

### The Decline in African-American Representation in Unions and Auto Manufacturing, 1979-2004

BY JOHN SCHMITT AND BEN ZIPPERER

### Summary

- Between 1983 and 2004, the share of African-American workers who were either members of a union or represented by a union at their place of employment fell substantially, from 31.7 percent of all black workers in 1983 to 16.6 percent in 2004. In 2004, African-Americans were still more likely to be in a union (16.6 percent) than whites (13.9) and Hispanics (11.4 percent). Nevertheless, the decline in union membership for black workers between 1983 and 2004 was sharper for blacks (down 15.1 percentage points) than it was for whites (down 8.3 percentage points) and Hispanics (down 12.8 percentage points). (See Table 1.)
- Between 1979 and 2004, the share of African Americans working in manufacturing declined from 23.9 percent in 1979 to 10.6 percent in 2004. Whites saw slightly smaller declines (from 23.5 percent to 12.1 percent), while Hispanics experienced a bigger drop off (from 30.2 percent to 13.7 percent). (See Table 2.)
- Between 1979 and 2004, the share of workers in auto manufacturing dropped for blacks, whites, and Hispanics. Blacks suffered the biggest declines –a 0.8 percentage-point decline, from 2.1 percentage points in 1979 to 1.3 percentage points in 2004-- compared to a 0.2 percentage point drop for whites and Hispanics. (See Table 3.)
- Throughout the entire 1983-2004 period, black workers have represented 13-15 percent of all union workers. Over the same period, the share of whites in the total union workforce fell from 78.1 percent to 70.1 percent, and the share of Hispanics rose from 5.8 percent to 11.0 percent of all union workers. (See Table 4.)
- Throughout the entire period from 1979 to 2004, the share of African-American workers in the total manufacturing workforce hovered around 10 percent. Meanwhile, the share of white workers fell from 82.1 percent of all manufacturing workers in 1979 to 69.5 percent in 2004. Hispanics (and other

John Schmitt is an Economist and Ben Zipperer is a Research Assistant at the Center for Economic and Policy Research. CEPR thanks the Rockefeller Foundation for its financial support.

Center for Economic and Policy Research 1611 Connecticut Ave, NW Suite 400 Washington, DC 20009 tel: 202-293-5380 fax:: 202-588-1356 www.cepr.net workers) increased their representation in the manufacturing workforce over the same period (up from 6.1 percent of manufacturing jobs in 1979 to 14.6 percent in 2004, for Hispanics). (See Table 5.)

- In 2004, blacks made up 14.5 percent of the auto manufacturing workforce; whites were 73.3 percent; Hispanics, 7.5 percent. Between 1979 and 2004, the share of blacks and whites in the total auto manufacturing workforce both fell. The share of Hispanic and other workers, meanwhile, increased, although remained at relatively low levels. (See Table 6.)
- Interpreting the preceding changes in the distribution of African-American employment and unionization rates can be complicated since the share of African Americans and other racial and ethnic groups in the total workforce has changed over time. Tables 8, 9, and 10 show the "relative representation" of whites, blacks, and Hispanics in the total union workforce (Table 8), the total manufacturing workforce (Table 9), and the auto manufacturing workforce (Table 10). The simplest way to explain the calculation is with an example. To calculate the relative representation of African Americans in the share of all union workers, we take the ratio of the share of African Americans in all union workers (13.5 percent in 2004, in Table 4) to the share of African Americans in the total workforce (10.6 percent in 2004, in Table 7). The resulting ratio is 1.27, which is greater than 1, indicates that African Americans are "over-represented" among union workers since there is a larger share of African Americans in unions than there is in the workforce as a whole. In the same year, Hispanics made up 11.0 percent of union workers, but 12.9 percent of the total workforce, resulting in a relative representation of 0.85, which is less than 1, indicating that Hispanics are "under-represented" among union workers. If a group has the same share of workers in unions as they do in the total workforce, then the ratio for relative representation would equal one (which is close to the rate for whites in 2004, 0.99).
- In 2004, African-American workers were "over-represented" in unions (Table 8) and in auto manufacturing (Table 10), but are actually "under-represented" in manufacturing as a whole (Table 9).
- The relative representation of African Americans has been steadily declining in unions (Table 8), manufacturing (from the mid-1990s, Table 9), and auto manufacturing (Table 10). From the mid-1990s on, black workers have actually been under-represented in manufacturing, relative to the rest of the economy (Table 9). Meanwhile, white workers have held their ground in manufacturing (Table 9), and have actually increased their relative representation in unions (Table 8) and auto manufacturing (Table 10).
