An Annotated Bibliography of Tax Compliance and Tax Compliance Costs

Compiled by

Simon James and Alison Edwards

University of Exeter Business School

2010

Economic and Social Research Council funding is gratefully acknowledged (award number RES-000-23-1595 'Optimum Tax Compliance Costs and Tax Simplification').

Preface

This collection of contributions to the study of tax compliance was compiled as part of an Economic and Social Research Council funded project which formally took place from March 2006 to August 2007. It builds on a great deal of earlier work – most notably by Ahmed *et al.* (2003), Evans (2003a), Fischer *et al.* (1992), Jackson and Milliron, (1986), Kirchler (2007) and Richardson and Sawyer (2001). These invaluable sources gave not only perspectives from Accounting, Economics, Law and Psychology but also from America, Australasia and Europe.

Although the entries were compiled for the purpose of the project, as it became clear that this collection might be of use to others, as earlier collections were to us, further information has been added. Where indicated, full abstracts can be found in Ahmed *et al.* (2003) and it also seemed helpful to indicate when the contribution was cited in one of the above sources since this usually involved more information or comment or both.

Although it has been tidied up to assist, hopefully, other users, the collection remains essentially a working document and there is no claim that it is a complete collection of all the relevant contributions. It was hoped to add more but as time passes it seemed best to make the bibliography available to others without further delay.

As many of the contributions cover more than one topic, the contributions are presented in alphabetical order by first author. Electronic searching seems to make the addition of an index of second and subsequent authors and a subject index of little additional value.

Simon James and Alison Edwards

accessed 20 October 2007.

An annotated bibliography bringing together the research collections of the Centre for Tax System Integrity at the Australian National University and the Knowledge Development Network of the Australian Taxation Office. The bibliography is restricted to materials that are concerned with tax compliance or ideas relevant to tax compliance such as regulatory compliance in general and justice. The bibliography is arranged in 10 parts as follows:

Part 1 - An evaluation of the tax system organized around issues such as administrative fairness including procedural justice, legitimacy, trust and the power to influence businesses.

Part 2 - Institutional demands including deterrence, conflict with tax authorities and the likely monetary and psychological costs of non-compliance.

Part 3 – Sources of influence including studies of factors such as self-perception, for example of a personal ethic norm of honesty and perceptions of others including tax advisers, for instance a social ethical norm of honesty.

Part 4 - The cash economy.

Part 5 – Policy issues such as studies that challenge current regulatory practice and propose improvements to the current tax system.

Part 6 – Theoretical contributions including reviews of the relevant literature from a methodological or theoretical perspective.

Part 7 – Contributions relating to the work of researchers of the Centre for Tax System Integrity in the development of a voluntary taxpaying culture but which do not fit readily into the preceding parts.

Part 8 – Econometric papers.

Part 9 – Centre for Tax System Integrity working papers.

Part 10 – Edited Collections on tax compliance.

Abstract in Ahmed *et al.* (2003), pp. 35-36.

A model of individual tax compliance behaviour is developed and estimated. The model recognizes the importance of marginal income tax rates, payroll tax contributions and benefits, the probability of detection and the penalty on unpaid taxes with respect to tax evasion and avoidance.

Abstract in Ahmed *et al.* (2003), pp. 101-2 and 163.
This paper uses experimental methods to analyze the long run impact of an amnesty. It finds that the average level of compliance falls after an amnesty but if post-amnesty enforcement increases aggregate compliance also increases. In fact, post-amnesty compliance is higher when an amnesty is accompanied by increased enforcement than when enforcement increases without an amnesty.

Abstract in Ahmed *et al.* (2003), pp. 58-59.

In this study 188 taxpayers in the Netherlands were interviewed regarding their circumstances, motives and perceptions regarding tax evasion. Information from their tax returns was also collected from the tax administration. The results suggest that both social and psychological factors were determinants of tax evasion.

Cited in Kirchler (2007).

