# FOREWORD

Tanzania, like other developing countries in sub-Saharan Africa, is faced with challenges of both under- and overnutrition. Undernutrition comprises of a number of nutritionally related conditions such as protein-energy malnutrition and micronutrient deficiencies, including those of vitamin A, iron, and iodine. Approximately one-fourth of Tanzanian children aged 0 to 59 months are stunted or underweight for their age, and over 60% of all children and about half of all women are anemic. Many Tanzanians also appear to be deficient in energy and unable to sustain their expected level of physical activity.

At the same time, overnutrition-related diseases such as obesity, diabetes, and hypertension are rapidly increasing among the adult population, most conspicuously in urban centers, but also in rural areas. For example, estimates of diabetes prevalence increased from about 1% in the 1980s to about 5% in 2000. Likewise, the prevalence of hypertension in 1993 was estimated to be about 5%, but by 2000 it had reached 27% in rural populations and 39% in urban populations.

These problems cannot be addressed without adequate information on the diets of individuals and populations. This in turn requires reliable data on both the consumption of foods and their nutritional composition. These food composition tables are an essential resource for understanding and analyzing dietary intake data for both individuals and communities, and for developing healthy recipes and food products.

The need for comprehensive food composition tables for Tanzania was recognized in 1993, following the first MUHAS–Harvard collaborative research project, which was conducted at Muhimbili National Hospital. These food composition tables are a result of the combined efforts of MUHAS–Harvard and the Tanzanian Food and Nutrition Centre, and provide information on 47 nutrients in over 400 commonly consumed foods and local dishes. They are supplemented by adult and child food-portion-size databases that will be especially useful when no detailed information is available on the amounts of food consumed by individuals.

These food composition tables will be highly useful not only for nutritionists, but for all professionals interested in knowing the composition of a single food, a mixed meal, or the entire diets of individuals or populations. The food industry will also find this information valuable in developing healthy food products, while the French and Portuguese translations of the names of foods included will ensure the tables' use well beyond Tanzania's borders. The tables are also available electronically, which will ensure that they are continually updated and expanded as new information becomes available and new questions arise.

As someone who has worked on various nutritional problems in Tanzania over the past thirty-five years, I have seen the rapid emergence of several challenges in diet, health, and nutrition. The Tanzania Food Composition Tables represent a major landmark that will be of enormous value in meeting both these challenges and others that will certainly follow. My experience working on nutritional issues in both East and West Africa has led me to conclude that no country has had an adequate set of food composition tables until now. Everyone interested in the issues of nutrition in Africa should be grateful for the efforts of Ellen Hertzmark and Zohra Lukmanji, who led this major project, and to the many other individuals who have made it possible.

# PREFACE

The importance of having more complete and detailed food composition tables for Tanzania was recognized in 1993. Such a resource would allow us to analyze the dietary data being collected in the MUHAS–Harvard research studies to assess the impact of nutrition on HIV disease progression and opportunistic infections in both adults and children and in non-HIV and HIV-infected pregnant women. The extensive work on compiling the Tanzanian Food Composition Tables began in 1996. They include information on 47 nutrients in over 400 foods including local dishes. In addition, since children below two years are often fed on rice or ugali (stiff porridge) with broth, a section on the nutrient values of different broths is also included.

The compilation of the food tables was carried out in close collaboration with the Tanzania Food and Nutrition Centre (TFNC).

The MUHAS–Harvard Collaborative project represents a long-standing partnership between Muhimbili University of Health and Allied Sciences<sup>1</sup> (MUHAS, Dar es Salaam) and Harvard University School of Public Health (HSPH, USA). The aim of the MUHAS–Harvard Collaboration is to strengthen Tanzania’s human resource and infrastructure capacity for research and to support the development of operational research, randomized clinical trials and large-scale epidemiological studies in nutrition and infectious diseases, which also included dietary assessments.

In addition HIV and AIDS Care and Treatment Program was launched in 2004, as a collaborative effort between MUHAS, Dar es Salaam City Council and HSPH (MDH) with funding from the President’s Emergency Fund for AIDS Relief (PEPFAR). This program was developed to provide prevention, care, treatment, and support to adults and children with HIV and AIDS in Dar es Salaam, Tanzania. Since its initiation, the program has enrolled more than 50,000 HIV infected adults and children and over 30,000 are receiving antiretroviral therapy.

The Tanzania Food and Nutrition Centre is a government institution under the Ministry of Health and Social Welfare, established in 1973 by an act of Parliament. It is a semi-autonomous institution whose authority is a governing board representing ministries, sectors and institutions that are all stakeholders in the fight against malnutrition. The centre is well known for excelling at building alliances for community-based actions, providing policy guidelines and developing capacity for nutrition research and action. TFNC’s vision is to have a well-nourished nation. Its mission is to provide expert guidance to actors at various levels on the prevention and control of all forms of malnutrition through research, advocacy, education and training. Hence, the centre’s core function is to plan, coordinate, and implement food and nutrition programs, facilitate training, carry out research, and to advise government, institutions and public organizations. It is also responsible for increasing public awareness on the importance of good nutrition for the prevention of nutrition-related diseases

The Tanzania Food Composition Tables are divided into three sections. Section 1 describes how the tables were compiled. Section 2 consists of the food tables themselves. The information in the food tables is presented by food groups (e.g. cereals and cereal-based foods) and contains information on 47 nutrients (macronutrients, vitamins, minerals and amino acids). In addition, a list of recipes of local dishes can be found at the end of the food tables. These recipes were collected from several sources and manually analyzed for nutrient composition.

---

<sup>1</sup> Formerly Muhimbili University College of Health Sciences (MUCHS)

The names of all the foods and dishes have also been translated into Kiswahili, French, and Portuguese, to facilitate their wider distribution and in the sub-Saharan countries. These lists can be found at the end of Section 2 along with a list of permitted food additives and preservatives.

Section 3 is devoted to the adult and child food-portion databases. We hope they will be valuable resources for all those involved in dietary assessments and epidemiological research related to diet, nutrition, and health.

We are indebted to the many individuals who at various stages, provided great help on this ten-year project.

Most of the nutritional values are based on foods found in the WorldFood Dietary System, to which we were introduced by Ms Laura Sampson of Harvard School of Public Health (HSPH).

We also acknowledge the excellent assistance and advice of Dr Susan Murphy, University of Hawai, who is one of the pioneers of the WorldFood Dietary Assessment System.

We also wish to thank the staff of the MUHAS–Harvard nutrition unit for their efforts in collecting recipes for the local dishes and their contributions when compiling the adult and children food-portion databases. Our special thanks to Ms. Winnie Okuli, Ms. Mercy Tarimo, Ms. Rosemary Mwaisaka, Ms. Stella Lawrence, Ms. Anne Bush, and Ms. Laureta Lucas.

Invaluable and useful information was provided by colleagues at Beltsville Human Nutrition Research Centre and Food Composition Laboratory on imputing nutrients in foods, sources of recipes, portion-size determination and laboratory analysis of nutrients in foods. Our thanks to Dr. Joanne Holden and Dr. Jim Harnely.

We gratefully acknowledge the support and contributions of colleagues within the Department of Community Health and Nutrition, Tanzania Food and Nutrition Centre, where this database development was initiated in 1997.

The Tanzania Food Composition Tables have been extensively reviewed by experts from both within and outside of Tanzania. We extend our thanks to:

Dr Eduardo Villamor (HSPH), Ms. Laura Sampson (HSPH), Dr. Ruth Charrondiere and Dr. Babarah Burlingham, (FAO), Dr. Suzanne Murphy (University of Hawai), Dr. Julie Howe (USDA Nutrition Laboratory), Dr. T. N. Malentlema (Child Growth and Promotion Union, Dar es Salaam), Professor Cornelius Nyaruhucha (Sokoine University of Agriculture, Tanzania), Dr Mel Olouch (World Vegetable Centre, Arusha), Ms. Helen Semu, and Dr. Fatma Abdallah (Tanzania Food and Nutrition Centre).

The names of foods and dishes included in the TFCT were translated into French by Mrs. Tasnim Yusufali and into Portuguese by Ms. Armanda Mani (The International baby food action network), UNICEF- Mozambique and Dr Anna Lindsay (HSPH).

We would like to acknowledge the support of Mr. Donald Halstead (HSPH) who has reviewed and edited this text and to Mr. Philemon Kaganda of Desk Top Publishers, Dar es Salaam for designing and production of the tables

# **BACKGROUND**

# Tanzania Food Composition Tables

## 1.1 Introduction

### 1.1.1 Overview

The Tanzania Food Composition Tables (TFCT) are considered to be an extended version of the food items already available in the TFCT compiled by Marealle in the early 1970s and later reviewed and updated in the 1980s by West et al. (1,2). Other food composition tables in use were the one compiled by Platt (3). While these food composition tables are still in use however, they are limited to raw foods and in terms of the types of foods they list. Hence there was a need to develop comprehensive food composition tables for Tanzania.

The TFCT gives information on 47 nutrients<sup>2</sup> of over 400 commonly consumed foods and local dishes based on recipes collected from several sources in Tanzania. These data are based on the WorldFood Dietary Assessment System (WFDAS) developed<sup>3</sup> at the University of California at Berkeley, in 1994 (4, 5). WFDAS is available on the FAO website and is designed to facilitate rapid dietary assessments (4, 5).

