

Discrete Applied Mathematics
Volume 153, Issues 1–3, 1 December 2005

Special Issue:
Typical Case Complexity and Phase Transitions

Guest Editors:
L.M. Kirousis, E. Kranakis

Contents

<i>L.M. Kirousis and E. Kranakis</i> Editorial	1
Guest Editors	2
<i>A. Beacham and J. Culberson</i> On the complexity of unfrozen problems	3
<i>P. Beame, J. Culberson, D. Mitchell and C. Moore</i> The resolution complexity of random graph k -colorability	25
<i>N. Creignou, H. Daudé and J. Franco</i> A sharp threshold for the renameable-Horn and the q-Horn properties	48
<i>T. Dimitriou</i> SAT distributions with planted assignments and phase transitions between decision and optimization problems	58
<i>A. Faragó</i> On the typical case complexity of graph optimization	73
<i>J. Franco</i> Typical case complexity of Satisfiability Algorithms and the threshold phenomenon	89
<i>Y. Gao and J. Culberson</i> Resolution complexity of random constraint satisfaction problems: Another half of the story	124

<i>G. Istrate</i>	
Threshold properties of random boolean constraint satisfaction problems	141
<i>U. Voll</i>	
A novel giant-subgraph phase-transition in sparse random k -partite graphs	153
Author index to volume 153	182
