

New Mover Studies: Union County

Sandra Charvat Burke and Mark A. Edelman

Findings

This report highlights the findings and experiences of Union County respondents who were included in a survey of nonmetropolitan movers in Iowa.¹ The purpose of the study is to better understand the decisions and thoughts of people who have moved and what they think about the communities and areas where they have lived. With increased understanding about why people move, community leaders may be able to develop actionable strategies for attracting and retaining population.²

Thirty-seven respondents from Union County participated in the survey, 15 who moved into the county, 17 who moved out, and five who moved within the county but changed zipcode (Table 1). In many respects, the

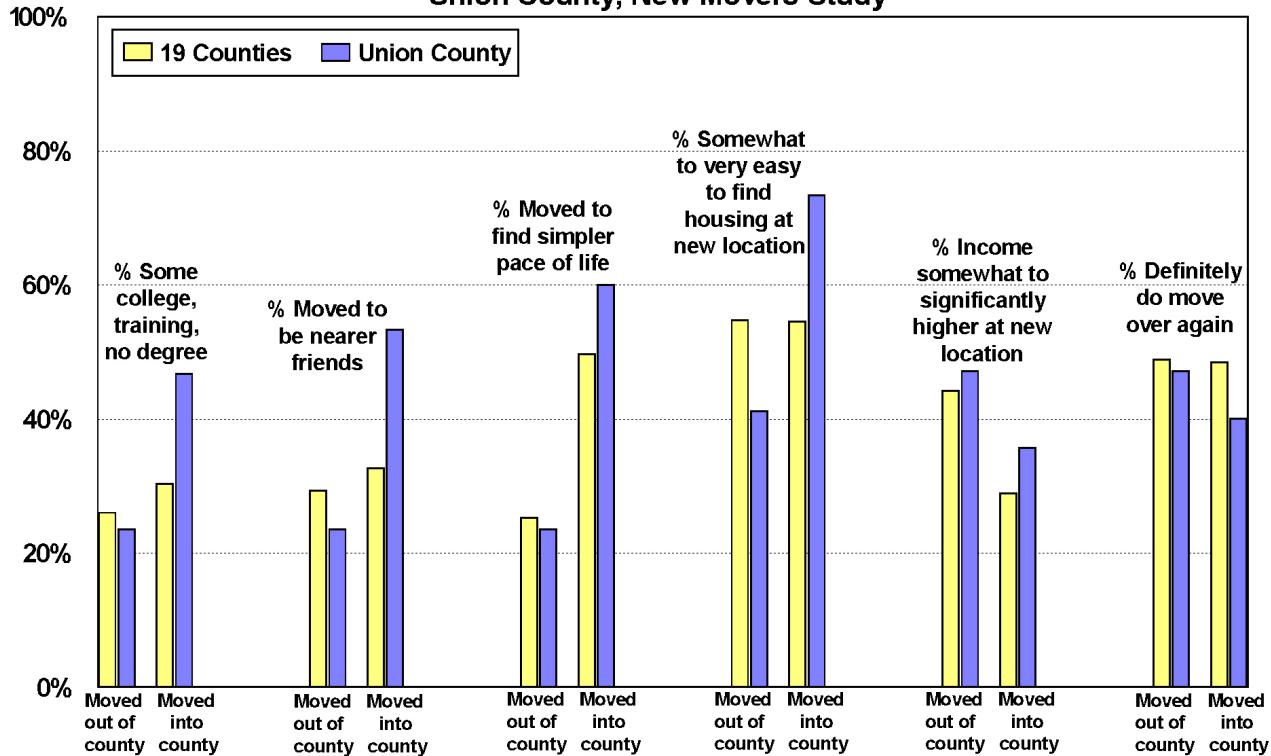

Union County participants shared similar characteristics and responses with the overall set of respondents, but in some aspects there were differences.

