**SPECTRUM OF PRESSURE FLUCTUATIONS
IN A TURBULENT FLOW**

by

1. As is known, in an incompressible liquid the pressure is connected with the velocity by correlation

$$\Delta p = - \rho \frac{\partial u_\alpha}{\partial x_\beta} \frac{\partial u_\beta}{\partial x_\alpha} , \quad (1)$$

where ρ is the density of the liquid and u_α the field of velocity; by twice repeating indexes a summation of from 1 to 3 is implied. During calculation of the spectrum or the structural function of pressure according to Equation (1), it is necessary to know the two-point correlative moment of the fourth order for the gradient of velocity. In Obukhov's treatise¹ the calculation of the structural function of pressure was conducted under the supposition that the fourth correlative moments of the field of velocity had been connected with the second, as during the Gaussian determination of probability. A similar supposition, which is designated the Hypothesis of Quasi-Normality, was first introduced by M. D. Millionshchikov². In the reluctance interval of wave numbers ($L^{-1} < k < l_\nu^{-1} \equiv \langle \epsilon \rangle^{1/4} \nu^{-3/4}$, where L is the outside scale, l the inner scale of turbulence³, ν the kinematic viscosity, and $\langle \epsilon \rangle$ the mean value of the dissipation of energy) the spectrum density of the pressure, corresponding to the structural function calculated by A. M. Obukhov¹, has the form

$$\phi_p(k) \sim \rho^2 \langle \epsilon \rangle^{4/3} k^{-7/3} . \quad (2)$$

An analogous result can be obtained by taking into consideration the dimensions, if it is assumed that in the reluctance interval of wave numbers, the spectrum of pressure (more exactly, the pressure shared at a constant density) is determined by only one measured parameter $\langle \epsilon \rangle$.

Doubts have recently arisen about both the correctness of the Hypothesis of Quasi-Normality and the applicability of the above indicated simple measurements at moments of a higher order^{4,5}. The feature of the intermittency of the turbulent flow had been assumed^{4,5} as a basis for calculating the higher correlations of moments of the turbulent field of velocity. In connection with these, a mathematical theory of random functions of new-type intermittent random functions is being developed. This paper discusses the calculation of the spectrum of pressure, based on analogous suppositions about the intermittency of the turbulent flow.

2. To define

$$a = \frac{1}{4\pi} \frac{\partial u_\alpha}{\partial x_\beta} \frac{\partial u_\beta}{\partial x_\alpha}, \quad (3)$$

from Equation (1) we obtain

$$\phi_p(k) = (4\pi\rho)^2 k^{-4} \phi_q(k). \quad (4)$$

Magnitude q , which can be designated the density of the hydrodynamic charge (with corresponding potential p/ρ), is a quadratic structure derived from the various components of the tensor of the gradient of velocity. Let's propose that magnitude q has such a statistical nature that it can be expressed as* $(\partial u_j / \partial x_k)^2$. Concerning the magnitude in^{4,5}, it develops an intermittent random process; corresponding calculations of the spectra of the correlative moments of velocity of the fourth and sixth orders seemed to agree with the experimental data^{6,7}.

An analogous supposition relative to magnitude q leads to a spectrum of the following type

$$\phi_q(k) \sim \langle \epsilon \rangle^2 \nu^{-2} k^{-1+\mu}, \quad 0 < \mu < 1. \quad (5)$$

Finally we have

$$\phi_p(k) \sim \rho^2 \langle \epsilon \rangle^2 \nu^{-2} k^{-5+\mu}, \quad 0 < \mu < 1. \quad (6)$$

Whereupon in agreement with Gurvich and Zubkovskiy's work⁶, $\mu \approx 0.4$.

There was a substantial difference between the spectra in Equations (2) and (6), both of which had been derived under different suppositions. Here the experiment is the deciding factor. In contrast to other authors^{6,7} we note that upon determination of the spectrum of pressure the inevitable instrument neutralization occurs after the nonlinear operation, which generates the flow. In connection with this the immediate determinations of the spectrum of pressure in a turbulent flow present special interest.

* Mathematically this is expressed by the requirement that the determined scalars of the spectral tensor of magnitude $(\partial u_i / \partial x_k) (\partial u_j / \partial x_l)$ had an identical wave number dependence in the reluctance interval.

