INFORMATION AND CONTROL 59, 190–195 (1983)

CUMULATIVE SUBJECT INDEX[1]
Volumes 56–59

A

Aftereffects
  storage media with, **56**, 199
Algebraic semantics
  of recursive flowchart schemes, **59**, 108
Algorithms
  parallel, solution for family of, **56**, 174
  polynomial time, for testing isomorphism of graphs
    k-contractible, **56**, 1
    pairwise k-separable, **56**, 21
  tree, and patterns in trees, **58**, 19
Almost all structures
  theory, complexity, **57**, 180
Always
  and *sometimes* in program verification, **57**, 165
Ambiguity
  problems in number systems, **56**, 139
Area–time
  optimal VLSI integer multiplier with minimum computation time, **58**, 137
Asynchronous experiments
  on processes, **59**, 36
Attribute grammars
  noncircular and arbitrary, **57**, 1
Automata
  transformation, of discrete random process, **58**, 1
  tree, and attribute grammars, **57**, 1
Automata theory
  and decision problems on number systems, **56**, 139
AUTOMATH
  classical, and related systems: semantics for, **59**, 127
Axiomatization
  propositional temporal logic and extended temporal logic, **56**, 72
  termination assertions, for recursive programs, **56**, 112
Axiom system
  for functional dependencies and inclusion dependencies, **56**, 154

B

Behavior
  non-sequential, of Petri nets, **57**, 125
Binary tree
  and pattern-matching, **58**, 19
Boolean convolution
  monotone network complexity of, lower bound on, **59**, 184
Bound
  lower, on monotone network complexity of Boolean convolution, **59**, 184

C

Cells
  optimal orientations, in slicing floor plan designs, **57**, 91
Circuitry
  integrated, very large scale: design methodologies amenable to automation, **57**, 91
Codes
  convolutional, and subspaces of $GF(q)^{\omega}$, **59**, 148
  target, production: with explicit loops, **57**, 148
Combinator
  -based compilers, loops in, **57**, 148
Communication
  and semantic theories of concurrency, connection, **57**, 102

[1] Boldface number indicates appropriate volume; lightface number indicates pagination.

Commutative grammars
classes, definition, **57**, 21
uniform word problems for, complexity, **57**, 21
Compilers
combinator based, loops in, **57**, 148
Complexity
of evaluating relational queries, **58**, 101
of first-order theory of almost all finite structures, **57**, 180
network, monotone: of Boolean convolution, lower bound on, **59**, 184
propositional temporal logic and extended temporal logic, **56**, 72
theory, oracle constructions in, **58**, 88
Complexity classes
computational, and random oracle hypothesis, **57**, 40
Computable functions
pseudo-extensions, **56**, 100
Computation
parallel, for well-endowed rings and space-bounded probabilistic machines, **58**, 113
time, minimum: area–time optimal VLSI integer multiplier with, **58**, 137
Computational complexity
of ordinary differential equations, **58**, 157
Concurrency
theories, connections: metric spaces and synchronization trees, **57**, 102
Context-free dynamic logic
deterministic: regular dynamic logic not interpretable in, **59**, 94
Context-free languages
deterministic, recognition in small time and space, **56**, 34
Convolution
Boolean, monotone network complexity of: lower bound on, **59**, 184
Convolutional codes
and subspaces of $GF(q)^{\omega}$, **59**, 148
Counters
and flow-chart programs, **58**, 59

D

Data
program-based test, adequacy: formal notion, **56**, 52
Databases
and dependencies, **56**, 154
Decision problems
concerning number systems, **56**, 139
Decision procedure
propositional temporal logic and extended temporal logic, **56**, 72
Definability
nontrivial, by flow-chart programs, **58**, 59
Dependencies
functional and inclusion, implication problem for, **56**, 154
Determinism
in dynamic logic, **57**, 48
Deterministic context-free dynamic logic
regular dynamic logic not interpretable in, **59**, 94
Deterministic context-free languages
recognition, in small time and space, **56**, 34
Deterministic dynamic logic
weaker than dynamic logic, **57**, 48
Deterministic process logic
elementary, **57**, 56
Differential equations
ordinary, computational complexity of, **58**, 157
Discrete Fourier transform
on Fermat ring, and area–time optimal VLSI integer multiplier, **58**, 137
Discrete random process
stabilization, **58**, 1
DOL languages
repetition of subwords in, **59**, 13
Dynamic logic
deterministic context-free, regular dynamic logic not interpretable in, **59**, 94
and deterministic dynamic logic, **57**, 48
regular, not interpretable in deterministic context-free dynamic logic, **59**, 94

