ING AGENCY. ALTHOUGH IT IS RECOGNIZED
THAT CERTAIN PORTIONS ARE ILLEGIBLE, IT
IS BEING RELEASED IN THE INTEREST OF MAK-
ING AVAILABLE AS MUCH INFORMATION AS
POSSIBLE.

PREFACE

This document is presented in two volumes and is the cumulative issue of the Research Data Facility (REDAF) R&D File. The next cumulative issue will be published in January, 1972.

Volume I lists all Earth Resources Program documentary information that is available at the National Aeronautics and Space Administration's Manned Spacecraft Center. Included in Volume II of the R&D File are sensor data collected during flights over test sites and from missions flown by subcontractors supporting the Earth Resources Survey Program.

The information cataloged in the two volumes of this document is divided into six major data catagories as follows:

Vol. I Part 1 - Technical documents and maps

 Part 2 - Satellite data

 Part 3 - Special data types

Vol. II Part 4 - Functional and check out data

 Part 5 - Imagery data

 Part 6 - Electronic data

The method for assigning accession numbers to the technical data is shown on the following pages. All requests for information concerning this R&D File should be directed to:

Edward O. Zeitler

Earth Resources Research Data Facility/TF12⁵³
National Aeronautics and Space Administration
Manned Spacecraft Center
Houston, Texas 77058

EDITOR'S NOTES

The REDAF at the Manned Spacecraft Center has arranged for program personnel and investigators supporting the Earth Resource Survey Program to avail themselves of all appropriate and related information concerning earth resources activities. This facility functions as the principle depository and distributive source for sensor data, program documents, and related information. All data contained in the REDAF are indexed in the R and D File and may be obtained by investigators and program related personnel through written requests or by visiting this facility. The R and D File is distributed in accordance with a current distribution list maintained by this office.

Each data item in the Research Data Facility (REDAF) has its own accession number which can be used in requesting data from the R and D File. The accession number is structured to yield such information as major subject or discipline, specific data type, geographic location, site number, and the shelf or index number. This number identifies each unit of data for retrieving data requested from the files. An example of an accession number and its elements is shown on the following page.

ACCESSION NUMBER FORMAT

1.- NASA Index identifier

1. NR

The first field of the accession number is a double letter code which distinguishes this index (Natural Resources) from other NASA indexes.

2. Major discipline and data type

The second field contains a double-digit code which identifies the specific data type under consideration. Documentary data is denoted by an upper case alpha plus the numeric. Other data types (imagery and nonimageries et cetera) are indicated by a double numeric.

In the case of documentary information, the first alpha digit identifies nine major subject categories as shown below:

A - Agriculture

B - Cartography

C - Forestry

D - Geography

E - Geology

F - Hydrology

G - Oceanography

H - Multi-discipline and other sciences

P - Earth Observations Program documents

The second digit is a numeric which designates one of nine specific data types as follows:

1. Site Maps
2. Site Description
3. Mission Request
4. Mission Screening and Summary Reports
5. (Temporarily vacant)
6. Progress Report
7. Summary Report
8. Subject Related Document
9. Technical Report

In addition to the nine document data types, described above, double-digit numeric indicators have been provided for the following data types:

- 10 Inflight Records (charts, graphs, et cetera)
- 11 Journals
- 12 thru 19 Reserved for future data types
- 20 thru 49 Imagery data (see TABLE I on page vi for a list of specific sensor types)
- 50 Gemini Film and Documentary Data File
- 51 Apollo Film and Documentary Data File
- 52 Earth Resources Technology Satellites (ERTS)
- 53 Sky Lab
- 54 Space Stations

