestra, International Composers and Improvisors Forum Munic, Klang-Drang Orchestra, London Kaz Composers Orchestra, Millefleur, Oxford Improvisors Orchestra, Royal Improvisors Orchestra, São Paulo Improvisors Orchestra, Second Nature (Baltimore's Improvising Orchestra, Swiss Improvisors Orchestra, Variable Geometry Orchestra, Vienna Improvisors Orchestra, Wuppertal Improvisationsorchester.

(g2.1) Metzner, Susanne: "hear and everywhere", Einblüte 13, 2002.

Accounts of a course at Magdeburg. Participants worked independently of each other and communicated via a billboard.

On historical improvisation guides by among others Clementi, Couperin, Gretry, Telemann, Kalkbrenner.

(g2.1) Meyer, Thomas: "Ist die freie Improvisation am Ende?". Dissonance, Schweizer Musikzeitschrift für Forschung und Kreation 111, September 2010, p.4-9. Also online: http://www.dissonance.ch/upload/pdf/diss111.hb_04_09.pdf (including abstracts in German, French, Italian and English)

The author takes some detailed looks at improvised music in Switzerland twenty-one years after Meyer (1989; G2.1). It has become much more established and integrated into educational institutions. However, the author thinks there is still an absence of reflection and afterthought, even despite a number of large congresses has been held (Tagung für improvisierte Musik Luzern), and even though there has been a close collaboration between the Swiss Composers' Union (Schweizerischer Tonkünstlerverein) and the improvisor's organisation Swiss Musicians' Cooperative (MusikerInnen Kooperative Schweiz) as joint publishers of Dissonance Magazine until 1996 when the latter was dissolved.

He asks whether the idea(s) of free improvisation are now outdated and absorbed into mainstream, since there is neither much discussion nor seemingly intense activity related to it with the young generations as it seems to him.

See also the numerous reactions to this article Kunkel et al. (2010; G2.1). For a continuation of the discourse, see Nanz (2011; G2.1).

This book examines the influence of lesbian communities and "second wave feminism" on Oliveros' work. Sonic Meditations has been devoted a chapter for itself. More about it in the review by Tracy M. McMullen in Critical Studies in Improvisation, Vol.4, no.2, 2008.

Thoughts around the improvisation matinées in Basel which started 2003. Improvisation has become established at conservatories. An immanent critique of the music form is suggested, emerging from the experience of its rhapsodic character. A critical view of the theorising part of the series is presented, after an acclaim of the performance part. The author proposes to study the philosophy of Merlau-Ponty (with 'body knowledge' as a notion) in order to find a theoretical basis which is not a result of forced theorising that fails to connect to its object of study because of an unreflected striving towards being objective.

See also the book Nanz (2011; G2.1), a book written by contributors to the series.

An introduction to Christoph Herndler's principles of composition - close to the descriptions by Herndler himself (G2.1; 2011) but worth reading for the authors' way of throwing this into relief with traditional ways of reproducing music from the sheet. For instance: "...no score from which one could write out parts and which would then suggest the limited role of each musician in the large whole. Every musician have at all times the total "score" to look at. The formal construction is not a riddle which you would have to approach through analysing it first. It is quite open und accessible to every musician."

Also liner notes to the content which is a version of "abgeschnitten, der kreis" for large ensemble and a number of video cameras, a performer and a
drawing artist. This work was also discussed by Herndler in (G2.1; 2011).

(g2.1)/ Neuner, Florian: "Auf der Spitze des Eisbergs. Die Berliner Komponistin und Verlegerin Juliane Klein". MusikTexte 139, p.5-13. Includes a list of works.

Juliiane Klein did her first studies in the DDR with, among others, composer Hermann Keller who taught her improvisation and composition. She later developed her own form of open composition. It seems to rely for the most part on verbal instructions, judging from the example quoted. This is a section in extenso ("work sheet") from the opera "Allein" (2012). It states some reflections on the dramatic content and provides a poetic description of the desired atmosphere, as well as some concrete musical guidelines.

(g2.1)/ Nonnenmann, Rainer: "Wanderer, kommst du nach...?", in: MusikTexte 102, August, 2004.

Includes a discussion of problems with late works by Nono which were written in close collaboration with musicians. They remain bound to those specific persons and are hard to approach by others - the know-how remained implicit with Nono and those musicians.

(g2.1)/ Nonnenmann, Rainer: "Wider den Utopieverlus t. Mathias Spahlingers "doppelt bejaht" beschreitet neue Bahnen". MusikTexte 124, Februar 2010.

Introduction and comments. Quotes four of the sheets of this graphically and verbally notated piece.

(g2.1)/ Nonnenmann, Rainer: "Jenseits des Gesangs. Sprach- und Vokalkomposition von Schwitters bis Schnebel". MusikTexte 126, August 2010. Quotes from Schnebel: Glossolalie 61 (Edition Schott ED 6414, ISBN 979-0-001-06833-8, - and cop. 1974 according to Nonnenmann) which is a worked-out version of the basic composition Glossolalie, still existing as an unpublished model - cf. the remarks about Schnebel (C2;1972). This unpublished model, we are told here, was to be used by musicians to make their own version, in order that they would really, as Schnebel put it, "play their own music and not follow someone else's command". This quotation is from "glossolalie (1959) für Sprecher und Instrumentalisten, Vorabzug des unveröffentlichten Manuskripts, Mainz: Schott, ohne Jahr, 1". There is also a quotation from "Exzeritienmaterial für Atemzüge", also unpublished material as it seems, cop. 1974 Schott. - There are as well quotations from Hans G. Helms (Fa:m ' Ahniesgwow) and Berberian (Stripsody).

One of the extremely rare accounts in detail of how compositional work can be done on a background of avantgarde jazz, rather than experimental classical music. The author was inspired by Steve Lacy, Braxton, Wadada Leo Smith, Cecil Taylor, Roscoe Mitchell and John Zorn since 1977. He has composed for the Rova saxophone quartet. A large number of works of his are described so that different compositional designs become clear, both how they work in themselves and how they differ. - Basis of his method is the familiar improvised jazz solo. Duos with simultaneous "solists" are frequently employed, also multiple duos. Given melodic/rhythmic materials influence the character of the pieces - they may be extended to a very high degree with ever new freely improvised, maybe contrasting materials, along the way. Further, shifts (sometimes repeated after a short time) are made to happen by means of cues, and several or all musicians can be in charge of those. The author states about his way of composition that the given material ("starting material" and "finishing material", also additionally designed as "musical or thematic material") as well as the "limits of the desired atmosphere, as well as some concrete musical guidelines.

(g2.1)/ Pfleiderer, Martin: "Herausforderung. Der englische Saxophonist John Butcher", MusikTexte 86/87 november, 2000.

Contains good, detailed accounts of the history of the Scratch Orchestra. Also activity of Portsmouth Sinfonia and Fluxus is treated.

Characterises a number of composers from the "middle or younger generation" who take interest in improvised music. Some of these study it before writing fixed compositions. What is new about this is the existence of an improvised music scene. Some composers may also be improvisors themselves. Others make it part of the performance. Jorge Sanchez-Chong (living in Vienna) creates ad hoc compositions for specific musicians and combines sometimes traditional interpreters and improvisors in one piece. In Salzburg, composer Gerhard E. Winkler’s "Bikini Atlant" some details are left to the musician's discretion, and a live-electronic part will react, unpredictably, to what was played. In German Karheinz Essl "more or less" for improvisors, short verbal directions are computer generated during performance. Lindsay Vickery is from Australia and part of the "Decibel" ensemble - "Transit of Venus" is noted in outlines. Belgian Stefan Prins combines fixed parts and parts notated in outlines in "ventiloquium". All mentioned works are illustrated in the article with samples from the scores.

This author's first book filled with thoughts on improvised music and related was Prèvost (G3;1995), viewing improvisation as "self-invention", according to its subtitle. The next, Prèvost (G3;2004) had as subtitle "meanings in music-making in the wake of hierarchial realignments and other essays". It dealt with the author's view of various recent and past tendencies in music history and life. The present work presents a new idea as its framework, an "adaptive" perspective inspired by evolution theory. This seems an interesting supplement to materialistic history views. As the author concedes (p.xi), primary source is "personal observations" rather than "scholarship". The term of adaptation acts as a loose framework for a gentle reviewing of various matters of special interest to the author, sometimes asking more questions than are being answered. Matters may deal with the historic development of improvised and experimental music. The looseness becomes apparent for this author for instance when (p.209ff) two verbal scores (by Allison Knowles and Markus Trunk) are given an "adaptive" analysis - but the text does not make it clear how their contribution to "change our perception of things" is related to ideas of adaptation, such as discussed elsewhere in the book.
But some interpretations of adaptation in music are indeed stated: serialism and science; a punk-dance originating in jumping in order to catch a glimpse of the band playing (chapter 2); free jazz as a turning towards "simpler values" (chapter 6); ecstasy as a creator of "cognitive fluidity" and serialism as both reflecting war economy and a search for "otherness" (chapter 8). Basic virtues with the improvising musician (meta-musician) of being empathetic and un-selfconscious are seen as a "biological imperative" (chapter 13).

Chapter 10 describes the authors' weekly London workshops which have been running since 1999, their standard procedures and experiences made. It has thus a special documentary value (see also Chase's report (G3; 2006)). P. 76-81 deal with Cardew’s Treatise.

In chapter 11, "Improvisation - Self-plagianism - Ventrioloquism", concepts describing various improvisor's roles towards musicians they have learnt from and towards themselves are suggested.

In this book as in the previous ones, the language can serve as a delicious lesson of advanced English, employing a large vocabulary to learn from. Just one example: "To remain dumbfounded by such a situation - to choose, or allow, oneself to be persuaded not to speak of it - is a type of moral cowardice" (p.218).

(g2.1)/ Reimann, Christoph: "Kollektives Individuum. Das Berliner Splitter Orchester". MusikTexte, August 2013, 29-35.

The "Splitter Orchester" was founded in 2010 by Clare Cooper, Clayton Thomas und Gregor Hotz. Cooper and Thomas came from Australia where they had another "splitter orchestra" with a workshop character. The founders invited twenty-four more improvising musicians to participate. The orchestra works in the public sphere - one concert in August 2010 was at Berlin Central train station. It has some historic connections to what has been called "Berlin reductionism" with long pauses, much use of noise and a selective approach to sound. The orchestra works mainly with free improvisations - however, informed by exercises. All members can bring their proposals and alternate as rehearsal leaders. Some exercises are simple, such as: "We play a crescendo having the duration of three minutes" or, "Play in such way that you can still hear the most quiet instrument".

Improvisations - however, informed by exercises. All members can bring their proposals and alternate as rehearsal leaders. Some exercises are simple, such as: "We play a crescendo having the duration of three minutes" or, "Play in such way that you can still hear the most quiet instrument". The article describes also two other exercises posing more complex tasks.

The orchestra performed a version of Mathias Spahlinger’s "doppel bejaht" during the Darmstadt Summer Courses. This is a composition consisting of individual parts, each of which is notated with verbal means and accompanied by a graphic sketch. The article quotes one of these (number 3). The title may be translated as "cluster (or infinite multitude of pitches)" - German. Klängband (oder unendlich viel Tonhöhen). "Long and less long durations, solely individual tones adding up to chords which change gradually all the time. No connected tones, melodies nor rhythms./Players start and stop their tone as well as make pauses ad libitum, then they play the same tone, or a different one. Always individually: do not start or end simultaneously with other musicians". After each section, there are three possible next sections to choose from. After each section, musicians are to agree non-verbally on which to play next. During rehearsals, a selection of sections was made. This was, according to the author, to a high degree based on actual instrumental possibilities.

