The conference aims at an exchange of ideas among economists who focus on research to improve analysis for decision-making, and on research into the nature of risk and uncertainty. The conference deals with conceptual issues, structure and adequacy of theories of risk and uncertainty, emergence of new information, and modelling of risk and uncertainty in the face of irreversibilities. These themes are discussed in the context of environmental and resource economics from both, theoretical and empirical, perspectives. For more information please visit the conference website.