E

Error
control, and convolutional codes, **59**, 148
Exponential time
relationships with *NP*, **58**, 88
Expressiveness
propositional temporal logic, **56**, 72
Extended temporal logic
axiomatization, decision procedure, and complexity, **56**, 72

F

Floor plan
  designs slicing: optimal orientations of cells in, **57**, 91
Flow-chart programs
  nontrivial definability by, **58**, 59
Flowchart schemes
  recursive, algebraic semantics of, **59**, 108
Fourier transform
  discrete, on Fermat ring: and area–time optimal VLSI integer multiplier, **58**, 137
Functional dependencies
  implication problem for, **56**, 154
Functions
  computable, pseudo-extensions, **56**, 100

G

Genus
  bounded, graphs: isomorphism, **56**, 1
Grammars
  attribute, tree automata and, **57**, 1
  commutative, complexity of uniform word problems for, **57**, 21
Graphs
  of bounded valence and bounded genus, generalization, **56**, 1
  k-contractible, isomorphism, **56**, 1
  pairwise k-separable, isomorphism, **56**, 21
  succinct representations, **56**, 183

H

Herbrand interpretation
  expressive relative to recursive programs, **56**, 212
Horn sentences
  in proportional logic, **59**, 1

I

Implication problem
  general and finite, for functional and inclusion dependencies, **56**, 154
Inclusion dependencies
  implication problem for, **56**, 154
Integration
  very large scale, integer multiplier: area–time optimal, **58**, 137
Interpretation
  Herbrand, expressive relative to recursive programs, **56**, 212
Isomorphism
  graphs
    k-contractible, **56**, 1
    pairwise k-separable, **56**, 21

L

Languages
  bounded, characterization: and theorem of Shirshov, **57**, 205
  deterministic context free, recognition in small time and space, **56**, 34
  DOL, repetition of subwords in, **59**, 13
  Parikh-bounded, and theorem of Shirshov, **57**, 205
  for processes, methods of synchronizing subprocesses, **59**, 36
  regular, characterization: and theorem of Shirshov, **57**, 205
  theory, and theorem of Shirshov, **57**, 205
Logic
  dynamic
    determinism in, **57**, 48
  dynamic,
    regular: not interpretable in deterministic context-free dynamic logic, **59**, 94
  process, and propositional dynamic logic model, **57**, 56
  proportional, class of sentences in: satisfiability problem for, **59**, 1
  propositional temporal and extended temporal: axiomatization, decision procedure, and complexity, **56**, 72
Loops
  in combinator-based compilers, **57**, 148
Lower bound
  on monotone network complexity of Boolean convolution, **59**, 184

M

Machines
  space-bounded probabilistic, and parallel computation for well-endowed rings, **58**, 113
  Turing, oracle, **58**, 88

Markov chain
and random process stabilization, **58**, 1
Medium
storage, with aftereffects, **56**, 199; *erratum*, **58**, 195
Memory
cell, maximum throughput with negligible error probability, **56**, 199
parallel, dynamic, **56**, 174
Mental poker
with three or more players, **59**, 84
Metric spaces
and concurrency theory connections, **57**, 102
Monotone network complexity
of Boolean convolution, lower bound on, **59**, 184
Multiplier
integer, area–time optimal VLSI: with minimum computation time, **58**, 137
Multiuser interference channel
capacity, **56**, 199

N

Net
Petri, non-sequential behavior, **57**, 125
Network complexity
monotone, of Boolean convolution: lower bound on, **59**, 184
Nondeterministic polynomial
and exponential time, relationships, **58**, 88
Non-Horn sentences
in proportional logic, **59**, 1
Nontrivial definability
by flow-chart programs, **58**, 59
Notion
software test data adequacy: justification, difficulties, and properties, **56**, 52
NP, *see* Nondeterministic polynomial
Number systems
representability, ambiguity, and decision problems concerning, **56**, 139

O

Oracle
random, hypothesis, **57**, 40
and relationships between *NP* and exponential time, **58**, 88
Ordinary differential equations
computational complexity of, **58**, 157
Orientations
optimal, cells in slicing floor plan designs, **57**, 91

P

Parallel computation
for well-endowed rings and space-bounded probabilistic machines, **58**, 113
Parallel memories
dynamic, **56**, 174
Parallel random-access machine
exclusive-read exclusive write, in dynamic parallel memories, **56**, 174
Pattern-matching
in trees, **58**, 19
Patterns
and pattern-matching in trees, **58**, 19
Petri net
non-sequential behavior, **57**, 125
Place/transition nets, *see* Petri net
Players
three or more, mental poker, **59**, 84
Poker
mental, with three or more players, **59**, 84
PRAM, *see* Parallel random-access machine
Probabilistic machines
space-bounded, and parallel computation for well-endowed rings, **58**, 113
Probabilities
of occurrences of patterns in trees, **58**, 19
Process
discrete random, stabilization, **58**, 1
synchronous and asynchronous experiments on, **59**, 36
Process logic
and propositional dynamic logic model, **57**, 56
Programs
flow-chart, nontrivial definability by, **58**, 59
recursive, and Herbrand interpretation, **56**, 212
verification, strength of *sometimes* and *always* in, **57**, 165
Proportional logic
class of sentences in, satisfiability problem for, **59**, 1

