

Volume 28, Issue 3**Research Announcement****Axiomatic Characterization of the Nash and Kalai-Smorodinsky Solution
Solutions for Integer Allocation Problems**

Somdeb Lahiri

*University of Witwatersrand at Johannesburg***Abstract**

We consider two-player integer allocation plms and provide axiomatic characterizations of adaptations of the Nash (1950) an Kalai-Smorodinsky (1975) solutions fo such problems. We also relate the theory dveloped for integer allocation problems, to the problem of fair allocation of indivisble objects among two agents. We refer to such problems here, as (two-player) fair matching problems.