(g2.1)/ Ringgespräch über gruppenimprovisation LXVIII, June, 2002.

Special issue on improvisation following recipes. Various exercises and pieces are quoted around in this issue.

g2.1/ Rutherford, Paul: Telephone conversation with Paul Rutherford, 4/5, 2000. Please see the 1945-1999 bibliography in which this item has been listed as a special exception.

Rzewski's contribution deals with utopian aspects of this composers' group which members abandoned composition for improvisation. This was, according to Rzewski, about creating "meaningful rituals, not images". The group process "tends to be more intense than any solitary activity such as composition, this is because living in a group tends to amplify all experiences, both the positive and the negative ones". Music-making should be freed from commercialism and passive adoration of stars - then "the concert will come to resemble other liberated forms such as the party or the day-off, themselves secular remnants of earlier ceremonies".

Teitelbaum's "MEV then and now" discusses the inclusiveness typical of the historic time in which the group was active. It is stated to be an excerpt of "Some MEV Memories" (no further references are given).

Composer James Saunders accounts for his ideas about "modular composition" which leaves details open for the musician's own interpretation and allows the works to have different durations. Reference is also made to similar procedures in works by John Cage and Matthias Spahlinger (128 erfüllte Augenblicke, 1975). In the same issue there is an article by Max Nyfeler, "Konzeptionelle Spiele" (53-57) and a work list. In Nyfeler's article he is also quoted for taking Chr. Wolff's orchestra piece "Ordinary Matter" (2001) as a model.

g2.1/ Schwabe, Matthias: "Carl Bergström-Nielsen: From the Danish Seasons" in: Ringgespräch über Gruppenimprovisation, März, 2000. Please see the 1945-1999 bibliography in which this item has been listed as a special exception.
The evening will only be successful when 3 to 4 such experienced ensemble musicians are present.

Includes a quote from, and comments on, Hans Wütrich's Kommunikationsspiele (1973).

Comments on the historical developments marginalising improvised music which he sees as due to the appearance of printed music. This solidified further into ethnic and social hierarchies which began to dissolve in experimental music and which are now being questioned. A background of recent Canadian research activity in public funding is described. The author finally expresses the hope that academic interest will not take away its creative power as an independent, interdisciplinary cultural agent.

There are further some remarks on the situation of improvisation and open works in French higher music education and at festivals.

Free improvisation was a new phenomenon of that time. A special characteristic of the group was that it consisted of composers. 21 members other than Evangelisti were according to Wagner affiliated with the group (during years stated between parenthesis), among which were: Larry Austin (1965), Frederic Rzewski (1966), William O.Smith (1965), Ivan Vandor (1965-67), Egisto Macchi (1968 -), Giovanni Piazza (1971-), Jesus Villa Rojo (1971-), Giancarlo Schiaffini, Antonello Neri, Alessandro Sbordoni (1977-).

Franco Evangelisti viewed improvisation as the logical consequence of his compositional activity, having arrived at the necessity of letting the performers make choices of their own, and he abandoned his former individual composition practice for working with the group. Members' compositional activity is discussed. The group's way to practise is discussed, dealing with exercises focusing on musical material and on reactions within the ensemble. On the background of these, however, improvisations were carried out freely but, according to Wagner, informed by specific idioms. Usually their duration was relatively short. Wagner undertakes a number of graphic transcriptions of the group's improvisations (some of which are available in reissue on the CD Ed. RZ 1009 from 1992). He employs an analytical vocabulary describing phases of "Texture Games"
On the background of his analysis, Wagner concludes that the group's music is indeed a consequence of Evangelisti's conception of aleatoric devices. These he cultivated, to be sure, in opposition to Cageian indeterminacy. Therefore, free improvisation the Evangelisti / Nuova Consonanza way involves a good deal of mental reflection, even if nothing is determined in beforehand.

The book describes additionally a general music history context of the time, of which the analytical remarks p. 48-50 about Chr. Wolff's compositions "Musik als sozialer Prozess" may be especially mentioned here. Duo II, Duet Pieces, Duet II and For 1, 2 or 3 People are treated.

About Ensemble for Intuitive Music Weimar (Ensemble für Intuitive Musik Weimar) founded 1980, its organisational endeavours and fights for organizing concerts with Stockhausen intuitive music pieces in the German Democratic Republic against the official cultural politics which were nevertheless successful to a large extent; and its relation to Stockhausen.

(g2.2)/ Powell, Larson: The Differentiation of Modernism. Postwar German Media Arts. Rochester, NY (Camden House) 2013.

In a context of general culture and media studies, this chapter outlines a musical and historical characterisation of Aus den Sieben Tagen / From the Seven Days. It may be briefly described with these keywords:

- improvisation and approach to oral culture. This is seen as unusual within contemporary music.
- reductionism: the musical material is reduced to simple elements and gestures
- timbre as a key dimension and as an energetically functioning agent, in the sense in which Ernst Kurth spoke of romantic harmony
- in the Stockhausen group recordings: an acting out, typical of the 1968 cultural climate.
- use of metaphers as instructions: part of a hermeneutic tradition extending back to classical tempo indications.

(g2.2)/ Saunders, James: "Commentary: RIGHT DURATIONS", Lely, John; Saunders, James (ed): Word Events. Perspectives on Verbal Notation.
Drawing on the available sources in English language, Saunders succeeds in providing an excellent general introduction to Stockhausen's intuitive music in general and to the specific piece in particular. A facsimile of the piece from the English edition precedes the article.

This interview with Johannes Fritsch, who as a musician worked closely together with Stockhausen, provides a useful overview of new forms of performance practice in Stockhausen's works: Mikrophonie I and II in which some performers solely operate microphones and in which various shades of noise are prescribed verbally, to be produced with found materials on a large gong; Mixtur, in which two musicians have the sole job of operating sine wave generators (for ring modulation of ensemble sound); Momente, in which choir singers freely interpreted humorous instructions such as for instance "like an old witch" or "like a baby"; Prozession, Kurzwellen and Spiral with the plus-minus notation and use of short-wave radios; Hymnen, in a version with improvising soloist; Solo for melody instrument with electronic feedback in which - like in many other cases - Stockhausen had the role of sound projectionist, modifying and filtering the output from microphones and machines; Aus den Sieben Tagen (From the Seven Days), the interviewee's view of the recording practice then and details of the collaboration with Stockhausen.

All this is a good example of how new use of instruments, new notations and new electronic devices are interwoven - including, but not limited to, the notion of improvisation. Such outlining of performance practice from a general point of view is still a rich field for further investigations, dealing with the fundamental practical side of music creation.

G2.3 ZORN

The game piece Cobra has had a remarkable success - among other things, according to the author, it is "routinely played by students in colleges and universities all over the world" (p. 44). - This article attempts to reconstruct, as fully as possible, the actual instructions given to musicians which Zorn did not wish to publish. It comments also on the history of previous such more or less official publications, however, without mentioning Slusser which also attempts to explain the rules from scratch. Also the coloured version of the score must be sought for elsewhere, for instance in Slusser's two renditions (Slusser[2008];g2.3) and Zorn 1984:g2.3), or in the CD cover of Zorn(1991:1). But this reconstruction seems to be the most detailed one hitherto.

Other parts of the article deal with the war games which inspired Zorn, with recordings of Cobra, with the other game pieces before and after Cobra. 

And with the remarkable integration of very different social roles unfolded by the musicians. A quote in a direct transcription from the same source as Bailey (g2.3) reads: "What I basically create [in the game pieces] is a small society and everybody kind of finds their own position in that society. It really becomes, like, a psychodrama. It's like scream therapy, or primal therapy. People are given power and it's very interesting to see which people like to run with that power, which people run away from it [and] who are very docile and just do what they're told [and those] who try very hard to get more control and more power. . . . It's very much like the political arena, in a certain kind of a sense . . . [where performers] are having a little carrot dangled in front of them. And it's interesting to see who tries to grab the carrot and who doesn't. And a lot of times the people who try to grab the carrot, it's pulled out of their hands by someone else in the band. So, it becomes kind of a scary, frightening thing to be in front of that band to see these people blossom and become the assholes that they really are" (p.56). One may supplement this with a few sentences from Bailey (g2.3:1992): "Bill Frisell is the kind of player who sits back and lets everybody else make decisions and just plays his butt off. Ultimately he was the one that was making the sound of the music while other people were dealing with the structure of it. Those are all valid positions to be in in the society that exists on stage..." (p.78).

G2.4 EARLE BROWN'S DECEMBER 1952

Be sure to see also the first bibliography until 2000. See also Bièvre (2012;H1) and Velasco-Pufleau (2012;g2.1); extensive analysis in Storesund (2015;G3.1).

G2.5 WOLFF

See also Wagner (2002;G2.1); extensive analysis in Storesund (2015;G3.1).

This book testifies to the continued and growing interest in Wolff's special form of indeterminacy in which he introduced the cue practise making performers dependent on each other. The following is my selection of points of special interest connected to new notations and their performance practise.

Pp. 193-209 by Clemens Gresser is an analysis of Proposal Collection, a collection of verbally notated pieces, most of which were written between 1968 and 1971. The reader may well wish to have the collection at hand during reading. The existence of a freeware online edition is not mentioned in the book, but you can find one at http://www.frogpeak.org/unbound/wolff/wolff_prose_collection.pdf or http://www.intuitivemusic.dk/iima/cw.htm . First part of this text deals with general issues around how misunderstandings of such open works may occur, due to decisions having been left to the
performer. Subsequent sections are titled “performing”, “listening” and “Conclusion: blurring the Function of Listener and Performer”.

P.25f, Amy C. Beal describes, on the basis of transcriptions and additional sources, how Wolff discussed and explained about his work Burdocks (1971) at the Darmstadt 1972 Summer Courses. James Saunders also comments the work pp 93-95. [Burdocks is listed as an A1 work in the old part of the present bibliography with additional references].

During pp 60-67, Philip Thomas deals in details with For Pianist (1959), with 4 illustrations.

The reader may find additional relevant information and thoughts throughout the book.

The author views Wolff's compositions from an educational aspect. They can prepare (classical) musicians for free improvisation. The sense for musical elements/dimensions and the ability to listen and interact can be heightened. In the article, an important contribution to the analytical and descriptive literature about Wolff's compositions is made by examining works written later than the sixties, such as For John/Material (2007) and Microexercises (2006, 2007) from a practical point of view, besides Stones from Prose Collection (1968-71). Excerpts of the works are given in the article. Experience with own workshops is a background and the research is a part of the authors' PhD study.

General presentation focusing on one of the works featured on the CD (in 10 different takes!): For 1, 2 or 3 people.