Proportional sentences
class, satisfiability problem for, **59**, 1
Propositional dynamic logic
model, and process logic, **57**, 56
Propositional temporal logic
axiomatization, decision procedure, and complexity, **56**, 72
expressiveness, **56**, 72
Pseudo-extensions
partial recursive functions, programs for, **56**, 100

Q

Queries
relational, complexity of evaluation, **58**, 101

R

Random oracle hypothesis
counterexamples, **57**, 40
future of, **57**, 40
Random process
discrete, stabilization, **58**, 1
Random signal source
in random process stabilization, **58**, 1
Recursion
and flow-chart programs, **58**, 59
Recursive flowchart schemes
algebraic semantics of, **59**, 108
Recursive programs
and Herbrand interpretation, **56**, 212
termination assertions for: completeness and axiomatic definability, **56**, 112
Relational queries
evaluation, complexity, **58**, 101
Relativization
and relationships between *NP* and exponential time, **58**, 88
Repetition
of subwords in DOL languages, **59**, 13
Representable sets
characterization, in number systems, **56**, 139
Representations
succinct, of graphs, **56**, 183
Rings
well-endowed, parallel computation for, **58**, 113

S

Satisfiability problem
for class of proportional sentences, **59**, 1
Semantics
algebraic, of recursive flowchart schemes, **59**, 108
for classical AUTOMATH and related systems, **59**, 127
Sentences
Horn and non-Horn in proportional logic, satisfiability problem for, **59**, 1
Slicing
floor plan designs, optimal orientations of cells in, **57**, 91
Sometimes
and *always* in program verification, **57**, 165
Space
$GF(q)^{\omega}$, subspaces of: and convolutional codes, **59**, 148
metric, and concurrency theory connections, **57**, 102
and time, deterministic context free language recognition in, **56**, 34
Space-bounded probabilistic machines
and parallel computation for well-endowed rings, **58**, 113
Stabilization
discrete random process, **58**, 1
Storage media
with aftereffects, **56**, 199; *erratum*, **58**, 195
Subspaces
classes, interconnections, **59**, 148
of $GF(q)^{\omega}$, and convolutional codes, **59**, 148
Subwords
in DOL languages, repetition of, **59**, 13
Succinct representations
of graphs, **56**, 183
Synchronization trees
rigid, and concurrency theory connections, **57**, 102
Synchronous experiments
on processes, **59**, 36

T

Target code
production, with explicit loops, **57**, 148

Temporal logic
propositional and extended: axiomatization, decision procedure, and complexity, **56**, 72
Termination assertions
for recursive programs: completeness and axiomatic definability, **56**, 112
Test data
program-based, adequacy: formal notion, **56**, 52
Theorem
of Shirshov, and language theory, **57**, 205
Theory
concurrency, connections: metric spaces and synchronization trees, **57**, 102
first-order, of almost all finite structures, complexity, **57**, 180
language, and theorem of Shirshov, **57**, 205
Throughput
maximum, with negligible error probability: memory cells, **56**, 199
Time
computation, minimum: area–time optimal VLSI integer multiplier with, **58**, 137
exponential, and *NP*: relationships, **58**, 88
quantifiers (*sometimes* and *always*), in loop invariants: in program verification, **57**, 165
and space, deterministic context free language recognition in, **56**, 34
Translation lemma
and corollaries, and decidability of equivalence in number systems, **56**, 139
Tree automata
and attribute grammars, **57**, 1
Trees
patterns and pattern-matching in, **58**, 19
synchronization, and concurrency theory connections, **57**, 102
Turing machines
oracle, polynomial time-bounded deterministic (nondeterministic), **58**, 88

U

Uniform word problems
complexity, for commutative grammars, **57**, 21

V

Valence
bounded, graphs: isomorphism, **56**, 1
Very large scale integrated circuitry
design methodologies, amenable to automation, **57**, 91
design systems, and succinct representations of graphs, **56**, 183
integer multiplier, area–time optimal, **58**, 137
VLSI, *see* Very large scale integrated circuitry

W

Well-endowed rings
parallel computation for, **58**, 113
Word problems
uniform, complexity: for commutative grammars, **57**, 21

Printed in Belgium