Abstract in Ahmed *et al.* (2003), p. 120.

This paper surveys some of the major achievements and failures of economists in the area of tax compliance, considers the reasons for the failures and suggests a number of changes to make the analysis more relevant to current tax compliance issues. In particular economic models must incorporate the variety of control devices used by tax administrations.

Balestrino, Alessandro and Galmarini, Umberto (2003), 'Imperfect tax compliance and the optimal provision of public goods', *Bulletin of Economic Research*, vol. 55(1), pp. 37-52.

Cited in Kirchler (2007).

It is argued that imperfect income tax compliance implies it is desirable that the supply of public goods should be distorted downwards.

Bankman, Joseph (2004), 'The tax shelter battle' in Henry J. Aaron, and Joel Slemrod, Joel, (eds.), *The Crisis in Tax Administration*, Brookings Institution Press, Washington DC, pp. 9-28.

Tax shelters are considered to be structured transactions with little or no independent business purpose. This chapter describes the modern tax shelter, discusses some of its effects and evaluates government use to curb the use of tax shelters.

Abstract in Ahmed *et al.* (2003), p. 51.

A survey of 333 tertiary students revealed that eight out of ten demographic factors analysed had statistically significant relationships with the acceptability and incidence of tax evasion behaviour. These were: course, age, ethnicity, qualification, occupation, income, work experience and tax return filing experience. The two that failed to show a statistically significant relationship were gender and employment status.

Abstract in Ahmed *et al.* (2003), p. 175.

Evasion decisions are determined by taxpayers' perceptions about the fairness of their fiscal treatment with respect to both the government supply of public goods and the perceived behavior of other taxpayers. The extent to which the desired level of evasion is undertaken in practice depends on the coercive powers of the state and taxpayers' attitude toward risk.

Boruch, Robert, F. (1989), 'Experimental and quasi-experimental designs in taxpayer compliance research', in Jeffrey A. Roth, John T. Scholz and Ann Dryden Witte (eds.) *Taxpayer Compliance: vol. I: An Agenda for Research*, University of Pennsylvania Press, Philadelphia, Appendix B, pp. 339-379.

This chapter concludes that four elements of the Compliance Model of the Australian Taxation Office are all relevant to large businesses. The four elements are i) understanding taxpayer behaviour, ii) building community partnerships, iii) increased flexibility in tax office operations to encourage and support compliance and iv) more and escalating regulatory options to enforce compliance.

Cited in Kirchler (2007).

This chapter provides a foundation for a conception of the taxpayer as multidimensional and dynamic. It differentiates, both theoretically and empirically, the compliance related actions of taxpayers from their evaluation of the tax system and the tax office. It is concluded that non-compliant actions on the part of the taxpayer must be met by a responsiveness from authority that recognizes and deals with it but at the same time encourages more cooperative motivational postures. Resentment and anger may well exist but the empirical findings presented here suggest there is also likely to be goodwill and acceptance of the rules of the game.

Abstract in Ahmed *et al.* (2003), pp. 9-10.

Based on social psychology and justice literature this paper develops hypotheses about the conditions under which complexity may affect perceptions of equity and therefore compliance. An experiment was conducted where the subjects assessed different forms of a hypothetical tax provision with identical economic consequences. It was found that the provision's complexity negatively affects equity assessments only when subjects were prompted with an alternative provision with relatively favourable consequences and then only when no explicit justification for its complexity and relative economic consequences is given.

Abstract in Ahmed *et al.* (2003), p. 65.

Taxpayers have an incentive to delay their property tax payments when interest rates rise above the penalty rate on delinquent property taxes. The proposition that property tax delinquency should rise as a percent of the tax levy with increases in the interest rate was tested using data from Indiana. The study found that a rise in interest rates causes a significant rise in the delinquency rate. Also, higher unemployment increases the delinquency rate while higher inflation reduces it.

