THE TEXAS AGRICULTURAL MARKET RESEARCH AND DEVELOPMENT CENTER

An Education and Research Service
of the
Texas Agricultural Experiment Station
and the
Texas Agricultural Extension Service

The purpose of the Center is to be of service to agricultural producers, groups and organizations, as well as processing and marketing firms in the solution of present and emerging market problems. Emphasis is given to research and educational activities designed to improve and expand the markets for food and fiber products related to Texas agriculture.

The Center is staffed by a basic group of professional agricultural and marketing economists from both the Experiment Station and Extension Service. In addition, support is provided by food technologists, statisticians and specialized consultants as determined by the requirements of individual projects.

Summary and Conclusions

Chan Connolly¹

Summary: The normal marketing season for Texas fresh citrus starts in October and ends in late May or early June. The 1972-73 marketing season was atypical as fresh citrus shipments were made each month during the 12 month period, August 1, 1972 to July 31, 1973.

August and September Texas fresh citrus shipments consisted primarily of off-bloom citrus. With minimum temperatures reaching a low of 26°F in January recorded at the Texas Agricultural Experiment Station at Weslaco, and with the subsequent relatively heavy precipitation, shipments during January and February were below normal with demand exceeding supply. During the late citrus marketing season, March through June, a shortage of citrus harvesting labor and truckers existed with demand exceeding supply which caused the shipping season to be extended.

Texas fresh grapefruit was shipped to 192 domestic markets including Canada. The export market is the largest single market accounting for 794 carlot equivalents representing 7.4 percent of total 1972-73 fresh grapefruit shipments.

The top 10 markets for Texas fresh grapefruit accounted for a little more than 41 percent of total shipments. The top 10 markets with absolute carlot shipments and percent of total Texas shipments represented by each is as follows:

<u>Rank</u>	<u>Market</u>	<u>Carlots</u>	<u>Percent</u>	<u>Cum. Percent</u>
1	Dallas-Fort Worth, Texas	637	5.97	5.97
2	Los Angeles, California	606	5.67	11.64
3	Minneapolis-St. Paul, Minnesota	527	4.94	16.58
4	Canada	458	4.29	20.87
5	Chicago, Illinois	451	4.23	25.10
6	Houston, Texas	430	4.03	29.13
7	San Francisco, California	363	3.40	32.53
8	San Antonio, Texas	332	3.11	35.64
9	St. Louis, Missouri	310	2.90	38.54
10	Portland, Oregon	299	2.80	41.34

¹ Associate Professor, Texas Agricultural Experiment Station at Weslaco, Texas

About 16.5 percent of Texas 1972-73 fresh grapefruit shipments were marketed in Texas markets.

During the 1972-73 season, Texas fresh orange shipments were made to 173 markets. The top 10 markets accounted for more than 54 percent of total shipments. The top 10 markets with absolute carlot shipments and percent of total Texas fresh orange shipments represented by each is as follows:

<u>Rank</u>	<u>Market</u>	<u>Carlots</u>	<u>Percent</u>	<u>Cum. Percent</u>
1	Houston, Texas	623	11.67	11.67
2	Dallas-Fort Worth, Texas	588	11.02	22.69
3	San Antonio, Texas	480	8.99	31.68
4	Los Angeles, California	360	6.74	38.42
5	New Orleans, Louisiana	194	3.62	42.04
6	Memphis, Tennessee	161	3.01	45.05
7	Jackson, Mississippi	144	2.69	47.74
8	Tulsa, Oklahoma	125	2.35	50.09
9	Little Rock, Arkansas	109	2.05	52.14
10	Oklahoma City, Oklahoma	108	2.02	54.16

A little greater than 40 percent of Texas 1972-73 fresh orange shipments were marketed in Texas markets.

Conclusions: The analyses of the 1972-73 Texas fresh citrus data by markets reveal that both fresh oranges and grapefruit have a wide distribution. Excluding the top 10 markets, the penetration in the majority of markets is extremely limited, suggesting that more efficient allocation of promotional resources may be made by developing a stronger merchandising program with the trade. The current advertising program consisting of TV, radio and newspaper may be curtailed in the minor markets and the resources reallocated to merchandising.

Introduction

The Texas citrus industry consists of more than 82,300 acres of citrus, almost one-third of which is early and mid-season oranges, more than one-fifth Valencias, and less than 50 percent grapefruit.

During the 1972-73 season, 206,000 tons of early and midseason oranges, 93,000 of Valencia oranges and 410,000 tons of grapefruit were harvested from this acreage. About one third (34%) of the early and midseason oranges, 39 and 49 percent of Valencia oranges and grapefruit respectively were marketed in the fresh form.

In terms of U. S. market share, Texas normally supplies almost 3 percent of the U. S. orange supply with the balance being supplied by Florida (77 percent) and California and Arizona (20 percent). In respect to grapefruit, Texas supplies about 18 percent, Florida 72 percent with California and Arizona contributing the balance.

