

This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: Patterns of Farm Financial Structure: A Cross-Section View of Economic and Physical Determinants

Volume Author/Editor: Donald C. Horton

Volume Publisher: UMI

Volume ISBN: 0-870-14150-3

Volume URL: <http://www.nber.org/books/hort57-1>

Publication Date: 1957

Chapter Title: APPENDIX B SELECTED FINANCIAL DATA RELATING TO AGRICULTURE BY STATES, 1930, 1940, AND 1950

Chapter Author: Donald C. Horton

Chapter URL: <http://www.nber.org/chapters/c2711>

Chapter pages in book: (p. 177 - 182)

APPENDIX B

SELECTED FINANCIAL DATA RELATING TO AGRICULTURE BY STATES, 1930, 1940, AND 1950

ILLUSTRATIVE data by states which provide the basis for a comparison of 1940 with 1930 and 1950 with respect to certain financial characteristics of agriculture are shown in the accompanying table. For this purpose the states have been grouped into major types of farming regions.

The estimates of the distribution of interests in farm real estate among operators, landlords, and creditors require a brief explanation. The interest of operators represents the value of farm real estate in farms that are both owned and operated by the farm operator, less the estimated farm real estate debt of these farmers. For 1950 and 1940 the data for these estimates are available from *1950 Farm Mortgage Debt—Cooperative Report*, published in December 1952 by the Bureau of the Census and the Bureau of Agricultural Economics. For 1930 the estimates were made without the benefit of official state estimates of farm mortgage debt of part-owner farmers. However, the 1930 estimates are based on the same concepts as those employed for 1950 and 1940. Any lack of precision resulting from incompleteness of data in 1930 does not impair the usefulness of the data for general comparative purposes.

The estimates of the operator interest in farm real estate for all three base years tend to understate the extent of this interest. Any interest of farm operators in farms other than those operated by them, whether as landlord or as creditor, is excluded. Furthermore, the interest of operators in all farm assets on the farms they own (as well as operate) is a larger percentage of these assets than is their interest in the real estate alone. For example, tenant operators usually have a substantial interest in non-real-estate farm assets of the farms they operate. From our data for sample counties, it appears that operator interests in all farm assets exceeded 48 per cent in 1940 as compared with operator interests in farm real estate alone of less than 43 per cent.

If we subtract the estimated operator interest in farm real estate from total value of farm real estate, the residual becomes the combined interests of landlords and creditors. Again, if farm mortgage debt is subtracted from this residual, the remainder

APPENDIX B

represents the landlord interest. The interests of operators who are also either landlords or creditors are classified with the landlord or creditor interest, as the case may be. It should be noted also that the landlord interest, as a residual, includes interests of different levels of government in farm land.

The additional state data shown in Table B-1 either are taken directly from published reports or are readily computed from such reports. The sources of these data are shown in the footnotes to these parts of the table.

APPENDIX B