We hope that these food tables will be an important reference for all those involved in assessing energy and nutrient intake, determining the effects of dietary intake on health and disease outcome, developing of dietary guidelines, planning menus for schools, prisons, orphanage centers and hospitals, as well as for nutrition education, counseling and health promotion of communities in Tanzania and neighboring countries. In addition, it will be an excellent guide for food industries when developing new healthy foods.

### 1.1.2 Objectives

The aim of the Tanzania Food Composition Tables, a national comprehensive food database, is to provide values for the amount of energy and nutrients (e.g. protein, fat, vitamins and minerals) that a food item contains and to facilitate scientific research and studies in diet related disease and in developing new healthy foods.

### 1.1.3 Users and Uses

Data on food composition are essential for a variety of purposes in many fields. The following list indicates some of the potential users and uses of TFCT.

- Clinical practice—enable dietitians to analyze diets, develop meals, and plan menus to ensure that patients' nutritional needs are met.
- Agricultural sector—ensure that the foods produced provide sufficient nutrients.
- Health educators and policy-makers—translate nutrient information into messages to the public about foods that promote good health.
- Trade, export and legislation—to ensure that the nutrient content of foods and food products do not carry any health risks and in line with specified regulations of Codex Alimentarius
- Food manufacturers and producers—to calculate nutrient values for food labeling purposes, and to formulate new products to meet specific nutrient composition.

<sup>2</sup> WorldFoods consists of 48 nutrients (Table 1.1)

<sup>3</sup> The system provides totals for 48 nutrients and percents of internationally recommended intakes for 21 nutrients. WorldFood 1 was released in 1994, and WorldFood 2 became available in 1996. The WorldFood program takes user-specified dietary data, analyzes it using the appropriate cross-reference indexes plus the IML, and then generates dietary nutrient totals.

- Researchers —enable the analysis of the diet intake data of individuals and populations in order to determine dietary correlates with diseases and their causes .

## 1.2 Development of the Tanzania Food Composition Tables

### 1.2.1 WorldFood Dietary Assessment System (WFDAS)

TFCT are based on the WFDAS, which include the International Food Composition Tables (the International MiniList or IML) in 1988–1992 at UC Berkeley, which were developed as part of the WorldFood Dietary Assessment Program (WFDAP) (4). This approach was adopted following the Nutrition Collaborative Research Support Program (Nutrition CRSP) in Egypt, Kenya, and Mexico in 1983–86 (5). The IML includes foods from Egypt, Kenya and Mexico as well as Indonesia, India, and Senegal. The IML provides information on a total of 48 nutrients in 195 foods which represent the foods consumed in most developing countries. The nutrient content of each food is per 100 g edible weight (4).

WFDAS is programmed to facilitate: the creation of additional databases by importing foods from the six country databases already within the system; the analysis of individual diets and the recipes, and the addition of foods from other sources.

**Table 1.1. List of Nutrients in IML**

Macronutrients (14)	Vitamins (12)	Minerals (10)	Amino Acids (12)
Energy	Vitamin A	Calcium	Tryptophan
Animal kcal	Animal vitamin A	Phosphorus	Threonine
Total protein	Vitamin D	Magnesium	Isoleucine
Animal protein	Vitamin C	Potassium	Leucine
*MFP protein	Vitamin E	Sodium	Lysine
Total Fat	Thiamine	Iron	Valine
Carbohydrate by difference	Riboflavin	*MFP – iron	Methionine
Sucrose	Niacin	Zinc	Cystine
Saturated fats	Folate	Copper	Tyrosine
Monounsaturated fats	Vitamin B6,	Manganese	Phenylalanine
Polyunsaturated fats	Vitamin B12		Arginine
Cholesterol	Pantothenic Acid		Histidine
Fiber			
Phytic acid			

**\*Meat, Fish and Poultry**

### 1.2.2. Compilation of the Tanzania Food Composition Tables

A floppy diskette of the WorldFood Dietary Assessment Program (WFDAP)<sup>4</sup> was obtained from UCLA and installed on a personal computer. It was accompanied by a manual with instructions on how to install the databases, diet intake analysis of individuals and recipes, and the import foods to create a new database.

<sup>4</sup> WFDAP can now be downloaded from <http://www.fao.org/infood/software/worldfood.html> (8)

Foods available and consumed in Tanzania and East Africa were identified and imported from IML, and Kenya food database. Any food not found in the Kenya database was imported from one of the other five countries' databases in WFDAP or from other appropriate food composition tables (9,10,11,12).

### 1.3 Food Groups

The foods were categorized into specific food groups, and the food composition tables were organized into eight sections (Table 1.2).

Each food group was assigned food codes of a specific range; for example cereals 1–100, fruit and fruit juices 101–150, and so on. The number of food codes exceeds the total number of foods, so as to accommodate the addition of new foods to any specific food group in the food composition tables. Local dishes are included in the appropriate food group and have been assigned specific food codes (Table 1.3).

The foods within each food group are listed alphabetically, not by food code. Except for animal kcal, all the nutrients shown in Table 1.1 are included in the Tanzania Food Composition Tables.

**Table 1.2. Food groups and food codes in Food Composition Tables**

	<b>Food Group</b>	<b>Food codes assigned</b>
A1	Cereals and cereal products	1–100
A2	Cereal-based local dishes	501–550
B1	Roots, tubers, bananas	351– 400
B2	Roots, tubers, and banana-based local dishes	951–1000
C1	Pulses, nuts, seeds	151–200
C2	Pulse, nut and seeds-based local dishes	651–700
D1	Meat, poultry (including eggs), fish	201–250 and 301–350
D2	Meat, poultry (including eggs), fish-based local dishes	551–600
D3	Milk and milk products	251–300
E	Oils and fats	1101–1150
F1	Fruit and fruit juices	101–150
F2	Fruit-based local dishes	601–650
F3	Vegetables	401–450
F4	Vegetable-based local dishes	751–800
GMI	Miscellaneous	451–500
GM2	Miscellaneous local dishes	
H	Locally prepared broths	851–900

**Table 1.3 Details of the food items in each food group**

	<b>Food Group</b>	<b>Details</b>
A1	Cereals and cereal products	Cereals such as rice, wheat, oat. Cereal products such as bread, biscuits, porridge, breakfast cereals
A2	Cereal-based local dishes	Local dishes prepared with cereals (e.g. porridges, chapatti)
B1	Roots, tubers, and bananas	Foods such as potatoes, cassava, taro and banana
B2	Roots, tubers, and banana-based Local dishes	Local dishes prepared with roots, tubers and bananas (e.g. cassava with coconut, potato chips)
C1	*Pulses, seeds, nuts	Mature and immature legumes, pulses, and foods commonly referred to as nuts and seeds
C2	*Pulses, seeds, and nuts-based local dishes	Local dishes with pulses, nuts and seeds (e.g. pigeon pea relish).
D1	Meat, poultry, fish	Foods commonly referred to as meat, poultry (including eggs) and fish products (e.g. sausages)
D2	Meat, poultry, and fish-based local dishes	Cooked dishes prepared with meat, poultry or fish (e.g. fish or chicken or beef relish)
D3	Milk and milk products	Milk and milk products, including sweetened condensed milk, ice cream, infant formula, yogurt, skim milk (dry or liquid), cheese
E	Oils and fats	Also includes foods concentrated in fats and oils (e.g. coconut)
F1	Fruit and fruit juices	Foods commonly referred to as fruits including avocado, but not tomato or cucumber
F2	Fruit-based local dishes	Fruit jams, juices, fruit salad with citrus fruit such as orange or pulp fruit such as papayas
F3	Vegetables	Foods commonly referred to as vegetables such as carrots, tomatoes, spinach, pumpkin leaves, immature maize, pumpkin
F4	Vegetable-based local dishes	Cooked dishes prepared with vegetables (e.g. spinach relish with oil).
GM1	Miscellaneous	Dried spices, sugar, honey, insects, alcoholic and non alcoholic drinks, water sherbet, sauces, salt
GM2	Miscellaneous local dishes	All beverages such as tea, coffee, local brews. Snacks such as groundnut cluster
H	*Broths	Clear liquids produced by cooking meat, poultry, fish, seafood, or vegetables in water and other ingredients, such as onion, tomatoes, salt, oil

\*An edible seed from a pod (e.g. peas, beans), eaten fresh or dried.

\*Defined as a liquid food made by cooking meat, fish, vegetables or other ingredients in water, milk, or stock

## 1.4 Features of the Tanzanian Food Composition Tables

All food items including the local dishes for each food group have been arranged into 17 groups (Tables 1.2). Table 1.3 also shows the details of the specific food items included in these food groups. Table 1.4 depicts an example of the layout of the food composition tables. Nutrient values are expressed per 100 grams. Each food item is identified by a unique food code.

A missing nutrient value for any food item is indicated by zero (0) in the tables.

All nutrient values are expressed to either the nearest one decimal point (e.g. 20.12 is expressed as 20.1) or to two decimal points (e.g. 0.5645 as 0.56 and 0.677 as 0.68).