With a relatively small U. S. market share of both oranges and grapefruit supplied by Texas, marketing strategy, especially in respect to advertising, promotion and merchandising cannot be patterned after other producing areas with higher market shares. An industry with a relatively small U. S. market share has limited resources with limited distribution, consequently promotional strategy for the most efficient allocation of resources will be different.

One of the major responsibilities of the Texas Valley Citrus Committee (TVCC) is to administer the advertising, promotional and merchandising program. For the 1973-74 season, the Texas Valley

Citrus Committee has requested TexaSweet Citrus Advertising, Inc. (TCAI) to develop a proposed total advertising, promotional and merchandising program. The Texas Valley Citrus Committee has final authority for approving and funding the proposed program.

The Texas Valley Citrus Committee is currently authorized to collect an assessment of 4½ cents per 7/10 bushel carton shipped by all handlers that qualify under the order. Approximately 4 cents of this assessment is allocated to advertising, promotion and merchandising.

Total funding available for one year depends on total supply of oranges and grapefruit and the percentage of each marketed in the fresh form. Processed citrus is excluded from the Federal Marketing Order. Over the past five years revenue for advertising, promotion and merchandising under this Order has averaged \$570,000. During the 1972-73 marketing season, an estimated 15 million cartons were marketed in the fresh form. Total revenue generated under the Marketing Order for all promotion efforts is expected to be about \$600,000 for the 1973-74 season.

Purpose

Prior to the 1972-73 season, handlers recorded only the telephone area code on copies of the Inspection Certificates which were forwarded to the TVCC for tabulation. If market destinations were listed, they were not recorded by TVCC. Texas fresh citrus distribution by telephone area codes, although helpful, were found to be too general to be used as a guide for

decision makers in the Texas citrus industry in respect to allocation of resources for advertising, promotion and merchandising.

The purpose of this publication is to quantify monthly shipments of fresh oranges and grapefruit by market areas (ADI's) in carton equivalents.^{1/} This data will provide the Texas Valley Citrus Committee with market information that may be used in planning the 1973-74 advertising, promotion and merchandising program.

Classifying Texas fresh citrus shipments by market areas as published by Sales Management for television coverage results in more meaningful data for utilization by the Texas Citrus Industry decision makers. Texas fresh citrus shipments by television ADI's may be correlated with demographic data for estimating market shares. A program to continue analyzing F.O.B. Texas fresh citrus shipments by television ADI market areas will eventually provide a historical data bank for the Texas Valley Citrus Committee enabling the decision makers to make a more efficient allocation of resources in the development of the many aspects in the total market program.

^{1/} Sales Management, SM's 10th Annual Survey of Television, Newspaper and Radio Markets, 630 Third Ave., New York, New York 10017, September 4, 1972.

NOTE: Each county in the United States is credited to one Area of Dominant Influence (ADI) on a TV share-of-viewing hours basis. That is, the individual station's share of the total weekly hours of TV viewing in the county. This data is collected by the American Research Bureau, Beltsville, Md. Each county is allocated exclusively to just one ADI to prevent overlap. There are a total of 209 television ADI's in the United States in 1972. All 209 ADI's are additive, and when summed, represent United States totals. Under this classification, each television ADI represents an unique market.

It should be worth noting that Television ADI's are only one kind of market classification. Radio and Newspaper ADI's and Designated Market Areas (DMA's) are other alternative classifications used by marketing firms. The classification selected depends upon the primary medium used in the total promotion program.

One of the provisions under Federal Marketing Order 906 for Texas fresh oranges and grapefruit is that all F.O.B. fresh citrus shipments originating in the three county production area, consisting of Hidalgo, Cameron and Willacy counties, shipped in lots of 400 pounds or greater out of the production area shall be covered by an Inspection Certificate. This service is provided by the U. S. Department of Agriculture, Agricultural Marketing Service, and Texas Department of Agriculture cooperating in shipping point inspection service. Subsequent to each inspection, an Inspection Certificate consisting of an original and six copies is issued on form FV(S.P.I.-Texas).

The Manager of the Texas Valley Citrus Committee made arrangements with all fresh citrus handlers to record destinations by cities on the Inspection Certificates for 1972-73 season so that a detailed analysis of Texas fresh citrus market distribution is available.

The data on Inspection Certificates is recorded by the Texas Valley Citrus Committee in code form and transferred to Standard Processing Co., Inc. of Pharr, Texas for keypunching. A preliminary monthly analysis is made by Standard Processing Co., Inc. at the request of Texas Valley Citrus Committee. At the conclusion of each season specific analyses are made by Standard Processing Co., Inc. in accordance to the request of the Texas Valley Citrus Committee.

