(Cell 149, 383–396; April 13, 2012)

Our paper reported that *Arabidopsis* PLETHORA transcription factors regulate cell division planes by transcriptional activation of MAP65, which interacts with the CLASP protein to guide microtubule orientation. We recently identified mistakes affecting Figures 4N, S4B, and S6E in which original data were processed inappropriately such that the panels do not accurately report the original data. At least in one case, the original data did not support the figure's conclusion. We believe that the most responsible course of action is to retract the paper. We sincerely apologize to the scientific community for any inconvenience that this might cause.
