Birkbeck was the central figure in the drama and Americans, who always felt comfortable in the assurances of old-world precedent, Glasgow, and London, were the proofs they urged in support of their own ambitions. They might just reasonably have looked for examples amongst themselves. The mechanics’ institute began simultaneously in Britain and the United States. The London Society and the Franklin Institute were established practically at the same time (Sinclair 1974, p.7)

Josiah Holbrook was the Birkbeck of America (Bode 1958)

San Francisco Mechanics’ Institute

- At the time of the San Francisco earthquake the Institute had 200,000 books,
- The building was destroyed with all its books and archives, including British patent reports going back to James 1, as well as technical and scientific papers and works of art.
- At the time of the fire, the librarian was already contacting book dealers and libraries in the eastern states by telegram asking if it was possible to send books, especially on architecture and engineering, for re-stocking in what was a temporary building established some five months after the earthquake….the rest is history!

The buildings at Saltaire, including the Mechanics Institute (now the Victoria Hall) were built in a neo-classical style very typical of the period.
The School, which faces the Mechanics Institute is also neo-Classical in style with it’s Ionic columns.