G3 GENERAL PHILOSOPHY, AESTHETICS, MUSIC THEORY AND MUSIC ANALYSIS

(g3)/ See also: Borgo (2005;G1.1); Wagner (2002;G2.1); Lely et al (2012; A2.2); Nanz (G5; 2011); Adrian (F2; 2012); Overgaard (2011;G5); Bièvre (2012;H1); Bramley (2015A-b; F2); Seuthe (2015;G2.2); Schwabe (2015;G2.1); Goldberg (2015;G4); Redhead (2016;G2.1)

About the festival Stockholm New Music 2003 which focuses on composing musicians and composers who are musicians themselves. "You have to see the musician as an artist and not just as a tool", Ivo Nilsson stated (p.201). The entailing discussion is summarized.

33 pieces for improvising ensemble based on the author's teaching at Aalborg University, Denmark. Compositions were created as part of the training in improvisation and formulation of playing rules. They employ selected global parameters, allowing participants to play from the score in a heterophonic manner. Verbally prescribed parameter changes and graphic/pictorial illustrations are further characteristics. Additionally, history and theory of parameter analysis is accounted for.

(g3)/ Bergstroem-Nielsen, Carl: Keywords in Musical Free Improvisation. Music and Arts in Action vol.5 (1), 2016, 11-18. Online (use link above).

Attempts to set up and illustrate some concepts describing improvised music within the themes of pluralisms, conflict, idioms, communicative context, and analytic approaches. Statements from improvisors Globokar, Evan Parker, Beresford, Bailey, Munthe, Rizzi, Prévost, Tilbury, Nankivell, Coudry, Lutz, Nunn and Walduck are sources.

The title almost says it: "self-idiomatic" is proposed as a more adaequate notion than the classic Baileyan non-idiomatic. However, the author shares an interest in the same repertory which Bailey describes, also Prévost's "meta-music" he sees as a comparable notion. - Further, the cultivation of extended techniques, self-built instruments and "noise operations" in the field are commented. Contrary to Coudry (1995;G1.1) who saw them as vehicles for a new kind of virtuosity, he views these as undermining virtuosity ideas.

(g3)/ Cannonone, Clément: Focal Points in Collective Free Improvisation. Perspectives of New Music 51 (1), Winter 2013.

Free improvisors cultivate special cognitive skills. The theoretical field known as game theory studies coordination issues among humans working together. A classic example is a telephone conversation being interrupted - both parties then face the same choice: shall I call back or wait for the other to do so? The problem arises out of too many possibilities to choose from. People will in such situations try to guess what the other might do. If there exists a cognitive salient strategy for both parties, this can be named focal point. Musicians practising Collective Free Improvisation (CFI) are all the time faced with similar-typed coordination challenges.

The author conducted empirical experiments aiming at tracking a specific, assumed *saliency* competence related to the issues mentioned above. In the first experiment, solo improvisors were to improvise along with a recorded background. This background was relatively homogeneous, but with some strongly diverging material suddenly appearing once. Results showed that "expert subjects" trained in CFI more often than the others drew...
formal implications from the incident.

The second experiment was about a group improvisation. Musicians were placed in different studio booths so as not to be able to see each other. They heard three different music samples in their headphones and they had been informed that the order of these playback was not the same for each musician. Then they were to start improvising simultaneously, using one of the samples as a point of departure. Subsequent interviews showed that "expert musicians" employed "team reasoning" (relying on identification with the group) to a higher degree and more explicitly than the others. Also, that there were no marked difference between novices of CFI coming from classical and jazz fields. In jazz settings there is improvisation, but a "play-driven" one more concerned with the excitement of the immediate activity. "It's that word play. You know, one of the things I talk to the students here a lot about is...What do you do? You say you play music, what does play mean?...I think most people actually work music" (Hugh Nankivell quoted on p.104).

"What differentiates improvised music from most other practises in its challenge to the work concept is its basis in collaboration", the author states p.79. He takes up the observation made by American philosopher Stanley Cavell: "in art... your invitation is based not on power or authority, but on attraction and promise..." (Cavell quoted p.111). This is also the situation for political initiatives within a democratic system. The author extends this line of thought to the audience's role. As traditional ways of evaluating the music are absent, the bond of commitment between musicians and audience has to be created not through recognisable styles but, in the terms of Gritten, by demonstrating 'authenticity' and 'sincerity'. Relating this to improvised music, the author sees the former as a notion that might only be relevant in improvised music under the special circumstance of knowing a performer's 'sound' in beforehand (p.115), and he interprets 'sincerity' in relation to performers' intentions as perceived by the audience members. Different organic, or oppositely stylised or self-conscious approaches may, generally, belong to the strategies of "suspending an audience's sense of disbelief" (p.116). There must be a 'social contract' in Cavell's sense: "...not mere obedience, but membership" (quoted on p.119). More recent writers (Laclau and Mouffe, as well as musicologist Leonard Meyer) have stressed the 'irrational' element in democracy (p.110), employing an 'agonistic' model (p.121). In Meyers' words, "ad hoc judgements" can be made, to which the author comments that "democracy is useful politically...because for a diverse collection of people to agree entirely on one overarching systematic approach is close to impossible and, potentially, dangerously inflexible" (both quotations from p.122). The following quotations illustrate further the points made by the author. The first one is about the kind of agreement that has to exist before playing: "X agrees to perform with Y because X knows that Y will play in such a way that complements what X plays; and Y know that X will not set fire on Y's cello" (p.121). The second concerns the active, both critical and creative role demanded by the musician: "The individual is impelled to find a way in which to make the music work as the effort of an ensemble by deciding to support the 'wrong' idea, or transform it or reject it by replacing it with an alternative" (p.123).

Last chapter before the concluding one is a series of analysis of some of Eddie Prévosts' weekly open London improvisation workshops (see also Prévost (2011,G1.1)).

This author practises open compositions as composer and musician. He argues that improvisatory fantasy and creativity should not shut out clarity and precision on the levels of compositionally defining the music and that of playing. He makes other points as to the importance of taking a clear stand to aesthetic issues, when the musical universe relates only to itself and takes no notice of other music universes, it becomes endangered by degeneration and stiffening into clichés. The author sees such a cliché in the opinion that improvisations should follow or have to follow an arch form as to crescendo - climax - decrescendo. Inspirations to a different approach could be taken from both Debussy and Stockhausen who created music in independent eposodes that are easy to combine with each other. Another issue inviting critical reflection is the composer Lachenmann's warning against naively using elements from classical music out of its context. Still another is composer Nicolaus A. Huber's warning against music production which may be authentic seen on its own background, but which has no profile in a diverse collection of people to agree entirely on one overarching systematic approach is close to impossible and, potentially, dangerously inflexible (both quotations from p.122). The following quotations illustrate further the points made by the author. The first one is about the kind of agreement that has to exist before playing: "X agrees to perform with Y because X knows that Y will play in such a way that complements what X plays; and Y know that X will not set fire on Y's cello" (p.121). The second concerns the active, both critical and creative role demanded by the musician: "The individual is impelled to find a way in which to make the music work as the effort of an ensemble by deciding to support the 'wrong' idea, or transform it or reject it by replacing it with an alternative" (p.123).

This MA dissertation overviews and discuss existing recent theories on improvisation. See also Eskildsen (2014) in English language which summarises the last part.
1) culture-related theories: Nettl's idea of improvisation as a model-based performance; Martin's and Becker's ideas about an "art world" and its conventions, such as the importance of an individual "voice" in jazz playing and the importance attached to solos, and broader sociological perspectives making improvised playing both a creative and an "editorial" practise because these fuse in an inner dialogue with the "art world". - Monson's Bourdieu-inspired insistence on a determining influence of social practises such as race and gender.

2) cognition-related theories: Norgaard's descriptions of mental activity during improvising, based on qualitative interviews. Continuous thought processes compromise "sketching" and "evaluating monitoring". Generative strategies comprise use of a "bank of ideas", repetition, as well as relating to the logic of elements of tonal music. - Gustavsen's phenomenological notions relate to existentialist psychology and describe basic oppositions which the improvisor must relate to: moment/duration, difference/unity, gratification/frustration, stimulating/stabilising and presence/distance. Since consciousness can only focus on one thing at a time, it has to wander around. - Pressing's schematic meta-model of data processing in many simultaneous dimensions (sonic, movement, etc) stressing the existence of a "knowledge base" and the importance of feedback, a background for later researchers such as Fouconnier & Turner ("blending theory") and for Kühl. Finally, Sudnow's self-documentary account on what it was like to learn to play the piano is discussed in its relation to the aforementioned views.

3) interaction-related theories: Monson's demonstration (in her book Saying something...) that metaphors of language and conversation are frequent in jazz musicians' way to talk about their music and that phrasing structure of the music can testify to this. - Dempsey's description of conduction-like signs musicians may employ in tonal repertoire, often aiming at taking new initiatives. In the terminology of Pierce, such signs are indexes, pointing directly to the reality (not icons or symbols). Drawing on Sawyer he coins the peculiar term "aggressive emergence". It distinguishes itself from simply emerging in a similar way in which theatre improvisations differ from everyday conversations - there is less ritual, and interventions have been undertaken to produce unexpected turns.

4) systems theory. According to Eskildsen, systems theory is used as a vague description of viewpoints within many disciplines having some familiarity with each other. "Autoeposis", as used of organisms being self-organised and to some extent autonomous, is a concept often encountered, coming from biology, and also a central one with Luhmann. Luhmann defines a system in a "non-ontological" way, as a historicity of repeated operations, not as a "thing" possessing fixed properties. Systems have "memory" but they are 'operationally closed' entities. Taking consciousness as an example, this means that a system of consciousness does not have any direct access to other systems. "Structural connections" however, allow the system to gather information through the senses, for instance. - Turning back to music, Landgraf follows the idea that any description of a context will be influenced by the describing system's operational historicity. Consequently, the observer should be aware of the basic assumptions underpinning his or her own system. He elaborately describes how the romantic period in Western art has become a foundation for art views with its demands of creativity and originality. Quoting Borge's formulation "wholes made up of wholes", Eskildsen finally reviews the very different fields and ways of study touched upon earlier and discusses how systems theory could be a fruitful framework for overviewing and connecting them.

---

This book includes contributions from speakers and musicians who have participated in the Canadian Guelph Jazz Festival (near Toronto). Scholars from USA, however, also play an important role, and main emphasis is on Cultural Studies from a black perspective. Contributions are grouped in four categories: Performers Improvise - Between and Across Cultures - Social Practice and Identity - Collaborative Dissonances. George Lewis is professor of "Cultural Studies / Experimental Practises Area" at San Diego University (UCSD) which seems to have become a center for improvisation studies. His "Improvised Music after 1950: Afrological and Eurological Perspectives" is reprinted with a newly written afterword commenting "The Changing Same". In an article by the editors bearing the same title as the general title of the book, Stephen Nachmanovich and Tom Nunn are addressed critically: "...in their haste to promulgate arguments about improvisation as a life-strategy for expressions of individuality, originality and creativity, they fail to account for the ways in which jazz improvisation and creative improvised music have always... been about community (rather than individual self-expression), about fostering new ways of thinking about, and participating in, human relationships (p.23). An article by Julie Dawn is devoted to the Feminist Improvising Group in the London seventies, making apparent the historical background of the later well-known trio Les Diaboliques with two of the former members - Maggie Nicols, Irene Schweizer plus Jollié Leandre. Eddie Prévost who is the only participant here from Europe, recalls the discussions during the seventies here with Cornelius Cardew and expresses a sceptical opinion on technology as environment. It deals with interactive software: George Lewis 'Voyager', as well as work by Chadabe, David Tudor, David Behrman, Nathanael Mackey; John Corbett and Benjamin Lefebre.