Abstract in Ahmed *et al.* (2003), p. 28.

This study tests several binary logic models using qualitative data from Spanish income taxpayers to establish whether taxpaying behaviour is only influenced by variables traditionally included in decision theory under uncertainty or whether it is also influenced by demographic, socioeconomic and psychological variables. The results are partially in line with classical models of tax evasion – increases in detection and the rates of penalties increase compliance – but it was found that a plurality of individual and sociological variables also help explain the complex behaviour associated with compliance.

Abstract in Ahmed *et al.* (2003), pp. 28-29.

This paper extends the standard expected utility model of tax compliance to include two other issues: the role of moral sentiments, specifically guilt and shame, in taxpayer decision-making and the relationship between taxpayers' perceptions of audit probability and the true audit probability. The parameters of the model are estimated from a dataset of detailed tax and audit information from the state of Oregon and the US Internal Revenue Service. There is evidence of considerable heterogeneity and a general upward bias in audit perceptions and the importance of the sentiment of shame in explaining reporting behaviour is much more sensitive than the sentiment of guilt to the degree of bias in audit perceptions.

Abstract in Ahmed *et al.* (2003), pp. 28-29.

Extends a standard model of tax evasion to account for the existence of 'ghosts' (individuals who do not comply with their tax filing requirements) and then examines implications of this extension by using a data set containing detailed tax and audit information for both filers and nonfilers of US federal income tax returns.

Cited in Kirchler (2007) and Richardson and Sawyer (2001).

Abstract in Ahmed *et al.* (2003), pp. 131-132.

Taxpayers may view their relationship with government as an exchange relationship whereby taxes are paid in return for the benefits of government expenditure. If taxes are considered to be unfair, tax evasion is a way of adjusting the corresponding terms of trade with government.

Falkinger, J. (1995) 'Tax Evasion, Consumption of Public Goods and Fairness', *Journal of Economic Psychology*, vol. 16 pp. 63-72.

Cited in Kirchler (2007) and Richardson and Sawyer (2001).

Abstract in Ahmed *et al.* (2003), p. 14.

Concerned with how the perceived share of public consumption or the perceived fairness of the political and social system affect behaviour regarding tax evasion.

Fennell, Lee Anne (2006), 'Hyperopia in Public Finance', in Edward J. McCaffery and Joel Slemrod (eds.) *Behavioral Public Finance*, Russell Sage Foundation, New York, pp. 141-171.

This paper focuses on time preference in relation to public finance. A common view is that people sometimes behave myopically but there are also situations where individuals appear to do the opposite (hyperopia) – weighting future benefits more than present ones. Such behavior seems to offer an explanation, for example, the well-known tendency of some US taxpayers to make interest-free loans to government by accepting overwithholding of income tax followed by a refund after the end of the tax year. There are psychological explanations for hyperopia which add to our ability to analyze time-preference decisions. For example, sometimes individuals seem to prefer improving sequences of, say, consumption rather than flat or declining ones.

Cited in Andreoni *et al.* (1999), Kirchler (2007) and Richardson and Sawyer (2001).

Abstract in Ahmed *et al.* (2003), pp. 36-37.

The authors developed measures of three kinds of the perceived threats of three kinds of punishment – shame, embarrassment and legal sanctions. These were applied to three forms of illegal behaviour – tax cheating, petty theft and drunk driving. The effects of the perceived threats on intentions to break the law were examined in 360 adults. Threats of shame and legal sanctions seemed to inhibit the inclination to commit each of the offences but the findings for embarrassment seemed to be inconsistent with the rational decision-making model.

Grasmick, H.G., Bursik, R.J. and Cochran, J.K. (1991), '“Render unto Caesar what is Caesar what is Caesar’s”': Religiosity and taxpayers' inclination to cheat', *The Sociological Quarterly*, vol. 32(2), pp. 251-266.

Abstract in Ahmed *et al.* (2003), pp. 31-32.

