

This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: A Study of Aggregate Consumption Functions

Volume Author/Editor: Robert Ferber

Volume Publisher: UMI

Volume ISBN: 0-87014-453-7

Volume URL: <http://www.nber.org/books/ferb53-1>

Publication Date: 1953

Chapter Title: Appendix B: Basic Data and List of Computed Functions

Chapter Author: Robert Ferber

Chapter URL: <http://www.nber.org/chapters/c0825>

Chapter pages in book: (p. 67 - 80)

Appendix B

BASIC DATA AND LIST OF COMPUTED FUNCTIONS

Table B-1

BASIC DATA USED IN COMPUTATIONS^a

	S (\$ bil.)	Y (\$ bil.)	N (mil.)	P (1935-39=100)	Y ₀ ^b (\$ bil.)	M (\$ bil.)

* At annual rates.

^a See pages 5-6 for definitions of variables.

^b The selection of maximum previous values for deflated income (Y/P and Y/NP) for the postwar estimates is a debatable point because the maximum previous values occur in a war year; this does not reflect the standard of living which the nation could otherwise have maintained at that level of income. The procedure followed in this study was to use the 1946 income figure, the income of the first postwar year, as the maximum previous income for the 1947 estimate. However, shortages of consumer goods were still fairly widespread in 1946; moreover, there is some doubt as to the accuracy of the deflation between 1946 and 1947 (see *Conference on Business Cycles* [NBER, 1951], pp. 98-102 and 115). Therefore, the selection of maximum previous deflated income for 1948-50 was made excluding 1946 income from consideration.

* Figures in parentheses underneath coefficients are the absolute values of the ratios of those particular coefficients to their standard errors. Origin of *T* is Jan. 1, 1935 for functions fitted to 1929-40 and Jan. 1, 1932 for all others. Each unit of *T* is six months.

** a = 1929-40; b = 1923-40; c = 1923-30, '35-40.

† The von Neumann ratio *K* for testing for the presence of auto-correlation in the residuals is the ratio of the mean-square successive difference to the variance (of the residuals). The

expected values of *K* and the 5% and 1% points of its distribution are as follows:

Expected value	5%	1%
1929-40	1.071, 3.293	.797, 3.567
1923-40	1.206, 3.030	.960, 3.276
1923-30, '35-40	1.123, 3.185	.859, 3.449

‡ Negative signs indicate overestimates; positive signs, underestimates.