55 thru 74 Reserved for spacecraft data types

75 Electronic Data (Magnetic Taped). See page vii for
non-imaging sensors.

76 Processed Electronic Data

TABLE I.- LIST OF SENSOR DATA TYPES
A.- CODE 20-49 IMAGERY SENSOR DATA TYPES

<u>CODE NO.</u>	<u>SENSOR</u>
20	Multiband Camera (Itek - 9 Lens)
21	RS-14 Dual Channel IR Scanner (Texas Instruments)
22	RC-8 Camera (Wild-Heerbrugg)
23	Reconofax IV IR Scanner (HRB Singer)
24	AAS-5 UV Camera (HRB Singer)
25	Nikon Data Panel K-17 Camera (Chicago Aerial)
26	T-11 Camera (Fairchild)
27	APS Camera (Maurer)
28	IR Radiometer Scanner (Block Engineering Co.)
29	RS-7 IR Scanner (Texas Instruments)
30	K-17 Metric Camera (Chicago Aerial)
31	Hasselblad Camera - 6-inch focal length
32	Reserved
33	APQ-97 SLAR (Westinghouse)
34	Reconofax IV Camera (HRB Singer)
35	Zeiss RMK 30/23 Camera - 12-inch focal length
36	Hasselblad Cluster Camera A
37	Hasselblad Cluster Camera B
38	Hasselblad Cluster Camera C
39	Hasselblad Cluster Camera D

TABLE I.- CONTINUED

<u>CODE NO.</u>	<u>SENSOR</u>
40	Hasselblad Cluster Camera E
41	Hasselblad Cluster Camera F
42	Reserved
43	Reserved
44	Reserved
45	DPD-2 SLAR (Philco-Ford)
46	KA-62 Cluster Camera A (Chicago Aerial)
47	KA-62 Cluster Camera B (Chicago Aerial)
48	KA-62 Cluster Camera C (Chicago Aerial)
49	KA-62 Cluster Camera D (Chicago Aerial)

B.- CODE 76 NON-IMAGERY SENSOR TYPES

<u>SENSOR</u>
Liquid Water Content Indicator (Johnson-Williams Co.)
Dewpoint Hygrometer (Cambridge System)
Multifrequency Microwave Radiometer (MFMR) - (Space General Corp.)
IR Rapid Scan Spectrometer (Lockheed Aero. Corp.)
Precision Radiation Thermometer (PRT-5) - (Barnes Engineering Corp.)
IR Radiometer (Block Engineering Corp.)

TABLE I.- CONCLUDED

SENSOR

Total Air Temperature Probe (Rosemont
Engineering Co.)

Multispectral Scanner-24 Channel (Bendix)

.400 GH_z Scatterometer-DP (Emerson Corp.)

13.3 GH_z Scatterometer-SP (Ryan Aero. Corp.)

13.3 GH_z Scatterometer-DP (Ryan Aero. Corp.)

1.6 GH_z Scatterometer-DP (Ryan Aero. Corp.)

3. Geographic Zone

The third field contains a double-digit alpha code which indicates the general geographic zone in which the data were collected. The REDAF geographic reference system is similar to the World Geographic Reference System (GEOREF) which is described on page xiv. This system divides the earth's surface into 15 degree quadrangles of latitude and longitude. Letters are assigned each 15 degree-division of longitude, extending eastward 360 degrees from the 180th meridian and also for each 15 degree division of latitude extending 180 degrees northward from the south pole. The appropriate letters for each division are shown on a Earth Zone Map on page x. Quadrangles covering areas within the United States are shown on the U.S. Zone Map on page x.

The initial letter indicates the approximate longitude and the second letter indicates the approximate latitude. For example the zone designated "GJ" indicates that the general geographic area for a given data type is located in the eastern half of the United States. The first letter indicates the approximate longitude, the second letter indicates the approximate latitude. If more than one zone is overflowed the data are classified in the zone of greatest coverage. The numberals "00" are used when zoning is not appropriate.

4. Site Numbers

Site numbers have been arbitrarily assigned by NASA for areas which have been overflowed and are indicated by a three-digit code in the fourth field of the accession number. For the convenience of users numbers covering test sites located within the United States are shown on a U.S. Zone Map preceding the index. A world map is also included which shows sites overflowed outside the United States. A list of site numbers, zone indicators, test site titles and major disciplines follows the maps. The code number "998" is used when more than one site is covered by one document or map.