Three types of sanctions in communications with taxpayers were tested. The first used legal sanctions – warning that fines or imprisonment may result from tax evasion. The second used informal sanctions – warning of more informal types of penalty that might result – such as the publication of the names of tax evaders. The third type noted the possibility of a bad conscience following evasion. The study found evidence that the communication of informal sanctions may increase hypothetical tax compliance. The appeal to conscience was successful in altering beliefs about the morality of tax evasion.

Abstract in Ahmed *et al.* (2003), pp. 37-38.

The authors discuss the findings of a series of studies on tax evasion in the Netherlands with special emphasis on the effect of deterrence. They tentatively conclude that non-evaders either need no deterrence, or very little, to keep them from tax evasion. Also, deterrence does not seem to have any effect on 'habitual' evaders. If there is, it may be in the wrong direction – there is a positive correlation between being punished for evasion in one year and willful evasion in the following year.

Abstract in Ahmed *et al.* (2003), pp. 64-65.

It is suggested that the government should explore positive approaches to encouraging taxpayer compliance such as emphasizing where taxpayers can get assistance rather than emphasizing penalties. The present study is a behavioural experiment which compares an economic factor – presenting penalty information – with a non-economic factor – presenting information about free taxpayer services.

Abstract in Ahmed *et al.* (2003), p. 136.

The authors describe the state of understanding of tax compliance at that time as primitive and suggested that more basic research was needed before we can begin to understand tax evasion. Section I of the paper examines key compliance variables, which are age, sex, education, income level, income source, occupation, peer influence, ethics, fairness, complexity, IRS contact, probability of detection, sanctions, tax rates, and 'other variables'. Section II is concerned with methodological considerations. Section III turns to theoretical areas relevant to compliance research – prospect theory, deterrence theory, cognitive structures and agency theory. The authors also outlined two general directions for future research – replicating and extending the issues they reviewed in this paper and more emphasis and attention to past research efforts.

This paper looks at different revenue authorities and links their behaviour to the existing literature on taxpayer compliance.

James, S. (2000), 'The taxpayer as responsible citizen', paper presented at the 12th Annual Meeting of the Society for the Advancement of Socio-Economics on 'Citizenship and Exclusion' at the London School of Economics and Political Science, 7-10 July. Abstract in Ahmed *et al.* (2003), p. 23.

Two approaches to the academic literature on tax compliance have been identified. One is based on a relatively narrow interpretation of economic rationality and utility maximization and the other incorporates contributions from a much wider range of academic disciplines. This wider approach to tax compliance is described here as the 'responsible citizen approach'. This paper addresses the description of the term citizen, summarizes the two approaches and offers a classification of the two approaches to tax compliance linked to the economic justification for taxation

Cited in Richardson and Sawyer (2001).

Abstract in Ahmed *et al.* (2003), p. 38.

Strümpel's (1969) model uses the concept of 'rigidity of assessment' to describe aspects of tax enforcement that reflect a deterrence model of social control. Strümpel argued that there were two opposing effects. The first is the expected deterrent effect of fear of getting caught and punishment. The other is that the retroactive, confrontational and coercive aspects of a deterrent approach may have the opposite effect on voluntary compliance. Taxpayers may increase their efforts to evade tax as well as pursuing other forms of tax resistance such as aggressive tax avoidance, increased use of the appeals process and political lobbying to muzzle the tax agency.

Kinsey, K.A. and Grasmick, H.G. (1993), 'Did the Tax Reform Act of 1986 improve compliance? Three studies of pre- and post-TRA compliance attitudes', *Law and Policy*, vol. 15(4), pp. 239-325.

Cited in Kirchler (2007).

Abstract in Ahmed *et al.* (2003), pp. 98-99.

Three bodies of data were examined and the results showed that the Tax Reform Act of 1986 in the USA showed an improved normative climate for taxpayer compliance. They demonstrate both the feasibility and the importance of examining the effects of substantive tax policies on taxpayer perceptions, attitudes and behavioural intentions.