---

The text treated here is a part of the chapter "Information, language, interaction" which again appears in a book accounting for a large number of experimental works and practises on the basis of selected topics. One subtopic of these topics is "Interaction" with its own subdivisions. Concerning interaction in musical performance, the section "Individual and collective decision-making" recapitulates a number of well-known works: For 1, 2 or 3 People - Edges - Prose Collection. But also Exercises (1973-74) Eislter Ensemble Pieces (1980), X for Peace Marches (1985), Instrumentalist(s)-Singer(s) and Ordinary Matter (2001-04) receive mention. Some characteristics of pieces are described and there may be quotes from the instructions and from other authors. Other composers' works one can read about here are Michael Pisaro, Anthony Braxton and James Saunders. A different section is titled "Cuing" (although Wolff's For 1,2 or 3 People is elsewhere usually seen as an example of this practise). Here composers James James, Dominic Lash, Charlie Sdraulig and Nomi Epstein appear with works from the 2000s and 2010s. Also Wolff's lesser known "Lines" from 1972 is described.

One more section is "Games and communities" dealing with Zorn and Roscoe Mitchell. Still another section is "Technology as a conversationalist technology as environment". It deals with interactive software: George Lewis 'Voyager', as well as work by Chadabe, David Tudor, David Behrman, Alvin Lucier and Richard Teitelbaum.

A number of still more sections stretch "interaction" beyond usual semantic meanings or go beyond that which takes place in performance. They are: "Groups, collectives and longterm interactions" (Scratch Orchestra, AMM, AACM, Musica Elettronica Viva, Echtzeitmusik are discussed) - "Types of rejection" - "Power plays and other forms of relating" (last two about improvisor's attitudes) - "Inhabiting a space together" and "The interaction is the score" (about composers writing for specific performers).
Because of the subtitle and because the author wishes to provide a sequel to Nyman (1974; H1) one could have expected a look back into some important anglo-saxon overviewsing books having been written since Nyman (1974; H4), Brindle (1976/86; H1) and especially Sutherland (1994; H1) which do not appear in the bibliography. However, the reader might do so.

An empirical study concerned with questions related to how satisfied participants are with free improvisations and what lies behind. One of the methods of measurement was to play a video recording for participants immediately after playing in one minute sequences. Participants were then to indicate how they felt at that time. Resulting graphs (p. (24)) show vivid differences in many cases, and disagreement appears as the normal situation, even if participants’ overall rating may be similar in come cases. The author remarks (p.25) that it seems one will have to ask all participants about how they were satisfied with a given improvisation, if one is to have a precise impression.

(g3)/ Grossmann, Cesar Marino Villavicencio: The Discourse of Free Improvisation. A Rhetorical Perspective on Free Improvised Music. PhD, University of East Anglia, Norwich, UK, 2008. Available online at www.bl.uk (without the sound files)

Musical rhetorics, such as were cultivated in Baroque music, are re-evaluated for describing free improvised music. A variety of concepts are presented and referenced to recordings and to a few conducted workshops. For the present reader, however, the general usefulness is unclear - descriptions appear schematic, like a catalogue of ideas. It could have been interesting to see concepts like ‘kairos’, ‘prolepsis’, the general categories of ‘decorum’ and that of ethics, connected to a general discussion of free improvised music - providing thorough information on how to both understand their meaning and to practically apply them in the new context. This might yet remain the task of other specialist researchers. Perhaps the list of ‘vices’ - categories covering “bad behaviour” (p.153f) - is the most transparent. It includes ‘battolegia’ (‘vain repetition’ - maybe “Cliche”) - ‘bomphiologia’ (‘exaggeration done in a self-aggrandising manner’) and still others.

In the introductory exploration of background, Various sidetlights fall on free improvised music and postmodernism, on youth rebellion phenomenons after second world war, and there are some brief comments on the sign language of Butch Morris.

One observation, loosely connected to the rhetorics theme but nevertheless valuable, is the author's account of his own experience with playing Berio's “Gesti” for recorder. As the author's description suggests, the piece proposes a number of new techniques to be employed and at the same time provides choices and freedom from a fixed scheme through a graphic score. “Performing FM [Free Improvised Music] is also the time of learning...we should think about the fact that knowledge is accumulative and that it depends on memory”, it is stated (p.44). This seems the perfect counter-study to the one of Globokar - one that much quoted dogma about composition and improvisation being different methods that should not be mixed - see Levallant (G1.1; 1981). One can learn and get new ideas from composers' propositions (like Derek Bailey also did from Wehren), and they function in a similar way to the exercises many improvisors keenly do. Like improvising demands much attention to fellow players, so playing an open composition demands attention to the materials and structures presented. This could in a similar manner be an occasion to look into new possibilities and their immediate, free use. So there is hope for combining the two methods.

On the background of psychoanalysis, existentialist psychology (Stierlin) and drawing on Berliner's documentations of how jazz improvisors develop their art, the author proposes a checklist of dialectical polarities. These are: moment vs. duration, difference vs. sameness, gratification vs. frustration, stability vs. stimulation and closeness (presence) vs. distance. As a general principle, it is important to maintain a creative view of both sides of a given polarity, avoiding creative freezing and instead unfolding the dynamic potential. Each of these polarities is commented on from both psychological and musically practical sides. This could be a text to inspire practical work rather than philosophical theory building. Even if the context is a jazz one where elements like motifs and chords are mentioned, all of the checklist and also the principles could be just as interesting for the free improvisor.

Despite its focus on computer networking, this article collects and discusses concepts relevant for characterising improvised music generally. The authors note that several new concepts have something essential in common: “Improvisation, indeterminacy and gaming all imply that the notion of a work shifts from the definition of outcomes to the design of conditions that afford play” (p.133). Differences between indeterminacy and improvisation are outlined. The following remark is about open composition but seems to cover the authors' view of the relation between improvisation and indeterminacy as well: “As such, the notion of indeterminacy is engulfed in a wider context of performance practise with specific cultural norms and a framework in which decisions are far from random but rather informed by shared practise” (p.134). Reference is made to Epstein's continuum of “decorum” and that of ethics, connected to a general discussion of free improvised music - providing thorough information on how to both understand their meaning and to practically apply them in the new context. This might yet remain the task of other specialist researchers. Perhaps the list of ‘vices’ - categories covering "bad behaviour" (p.153f) - is the most transparent. It includes 'batolegia' ("vain repetition" - maybe "Cliche") - 'bomphiologia' ("exaggeration done in a self-aggrandising manner") and still others.

Hodgkinson, Tim: "A rich field of possibilities: strategies and indeterminacy in free improvisation", Resonance 8.1, 2000. The possibilities arising is a part of the improvising process, even when they do not come to use. Good essay on aesthetics.

(g3)/ Irmer, Christop: "Das Verhältnis von Musiker und Publikum in etischer Hinsicht", Ringgespräch über Groupenimprovisation LXXXVI, April 2013, 5-7.

A statement by Vinko Globokar from 1976 is taken up critically: "...I regard improvisation as a purely private process which can only be of importance for the players' inner development and at which the audience can only be present as a witness" (see Globokar (1972:22.1). This is seen as a self-sufficient attitude and contrasted to a quotation by Malcolm goldstein who appreciates the aspect of sharing the experience with other. The author then develops the idea that improvised implies a more direct perception of the musicians' human presence by the audience than do performances of written works. This idea is based on phenomenologically oriented philosophers Fischer-Lichte, Waldenfels, Lévinas (Merleau-Ponty and Derrida are also mentioned in the background).

One point to be observed from this is that the musical and the general appearance of the musicians' body may interfer ("semiotic body" and
"phenomenal body" according to Fischer-Lichte). Another point is (following thoughts from Lévinas) that the concert situation implies empathy and closeness. And there is a mutual witnessing of each other, also between individuals in the audience. This state of affairs is seen as the basis for a social order, a ritual which stabilises the situation and prevents too much closeness. The applause ritual is an example - it can be formal or more spontaneous, but within the limits of the ritual.

(g3)/ Jacob, Andreas: "Der Gestus des Improvisatorischen und der Schein der Freiheit", Archiv für Musikwissenschaft 66 (1), 2009.

Carl Philipp Emanuel Bach advised pianists to abandon habits: "...Fantasies... do not consist of passages learnt by heart nor of thoughts stolen from others. They must spring from a good musical soul - the declaratory quality and the fast surprising moves from one affect to another." This could sound close to the modern notion of "stream of consciousness". Passages by CPE Bach and by Francois Couperin are quoted with illustrations and discussed. The examples given could be viewed as early examples of consciously open works, since they abandon exact metre and bar lines, precisely in order to become more like improvisations. Music by Maurice K Kelg and John Cage are in turn commented on. Reference is made along the way not only to old authors like CPE Bach and Brossard (Dictionnaire de la musique, 1705), but also to more recent authors on the subject of improvisation. Among others, Ferrand, Bailey, Dahlhaus and Feist - summary of works of these to be seen in this bibliography's two volumes.

Author's own summary reads as follows: "For various aesthetic reasons, it may be attrative for composers to adopt a "gesture of improvising" to display an attitude that feigns improvisation or spontaneous musical action. Examples taken from the seventeenth and eighteenth centuries, as well as from music of the last fifty years, illustrate some of the procedures of and motivations for this ostensible immediacy. Noteworthy aspects include the conscious presentation of freedom when creating music, the demonstration of contingencies surrounding the musical process, but paramount and preceding any musical action, however, is the confrontation with music's materiality, which brings to the fore the moment of the creative beginning in music"

(g3)/ Kösterke, Doris: "Was ist Qualität?", ringgespräch über gruppenimprovisation LXVII, juni, 2001.

Considerations taking as their basis the novel by Pirsig, Zen and the Art of Motorcycle Maintenance. Quality lies in the relation between the beholder and the object.

(g3)/ Lange, Barbara Rose: "Teaching the Ethics of free improvisation". Critical Studies in improvisation vol. 7 nr. 2, 2011.

Ideals of equality are often cherished by improvisors. Cardew (1971; G3) views this issue in the context of philosophical ethics. However, can they be realised in an educational setting based on the teacher's authority? The author raises this issue and discusses it in relation to a community ensemble in Houston, USA. One example of attempting to open for dialogue and participant's choices in teaching is quoted p.5. Statements from participants are quoted and summarised which describe the friendly, yet also serious atmosphere. This is, so the author assumes, why some of them came to feel less afraid of the urban neighbourhood in question.

(g3)/ Lind, Rikke: "Improvisation". Klassisk musik. DR's magasinet om livet i musikken og musikken i livet, nr. 5, maj, 2003.

Harpsichordist and conductor Lars Ulrik Mortensen deals with improvisation in earlier times and in music history and states that historic music practise has re-established improvisation and in so doing made it possible to have more improvisation teaching at conservatories.

(g3)/ Linnros, David: "Ständigt flöde - improvisationen och sökandet efter friheten", Special issue on improvisation, Nutida Musik 2, 2005.

Reason and Nature may appear as enemies, reason having become totalitarian and one-sided - according to Adorno/Horkheimer. Friedrich von Schiller, who built on ideas from Kant, asserted that sensibility cannot be simply subsumed under reason. Solely when they interact, humans can realize their potential: "Only when [the human being] changes, it EXISTS, only when it remains unchanging IT exists", says Schiller. So, "without form no matter, without matter no form". Applying these reflections to music, the author concludes that the concepts of improvisation and composition represent abstract principles, hence they are not very informative. Therefore, he recommends that discussion be focused on the actual potentials and limitations of the music in question.

