^c Vascular Section, Department of Surgery, UNIFESP, São Paulo, SP, Brazil

Available online 25 January 2010

The authors regret that an error occurred in the final sentence of the Results section within the Abstract of their published paper.

The correct sentence is as follows:

“The saphenous vein had been obliterated, 180 days after treatment, in 90% of the surgery group, compared with 78% in the foam sclerotherapy group.”