Starting with the 1972-73 season, a code was developed for all market destination areas as defined by Sales Management in respect to television Areas of Dominant Influence (ADI's) which was recorded on each Inspection Certificate by TVCC. Subsequent to analysis of data

by Standard Processing Co., Inc., all keypunch cards were recorded on magnetic tape in monthly increments by the Texas Agricultural Experiment Station at Weslaco, Texas. A preliminary analysis of monthly fresh citrus shipments by ADI's was made by the use of the 1800 IBM Computer with 100 copies provided to the Texas Valley Citrus Committee for distribution.

Some limitations existed in the preliminary analysis due mainly to two reasons. First, the end or first day of a month does not usually fall on the end of a week. As the Texas Valley Citrus Committee classifies data on a weekly basis, the first or last few days of a month may or not coincide with the month as defined by the Texas Valley Citrus Committee. Second, all Inspection Certificates for a given month do not arrive at the Texas Valley Citrus Committee office in time for coding by the final date established for Standard Processing Co., Inc. for making the analysis. The late Inspection Certificates are carried forward to the next month. The monthly analysis of Texas fresh citrus shipments by ADI's contained in this report eliminate both of these problems.

At the conclusion of the 1972-73 season all data collected by the Texas Valley Citrus Committee was stored on magnetic tape for future reference. This eliminates the need for the storage of keypunched cards which take considerable space.

The analyses of monthly Texas fresh citrus shipments by ADI's in this publication are actual copies of computer printouts. Through programming, a special format was developed so the printout sheets could be reproduced directly without typing. This process

not only reduced the cost of reproduction but also eliminated errors often associated with typing from computer printout sheets.

The format for each monthly analysis includes carton equivalents by grade with a monthly total for all grades by markets. A year-to-date (YTD) total also is included for each market area. The market areas are identified (ADI Identification) by means of major cities within each ADI. On the right side of each table two percentage columns are found. The first percent column is a measurement reflecting the percent of total cartons shipped to each ADI during a given month. The percent measurements are arrayed starting with the ADI receiving the greatest carton equivalents listed first followed by the second largest and so forth. The last percentage column accumulates the ADI percentage measurements.

A dotted line and a solid line appears on the front page of each monthly table and the annual table. All ADI's above the dotted line delineate the largest five markets and all ADI's above the solid line identify the largest ten markets. These lines are provided for the reader's easy reference in respect to identifying the top five and ten market areas.

Figure 2. Texas Fresh Citrus Shipment By Months, 1972-73.

Source: Texas Valley Citrus Committee, Pharr, Texas.

Shipments

Annual: A small difference exists between the Texas Valley Citrus Committee's 1972-73 annual carton shipment of fresh citrus, tabulated by Standard Processing, Inc. of Pharr, Texas and the tabulations made by the Texas Agricultural Experiment Station of Weslaco, Texas. Annual fresh orange and grapefruit shipments by each entity is as follows:

<u>Type of Citrus</u>	<u>TVCC Cartons</u>	<u>TAES Cartons</u>	<u>Difference Cartons</u>	<u>Percent Difference</u>
Orange	5,350,412	5,335,164	15,248	0.285
Grapefruit	10,664,429	10,663,808	621	0.058

A greater absolute carton difference exists in fresh oranges than in grapefruit. The 15,248 carton difference for fresh oranges represents a little more than 15 carlot equivalents.¹ In terms of total annual shipments, this difference is very small measuring less than 0.3 of one percent. The absolute difference in fresh grapefruit shipments is a little more than one half of one carlot equivalent which is insignificant.

Both orange and grapefruit differences in annual shipments are relatively small. Since it would require more resources to edit the approximately 80,000 IBM keypunch cards than value gained, and since the time utility of this analysis has a high value in respect to the allocation of promotional resources for the 1973-74 season, it was the decision of the author to publish these analyses, given there exists the very small differences in annual data shipments.

Monthly: During the 1972-73 season, August 1, 1972 through July 31, 1973, shipments of Texas fresh citrus were made each month. Texas fresh orange

¹ One carlot equivalent = 40,000 pounds = 1000 cartons

shipments reached a maximum during December which is atypical for previous seasons. Grapefruit shipments reached a maximum during March. (Table 27 and Figure 1, page 99)

Total fresh citrus shipments by months are presented in Table 27 and portrayed in Figure 2, page 100. The total monthly citrus shipment distribution is bimodal. Orange shipments influenced the maximum level reached in December and grapefruit shipments are primarily responsible for the second maximum level reached in March. The bimodal distribution is influenced by a freeze in January followed by above normal precipitation that continued through February. The unfavorable weather reduced the rate of harvesting with sales potential exceeding the harvesting rate during late January and February.

A labor harvesting and transportation shortage occurred in April and continued for the balance of the season. The labor and transportation constraint is responsible for extending the season into July. Normally the shipping season ends in late May or early June..