Critique, among other things, of a practise of playing cue-music by Wolff from fixed versions.

About the festival Stockholm New Music 2003 which focuses on composing musicians and composers who are musicians themselves. "You have to see the musician as an artist and not just as a tool", Ivo Nilsson stated (p.201). The entailing discussion is summarized.

(g3)/ Morris, Joe (2012): Perpetual Frontier. The Properties of Free Music. Stony Creek, USA (Riti Publishing).

This book deals with systematic descriptions of free improvised music and its jazz background. Talking on the background of a long teaching experience, the author thinks there is a lack of "information that is actually transferable...delivered in explicit, succinct language and compatible with the technical language of other music" (p.19). So he works on approaching such terminology. There are sensitive and diplomatic statements about the development of free music in relation to jazz. Descriptive overall labels are stated as "Melodic structure - Pulse - ... - Form". They are seen in the context of possible improvised processes. "Interaction" has also made its way here - but collective improvisation is dealt with elsewhere in a special section, see below.

The section with "Example Methodologies" seems to throw important light on the American free music tradition through characterising methods of Cecil Taylor (Unit structures), Ornette Coleman (Harmonolitics) and Anthony Braxton (Tri-Axiom Theory, including use of different notation forms and ways to organise an orchestra involving "the use of sub-group, self-directed, and self-conducted performance", p.97). According to the author, the first two and maybe also the last one have "templates" as their central compositional tool - a melodic short pattern, possibly with additional properties, or in other words a mode, which can be varied. Together with "European Free Improvisation", these have had no less than "broad influence on free music", according to the author. If the author had included some small, concrete written examples for those three it might have been even more clarifying (please do for the next edition :-)

It seems a far-reaching thesis that American Free Music (or the generation thereof roughly circumscribed by these three) as its main compositional technique employs segments of the twelve tones in a way similar to Arnold Schoenberg or followers like Milton Babbitt. However, this form of
composition has been extensively cultivated by American classical composers. The terminology of Morris sounds consistent with such a thesis.

"European Free Improvisation" is dealt with as one more "operational methodology", parallel to the three other selected approaches. European readers (like the present writer) can have the curious experience of an almost "etnographic" description from outside of our use of extended techniques, emphasis on timbre rather than pitches, form as "indecipherable" - and even of collective improvisation without hierarchy. This is described here as a uniquely European variety - although the author does concede that the tendencies have from a certain point on also mixed. While these descriptions in themselves can be precise and thought-provoking, a more questionable statement is made about durations allegedly being short for the most part and the music consisting of a "sequence of sounds" (p.104). Perception is not as simple as this might suggest; the same music may be perceived by different listeners and players in different segmentations and entities within them. "One sound" is not just one sound.

Last part of the book consists of enquete contributions by the musicians Marilyn Crispell, Charles Downs (ala Rashid Baker), Agusti Fernandez, Simon H. Fell, Mary Halvorson, Katt Hernandez, Joe McPhee, Nicole Mitchell, William Parker, Jamie Saft, Matthew Shipp, Ken Vandermark, Alex Ward, Nate Wooley and Jack Wright.

This is the second book by Eddie Prévost, well known drummer of the British improv scene, workshop leader and director of Matchless Records. This, the author points out, was central to jazz from its early stages and still an unchallenged vital principle for early European improvised music.

Earlier, in 1927, Louis Armstrong, already in a star position, nevertheless recorded with "Hot Five" in a very collaborative way. At the same time, Anton von Webern worked with his Trio opus 20 and did away with hierarchical tonality, a form of democracy taking place on a symbolic level only, but nevertheless utopian. There was an open window to less authoritarian music practise in both fields. "The days of the concerto were not over and the star soloist in jazz had hardly begun" (p.17). One may wonder at the fact that "The heroic figures of the lonely painter, composer, poet or rock guitarist still dominate our popular sense of creative genius. No equivalent place of honour has been found for the highest order of collaborative activity" (p.17).

However, according to the author, communitarism became challenged by the ideas of John Cage of letting sounds be just sounds. This could serve as an excuse for solipsist playing, without listening to or interacting with each other. Such attitudes are, still according to the author, widespread among laptop playing musicians, also when they practice sampling technology.

The writing style of the book is rhapsodic, viewpoints being often repeatedly stated when taking up new examples at various points in the discourse. The strength of this is the immediate feeling of being in the company of the author speaking. A drawback seems to be that issues brought forward are eminently such ones that need to be discussed within a wider field of musicians. It could be an idea for possible further writings to have co-authors with adverse opinions.

It cannot be overlooked that there is a pessimistic tone throughout the book. If one reads it as a manifesto or a pamphlet it may appear conservative, seeing no hope at all in newer developments such as the use of laptops and sampling.

However, "The validity of this activity will be assessed ultimately by how resonant the responses are to these texts, even through many of my theses may come to be modified by myself or crucified by others" (p.3), we are told in the introduction. So go ahead and discuss with the author!
disruptions of the order they represent. This makes parody, irony, innovation, creativity and revolution fruitful areas of study. - See, however, the author's PhD Sansom (1997; G3) with more details and a theoretical model which is not mentioned in the article.

Heuristics is about making choices, with the amount of analysis reduced to what is practical. Compositions involving choices of the "if-then" kind during performance are examined: Chr. Wolff (For Pianist 1959), Joseph Kudirka’s harmony (2007, text-notated) and the authors' All voices are heard (2015, text-notated).

Article which inspired Peter Niklas Wilson by looking beyond the opposition of composition / improvisation.

The author makes reflects thoroughly on the issue of musical quality with empirical descriptions as the starting-point. Sounding together and playing together are concepts describing essential, specific characteristics according to him.

(g3)/ Schneider, Hans: “Klangnetze oder Kunst als Erfahrung der Horizont-Erweiterung und der eigenen Veränderbarkeit”, in: Schneider, Hans (Hg.): Klangnetze: ein Versuch, die Wirklichkeit mit den Ohren zu erfinden, Saarbrücken (Pfau) 2000.

Touches upon the issue of improvisers dealing with combining their own worlds with the multitude of what is outside of it.

This text proposes an excellent critique of the way in which improvisers refuse to characterise their music. This way they also keep away from defining the territory they work with and its strengths and resources. A number of musicians' statements are discussed. The text goes on to discuss concepts from among others philosophers Landgraf and Derrida, including that of "molecularity", which emphasises a completeness in the complex situation in which to play, rather than nothingness. - However, there seems to be a more down-to-earth job which the author leaves to others: following up the critique with describing actual idioms at play (cf. Bullock (2010;g3) and actual social contexts.

Describes the pointillistic playing manner of John Stevens and the Ensemble, founded 1965 together with Trevor Watts and over the following decades also including Derek Bailey, Poul Rutherford, Barry Guy, Maggie Nichols, John Butcher as well as many other English improvisors.

Scott uses the notions of "hyper-contrapunctualism" and "hyper-interactive" "to characterise the broader process without denoting a particular musical idiom" (p.98) along with the Deleuzian term "molecular". Sleeve notes by Milo Fine and by Stevens from historic releases are quoted which testify to the collective character of this music. Connections to Stevens' way of teaching are traced. The author proposes that, also outside in its own right, this way of playing is interesting to contemplate in the historic context of later, related ways.

(g3)/ Stangl, Burkhard: "Schall, Schrift und Schallsschrift", in: Schneider, Hans (Hg.): Klangnetze: ein Versuch, die Wirklichkeit mit den Ohren zu erfinden, Saarbrücken (Pfau) 2000.

Deals with various aspects around writing, "orality" and media.

This is a good treatment of the intermediary area between composition and quasi nothing - that is, agreements made by improvisors. An important issue which has not yet had the amount of focus it deserves.

(g3)/ Weymann, Eckhard: "Dynamische Spielverfassung - die Voraussetzung für den Umgang mit Nicht-Wissen (Dynamic playing state as a prerequisite for dealing with unknowing)". Musiktherapeutische Umschau 35, 2014 Heft 3, 228-36.

Author's summary: in its «free» musical improvisation, music therapy makes use of a form of action whose programme is the unforeseen and the unplanned. This requires (and fosters) the ability to make constructive use of uncertainty (negative capability), openness to what is taking place and confidence in process. Thus the ability to play and to enter dynamic playing states is focussed on as a core competence of music therapists. As well as several historic examples of this attitude of playful unknowing (Socrates, Leonardo da Vinci, Kleist), contemporary authors are introduced who in dealing with complex professional problems find the exclusive use of factual and methodological knowledge inadequate and describe other ways – artistic or playful – of dealing with uncertainty and complexity.

On the greater visibility of improvisation in concert life in recent years. Good, full discussion of form concepts, with interesting quotations from musicians. On well-known indetermination aesthetics within new music as a sign that opposites are becoming relative. A fine summing up of this authors’ insights till now.

(g3/) Wilson, Peter Niklas: “Tendenz zur Kanonbildung”, ringgespräch über gruppenimprovisation LXVII, juni, 2001.
An attempt to describe the norms and expectations concerning freely improvised music.

(g3/) Wilson, Peter Niklas: “Von der sozialen Relevanz improvisierter Musik” in: Jazz und Gesellschaft. Sozialgeschichtliche Aspekte des Jazz (Knauer, Wolfram, hrsg.), 2002 (Part of a series: Darmstädter Beiträge zur Jazzforschung Bd.7).
Wilson discusses improvisors’ notions of improvisation as having great innovative forces and the paradox that this music has no attention from society and the general public. Some typical audience prejudices of alleged “elitarism” and “abstract” proprieties are discussed which mistake the anti-systematic and concrete here-and-now aspect, yet reveal that demand is placed on the listener: that of being totally present. Eclecticism makes, according to Wilson, the present situation maybe more problematic than the pioneer situation earlier. W. concludes that the process character of improvised music (which many improvisors think is important) should be reflected more in the music’s presentation forms.

G3.1. IMPROVISED PERFORMANCE PRACTISE RELATED TO EXPERIMENTAL AND NEW WORKS

See also: Kopp(2010;E1); Solare (2008;E1); Jahn (2006;E2); Melvin (2010;G1.1); Polaschegg (2007;G1.1); Frisk (2008;G2.1); Nonnenmann (2004;G2.1); Toop (2008;G2.2); Wilson (2000;G3)

Report from a symposium having various lectures dealing with the independent way in which the singer Cathy Berberian interpreted new music. One of these views is of that of René Michelsen, who claimed that she employed a certain distance to the works allowing her to creatively assume different roles towards them, in the sense of “Camp-Art”, a notion of the nineteen hundred sixties, thus creating a “panopticon” of qualities.

As the title suggests, this is a practical handbook, guiding musicians in how to perform open works. If one keeps insisting on learning about this repertory, one will eventually find out through hard work and working with the right colleagues. But it is less easy for those students, their teachers and musicians who might be interested if they just got the necessary information. This is exactly what is given here.

