Announcement

First World Congress of the Bernoulli Society for Mathematical Statistics and Probability

Tashkent, USSR, September 8–14, 1986

The Bernoulli Society was founded in 1975 and is a unique world society devoted to these two closely related subjects. Since then it has generated a large number of local or thematic meetings in many parts of the world. An international framework has been established within which mathematical statistics and probability can be studied worldwide on a cooperative basis, and the time is now ripe for an international meeting of the Society as a whole. It has been decided that this meeting shall take place in Tashkent, USSR, on September 8–14, 1986. There are 34 topics on the scientific program, including abstract inference, crossvalidation, selfsimilar processes, geology and geophysics, large deviations, random fields, and percolation.

All interested persons are cordially invited to attend, and to join the Society. The Organizing Committee feels that it is very important to have adequate representation from all groups concerned with these subjects, and they urge everyone to participate personally in this unique occasion.