5. Bin or File Number

This number is used by the REDAF to indicate the shelf position in which the data is stored and to locate or retrieve the data when needed. All entries in the R and D File are arranged under separate sections according to discipline and data type or sensor type. An example of a typical entry is shown on page xii.

|
June 25, 1965, Contract No. R-146

Information extracted from the above annotation establishes this entry as a document in the Geological discipline and is a technical letter concerning NASA Test Site 2 located within the "EJ" 15-degree quadrangle which covers the western portion of the United States.

Similarly the accession number -

NR-34-EJ-075-00037
|
| Test Site
|
| Geographic Reference
|
Reconofax IV Sensor

indicates that the data contains Reconofax IV imagery over Test Site 75 - Goldfield, Nevada which is located within the EJ 15-degree quadrangle covering the western portion of the U.S.

When the requestors area of interest has been determined, data-research personnel at the Redaf will assist as needed in providing the appropriate information and answering questions.

Documents, photographs, and maps are available to visitors for examination and viewing. After deciding which information will be needed, source information concerning its availability will be provided.

Computer searches can be made according to the geographical zone, the test site, personal and corporate authors, missions, and subject descriptors, or any combination of these classifications when more specific information is desired.

Information may also be scanned on microfilm viewers in a viewing area.

In an effort to improve the utility of this document for meeting the needs of users we have included a questionnaire following the index. Your comments and the return of this form will be appreciated.

GEOREF-WORLD GEOGRAPHIC REFERENCE SYSTEM

The REDAF World Geographic Reference system is similar to the World Geographic Reference System (GEOREF) described in A. F. Manual 51-40, Vol. I, Air Navigation, pages 3-34 through 3-38.

The GEOREF is based on the normal geographic longitude and latitude projection lines of any specific chart, and defines a unit of geographic area in which a specific point lies. The GEOREF divides the earth's surface into 15 degree quadrangles of longitude and latitude with the point of origin at the 180th meridian and the South Pole (see Earth Zone Map, page xv). The divisions extend eastward 360 degrees from the 180th meridian with each component zone of these divisions identified by a letter from A through Z, omitting I and O, and extends northward 180 degrees from the South Pole with the zones lettered from A through M, omitting I. This combination divides the earth's surface into 288 basic 15 degree quadrangles, each having 2 letters identifying the zone of longitude and latitude.

Each such basic 15 degree quadrangle (see GEOREF 15 degree square sample quadrangle, page xvi) is further divided into 15 lettered 1-degree units eastward and 15 lettered 1-degree units northward. These 1 degree quadrangles are lettered from A through Q, omitting I and O.

As an example, within a one degree square quadrangle, the geographical location of Site 002 (Pisgah Crater, California) the coordinates of which are 116 degrees 16 minutes to 116 degrees 34 minutes west longitude and 34 degrees 35 minutes to 34 degrees 50 minutes north latitude is completely described by the four letters EJDE and located as follows:

1. On the Earth Zone Map, locate the 15 degree quadrangle "EJ" by reading right to "E" and up to "J".
2. On the GEOREF 15 Degree Square Sample Quadrangle, locate the 1 degree quadrangle "DE" with the sample "EJ" 15 degree quadrangle by reading right to "D" and up to "E".

By the use of this method and assigning the appropriate four letter designators for each 1-degree-square covered, all available photography and other documented information on any specific geographical area can be readily indexed and speedily retrieved by the 4-letter combinations. The first two letters of each 4-letter combination which locate the specific 15 degree zone quadrangle are also a part of all associated document accession number. A map showing the location of each 1-degree quadrangle is included on the page xvii.

EARTH ZONE MAP

U.S. 1 - DEGREE GEOREF QUADRANGLE LOCATION MAP

Reproduced from
best available copy.

In addition to retrieving data by GEOREF all data coverage can be located in the United States and can be retrieved by test quadrant number. The Test Quadrant number corresponds to the Army Map Service number shown on page xvix.

As an example NHL5-7 covers from 94° N to 96° W longitude and from 29° N to 30° N latitude which is the Houston, Galveston Bay Area.