The nutrient values of all foods are expressed per 100 g edible portion for raw or cooked foods unless otherwise indicated. Different food codes have been assigned to the same foods listed as raw, cooked, edible portion (EP) and all portion (AP). All the nutrient values were adjusted for moisture and waste in the original IML on which the food composition tables are based.

### 1.4.1 Terms in the Food Composition Tables

**RAW-EP:** Raw or uncooked—edible portion before cooking and is the part of the food that is eaten. Excludes any waste, such as seeds, skin (if not eaten), bones, etc.

**RAW-AP:** Raw or uncooked food—both the edible and inedible components (e.g. seeds, peel, shells, bones).

**COOKED-EP:** Cooked, edible portion—food after cooking of the part that is eaten excluding any waste, such as seeds, skin (if not eaten), bones, etc.

**COOKED-AP:** Cooked, as purchased—food after cooking; includes the waste (e.g. peel, bones).

**Table 1.4. Example of the layout of the Tanzania Food Composition Tables**  
Nutrient values expressed per 100 g of Edible Food Item

Food code	Macronutrients	Energy	Protein	Animal Protein	MFP Protein	FAT	CHO DF
		Kcal	g	g	g	g	g
<b>A1</b>	<b>Cereals and cereal products</b>						
1	Biscuit	434	9.2	0	0	11.8	71.5
2	Bread roll	274	8.8	0	0	3	51.9
3	Bread, white	274	8.8	0	0	3	51.9
5	Buns	274	8.8	0	0	3	51.9
	<b>Local dishes</b>						
<b>A2</b>	<b>Cereal-based local dishes</b>						
513	Chapatti (Dry)	208	5	0	0	4	38
512	Chapatti with oil	372.6	5.9	0	0	19.5	50.6
532	Donut – African	359.7	5.2	0	0	15.5	50.6

## 5. Local Dishes

### 1.5.1 Sources of Recipes of Local Dishes

Also included in the Tanzania Food Composition Tables are recipes of a variety of commonly consumed local dishes which were collected and manually analyzed for nutrient content.

These recipes were obtained from:

- Diet surveys carried out by Tanzania Food and Nutrition Centre (TFNC) staff in different areas of Tanzania using either “weigh and record” or “24 hour diet recall” methods
- Weighed and recorded surveys with MUHAS–Harvard project participants
- Street food vendors
- MUHAS student canteen
- MUHAS–Harvard data entry clerks
- Composition tables of South African foods (9)
- Recipe books and recipe websites (13,14,15)

It must be pointed out that the preparation conditions for recipes, such as cooking temperature and duration, can vary and dramatically affect cooking yields and changes in retention of micronutrients. Foods included in the IML were adjusted for cooking and retention factors, but we did not apply these factors to any of the recipes included here. Our calculations were based on the nutrient values of the raw materials. Therefore, the nutrient values of the cooked dishes are only rough estimates.

### 1.5.2. Analysis of Nutrients in Locally Cooked Dishes

The type and amount of raw ingredients in each recipe were weighed and recorded with diet scales or estimated using household utensils. The total amount that remained after cooking was then weighed or estimated.

The total nutrient composition of each recipe was obtained by calculating the nutrient value of each raw ingredient and then summing all these values. The total nutrient content per 100 g cooked dish A was calculated as follows (e.g. Table 1.4):

$$\frac{100 \text{ g Food A} = \text{Total nutrient content A dish}}{\text{Total amount A dish}} \times 100$$

The cooked dish was then categorized by food group

**Table 1.5 Example of a TFCT Recipe Calculation**

Pancake: Total cooked amount = 2000 g (20 pancakes)						
*Food code	*Ingredient	Amount g	*Energy Kcal/100 g	Total Energy	*Protein g / 100 g	Total Protein g
30	Wheat flour	1000	364	3640	12.3	123
307	Egg, Chicken	300	155	465	12.6	37.8
463	Salt iodized	4	0	0	0	0
1113	Vegetable oil	300	862	2586	0	0
Total per recipe	<i>Water was added but not weighed</i>			6691	24.9	160.8
Per @100 g			334.6		8	—

\*As in FDB

@Total nutrient A x 100/ Total cooked food weight (g).

### 1.5.3 Recipes of Local Cooked Dishes

We collected more than one recipe for several dishes. Nutrients were calculated for each recipe and then the average values for a particular dish were entered in the Tanzania Food Composition Tables. These recipes were not standardized for waste or vitamin loss during cooking. For this information the user may refer to the FAO Food composition tables for use in Africa and the USDA National Nutrient Database for Standard Reference, Release 19 (10, 11), both of which are available online.

Each recipe was assigned a food code. The recipes are listed by their codes at the end of food tables in Section 2. We hope this will enable the users to easily refer to the information on recipes and ingredients.

## 1.6 Nutrients

### 1.6.1 Energy

The energy value of the foods is given in kilocalories (1 kcal = 4.184 joules).

The percentage of energy contributed by the protein, fat, and carbohydrate in a food is based on factors of 4 kcal/g for protein, 9 kcal/g for fat, 4 kcal/g for total carbohydrate (i.e. available carbohydrate plus dietary fiber), and 7 kcal/g for alcohol. The sum of these percentages does not usually add up to 100%.

### 1.6.2 Protein

Total protein value is given as grams per 100 g food. Separate values for total animal protein and total protein of meat, poultry, and fish (MFP protein, excludes milk), already included in total protein, are also given as gram per 100g food.

### 1.6.3. Fat

The total fat value, given as grams per 100 g food, is subdivided into saturated, monounsaturated, and polyunsaturated fatty acids. In addition to fatty acids, the total fat in a food may include non-fatty acid components of phospholipids, unsaponifiable components, such as sterols, and the glycerol component of triglycerides.

#### 1.6.4 Cholesterol

This is given as mg/100g food.

#### 1.6.5 Carbohydrates

The value of “total carbohydrate” is the difference between 100 minus the sum of the figures for protein, fats, ash, water and alcohol when present. It is expressed as grams per 100 g food. Total carbohydrate value includes both the unavailable carbohydrates (dietary fiber) and available carbohydrates (free sugar, dextrin, starch, glycogen and added sugar).

#### 1.6.6 Dietary fiber and Phytate

The fiber content of the food is given as dietary fiber in grams per 100g. Dietary fiber is a substance found in foods that come from plants (whole cereals, fruits and vegetables) and typically cannot be digested. It is also called bulk or roughage.

Phytate or phytic acid is expressed as mg/100 g food. Phytic acid is inositol hexaphosphate. It is found in plant cells, especially in seeds, where it acts as a storage compound for phosphate groups.

#### 1.6.7. Sucrose

This value given in grams per 100 g represents the total amount of naturally occurring sugars in the food, for example, lactose in milk and or fructose in fruits.

#### 1.6.8 Vitamins

Vitamin A values are given in retinol activity equivalents (RAE)<sup>5</sup>.

1 µg RAE = 1µg retinol = 3.33 IU

= 12 µg β carotene = 24 µg of other provitamin A carotenoid.

The total vitamin A value in µg/100 g includes both the plant and animal sources. A separate value for vitamin A from animal sources is also given per 100 g food.

Thiamine, riboflavin, Vitamin B6, Vitamin C, pantothenic acid and niacin are expressed as mg/100 g food. Folate, Vitamin B12, Vitamin E, and Vitamin D are expressed as µg/100 g food.

The term “niacin” includes both nicotinic acid and nicotinamide but not the nicotinic acid that could be contributed by tryptophan. Tryptophan is converted in the body to nicotinic acid with varying efficiency. On average 60 mg tryptophan is equivalent to 1mg niacin.

The values for vitamin C refer to total ascorbic acid; that is reduced plus dehydroascorbic acid, as both forms are active.

Vitamin D is expressed as µg cholecalciferol (1 IU vitamin D = 0.25 µg). The values of vitamin E are for α-tocopherol equivalents (1 IU vitamin E = 0.67 mg α-tocopherol equivalents).

---

<sup>5</sup>The Institute of Medicine panel (2001) for Dietary Reference Intakes for Vitamins and Minerals recommended that the factors for activity of provitamin A carotenoids be reduced to one-half of the previous values 1:6 to 1:12 for beta-carotene and from 1:12 to 1:24 for other provitamin A carotenoids. The vitamin A content of all foods in the IML are based on these new factors.

### **1.6.9 Minerals**

Calcium, phosphorus, iron, magnesium, potassium, sodium, zinc, copper and manganese are given in mg/100 g. The total iron value includes iron into animal meat, poultry and fish (excluding milk and eggs). MFP iron values also included in the food tables

The sodium values of most cooked foods and dishes represent the food's natural sodium content (salt not added), except for a few cooked dishes as indicated in the recipes and for purchased and processed foods, such as butter and tomato sauce. Baking powder added to recipes was not considered. (salt considered only where included in the recipe but not where not included

### **1.6.10. Amino Acids**

The 12 amino acids, including the 9 essential ones, are given in mg/100 g food.