Kinsey, K. and Stalans, L.J. (1999), 'Leveling the playing field: Prestige and representation in tax audits', *Law and Society Review*, vol. 33, pp. 993-1023.

Abstract in Ahmed *et al.* (2003), p. 58.

Found that taxpayers of higher occupational prestige do not come out ahead in tax audits. Auditors were more likely to invite further discussion of tax issues from high-prestige taxpayers and were less likely to assess additional taxes on their returns. However prestige effects were concentrated among unrepresented taxpayers. When tax practitioners were involved in audits these effects disappeared.

This book is divided into five parts. Part I provides a chapter on the background, another on tax principles and tax research in relation to psychology and a third on methodological issues and 'rational economic man'. Part II is concerned with attitudes to taxation and public spending, referenda, public opinion and fiscal policy-making. Part III turns to attitudes and behaviour with respect to tax evasion and avoidance. Part IV looks at other areas of fiscal psychology research with a chapter on simplicity and comprehensibility and another on work motivation and taxation. Part V has a chapter on psychology and fiscal policy and a concluding chapter.

Abstract in Ahmed *et al.* (2003), p. 48.

Nearly one in four of a sample survey of 800 Oregon Adults admitted they practiced tax evasion. Higher percentages were found for individuals who were young, with low income, male and who believed their chance of getting caught was low. Belief that the tax system was unfair was unrelated to noncompliance and the deterrent effect of penalties seemed uncertain.

Mason, R. and Calvin, L.D. (1984), 'Public confidence and admitted tax evasion', *National Tax Journal*, vol. 37(4), pp. 489-486.
Cited in Fischer *et al.* (1992), Jackson and Milliron (1986).
Abstract in Ahmed *et al.* (2003), pp. 45-46 and included in the annotated bibliography in Fischer *et al.* (1992), p. 42.
The relationship between perceived unfairness of a tax system and compliance may not be a simple or direct one and the data suggest that compliance norms must be neutralized and fear of sanctions weakened before noncompliance occurs.

McCaffery, Edward, J. and Slemrod, Joel (eds.)(2006), *Behavioral Public Finance*, Russell Sage Foundation, New York.

The editors sketch out three broad clusters of questions which are addressed throughout this collection of papers. The first is that form matters – for instance different taxes may cause different types and levels of psychic discomfort. The second is concerned with time inconsistency and problems of self-control – similar to what Pigou once famously described as a perverted telescopic faculty. The third cluster relates to the willingness of citizens to act in the public interest, even when it may not appear to be in their own immediate self-interest, for example, by paying their taxes to a large extent without the need for an unduly coercive tax regime.

McKerchar, M. (1995), ‘Understanding small business taxpayers: Their sources of information and level of knowledge of taxation’, *Australian Tax Forum*, vol. 12, pp. 25-41.

Abstract in Ahmed *et al.* (2003), p. 77.

It was found that many of a sample of 200 small businesses in a rural community thought they had a satisfactory level of tax knowledge but their responses to a broad range of questions indicated they did not. Therefore it may be that many small businesses are unintentionally noncompliant because they do not realize they have sufficient knowledge of the tax system. Knowledge levels can be improved if small businesses taxpayers can be convinced of their ‘need to know’.

Abstract in Ahmed *et al.* (2003), pp. 42-43.

This paper is concerned with individuals' tax noncompliance by an examination of CPAs' perceptions of seven key compliance features: deductions permitted, Internal Revenue Service information services, withholding and information reporting, tax preparer responsibilities and penalties, the probability of audit, tax rates and taxpayer penalties. The results indicate that CPAs consider reducing tax rates to be the single most important feature for increasing tax compliance. The paper also assesses the results in the light of the competing perspectives of economic deterrence and fiscal psychology and found them to be consistent with the latter. The authors concluded therefore that the key to improving tax compliance is tax reform not increasing penalties.