The age profile among the Union movers in the study was similar to that of the total set of movers in that those moving in tended to be somewhat older than those who left (Tables 1, 5). A higher proportion of males than females moved out of the county; nearly 65 percent of those leaving were male. In contrast, more than half (53%) of those moving into Union County were female. Relatively few of the respondents coming to Union County had a college bachelor degree. These movers were concentrated in the middle levels of education. Compared with the overall movers, many more of those coming to

Union said they had finished their education with high school or with some college or vocational training (Tables 1, 5; Figure 1).

Reasons for moving varied among the respondents, but generally fell into those related to work, family, community, or housing. The respondents who came to Union County gave more family or friendship reasons as the most important factor than did the overall movers (Tables 1, 5). The respondents who left Union were more likely than both the overall movers and those who entered Union County to say they moved to look for work or that retirement was a factor in their move. More than half of those moving into the county said that moving to be nearer friends was a factor in their decision (Tables 2, 6; Figure 1).

Community Vitality Center, Iowa State University, Ames, IA

New Mover Studies: Union County

The Union movers were very similar to those in other counties in that the respondents who came into Union County were more likely than those who left to say that wanting a less congested place to live or a simpler pace of life was a factor in their moving decision (Table 2, Figure 1). Forty percent or more of those moving in said they wanted more outdoor recreation or to live in a desirable natural environment (Table 2).

In general, it was the respondents who were leaving Union County who most often cited wanting lower taxes, better local schools, or more opportunities for children to succeed. In contrast, lowering the cost of housing was more important for respondents who moved in than for those who left (Table 2). Among these new residents of Union, seventy-three percent reported that housing was somewhat to very easy to find, much higher than for the overall respondents and also much higher than among the respondents who left Union County (Tables 3, 7; Figure 1).

The income reported by Union participants tended to be lower than that for the overall study. In a pattern similar to the overall findings, those moving out of Union County tended to report somewhat higher income than those moving in. None of the respondents coming to Union reported an income of \$100,000 or more (Table 3, 7). Still, higher proportions of the Union County movers than for the overall movers, both moving in and moving out, said that their

Table 9. Mover Categories and Type and Direction of Move.

| Category | Type and Direction of Move |
|----------------------------------|---|
| A: Within County, Zipcode change | Moved within one of the 19 study counties but changed zip code. |
| B: Out To Another Iowa County | Moved out of one of the study counties to another county in Iowa. |
| C: In From Another Iowa County | Moved from another county in Iowa into one of the study counties. |
| D: Out To Another State | Moved out of one of the study counties to another state. |
| E: In From Another State | Moved from another state into one of the study counties. |

income would be somewhat to significantly higher in their new location than in the previous location (Tables 4, 8; Figure 1).

The participants from Union County, both moving in and moving out, tended to be somewhat less satisfied with their new location than were the overall group of movers. However, large majorities of the movers going either direction said they would probably or definitely do their move over again (Tables 4, 8; Figure 1).

The goal of this study is to better understand the experiences of people who have moved. This report focuses on the findings for Union County and highlights some of the similarities and differences with the findings for the entire set of 19 counties. Because the number of respondents in any one county is small, the overall findings and trends are likely the best guidelines as community residents and leaders think about possible next steps. The overall objective is to help community leaders better understand household moving trends so they can develop actionable strategies to address the reasons why people come, why people leave, enhance the qualities that cause people to stay, and thus stabilize or increase their populations.²

The Study

These research results are from a survey of nonmetropolitan movers in 19 selected counties in Iowa that included Union County.¹ People who had moved either into or out of these 19 counties were identified through a purchased database and were mailed a survey in the fall of 2005. The survey asked questions about the respondent's previous location as well as their current location, reasons for moving, satisfaction with multiple factors in their communities, as well as their demographic, social, and economic situation. Five categories of movers are used to examine the results (Table 9). Most respondents had moved during 2003 through 2005 and 737 respondents who met the study criteria replied for an overall response rate of 35 percent. The estimated response rate for Union County was 33 percent.

Notes

1. Previous reports, a description of the study, the counties included, and the survey questionnaire are available on the Community Vitality Center web site at: www.cvcia.org.
2. Previous reports contain examples of possible next steps and strategies that community leaders might consider.