## **1.7. Imputation of Nutrients**

Nutrient values obtained by imputation are estimates derived from analytical values of a similar food (e.g. values for peas used for green beans) or for another form of the same food (e.g. values for "boiled" used for "steamed"). They may also be derived by calculation from incomplete or partial analyzes of a food (e.g. carbohydrate or moisture by difference, sodium derived from chloride values or, more commonly, chloride calculated from the value for sodium). Similar calculations can be made by comparing data for different forms of the same food (e.g. "dried" versus "fresh" or "defatted" versus "fresh") (18)

**Table 1.6 Field and Measuring Units for Nutrients**

FOOD CODE	This is the food code field, which uniquely identifies each food in the food composition table.
FOOD NAME	This is the field for the food name
<b>MACRONUTRIENTS</b>	
ENERC_KCAL	Energy in kilocalories
PROCNT	Total protein in grams
A_PROTEIN	Protein in grams from animal sources
MFP_PROTEI	Protein in grams from meat, fish, and poultry (does not include milk and eggs)
FAT	Total fat in grams
CHOCDF	Total carbohydrates by difference in grams
SUCS	Total sugar in grams
FASAT	Saturated fatty acids in grams
FAMS	Monounsaturated fatty acids in grams
FAPU	Polyunsaturated fatty acids in grams
CHOLE	Cholesterol in milligrams
FIB	Fiber, method of determination unknown (dietary fiber), in grams
PHYTAC	Phytate in milligrams
<b>VITAMINS</b>	
VITA	Vitamin A in retinol equivalents (micrograms)
A_VITA	Animal source vitamin A in retinol equivalents (micrograms)
VITD	Vitamin D in micrograms
VITE	Vitamin E in tocopherol equivalents
VITC	Vitamin C in milligrams
THIA	Thiamin in milligrams
RIBF	Riboflavin in milligrams
NIA	Niacin, pre-formed in milligrams
VITB6	Vitamin B6 in milligrams
FOL	Folate in micrograms
VITB12	Vitamin B12 in micrograms
PANTAC	Pantothenic acid in milligrams
<b>MINERALS</b>	
CA	Calcium in milligrams
P	Phosphorus in milligrams
MGM	Magnesium in milligrams
K	Potassium in milligrams
NA	Sodium in milligrams
FE	Iron in milligrams
MFP_FE	Iron from meat, fish, and poultry in milligrams (does not include milk or eggs)
ZN	Zinc in milligrams
CU	Copper in milligrams

Table 1.6 continued

AMINO ACIDS	
TRP	Tryptophan
THR	Threonine
ILE	Isoleucine
LEU	Leucine
LYS	Lysine
MET	Methionine
CYS	Cystine
PHE	Phenylalanine
TYR	Tyrosine
VAL	Valine
ARGM	Arginine
HIS	Histidine

## 1.8 Bioavailability of Nutrients

The term bioavailability (biological availability) is defined as the proportion of a nutrient in food that is utilized for normal body function (11). Many nutrients, including iron, calcium, magnesium, zinc, copper, manganese, niacin and folate, are not totally absorbed and utilized. No allowance for this has been made in the Tanzania Food Composition Tables and the values given are the actual values of the raw ingredients.

This should be noted when interpreting the analyzed dietary intake data. The WorldFood Dietary Assessment Program may be used to calculate the available iron and zinc intakes.

## 1.9 Calculating of Nutrient Intakes Using the TFCT

- Choose the item in the tables that corresponds most closely with the foods consumed.
- If the food consumed is not in the tables, then choose a suitable alternative by considering the type of food, general characteristic of the food, and likely nutrition profile. However, the results might not be fully accurate, and other sources of data may be sought (e.g. South African food tables or the USDA National Nutrition database (9,11).
- Once the food has been selected, the nutrient intakes are calculated by multiplying the nutrient figure shown in the tables by the weight of the food consumed (nutrients are expressed per 100 g or 100 mL in case of beverages). For example, if 60 g food has been consumed, multiply the nutrients by 0.6; if 150 g has been consumed, multiplied by 1.5. The results from these calculations, when added, will give the total nutrient intake.
- **Recipes**  
If the sample of food consumed is a cooked dish prepared with a different recipe from those in this book, its nutrients can be calculated using the method given in Table 4.

- **Portion Sizes**

If the weight of food consumed has not been recorded or if an estimate is required, refer to Section 3 for the food-portion databases for adults and children.

#### **1.10 Limitations of Using the Tanzania Food Composition Tables**

- The units and conversion factors used in calculating the nutrient values of foods in these tables may not be comparable with those in other countries or literature reports.
- Estimates of the amount consumed may over- or underestimate the actual amount eaten as compared with the recorded weight.
- The nutrient values of local cooked dishes were not adjusted or standardized for percentage waste and vitamin loss during cooking.

#### **1.11 Possible Sources of Errors**

- Errors will arise if a food is classified incorrectly; for example, if it is assumed that plain rice was consumed when it was in fact rice cooked with coconut.
- In manual coding systems, incorrect food code numbers may be used. In computerized systems, mistakes can occur when entering numbers.
- Errors can occur when measuring and recording food weights, which will affect the calculation of nutrient intakes.

#### **1.12 Vitamin Loss estimation in Foods and Recipe Calculation**

The information on the losses of heat- and water-labile vitamins during cooking is presented in Tables 1.7-1.9<sup>6</sup>.

They have been estimated by assigning a set of factors for percentage vitamin losses to each ingredient in the recipe, according to its food group and the method of cooking. These values should be treated as guidelines only.

## H. Local Broths

These are referred to clear liquid produced by cooking meat, poultry, fish, seafood or vegetables in water and other ingredients such as onion, tomatoes, salt, oil and then removing it.

A broth can be clear soup, or gravy or sauce of any relish

The nutrient composition is based on the recipe of the relishes found in other sections

**Table 2.2 Foods Names: English and Kiswahili**

	Foods – names in English	Majina ya vyakula kwa kiswahili
<b>A1</b>	<b>Cereal and Cereal products</b>	<b>Nafaka na bidhaa za nafaka</b>
1	Biscuit	Biskuti
2	Bread roll	Mkate wa miviringo
3	Bread, white	Mkate
6	Cake	Keki
7	Cookie	Biskuti
8	Donut	Mandazi
9	Infant cereal, Cerelac	Cerelac (chakula cha mtoto)
33	Macaroni or spaghetti	Tambi
10	Maize, cracked, cooked	Mahindi ya kukobolewa yaliyopikwa
11	Maize, dried, raw	Mahindi makavu
12	Maize flour, dry	Unga wa mahindi
13	Maize green., cooked	Mahindi ya kuchemsha
14	Maize, on the cob, immature	Mahindi machanga
15	Maize, yellow, flour	Unga wa mahindi ya njano
16	Millet, bulrush	Uwele
17	Millet, finger, grain or flour	Ulezi, Unga wa ulezi
34	Mixed porridge flour (maize and oil)	Unga wa uji mchanganyiko (mahinidi na mafuta)
18	Mixed porridge flour (maize)	Unga wa uji mchanganyiko na mahindi
19	Mixed porridge flour (no maize)	Unga wa uji mchanganyiko bila mahinidi)
20	Porridge, fermented	Uji uliochachuka
22	Rice flour, local	Mchele au unga wa mchele wa kenyeji
21	Rice, fried and boiled	Wali wa kukaanga na kuchemsha
23	Rice, white grain, raw	Mchele
35	Semolina	Semolina
24	Sorghum	Mtama
26	Sorghum, flour	Unga wa mtama
27	Vermicelli, uncooked	Tambi zisizopikwa
28	Wheat, dough, deep fried	Half keik ya ngano
29	Wheat flour	Unga wa ngano usiokobolewa
30	Wheat flour, 72% extract	Unga wa ngano wa chapati za kihindi – uliokobolewa
31	Wheat, flour, maida	Unga wa ngano mweupe
<b>A2</b>	<b>Cereal-based local dishes</b>	<b>Vyakula vyenye asili ya nafaka</b>
534	Cake (home made)	Keki ya kutengeneza nyumbani
513	Chapati (dry)	Chapati bila mafuta
512	Chapati with oil	Chapati yenye mafuta
532	Donut- african	Mandazi
525	Maize and kidney bean dish	Makande

