## SOURCES AND METHODS

### Tables G-1, G-2, G-3 (Actual), and G-4 (Projected)

Rates were computed from the population and labor force data for 1890-1950 and 1940-65 described in sources for Table A-3. 1970 data, from [35, p. 130]. (Data for 1960 and 1970 include Alaska and Hawaii.)

### Tables G-3 and G-4 (Predicted)

Sex-age distributions of the "domestic" working-age population (i.e., excluding immigration during the preceding decade) obtained in the components of change analysis were used (cf. sources for Table A-3). For estimates of population and labor force by school-enrollment status, marital, and child-dependency status, use was made of [12, pp. 46, 54, 58], [52, p. 231], [116, Tables A-2, A-6], [174, p. 17], [177, p. 114], [195, pp. A-8, A-13], [196, p. 14], [202, p. 221], and relevant tables in the census summary volumes for 1950 and 1960. Projected population distributions for 1970 by these characteristics based on series B population projections, underlying [35], were kindly supplied by BLS.