For each carlot equivalent of fresh oranges shipped, two carlot equivalents of fresh grapefruit were shipped. This reflects a long-run trend now occurring in the Rio Grande Valley of Texas in respect to grapefruit production. With greater yield levels and higher prices for grapefruit, grove owners are planting more grapefruit acreage than orange. The Valley is gradually transforming into a predominantly grapefruit producing area.

Percent of Texas fresh citrus marketed by months is presented in Table 28. In terms of percent shipped monthly, a greater rate of orange shipments were marketed earlier than grapefruit. In early January, one-half of total orange shipments was reached but the mid-point for grapefruit shipments did not occur until one month later.

Table 27

TEXAS FRESH CITRUS SHIPMENTS BY MONTHS

1972-73

Month	Grapefruit (Cartons)	Oranges (Cartons)	Total (Cartons)
August	832	13,673	14,505
September	24,941	126,863	151,804
October	626,545	447,619	1,074,164
November	1,244,605	548,644	1,793,249
December	1,454,101	1,144,038	2,598,139
January	1,488,200	677,672	2,165,872
February	1,526,697	608,422	2,135,119
March	1,873,417	702,770	2,576,187
April	1,402,727	573,795	1,976,522
May	912,702	401,269	1,313,971
June	103,375	77,074	180,449
July	5,698	13,331	19,020
Total	10,663,840 ^{1/}	5,334,170 ^{1/}	15,999,010 ^{1/}

^{1/} The annual carton total for grapefruit is 32 cartons greater than tabulated in Table 13 and the orange total is 6 cartons greater than tabulated in Table 26. It is surmised that one card may not have been read by the 1800 IBM computer system when making the seasonal analyses for oranges and for grapefruit.

The codes for all ADI's are presented in Appendix, Table A. Markets not receiving Texas fresh grapefruit and oranges during the 1972-73 season are tabulated in Appendix Table B and Table C respectively.

Top Ten Markets

Grapefruit: The export market is the largest single market for Texas fresh grapefruit during the 1972-73 season accounting for 794 carlots representing 7.4 percent of total shipments (Table 13). The minimum temperature of 26° F on January 12, 1973, recorded at the Texas Agricultural Experiment Station at Weslaco, and the subsequent relatively heavy precipitation, curtailed potential export shipments from January to the end of the season. It is estimated that 15 percent of the total fresh grapefruit shipments would have been exported had weather not been a constraint.

The top ten markets, with exports excluded, for Texas fresh grapefruit are as follows:

<u>Rank</u>	<u>Market</u>	<u>Carlots</u>	<u>Percent</u>	<u>Cum. Percent</u>
1	Dallas-Fort Worth, Texas	637	5.97	5.97
2	Los Angeles, California	606	5.67	11.64
3	Minneapolis-St. Paul, Minnesota	527	4.94	16.58
4	Canada	458	4.29	20.87
5	Chicago, Illinois	451	4.23	25.10
6	Houston, Texas	430	4.03	29.13
7	San Francisco, California	363	3.40	32.53
8	San Antonio, Texas	332	3.11	35.64
9	St. Louis, Missouri	310	2.90	38.54
10	Portland, Oregon	299	2.80	41.34

The top five domestic markets accounted for more than 25 percent of total grapefruit shipments for the 1972-73 season, and the top 10 domestic markets accounted for more than 41 percent. Three Texas markets (Dallas-Fort Worth, Houston and San Antonio) are included in the top ten fresh grapefruit markets.

Oranges: The top ten markets for Texas fresh oranges are as follows:

<u>Rank</u>	<u>Market</u>	<u>Carlots</u>	<u>Percent</u>	<u>Cum. Percent</u>
1	Houston, Texas	623	11.67	11.67
2	Dallas-Fort Worth, Texas	588	11.02	22.69
3	San Antonio, Texas	480	8.99	31.68
4	Los Angeles, California	360	6.74	38.42
5	New Orleans, Louisiana	194	3.62	42.04
6	Memphis, Tennessee	161	3.01	45.05
7	Jackson, Mississippi	144	2.69	47.74
8	Tulsa, Oklahoma	125	2.35	50.09
9	Little Rock, Arkansas	109	2.05	52.14
10	Oklahoma City, Oklahoma	108	2.02	54.16

The top ten Texas fresh orange markets accounted for a little more than 54 percent of total shipments.

An examination of monthly data reveals that there is considerable variation in the rank order of markets by months for fresh Texas grapefruit and oranges. There are many factors that influence the intraseasonal variation in respect to the rank order of markets. Competitive supplies from other areas, fruit quality, weather, distance from market, promotional programs, available harvesting labor, intraseasonal demand, and transportation all have an influence on shipments to the various markets during a given month. The first few weeks of shipments are made to markets situated a
