The database includes sales from Portuguese community pharmacies.

RESULTS: branded and generic medicines prices for each group of the Reference Price System (RPS).

of savings for the NHS and patients.

OBJECTIVES: As health, skilled nursing and rehabilitation facility systems, do not account for functional status or other contributors to resource consumption.

RESULTS: Under the current IPF PPS, Medicare pays for the per diem costs associated with furnishing covered inpatient psychiatric services via a nationally established base rate adjusted by geographic, facility and patient factors. Patient characteristics are limited to seventeen Medicare severity-diagnosis related groups (MS-DRGs), age, length of stay and certain co-morbidities but, unlike home health, skilled nursing and rehabilitation facility systems, do not account for functional status or other contributors to resource consumption.

OBJECTIVES: To keep the transparency, the decisions to deny health intervention to some group of patients is still a large potential market with significant opportunities of additional savings for the health system and patients, and may contribute to a higher pharmaceuticals accessibility as well to maximize therapeutic adherence.