There is a "basic recipe" proposed of four, logically progressing steps: analysing the score - making a bank of ideas - testing ideas and practise performance - performance. These have many subdivisions with questions, making the recipe an extensive checklist which takes account of a large number of possible problem issues. For instance, at the beginning we read: "What does the score tell the performer about what tasks to perform and what responsibility to take?" Additional questions ask: "Does the work have an instructional text? If yes: what does the instruction say?" And further: "Is the instruction clear and logical, or is there any individual need for interpretation of the instructions? Is there anything that the instructional text does not deal with?" (p.23). The newcomer to the repertory is thus encouraged to analyse for him/herself and identify possible issues requiring both creative reflection and decisions from the performer. The second step, "Making a bank of ideas" goes further to demand that the musicians makes clear "What possibilities and what limitations does the score give for a realization?", and possibly, "Do I need to define any specific rules for possibilities or constraints for this specific realization?". On such backgrounds, it will next be possible to design relevant exercises, to experience what playing the piece can be all about. Then, in subsequent developments, focus moves increasingly and slowly towards the performance itself. For instance, "Does the work require attention from the audience in an unusual way?" and, very importantly, "Interaction: how to relate to fellow players"(p.30-33); these, and more, are discussed in details.

But then there is a large section with 9 "showcase studies", partly an anthology possessing all the usefulness this word implies. In the first five plus that by Melhus, the performing material is quoted in extenso so that you have everything you need to attempt playing them. Again detailed, practically oriented discussions lead through the long checklist for each work, now tightly connected to their specific issues. Insightful remarks abound - for instance, it is said about the "barely audible" dynamics in Feldman's Interaction no. 6 that it should be thought of from the audience's side - the sound disappears way down in the hall before it does where the pianists sit. Works vary a lot - from Cardew's little graphical drawing with no explanation and Pauline Oliveros' text piece Horse sings from Cloud to complex works like Earle Brown's December 52 and Wolf's Edges. Even these two latter ones are analysed and admirably illuminated from the practical perspective. Else, there are works by the author herself and Bjørn Thomas Melhus.

Additionally, there are some sections commenting general issues. "Authentic performance, or not?" seems a crucial one for classical musicians. The first sentence already makes a prompt statement: "Playing with historical accuracy is not the same thing as playing which is historically informed" (p.139). The theme of interaction is taken up again, explaining with examples how playing can be simultaneously (individuals are independent), it does not have to be the traditional "playing together" - meaning that the performers may adjust their musical actions to each other as desired. Whereas in playing simultaneously "they continue to play what is decided at that moment intuitively (as in improvisation), or what has been pre-determined, without any regard to what the fellow players play". And notably the sentences goes on: "This applies to all parameters..." (p.144). So very simply put, one does not adjust dynamics towards the same "balance" either in this case. Some further remarks are made in the direction of open form tradition and terminology. A concluding section "Where do we go from here" mentions the benefits of not only connecting to an important part of the modern repertory, also "Trusting the performer as a creative artist" and getting to know your instrument better.

This free book is a toolbox containing both guidance and materials enough for an extensive course at high educational level.
A word on the limitations. On the historical and theoretical level it is not exhaustive and was not meant to be. A general classification at the beginning divides notational techniques into "1.Text notation - 2.Graphic notation - 3.Number notation - 4.Extended conventional notation". Notation with numbers is a recurring phenomena in the examples quoted, but thinking of the open repertory as such, one could extend this category into "Non-conventional signs or symbols" or the like - Edges by Chr. Wolff which is included in the showcase studies could be a good example. - Looking at its repertory, it is clearly focused around the anglo-saxon, indeterminacy tradition in which chance and non-linearity is important. Exceptions are the works by Melhus and Storesund herself which feature more linear, narrative processes. In some cases, Stockhausen is hinted at as a contributor to the tradition of open works and the historical role of Darmstadt receives ultra-short mention, but the reader must look elsewhere for a closer description of the European tradition. However, noteworthy enough, the basic recipe, the checklist, is so adequate that you could also use it here.
It follows that musical habits should be examined consciously. This could happen through a self-questioning related to playing. As, however, situations in improvised music require fast action without time enough for always maintaining such attention and reflection, exercises are also recommended. These may be based on limitations, in order to learn to use a given situation with more invention and go beyond habits.

This article appeared in an issue of Ringgespräch with the title "Improvisation between reflex and reflection". See also Gagel (2010; G4) who, interestingly, arrives at a very similar conclusion on a different background.

Improvisation functions well when the "self" is in charge, not rational consciousness. This "self" is a "subliminal consciousness". Rational consciousness is around half a second behind events before it can act, according to empirical measurement. Danish football player Michael Laudrup illustrated the point clearly when he commented on a chance he missed in a match: "I had too much time - I thought over what to do: I did not hit properly". Another example is traditional Zen teaching which recommends "becoming empty" in order to act properly.

Rational consciousness may block the process, but it is also a necessary partner. In order go make good collaboration possible, practising the awareness aspect by means of exercises is useful. The so-called "flow channel" describes a fruitful condition which provides the right amount of challenging while still avoiding to provoke blockings. This article appeared in an issue of Ringgespräch having the title "Improvisation between reflex and reflection". See also Eikmeier (2010; G4) who, interestingly, arrives at a very similar conclusion on a different background.

This short article provides what seems a simple, yet effective and practically relevant meta-model of what happens when we try to make music in the moment: the individual process goes through tuning (body and mind) - allowing (the inspiration/guidance/music-to enter), trusting (that which can do what you want). The reverse could also be true: "If you do not know what you are doing, you cannot do what you want".

This work, written as a PhD at Universität für Musik und Darstellende Kunst, Wien, Institut für Musikpädagogik, aims at unfolding a system theory of improvisation as social art. Overviews of the theoretical and methodological background are given. The importance of the social and cultural context for improvisation is illustrated. A description of the system is given, which is supposed to be able to explain the phenomenon improvised music in general. The system is presented in a simplified form as a model, which is able to explain and to predict the main aspects of the process of improvisation. The model is supposed to be able to highlight the most important features of the system and to show their interrelations.

Improvisation exercises - work by Peter Hoch, Malcolm Goldstein and Gertrud Meyer-Denkmann is quoted, as well as work by the author. 'emergence' and an 'affect logic' (Ciompi) which regards emotions as a basis for how human consciousness focuses on groups of phenomena. It also discusses theoretical aspects of the social experience with improvised music and aspects of workshop building. This includes the use of improvisation exercises - work by Peter Hoch, Malcolm Goldstein and Gertrud Meyer-Denkmann, as well as work by the author.

The author associates improvisation and composition with short- and long term memory. He views it as having central importance that improvisation is open for the unexpected - a possibility for playing with turning the cause-effect relation upside-down in a dynamic manner. Also the line of thought may be summarised approximately like this: music is a rather autonomous thing and expresses time.

The author quotes from Feldenkrais: "When you know what you are doing, you can do what you want". The reverse could also be true: "If you do not know what you are doing, you cannot do what you want".

The author associates improvisation and composition with short- and long term memory. He views it as having central importance that improvisation is open for the unexpected - a possibility for playing with turning the cause-effect relation upside-down in a dynamic manner. Also the line of thought may be summarised approximately like this: music is a rather autonomous thing and expresses time.

The author states that musical habits should be examined consciously. This could happen through a self-questioning related to playing. As, however, situations in improvised music require fast action without time enough for always maintaining such attention and reflection, exercises are also recommended. These may be based on limitations, in order to learn to use a given situation with more invention and go beyond habits.

and 'spontaneity' are neither necessarily connected to each other, nor is spontaneity a special privilege for improvised music. For Matthias Kaul a number of authors criticise the notion of 'freedom' as saying too little about free improvisation. According to Sebastian Kiefer, 'unpredictability' linking to commonly used concepts. The discourse easily becomes labyrinthic. For Harald Kimmig (p.138), creativity and intuition are worn-down concepts, easy to misunderstand. Peter Baumgartner (p.190) is the context. Various reflections on the progress of history and on an arrangement seeking to combine playing of improvised music and reflecting on it. Newton, René Krebs, Kjell Keller, Michael Vorfeld, Matthias Schwabe, John Butcher, Markus Waldvogel, Peter Baumgartner. Marianne Schuppe, Christoph Schiller, Carl Ludwig Hübsch, Claus-Stephan Mahnkopf, Lukas Rohner, Sebastian Lexer, Hans-Jürg Meier, Jacques Demierre, Lauren Newton, René Krebs, Kjell Keller, Michael Vorfeld, Matthias Schwabe, John Butcher, Markus Waldvogel, Peter Baumgartner. Marianne Schuppe, Daniel Studer, Matthias Arter, Roland Moser.

(g5)/ Gronemeyer, Gisela; Oehlschlägel, Reinhard (ed.): Special issue Improvisation, MusikTexte 86/87 November, 2000.

Also to be mentioned, in addition to those articles having separate entries: "Improvisation als Herausforderung. Der englische Saxophonist John Butcher" (Martin Pfeiderer) [mentions among other things Chris Bur's Ensemble]. - Other interviews deal with composers and their relation to improvisation: Anthony Coleman, Wolfgang Mitterer, Peter Eötvös, Héctor Moro and Bernd-Alois Zimmermann. Tresher's important analytical article about Cardew's Treatise was already included in my large bibliography as an exception, even if the date is later than 1999 (Tresher 2000;E2).

(g5)/ Overgaard, Jacob Thorklid: Improvised Music. Essays and Interviews. Copenhagen (Ed. Wilhelm Hansen, WH 31324), 2011. The author is a Danish improvising musician who, writing in English, reflects on his own practice. Apart from Bailey's book he seems largely unaware of the body of English literature dealing with his subject. But instead, he investigates his subject to a large extent by introspection and reflection in a sensible way, besides doing interviews and summarising theorists from neighbouring fields. There is an informal tone to the book, as if the reader had just met the author after a concert and they were having a conversation over a drink.

Theoretical references and explorations are made especially fruitful to theatre, in "Essay #5 - Theatre, Dance and Abstract Painting" (p.94-115). Keith Johnston, father of the concept of "theatre sport" seems to deduce concepts that characterise free improvisation well in its first stages from the sixties and on: keywords such as spontaneity and equal status are focused upon. An interesting deepening out of this comes about by stating the importance of "narrative skills". We are dealing with an open-ended "storytelling", not "telling a story. Also, spontaneity is characterised in several ways, with a view to evade the "normal" suppression of "obscene" and other "strange" contents. Players' attitudes need to be "allowing" to a high flavour, a descriptive character going beyond any purely apologetic views. Thus, they could make general comparisons possible, both within improvised music and between this and other musics.

The importance of "narrative skills". We are dealing with an open-ended "storytelling", not "telling a story. Also, spontaneity is characterised in several ways, with a view to evade the "normal" suppression of "obscene" and other "strange" contents. Players' attitudes need to be "allowing" to a high flavour, a descriptive character going beyond any purely apologetic views. Thus, they could make general comparisons possible, both within improvised music and between this and other musics.

Various reflections on the progress of history and on an arrangement seeking to combine playing of improvised music and reflecting on it. A "thematic register" lists a number of concepts and occurrences within the book. See also Nanz (G2.1; 2007), written by the editor, which presents a critical view of the theorising part of the series, together with an acclaim of the source is mentioned, but it is a slightly edited excerpt of her contribution to a similar discussion - the one following the article Meyer (2010; G2.2) which had 35 participants in all. It can be found at http://www.dissonance.ch/de/rubriken/6/95. The present book consists of 33 contributions - and the vast majority are from persons who did not participate in the previous discussion mentioned!