Abstract in Ahmed *et al.* (2003), p. 7.

Based on survey data from 2,301 investors in schemes subsequently restricted by the Australian Tax Office and 2,040 taxpayers from the general population found that the former were disillusioned with the tax system and more likely to be hostile and resistant towards the ATO. Discusses possible improvements in the way the aggressive tax planning might be dealt with.

Abstract in Ahmed *et al.* (2003), pp. 6-7.

Reported the results of in-depth interviews conducted with 29 investors in 'tax effective' schemes that were subsequently regarded by the Australian Tax Office (ATO) as an abuse. In line with the procedural justice literature, the study found that many scheme investors defied the demands of the ATO because the procedures it used to deal with the situation were thought to be unfair.

Prebble, Mark (1990), 'Tax compliance and the use of tax information', *Australian Tax Forum*, vol. 7(2), pp. 207-216.

Abstract in Ahmed *et al.* (2003), p. 128.

Examines the claim by some tax authorities that using income tax information for other purposes, such as the administration of welfare benefits, would reduce voluntary tax compliance. A theoretical analysis suggests that some effect is possible but likely to be small and a brief review of experience in several administrations found no evidence that wider use of tax information has a significant effect on tax compliance.

Pritchard, Damian and Khan, Nadeer (2005), 'Offshore compliance: Using regression and risk modelling to select cases from large datasets, in *Recent Research on Tax Administration and Compliance: Proceedings of the 2005 IRS Research Conference*, Statistics of Income Division, Internal Revenue Service, Department of the Treasury, Washington DC, pp. 131-140.

Abstract in Ahmed *et al.* (2003), p. 185.

Compares an alternative 'audit cutoff' policy, in which an audit is triggered if reported income is 'too low', with the standard random audit policy.

This note is concerned with the formula used by the Internal Revenue Service in the USA to help it select returns for scrutiny. Perhaps not surprisingly this was one of the best kept secrets by the US government.

Abstract in Ahmed *et al.* (2003), p. 18.

Using student subjects in an experiment framed as a business simulation this study finds support for two propositions. The first is that having to pay more tax after insufficient tax has been withheld will lead to more evasion than receiving a refund after too much tax has been withheld. The second was that greater opportunity to evade taxes will lead to higher levels of evasion.

Cited in Kirchler (2007) and Richardson and Sawyer (2001).
Abstract in Ahmed *et al.* (2003), p. 27.
The paper uses a regression analysis of survey and tax return data for 445 taxpayers. The subjective risk of getting caught is more closely related to duty than to objective risk factors. Objective audit probabilities affect only taxpayers with greater temptation to evade, but duty influences tempted taxpayers as much as other taxpayers.

Cited in Kirchler (2007).

Abstract in Ahmed *et al.* (2003), pp. 134-135.

The authors' framework for taxpaying research emphasizes that compliance is as problematic as noncompliance, that individuals have different opportunities and that taxpaying does not necessarily involve deliberate decisions. Both the process of decision-making and the content of decisions must be studied. The content of compliance decisions are affected by four clusters of factors: material consequences, normative expectations, socio-legal attitudes and beliefs and expressive factors.

Smith, K.W. and Stalans, L.J. (1991), 'Encouraging tax compliance with positive incentives: A conceptual framework and research directions', *Law and Policy*, vol. 13(1), pp. 35-53.

Cited in Kirchler (2007) and Richardson and Sawyer (2001).

Abstract in Ahmed *et al.* (2003), p. 101.

Previous research suggests that respectful treatment and praise may be more effective incentives than materialistic incentives for achieving long lasting compliance because people have a strong tendency to reciprocate actions they receive from authorities. This paper draws on learning and social psychological research to identify the processes by which positive incentives induce compliance using tax as a specific example.

