
Contents:
- Preface
- 1. BeOS programming overview
- 2. BeIDE projects
- 3. BeOS API overview
- 4. Windows, views, and messages
- 5. Drawing
- 6. Controls and messages
- 7. Menus
- 8. Text
- 9. Messages and threads
- 10. Files
- Index.

Contents:
- Preface
- 1. Introduction
- 2. Performance issues in interactive VOD service
- 3. Related work
- 4. A dynamic approach to VOD scheduling
- 5. On improving the transient performance of CSCAN schedulers
- 6. Prioritized admission strategies to improve user-perceived performance
- 7. Run-time optimization of readsize
- 8. Conclusions
- References
- Index.

Contents:
- Preface
- List of contributors
- 1. Symbolic math powerhouses revisited
- 2. Symbolic magic
- 3. A critique of the mathematical abilities of CA systems
- 4. Simplifying square roots of square roots by denesting
- 5. Can your computer do complex analysis?
- 6. Efficient computation of Chebyshev polynomials in computer algebra
- 7. A review of symbolic solvers
- 8. About the polynomial system solve facility of Axiom, Macsyma, Maple, Mathematica, MuPAD, and Reduce
- 9. Computing limits in computer algebra systems
- 10. Let's do some analysis
- 11. Solving ordinary differential equations
- 12. Integrability tests for nonlinear evolution equations
- 13. Code generation using computer algebra systems
- 14. Symbolic mathematics system evaluators
- 15. Computer algebra in mathematics education
- 16. On Lovelace, Babbage and the origins of computer algebra
- 17. Computer algebra systems
- Appendices
- A. Major general purpose CASs
- B. Resources
- C. Computer algebra synonyms
- References
- Biographies of contributors
- Epilogue
- Index.

Contents:
- I. Foundations
- 1. The scope of integer and combinatorial optimization
- 2. Linear programming
- 3. Graphs and networks
- 4. Polyhedral theory
- 5. Computational complexity
- 6. Polynomial-time algorithms for linear programming
- 7. Integer lattices
- II. General integer programming
- 1. The theory of valid inequalities
- 2. Strong valid inequalities and facets for structured integer programs
- 3. Duality and relaxation
- 4. General algorithms
- 5. Special-purpose algorithms
- 6. Applications of special-purpose algorithms
- III. Combinatorial optimization
- 1. Integer polyhedra
- 2. Matching
- 3. Matroid and submodular function optimization
- References
- Author index
- Subject index.

Contents:
- Preface
- Acknowledgments
- 1. Introduction
- 2. Notation
- 3. Random heuristic search
- 4. The simple genetic algorithm
- 5. Implementation
- 6. The Walsh Transform
- 7. Computing with the heuristic
- 8. Basic examples
- 9. The inverse heuristic
- 10. Focused heuristics
- 11. Linear fitness
- 12. Perturbation arguments
- 13. Transient behavior
- 14. Asymptotic behavior
- 15. Hyperbolicity
- 16. Geometric invariance
- 17. Quotients
- 18. Models
- 19. Schemata
- 20. Appendix
- Theorem index
- Symbol index
- Index.

Contents:
- Preface
- 1. Introduction
- 2. Basic data structures
- 3. Advanced data structures
- 4. Sorting
- 5. Searching
- 6. Sets
- 7. Matrices
- 8. Graphs
- 9. Strings
- 10. Geometric algorithms
- 11. Number systems
- 12. Number theory
- 13. Cryptography
- 14. Probability
- 15. Statistics
- 16. Numerical analysis
- Appendices
- Further reading
- B. ASCII character set
- Index.

Contents:
- 1. Vectors
- 2. Matrix methods
- 3. Transformations
- 4. Symmetry and groups
- 5. Limit and continuity
- 6. Topology
- 7. Halfspaces
- 8. Points
- 9. Lines
- 10. Planes
- 11. Polygons
- 12. Polyhedra
- 13. Constructive solid geometry
- 14. Curves
- 15. The Bézier Curve
- 16. Surfaces
- 17. Computer graphics display geometry
- 18. Display and scene transformations
- Bibliography
- Answers to selected exercises
- Index.
