

**Discrete Applied Mathematics**  
**Volume 159, Issue 4, 28 February 2011**

**Contents**

**Contributions**

- R.S.F. Bravo, S. Klein, L.T. Nogueira and F. Protti*  
Characterization and recognition of  $P_4$ -sparse graphs partitionable into  $k$  independent sets and  $\ell$  cliques 165
- C. Bujtás, E. Sampathkumar, Z. Tuza, L. Pushpalatha and R.C. Vasundhara*  
Improper C-colorings of graphs 174
- G. Galbiati, R. Rizzi and E. Amaldi*  
On the approximability of the minimum strictly fundamental cycle basis problem 187
- E. Hashorva*  
Asymptotics of the convex hull of spherically symmetric samples 201
- S. Lin, S. Wang and C. Li*  
Panconnectivity and edge-pancyclicity of  $k$ -ary  $n$ -cubes with faulty elements 212
- J.M. Sigarreta, I.G. Yero, S. Bermudo and J.A. Rodríguez-Velázquez*  
Partitioning a graph into offensive  $k$ -alliances 224
- Y. Wang, Q. Wu and L. Shen*  
Planar graphs without cycles of length 4, 7, 8, or 9 are 3-choosable 232

**Notes**

- X.-F. Pan and N.-N. Lv*  
Sharp bounds of the zeroth-order general Randić index of bicyclic graphs with given pendent vertices 240
- Z. Ryjáček, G.J. Woeginger and L. Xiong*  
Hamiltonian index is NP-complete 246
- K. Thörnblad and M. Patriksson*  
A note on the complexity of flow-shop scheduling with deteriorating jobs 251