Smith, K.W. and Stalans, L.J. (1994), 'Negotiating strategies for tax disputes: Preferences of taxpayers and auditors', *Law and Social Enquiry*, vol. 19(2), pp. 337-368.

Abstract in Ahmed *et al.* (2003), p. 98.

This study uses data from pre-audit interviews with taxpayers and state tax auditors to explore how characteristics of tax disputes, the roles of the parties, citizens' perceptions of the attitudes and orientations of officials and other factors affect the strategies officials and taxpayers prefer for resolving disputes.

Smulders, Sharon and Naidoo, Gelishan (2010), 'Small business tax compliance burden – is the South African revenue service building bridges, roads or pathways to alleviate this burden?' paper presented at the 9th International Tax Administration Conference, ATAX, University of New South Wales, Sydney, 7-9 April.

Snively, K. (1990), 'Government policies to reduce tax evasion: Coerced behavior versus services and values development', *Policy Sciences*, vol. 23, pp. 57-72.

Abstract in Ahmed *et al.* (2003), pp. 103-104.

A distinction is made between coercive compliance policies and those that emphasize developing taxpaying values among citizens through service improvement and informational strategies. The paper examines the utility of service and values based policies and the need for increased investment in these areas of tax administration.

Cited in Richardson and Sawyer (2001).

Abstract in Ahmed *et al.* (2003), pp 136-137.

Reviews research on tax evasion from a number of disciplines. It is argued that economic models do not explain empirical findings which suggest the importance of non-maximizing behavior and social norms of compliance.

Spicer, M.W. (1990), 'On the desirability of tax evasion: Conventional versus constitutional economic perspectives', *Public Finance*, Vol. 45(1), pp. 119-127.

Abstract in Ahmed *et al.* (2003), pp 180-181.

Existing literature has discussed the desirability of tax evasion. This paper argues that an economic analysis of this issue would be better framed within a constitutional framework which is developed drawing on the work of Brennan and Buchanan.

Abstract in Ahmed *et al.* (2003), pp. 15-16.

To examine the possible ripple effects of enforcement contacts on the general population's support for the tax authorities the authors compared what a sample of 237 taxpayers said happened in their tax audit interviews with what they told members of their social network. As individuals are concerned with others' images of them this may weaken a bias towards negative messages. The results indicated that messages about fairness of decision-making, favourable outcomes and dignity more closely approximated the distribution of the audited taxpayers' perceptions. A bias was found in two situations – in messages about instrumental quality and on the rare occasions when taxpayers were subject to undignified treatment but there was a favourable outcome.

Cited in Kirchler (2007).

This chapter argues for a social-psychological approach to taxpayer behaviour that aims to show that attitudes towards paying tax are not stable, but determined by how one defines oneself in relation to the tax system, the tax authorities and other groups of taxpayers. It concludes that understanding how taxpayers perceive themselves in the tax system is necessary to understand the motivations that underlie taxpaying behaviour.

Abstract in Ahmed *et al.* (2003), p. 63.

Discusses the role of tax practitioners – not only as intermediaries between the taxpayer and the authorities but also in terms of the influence they may have on the ethical climate and level of compliance – with reference to data derived from an empirical study of Australian tax practitioners and tax officials.

Tooma, Rachel, (2007), 'Deterring promoters of tax exploitation schemes', in Margaret McKerchar and Michael Walpole (eds.), *Further Global Challenges in Tax Administration*, Fiscal Publications, Birmingham, pp. 243-262.

This paper is concerned with two responses to tax avoidance schemes. The first is the civil penalty model whereby promoters of inappropriate tax exploitation schemes may be subject to penalties – an approach used in Australia and New Zealand. The second is the disclosure model whereby promoters have to disclose tax schemes to the revenue authorities before marketing them – an approach used in Canada, the USA and the UK.

Abstract in Ahmed *et al.* (2003), p. 68.

This study has three main elements – possible improvements to the income tax, the appropriate balance between direct and indirect taxes and the choice of the means of levying an indirect tax.