523	Maize and sorgum ugali (stiff porridge)	Ugali wa mahindi na mtama
531	Maize porridge with margarine and sugar	Uji wa mahindi yenye marjarine na sukari
505	Maize porridge without sugar no milk	Uji wa mahindi bila sukari na maziwa
506	Maize porridge with sugar	Uji wa mahindi wenye sukari
502	Maize porridge with sugar and egg	Uji wa mahindi wenye sukari na yai
507	Maize porridge with sugar and milk	Uji wa mahindi wenye sukari na maziwa
519	Maize ugali (stiff porridge)	Ugali wa mahindi
508	Millet Porridge with sugar	Uji wa ulezi wenye sukari
509	Mix Flour Porridge with sugar	Uji wa unga mchanganyiko wenye sukari
514	Pancake	Chapati maji
543	Rice biriyani	Biriani
516	Rice boiled without oil	Wali bila mafuta
517	Rice boiled with oil	Wali wenye mafuta
530	Rice bread	Mikate kumimina
524	Rice bun	Kitumbua
515	Rice and meat pillau	Pilau
544	Rice and mung dish with coconut milk	Mseto wenye tui la nazi
545	Rice and mung dish without coconut milk	Mseto bila tui la nazi
533	Rice poridge with coconut without sugar	Uji wa mchele wenye tui la nazi bila sukari
528	Rice porridge with sugar	Uji wa mchele wenye sukari
521	Rice ugali (stiff porridge)	Ugali wa mchele
518	Rice with coconut milk	Wali wenye tui la nazi
540	Rice with ground meat	Wali na supu ya nyama ya kusaga
522	Sorgum and millet ugali (stiff porridge)	Ugali wa mtama na ulezi
511	Sorgum porridge with sugar	Uji wa mtama wenye sukari
527	Vermicelli - cooked	Tambi za kupika
535	Vermicelli with coconut milk and sugar	Tambi zenye tui la nazi na sukari
536	Vermicelli with oil and sugar	Tambi zenye mafuta na sukari
537	Vermicelli with coconut milk and salt	Tambi zenye tui la nazi na chumvi
529	Wheat fritter sweet	Visheti
542	Wheat porridge	Uji wa ngano
<b>B1</b>	<b>Roots, Tubers and Bananas</b>	<b>Mizizi, Viazi na Ndizi</b>
352	Banana, cooked	Ndizi ya kupika
365	Breadfruit, unripe	Sheli sheli mbichi
362	Cassava, dried	Mhogo mkavu
359	Cassava, dried flour	Unga wa mhogo mkavu
358	Cassava, raw	Mhogo mbichi
364	Cassava, spicy crisp or chips	Chips za mihogo
367	Edible starch, tapioca or corn	Wanga (mahindi/magimbi)
354	Potato, crisps, plain, salted	Crisps/chipsi

353	Potato, English, cooked	Viazi viringo vilivyopikwa
357	Squash, summer, fresh –AP	Mung'unya na maganda
366	Squash, summer, fresh,-EP	Mung'unya bila maganda
369	Sweet potato, red-orange	Viazi vitamu ya nyekundi -njano
361	Sweet potato, fresh –EP	Viazi vitamu bila maganda
360	Sweet, potato, fresh – AP	Viazi vitamu na maganda
356	Taro , raw	Magimbi ya kupikwa
368	Yam	Viazi vikuu
<b>B2</b>	<b>Roots, Tubers and Banana-based local dishes</b>	<b>Asili ya Mizizi, Viazi na Ndizi</b>
974	Banana porridge, plain	Mtori – wa kawaida
975	Banana porridge with meat	Mtori – wa nyamai
976	Banana porridge with fish	Mtori –wa samaki
977	Banana Porridge with meat, spinach	Mtori wenye nyama na spinachi
954	Banana with cashew nut	Ndizi za kupika zenye korosho
955	Banana with coconut milk	Ndizi za kupika zenye tui la nazi
968	Banana with kidney beans	Ndizi za kupika zenye maharage
953	Banana with meat	Ndizi za kupika zenye nyama
952	Banana with meat and coconut milk	Ndizi za kupika zenye nyama na tui la nazi
973	Banana with meat, oil, vegetable,	Ndizi ya kupika yenye nyama,,mafuta,mboga
951	Banana with oil ( without meat )	Ndizi ya kupika yenye mafuta (bila nyama)
969	Banana, boiled	Ndizi ya kuchemsha
964	Banana, fried	Ndizi ya kukaanga
971	Banana, roast	Ndizi ya kuchoma
541	Cassava porridge with sugar	Uji wa mihogo wenye sukari
526	Cassava stiff porridge	Ugali wa mihogo
956	Cassava with coconut milk	Mihogo yenye tui la nazi
965	Cassava, boiled	Mihogo ya kuchemsha
957	Cassava, fried	Mihogo ya kukaanga
978	Kachori (spicy potato balls)	Kachori
960	Potato chips	Chipsi
959	Potato relish with beef	Mchuzi wa viazi vyenye nyama
972	Potato relish with coconut milk	Mchuzi wa viazi vyenye tui la nazi
958	Potato relish with oil	Mchuzi wa viazi vyenye mafuta
961	Potato, boiled	Viazi vya kuchemsha
963	Roots and tubers mixed (futari)	Futari
967	Sweet potato, boiled	Viazi vitamu vya kuchemsha
966	Sweet potato, fried	Viazi vitamu vya kukaanga
970	Taro, cooked, without salt	Magimbi ya kuchemsha bila chumvi

<b>C1</b>	<b>Pulses, Nuts and Seeds</b>	<b>Jamii ya maharage,njugu na mbegu</b>
179	Almonds	Lozi
151	Bambara groundnut, fresh	Njugu mawe mbichi
154	Bean, kidney, green, cooked	Maharage mabichi yaliyopikwa
170	Bean, kidney, mature seeds, raw	Maharage mabichi yasiyopikwa
153	Bean, kidney, mature, boiled without salt	Maharage makavu yaliyopikwa
155	Bean, mung, dry	Choroko kavu
156	Bean, mung, raw	Choroko mbichi
157	Cashewnut	Korosho
158	Chickpea	Dengu
159	Chickpea flour (besan)	Unga wa dengu
162	Cowpea, green, uncooked	Kunde changa mbichi zisizopikwa
163	Cowpea, uncooked	Kunde kavu zisizopikwa
164	Groundnuts	Karanga
173	Hyacinth beans (dried)	Fiwi kavu
174	Hyacinth beans, immature, raw	Fiwi mchanga mbichi
176	Hyacinth beans, immature, boiled without salt	Fiwi changa zilizopikwa
180	Lentils, whole	Adesi
177	Lentils, cooked	Adesi zilizopikwa
175	Palm seed	Mbegu za mawese
178	Peanut butter, smooth	Siagi ya karanga
165	Pigeon peas, cooked	Mbaazi uliyopikwa
166	Pigeon peas, green	Mbaazi mchanga mbichi
171	Pigeon peas, raw	Mbaazi kavu hazijapikwai
172	Pumpkin seed	Mbegu za boga
167	Sesame seed	Ufuta
168	Soybean, yellow	Maharage ya soya ya njano
169	Sunflower seeds	Mbegu za alizeti

<b>C2</b>	<b>Pulses, nuts, seeds-based local dishes</b>	<b>Asili ya kunde, ndugu na mbegu</b>
663	Bambara ground nut relish with coconut milk	Mchuzi wa njugu mawe wenye tui la nazi
32	Bhajia (chickpea flour fritters)	Bhajia
664	Chick pea relish with coconut milk	Mchuzi wa dengu wenye tui la nazi
653	Cow pea (dry) relish without oil	Mchuzi wa kunde bila mafuta
654	Cow pea (dry) relish with oil	Mchuzi wa kunde wenye mafuta
651	Cow pea (fresh) relish without oil	Mchuzi wa kunde mbichi bila mafuta
652	Cow pea relish with coconut milk	Mchuzi wa kunde wenye tui la nazi
657	Kidney bean relish without oil	Mchuzi wa maharage bila mafuta
656	Kidney bean relish with oil	Mchuzi wa maharage wenye mafuta
655	Kidney bean relish with coconut milk	Mchuzi wa maharage wenye tui la nazi
662	Mung bean (dry) relish with coconut milk	Mchuzi wa chorok wenye mafuta
658	Mung bean (dry, boiled)	Choroko zilizopikwa
659	Pigeon pea (fresh, cooked)	Mbaazi mbichi zilizopikwa
660	Pigeon pea relish with coconut milk	Mchuzi wa mbaazi wenye tui la nazi
661	Pigeon peas relish with oil	Mchuzi wa mbaazi wenye mafuta

<b>D1</b>	<b>Meat, Poultry, Fish</b>	<b>Nyama, Kuku, Samaki</b>
205	Beef liver, raw	Maini mabichi
204	Beef, boneless	Nyama bila mifupa, steki
201	Beef, liver, cooked	Maini ya kupikwa
202	Beef, medium fat, cooked	Nyama yenye mafuta kiasi iliyopikwa
203	Beef, tripe	Utumbo
206	Chicken, liver	Maini ya kuku
208	Chicken, raw	Nyama ya kuku mbichi
306	Egg yolk	Kiini cha yai
307	Egg, chicken	Yai la kuku
308	Fish, dried, cod	Samaki mkavu
309	Fish, dried, fresh water	Samaki mkavu wa ziwani
220	Fish, fresh	Samaki mbich
310	Fish, high fat	Samaki wa mafuta mengi
311	Fish, raw	Samaki
312	Fish, sardines	Dagaa
313	Fish, small, dried, fresh water	Samaki wadogo wakavu wa ziwani/mtoni
314	Fish, small, fresh, fresh water	Samaki wadogo wabichi wa ziwani/mtoni
319	Fish, smoked, dried-AP	Samaki wa kukausha kwa moshi
320	Fish, smoked, dried – EP	Minofu ya samaki iliyokaushwa kwa moshi (EP)
315	Goat meat	Nyama ya mbuzi
316	Mutton, meat	Nyama ya kondoo
317	Pork, medium fat, cooked	Nyama ya nguruwe ya kupikwa (mafuta kiasi)
318	Sausage	Soseji