13. ABSTRACT

Calculation of the pressure spectrum in a turbulent flow, assuming the flow to be generated by a random intermittent function. The spectrum obtained on the basis of this assumption is found to differ greatly from a spectrum obtained previously on the basis of Millionshchikov's Hypothesis of Quasi-Normality.

INSTRUCTIONS

1. **ORIGINATING ACTIVITY:** Enter the name and address of the contractor, subcontractor, grantee, Department of Defense activity or other organization (*corporate author*) issuing the report.
- 2a. **REPORT SECURITY CLASSIFICATION:** Enter the overall security classification of the report. Indicate whether "Restricted Data" is included. Marking is to be in accordance with appropriate security regulations.
- 2b. **GROUP:** Automatic downgrading is specified in DoD Directive 5200.10 and Armed Forces Industrial Manual. Enter the group number. Also, when applicable, show that optional markings have been used for Group 3 and Group 4 as authorized.
3. **REPORT TITLE:** Enter the complete report title in all capital letters. Titles in all cases should be unclassified. If a meaningful title cannot be selected without classification, show title classification in all capitals in parenthesis immediately following the title.
4. **DESCRIPTIVE NOTES:** If appropriate, enter the type of report, e.g., interim, progress, summary, annual, or final. Give the inclusive dates when a specific reporting period is covered.
5. **AUTHOR(S):** Enter the name(s) of author(s) as shown on or in the report. Enter last name, first name, middle initial. If military, show rank and branch of service. The name of the principal author is an absolute minimum requirement.
6. **REPORT DATE:** Enter the date of the report as day, month, year, or month, year. If more than one date appears on the report, use date of publication.
- 7a. **TOTAL NUMBER OF PAGES:** The total page count should follow normal pagination procedures, i.e., enter the number of pages containing information.
- 7b. **NUMBER OF REFERENCES:** Enter the total number of references cited in the report.
- 8a. **CONTRACT OR GRANT NUMBER:** If appropriate, enter the applicable number of the contract or grant under which the report was written.
- 8b, 8c, & 8d. **PROJECT NUMBER:** Enter the appropriate military department identification, such as project number, subproject number, system numbers, task number, etc.
- 9a. **ORIGINATOR'S REPORT NUMBER(S):** Enter the official report number by which the document will be identified and controlled by the originating activity. This number must be unique to this report.
- 9b. **OTHER REPORT NUMBER(S):** If the report has been assigned any other report numbers (*either by the originator or by the sponsor*), also enter this number(s).

10. **AVAILABILITY/LIMITATION NOTICES:** Enter any limitations on further dissemination of the report, other than those imposed by security classification, using standard statements such as:
 - (1) "Qualified requesters may obtain copies of this report from DDC."
 - (2) "Foreign announcement and dissemination of this report by DDC is not authorized."
 - (3) "U. S. Government agencies may obtain copies of this report directly from DDC. Other qualified DDC users shall request through _____."
 - (4) "U. S. military agencies may obtain copies of this report directly from DDC. Other qualified users shall request through _____."
 - (5) "All distribution of this report is controlled. Qualified DDC users shall request through _____."

If the report has been furnished to the Office of Technical Services, Department of Commerce, for sale to the public, indicate this fact and enter the price, if known.

11. **SUPPLEMENTARY NOTES:** Use for additional explanatory notes.
12. **SPONSORING MILITARY ACTIVITY:** Enter the name of the departmental project office or laboratory sponsoring (*paying for*) the research and development. Include address.
13. **ABSTRACT:** Enter an abstract giving a brief and factual summary of the document indicative of the report, even though it may also appear elsewhere in the body of the technical report. If additional space is required, a continuation sheet shall be attached.

It is highly desirable that the abstract of classified reports be unclassified. Each paragraph of the abstract shall end with an indication of the military security classification of the information in the paragraph, represented as (TS), (S), (C), or (U).

There is no limitation on the length of the abstract. However, the suggested length is from 150 to 225 words.

14. **KEY WORDS:** Key words are technically meaningful terms or short phrases that characterize a report and may be used as index entries for cataloging the report. Key words must be selected so that no security classification is required. Identifiers, such as equipment model designation, trade name, military project code name, geographic location, may be used as key words but will be followed by an indication of technical context. The assignment of links, rules, and weights is optional.
