Agricultural Distortions Research Project Working Paper 01, July 2006 (revised October 2006)

This is a product of a research project on *Distortions to Agricultural Incentives*, under the leadership of Kym Anderson of the World Bank's Development Research Group. It draws mostly from the World Bank's *World Development Indicators* website but also from the FAO and GTAP websites. The authors are grateful for helpful comments from workshop participants and for funding from World Bank Trust Funds provided by the governments of Ireland, Japan, the Netherlands (BNPP) and the United Kingdom (DfID).

This Working Paper series is designed to promptly disseminate the findings of work in progress for comment before they are finalized. The views expressed are the authors' alone and not necessarily those of the World Bank and its Executive Directors, or the countries they represent, nor of the countries providing the funds for this research project.

Introduction

This compilation of data is prepared as a companion to the Bank's research project on *Distortions to Agricultural Incentives*. Its purpose is to provide comparative basic economic and trade indicators for the countries involved as case studies in that project. The project is global in coverage, and is sub-divided into five groups: Africa, Asia, Europe and Central Asia's Transition Economies, Latin America and the Caribbean, and High-income Countries. The map at page 16 shows the countries under study while the project coverage in terms of several economic and trade indicators as a share of the world is included in the table at page 19.

The present Compendium is divided into 7 main sections. The first one includes data on High-income Countries (OECD definition with the exclusion of Korea Rep.) which are compared with three aggregates for developing countries according to the 2006 WDI income classification: low-income, lower-middle-income and upper-middle-income. The rest of the High-income Countries is included in the so called "other high income" category which is obtained as a residual from the world total. We also present the total regional aggregates for the developing countries in Africa, Asia, ECA and Latin America and the Caribbean as computed respectively in sections¹ 2, 3, 4 and 5. Sections 2 through 5 focus indeed specifically on one of the 4 regional groups and compare data for the case study countries (always separately shown) with various aggregates of studied and not studied countries. Due to the very limited data availability several countries have not been included in the Compendium. This is the case for all African countries with a population of less than 2 million in 2000, plus Mauritania, Liberia, Eritrea, Sierra Leone, Somalia, Guinea, Angola and the Democratic Republic of Congo. Similarly all the not studied countries in Asia have been excluded (whose relative GDP and population with respect to the Asian studied group is however very small) together with Serbia and Montenegro, and Bosnia and Herzegovina for the ECA region, and all the countries with a population of less than 1 million in 2000 (except Barbados and Saint Lucia), plus Cuba and Puerto Rico in Latin America and the Caribbean. Finally, section 6 and 7 include estimates of trade distortions, and sectoral shares of value added and household expenditures for all the studied countries and several regional aggregates.

Sections 1 to 5 begin with tables showing which countries are included in the section and in the various aggregates, which vary depending on the main source of the data (WDI or GTAP dataset). Summary data for the period 2000-2004 and growth data for recent years follow. The subsequent tables show data for the 45-year period from 1960 to 2004, in five-year averages². Finally, trade weighted applied tariffs as retrieved through WITS from the UNCTAD-TRAINS dataset are reported for all the case study countries in alphabetical order³.

Apart from the series on black market premium (compiled by Easterly), on labor force, agricultural employment, agricultural land and the section on production, supply and export of agricultural commodities taken from the FAO, and those marked with * in the table of contents computed from the GTAP6.1 database (or version 6.2 when specified), all data have been retrieved from the *World Development Indicators* (April 2006). Definitions of the various variables can be found in the WDI section of the World Bank's website. Data on labor force,

¹ The high income countries Korea Rep., Taiwan (China) and Slovenia are also included in these regional aggregates, the first two in Asia and the latter in the ECA region.

² For the ECA region annual data are reported for the period 1990 to 2004.

³ Data for Kazakhstan and Tajikistan are not available.

agricultural employment, agricultural land and production of agricultural commodities for Taiwan are taken from the Council of Economic Planning and Development, Republic of China. Time series of applied ad valorem tariff (AHS) data from 1988 to 2005 are collected from UNCTAD-TRAINS using the WITS system⁴. These tariffs correspond to trade weighted HS6 digits compiled at GTAP sectoral level for primary agriculture and processed food, and aggregates for primary agriculture, processed food, and primary non agriculture. Effectively applied tariffs for the year 2001 reported in the last table of the basic trade indicators come instead from the GTAP6.1 database. They are obtained through a joint CEPII / ITC project, known as MAcMAps, which calculates HS6 bilateral tariff including ad valorem tariff equivalent of specific and compound tariffs and key non-tariff barriers such as tariff rate quotas (TRQs).

Five-year averages are computed by averaging all the available annual data within the period. However, average percentages and ratios for single countries between two variables are computed by considering only those years for which observations are available for both series. Growth rates are calculated consistently with the WDI statistical procedure, i.e. by fitting a linear regression trend to the logarithmic annual values whenever at least half of the observations in the period are available. The RCA indexes are computed by considering the ratio of the various exports categories with respect to total merchandise exports. The service sector is derived as a residual, from GDP less agriculture and industry.

⁴ <http://wits.worldbank.org/>. In the absence of a corresponding trade flow for a given tariff, WITS seeks for a matching trade flow in COMTRADE, either by direct or inverted trade (collecting exports to region x). These are exclusively ad valorem tariffs and thus do not include ad valorem equivalent of specific tariffs.

^a RIC=rice, WHT=wheat, CGR=coarse grains, OLS=oilseed products, SUG=raw and refined sugar, OCR=other crops, MLK=milk products, BSM=beef and sheep meats, PPE=pork, poultry and eggs, F_V=fresh fruits and vegetables.

Description of aggregate sectors, GTAP

Primary Agriculture

GTAP sector	description
pdr	Paddy rice
wht	Wheat
gro	Cereal grains nec
v_f	Vegetables, fruit, nuts
osd	Oil seeds
c_b	Sugar cane, sugar beet
pfb	Plant-based fibers
ocr	Crops nec
ctl	Cattle,sheep,goats,horses
oap	Animal products nec
rmk	Raw milk
wol	Wool, silk-worm cocoons

Other Primary

GTAP sector	description
frs	Forestry
fsh	Fishing
coa	Coal
oil	Oil
gas	Gas
omn	Minerals nec

Processed Food

GTAP sector	description
cmt	Meat: cattle,sheep,goats,horse
omt	Meat products nec
vol	Vegetable oils and fats
mil	Dairy products
pcr	Processed rice
sgr	Sugar
ofd	Food products nec
b_t	Beverages and tobacco products

Other Manufacturing

GTAP sector	description
tex	Textiles
wap	Wearing apparel
lea	Leather products
lum	Wood products
ppp	Paper products, publishing
p_c	Petroleum, coal products
crp	Chemical,rubber,plastic prods
nmm	Mineral products nec
i_s	Ferrous metals
nfm	Metals nec
fmp	Metal products
mvh	Motor vehicles and parts
otn	Transport equipment nec
ele	Electronic equipment
ome	Machinery and equipment nec
omf	Manufactures nec