<b>D2</b>	<b>Meat, Poultry, Fish-based local dishes</b>	<b>Asili ya wanyama, ndege na samaki</b>
552	Beef relish with coconut milk	Mchuzi wa nyama wenye tui la nazi
578	Beef relish without oil	Mchuzi wa nyama bila mafuta
551	Beef relish with oil	Mchuzi wa nyama wenye mafuta
577	Beef, fried	Nyama ya kukaanga
576	Beef, ground relish	Mchuzi wa nyama ya kusaga
574	Chicken boiled or roasted	Kuku wa kuchemsha/choma
554	Chicken relish without oil	Mchuzi wa kuku bila mafuta
573	Chicken relish with coconut milk	Mchuzi wa kuku wenye tui la nazi
556	Chicken relish with oil	Mchuzi wa kuku wenye mafuta
207	Chicken, fried	Kuku wa kukaanga
571	Egg boiled	Yai la kuchemsha
561	Egg, fried	Yai la kukaanga
565	Fish fresh stew	Mchuzi wa samaki wa kuchemsha
566	Fish relish without oil	Mchuzi wa samaki bila mafuta
567	Fish relish with coconut milk	Mchuzi wa samaki wenye tui la nazi

564	Fish relish with oil	Mchuzi wa samaki wenye mafuta
569	Fish, fried	Samaki wa kukaanga
563	Fish, fried relish	Supu wa samaki wa kukaanga
580	Liver relish	Mchuzi wa maini
579	Liver, fried	Mailni ya kukaanga
570	Meat samosa	Sambusa
572	Meat, barbecued	Mishikaki
562	Omelet, spanish	Spanish omelet
575	Omelet, spanish with potato	Spanish omelet na viazi
560	Small dried fish relish with coconut	Mchuzi wa dagaa wenye tul la nazi
558	Small dried fish relish with okra	Mchuzi wa dagaa wenye bamia
557	Small dried fish with tomatoes and oil	Mchuzi wa dagaa wenye nyanya na mafuta
559	Small dried fish, fried	Dagaa wa kukaanga
<b>D3</b>	<b>Milk and Milk products</b>	<b>Maziwa na bidhaa za maziwa</b>
261	Cheese, cheddar	Jibini cheddar
258	Cheese, cream	Kimu yoa jibini
259	Cheese, mozzarella	Jibini mozzarella
251	Ice cream	Icekrimu
252	Infant formula, Lactogen	Maziwa ya watoto wachanga (Lactogen)
253	Milk, condensed, sweetened	Maziwa yai ya kopo yenye sukari
257	Milk, condensed, evaporated, without vitamin A	Maziwa ya maji ya kopo bila vitamin A
260	Milk powder, non-fat without vitamin A	Maziwa ya unga bila mafuta na vitmmin A
254	Milk powder, full-cream	Maziwa ya unga namafuta
255	Milk, cow, whole	Maziwa ya ng'ombe halisi
256	Yogurt , plain whole milk	Maziwa mtindi/magando
<b>E</b>	<b>Oils and Fats</b>	<b>Mafuta na bidhaa ya mafuta</b>
1102	Butter refined – ghee	Samli
1101	Butter with salt	Siagi
1105	Coconut cream	Tui la nazi
1114	Coconut meat, raw	Nyama ya nazi
1104	Coconut milk and water	Tui la nazi na maji
1115	Coconut water	Maji ya nazi
1103	Coconut oil	Mafuta ya nazi
1107	Margarine	Marjarine (siagi)
1108	Red palm oil	Mafuta ya mawese
1109	Sesame oil	Mafuta ya ufuta
1110	Vegetable fat	Mafuta ya mimea (kama blueband, tanbondi)
1111	Vegetable fat, cowboy	Mafuta ya cowboy
1112	Vegetable fat, kimbo	Mafuta ya kimbo
1113	Vegetable oil	Mafuta ya mimea (ya maji)

<b>F1</b>	<b>Fruits and Fruit juice</b>	<b>Matunda na Juisi</b>
129	Apple, raw with skin	Apple
101	Avocado, raw all common variety	Parachichi
102	Banana, ripe	Ndizi mbivu
103	Baobab, pulp	Ubuyu (bila mbegu)
131	Custard apple (bullock's heart) raw	Sitafeli
133	Date, red, dried	Tende ulyokaushiwa
134	Date, yellow	Tende mbichi
130	Durian	Duriani
135	Grapefruit	Dalansi
105	Grapes, pale green	Zabibu, rangi kijani
106	Guavas, common, raw	Mapera
107	Jackfruit, raw	Fenesi
109	Lemon, raw, without peel	Limao
110	Lime, raw	Ndimu

## 2.5 List of Recipes

Recipes of all the local dishes included in the Tanzania Food Composition Tables are presented in this section.

Some ingredients of dishes which had more than one recipe were summed up and divided by the number of entries.

The amount of water is not included for any recipe and therefore, the weight of the total cooked amount is indicated at the end of each recipe as "Total"

Recipes are listed by the assigned food code in the TFCT to enable the user to find it easily.

18. **Mixed porridge flour (with maize)**  
1 kg maize flour                      500 g rice flour  
1 kg millet flour                      500 g sorghum flour  
500 g yellow soybeans  
*Total = 4 kg*
19. **Mixed porridge flour (no maize)**  
1 kg rice flour                      2.5 kg sorghum flour  
500 g millet flour                      500 g groundnut  
*Total = 5 kg*
- 32 **Bhajia (chick pea fritters)**  
1 kg chickpea flour                      150 g onion  
500 mg chilli powder                      350 g vegetable oil  
*Total = 2 kg*
- 34 **Mixed porridge flour (with maize and groundnuts)**  
500 g rice flour                      1 kg maize flour  
500 g yellow soybeans                      500 g groundnut  
*Total = 2.5 kg*
- 207 **Fried Chicken**  
750 g chicken                      100 g vegetable oil  
250 mg salt                      60 g lime  
*Total = 750 g*
- 481 **Chilli sauce**  
60 g green chilli                      5 g salt  
260 g tomato                      250 g sugar  
35 g onion                      200 g vinegar  
*Total = 700 g*
- 502 **Maize porridge with milk, egg and sugar**  
30 g maize flour                      15 g sugar  
50 g egg                      100 g milk  
*Total = 300 g*

- 505 **Maize porridge (no sugar or milk)**  
 10 g maize flour  
*Total = 100 g*
- 506 **Maize porridge with sugar**  
 10 g maize flour  
 15 g sugar  
*Total = 100 g*
- 507 **Maize porridge with milk and sugar**  
 10 g maize flour                      50 g milk  
 50 g sugar  
*Total = 100 g*
- 508 **Millet porridge with sugar**  
 10 g millet flour  
 15 g sugar  
*Total = 100 g*
- 509 **Mixed flour porridge with groundnuts**  
 10 g millet flour                      5 g groundnut  
 5 g rice flour                          4 g vegetable oil  
 4 g sugar  
*Total = 100 g*
- 511 **Sorghum flour porridge**  
 10 g sorghum  
 15 g sugar  
*Total = 100 g*
- 512 **Chapati**  
 500 g wheat flour                      250 mg salt  
 190 g vegetable oil  
*Total = 1.1 kg*
- 513 **Chapati (dry with less oil)**  
 500 g wheat flour  
 30 g vegetable oil  
*Total = 1 kg*
- 514 **Pancake**  
 1 kg plain flour                      200 g cooking oil  
 300 g egg                              5 g salt  
*Total = 2 kg*

- 515 **Pillau**  
 1 kg rice 100 g garlic  
 915 g mutton (goat's meat) 100 g green peas  
 100 g onion 50 g carrot  
 100 g vegetable oil  
*Total = 3.8 kg*
- 516 **Rice cooked (plain)**  
 1 kg rice  
*Total = 2 kg*
- 517 **Rice cooked with oil**  
 1 kg rice  
 50 g oil  
*Total = 800g*
- 518 **Rice cooked with coconut milk**  
 350 g rice  
 100 g coconut milk  
*Total = 2 kg*
- 519 **Stiff maize porridge (ugali)**  
 450 g maize flour  
*Total = 1.4 kg*
- 521 **Stiff rice porridge**  
 40 g rice flour  
*Total = 100 g*
- 522 **Stiff sorghum and millet porridge**  
 75 g sorghum flour  
 25 g millet flour  
*Total = 300 g*
- 524 **Rice buns (Vitumbua)**  
 1 kg rice flour 125 g vegetable oil  
 120 g sugar  
*Total = 1.25 kg*
- 525 **Maize and kidney dish (Makande)**  
 2 kg maize 5 g salt  
 500 g cooked kidney beans 300 mL coconut milk  
 80 g oil  
*Total = 2 kg*
- 527 **Vermicelli, plain**  
 225 g vermicelli 3 g salt  
 6 g oil  
*Total = 3 kg*

- 528 **Rice porridge with sugar**  
 10 g rice flour  
 15 g sugar  
*Total = 100 g*
- 530 **Rice bread**  
 2.75 kg rice flour                      875 g sugar  
 100 g vegetable oil                      2.25 L coconut milk  
 10 g yeast  
*Total = 8 kg*
- 531 **Maize porridge with margarine and sugar**  
 150 g maize flour                      4 g margarine  
 150 g sugar  
*Total = 1.15 kg*
- 532 **Donut – African (Mandazi)**  
 1 kg plain flour                      150 g vegetable oil  
 250 g sugar  
*Total = 2 kg*