When directly following playing or listening, many issues for discussion may spontaneously arise. Thomas Meyer mentions 'form', 'interaction' and 'responsibility' as commonly arising during the series. Urban Mäder provides a detailed documentation of one of his free ensemble improvisation lessons at Musikschule Basel. It can show how dialogue is important for meaning to arise. What appears highly meaningful in the middle of the discussion may, however, be not just difficult to "generalise" but simply less illuminating in another context, maybe precisely because there is too little linking to commonly used concepts. The discourse easily becomes labyrinthic.

A number of authors criticise the notion of 'freedom' as saying too little about free improvisation. According to Sebastian Kiefer, 'unpredictability' and 'spontaneity' are neither necessarily connected to each other, nor is spontaneity a special privilege for improvised music. For Matthias Kaul (p.53), freedom exists solely in choosing what to play with (perhaps he means instruments etc) - else, there is a discipline to follow the demands of the context. For Harald Kimmig (p.138), creativity and intuition are worn-down concepts, easy to misunderstand. Peter Baumgartner (p.190) is against being a "poetic apostle of the moment", 'presence', 'of The New', etc. He points to a predictable dimension in improvisations and to conventional properties in sounding idioms and interaction. This is elaborated by Rudolf Kelterborn (p.177) and Claudia Ulla Binder (p.186). The first reflection in a lack of "unisonic" impulsiveness and the dominance by lengthy growth development, the second the recurrence of well-known textures: with holes, with an integrated mass of sound, or with a climax. It could seem notions like 'freedom' etc., maybe more relevant to the sixties and seventies, have become outdated, and we need to view free improvisation as a practice in its own right, imposing its own demands on its practitioners.

It may seem easier to provide practical advice to musicians. Walter Faehndrich provides a number of checklists dealing with the avoidance of clichés, and Lukas Rohner makes his advice wonderfully clear through graphic visualisations. Harald Kimmig demonstrates, however, that the goal of reaching common notions in which to talk about free improvisation is perhaps within reach. He poses five questions: What happens from the point of view of instrumental technique? What happens aesthetically? Is movement (body), emotion, intellect active? How is communication taking place? Is there a readiness for risk-taking? These questions, says the author, could be posed when facing any music, and they aim pragmatically at describing 'hard facts'. They could be said to have an ethnological or sociological flavour, a descriptive character going beyond any purely apologetic views. Thus, they could make general comparisons possible, both within improvised music and between this and other musics.

A "thematic register" lists a number of concepts and occurrences within the book. See also Nanz (G2.1; 2007), written by the editor, which presents a critical view of the theorising part of the series, together with an acclaim of the performance part.

Authors other than those mentioned above are Fritz Hauser, Sylwia Zytinska, Malcolm Goldstein, Christian Kaden, Hans Saner, Philippe Micol, Christoph Schiller, Carl Ludwig Hübsch, Claus-Stephan Mahnkopf, Lukas Rohner, Sebastian Lexer, Hans-Jürg Meier, Jacques Demierre, Lauren Newton, René Krebs, Kjell Keller, Michael Vorfeld, Matthias Schwabe, John Butcher, Markus Waldvogel, Peter Baumgartner. Marianne Schuppe, Daniel Studer, Matthias Arter, Roland Moser.

(g5)/Gagel, Reinhart; Joachim Zoepf (Hrsg): Können Improvisatoren tanzen?, (Wolke Verlag) 2003.

Documentation from the Symposium Improvisierte Musik in Köln, 21-23. January 2000. With a CD. Contributions by among others: Gagel, Felix Klopotek, Peter Niklas Wilson ("Rekonfigurationen", on improvisation and composition approaching each other institutionally and structurally), Johannes Fritschi ("Improvisation und Extase", comparing improvisation with myth and posing the question about what to do with negative music experiences) and a manifesto by Wolfgang Schliemann and Joachim Zopl, "Improvisierte Musik - Ars sui generis".

(g5)/ Gronemeyer, Gisela; Oehlschlägel, Reinhard (ed.): Special issue Improvisation, MusikTexte 86/87 November, 2000.
degree, and not too much "blocking", in order to develop the common process. - Paxton, the father of "contact improvisation", may help to characterise the interactional aspect by introducing the notion of "friction". It can be seen as related to the method of being connected to other performers. This situation makes events unpredictable and provides constant challenge to participants. Friction also occurs between players or sound sources. It may thus, it seems, be regarded as a constant source of both tension and energy, also in music. It describes a process with multiple components, very different from traditional concepts of melody and accompaniment.

The book also contains a photo series of Danish and international musicians, and interviews with Raymond Strid, Torben Sangild, Peter Ole Jørgensen and Vagn E. Olsson.

Readers should be prepared for frequent errors in the English language - in many cases, Danish expressions have been translated too literally. Instead of "number", read "piece", instead of "fat", read "cool", etc.

Various information about an important German improvisor. Reflections about the specific quality of improvisation.

Interview with some remarks on improvisation.

(g5)/ Saunders, James (ed.): The Ashgate Companion to Experimental Music (Ashgate), 2009.
Book comprising articles on miscellaneous topics of experimental music generally and interviews with a number of musicians - all related to English music.

"Writing, music" by Michael Pisaro considers with examples works by Cage, Beuger, Brecht, Brown, Wolff, Oliveros, Ono, Tenney, Werder and Pisaro. Edwin (Eddie) Prevost's basic thoughts seem to have found their hitherto most concise form on 13 pages here - see Prevost (2009; G3).

Improvisors Rhodri Davies and Evan Parker are featured in interviews. They have different attitudes towards the sounds they work with: Davies sees his work as an ever ongoing exploration. Even if specific challenges exist to be worked on consistently for a period of time, he likes to move on to something else at some point - and in some cases leave it to composers to use the sounds. Parker, on the other hand, is not against the notion of having a "bag" with known material to use from if he feels it it relevant, neither of using the term of one's own "sound".

The author begins with statements about the greater visibility of improvised music in concert in recent years. There is a good, full discussion of form concepts, with interesting musicians' quotations. Also the overlapping of composers' improvisors' roles and their difference after all is treated here. This article is a very good summarizing of the insights till now of this author.

H. OTHER WRITINGS.

H1 GENERAL ACCOUNTS OF MUSIC HISTORY, DEALING THOROUGHLY WITH THEMES CONCERNING NEW NOTATION FORMS AND/OR IMPROVISATION

(h1)/ Guy de Bièvre: Open, mobile and indeterminate forms. PhD, Brunel University 2012. Available through www.bl.uk
This dissertation examines important aspects of open composition forms in recent music history, both in the form of a general discussion, and by analysing selected works. A portfolio of own works is also commented on.

The general section "On Form" focuses especially on the divergent, sometimes even strongly conflicting, composers' views on openness of composition. Henri Pousseur is pointed to as a composer who conceived of determination and indeterminacy as complementing, not antagonising each other. Also serialism, according to Dominique and Jean-Yves Bosseur, is viewed by Pousseur "as a tool transgressing the author's omnipresent subjectivity, thus even meeting Cageian concepts" (p.24).

Another problem touched upon is the possible status of unwritten rules, even if "everything" seems to be permitted. The author also looks at the typical attitudes to openness in jazz and concludes (p.36) that "Where the avant-garde composer grants liberties to the performer, the jazz performer takes ungranted liberties with a composer's work."

And the selection of compositions subsequently analysed surely is a mixed one. The first is Earle Brown: December 52, which is scrutinised with special focus on its bckground and genesis, taking in a number of sources studied by the author during a visit to the Earle Brown Archive. It thus presents hitherto unknown material, alongside the numerous published interviews and other texts. See the special category g2.4 especially in the "old" department before 2000 of the present bibliography.

Then follow Miles Davis (Ife 1972-82, analysed on the basis of recordings), Adam Rudolph ("Ostinatos of Circularity" [2011], written materials used for conducted improvisation), Peter Zummo ("Experimenting with Household Chemicals", recording publ. 1995, traditionally written parts to be performed in individual tempos and with some choices and liberties) - and Anne la Berge.

Her pieces may use electronics, be based on a time line, and some are published by Donemus. Performers may influence the electronics settings and play from general indications ("e.g. melody, sustain, long tones, noise, busy", p. 141). She has an interesting characterisation of oral versus written communication of musical instructions. "The decision to put works on paper, rather than communicating them orally, has also to with the symbolic power of paper", de Bièvre says, and quotes the composer: "...because I find oral communication too fleeting and also too commanding. It doesn't allow them enough room for their own fantasy: ... I think paper is a sort of God, but it can be disregarded because one can always take a distance from God" (p.137).

(h1)/ Cox, Christoph; Warner, Daniel (ed.): Audio Culture: readings in modern music, USA (Continuum) 2004.
This is a comprehensive sourcebook covering various aspects of experimental music, including improvised music.

A section on "The open work" features texts by composers John Cage, Earle Brown and Anthony Braxton as well as an interview with John Zorn. The three latter texts have not been described by this author before, and the availability of general remarks by Braxton about how to deal with his pieces is a valuable thing. The Zorn interview is an important one, maybe the most important one till now when it comes to information about the
game pieces, since it deals in depth with the evolution of game piece composition over time. It also contains Zorn's declaration that he likes the game pieces to remain unpublished, since personal instruction is important - a decision which on one hand is not very helpful for those wishing to study alternatives to a music tradition being still so deeply fixed to traditional notation. On the other hand this might hopefully provoke some more people to create their own game pieces. Umberto Eco's influential "The poetics of the open work" is represented here, very relevant text to go with texts about open compositions.

In the department for "Improvised musics" one finds texts from Derek Bailey's classic book and texts by Ornette Coleman (documenting the role of free improvisation in his work) and Frederic Rzewski (on improvisation and memory). George Lewis' article on "Afrological and EUrological Perspectives" in improvised music after 1950 is also reprinted.

Other relevant texts to be mentioned in this specific context of improvised music and related could be ones by John Cage and Cornelius Cardew's "A Scratch Orchestra: Draft Constitution".

The chapters come with informative introductions to each chapter. Credit must go to the editors for putting the difference between indeterminacy and aleatory devices right in the introduction to "The open work" and for providing a reasonable, short article on "Visual sounds: Graphic scores". Each chapter is preceded by a collection of interesting quotations. There is also an index and a chronology.

With its compilation of essential and useful texts extending into experimental music generally (including recent developments of DJ culture and electronica) this book is a must for libraries and will be a most useful tool for students. It is also a much needed initiative in bridging the gap between American and European experimental / modern music history, taking in materials from both sides of the Atlantic. May more good discussion and work in this spirit follow...

**H2.1 BIBLIOGRAPHIC AND DISCOGRAPHIC LITERATURE**

(H2.1)/ See also: Borgo (2005;G1.1)

(h2.1)/ See also: Fischlin (2004;G3).

(h2.1)/ See also: Rüdiger et al (2004;F2).

(h2.1)/ See also: Roussel (2000; G2.3)

The last title contains a list of verbally and graphically notated works by this Fluxus-orientated composer which is comprehensive and annotated - among other things, instrumentation and notation are stated.

(h2.1)/ Martinelli, Fransesco: Joëlle Léandre Discography, Italy (Vivaldi e Bandecchi) 2002. Please see the 1945-1999 bibliography in which this item has been listed as a special exception.

