MATHEMATICS**

Foreword

The idea of this *Special Issue on Coding and Cryptography* emerged when observing the success of the first Workshop on Coding and Cryptography, which was held in Paris (France) in January 1999, when no proceedings of full papers were planned for this Workshop.

I wish to express my gratitude to Professor Peter Hammer, the Editor-in-Chief of *Discrete Applied Mathematics* for proposing this journal to take in this special issue, for giving me the opportunity to guest-edit it and for his kind help.

I deeply thank P. Charpin, M. Girault, G. Kabatiansky and H. Van Tilborg for having accepted to join me in the Edition Committee and for their precious help in refereeing the manuscripts and taking decisions.

I am also grateful to D. Augot, C. Bachoc, T. Berger, J. Boutros, A. Canteaut, S. Coffey, I. Duursma, P. Gaborit, H. Gilbert, S. Litsyn, A. Lobstein, P. Loidreau, G.R. Pellican, N. Sendrier, J. Simonis and J. Wolfmann for their detailed reviews.

Finally, we owe the existence of this special issue to the researchers who submitted their manuscripts for our consideration, and to the authors of the fine papers collected here.

It has been a pleasure to work with all concerned.

C. Carlet