 200 g spinach leaves      100 mg salt  
 8 g sesame seeds  
*Total = 100 g*
- 775 **Okra relish with oil**  
 200 g okra      40 g green pepper  
 170 g tomato      90 g vegetable oil  
 60 g onion      500 mg salt  
 40 g carrot  
*Total = 600 g*
- 776 **Eggplant relish**  
 450 g eggplant      150 g onion  
 300 g tomato      35 g vegetable oil  
 150 g potato      1 g salt  
*Total = 900 g*
- 777 **Sweet potato leaf with milk**  
 700 g sweet potato leaves      200 mg salt  
 200 g milk  
*Total = 350 g*

- 778 **Green pea relish with coconut milk and oil**  
 1.25 kg green peas                      440 g tomato  
 400 g coconut milk                      45 g vegetable oil  
 100 g onion                                500 mg salt  
*Total = 2.4 kg*
- 779 **Cowpea leaf relish with groundnut**  
 60 g cowpea leaves                      30 g tomato  
 100 g coconut milk                      10 g groundnut  
*Total = 200 g*
- 782 **Green pea relish with coconut milk**  
 1.25 kg green peas                      100 g onion  
 400 g coconut milk                      390 g tomato  
 5 g salt  
*Total = 2.5 kg*
- 783 **Okra relish, plain**  
 100 g okra                                 500 mg salt  
 100 g pumpkin leaves  
*Total = 300 g*
- 951 **Banana with oil, tomato and onion**  
 1.5 kg banana                              50 g onion  
 200 g tomato                              50 g vegetable oil  
 1 g salt  
*Total = 2 kg*
- 952 **Banana with meat and coconut milk**  
  
 2.5 kg banana                              100 g tomato  
 125 g coconut milk                      50 g onion  
 100 g boneless beef                      1 g salt  
*Total = 2.8 kg*
- 954 **Banana with cashew nuts**  
  
 350 g banana                              25 g cashew nuts  
 10 g tomato                                500 mg salt  
 10 g onion  
*Total = 500 g*
- 955 **Banana with coconut milk**  
 245 g banana                              200 mg salt  
 230 g coconut milk  
*Total = 535 g*

- 956 **Cassava with coconut milk**  
 1.28 kg cassava 500 mg salt  
 125 g coconut milk  
*Total = 1.6 kg*
- 957 **Fried Cassava**  
 1 kg cassava with peel 200 mg salt  
 250 g vegetable oil  
*Total = 1 kg*
- 958 **Potato relish with oil**  
 2 kg potato 200 g tomato  
 50 g vegetable oil 1 g salt  
*Total = 3.1 kg*
- 959 **Potato relish with beef**  
 1.8 kg potato 300 g coconut milk  
 100 g beef or mutton 25 g vegetable oil  
 45 g tomato paste 6 g salt  
 25 g onion  
*Total = 2.6 kg*
- 960 **Potato chips**  
 1 kg potato  
 240 g vegetable oil  
*Total = 1.2 kg*
- 968 **Banana with kidney beans**  
 1.7 kg banana 40 g vegetable oil  
 500 g kidney beans, dried, cooked 300 g tomato  
*Total = 4.5 kg*
- 972 **Potato relish with coconut milk**  
 300 g potato 200 mg salt  
 250 g coconut milk  
*Total = 300 g*
- 973 **Banana with meat, oil and vegetables**  
 600 g banana 25 g vegetable oil  
 200 g beef or goat's meat (mutton) 900 g beef broth  
 25 g onion 50 g green pepper (capsicum)  
 50 g tomato 1 g salt  
*Total = 2.5 kg*

- 974 **Banana porridge (Mtori)**  
 2 kg banana                      170 g tomato  
 90g oil                              800 g potato  
 70 g onion                         1 g salt  
*Total = 3 kg*
- 975 **Banana porridge (Mtori) with meat**  
 500 g banana                      170 g tomato  
 200 g beef or mutton              400 g coconut milk  
 800 g potato                        200 g green pepper  
 340 g carrot                        180 g oil  
 70 g onion                         5 g salt  
*Total = 4.5 kg*
- 976 **Banana porridge (Mtori) with fish**  
 300 g banana                      30 g carrot  
 50 g dried fish                      125 g green peas  
 70 g onion                         45 g oil  
 85 g tomato                        1 g salt  
*Total = 800 g*
- 977 **Banana porridge (Mtori) with ground meat**  
 400 g banana                      2 g salt  
 250 g ground beef                 45 g oil  
 30 g carrot  
*Total = 800 g*
- 978 **Kachori (spicy potato balls)**  
 750 g potato                        20 g lime juice  
 10 g ginger                         2 g salt  
 10 g garlic                         200 g chickpea flour  
 100 g vegetable oil  
*Total = 1 kg*
- 1107 **Halwa**  
 150 g edible starch                 225 g clarified butter (ghee)  
 500 g sugar  
*Total = 1 kg*

## 2.8 Food additives and preservatives

### 2.8.1 Definition

**Food additives** are substances added to food to preserve flavor or improve its taste and appearance. Some additives have been used for centuries; for example, preserving food by pickling (with vinegar), salting, as with bacon, preserving sweets or using sulfur dioxide as in some wines. With the advent of processed foods in the second half of the 20th century, many more additives have been introduced, of both natural and artificial origin.

Food additives have been used for centuries. Salt, sugar and vinegar were among the first and used to preserve foods. In the past 30 years, however, with the advent of processed foods, there has been a massive explosion in the chemical adulteration of foods with additives. Considerable controversy has been associated with the potential threats and possible benefits of food additives

### 2.8.2 Numbering

To regulate these additives, and inform consumers, each additive is assigned a unique number. Initially these were the “E numbers” used in Europe for all approved additives. This numbering scheme has now been adopted and extended by the Codex Alimentarius Committee to internationally identify all additives, regardless of whether they are approved for use.

E numbers are all prefixed by “E”, but countries outside Europe use only the number, whether the additive is approved in Europe or not. For example, acetic acid is written as E260 on products sold in Europe, but is simply known as additive 260 in some countries. Additive 103, alkanet, is not approved for use in Europe so does not have an E number, although it is approved for use in Australia and New Zealand. Since 1987 Australia has had an approved system of labelling for additives in packaged foods. Each food additive has to be named or numbered. The numbers are the same as in Europe, but without the prefix ‘E’.

### 2.8.3 Categories

Food additives can be divided into several groups, although there is some overlap between them.

**Acids:** Food acids are added to make flavors “sharper”, and also act as preservatives and antioxidants. Common food acids include vinegar, citric acid, tartaric acid, malic acid, fumaric acid, lactic acid.

**Acidity regulators:** are used to change or otherwise control the acidity and alkalinity of foods.

**Anticaking agents:** keep powders such as milk powder from caking or sticking.

**Antifoaming agents:** reduce or prevent foaming in foods.

**Antioxidants:** such as vitamin C act as preservatives by inhibiting the effects of oxygen on food, and can be beneficial to health.

**Bulking agents:** such as starch are additives that increase the bulk of a food without affecting its nutritional value.

**Food coloring:** are added to food to replace colors lost during preparation, or to make food look more attractive.

**Color retention agents:** In contrast to colorings, color retention agents are used to preserve a food's existing color.

**Emulsifiers:** allow water and oils to remain mixed together in an emulsion, as in mayonnaise, ice cream, and homogenized milk.

**Flavors:** are additives that give food a particular taste or smell, and may be derived from natural ingredients or created artificially.

**Flavor enhancers:** enhance a food's existing flavors. They may be extracted from natural sources (through distillation, solvent extraction, maceration, among other methods) or created artificially.

**Flour treatment agents:** are added to flour to improve its color or its use in baking.

**Humectants:** prevent foods from drying out.

**Tracer gas:** allow for package integrity testing to prevent foods from being exposed to atmosphere, thus guaranteeing shelf life.

**Preservatives:** prevent or inhibit spoilage of food due to fungi, bacteria and other microorganisms.

**Stabilizers:** thickeners and gelling agents, like agar or pectin (used in jam for example) give foods a firmer texture. While they are not true emulsifiers, they help to stabilize emulsions.

**Sweeteners:** are added to foods for flavoring. Sweeteners other than sugar are added to keep the food energy (calories) low, or because they have beneficial effects for diabetes mellitus and tooth decay and diarrhea.

**Thickeners:** are substances which, when added to the mixture, increase its viscosity without substantially modifying its other properties.