Wallschutzky, I.G. (1988), *The Effects of Tax Reform on Tax Evasion*, Australian Tax Research Foundation, Research Study 8, Sydney.

Abstract in Ahmed *et al.* (2003), p. 43 and 107.

Tax evasion occurs not only because taxpayers have the opportunity to evade but also a desire or motivation to do so. In 1982 information was collected to test various hypotheses about taxpayers' motivations. This research in this report repeated the survey work conducted in 1982 to establish what effects subsequent administrative and substantive reforms to the Australian tax system may have had on tax evasion.

Wallschutzky, Ian (1995), 'Cost of compliance for small business: results from twelve case studies in Australia', in C. Sandford (ed.), *Taxation Compliance Costs: Measurement and Policy*, Fiscal Publications, Bath, pp. 275-298.

The research reported in this chapter aimed to explore issues relating to compliance costs and burdens. The methodology was based on a pattern of an initial interview with a small business followed by four subsequent quarterly interviews. The findings of this research suggest that too much might have been made of the costs and problems of complying with government regulation.

Wallschutzky, Ian (1998), 'The implications of electronic commerce for the Australian income tax system', in Chris Evans and Abe Greenbaum (eds.) *Tax Administration: Facing the Challenges of the Future*, Prospect, Sydney, pp. 35-50.

This paper provides an overview of how electronic commerce might impact on the Australian income tax system including compliance as a major issue.

This chapter concentrates on considerations of justice and fairness that could influence taxpayers' evaluations of the tax system and therefore their decisions regarding compliance. It also offers a conceptual framework for such considerations based on conceptual distinctions made in social psychological justice research. It is concluded that an explanation of taxpayer behaviour based purely on self-interest is insufficient.

Widdowson, David (1998), 'Managing compliance: More carrot, less stick', in Chris Evans and Abe Greenbaum (eds.) *Tax Administration: Facing the Challenges of the Future*, Prospect, Sydney, pp. 99-104.

This chapter discusses a new approach by the Australian Customs Service which not only recognizes the need to balance enforcement with assistance but also recognizes the benefits of providing industry with incentives to comply. A key element is allowing highly compliant companies more latitude to self-assess their revenue liability by relying mainly on their internal accounting systems and procedures

An economic model of tax compliance is developed and estimated. It was found that increases in the probability of audit, information reporting and tax withholding will be likely to increase compliance. However, increasing moral ambivalence toward tax compliance will increase non-compliance. It was also found that the decline in audit rates in the 1970s may have accounted for a substantial portion of the decline in compliance during that period.

Woellner, R.H. (1994), 'Attitudes of ATO auditors', paper presented at the conference on *Current Issues in Taxation*, University of Newcastle, Australia.

The paper is based on interviews with auditors of the Australian Tax Office.

Abstract in Ahmed *et al.* (2003), p. 13.

Two procedural constructs – consistency and accuracy – are examined using an experiment. It was found that procedural injustice experienced indirectly by becoming away of the unfair treatment of another increased the level of noncompliance. However procedural injustice experienced personally – either by being subject to inconsistency in enforcement or to enforcement attempts resulting from inaccurate information did not increase the level of noncompliance.

Abstract in Ahmed *et al.* (2003), p. 42 and pp. 183-184.

Considers the possibility that withholding tax on employees' wages might encourage evasion of taxes on income not subject to withholding through non-filing of individual returns and also employers may pass less to the tax authorities less than the amounts withheld.

Abstract in Ahmed *et al.* (2003), p. 39.

It is sometimes possible to evade taxes by claiming that income coming from one source came from a source that was more lightly taxed. The paper focuses on the relationships between misreporting and taxation under alternative penalty schemes. Allowing the taxpayer the choice between source misreporting and pure under-reporting, the paper also examines the relative amount of tax escaping the tax collector through the alternative forms of evasion and determines the conditions under which one will be preferred to the other.