(h2.1)/ Sounds99 - inlaybook to 3 CD release. Blue Tower Records, BTCD 09/10/11, 1999

Includes discographies of those musicians participating in this festival.

**BIBLIOGRAPHICAL AND OTHER INFORMATION**

**H3.1 LITERATURE ON MUSIC THERAPY**

Various practical considerations.

(h3.1)/ Deuter, Martin: "Polaritätsverhältnisse. Zu einer musikalisch-psychologischen Benennung der Improvisation", in: Vermittlungen..musically speaking. Special issue of Einblicke (hrsg. BVM, Berufsverband der Musiktherapeutinnen und Musiktherapeuten in Deutschland e.V.). Zum Improvisationsunterricht im Musiktherapeutestudium / On Improvisation Training in Music Therapy Training, Heft 12, November, Manus, 2001. Please see the 1945-1999 bibliography in which this item has been listed as a special exception.

**H3.2 WRITINGS RELATED TO THE TEACHING OF INTUITIVE MUSIC AND GRAPHIC NOTATION AT AALBORG UNIVERSITY AND OTHER**
PLACES

(h3.2)/ Bergstrøm-Nielsen, Carl: "Musicoterapia e improvisación libre", Tavira (2a época), Revista de Ciencias de la Education No 19, Cadiz (Universidad de Cadiz) 2003.

(h3.2)/ Cohen, Susanna; Gilboa, Avi; Bergstrøm-Nielsen, Carl; Leder, Rivka; Milsteina, Yifat: "A multi-perspective approach to graphic notation". Nordic Journal of Music Therapy 2011, p.1-23.

Authors' abstract: In many instances, music therapists are called upon to analyze their own work or to present it to others. However, the temporality and complexity of clinical-musical events generates challenging difficulties in providing a quick overview of a single session. In the present paper, a method to visually map the events that occur in music therapy sessions is proposed, following in the footsteps of authors who have suggested graphical notation as a possible solution to the problem. The Music-therapy Analyzing Partitura (MAP) is used by the therapist to describe what happened in a session and is shared with colleagues who may read and discuss it. The establishment of a standard code is proposed, which is based on known principles of music notation and new simply designed symbols and icons. Two clinical sessions with a group are described and the advantages and disadvantages of the MAP are discussed.

Authors' abstract: The music therapy analyzing partitura (MAP) is a method that was recently proposed to visually describe and analyze music therapy sessions. The main objective of this study was to examine the method and to see if it was in fact clear and usable to music therapists (MTs). Twenty-six experienced and inexperienced MTs were exposed to a MAP and to a written verbal description of the same session. Under a time limitation, they answered informative questions regarding the session and, in addition, indicated the potential of each of the descriptions to raise and analyze research questions. It was found that MTs could easily understand the MAP code. When using the MAP, they correctly answered significantly more questions in comparison with the verbal description. MTs indicated that the MAP had better analyzing potential than the verbal description. Suggestions for future development of the MAP, as well as its possible implications to arts therapists at large, are discussed.

Focuses on a case and analyses material from five sessions using graphic notation.

H4 MISCELLANEOUS OTHER WRITINGS

Note. In the large bibliography (1945-1999), this was a category also for various literature having been mentioned in the text - even including writings I would directly warn the reader against. In this 2000- list H4 is different: it deals solely with various literature which is directly relevant.

(h4)/ Christensen, Erik: "Overt and hidden processes in 20th century music", in: Seibt, J. (ed.): Crossdisciplinary studies in dynamic categories, Pr. in the Netherlands (Klüwer Academic Publishers) 2003.
Describes two different versions of Variations II (1961) by Cage, thus exemplifying how different versions may be.

(h4)/ Christensen, Jean: "New Music of Denmark" in White, John D. (ed.): New Music of the Nordic Countries, USA (u.tr.)(Pendragon Press Musicological series) 2002.
In addition to a biographically-oriented dealing with generations of individual composers, some pages deal with experimental tendencies, their organisations and their interaction with mainstream music life and its organisations.

Review of Wilson (1999;G1.1).

Review of Feisst (1997;G1.1) and Wilson (1999;G1.1). Provides characterisations of the two books and throws them into relief relating them to each other.

OTHER

I. RECORDINGS

Note. Unlike in the 1945-99 bibliography which, even on a modest scale, attempted to list varied selections, this is just a residual category listing recordings mostly belonging to some of the items above! The reader is thus referred to other sources - you may for instance consult

* The reviews published on my homepage: http://www.intuitivemusic.dk/intuitive/irev.htm
I. VARIABLE WORKS AND MUSIC PLAYED FROM RECIPES

(i1) See also Collins (2001; H2.1).

(ii) Béla Hamvas Group for Intuitive Music. Compositions by Vincze, Bergstrøm-Nielsen, Plaetner, Leikfeldt and Stockhausen. Intuitive Records IRCD 004 2004. Illustrated booklet in English, German and Hungarian languages. AUB DKDM

(iii) Leukert, Bernd (ed.): Christian Wolff. Bread and Roses, Wergo WER 6658 2003. This CD contains 10 different, short interpretation of Wolff's "For 1, 2 or 3 People" and thus amply illustrated how versions may differ. Additionally, there is one long version of Edges. (See Wilson (g2.5:2003) and Wagner (g2.5; 2003) for the contents of the booklet).

Book with a series of pictures inspiring improvisations from simple instructions. Additionally, notations representing free fantasy variations over the sounding results have been added. (The additional information here has been gathered from music author Søegaard).

K. EXHIBITIONS OF NEW NOTATIONS AND THEIR CATALOGUES

This list is by exhibition year rising (scroll down to see the recent ones).

(k) Graphic Scores by Ichiyanagi Toshi January 16( Tues.)- 28(Sun.), 2001, Art Space G, Aichi Arts Center (Japan). In cooperation with KONDO Yasuyo. (http://www.aac.pref.aichi.jp/english/bunjyo/event/PReport-e/00/00-12gs.html). This item has been listed in the 1945-1999 bibliography as a special exception.

(k) / Notations21: Breaking the boundaries. Chelsea Arts Museum October 2008. Curated by Theresa Sauer. This exhibition was realised in connection with the publishing of Sauer (2009;(E1)). The catalogue consists of 12 pages (28 x 21 cm) and features mainly 3 concert programmes with notes and composer bios. Pieces are by composers featured in the book, apart from Means, David.

(k) / Cox, Christopher: Every Sound You Can Imagine. Programme booklet for the exhibition at Contemporary Arts Museum Houston, 2008. ISBN 978-1-933619-15-6. Contains the article Cox (2008; E1). Subsequently shown 2009 at New Langton Arts, San Francisco. From the complete listing of works it appears that contents of the exhibition was mostly unpublished works, also some European. Both the "classic" period from the 1950s and on as well as recent decades, including many items after 2000, are represented.

(k) / Notations21: Breaking the boundaries, May 13-31 2009. Hutchins Gallery, C.W.Post Campus, Long Island University, 720 Northern Blvd, Brookville NY. Curated by Theresa Sauer. Sauer. This exhibition was realised in connection with the publishing of Sauer (2009;(E1)). The catalogue consists of 20 pages (28 x 21 cm) and features descriptions and notes on the exhibited works, with some illustrations. A number of Notations 21 composers participate as well as Thome, Joel and Chadabe, Joel.

(k) / Notations21 scores. Picturing the Sounds: Dialects of Contemporary Composers. From October 7th 2010. The University of New Haven Seton Gallery in Dodds Hall, West Haven, CT 06516. Curated by Theresa Sauer and Christopher Reba. This exhibition was realised in connection with the publishing of Sauer (2009;(E1)). The catalogue (14 x 21,5 cm, 12 pages) contains notes by the curators and a concert programme featuring music by Notations 21 composers, Mohammed Fairouz and Joel Chadabe, with notes and bios. Christoph Reba's note has an analytical viewpoint that focuses on what has been added to notation in the historical development: "However different these various notation systems may seem, taken together, they speak to the universality of musical expression and interpretation. The role of graphic notation in the world today is to broaden communication between composer, performer, and listener. When Western notation was first developed, the composer was concerned about creating a symbol to represent a sound, and in some sense musical notation is going back to its roots, but at the same time with an eye towards the future. Contemporary composers have seen many more possibilities. They have ideas about collaboration, intuition, improvisation, time and space and stretching the limits of what we can...
EXPERIMENTAL IMPROVISATION PRACTISE AND NOTATION...

communicate in symbols."

(k)/ As a part of Festival Blurred Edges 2011 in Hamburg: Exhibition of graphic scores by Phil Corner, Nikolaus Gerszewski, Roman Haubenstock Ramati, Christoph Herndler. Opening concert with Von Eden Band playing TEXTURES by Nikolaus Gerszewski. Schute, Industriestrasse 125, Wilhelmsburg. 15. May 2011 (until?)

(k)/ June 2011, Pescara (Italy), arr. by Piotr Lachert For both musicians who are visual artists and graphic score-makers. Scores by Edgar Barroso, Anna Mikhailova, Davide Remigio, Zach Sheets, Juan Manuel Abras and Ann-Helene Schlüter.

(k)/ 2011, 19th June - 16th July. La Zonné, 7 bis rue des Combattants en Afrique du Nord 06000 Nice, France. "Supports d’attaches à sons d’attaches supposées". Une exposition centrée sur les sons fixés sur supports visuels et textuels. Part of the festival "L’Art contemporain et la Côte d’Azur - Un territoire pour l’expérimentation, 1951-2011"

(k)/ 2014, 22nd March – 5th April 2014, Library of Birmingham. Represented composers/visual artists were: Robert Ashley, Cathy Berberian, Janet Boulton, Gavin Bryars, Earle Brown, Cornelius Cardew, Erik Christensen, Adam de la Cour, Lyell Cresswell, Brent Michael Davids, Luke Deane, Fred Frith, William Hellermann, Christopher Hobbs, Anton Lukoszevieze, Christian Marclay, René Mogensen, Claudia Molitor, Pauline Oliveros, R. Murray Schafer, Carl Bergstrom-Nielsen, Henrik Rasmussen, Theresa Sauer, Elliott Sharp, Howard Skempton, Ismail Wadada Leo Smith, Maya Verlaak, Michael Wolters. The exhibition also included postcard scores created by local people, under the guidance of composer Kirsty Devaney. A selection of these were performed. A performance, "Ringing out" by Beth Derbyshire and Andy Ingamells with audience participation was carried out 5 times. (A photo documentation with present author).

(k)/ Also there were 15 short daily concerts played from works by: Lyell Cresswell, Halim El Dabh, Wadada Leo Smith, Gavin Bryars, Christopher Hobbs, Fred Frith, Theresa Sauer, Erik Christensen, Henrik Rasmussen, Carl Bergstrom-Nielsen, Anton Lukoszevieze, Janet Boulton, Cornelius Cardew, Pauline Oliveros, Herbert Brün, William Hellermann, René Mogensen.

(k)/ 2014, Month of June, Simone Spagnolo (graphic scores), The Gallery Café, Bethnal Green, London. The samples shown at the internet pages seem to show fairly traditionally written music, however arranged in visually unusual ways and illustrated with drawings. They were meant to be shown onstage during an opera incorporating some audience participation.

(k)/ (2014-2015) features many examples of works and written contributions from composers and others involved.