## Appendix: Food additive index

Updated up to the 30th Session of the Codex Alimentarius Commission (2007)

### A

- Acesulfame Potassium (950)
- Acetic Acid (Glacial) (260)
- Acetic and Fatty Acid Esters of Glycerol (472a)
- Acetylated Distarch Adipate (1422)
- Acetylated Distarch Phosphate (1414)
- Acetylated Oxidized Starch (1451)
- Acid Treated Starch (1401)
- Agar (406)
- Alginic Acid (400)
- Alitame (956)
- Alkaline Treated Starch (1402)
- Allura Red AC (129)
- Aluminium Ammonium Sulphate (523)
- Aluminium Silicate (559)
- Amaranth (123)
- Ammonium Acetate (264)
- Ammonium Alginate (403)
- Ammonium Carbonate (503(i))
- Ammonium Chloride (510)
- Ammonium Hydrogen Carbonate (503(ii))
- Ammonium Hydroxide (527)
- Ammonium Lactate (328)
- Ammonium Salts of Phosphatidic Acid (442)
- Amylase (*Aspergillus oryzae* var.), Alpha- (1100)
- Amylase (*Bacillus Megaterium* expressed in *Bacillus Subtilis*), Alpha- (1100)
- Amylase (*Bacillus Stearothermophilus*), Alpha- (1100)
- Amylase (*Bacillus Stearothermophilus* expressed in *Bacillus Subtilis*), Alpha- (1100)
- Amylase (*Bacillus subtilis*), Alpha- (1100)
- Amylase (Carbohydrase) (*Bacillus licheniformis*), Alpha- (1100)
- Annatto Extracts (160b)
- Ascorbic Acid (L-) (300)
- Aspartame (951)
- Aspartame-Acesulfame Salt (962)
- Azodicarbonamide (927a)
- Azorubine (Carmoisine) (122)

### B

- Beeswax (901)
- Beet Red (162)
- Benzoyl Peroxide (928)
- Bleached Starch (1403)

- Brilliant Black (Black PN) (151)
- Brilliant Blue FCF (133)
- Bromelain (1101(iii))
- Brown HT (155)
- Butylated Hydroxyanisole (320)
- Butylated Hydroxytoluene (321)

### C

- Calcium 5'-Guanylate, (629)
- Calcium 5'-Inosinate, (633)
- Calcium 5'-Ribonucleotides, (634)
- Calcium Acetate (263)
- Calcium Alginate (404)
- Calcium Aluminium Silicate (556)
- Calcium Ascorbate (302)
- Calcium Carbonate (170(i))
- Calcium Chloride (509)
- Calcium Gluconate (578)
- Calcium Glutamate (D, L-) (623)
- Calcium Hydroxide (526)
- Calcium Lactate (327)
- Calcium Malate (D, L-) (352(ii))
- Calcium Oxide (529)
- Calcium Propionate (282)
- Calcium Silicate (552)
- Calcium Sulphate (516)
- Candelilla Wax (902)
- Canthaxanthin (161g)
- Caramel II - Caustic Sulphate Process (150b)
- Caramel III - Ammonia Process (150c)
- Caramel I - Plain (150a)
- Caramel IV - Sulphite Ammonia Process (150d)
- Carbon Dioxide (290)
- Carmines (120)
- Carnauba Wax (903)
- Carob Bean Gum (410)
- Carotenes, beta (Vegetable) (160a(ii))
- Carrageenan and its Na, K, NH<sub>4</sub>, Ca and Mg Salts (Includes Furcelleran) (407)
- Castor Oil (1503)
- Chlorine (925)
- Chlorine Dioxide (926)
- Chlorophyll (140)
- Citric Acid (330)
- Citric and Fatty Acid Esters of Glycerol (472c)
- Cross-linked Carboxymethyl Cellulose (Cross-

- linked Cellulose Gum) (468)
- Curcumin (100(i))
- Curdlan (424)
- Cyclamic Acid (and Na, K, Ca Salts) (952)
- Cyclodextrin, Alpha- (457)
- Cyclodextrin, Beta- (459)
- Cyclodextrin, Gamma- (458)

## D

- Dextrins, Roasted Starch, (1400)
- Diacetyltartaric and Fatty Acid Esters of Glycerol (472e)
- Dimethyl Dicarboxylate (242)
- Dioctyl Sodium Sulphosuccinate (480)
- Diphenyl (230)
- Dipotassium 5'-Guanylate, (628)
- Disodium 5'-Guanylate, (627)
- Disodium 5'-Inosinate, (631) \
- Disodium 5'-Ribonucleotides, (635)
- Distarch Phosphate (1412)

## E

- Erythritol (968)
- Erythrosine (127)
- Ethyl Cellulose (462)
- Ethyl Hydroxyethyl Cellulose (467)
- Ethyl Maltol (637)

## F

- Fast Green FCF (143)
- Ferric Ammonium Citrate (381)
- Ferrous Gluconate (579)
- Ferrous Lactate (585)
- Formic Acid (236)
- Fumaric Acid (297)

## G

- Gellan Gum (418)
- Glucono Delta-Lactone (575)
- Glucose Oxidase (*Aspergillus niger* var.) (1102)
- Glutamic Acid, (L(+)-) (620)
- Glycerol (422)
- Glycerol Esters of Wood Rosin (445)
- Grape Skin Extract (163(ii))
- Guaiac Resin (314)
- Guanylic Acid, 5'- (626)
- Guar Gum (412)
- Gum Arabic (Acacia Gum) (414)

## H

- Hexamethylene Tetramine (239)
- Hydrochloric Acid (507)
- Hydrogenated Poly-Decenes (907)
- Hydroxypropyl Cellulose (463)
- Hydroxypropyl Distarch Phosphate (1442)
- Hydroxypropyl Methyl Cellulose (464)
- Hydroxypropyl Starch (1440)

## I

- Indigotine (Indigo Carmine) (132)
- Inosinic Acid (630)
- Invertase (*Saccharomyces cerevisiae*) (1103)
- Isoascorbic acid (Erythorbic Acid) (315)
- Isomalt (Isomaltitol) (953)
- Isopropyl Citrates (384)

## K

- Karaya Gum (416)
- Konjac Flour (425)

## L

- Lactic Acid, (L-, D- and DL-) (270)
- Lactic and Fatty Acid Esters of Glycerol (472b)
- Lactitol (966)
- Lecithin (322(ii))

# **SECTION 3**

## **Food portion size databases**

### 3 Adult and child food portion databases

These databases are based on the foods included in the food composition tables and are listed by their assigned food codes.

#### 3.1 Objectives: The databases aim to:

- provide estimates on the average portion size of foods commonly consumed by Tanzanian adults and children based on information gathered from several sources. The average portion size was calculated after weighing different amounts of the same food consumed by a number of different people. This information is particularly useful when no other information is available on how much of a food is normally consumed.
- provide weights of food items using different commonly available domestic utensils.
- provide information on the average weights of “countable foods” such as oranges, maandazi, chapatti etc.

#### 3.2 Sources of information for average amount of foods consumed

The different food items presented in these databases were measured using the same utensils shown in illustration 3.1 and indicated in table 3.1 during the dietary assessments of the study participants. Three or more samples of all the foods were obtained from the medical students' canteen at MUHAS, the staff canteen at TFNC, or from vendors, markets and staff households.

The foods were transferred to the utensils and then removed and weighed. The recorded weights were entered into the adult and child food-portion databases. The countable foods were also categorized as small, medium and large.

**Table 3.1. Utensils used**

Utensil code	Utensil - Type	Volume of water (ml)
1	Bowl	350
2	Glass	250
3	Cup	200
4	Plate	500
5	Tablespoon	15
6	Teaspoon	5
7	Saucer	150

**Illustration 3.1 Utensils to measure amounts**

### **3.3 Information sources for average portion size.**

The 10 column in the adult database represents the mean or average amount in grams of a specific food consumed. These servings were derived by dividing the total amounts by the number of entries for that specific food.

#### For adults: (15 years and above)

- Served in the TFNC and Muhimbili University students canteens (weighed all items included in a meal)
- Served in the general staff cafeteria at Muhimbili National Hospital
- Sold by street vendors; e.g. fruits, and breakfast foods such as *vitumbua* (rice bun) *maandazi* (African donut)
- Snacks purchased by data clerks working for MUHAS–Harvard group, which were weighed, then recorded over a period of 7 days
- Sold by women vendors; e.g. cooked dishes such as rice and beans
- Through the household (HH) diet surveys by the weigh and record method carried out in different areas in Tanzania by TFNC. We recorded the foods consumed for 3-5 days by each individual
- Weighed and recorded by the study subjects. The subjects weighed and recorded for 3 days the food they cooked and ate in their homes under close supervision. All signed informed consent forms. They were provided with food weighing scales, standard spoon, glass, measuring jug along with a standard form to record the diet.

*for children: (below five years)*

- Through the household diet surveys carried out in different areas in Tanzania (as describe above for adults)
- Through the diet intake assessments by 24-hour diet recall and by weigh and record method
  - Of children under five selected among those participating in the MUHAS–Harvard studies. Wherever possible, we also recorded the diet intake of their siblings if under 5 years was also recorded
  - The children under five years of MUHAS–Harvard staff

The information on food intake was stratified by the child's age group: 6-12 months, 13-36 months, and 37 and over.

Recipes of different dishes were also collected during the household diet surveys.

### **3.3 Compilation of Portion size databases**

The information on the amounts of different foods consumed were entered MS Excel. Each food has several entries for "amounts consumed".

*For adults:* The mean intake by weight of each specific food was calculated and then entered into the database.

Table 3.2 Adults Food Portion data base

VS = Very small S= Small size; M = Medium size; L = Large; VL = Very Large; Std = Standard; A = Adult average portion
